Serbia is invited to continue legislative alignment where necessary, and is also encouraged to implement actions under the Common Regional Market based on EU rules, including through cooperation with the Central European Free Trade Agreement (CEFTA) and the Regional Cooperation Council.

Serbia should urgently improve its alignment with EU common foreign and security policy, including restrictive measures, avoid actions that go against EU positions on foreign policy, and step up actions to prevent any attempt to use the territory of Serbia for the circumvention of EU restrictive measures.

Chapter 30: External relations

The EU has a common commercial policy towards third countries, based on multilateral and bilateral agreements and autonomous measures. There are also EU rules on humanitarian aid and development policy.

Serbia remains **moderately prepared** in the area of external relations. **Limited progress** was made overall. The capacity to pursue key challenges in trade policy needs to be strengthened, in particular in order to move forward with accession to the World Trade Organization (WTO), where again no progress was made. Serbia has yet to further strengthen the administrative capacity of the Ministry of Internal and Foreign Trade for handling trade with the EU and CEFTA, as well as WTO accession. By the end of October 2023, Serbia had lifted all its trade restrictions that been introduced on a number of products in the agricultural and energy sectors in non-respect of the provisions of the Stabilisation and Association Agreement (SAA). In October 2023, Serbia provided an updated list of actions to be taken in the context of the WTO accession process as part of the action plan on its remaining legislative alignment with the EU *acquis*. No substantial progress was made on development policy and humanitarian aid. Last year's recommendations therefore remain valid.

In the coming year, Serbia should in particular:

- adopt a WTO-compliant law on genetically modified organisms, so as to move forward with remaining bilateral market access negotiations and to move towards finalisation of its accession to the WTO; and
- continue to implement actions within the Common Regional Market action plan 2021-2024; in particular, negotiate and ensure a swift adoption of CEFTA Additional Protocol 7 on dispute settlement.

As regards the **common commercial policy**, no progress was made on Serbia's accession to the World Trade Organization (WTO). This continues to be stalled, primarily due to lack of progress on the adoption of a modified law on trade in genetically modified organisms, and on the completion of market access negotiations with a small number of WTO members. The Regional Convention on pan-Euro-Mediterranean preferential rules of origin is being applied in Serbia. Serbia's customs tariff nomenclature for 2023 was harmonised with the EU combined nomenclature in November 2022.

The administrative capacity of the unit in the Ministry of Internal and Foreign Trade in charge of trade with the EU and EFTA should be strengthened and Serbia's capacity to complete the WTO accession should be further increased through ensuring representation in Geneva. Further work is yet to be done to improve the capacity to collect market statistics through the work of the national coordination body for trade facilitation.

With regard to participation in CEFTA, Serbia has continued the implementation of Additional Protocol (AP) 5 on Trade Facilitation and AP 6 on Trade in Services. Negotiations within CEFTA on AP 7 on Dispute Settlement are ongoing. Serbia should continue to play a constructive role in CEFTA and within the Common Regional Market, in line with commitments taken at the Sofia Summit in November 2020 and the Berlin Process, including during its upcoming role as the chair of CEFTA in 2024.

Serbia should ensure smooth implementation of the SAA and abstain from introducing unilateral trade restrictive measures without prior consultation of the Commission, in line with its SAA obligations. Throughout 2022, Serbia on repeated occasions introduced temporary trade restrictions in the form of export bans or export quotas pertaining to a number of products that were all revoked in the course of 2023: export ban on certain agricultural products (from 10 March 2022 until 11 August 2022); export ban on milk and butter products (from September 2022 until 31 January 2023); export ban on certain raw wood products (from 26 May 2022 until 31 October 2022, and from 5 November 2022 until 31 January 2023); export quotas for different types of raw wood (from 5 August 2022 until 28 February 2023); export restrictions on wood pellets (from 1 December 2022 until 31 January 2023); export ban on Eurodiesel EN 590 (from 30 June 2022 until 31 March 2023); and export ban on natural gas (from 17 October 2022 until 28 February 2023). In February 2023, Serbia introduced changes to the import duties envisaged in the SAA applying to a large number of milk and dairy products. The Commission was not notified or consulted, as provided for in the SAA, until after the measure was taken. Serbia claimed that this measure was justified under Article 32 of the SAA (the safeguard clause concerning agriculture and fisheries) but did not provide sufficient justification despite two consultative meetings with the Commission dedicated to this specific measure. In May 2023, Serbia further extended import duties on concentrated milk and cheese. Serbia requested a consultative meeting with the Commission and shared written data before the decision was formally taken in line with the procedures stipulated by the SAA, but once again failed to justify the measure under the SAA. Without prior consultation or notification, in July 2023, Serbia adopted additional amendments to further increase the level of special import duties for certain groups of dairy products, mainly: milk and sour cream, yoghurt and related products, whey and butter, and in August 2023, Serbia extended the decision for concentrated milk and cheese. These unjustified measures expired on 31 October 2023.

Furthermore, the unilateral measures adopted by Serbia in December 2020, and further adjusted in December 2022, with regard to the management of wine imports from the EU, restricting the allocation per trader, create a less favourable trade environment. As these measures remain in place, Serbia is encouraged to restore the first come, first served arrangement.

Serbia has committed to take appropriate action in order to stop the possibility circumvent EU restrictive measures introduced in the context of Russia's aggression against Ukraine via Serbian territory and/or by legal entities registered in Serbia, including through monitoring, identifying and inspecting suspicious trade flows of priority battlefield goods and economically critical goods (*see also Chapter 29 on Customs union, and Chapter 31 on Foreign, security and defence policy*).

Serbia's law on **dual-use goods** remains to be aligned with Regulation (EU) 2021/821 of May 2021. In April 2023, Serbia adopted the national control list of dual-use goods aimed at full alignment with the Commission Delegated Regulation (EU) 2023/66 of October 2022. In May 2023, the national control list of arms and military equipment was aligned with the Common Military List of February 2023. Serbia's applications to join the Wassenaar Arrangement and the Australia Group are still under consideration. Serbia is not a signatory of the Kimberly Process on conflict diamonds.

Regarding **bilateral agreements with third countries**, Serbia signed a Memorandum of Understanding with China in April 2023; this formally started the negotiations of a Serbia-China free trade agreement which was signed in October 2023. Serbia announced plans for free trade agreements also with the United Arab Emirates, Egypt and South Korea, but substantial negotiations have yet to begin. All the agreements that Serbia negotiates must ensure compatibility with the EU *acquis* and include sunset clauses, which guarantee that Serbia can

renounce the agreements upon accession to the EU. Serbia should also ensure that proper scoping exercises are conducted before concluding any negotiations in order to minimise the risk of negative effects on specific sectors.

Serbia has 46 bilateral investment treaties in force, 21 of which are with EU Member States. Serbia should develop a strategy for amending or terminating existing treaties that fall short of EU standards and expose the country to risks due to the broad and open language used. Negotiations on new such treaties are ongoing with South Korea, and have been announced for Angola, Bahrain, Uzbekistan, India and the Kyrgyz Republic.

No substantial progress was made on **development policy** and **humanitarian aid**. A new law on development cooperation and humanitarian aid is still being prepared. Development assistance and humanitarian aid are granted on an ad hoc basis.

Chapter 31: Foreign, security and defence policy

Member States must be able to conduct political dialogues under the EU foreign, security and defence policy, align with EU statements, take part in EU actions, and to apply agreed sanctions and restrictive measures.

Serbia is **moderately prepared** in the area of common foreign, security and defence policy (CFSP). **No progress** was made during the reporting period as Serbia's alignment patterns remained unchanged and some of Serbia's actions and statements went against EU positions on foreign policy. Following Russia's war of aggression against Ukraine, Serbia aligned with some EU positions in international fora (including in the UN General Assembly (UNGA)). It has continued not to align with any restrictive measures against the Russian Federation and has not aligned with the majority of High Representative (HR) statements on this matter. It also maintained high level relations with the Russian Federation, raising questions about Serbia's strategic direction. Serbia has also signed a Free Trade Agreement with China in October 2023, which is a strategic concern. Serbia did not make progress in line with the Declaration of the EU – Western Balkans Summit (Tirana, 6 December 2022), to work on closing space for foreign interference and information manipulation, including disinformation. Serbia continued to participate in and contribute substantially to EU crisis management missions and operations under the Common Security and Defence Policy.

In the coming year, Serbia should in particular:

- improve, as a matter of priority, its alignment with EU Common Foreign and Security Policy, including restrictive measures, and avoid actions and statements that go against EU positions on foreign policy;
- continue to step up action to prevent any attempt to use the territory of Serbia and/or legal entities registered in Serbia for the circumvention of EU restrictive measures;
- make credible efforts to close space for foreign interference and information manipulation, including disinformation, and take actions towards building societal resilience against it and other forms of hybrid threats.

The **political dialogue** between the EU and Serbia on foreign and security policy continued. In April 2023, Serbia participated in the ninth EU-Western Balkans meeting of Political Directors. In March 2023, Serbia participated at ministerial level at the first Schuman Security and Defence Forum and in May 2023 in a working lunch with members of the Foreign Affairs Council.

The institutional framework enabling Serbia's participation in the EU CFSP and CSDP is in place. The draft law on Foreign Affairs has been prepared. In September 2023, a law on participations of civilians in international missions and operations was adopted. Serbia appointed a State Secretary who also performs the function of 'political director' and there is a 'European correspondent'. Serbia supports the implementation of the EU Strategic Compass for Security and Defence.

On the **Common Foreign and Security Policy (CFSP)**, in 2022, Serbia's alignment rate with relevant High Representative statements on behalf of the EU and relevant Council Decisions was 46%. As of August 2023 its alignment rate was 51%. Serbia has not aligned with any **restrictive measure** against Russia, nor with the majority of High Representative Statements related to Russia and Ukraine. Serbia failed to align with a number of other HR Statements and EU restrictive measures linked to Russia, China, Belarus and Iran. Serbia has continued to operate flights to Russia. Serbia needs, as a matter of priority, to make serious additional efforts regarding its alignment with the EU CFSP.

In the United Nations General Assembly Serbia mostly aligned with the vast majority of UNGA Members on resolutions related to the Russian war of aggression against Ukraine. Serbia aligned with the EU when voting in UNGA on resolutions regarding Russia's war of aggression against Ukraine, its humanitarian impact, the suspension of the Russian Federation from the UN Human Rights Council, the condemnation of the sham referenda and illegal annexation of Ukrainian territories and on principles underlying a comprehensive, just and lasting peace in Ukraine. It however abstained on the UNGA resolution on Russian reparations for Ukraine in November 2022. The alignment record in other multilateral forums is mixed and Serbia often abstains on positions related to Russia's war of aggression against Ukraine.

Following the visit of the EU Special Envoy for the **implementation of sanctions** in May 2023, which focused on concrete actions aimed at tackling sanctions circumvention, Serbian customs authorities took concrete steps to address the issues raised by the EU Special Envoy, including with concrete actions to step up export controls. Close cooperation and exchange of information between the EU and Serbia authorities is ongoing at technical level. Serbia should continue to step up its efforts to fight sanctions circumvention.

Serbia continued to develop **intense relations and strategic partnerships with a number of countries worldwide**, including maintaining relations with Russia and China. High-level contacts and bilateral visits from Russia were maintained, albeit at reduced frequency, raising questions about Serbia's strategic direction. In October 2022, Russia's Deputy Foreign Minister visited Belgrade, where he hosted a meeting of Russian Ambassadors posted in the region. In April 2023, members of the Russian upper chamber, the Federation Council, who are on the EU sanctions list, were received by Serbian Speaker, MPs and Minister for Public Administration and Local Government. The Russian Ambassador was frequently and regularly received by the President, Speaker, and First Deputy Prime Minister / Minister of Foreign Affairs, and Minister of Energy. In May 2023, the head of the national Security Information Agency attended the 11th Moscow International Security conference. Serbia's First Deputy Prime Minister and Foreign Minister announced that he will visit Moscow by the end of 2023. The Serbian President met briefly with the Russian President in the margins of Belt and Road summit in Beijing in October 2023.

Serbia vocally supported the territorial integrity of Ukraine and it provided humanitarian assistance, including ambulances vehicles, and energy equipment, including through the UCPM. The Serbian President met with the President of Ukraine in August 2023 and, also in August 2023, the Serbian Prime Minister addressed the Crimea Platform meeting, but Serbia has not joined the Crimea Platform Declaration.

Close contacts were also maintained with China. The Serbian President accompanied by a high-level delegation, attended Belt and Road summit in Beijing in October 2023, during which Serbia and China signed a free trade agreement, which is of strategic concern. He also met with the Chinese President on this occasion. Belgrade received visits of the Chinese Special Representative for the China-CEEC cooperation and of the Deputy Head (Vice Minister) of the International Department of the Chinese Communist Party's Central Committee, in November 2022.

Several high-level visits from the United States to Belgrade took place, as well as visits of Belgrade officials to the US. A Memorandum of Understanding for cooperation between the US State Department and the Serbian Ministry of Foreign Affairs was signed in January 2023.

There was an intense agenda of bilateral visits between the Serbian leadership and the one of the United Arab Emirates in 2022 and 2023 (Heads of State and Ministerial visits), with the signature of a number of cooperation agreements and a loan signed in September 2022 during the Serbian President's visit to Abu Dhabi. A free trade agreement has also been announced.

The President of India visited Serbia in June 2023 and a visa simplification mechanism was announced, following the reintroduction of visas for Indian nationals as of January 2023. The President of Cuba visited Serbia in June 2023, witnessing the signing of an agreement waiving visa requirements for holders of official and diplomatic passports.

High-level contacts were also maintained with Iran. In October 2023, the Deputy Foreign Minister of Iran was in Belgrade for political consultations with Serbian MFA. In December 2022, the Iranian Foreign Minister was received by Serbia's President, with Belgrade providing a venue for him to meet all Iranian ambassadors posted in Europe. In August 2023, the State Secretary of the Serbian Ministry of Foreign Affairs travelled to Iran for political consultations. Serbia has also intensified contacts with other members of the Non-Aligned Movement and in March 2023 the Serbian MFA took part in the summit-level meeting of the Non-Aligned Movement Contact Group in Baku.

Serbia continued to engage actively with **international organisations**. Serbia does not have bilateral immunity agreements granting exemption from the jurisdiction of the **International Criminal Court** and complies with the EU common positions on the integrity of the Rome Statute together with the related EU's guiding principles on bilateral immunity agreements. The issuance of arrest warrants by the ICC against Russian President Putin and the Russian Commissioner for Children's Rights in March 2023 was however criticised by the Serbian leadership as being politicised and not conducive to peace.

Serbia continued supporting EU measures and documents on **conflict prevention**.

Serbia has joined almost all key **non-proliferation, disarmament and arms control treaties** promoted by the EU. Serbia should consider ratifying Protocol V on Explosive Remnants of War of the Convention on Certain Conventional Weapons (CCW). Serbia has a transparent reporting system on its strategic exports controls. At the same time, frequent and recurring allegations of corruption in arms trade deals need to be investigated. Serbia is a very active State Party to the Chemical Weapons Convention. However, Serbia has not in recent years (2022 and 2023) aligned with EU statements agreed in The Hague for the Organisation for the Prohibition of Chemical Weapons (OPCW) Conference of States Parties and Executive Council meetings. Serbia adopted a new Action Plan for the implementation of the Strategy for the fight against proliferation of Weapons of Mass Destruction for the period 2023-2025. Serbia is implementing its 2021-2024 strategy and respective action plan for small arms and light weapons control (SALW), with positive results. A new draft action plan (replacing the one of 2019-2020) is in preparation. The authorities took part in regional meetings on

SALW and Serbia is engaging positively on the implementation of the EU Roadmap on SALW and announced a tightening of controls following the mass shootings of May 2023. In Geneva, in the context of the Conference on Disarmament, Serbia did not systematically align with EU statements in 2022 and 2023. At the UN in New York, Serbia occasionally does not align with EU statements and sometimes supports positions at the UN General Assembly.

In terms of **security measures**, Serbia continued implementing its security of information agreement with the EU on procedures for exchanging and protecting classified information.

On **common security and defence policy (CSDP)**, Serbia continued to actively participate and contribute substantially to **EU crisis management missions and operations**, notably the EU training missions in Somalia and Central African Republic, and EU NAVFOR Atalanta. Serbia has expressed interest to contribute to EUTM Mozambique. Serbia is planning to contribute to civilian CSDP missions. The law on participation of civilians in international missions and operations was adopted in September 2023. Serbia continued to participate in the roster of the EU Battle Groups. Serbia also continued to participate in five UN peacekeeping missions. Serbia continued cooperation with NATO and in June 2023, a military exercise “Platinum Wolf” was held. Under the **European Peace Facility**, Serbia takes part in the Balkan Medical Task Force assistance measure.

On **hybrid threats**, in October 2022, the Serbian authorities formally appointed the new National Focal Point for the EU at the CBRN (Chemical, Biological, Radiological and Nuclear Risk Mitigation) Centre of Excellence, after the post remained vacant for over a year. Serbia attended at technical level the CBRN ministerial conference hosted by the EU in May 2023.

ANNEX I – RELATIONS BETWEEN THE EU AND SERBIA

Within the framework of the **accession negotiations**, twenty-two chapters have been opened, two of which have been provisionally closed (chapters 25 and 26). In accordance with the revised enlargement methodology, which Serbia accepted, negotiation chapters are grouped in six thematic clusters and negotiations should be opened for each cluster as a whole – after fulfilling opening benchmarks – rather than on individual chapters. All chapters of cluster 1 (fundamentals) and cluster 4 (green agenda and sustainable connectivity) are opened. Cluster 3 (competitiveness and inclusive growth) is the most advanced cluster to be opened next. Serbia tabled its negotiating positions on chapters 2, 3, 10, and 28.

Serbia is participating in the **Stabilisation and Association Process**. Serbia continued to build a track record in implementing the obligations of the Stabilisation and Association Agreement (SAA). However, Serbian legislation remains noncompliant with the SAA in a number of areas, including on restrictions on the acquisition of real estate and on discriminatory issuance of payment cards by banks. Furthermore, during the reporting period Serbia introduced on repeated occasions temporary trade restrictions on a number of products without presenting sufficient justifications, nor always following the procedures set out in the SAA. As regards public procurement, intergovernmental agreements concluded with third countries and their implementation do not follow the EU principles of equal treatment, transparency, non-discrimination and competition for the majority of the value of public procurement contracts. As a result, EU companies are prevented from participating in large-scale infrastructure projects implemented in the country.

Regular political and economic dialogue between the EU and Serbia continued. Sub-committee meetings were held, together with a meeting of a special group on public administration reform. The Stabilisation and Association Parliamentary Committee met in November 2022 and June 2023. Serbia also participates in the ministerial dialogue between the economic and finance ministers of the EU and the candidate countries, where joint recommendations are adopted. The most recent meeting was held in May 2023.

Economic integration with the EU remained high. The EU remains the main trading partner of Serbia, followed by CEFTA countries. In 2022 Serbia's total trade with the EU accounted for 58.7 % (65.8 % of total exports and 53.9 % of total imports). EU-Serbia trade rose by 27 % in 2022, demonstrating continued recovery from the impacts of the COVID-19 pandemic. Serbia's total trade in 2022 was worth EUR 42.7 billion. The country's trade deficit with the EU amounted to EUR 6.3 billion in 2022. In comparison, Serbia's trade with CEFTA represented around 10.3% of total trade.

The pattern of Serbia's alignment with **EU common foreign and security policy** positions remained unchanged. Serbia continued to participate actively in EU crisis management missions and operations under the common security and defence policy.

Visa-free travel for citizens of Serbia travelling to the Schengen area has been in force since December 2009. A **readmission** agreement between the European Union and Serbia has been in force since 2008. The Commission's October 2023 sixth report under the visa suspension mechanism concluded that Serbia continues to meet the visa liberalisation requirements.

Under the **Instrument for Pre-accession Assistance 2021 – 2027 (IPA III)**¹⁵ a first financing decision of EUR 122.14 million was adopted at the end of 2021, providing support in connectivity and energy efficiency, strengthening private sector development, trade, research and innovation, as well as improving the healthcare system. The second financing decision of

¹⁵ Official Journal L 330, 20.9.2021.

EUR 162 million was adopted at the end of 2022 providing support on fundamental rights, justice reform, public administration reform, the Green Agenda as well as on social cohesion, development, and economic growth.

At the EU-WB Summit in Tirana in December 2022, the Commission put forward an **Energy Support Package** of EUR 1 billion for the Western Balkans to address immediate, short-term, and medium-term needs in the region in the context of the energy crisis and of Russian war of aggression against Ukraine. Following this announcement, a EUR 165 million budget support programme for Serbia was adopted at the end of 2022 to cushion the energy price increase to SMEs and vulnerable households and to accelerate energy diversification. This first set of programmes are complemented by a significant package of multi-country programmes and the rural development programme IPARD III with a total amount of EUR 288 million, provide a significant contribution to kick-start the implementation of the Economic and Investment Plan for the Western Balkans and the Green Agenda. Serbia participates also in cross-border cooperation programmes, transnational cooperation programmes and Union programmes.

The new activities will add to the on-going programmes under **IPA II** (2014-2020), which are still providing significant support for the social and economic development of the country and contribute to key reforms in the rule of law, public administration reform and other sectors. Three important budget support operations on public administration reform, integrated border management and education were finalised.

Serbia continues to benefit from support under the IPA multi-country and regional programmes. Additionally, Serbia participates in three **cross-border cooperation programmes** with neighbouring Western Balkan countries and in transnational cooperation programmes with Member States under the European Regional Development Fund and the IPA Adriatic cross-border programme.

Serbia participates with IPA support in the following Union programmes: Horizon Europe; COSME; Erasmus+ and Creative Europe; The Citizens, Equality, Rights and Values (CERV); Employment and Social Innovation and the Digital Europe Programme. To facilitate the alleviation of the skills mismatch in the country, Serbia is participating, as observer, in a pilot project under the Technical Support Instrument.

Annex I – Relations between the EU and Montenegro	135

1. INTRODUCTION

1.1. CONTEXT

Accession negotiations with Montenegro were opened in June 2012. To date, 33 negotiating chapters have been opened, of which three have been provisionally closed. Montenegro accepted the revised enlargement methodology focusing on: fundamental reforms, stronger political steer, increased dynamism and predictability of the process. Montenegro continued to broadly implement the Stabilisation and Association Agreement (SAA) and meetings of the joint bodies under the agreement took place at regular intervals.

Overall progress in the accession negotiations depends on progress in the area of rule of law, in line with the requirements set out in the Negotiating Framework as well as the revised methodology formally accepted by Montenegro at the Intergovernmental Conference held on 22 June 2021. Progress towards meeting the interim benchmarks set in the rule of law Chapters 23 and 24 will be key to achieve further progress in the negotiations overall. No further chapters will be provisionally closed before this milestone is reached.

The political commitment of the Montenegrin authorities to the strategic goal of European integration has been consistently stated as the key priority for the country. However, progress on EU accession reforms has largely stalled as Montenegro suffered from deep polarisation and political instability. The country was ruled by a caretaker government and while Parliament was unable to assemble a consistent majority. The absence of a functional Constitutional Court created uncertainties and legal discrepancies, including on the electoral processes. The presidential election run-off and parliamentary elections took place in April and June respectively. The constitution of the new parliament and the new government took place at the end of October 2023. Local elections took place in 14 municipalities.

The EU continued to provide essential and unparalleled technical and financial support. To address the energy crisis provoked by Russia's war of aggression against Ukraine, Montenegro and the Commission prepared an Energy Support Package, consisting of a focused national energy action plan and an immediate budget support programme providing EUR 30 million of grant financing to Montenegro. The EU also made available EUR 500 million to the region under the Western Balkans Investment Framework to respond to the crisis in the medium term.

1.2. SUMMARY OF THE REPORT¹

Concerning **political criteria**, the reporting period was marked by tense and confrontational positions leading to a blockage of the political system.

The political situation was dominated by a caretaker government that did not have the confidence of the Parliament and a Parliament unable to assemble a clear and consistent

¹ This report covers the period from June 2022 to June 2023. It is based on input from a variety of sources, including contributions from the government of Montenegro, the EU Member States, European Parliament reports and information from various international and non-governmental organisations. This also includes the results of comparative assessments and indices produced by other stakeholders, in particular in the area of rule of law.

For the state of play the report uses the following assessment scales: early stage, some level of preparation, moderately prepared, good level of preparation and well advanced. For progress made during the reporting period, the following scale has been used: backsliding, no progress, limited progress, some progress, good progress and very good progress. Where appropriate, also interim steps have been used.

majority to take forward reforms. Moreover, the boycott by large sections of the Parliament affected its work.

There was no effective political dialogue and constructive engagement by political parties with a view to enhancing parliamentary accountability and government oversight. There was a lack of direction on EU accession issues, in particular following the resignation of the Minister of EU Affairs. On several occasions, the Government and/or the Parliament chose to ignore recommendations of the European Commission and/or the Venice Commission.

Adoption of the Act on Parliament that would regulate relations between the Parliament and the executive is pending.

Local elections in 14 municipalities (October 2022), presidential elections (March/April 2023) and parliamentary elections (June 2023) took place. The constitution of the new parliament and the new government took place at the end of October 2023. Election observation missions of the Office for Democratic Institutions and Human Rights of the Organization for Security and Co-operation in Europe monitored the presidential and parliamentary elections. These missions assessed both elections as peaceful and competitive despite some procedural shortcomings. The mandate of the Parliamentary Committee for a comprehensive electoral reform expired in July 2022 with no tangible results. The legal framework requires a comprehensive reform and harmonisation of election legislation, voting and candidacy rights, transparency, mechanisms of dispute resolution, and oversight of campaign finance and media. These, along with other issues, remain unaddressed. The absence of a functional Constitutional Court between September 2022 and February 2023 seriously affected electoral processes.

As regards **governance**, the government has carried out its duties in a caretaker capacity since August 2022 and with limited accountability, due to the inability of the political system to form a new government or proceed to early elections. Against the background of unclear rules governing the competences of a caretaker government, the government continued to adopt important decisions, and to dismiss and appoint key officials. Key positions continued to be filled on an acting basis. The lack of ministerial coordination remains a cause for concern. In February 2023, the caretaker government adopted its Annual Work Programme for 2023. Overall, transparency of governance remained an issue and the government frequently resorted to the procedural option of adopting decisions without formally holding a government session. Both Presidents in function during the reporting period refused to sign legislation adopted following the dissolution of the Parliament.

The role of **civil society** is recognised and promoted. However, the legal and institutional framework regulating cooperation between state institutions and civil society needs to be improved. Politicians – including at the highest level – frequently denigrated the work of civil society organisations and isolated cases of verbal attacks were reported. The Council for Co-operation of State Bodies and Non-Governmental Organisations has not resumed its work.

Montenegro is moderately prepared in the area of **public administration reform**. Overall, limited progress was made. A new public finance management reform programme was adopted and its implementation was started. By contrast, no changes were made to amendments to the civil service legislation that introduced relaxed qualification requirements and ample discretion for appointing authorities to dismiss heads of administrative bodies. The Parliament adopted amendments to the Law on local self-government to harmonise it with the Law on civil service, disregarding the Commission's recommendation. The relaxed requirements are a source of continuing concern for merit-based recruitment, competence and independence of civil servants. Continued staff changes in the public administration led to further loss of know-how on matters related to the EU accession process and an overall

slowing of the pace of reforms. The Parliament has yet to adopt amendments to the Law on access to information. Effective lines of accountability within the administration are still to be set up.

Montenegro remains moderately prepared to apply the EU *acquis* and European standards in the area of **judiciary and fundamental rights** but made limited progress overall. No progress was achieved in justice reform, the most challenging area of the rule of law to date. The judicial system continued to face a deep institutional crisis, resulting in weak leadership and management, lack of strategic vision and poor planning, affecting the country's ability to deliver justice. In addition, the system remains affected by issues of accountability, among other weaknesses. Montenegro continues to meet its obligations on fundamental rights under international human rights instruments and legislation. The Law on the Judicial Council and judges and the Law on State Prosecution Service remain to be amended in line with the EU *acquis* and European standards. Full and effective protection of journalists and other media workers continues to improve, yet tangible results on old cases of attacks have yet to be achieved.

Montenegro has achieved some level of preparation in the **fight against corruption**. Limited progress was achieved. Corruption, including high-level corruption, remains an issue of concern and is prevalent in many areas, including in state structures. Montenegro has not sufficiently upgraded its legislative and strategic framework for the prevention of and fight against corruption in line with the EU *acquis*, European and international standards. Several high-profile cases of corruption are under investigation. Montenegro still needs to demonstrate a stringent and unambiguous criminal justice response to this critical phenomenon. Limited progress was achieved in preventing corruption. The results of the Anti-Corruption Agency improved in quantitative terms. However, its independence, accountability, impartiality, and proactiveness should be further ensured. The Law on prevention of corruption should be improved.

As regards the **fight against organised crime and high-level corruption**, the Special Prosecution Office acted with alacrity in launching several high-profile investigations, that appear to point to a deep infiltration of corruption and organised crime into state structures, including at the top level of the judiciary and law enforcement. The justice system of Montenegro needs to demonstrate a strong, stringent, coherent and unambiguous response. Montenegro must further improve the track record of investigations, prosecutions, final verdicts and asset confiscation in the fight against organised crime and high-level corruption. A more deterrent and effective criminal sanctioning policy and criminal justice response needs to be enforced to avoid the perception of impunity. The effective and systematic use of financial investigations and asset seizure and confiscation needs to be improved. Efforts in this policy area should primarily target those sectors that are most vulnerable to corruption.

In the area of **fundamental rights**, the legislative and institutional framework is largely in place and Montenegro continues to largely meet its international obligations on human rights. However, additional efforts are needed to fully implement this framework. Changes to the existing legislation are also needed, in particular in the area of non-discrimination. The reporting period continued to be marked by polarisation and division. The most vulnerable groups in society (including Roma² and Egyptians, persons with disabilities, LGBTIQ persons) continued to be subjected to discrimination, hate speech and hate crime. The trend of

² In line with the terminology of European institutions the umbrella term 'Roma' is used here to refer to a number of different groups, without denying the specificities of these groups.

increase in the number of femicides with insufficient follow-up by the authorities and cases of publicly expressed misogyny, gender-based violence and violence against children remains an issue of serious concern. Additional efforts need to be made to ensure effective implementation of legislation, access to justice, and enforcement of rights in administrative and judicial proceedings, in particular for vulnerable groups. Montenegro must step up its efforts to conduct efficient, effective and independent investigations to address police torture, violations, and illegal use of coercive measures.

Montenegro has a pluralistic and diverse media landscape and has some level of preparation in the area of **freedom of expression**. Overall, limited progress was achieved. In general, the authorities provided prompt and effective law-enforcement and institutional responses to new cases of violence against journalists. However, there was no effective judicial follow-up of old cases. The government involved civil society and media stakeholders in the drafting of new media legislation but failed to finalise the legislative proposals and present them to the Parliament. The authorities need to step up efforts to effectively address the pending recommendations of the ad hoc commission for monitoring violence against the media, particularly regarding important old cases. The RTCG, the national public broadcaster, continued to produce politically balanced content, including during election periods. Further sustained efforts are needed to meet the highest standards of media integrity and accountability, counter disinformation, and limit the effects of online harassment and hate speech. The media environment remains highly politically polarised, with uneven application of the journalistic Code of Ethics and professional standards. Credible and effective self-regulation mechanisms need to be set up to strengthen media integrity and professionalism.

On the **economic criteria**, Montenegro has made limited progress and is moderately prepared in developing a **functioning market economy**. The economic expansion continued at a robust pace in 2022, supported by private consumption and strong growth in tourism. Headwinds came from inflationary pressures on the back of higher global commodity prices. The current account deficit increased as both exports and imports expanded rapidly. An expansionary fiscal policy fuelled domestic demand and contributed to very high net wage growth. The budget deficit increased significantly and a comprehensive medium-term consolidation plan to address mounting fiscal challenges has not been developed. The labour market situation improved, but structural problems persist, including large regional disparities and gender gaps, informality and high youth and long-term unemployment. The banking sector remained well capitalised and liquid. The number of new businesses increased, but efforts to improve the business environment and the governance of state-owned enterprises slowed down due to political uncertainty.

Montenegro has made some progress and is moderately prepared to **cope with competitive pressure and market forces within the EU**. The education system faces numerous challenges, as shown by the results of international tests. Although public financing for research and development remains modest, some progress was made in attracting private investors. Efforts to advance a green and digital transition have continued, but large infrastructure gaps persist, as the administrative and financial capacity to identify, prioritise and implement major public investments remains limited, hampering the use of EU support. Despite some progress in the metallurgy sector and the good performance of tourism, efforts are needed to diversify Montenegro's narrow production base. The low value added of domestic products, the small size of local companies, and their low level of participation in exports represent obstacles to increasing the productivity and competitiveness of local firms.

Montenegro made progress on **statistical methodology** and transmission of data to Eurostat and the strategic framework for **financial control**. Montenegro should now focus on aligning

its statistics with the European System of Accounts and strengthening budget inspection and managerial accountability in public administration. Montenegro is moderately prepared / has a good level of preparation in the area of **public procurement**. In 2022, some progress was achieved in aligning with the EU *acquis* and in further improving the functioning of the electronic procurement system. In the coming year, Montenegro should focus on the effective implementation of legislation on public procurement and public-private partnership. It should also fully comply with EU public procurement rules in all cases, such as when awarding the concession to operate airports.

Regarding **good neighbourly relations and regional cooperation**, Montenegro remained committed to promoting good bilateral relations with other enlargement countries and neighbouring EU Member States. Montenegro is generally an active participant in regional cooperation.

Concerning Montenegro's **ability to assume the obligations of membership**, important work on alignment and preparation for the implementation of the EU *acquis* took place in many areas, albeit at a much slower pace than anticipated.

The **internal market** cluster is key for Montenegro's preparations to meet the requirements of the EU's internal market and is of high relevance for possible early integration measures and the development of the Common Regional Market. Progress was achieved on market surveillance, accreditation and standardisation; intellectual property rights and the adoption of a new national comprehensive strategy on intellectual property; State aid transparency; banking; and consumer and health protection. Montenegro should now focus on aligning its legislation with the EU *acquis* on standardisation; strengthening the Employment Agency; continuing to align with the EU Services Directive; enforcing the new postal market rules; stepping up progress on developing qualifications for regulated professions; accelerating progress on electronic company registration, capital movements and payments, including on the acquisition of property rights; adopting a new company law and a corporate accounting law; further aligning its legislation with the EU *acquis* on intellectual property; adopting the roadmap concerning the closing benchmarks in the area of competition and State aid and further progress on State aid cases including complex ones; ensuring consumer protection and health protection; and implementing the laws aligning its legislation with the EU *acquis* in the insurance and capital markets sector.

The **competitiveness and inclusive growth** cluster has significant links to Montenegro's Economic Reform Programme. Progress was made on tobacco control, pensions, industrial policy, the operationalisation of the Innovation Fund, taxation, and trade facilitation. In the area of economic and monetary policy, work to implement the action plan for alignment with the EU *acquis* is ongoing. Montenegro should now focus on independence of the media sector and adoption of laws on audiovisual media; alignment with the EU *acquis* on value added tax; coordination of work on economic and monetary issues; labour law and the anti-discrimination law, safety at work; assessing industrial policy and drafting a new policy, research and innovation, education and training and implementing EU-compatible computerised transit system.

The **green agenda and sustainable connectivity** cluster has significant links to Montenegro's Economic Reform Programme, the Commission's Economic and Investment Plan and the Green Agenda for the Western Balkans. Progress was made in creating a day-ahead energy market and on port state control, but progress was limited concerning environment and climate change. Montenegro should now focus on the strategy for green transition in the energy sector, including just transition plans for a phase-out of the power plant in Pljevlja; adoption and implementation of the railway law; revision of the Transport

Development Strategy and significantly stepping up efforts on waste management, water and air quality, nature protection and climate change, including by adopting the National Energy and Climate Plan without further delay.

The resources, agriculture and cohesion cluster comprises policies linked to EU Structural funds and Investment funds and developing the capacities to assume the responsibilities of a future EU Member State. Progress was made in the area of agriculture and rural development through the adoption of a new Strategy, food and fisheries and aquaculture, regional policy and structural instruments, financial and budgetary provisions. Montenegro should now focus on starting the implementation of the IPARD III programme, accelerate legislative alignment in the area of agriculture and rural development as well as fisheries and aquaculture, upgrade food-establishments and food safety controls whilst continuing vaccination plans for rabies as needed; EU cohesion policy requirements building capacity for the handling of Instrument for Pre-accession Assistance programmes under indirect management; and rules of administration for the own resources system.

In the **external relations** cluster, Montenegro continued to fully align with all EU common foreign and security policy (CFSP) positions, declarations and common positions, including sanctions. It also continued to implement measures under the Common Regional Market based on EU rules, including by cooperating under the Central European Free Trade Agreement (CEFTA) and the Regional Cooperation Council.

Strengthening the **administrative capacity** to apply the EU *acquis* remains an important challenge for Montenegro, including the urgent need to re-stabilise a functional negotiating structure.

In the area of **migration**, legal labour migration to Montenegro continued to increase. In 2022, 29 319 temporary residence and work permits were issued, mainly for seasonal workers. In 2022, 8 519 migrants were registered who had crossed the border illegally, a twofold increase compared with 2021, reflecting regional trends. A total of 8 320 people registered an intention to request asylum, but only 175 actually lodged an asylum request and 9 persons were granted an international protection status. Montenegro continues to host the highest number of Ukrainian nationals in the Western Balkans, both in absolute figures and proportionally to its population (1%). The EU-Montenegro readmission agreement with EU Member States continued to be implemented satisfactorily. Montenegro and the EU signed a new status agreement in May 2023, enabling European Border and Coast Guard Agency (Frontex) deployments anywhere on the territory of Montenegro. Steps were taken to further align Montenegro's visa policy with the one of the EU, although further efforts are needed in this regard. Montenegro must continue its efforts to cope with migratory pressure, by developing its international cooperation on readmission, raising its capacity to prosecute migrant smuggling networks; and setting up a modern migrant data collection system. The economic citizenship scheme was. The investor citizenship scheme was phased out at the end of 2022.

2. CLUSTER 1: THE FUNDAMENTALS OF THE ACCESSION PROCESS

2.1. FUNCTIONING OF DEMOCRATIC INSTITUTIONS AND PUBLIC ADMINISTRATION REFORM

2.1.1 Democracy

Montenegro suffered from deep polarisation and division, which was manifested in tense confrontational positions between politicians unwilling to end the political stalemate, being even prepared to escalate the constitutional crisis to achieve short-term partisan gains. This led to a blockage of the political system. The political situation was dominated by a caretaker government lacking the necessary political legitimacy and a Parliament unable to assemble a consistent majority to take forward reforms. The absence of a functional Constitutional Court led to uncertainty and legal discrepancy. Presidential and Parliamentary elections took place, as well as local elections in 14 municipalities. Election observation mission of the Office for Democratic Institutions and Human Rights of the Organization for Security and Co-operation in Europe (OSCE/ODIHR) monitored the Presidential and Parliamentary elections. These missions assessed both elections as peaceful and competitive despite procedural shortcomings. The mandate of the Parliamentary Committee for a comprehensive electoral reform produced no tangible results. The boycott by large sections of the Parliament further affected its work.

Elections

Local elections in 14 municipalities (October 2022), presidential (March/April 2023) and parliamentary elections (June 2023) took place. OSCE/ODIHR election observation missions monitored the presidential and parliamentary elections and assessed both as peaceful and competitive despite some procedural shortcomings. The mandate of the Parliamentary Committee for a comprehensive electoral reform expired in July 2022 with no tangible results. The legal framework still requires a comprehensive reform and harmonisation of election legislation, voting and candidacy rights restrictions, transparency, mechanisms of dispute resolution, and oversight of campaign finance and media. These, along with other issues, remain unaddressed. The absence of a functional Constitutional Court affected electoral processes. The constitution of the new parliament and the new government took place at the end of October 2023.

The mandate of the Parliamentary Committee for a comprehensive electoral reform expired on 31 July 2022. No progress was made in following up on pending OSCE/ODIHR recommendations and crucial issues concerning electoral legislative reform, voter registry, financing of political entities and electoral campaigns, residence registers, code of election campaign ethics, and proposals to strengthen the professionalism and transparency of the work of the State Election Commission (SEC) and the Anti-Corruption Agency (ACA).

In the absence of overall reform, the SEC carried out improvements in areas within its sole competence, and increased the overall transparency of its work. However, the SEC's politicisation prevents it from performing its role as independent election administration body. In particular in the run-up to the first round of the presidential elections, the SEC took legally questionable decisions led by its politically appointed members.

On 23 October 2022, local elections took place in 14 municipalities. The Constitutional Court (CC) was without a quorum during most of the local election process; as a result, the full and effective legal protection of voting rights was not guaranteed. The final election results in some municipalities (Plav, Podgorica and Pljevlja) could only be published in March 2023, after the CC dismissed all pending complaints. Two municipalities (Budva and Kolasin) published final election results with appeals still pending at the CC.

The elections in the municipality of Savnik are not yet completed, as Municipal Election Committee (MEC) members cannot agree on the continuation of the elections at a polling station. The Basic State Prosecutor's Office in Pljevlja formed 30 cases against 38 persons on election disruption charges. After investigation, the Prosecutor's Office submitted indictments against 30 persons to the competent court. The Pljevlja Prosecutor's Office started initial investigations against 37 persons for the criminal offense of certifying false statements. On 5 March 2023, local elections took place in the municipality of Tuzi without major irregularities.

On 20 June 2023, the Ombudsman of Montenegro issued a statement supporting the complaint of the Union of the Blind that most MECs did not guarantee an equal, secret and dignified voting process for persons with disabilities, even though in March 2022, the SEC had revised relevant by-laws and instructed all MECs accordingly.

Presidential elections took place in two rounds, on 19 March 2023 and 2 April 2023. In the run-up to the first round, SEC rejected the nomination of one presidential candidate, citing contradictory information on his citizenship and permanent residence, following a procedure not provided for by the law. The concerned candidate filed a lawsuit against the SEC for violation of his voting rights and discriminatory treatment. In April 2023, the Agency for Personal Data Protection and Free Access to Information decided that the SEC had acted against its mandate and ordered it to destroy all documents relevant to the case in point that it had received from the Serbian SEC. The sequence of these events led to inconsistent practice by the SEC in relation to presidential and parliamentary elections. Overall, the SEC ensured transparency, but it did not permit observers to verify signatures, claiming personal data protection. During the electoral period, only one SEC session was broadcast live.

The CC dismissed seven complaints filed before the first round of the presidential election as inadmissible and rejected four. The Basic State Prosecutor's Office in Podgorica is investigating criminal complaints made by dozens of citizens stating that their signatures in support of presidential candidates were forged. There were no complaints after the first and second rounds of voting.

The Serbian Orthodox Church in Montenegro publicly called on its followers to vote for one political side. A key civil society election observer, the non-governmental organisation (NGO) Centre for Monitoring and Research (CEMI), received death threats. Several polling stations were not accessible for persons with disabilities. Women were underrepresented in the election administration.

The OSCE/ODIHR deployed an international election observation mission, (IEOM) including observers embedded from the Parliamentary Assembly of the Council of Europe (PACE) and from the European Parliament. For the second round, the OSCE/ODIHR did not send any short-term observers. Two local NGOs deployed observers in nearly all polling stations across the country.

According to the OSCE/ODIHR's preliminary conclusions, both rounds were peaceful and competitive and respected freedoms of assembly and expression. However, most long-standing OSCE/ODIHR recommendations related to the need for comprehensive reform and harmonisation of election legislation, voting and candidacy rights restrictions, transparency, mechanisms of dispute resolution, and oversight of political party campaign finance and media remain valid.

The legal framework lacks sufficient regulation, for example on the grounds for annulment of election results by the court, the procedures for the tabulation of results, and the second round of the presidential election. The SEC implemented provisional solutions, addressing

legislative gaps, and overall, the process was appropriately managed. The media landscape was polarised along political lines and media outlets remained highly vulnerable to internal and external influence from corporate and political interests.

On 17 March 2023, one day after having dissolved the Parliament, President Dukanović called early parliamentary elections for 11 June 2023. On 27 June 2023, the Constitutional Court unanimously repealed the amendments to the Law on the President from December 2022, which had been the precondition for dissolving the Parliament. The Ministry of Interior published the voter register of 543 599 citizens with a delay.

The parliamentary elections of June 2023 were competitive and well run, despite taking place against the background of a protracted institutional and constitutional crisis. The formation of a new government took place on 31 October 2023. It is important that the new government is able and committed to taking forward EU-related reforms.

The OSCE/ODIHR observation mission of the parliamentary elections took place in similar circumstances as the mission to observe the presidential elections. Two local NGOs deployed observers to most polling stations across the country. For the first time, observers for the Union of the Blind systematically monitored the accessibility and voting material for persons with disability at 505 polling stations. Its findings were that most MECs did not provide appropriate accessibility for persons with disability. The preliminary conclusions of the international election observation mission were similar to those published after the presidential elections.

Two political parties submitted several complaints to various MECs on discrepancies between the number of people who exercised their right to vote, the number of ballots, and the number of control coupons. The Kolasin and Cetinje MECs decided to repeat the elections in one polling station each. The SEC annulled the decision of the MEC Kolasin. On 8 July 2023, the elections were repeated in Cetinje.

SEC declared the final results of the parliamentary elections on 14 July, which is not in accordance with the legal deadline for announcing election results, (15 days after the elections).

The inclusion of women in political life remains low. In the new Parliament there will be only 17 women, (21%), the lowest percentage since the introduction of the quota system, under which one fourth of the electoral ticket must be reserved for representatives of the underrepresented gender.

There are no new developments in the political and judicial follow-up to the alleged misuse of public funds for party political purposes in the 2012 ‘audio recordings affair’ Regarding the alleged electoral fraud case “the ‘envelope affair’” in 2016, in August 2023 the High Court confirmed the indictment against former Podgorica Mayor Stijepovic.

Parliament

The political situation was dominated by a caretaker government lacking the necessary political legitimacy and a Parliament unable to assemble a clear and consistent majority to take forward reforms. Moreover, the boycott by large sections of the Parliament further affected its work. The overall accountability of the political system was undermined by the shortcomings of the Montenegrin Constitution, which lacks clarity and presents loopholes, and by the lack of a legislative framework regulating the competences of a caretaker government or a dismissed Parliament. This added to an overall sense of political and institutional unpredictability.

There was no effective political dialogue and constructive engagement by political parties to enhancing parliamentary accountability and government oversight. There was a lack of activity on EU accession issues, in particular following the resignation of the Minister of EU Affairs. Furthermore, on various occasions, the Parliament adopted legislation that contradicted recommendations of the European Commission and/or the Venice Commission. The Parliament continued to strengthen its transparency by establishing some citizen-oriented services.

Adoption of the Act on Parliament that would regulate relations between the Parliament and the executive is pending.

Since the government of Prime Minister (PM) Abazović had a no-confidence vote in August 2022, the Parliament has been unable to reach the necessary majority to appoint a new PM and government. Despite this, and even following the Parliament's dissolution in March 2023 and the announcement of early parliamentary elections, the Parliament continued operating, adopting legislation and taking occasional decisions, as if the government was not acting in a caretaker capacity. Since the autumn of 2022, Members of Parliament (MPs) from DPS and its partners have boycotted most plenary sessions. Presidents Dukanović and Milatović refused to sign the laws that the Parliament adopted after its dissolution.

Upon completion of consultations on the formation of a new government in September 2022, President Dukanović proposed that the Parliament be dissolved, but on 30 September 2022, the Parliament refused to act in accordance with this request. Instead, with the publicly declared purpose of facilitating the formation of a new government in November, an ad hoc majority composed of three political blocks adopted amendments to the Law on the President that circumvent the applicable constitutional provisions on the prerogatives of the President. According to the amendments, within 30 days from the date of a no-confidence vote, and after conducting political consultations, the President is 'obliged to propose as PM-designate the candidate who has the support of the majority of the total number of MPs' or the candidate with 'dominant parliamentary support'. If the President does not comply, the Parliament is given the authority to nominate a PM-designate by simple majority. Using his constitutional prerogatives, President Dukanović returned the Law to the Parliament for review.

In November 2022, President Dukanović referred the amendments to the Council of Europe's Venice Commission for an urgent opinion. The Venice Commission assessed that a smaller parliamentary majority than prescribed for constitutional revisions should not have adopted these amendments. Nevertheless, in December 2022, the same majority adopted the amendments again, and gave the mandate to MP Lekic to form a new government. However, the same political blocks failed to find an agreement on the formation of the new government. Due to controversies over the amended law, which the opposition considered unconstitutional, the opposition boycotted most sessions from October 2022 until April 2023. In June 2023, the Constitutional Court unanimously repealed the controversial amendments to the Law on President.

The Parliament held 20 sittings (10 sittings during ordinary sessions and 10 sittings during extraordinary sessions). It adopted 133 acts (75 laws, 56 decisions and two resolutions). In December 2022, the Parliament adopted the 2023 Budget Law.

Following the June parliamentary elections, on 27 July 2023 the new Parliament held its first session and verified the mandates of the new MPs. The new Parliament speaker was voted into position on 30 October 2023.

As regards the Parliament's **legislative role**, due to the boycott, most laws were adopted by simple majority (41) with most opposition MPs not participating in the discussion. The

Parliament repeatedly sought to make changes to systemic laws via administrative procedures and without broader consultations. On various occasions, the Parliament adopted legislation that contradicted recommendations from the European Commission and/or the Venice Commission. Montenegro did not adopt some important pieces of legislation, such as the Law on Government and the Law on Parliament, which are needed to improve overall governance.

Communication between the Parliament and the executive, and with independent institutions, was challenging. In some instances, the government failed to deliver its opinions on legislative initiatives introduced by MPs. A particular relevant case – due to its fiscal impact – was the draft Law on compensation for former recipients of the benefit for mothers of three or more children. Opinions on major legislative proposals were adopted without discussion, most notably by the Committee on Economy, Finance and Budget. There was a lack of parliamentary activity on EU accession issues or coordination with the relevant ministries. The Committee on European Integration held its last session in July 2022.

The **oversight function** of the Parliament was limited. The Rules of Procedure provide that the PM's hour takes place once a month. However, only two such sittings were held during the reporting period. Parliamentary committees held 27 consultative and nine control hearings. As part of their supervisory activities, the committees considered numerous reports that independent bodies submitted to the Parliament in accordance with the law. There is no uniform practice in or approach to conducting parliamentary hearings or reviewing reports and proposed legislation.

The Parliament continued working on promoting the principle of **openness and transparency**. The public submitted 37 requests for free access to information to which the Parliament responded. The Parliament received 99 citizen submissions and 15 e-petitions. Of these e-petitions, one resulted in a consultative hearing before the Committee on Health, Labour and Social Welfare. The Parliament introduced accessibility features on its website, adapting its content to blind and partially sighted persons. In cooperation with the European Parliament, in November 2022, the Parliament organised the second 'Citizens' Assembly' to enhance the general public's participation in the decision-making and policymaking process. The Parliament also organised the 'Simulation of Parliament' for high school students, as well as a Youth Parliament session. No reports on violations of the Code of Ethics were submitted to the Committee on Human Rights and Freedoms in the reporting period.

The Parliament continued to further strengthen the control and supervisory functions and the capacity of the legal harmonisation service. On the proposal of the Administrative Board and at the request of the Special State Prosecutor's Office, in April 2023, the Parliament adopted a decision to allow the initiating of criminal proceedings against five opposition MPs due to alleged abuse of their official position. The Parliament's cross-party Women's Club continued its active role.

Governance

Since the no-confidence vote in August 2022, the government has carried out its duties in a caretaker capacity and with limited accountability, due to the inability of the political system to form a new government or proceed to early elections. Against the background of unclear rules governing the competences of a caretaker government, the government continued to adopt important decisions and to dismiss and appoint key officials. Furthermore, in November 2022 the caretaker PM decided to dismiss the caretaker Ministers of Defence and of Foreign Affairs, and the Parliament endorsed his decision. In December 2022, the caretaker Minister of European Affairs resigned. All vacancies were filled *ad interim*. The lack of ministerial coordination remains a cause for concern. Following the June parliamentary elections, the

new government was established on 31 October.

In October 2022, the government dismissed the acting Director of the National Security Agency (ANB) on the grounds of alleged non-compliance with the Law on ANB, and appointed a new acting Director. In March 2023, following the arrests of police officials suspected of being connected to criminal groups, the government decided to dismiss the Police Director on the grounds of 'functional responsibility'. The Police Director brought a lawsuit against the government before the Administrative Court. In July 2023, the Court overturned the government's decision and established that the dismissal decision violated existing regulations. Shortly afterwards, the government adopted a new decision terminating again the Police Director's mandate, following which the Police Director submitted a new lawsuit. The Court is yet to decide, but it rejected as unfounded the request to postpone the enforcement of the dismissal decision until a final legal decision is made.

The 35 diplomatic representative offices of Montenegro are led by 13 ambassadors and 22 *chargés d'affaires*. Some of them were appointed by the caretaker government.

In February 2023, the caretaker government adopted its Annual Work Programme for 2023. In the reporting period, it adopted 56 law proposals, 37 of which were accompanied by Regulatory Impact Assessment (RIA) form. It passed 35 decrees, 26 of which with a completed regulatory impact assessment RIA form. In November 2022, the caretaker government adopted a decision to set up negotiating working groups for all *EU acquis* chapters except for chapter 12.

Overall, **transparency of governance** remained an issue. However, the government took some positive steps including the regular, proactive publication of information on all expenditure from the state budget. The government continued to broadcast its sessions live. However, the government frequently resorted to the procedural option of adopting decisions without formally holding a government session. When new legislation needs to be adopted, an inclusive consultation process must be followed. This process should under all circumstances uphold the legal safeguards against undue political influence on independent public and regulatory institutions. Any legal changes to their composition and governance should avoid potentially disruptive action that could affect the functioning of the management bodies of those institutions.

As **for local governance**, the new Podgorica local government was only formed in April 2023, six months after the October 2022 local elections. Meanwhile, the incumbent Municipal Assembly and local government exercised their functions in a caretaker capacity (see section on elections). The mayor of Budva was arrested in April 2023 on suspicion of creating a criminal organisation and drug smuggling. To address this situation and enable the formation of a new local government pending the finalisation of electoral results, in December 2022, an ad hoc majority of three political blocks adopted amendments to the Law on local self-government by simple majority. According to the amendments, if the Municipal Election Commission does not announce the final election results within 60 days, the mandate of the local parliament in power would end by force of law. It is highly questionable whether these amendments are compatible with the Constitution. Thus, President Dukanović returned the Law to the Parliament for review. However, the Parliament adopted it again in March 2023. As for other pieces of legislation adopted following the dissolution of the Parliament, both President Dukanović and his successor refused to sign them.

At the end of December 2022, the parliamentary majority in the Podgorica Assembly adopted a decision to increase the salaries of civil servants and state employees by up to 30%. Women's political participation remained low at local level with the exception of Podgorica

and Budva. In Podgorica, the newly appointed mayor and the president of the local assembly are women. In Budva, most of the members of the new Municipal Assembly are women.

Civil society

The role of civil society is recognised and promoted. However, the legal and institutional framework regulating cooperation between state institutions and civil society still needs to be improved. Politicians – including at the highest level – frequently belittled the work of civil society organisations (CSOs) and isolated cases of verbal attacks were reported, when, for example, they criticised the work of the government. Recommendations from last year’s report remain largely valid.

The Council for Co-operation of State Bodies and Non-Governmental Organisations has not resumed its work. The government’s financial support for CSOs is regulated by a set of rules ensuring transparency and external evaluation. However, Montenegro needs to strengthen ministries’ capacity for strategic planning, monitoring and evaluation of support provided to CSOs.

An empowered civil society is a crucial component of any democratic system and should be recognised and treated as such by state institutions.

The overall legal and institutional framework on freedom of expression, association and assembly is in place, but important pieces of legislation are lacking or need revision. The tax law provides some incentives to philanthropy, but its notion of ‘public interest’ is more limited than in the Law on NGOs, therefore restricting tax incentives. Montenegro still needs to align its legal framework on access to information with the EU *acquis*. Under the current law, public institutions could restrict the access of CSOs to key policy decisions by classifying this information. Montenegro has a Law on volunteer work, promoting voluntary work for state institutions to gain professional experience. However, a broader legal framework is needed to promote the free use of time, knowledge and skills for the benefit of volunteering activities. Draft amendments have been under discussion since 2019, but were not finalised. Amendments to the Law on NGOs are being drafted to improve the procedures for setting up, registering and operating NGOs. CSO representatives were appointed to the working group discussing the draft amendments.

A strategy promoting cooperation with NGOs for 2022-2026 was adopted in July 2022, after a broad public consultation process, and is being implemented. The strategy confirms the position of civil society as a strong partner of the state in public policy-making, and proposes to improve the digital registration procedures for CSOs and to publish CSO projects’ results online.

The role of civil society in the EU accession process is recognised in theory, but insufficiently in practice. CSO representatives participate in working groups discussing chapters of the EU accession negotiations. In 2022, all ministries appointed CSO representatives to working groups set up to draft laws and national strategies in their respective areas, in compliance with the Law on public administration. However, not all ministries conducted public consultations on draft laws. The report adopted by the government in December 2022 on conducting public consultations when drafting laws and strategies found that a significant number of laws were adopted without prior consultation with civil society.

On 22 July 2022, the government adopted a decision on appointing members of the Council for Co-operation of State Bodies and Non-Governmental Organisations, a body consisting of an equal number of state officials and NGO representatives. One of its responsibilities is to oversee the implementation of the strategy for cooperation with NGOs. However, there were

not enough applications from NGO representatives to become members of the Council in each of the thematic areas, despite the consecutive launch of six public calls. This reflects a perceived lack of relevance of the body among CSOs. Therefore, the Council did not resume its work, which was interrupted in October 2021. This undermines the dialogue between the government and civil society and should be addressed as a matter of priority by holding an inclusive dialogue.

The rules for public funding of CSOs oblige ministries to conduct consultations with CSOs on their annual funding priorities, to publish open calls, and to award grants through a selection process involving external evaluators. Despite this obligation, not all ministries launched calls for proposals to finance CSO projects. In some cases, the calls for proposals were delayed; as a result, more than EUR 1.1 million earmarked for this purpose in the 2022 budget has not been allocated.

In some cases, the lack of clear and fair selection criteria resulted in the selection of CSOs with no experience in the area, or the selection of CSOs unfit for the work with a specific target group. In the area of trafficking in human beings, the Ministry of Interior allocated a grant to a CSO whose manager had been accused of exerting violence against minor victims of trafficking, during a previous grant of the Ministry. The two minor victims had filed a complaint with the local police. Allocation of state funds must be based on the highest professionalism and integrity criteria and be safeguarded by a control mechanism.

The annual report on the financing of CSO projects in 2021 was published in December 2022, concluding that 92% of the allocated amount was spent. The Ministry of Public Administration created a website centralising information for CSOs, including funding opportunities. However, more efforts from ministries are needed on coordination, strategic planning, monitoring and evaluation of the support they provide to CSOs.

CSOs can also access funds at local level, according to the Law on local self-government. In 2022, 18 municipalities (out of 23) launched calls for proposals.

2.1.2. Public administration reform

Montenegro is **moderately prepared** in the area of public administration reform. Overall, **limited progress** was made. Implementation of the public administration reform strategy continued, while a new public finance management reform programme was adopted and its implementation was started. Both strategic documents are linked to the budgetary framework. By contrast, amendments to the civil service legislation adopted in 2021, introducing relaxed qualification requirements and ample discretion of appointing authorities to dismiss heads of administrative authorities, remained in place. Furthermore, the Parliament adopted amendments to the Law on local self-government to harmonise it with the Law on civil service, disregarding last year's recommendation. The relaxed requirements introduced by these amendments are a source of continuing concern for merit-based recruitment, competence and independence of civil servants. Continued staff changes in the public administration led to further loss of know-how on matters related to the EU accession process and an overall slowing of the pace of reforms. The Parliament has yet to adopt long-awaited amendments to the Law on access to information. Effective lines of accountability within the administration are still to be set up.

The 2022 recommendation on adoption and implementation of the strategic framework was met, while other recommendations remain valid. In the coming year, Montenegro should in particular:

→ adopt and implement amendments to the Law on access to information in line with the

principles of good public administration and introduce measures to reduce the high number of requests for information and related appeals;

→ amend the Law on civil servants and state employees and the Law on local self-government to ensure that recruitment follows the principles of merit, competence and transparency.

→ put in place a unified, comprehensive and transparent system for capital investment planning and management.

Strategic framework for public administration reform

In May 2023, the government adopted a report on the implementation of the 2022-2026 **public administration reform (PAR) strategy** in 2022. Political support for PAR continued to be ensured through the PAR Council, chaired by the Prime Minister. The format of the Council was made more inclusive: in addition to representatives of government institutions and civil society, the composition was expanded to include representatives of the trade unions. The PAR strategy and its action plan were linked to the 2023 budget.

Rightsizing (optimising) public administration is one of the objectives of the PAR strategy. As part of this, functional analyses are being carried out, notably in the health sector. At the same time, the number of employees at both central and local level continued to increase, with no proper prior assessment. Outgoing governments have made many appointments that burden the state budget for the next few years.

Policy development and coordination

The **legal framework** for policy development is in place. In February 2023, the government adopted its annual work programme for 2023, based on the government's mid-term work programme for 2022-2024.

The **institutional structures** for a coherent policymaking system are in place. The overall quality of strategic documents improved. The general secretariat of the government increased its attention to incorporating gender and environment into all policies. Nevertheless, further work is needed to make this process more effective and practical, including by training all stakeholders. Proper costing of strategic documents and their linkages to the budgetary process continue to require particular attention.

Evidence-based policymaking remains only partially ensured. According to the latest available government report (2021), ministries are not consistently carrying out public consultations, with consultations being held on 45% of laws and strategies. When public consultations were carried out, mandatory accompanying documents such as the regulatory impact assessment (RIA) were published for less than half of the drafts under consultation (48%). However, work is ongoing to improve the RIA process, including by developing a new form.

Public finance management (PFM)

In December 2022, the government adopted a new **PFM reform programme** for 2022-2026 with an action plan for the same period. In May 2023, the government adopted implementation reports for 2021 and 2022. The PAR Council provides political guidance for the implementation of the reform programme and ensures coordination with the PAR strategy. The new reform programme is linked to annual budgeting and the mid-term budgetary framework. It has a wider scope than the previous one as it now includes PFM at local government level. The government's investment planning and public investment management capacity needs to improve significantly. The improved legislative framework

for public procurement and internal control needs to be implemented in practice.

In February 2023, the Parliament adopted amendments to the Law on **budget and fiscal responsibility**, mainly to set up the Fiscal Council, an independent oversight body. However, during the preparation of the law, there was no regular consultation process among Montenegrin institutions, with no public consultations nor RIAs. Members of the Fiscal Council have not yet been appointed. Appropriate political backing will be necessary for the Council to add value to the PFM system as a trusted institution.

As concerns **digitalisation** in the PFM area, the state budget electronic system and central calculation of salaries improved. However, not all public institutions have been included in the centralised salary system. The interoperability of the different IT systems, including the treasury system, is yet to be completed. This is delaying progress in the area of PFM on issues such as introducing accrual accounting and fully developing performance budgeting.

On **budget transparency**, Montenegro published key budgetary documents timely. However, the readability of budget information did not improve significantly, and no transparency roadmap was published. Programme-based budget classification was improved continuously with programme goals and performance indicators, but weaknesses in monitoring and reporting continue to limit the analysis of the effectiveness of spending and the efficiency of service delivery. Pre-budget and mid-year budget execution reports were published according to economic, organisational and programme classifications. In addition, public participation in the budget process and the Parliament's oversight of the budget is yet to be improved, including by publishing the 'citizens' budget', which remains pending. The Parliament adopted the 2023 budget in line with the budget calendar but with limited qualitative assessment.

Public service and human resources management

Amendments adopted to the **Law on civil servants and state employees** in 2021, introducing relaxed qualification requirements and ample discretion of appointing authorities to dismiss heads of administrative authorities, remained in place. In December 2022, the Parliament adopted amendments to the **Law on local self-government** relaxing the requirements for recruitment and dismissal of local civil servants, aligning it with the amendments to the 2021 Law on civil servants and state employees. In February 2023, the government adopted an agreement on public administration and the judiciary to increase the **salaries** of around 20 000 public employees by an average of more than 30%, with immediate effect.

The Human Resources Management Authority worked on developing the methodology to monitor **human resources management**. Some improvements have been made to the related information system, but due also to the cyberattack in 2022, the system is yet to be completed. Nevertheless, human resources plans are still not aligned with the budget process.

The legal and policy framework is in place to promote **gender balance** in civil service, and efforts are being made to mainstream gender across all aspects of the public administration reform. Further work is needed to collect and disaggregate data on gender parity across all levels of the public administration and to prepare a planned gender equality plan for the Ministries.

Accountability of administration

The Parliament has yet to adopt amendments to the Law on **access to information** although the preparation and consultation process has already taken years. It is also important to solve the current problems regarding the high number of requests for information and related

appeals. After a 9-month period of inactivity, the Council of the Agency for Personal Data Protection and Free Access to Information started working again as an appeal body when two vacant positions (including that of chairperson) were filled in August 2022.

As concerns **lines of accountability**, the legislative framework for the supervision of the work of state administration bodies is in place. The framework specifies the lines of responsibility of ministries and their respective bodies. However, the functioning of this framework needs to be improved, including the process and quality of reporting by subordinate authorities to the relevant ministries.

The **organisational set-up of the state administration** is still not fully aligned with the Law on state administration. In the reporting period, the government changed the organisation of the state administration three times. This resulted in reorganisations of the state administration without appropriate prior analysis and led to significant staff turnover because the tenure of incumbent managers was ended and new managers were appointed.

The legal basis is in place to ensure the **citizens' right to good administration** in administrative procedures and judicial review and for public authorities to assume liability in cases of wrongdoing and ensure the citizens' right to seek compensation. However, cases of administrative disputes are not treated in a reasonable time. The Administrative Court has a very large number of administrative disputes from the area of access to information and as a consequence, the estimated duration of handling cases has increased to more than three years. Also, as public authorities are often not enforcing court judgements voluntarily. Even if a court makes a judgement in favour of the citizen and the administration needs to compensate for its wrongdoing, the citizen needs to initiate enforcement proceedings, which takes additional time.

Service delivery to citizens and businesses

The process of modernising **public service delivery** in Montenegro remained slow. The Law on administrative procedures was not consistently implemented, notably as concerns the 'once only' principle and electronic communication. Services in general remain bureaucratic and are not user-friendly.

Overall, the **digitalisation of public services** remains modest, particularly for services offered to individuals. Recent survey data on people's use of e-administration shows that in Montenegro less than 30% used the internet to interact with public administration in 2021, compared with the EU average of 58.50%. Montenegro made some progress in the digital government area, notably on the functional interoperability framework and active electronic data exchange among various government institutions. Nevertheless, the government needs to invest in transforming these key enablers into tangible results for people, working both on the supply side (issuing more streamlined, user-friendly digital services and eID solutions) and on the demand side (understanding the reasons for people's low take-up of available digital services and removing the obstacles). Montenegro has not aligned with the latest revision of the European Interoperability Framework and the Interoperable Europe Act.

2.2. RULE OF LAW AND FUNDAMENTAL RIGHTS

2.2.1 Chapter 23: Judiciary and fundamental rights

The EU's founding values include the rule of law and respect for human rights. An effective (independent, high-quality and efficient) judicial system and an effective fight against corruption are of paramount importance, as is respect for fundamental rights in law and in

practice.

Montenegro remains **moderately prepared** to apply the EU *acquis* and European standards in this area and has made **limited progress** overall. No progress was achieved on justice reform, to date the most challenging area of the rule of law. The judicial system continued to face a deep institutional crisis and remains affected by issues of accountability, among other weaknesses. As stated in previous annual reports, corruption and high-level corruption remain issues of concern and are prevalent in many areas, including within state structures. Limited progress was achieved in preventing corruption, but the legislative and strategic framework have yet to be fully upgraded. Several high-profile cases of corruption are under investigation. Montenegro needs to demonstrate a stringent and unambiguous criminal justice response. Montenegro continues to meet its obligations on fundamental rights under international human rights instruments and legislation. However, challenges remain in ensuring effective implementation of legislation, in particular for the most vulnerable. The continuing trend of increase in the number of femicides and cases of gender-based violence remains an issue of serious concern. Full and effective protection of journalists and other media workers continues to improve, yet tangible results on old cases of attacks have yet to be achieved.

Functioning of the judiciary

Montenegro's **judicial system** is **moderately prepared**, with **no progress** on the implementation of key judicial reforms. The functioning of the justice system continued to face challenges including pending appointments and a number of crucial posts that remain occupied *ad interim* beyond the mandate limited by the Constitution or other relevant legislation. This resulted in weak leadership and management, lack of strategic vision and poor planning, affecting the country's ability to deliver justice and undermining the legitimacy of the highest judicial institutions. This was particularly serious for the Constitutional Court, which was left without a quorum from September 2022 until February 2023, when the Parliament appointed three judges. The Court still has one vacant position.

Several events described in the text below suggest that the independence, impartiality, accountability and professionalism of the judiciary have yet to be improved. Ensuring the ethical and disciplinary accountability of judges and prosecutors remains an issue. Furthermore, the Law on Judicial Council and judges, and the Law on State Prosecution Service, have yet to be amended in line with European standards and the EU *acquis*, following the existing European Commission recommendations and Venice Commission opinions. These two laws are central to the functioning of the judiciary and the prosecution, ensuring, respectively, their independence and autonomy, impartiality, accountability, and professionalism.

The efficiency of the judiciary also needs to be strengthened. The human, financial, physical infrastructure and ICT management systems require improvement. The adoption of a new strategy on the rationalisation of the judicial network is still pending.

The proper functioning of the judiciary in line with European standards has yet to be proven. There must be a genuine and unambiguous commitment from the executive and the judiciary to guaranteeing the implementation of reforms, and a political dialogue in the Parliament to secure the required majority for all pending senior judicial appointments and pieces of legislation.

Montenegro continues to make progress on the domestic handling of war crimes, with good judicial cooperation with neighbouring countries and the International Residual Mechanism

for Criminal Tribunals.

Last year's recommendations remain valid. In the coming year, Montenegro should in particular:

- appoint the remaining members of the Constitutional Court and the Judicial Council, a permanent President of the Supreme Court, and a permanent Supreme State Prosecutor and President of the Prosecutorial Council, based on merit and in a transparent procedure, to ensure the proper functioning of the judiciary with independence, impartiality and integrity of officeholders in key judicial positions;
- amend the Law on Judicial Council and judges, the Law on State Prosecution Service, and convincingly plan the necessary amendments to the Constitution, addressing all the already existing European Commission recommendations, Venice Commission opinions and Council of Europe Group of States against Corruption (GRECO) recommendations, to bring them in line with the EU *acquis* and European standards on the independence of the judiciary and autonomy of the prosecution, as well as their impartiality, accountability and professionalism;
- adopt a new strategy and action plan for the judicial reform and for the rationalisation of the judicial network; fully implement the ICT strategy, to improve the efficiency of the system.

Strategic documents

Justice reform remains the most challenging area of the rule of law. There were no results on the implementation of the 2019-2022 strategy for the reform of the judiciary and its 2021-2022 action plan. The government did not adopt any new strategic documents on judicial reforms. The Ministry of Justice did not demonstrate the required level of commitment to fully and timely implementing all segments of the judicial reforms.

Management bodies

The functioning of the judiciary continues to face a deep institutional crisis.

On 27 February 2023, the Parliament appointed three judges to the **Constitutional Court**, thus restoring the Court's decision-making quorum. This ended an unprecedented institutional blockade for Montenegro that left the Court unable to function between September 2022 and February 2023. This affected the capacity of Montenegro to finalise local election results, led to instances of politically opportunistic behaviour, and prompted the Venice Commission to exceptionally step in, in place of the Court, to examine the constitutionality of proposed amendments to the Law on the President upon the request of the President of Montenegro. The Parliament still needs to appoint the seventh (final) judge needed for the Court to function in full compliance with the Constitution.

The Constitutional Court's ability to function properly, its performance and efficiency were undermined throughout 2022 due to its incomplete composition, even before it lost its quorum in September after the retirement of one judge, leaving the Court with only three out of seven judges. With its quorum restored in February 2023, the Constitutional Court resumed its work on a very substantial backlog of over 3 000 constitutional complaints and over 250 initiatives for reviewing the constitutionality of laws and other legal acts. The Court resolved the appeals against the local election results, which were confirmed, enabling the formation of local governments in certain municipalities, including Podgorica.

The Judicial and Prosecutorial Councils are the two main bodies for the self-government of the judicial system, bearing responsibilities for the careers of judges and prosecutors. The

composition, appointment procedures and functioning of these two bodies remain issues of concern that affect more broadly the whole justice sector, including on the balance between independence and accountability. The Law on Judicial Council and Judges, and the Law on State Prosecution Service, remain to be amended in line with European standards and the EU *acquis*, following the existing European Commission recommendations and the Venice Commission opinions.

After two years in incomplete composition, the **Judicial Council** has now all of its 10 members in place. In 2022, the General Conference of Judges elected four new members to the Council. The Council's long-lasting incomplete composition undermined its decision-making, which requires a two-thirds majority in several instances, such as the appointment of the Supreme Court President (pending since 2020). This undermined the overall functioning of the justice system.

The Judicial Council still operates with three of its lay members in office beyond the formal end of their term of office in 2018, including its acting President. This is contrary to the Constitution, which limits the term of office of members of the Council to four years. However, due to failure to reach a qualified majority in the Parliament for the election of new non-judicial members, a temporary anti-deadlock mechanism continues to apply. This mechanism was introduced in 2018 to ensure that the lay members concerned remain in office until new ones are appointed. The three non-judicial members are currently in their 10th year in office. This undermined the Council's democratic legitimacy and accountability.

A new call for the non-judicial posts was published in December 2022 and 11 candidates are undergoing the selection process before the Parliamentary Committee on Political System and Judiciary.

At its first session in its new composition in August 2022, the Judicial Council appointed new members to its working committees. The 2023 budget proposal amounts to EUR 2 648 609. This represents an increase of 20% compared with 2021, mainly due to the planned procurement of licences to operate the Judicial Information System. The Council's working space and working conditions in general continued to be inadequate.

The appointment of a permanent **Supreme State Prosecutor (SSP)** – who is also the **President of the Prosecutorial Council** – has been pending since October 2019 due to lack of cross-party consensus in the Parliament.

In July 2022, the **Prosecutorial Council** decided to extend the term of office of the acting SSP for six additional months, in line with the temporary anti-deadlock mechanism set in the Law on State Prosecution Service. In February 2023, the Council appointed a new acting SSP for a term of office of six months, through a decision-making process that raised concerns over compliance with the relevant provisions of the Law on State Prosecution Service as described in the following section.

During the reporting period, the Prosecutorial Council held eight sessions. The 2023 budget of the Council is EUR 673 205 (2022: EUR 548 529). The Prosecutorial Council must still ensure a more proactive approach to addressing issues in the public prosecution service, for example the evaluation of the professional performance of Heads of State Prosecution Offices and of State Prosecutors themselves, including their accountability and professionalism. In December 2022, the Council adopted its 2023-2025 communication strategy, including the accompanying 2023 action plan. Additionally, the Council adopted a new reporting methodology.

Further efforts are needed to substantially **improve the functioning of the entire judicial**

system and restore public trust in it. While the transparency of the Judicial and Prosecutorial Councils continued to improve, it has yet to be further strengthened. Sessions of both Councils are open to the interested public (media, NGOs), but further measures are needed, such as publishing fully reasoned decisions on promotions, appointments, and disciplinary cases. The operational capacity of both Councils' secretariats continues to improve but should be strengthened further. Their administrative capacity has yet to be improved, including regarding planning and management of strategic, budget and human resources, as well as public communication. Members of both Councils should devote more time and show full commitment to performing their functions. Overall, resource levels do not match judicial performance targets. Other key high-level judicial appointments remain pending ultimately affecting Montenegro's ability to deliver effective justice. This lack of appointments significantly hampers the correct functioning of the highest instances and the management bodies of the judiciary. This undermines their capacity to exercise their powers, which are key to ensuring the independence of the justice system and to providing strategic guidance and leadership in the reform process.

Montenegro has yet to implement key **constitutional amendments** in line with the recommendations of the Venice Commission and GRECO and with other European standards. This includes the outstanding adoption of relevant implementing legislation. Montenegro did not address fully the 2021 Venice Commission recommendations on the amendments to the Law on State Prosecution Service, including on the appointment by qualified majority of the lay members of the Prosecutorial Council, to reduce the risks of undue political influence over the Council. Montenegro has yet to ensure the effective independence and professionalism of the judiciary, including by fully and unambiguously implementing the relevant constitutional and legal framework in line with European standards. The revision of the Law on Judicial Council and judges is ongoing; however, the European Commission and Venice Commission recommendations have yet to be fully addressed.

Montenegro has yet to take tangible measures to demonstrate its unambiguous commitment to guaranteeing the proper functioning of the judiciary in line with European standards. The executive and the judiciary need to be genuinely determined to support the implementation of reforms. Political dialogue in the Parliament is also essential to secure the required majority for all pending senior judicial appointments and pieces of legislation.

Independence and impartiality

Following the 2013 amendments to the Constitution, judicial independence was strengthened by increasing the safeguards against the risks of undue political influence over appointments. Overall, the legal framework guaranteeing judicial independence is in place. However, the judiciary and the prosecution service remain to be perceived as vulnerable to political interference and the level of public confidence in the judicial system remains low. This is due mainly to an insufficient rule of law culture in relevant institutions and to shortcomings in the relevant legislation. At the same time, the executive and legislative branches must avoid publicly discrediting the judiciary.

The legal framework guaranteeing the independence and impartiality of the judiciary is being revised. Following an extensive and inclusive consultation process, in October 2022, the Ministry of Justice requested an opinion from the Venice Commission on the draft amendments to the **Law on Judicial Council and judges**. The December 2022 opinion pointed to several issues to be addressed, including most of the 2014 Venice Commission recommendations on the same Law. These include, regulating judges' work-related rights (including their retirement age and pension rights), limiting the use of temporary anti-

deadlock mechanisms for key appointments to specific exceptional events, bringing the evaluation and disciplinary proceedings of judges in line with European standards, and strengthening the independence of the Judicial Council and the legal guarantees to avoid undue political influence. In February 2023, the Ministry of Justice requested a follow-up opinion from the Venice Commission based on an updated version of the draft amendments, which concluded in March 2023 that several of these important recommendations have not been followed and remain valid. On 1 June 2023, the government adopted draft amendments to the Law on Judicial Council and judges. These amendments improve certain technical aspects of the current Law, but do not address several important recommendations of the European Commission and the Venice Commission in substance, including the above-mentioned ones. They are therefore not sufficient to bring the Law in line with the EU *acquis* and European standards regarding the independence, impartiality, accountability, integrity and efficiency of the judiciary and need further revision.

In addition, the 2021 Venice Commission recommendations on the **Law on State Prosecution Service** have yet to be addressed. In particular, Montenegro has not fully addressed recommendations related to the election of lay members to the Prosecutorial Council and the need to ensure that the Council is not politicised in this process. In addition, Montenegro has yet to address the concerns over the termination of the mandate of the Prosecutorial Council members immediately after the entry into force of the amendments, and the transitional arrangements proposed do not represent a solution to the serious issue of the need to find broad political consensus on the next SSP. In February 2023, the Ministry of Justice announced the setting-up of a working group to amend the Law.

These two Laws are central to the functioning of the judiciary and have yet to be brought fully in line with European standards and the EU *acquis*.

Contrary to his predecessor, the Minister of Justice took active part in the Judicial Council sessions as *ex officio* member. In October 2022, the Minister criticised the Judicial Council's decision to publish a new call for the election of the President of the Supreme Court of Montenegro as he did not consider it appropriate. In January 2023, the only candidate that applied, the current acting President of the Supreme Court and member of the Judicial Council, did not get the necessary majority due to the interpretation of the Law by the Supreme Court's General Session. An appeal was filed before the Administrative Court, which overturned the decision and deemed the candidacy valid based on the support of a sufficient majority of Supreme Court judges. Following this, the Anti-Corruption Agency initiated proceedings to investigate potential aspects of corruption in the Administrative Court's decision-making process. In addition, the Anti-Corruption Agency submitted a request to the Ministry of Justice to conduct an inspection of the Administrative Court. In July 2023, the Judicial Council did not support the appointment of the current acting President of the Supreme Court as full-term Supreme Court President.

The appointment of a permanent **Supreme Court** President has been pending since December 2020; attempts have failed five consecutive times.

In April 2023, the Judicial Council appointed a new President of the Commercial Court. The constitutional and legal framework limit the period in office of Court Presidents to a maximum of two terms to prevent over-concentration of power, but two Basic Court Presidents (Basic Courts of Danilovgrad and Zabljak) were reappointed by the Judicial Council for a third mandate or more between 2019 and 2020 and are still in office.

The Judicial Council continued its good practice of publishing the names of applicants for judicial positions.

In July 2022, the Prosecutorial Council decided to extend the term of office of the acting **Supreme State Prosecutor** (SSP) – who is also the acting President of the Prosecutorial Council – for six additional months, in line with the temporary anti-deadlock mechanism set in the Law on State Prosecution Service.

In September 2022, based on a legal opinion of the Ministry of Justice, the Prosecutorial Council adopted a decision granting the right to the acting SSP, which was exercised in February 2023 after the expiration of the mandate of the former SSP, to remain in the Supreme State Prosecution Office (SSPO) as State Prosecutor. This decision is incompatible with the procedure for the appointment of State Prosecutors to the SSPO set in the Law on State Prosecution Service.

In December 2022, the Parliament once again failed to appoint a permanent Supreme State Prosecutor who is also the President of the Prosecutorial Council.

After that, still in December 2022, the Prosecutorial Council and the caretaker government adopted a proposal to amend the Law on State Prosecution Service, extending the term of office of the acting SSP virtually ad infinitum until the Parliament would appoint a new permanent SSP. This was against the recommendations of the European Commission and the Venice Commission and raised concerns over the respect for the rule of law and the key principles of independence and accountability of the judiciary and the separation of powers. Furthermore, the current Law on State Prosecution Service includes an anti-deadlock mechanism³ by which the Council may appoint an interim SSP for a period of six months, extendable for one more period of six months. Following the negative opinion of the Parliament's Judicial Committee, the caretaker government decided to withdraw the proposal from parliamentary procedure.

On 6 February 2023, as the last mandate expired, the Prosecutorial Council failed to appoint a new acting SSP as neither of the two candidates received the required majority.

Two days later, the Council appointed a new acting SSP from among its prosecutorial members, who resigned just before the vote took place. This raised concerns regarding the respect of the relevant provisions in the Law on State Prosecution Service, which determines that a prosecutor who is a member of the Prosecutorial Council can neither be appointed as head of the Prosecution Service nor be promoted during their mandate in the Council. In addition, the potential conflicts of interest during the decision-making process were not addressed, as the appointee was involved as a member of the Council in the voting on the two other candidates for the same position two days earlier. In April 2023, the Council proposed one candidate to the Parliament from amongst three applicants for an appointment as permanent SSP following the launch of a public call in January 2023. The vote in Parliament is pending. In August 2023, the Council extended the mandate of the acting SSP, which had been elected in February 2023, for six additional months.

The Prosecutorial Council needs to show genuine and unambiguous commitment to guaranteeing the full independence of the judiciary and to fully implementing EU-related reforms in the judiciary in compliance with European standards.

³ This mechanism was introduced in 2021, based on the opinion of the European Commission and the Venice Commission, with a clear caveat: such a temporary solution should not last too long, to prevent that the constitutional provisions giving the power to elect the permanent SSP to the Parliament and limiting the SSP's term of office would be deprived of any meaning.

In January 2023, the Council launched a new public call to appoint a permanent SSP, and in April 2023, it proposed one candidate to the Parliament among the three applicants.

Accountability

Promotion and enforcement of **ethics and professional standards among judges and prosecutors** remains a challenge. Both the Judicial and the Prosecutorial Councils have a limited track record and lack proactivity. Montenegro did not amend the disciplinary and ethical legal framework for judges and prosecutors. Further improvements and effective enforcement of the judicial inspection system are needed, including more thorough and unannounced inspections.

In October 2022, acting upon the request of the Disciplinary Prosecutor, the Judicial Council temporarily removed one judge from the Commercial Court, in connection to criminal proceedings launched in the case against the former President of the Supreme Court. In November 2022, the Special Prosecutor's Office filed an indictment before the High Court in Podgorica against the former President of the Commercial Court of Montenegro on charges of organised crime, embezzlement, and other criminal offences. The indicted person remains in pre-trial detention.

In December 2022, a Special Prosecutor from the Special Prosecution Office was arrested on organised crime and corruption charges. Placed in pre-trial detention, the Prosecutorial Council suspended him from office.

In April 2023, the Minister of Justice filed a motion for the dismissal of Head of the High Prosecutor's Office in Podgorica over suspicion of exerting undue influence on a prosecutor in 1 case. Acting upon the Minister's motion, the Disciplinary Prosecutor presented a motion for her dismissal to the Prosecutorial Council. In June 2023, the Council rejected the motion.

There has been no progress in strengthening the accountability of judges and prosecutors and demonstrating a corresponding track record. The work of ethical commissions for judges and prosecutors remains mostly ineffective. During the reporting period, the **Ethical Commission of the Judicial Council** was not functioning. A legal remedy to challenge the Commission's decisions has yet to be provided for by law. There are seven cases pending before the Ethical Commission.

Following the new composition of the Prosecutorial Council in August 2021, the **Ethical Commission of the Prosecutorial Council** restarted its activities only in September 2022, with the processing of several pending cases. In one case, the Ethical Commission found a violation of the Code of Ethics for State Prosecutors, while in four cases, it found that State Prosecutors had not violated the Code. While one case was delegated to the Commission for examining complaints about the legality of the work of State Prosecutors and Heads of State Prosecution Offices, the remaining four cases are still pending before the Commission.

The approach of Ethical Commissions of the Judicial and Prosecutorial Councils to handling cases is still not sufficiently effective and consistent.

Judges and prosecutors are required by law to declare their assets. However, the verification of asset declarations by the Anti-Corruption Agency (ACA) is limited to a check of compliance with the legal obligation to submit such declarations, which can only result in administrative and misdemeanour proceedings. The competences of ACA regarding the verification of asset-declarations should be strengthened in order to ensure an effective asset-declaration system. The disciplinary practice of the Judicial and Prosecutorial Councils in sanctioning judges and prosecutors for not submitting reports on assets and incomes to the ACA is not consistent and puts into question the effectiveness of this preventive mechanism.

The Disciplinary Committee of the Judicial Council did not sanction any judge for not providing asset declarations, while the Disciplinary Committee of the Prosecutorial Council sanctioned non-compliant prosecutors with a 20% salary cut.

There have been no significant results on enforcing measures to ensure the accountability of independent legal professions. In 2023, the Ministry of Justice initiated proceedings to establish the disciplinary liability of one public bailiff. The implementation of the new Codes of Ethics for notaries, public bailiffs and court interpreters remains limited. The draft of the new Code of Ethics for lawyers is still pending adoption by the Bar Association. The self-regulatory roles of the chambers and professional associations of legal professions must also be further strengthened.

During the first half of 2023, judicial inspectors of the Ministry of Justice performed inspections in 10 courts and six prosecution offices, during which no irregularities were observed. In 2022, judicial inspectors of the Ministry of Justice carried out inspections in 20 courts and 16 prosecution offices. In addition, at the request of the acting President of the Supreme Court, an extraordinary inspection was conducted in the High Court in Podgorica. During the inspection of the courts and prosecution offices, 15 irregularities were found (8 in the work of courts and 7 in the work of prosecution offices). Judicial inspectors of the Ministry of Justice performed regular checks of the legality of the work of 25 public bailiffs' offices and the Chamber of Public Bailiffs, during which two irregularities were observed. In addition, judicial inspectors of the Ministry of Justice checked the legality of the work of 38 notaries' offices and the Chamber of Notaries, during which seven irregularities were found. The Ministry's capacity in this area still requires significant strengthening.

Professionalism and competence

Montenegro continues to organise single nation-wide competitions for judges and prosecutors. The Judicial Council appointed 20 new judges, while 14 judges were promoted to higher instance courts. In addition, three court Presidents have been appointed by the Judicial Council (Commercial Court, Administrative Court, and Basic Court in Kotor). In 2022, the Council confirmed the termination of judicial function for 16 judges.

In 2022, the Prosecutorial Council appointed the new Chief Special Prosecutor, the Head of the Basic State Prosecutor's Office in Podgorica and 17 State Prosecutors. In 2023, the Council appointed the Head of the Basic Prosecutor's Office in Cetinje. The Council confirmed the termination of prosecutorial function for 21 prosecutors, including the former Chief Special Prosecutor.

Both Councils have yet to ensure the systematic conduct of regular assessments of judges and prosecutors. Evaluations need to be more thorough. Both Councils should develop their appraisal parameters with more targeted focus on magistrates' accountability, individual performance, and the quality of work. In 2022, 29 judges (only around 11% of the active ones) were evaluated as part of the regular professional assessment procedure, while 61 judges and 7 State Prosecutors were evaluated for the purpose of promotion. In 2022, only three State Prosecutors were evaluated as part of the regular professional assessment procedure, while 13 prosecutors were evaluated for the purpose of promotion and 13 at the end of their 4-year terms of office. The fact that all 29 evaluated prosecutors received excellent grades raises questions over the objectivity and the overall purpose of the evaluation process. In September 2022, the Prosecutorial Council adopted revised rules on evaluation of State Prosecutors, which entered into force on 7 October 2022.

The interpretation of legal conditions for old-age retirement of judges and prosecutors is disputed after the 2020 Law on pensions insurance lowered the general age requirement for

the right to a pension, deviating from provisions of the General Labour Law. In December 2022, the Administrative Court annulled the Judicial Council's decision from August 2021 to terminate the mandate of a judge of the Supreme Court due to fulfilment of the conditions for old-age retirement. Following this decision, the Judicial Council informed the Supreme Court that the judge has the right to return to work. In 2022, the Judicial and Prosecutorial Council declared the termination of the mandates of nine judges and 10 State Prosecutors based on their interpretation of fulfilment of the conditions for old-age retirement. Proceedings before the Constitutional Court on this subject are still ongoing.

Quality of justice

The 2023 budget for the justice system is EUR 42.01 million. This is an increase of 11% compared with the previous year (2022: EUR 37.3 million). Courts and prosecution offices are considered as separate budgetary units in the state budget for 2023. While implementation of the programmatic budgetary framework is ongoing, the capacity of individual courts and prosecution offices to effectively apply the procedures for budgetary planning, resource allocation and execution remains insufficiently developed.

In 2022, Montenegro had 263 full-time judge positions (42.4 per 100 000 inhabitants), 57% of whom were women, and 103 prosecutor positions (16.6 per 100 000 inhabitants), 62% of whom were women. According to the European Commission for the Efficiency of Justice, the European averages are 22.2 judges and 11.8 prosecutors per 100 000 inhabitants. The 2022 budgetary allocation for the judicial system in Montenegro was about EUR 35,249,852 € million. This amounts to around EUR 30 per inhabitant.

On 1 June 2023, the government adopted draft amendments to the **Law on Judicial Training Centre of Montenegro**, proposing a reduction in the duration of the initial training for judges and prosecutors from 18 to 12 months. Montenegro did not consult with the European Commission on these amendments, which are not in line with European standards and with the recommendations already submitted to Montenegro.

Overall, apart from the proposed amendments, the functioning of the **Judicial Training Centre (JTC)** continues to improve. Its 2023 budget is EUR 869 819, which is in accordance with the amount prescribed by law (2% of the budget allocated for judiciary and state prosecution). In 2022, the total budget allocated to training initiatives at the JTC amounted to EUR 385 839, a reduction of 8.7% compared with the previous year. The JTC continued to implement the new training needs assessment (TNA) methodology adopted in 2021 and prepared a comprehensive TNA report, based on which the 2023 training programme was developed. The JTC assessed the criteria and procedures for selecting and evaluating judicial trainers to further improve the quality of judicial training programming and delivery. As for the administrative capacity of the Secretariat of the Centre for Training in the Judiciary and Public Prosecution Service, out of the total of 19 planned positions, 15 are currently filled.

The positive trend in **alternative dispute resolution (ADR)** continued and the system continued to expand. In 2022, the ADR Centre received 10 773 cases for mediation (2021: 7 297 cases). Between 1 January 2023 and 30 June 2023, the ADR Centre received 3 914 new cases, while 1 384 cases from 2022 are still pending. The increase in the number of cases of mediation referred to the ADR Centre is not followed by an appropriate increase in the budget and staff of the Centre. From July to October 2022, a public awareness raising initiative presenting the work of the ADR Centre and the benefits of mediation was implemented to create an environment in which mediation is understood and accepted as an effective way to resolve disputes. The initiative resulted in several deliverables aimed at mediation stakeholders and the general public, including social media posts, city billboards,

animated video materials, etc.

Efficiency

In 2022, 130 881 cases (2021: 118 568) were pending before Montenegrin courts, 92 918 of which were new (2021: 84 143). A total of 78 758 cases were resolved (2021: 80 485). At the end of 2022, 51 539 cases were pending before Montenegrin courts and the number of cases older than three years stood at 4 890 (2021: 3 794). The disposition time (the average time from filing to decision) was 178 days for Basic Court cases (2021: 158), 442 days for Commercial Court cases (2021: 197) and 1 158 days for Administrative Court cases (2021: 538). The clearance rate in 2022 decreased to 86%, from the 92% of 2021.

In the first quarter of 2023, there were 79 027 cases before Montenegrin courts: 27 488 new cases and 51 539 cases that were unresolved at the beginning of Q1-2023. In Q1-2023, 20 262 cases were resolved, of which 1 582 cases are older than three years. At the end of Q1-2023, there were 6 946 old cases (older than 2020) not resolved before Montenegrin courts.

The backlog of pending enforcement cases before courts fell. At the end of 2022, 1 006 cases were pending (150 000 in 2016). In 2022, 70 801 cases were filed with bailiffs' offices (2021: 76 779), with 42 201 cases pending by the end of the year (2021: 47 217). The number of pending enforcement cases at the end of Q1-2023 was 1 560.

Since the adoption of the analysis on the **rationalisation of the court network** in October 2020, there has been no tangible development. In 2022, the Ministry of Justice launched activities to rationalise the court network based on previous recommendations and with the support of the EU. In July 2022, the Ministry set up a working group including representatives of judicial and prosecutorial institutions to work on a strategic document. In March 2023, based on the findings of the 2020 analysis on the needs of the rationalisation of the judicial network, and on submitted proposals, the Ministry prepared a draft judicial network rationalisation plan setting out measures, activities, result and impact indicators, time limits, competent authorities, and sources of funding necessary to rationalise the judicial network. A new strategic document on the rationalisation of the court network remains to be adopted. Reforms in this area should draw on available data, conclusions from studies, and cost-benefit analyses, while ensuring better overall management of human resources and judicial infrastructure. Ultimately, these reforms should lead to the optimisation of the judicial network and the closure of small, unviable courts.

It remains a challenge to fully implement instructions for collecting statistical data in a way that is compliant with the guidelines of the European Commission for the Efficiency of Justice (CEPEJ).

The new court information system (PRIS) to further modernise and reform the judicial system is not in place yet. Therefore, it is important to find alternative solutions and make significant steps to improve court statistics and to further increase the efficiency and transparency of the judicial system.

The efficiency of the judiciary is hampered by the lack of effective systems for human resources and staffing, financial resources, ICT, proactive case management and infrastructure management. There is an urgent need for strategic investment in infrastructure. At all levels of the judiciary, the allocated working space (notably for the Special State Prosecution Office) and working conditions in general at all levels of the judiciary remain inadequate. There is a lack of specialised judges and prosecutors and a lack of expertise in certain areas. Appropriate ICT infrastructure and equipment in the judiciary is lacking. More

efforts are needed to ensure the effective financial independence of the judicial system.

Domestic handling of war crime cases

Montenegro continued to implement its 2015 war crime prosecution strategy, but with limited results. To ensure effective implementation and monitoring of the strategy, Montenegro needs to improve its proactive investigation and prosecution of war crimes in line with international humanitarian law. The criminal legislation is being amended to address the legal and practical obstacles to effectively investigate, prosecute, try and punish war crimes, in line with the recommendations of the International Residual Mechanism for Criminal Tribunals.

During 2022 and 2023, there were no new indictments. The trial of 1 person, against whom an indictment was filed in October 2021, is still ongoing before the High Court in Podgorica. Between 1 January and 28 December 2022, the Special Prosecution Office (SPO) handled 12 cases, of which nine are in the investigation phase and one is on trial. In seven of them, the preliminary investigation phase is ongoing. During the reporting period, the SPO acted upon three letters rogatory for the provision of international legal assistance that the Prosecution Office of Bosnia and Herzegovina (two) and the Prosecution Office of the Republic of Srpska (one) sent in 2022. The SPO sent three letters rogatory in total, one to the Prosecution Office for war crimes of the Republic of Serbia, and two letters rogatory to the Prosecution Office of Bosnia and Herzegovina.

On 16 January 2023, the Parliamentary Committee on Political System, Judiciary and Administration organised a discussion on the investigation regarding the Lora prison camp in Split. During the meeting, the Minister of Justice announced the revision of the agreement between the prosecution services of Montenegro and Croatia on cooperation and prosecution of perpetrators of war crimes as it specifies only the obligations of Montenegrin authorities, primarily the Prosecutor's Office, in acting upon the request of Croatian investigative authorities.

Montenegro continued to actively participate in the regional Missing Persons Group and helped implement the framework plan signed in November 2018. Cooperation with neighbouring countries under bilateral cooperation protocols continued. The list of missing persons compiled by the Commission on Missing Persons of Montenegro comprises records of 51 active cases of Montenegrin citizens or people whose families reside in Montenegro. Montenegro's legislative framework still does not include a specific law on missing persons.

Fight against corruption

Montenegro has achieved **some level of preparation** in the fight against corruption. **Limited progress** was achieved. Corruption, including high-level corruption, remains an issue of concern and is prevalent in many areas, including in state structures. Montenegro has not sufficiently upgraded its legislative and strategic framework for the prevention of and fight against corruption in line with the EU *acquis*, European and international standards, for which a new strategy and an accompanying action plan are required. Limited progress was achieved in preventing corruption, and the results of the Anti-Corruption Agency (ACA) improved in quantitative terms. However, the ACA's independence, accountability, impartiality, and proactiveness should be further ensured. The Law on prevention of corruption should be improved in line with the existing recommendations of the 2021 peer review mission. Montenegro reached a turning point in the investigation and prosecution of some high-level corruption cases in 2022. The Special Prosecution Office (SPO) acted with alacrity in several high-profile cases. These appear to point to a deep infiltration of corruption and organised criminality into state structures, including at the top level of the judiciary and law enforcement. Montenegro's justice system needs to demonstrate a strong, stringent,

coherent and unambiguous criminal justice response. Montenegro must further improve the track record of investigations, prosecutions and final verdicts, including asset seizure and confiscation, in the fight against corruption including high-level corruption. A more deterrent and effective criminal sanctioning policy and criminal justice response to corruption including high-level corruption is needed to avoid the perception of impunity. The effective and systematic use of financial investigations and asset seizure and confiscation needs to be improved.

Efforts in this policy area should primarily target those sectors that are most vulnerable to corruption, for which a solid risk assessment and dedicated action are required.

Last year's recommendations were only partially implemented and remain largely valid. In the coming year Montenegro should in particular:

- adopt an improved the legal, institutional and strategic framework for the prevention of and fight against corruption in line with the EU *acquis*, European and international standards, through an integrated approach, by amending and effectively enforcing the Law on prevention of corruption and criminal legislation, and by addressing all recommendations of the 2021 peer review mission, including on financial investigations and asset seizure and confiscation, as well as recommendations from the Council of Europe Group of States against Corruption (GRECO) and the Organization for Security and Co-operation in Europe (OSCE);
- improve the track record on corruption including high-level corruption by urgently strengthening the effective enforcement of existing criminal legislation by prosecution services and courts, to impose effective penalties, and take specific measures to improve the use of plea bargain agreements in exceptional cases for a more transparent, credible, deterrent and consistent criminal justice response;
- take action to implement the recommendations of the June 2022 peer review mission on the fight against organised crime and high-level corruption.

Montenegro did not yet upgrade the legal, institutional, and strategic frameworks for the prevention of and fight against corruption. In particular, it still needs to adopt a new integrated strategy and action plan. Montenegro has yet to ensure inter-institutional cooperation and coordination between all bodies involved as well as coherence and a clear description and understanding of their mandates, roles and responsibilities.

The recommendations of the 2021 peer review mission remain largely unaddressed. The mission focused on assessing the legislative and institutional framework for the prevention of corruption, and on improving the ACA's capacity, performance, working methods and results. To comply with many of the peer review recommendations, Montenegro must revise the legislative framework, in particular the Law on prevention of corruption, and the Law on control of political entities and electoral campaigns in a first instance. Although this process has started, the adoption of reforms is still pending.

Furthermore, the ACA's efforts to prevent corruption need to be supplemented by a serious response by law enforcement, prosecution services and criminal justice. Independent and efficient courts are key to ensuring fair and timely judicial oversight and control of the work of the ACA and prosecutors. International cooperation should also be boosted to strengthen the national efforts in the fight against corruption, regardless and beyond ad hoc political will and affiliation. The ACA's independence, integrity, impartiality and accountability have yet to be further ensured and its proactivity and priority-setting must be improved, ensuring a non-selective approach and good-quality decisions, to improve its track record and results.

The ACA's financial independence has yet to be fully guaranteed.

Montenegro has yet to implement all recommendations of the evaluation reports from the (GRECO), including the fourth evaluation round on prevention of corruption in respect of MPs, judges and prosecutors, and the fifth evaluation round on preventing corruption and promoting integrity in central governments (top executive functions) and law enforcement agencies.

Prevention of corruption – legal framework

Key shortcomings identified in the legal framework for the prevention of and fight against corruption and its effective enforcement have yet to be addressed as described below. In this respect, Montenegro has yet to address in full the recommendations of the EU peer review missions conducted in 2019 and 2021 and of the evaluation reports from GRECO.

The Law on prevention of corruption (LPC) has not been amended. During the reporting period, the lack of coordination and cooperation between all stakeholders involved in this policy area was exacerbated. Three processes to review the LPC ran in parallel. In March 2022, the government launched a thorough analysis of the LPC for its amendment. In turn, the ACA, supported through the EU-Council of Europe Horizontal Facility, worked on a comprehensive analysis of the LPC, which so far produced three sets of recommendations: one concerning the position, mandate and powers of the ACA; another one focusing on asset declarations, gifts and sponsorships, and on legal mechanisms to prevent conflicts of interest; and a third focusing on the provisions of the LPC related to protection of whistle-blowers, integrity and misdemeanour. Finally, the Anti-corruption Committee of the Parliament took an initiative to revise some provisions of the LPC by setting up a working group at the end of 2022. The working group completed its work in late April 2023, and the Anti-Corruption Committee adopted the draft amendments to the LPC, but the plenary vote is still pending.

Montenegro did not yet improve the legal framework regulating **political parties' funding**, partly due to the lack of willingness on the part of political parties represented in the Parliament themselves. Shortcomings in the existing legal framework on political parties' financing include those identified in recommendations of the Office for Democratic Institutions and Human Rights of the Organization for Security and Co-operation in Europe (OSCE-ODIHR). The current legal framework does not provide for effective safeguards against and penalties for circumvention of the rules, which limits effective oversight. Limited progress was achieved on amending the rules on calculation and reporting of in-kind donations, in line with the Council of Europe's recommendations and aligning the annual financial reporting form with best accounting practice, which had been pending since 2014. Civil society organisations (CSOs) are critical of the lack of progress in revising the legal framework for combating corruption in political parties' financing. In particular, the Law on election of Councillors and MPs was not amended, and it must be aligned with the Law on financing of political entities and election campaigns.

Prevention of corruption – institutional framework

The ACA remains Montenegro's key institution for promoting integrity and preventing corruption. In performing its activities, the ACA cooperates with several public bodies, including the prosecution services and the State Audit Institution. The results of the ACA's investigations are subject to court review.

In July 2019, the President appointed the Anti-Corruption Council for a four-year term of office. The Anti-Corruption Council consists of five members and is responsible for decision-making on the ACA and for the appointment of its Director. The Council's mandate ended on

31 July 2023.

In November 2022, during the parliamentary debate on the ACA's 2021 annual report, some MPs announced an initiative to dismiss the ACA's management, questioning its impartiality and accusing it of taking a selective and biased approach in cases related to the previous political majority. Subsequently, the Anti-Corruption Committee of the Parliament set up a working group to propose amendments to the existing LPC to increase the Parliament's oversight functions on the ACA and the accountability of the ACA's management if it acts in a biased manner. Under the existing legislation, only the ACA's Council can dismiss the ACA's Director. The working group, which started working in early 2023, includes two MPs and two representatives of relevant CSOs. Representatives of the parliamentary opposition and the Director of the ACA refused to take part in the working group. These parallel initiatives suggest that Montenegro has yet to ensure leadership and a coherent approach to amending and modernising the legal and institutional framework for the prevention of corruption in line with European and international standards and best practice.

The ACA currently employs 53 persons while its organigram detailing the workforce envisages a total of 75 posts. Following the 2021 EU peer review mission recommendation to allocate additional human resources to the ACA, the government decided in the second half of 2022 to employ 14 more staff. A total of seven recruitments are finished, and the rest are ongoing. During the reporting period, the ACA continued its communication activities and collaboration with CSOs, holding meetings, participating in consultations, and attending 10 conferences organised by civil society. Moreover, in 2022, the ACA held 29 anti-corruption training sessions attended by 362 participants.

Based on the Law on financing of political entities and election campaigns, the ACA checks if legal entities, companies, entrepreneurs, and related natural and legal persons who performed activities of public interest or concluded a contract following a public procurement procedure gave contributions to political subjects in the two years before or after the contract period. Montenegro could strengthen prevention of corruption in the field of public procurement and political parties' financing by fully and efficiently exchanging good-quality data, and ensuring the interoperability between the Ministry of Finance's e-procurement system and the ACA's electronic system.

The ACA checks public procurement procedures based on whistle-blower reports related to government bodies, local self-government and administration units, and public companies, public institutions, and other legal entities whose majority owner or founder is the state or a municipality. In 2022, the ACA initiated 28 procedures based on whistle-blower reports (which is about 14.2% of a total of 188) and 9 procedures that were initiated *ex officio*.

In July 2022, the caretaker government decided to set up the new National Council for the Fight against High-level Corruption, replacing the one created in 2020. Beyond representatives of different ministries and other relevant bodies, judges and prosecutors, the National Council also includes representatives of CSOs, such as NGOs and the Union of Municipalities. Its constitutive session took place at the end of January 2023. The main responsibilities of the National Council include preparing, monitoring and reporting on the implementation of a new strategy for the fight against corruption and related action plans, to which this body must dedicate thematic sessions. Further responsibilities of the National Council include the strengthening of inter-institutional cooperation on matters related to corruption. The National Council met twice. As of June 2023, a needs assessment is being carried out under the Horizontal Facility funded by the EU and the Council of Europe to analyse the institutional framework and support the drafting of the strategy.

In December 2022, a peer review mission on the functioning of independent regulatory bodies in the area of fundamental rights took place, assessing the **Agency for Personal Data Protection and Free Access to Information**. The human resources capacity of the Agency needs to increase, particularly in the area of free access to information, where in 2022 only 10 staff dealt with a caseload of 8 865 complaints (2021: 5 285). Most of the complaints were filed by only a few physical persons, which could indicate an abuse of the system for financial benefit. The Agency's Council was not operational until August 2022 and was able to solve 3 743 complaints. By the end of 2022, the backlog stood at 5 720.

Prevention of corruption – track record

The **track record on prevention of corruption** continued to improve in terms of the number of cases dealt with. The ACA became somewhat more proactive in its work and outreach activities towards the public, media, and civil society.

In 2022, the ACA initiated a total of 444 new administrative procedures and completed 423 procedures (including cases from previous years). In the first quarter of 2023, the ACA initiated 28 administrative proceedings against public officials (income and assets declarations only). In 2022, the ACA instituted a total of 1 556 proceedings on various grounds before misdemeanour courts (2021: 1 164 proceedings), 1 043 proceedings were completed (including those from previous years) and penalties were imposed in 92.6% of cases. The total amount of fines, including direct misdemeanour orders, amounted to EUR 103 590 (2021: EUR 149 242). In the first quarter of 2023, the ACA submitted 410 requests for initiation of misdemeanour proceedings to the misdemeanour courts.

The total number of **income and assets declarations** submitted to the ACA on various grounds further grew in 2022, reaching 11 784 (2021: 10 657). The ACA performed administrative and technical checks on 6 168 reports, verification of accuracy and completeness on 1 742 reports, and additional verification of the reports of 20 high-ranking public officials, chosen in accordance with the degree of vulnerability of the area/function. Out of the 444 administrative proceedings the ACA initiated in 2022, 423 were related to income and assets (2021: 295). The ACA found violations of the law in 376 cases (2021: 160) and initiated 1 057 misdemeanour proceedings on reports on income and assets (2021: 1 002). In the first quarter of 2023, the ACA received 9 019 statements on income and assets (25% more than in the same period of 2022), which were all administratively and technically processed, while the additional verification phase was planned for the second quarter of 2023. In the first quarter of 2023, the ACA initiated 334 misdemeanour proceedings against both former and newly appointed public officials, out of which 267 proceedings were completed. Penalties were imposed in more than 80% of cases, for a total amount of EUR 21 945.

During the reporting period, the ACA continued its activities to inform and support those concerned by the obligation to submit reports on income and assets declarations.

On **incompatibility of functions and conflict of interest**, in 2022, the ACA issued 213 opinions (14.5% more than in 2021 (186)), leading to the resignation of 24 public officials (2021: 26), and one termination of employment (2021: two). A further 55 opinions were issued in the first quarter of 2023, leading to five resignations of public officials and one termination of the service contract.

In 2022, the ACA continued monitoring **the lifestyle of public officials**, using publicly available data and media reports. The ACA submitted 1 case to the Special Prosecution Office.

In the last three years, the ACA has initiated 102 administrative proceedings against judges

and 39 against prosecutors due to the incomplete reporting of their assets, or incorrect data. In January 2023, the Administrative Court decided that the submission of incorrect data related to asset declarations and income does not necessarily constitute a violation. The ACA challenged this before the Supreme Court and its opinion is pending.

In 2022, the ACA issued 213 opinions (2021: 186) on incompatibility of functions and conflict of interest, leading to the resignation of 24 public officials (2021: 26), and one termination of employment (2021: two).

However, further work is needed to effectively address the 2021 EU peer review recommendations on the ACA's role in dealing with conflict of interest and incompatibility of functions, assets declarations and monitoring of lifestyle of public officials.

Concerning **funding of political parties and electoral campaigns**, the ACA oversaw all local elections held in 2022 and the first semester of 2023. Subsequent local elections across Montenegro resulted in an unusually long period of election campaigns, increasing the work of the ACA in monitoring the application of the Law on financing of political entities and election campaigns (LFPEEC). In 2022, the ACA checked 55 604 reports out of the 55 773 reports submitted by political subjects, authorities, and media advertising service providers. The ACA imposed measures to suspend the transfer of budget funds for the financing of regular work on eight political subjects, and a permanent measure of suspension on another five. In the first quarter of 2023, the ACA received 19 002 reports submitted by political subjects, authorities, and media advertising service providers, of which it checked 18 856.

In 2022, the ACA registered a total of 117 irregularities in the reports of political parties, and initiated 439 misdemeanour proceedings for violation of the LFPEEC. Out of 167 complaints relating to electoral campaigns submitted in 2022, the ACA decided on 89, while other procedures are ongoing. In the first quarter of 2023, the ACA initiated misdemeanour proceedings for violation of the LFPEEC in 69 cases, and 86 proceedings were completed (also from previous years). The ACA imposed 10 measures on political entities. It organised four meetings with CSOs on monitoring, supervision and control of electoral campaigns in the 2022 local elections. In the first quarter of 2023, Two such meetings were organised. Despite the overall figures, the scope and therefore the impact of checks in this important area remain limited due to the unclear or deficient provisions of the LFPEEC, namely regarding the exemption of some categories of political subjects from the scrutiny of the ACA. In line with the findings of the 2021 peer review, and in view of the numerous hidden arrangements for (illegal) political party financing, further efforts are needed to adjust the rules to this volatile environment and make the monitoring of political parties' financing by the ACA and the State Audit Institution effective.

In 2022, the **State Audit Institution (SAI)** performed and published audit reports on both financial and regularity audits from 2021 for 12 political entities. Regularity audits resulted in five qualified, five adverse and two unqualified opinions, while for financial audits the SAI expressed nine unqualified, two qualified and one adverse opinion.

In 2022, the ACA received seven requests for **whistle-blower protection** (2021: five), three of which are still being processed. The ACA received 189 reports on threats to the public interest (2021: 142), out of which 94 were submitted anonymously. The ACA completed 81 procedures and identified threats to the public interest in five cases (2021: 15). The ACA forwarded 12 reports to the prosecution service, and 34 to other responsible state institutions. The largest number of procedures initiated based on whistle-blowers' reports is related to labour relations. In the first quarter of 2023, the ACA received 57 whistle-blower reports, a significant increase compared with the same period of last years. A total of 28 reports were

anonymous. A threat to the public interest was found in 1 of the 12 completed procedures. No procedure was forwarded by the ACA to the prosecution authorities, while 3 reports were forwarded to other responsible institutions. Further sustained results are needed, including by increasing the ACA's human resources expertise, in line with the recommendations of the April 2021 peer review. Montenegro remains the only country in the region without a specific law on whistle-blowing; the subject remains covered by the LPC, which is not fully in line with the EU *acquis*.

On **integrity plans**, in 2022, 704 reports (2021: 692) on the implementation of integrity plans in 2021 were submitted to the ACA. In the first quarter of 2023, 167 reports on the implementation of integrity plans in 2022 were submitted to the ACA by various authorities. By the end of 2022, the ACA had developed a methodology for assessing the application of anti-corruption measures in the judicial system, including an IT application for its implementation.

On **lobbying**, in 2022, the lobbying register included nine individuals and one legal entity. The working group on amending the Law on lobbying produced a first draft, which was submitted to the European Commission for its opinion in June 2022. The European Commission has shared its recommendations with the Montenegrin authorities. In February 2023, the Ministry of Justice adopted a new draft version of the Law addressing most of the recommendations. In December 2022, the working group finalised the drafting of nine implementing acts meant to regulate the implementation of the Law on lobbying. The working group accepted most recommendations provided by EU experts.

The **Code of Ethics for top executive officials** was adopted in 2021 by the government in the form of non-binding guidelines. It remains ineffective as no disciplinary penalties can be imposed until the Parliament adopts the Law on government.

Combating corruption

The criminal legislation to improve the fight against corruption is being revised in line with European standards. The existing legal framework on asset confiscation needs to be reviewed and its effective enforcement has yet to be improved substantially, in line with the EU *acquis*, European standards and best practice. The new draft law on confiscation adopted by the caretaker government and submitted to the Parliament failed to address all comments, recommendations and concerns provided by EU experts and the European Commission.

The **Special Prosecution Office (SPO)** leads prosecutions in cases of high-level corruption under the leadership of the Chief Special Prosecutor. It currently employs 48 staff, including 10 Special Prosecutors. Of these Special Prosecutors, 1 was assigned to the Centre for the Education of Judges and Prosecutors; two are not active anymore but receive compensation upon termination of office; two were reassigned from the High State Prosecutor's Office in Podgorica; and two were reassigned from the Basic State Prosecutor's Office in Podgorica.

The SPO's human resources remain largely insufficient to cope with a workload of up to 100 cases per Special Prosecutor. Furthermore, the office conditions are well below the minimum required European standards and prevent the SPO from appropriately and efficiently performing its duties. This also creates security risks. Based on the pre-feasibility study prepared by an EU project to address this grave issue, the Ministry of Justice is carrying out an internal analysis, with the initial objective of housing the SPO and the Special Police Unit on the same premises.

The **High Court of Podgorica** is the specialised court in charge of high-level corruption cases. Currently, the High Court has 34 judges, five of which work in the Special Department for Organised Crime, Corruption, Terrorism and War Crimes.

A more deterrent, consistent, and effective criminal sanctioning policy and criminal justice response to corruption and high-level corruption has yet to be enforced, including to avoid the perception of impunity. The use of **plea bargain agreements (PBAs)** in high-level corruption cases, when necessary, needs to be clarified and improved in line with European standards and practice to avoid abuse during criminal proceedings. PBAs must be resorted to with extreme care, only in very specific cases, for the right purposes and building in all necessary legal safeguards. When this mechanism is used, a legal cost-benefit analysis in the interest of justice should be carried out systematically. In no case should criminal penalties go below the legal statutory minimum. To improve the effective use of PBAs, guidelines need to be drafted for specialised courts and prosecution services; a working group was tasked with preparing this in January 2023. As a precautionary measure, the SPO decided to temporarily suspend the use of PBAs in October 2022 until the guidelines are adopted and unified in their use.

The **track record** of investigations and prosecutions in cases of high-level corruption improved but has yet to be further consolidated. By contrast, the track record of trials and final convictions in these cases is almost non-existent.

In December 2022, the SPO requested the Parliament to lift the immunity of five MPs as part of a criminal investigation on suspicion of abuse of office related to the allocation of apartments and favourable housing loans to state officials, including to prosecutors, judges, other MPs or Ministers. In April 2023, a majority in the Parliament voted in favour of the motion to strip the MPs of their immunity.

In 2022, the SPO issued orders to investigate criminal offences of high-level corruption in 11 cases against 76 individuals and five legal entities (2021: 15 cases against 70 individuals and 19 legal entities). Based on the government's data, in the same year, the SPO brought six indictments against eight individuals, and 11 indictments against 73 individuals and five legal entities, an increase compared with 2021 (three indictments against nine individuals; 11 indictments against 68 individuals and 21 legal entities). Financial investigations were launched in five cases, against 43 individuals and four legal entities (2021: seven cases against 40 individuals and four legal entities).

From 15 May to 10 October 2022, criminal charges were submitted to the SPO against 438 individuals and 21 legal entities. During the reporting period, criminal charges against 80 of these people were resolved. Against 27 people, decisions were made to dismiss criminal charges. Orders to investigate were issued against 52 people, while an order to suspend the investigation was made against 1 person. Charges against 129 natural persons and three legal entities remain pending.

Montenegro has yet to improve the legal approach to and track record on **financial investigations and confiscation of assets** linked to high-level corruption. Montenegro should urgently address the lack of expertise available in the justice system on financial investigations. In 2022, a temporary security measure (ban on disposing of immovable property) was imposed in one case against a defendant. The High Court in Podgorica adopted temporary measures in two cases. In two cases related to corruption, at the request of the SPO, funds and securities at banks were temporary blocked. Between 1 January and 22 March 2023, the High Court of Podgorica imposed provisional security measures in three new cases.

Fundamental rights

The legislative and institutional framework on fundamental rights is largely in place and Montenegro continues to largely meet its international obligations on human rights. However, additional efforts are needed to fully implement this framework. Some legislative changes are also needed, in particular in the area of non-discrimination. Just like the previous year, the reporting period was marked by polarisation and division. The most vulnerable groups in society (including Roma and Egyptians, persons with disabilities, LGBTIQ persons) continued to be subjected to discrimination, hate speech and hate crime.

Additional efforts need to be made to ensure access to justice and enforcement of rights in administrative and judicial proceedings, in particular for vulnerable groups.

Last year's recommendations remain valid. In the coming year, Montenegro should in particular:

- amend and adopt legislation in line with the EU *acquis*, European and international standards on domestic violence, anti-discrimination, hate crimes and hate speech, harmonisation of the 2020 Law on same-sex partnership, and data protection;
- amend the criminal legislation in line with the EU *acquis*, European and international standards for the protection of fundamental rights and procedural rights;
- more efficiently protect fundamental rights, in particular for vulnerable groups, and ensure the harmonised interpretation of European Court of Human Rights case-law and European and international human rights standards throughout the justice system, including by improving inter-institutional cooperation.

Montenegro continues to maintain a regular dialogue and cooperation with international human rights organisations and monitoring bodies. Overall, Montenegro fulfils its obligations under **international human rights instruments** and legislation. However, it has yet to ratify the International Convention on the Protection of the Rights of All Migrant Workers and Members of their Families, signed in October 2006; the 2014 Protocol to the 1930 Forced Labour Convention; and the 2019 Framework Convention on Tourism Ethics of the UN World Tourism Organization. Montenegro is late with its submission of reports to the International Covenant on Economic, Social and Cultural Rights (due in 2019), and the International Convention on the Elimination of All Forms of Racial Discrimination (due in 2021). Montenegro did not improve its systematic mechanisms for reporting to the UN human rights mechanisms and following up on their recommendations as recommended during the 2018 Universal Periodic Review (UPR). During its fourth UPR session on 8 May 2023, the country received 247 recommendations, out of which it accepted 225, noted 15, and will determine its position regarding seven recommendations by October. Most recommendations concern gender-based violence, hate speech and hate crime, other forms of discrimination, human trafficking, torture and ill-treatment and threats against journalists.

Montenegro continues to ensure good cooperation with the **European Court of Human Rights (ECtHR)**. In June 2023, there were 89 applications pending before the ECtHR. The ECtHR did not deliver any judgments in respect of Montenegro during the reporting period (against 5 in 2022). In the reporting period, 292 new applications were allocated to a decision body. Currently, there are no cases under close supervision by the Committee of Ministers.

Concerning the **promotion and enforcement of human rights**, institutional capacity has yet to be further strengthened, including by allocating appropriate funding. The role of the Constitutional Court in providing legal remedy for human rights violations was undermined,

due to the Court's incomplete composition as explained in the judiciary section of this report. The internal set-up of the Ministry of Human and Minority Rights should improve and address all areas related to fundamental rights, including by ensuring the necessary human resources are in place. Changes in the management and structure of the Ministry introduced in July 2022 undermined its capacity to promote fundamental rights, enforce the legal framework, draft new legislation, and implement and monitor existing strategies and policies. Key staff responsible for the rights of persons with disabilities and anti-discrimination were removed.

Montenegro has yet to adopt a comprehensive monitoring and data collection system in order to assess the level of implementation of human rights legislation, policies, and strategies.

The Ombudsperson's Office continues to be perceived as one of the most trusted institutions by Montenegrin citizens, and its views are often quoted in the media. The regulatory and institutional framework for its appropriate functioning is largely in place. It continues to be accredited with 'B' status by the Sub-Committee on Accreditation of the Global Alliance of National Human Rights Institutions. Montenegro should take measures to better align this framework with the Paris principles so that it could be upgraded to an 'A' status. The Ombudsman's capacity to handle complaints and the quality of its decisions continued to improve. However, the decisions and recommendations of the Ombudsman remain non-mandatory, and Montenegro needs to improve their systematic follow-up across all public institutions. The draft 2023 budget for the Ombudsperson's Office increased by 17% compared with the 2022 budget. However, this increase is partly due to the November 2022 government decision on raising the basic salary of certain institutions rather than reflecting an increase in the operational budget. The human resources capacity of the Ombudsperson's Office appears to be sufficient and stood at 36 employees as of December 2022.

In 2022, the Office dealt with 1 109 complaints (2021: 1 123), 890 of which it received in 2022 and 219 of which were transferred from 2021. It closed 979 cases (88.27%) (770 cases from 2022 and 209 cases from 2021). Of these, 343 cases were closed for lack of procedural requirements and reference to other legal remedies (126 cases were not in the mandate of the Office, 108 cases were closed due to inadmissibility, and 109 cases were referred to other legal remedies). The Office conducted investigations in 576 cases: in 94 cases, no infringement was found; in 327 cases, an infringement was found, with 89 infringements remedied in the course of the investigation; and in the remaining infringement cases, the Office issued opinions in 238 cases, with 658 recommendations. In 86 cases, the Office pointed at failures of public authorities to take preventive action. In 2 cases, it provided recommendations to adopt new legislation or amend laws or regulations. Most cases were related to violations of labour and employment rights, peaceful enjoyment of property, healthcare, right to privacy, right to legal remedy, and environmental protection. In its 2022 annual report, the Ombudsperson's Office found shortcomings in the reaction of state institutions to final court judgments.

By the end of 2022, the backlog of cases pending before the Constitutional Court included 2 564 related to the protection of human rights. Montenegro must ensure that the duration of proceedings before the Constitutional Court is reduced to guarantee the 2015 ECtHR's stand on the effectiveness of the constitutional complaint as a legal remedy in the country.

As regards the **prevention of torture and ill treatment**, on 22 June 2023, the European Committee for the Prevention of Torture and Inhuman or Degrading Treatment (CPT) called upon the Montenegrin authorities to investigate cases of police brutality and change 'the current culture of police impunity' and warned of poor conditions and severe overcrowding in remand prisons in Podgorica and Bijelo Polje in its latest report published in June 2022. In

May 2023, Montenegro submitted its report on the follow-up to the UN Committee against Torture (CAT) concluding observations of May 2022. Montenegro is in the process of amending its Criminal Code and Criminal Procedure Code to comply with 2017 and 2022 CAT recommendations to align the definition of torture with the Convention, punish acts of torture or ill treatment with penalties commensurate with their grave nature, and abolish the statute of limitations for the crime of torture. On 8 June 2023, the government adopted amendments to the Law on legal aid. Under these amendments, victims of torture and other forms of ill treatment as well as victims of crimes against sexual freedom and children who initiated proceedings for the protection of the rights of the child would be recognised as privileged users of the right to legal aid. The government requested the European Commission's assessment of the draft amendments to ensure alignment with the EU *acquis* and European standards, but failed to wait for it. The amendments have not been adopted by the Parliament.

Montenegro must step up its efforts to conduct efficient, effective and independent investigations to address police torture, violations, and illegal use of coercive measures. Following evidence of police torture leaked in the press, the Minister of Interior suspended four police officers from the Unit for Special Operational Support accused of extorting testimony using serious violence. However, no judicial follow-up has been made so far.

The National Preventive Mechanism (NPM) upgraded its "Methodology for implementing the duties and powers of the National Preventive Mechanism", incorporating the latest international standards and practices. In 2022, the NPM decided on the remaining 21 cases (out of a total of 27) concerning the conduct of police officers during the enthronement of the Metropolitan in the Cetinje Monastery on 5 September 2021. It found excessive use of chemical agents in all cases and a violation of Article 3 of the European Convention on Human Rights (prohibition of torture) and Article 28 of the Constitution of Montenegro (dignity and inviolability of persons). Investigations are still ongoing and there are no court proceedings yet. Visible identification markings (names, surnames, number of official badges, etc.) were introduced on police uniforms and protective helmets enabling identification and efficient investigations, but their use is not systematic. The NPM determined a violation of Article 3 of the Convention in one case of abuse in the women's prison in Podgorica. In six cases related to prohibition of torture and cruel, inhuman or degrading treatment or punishment in the work of the Police Administration, the NPM determined violation of rights in three cases.

Some progress was made towards implementing the CPT's 2019 recommendations on the **prison system** and conditions of detention. In July 2022, the government adopted the final report on the implementation of the action plan for the implementation of the 2017-2021 strategy for the execution of criminal penalties. On 22 June 2023, the government adopted the new strategy for 2023-2026 but its accompanying action plan for 2023-2024 has yet to be adopted. The Administration for Execution of Criminal Sanctions (AECS) initiated 11 disciplinary proceedings for breaching official duty, but not regarding abuse of power or authority in respect of torture or inhuman treatment of people deprived of their liberty. Hiring of staff and capacity building continued. Prisoners continue to enjoy access to programmes and occupational activities. Parts of the existing prison and remand facilities underwent adaptation and modernisation to improve the facilities. Preparations for the construction of the new prison facility in Mojkovac for the north of Montenegro and four facilities in Spuz (a special health institution, a reception, a multifunctional facility, and an open-type prison) continued and are not finalised. The AECS initiated activities to improve its capacity for implementing occupational therapy for prisoners. Several NGOs provided educational,

recreational and vocational activities for prisoners. In April 2022, there were 605 convicts, 19 of which were women, which is in accordance with the available places. The number of detainees is 464, 16 of which are women; 56 are accommodated in the pre-trial detention unit in Bijelo Polje and 408 in the overcrowded pre-trial detention unit in Podgorica, which has only 292 places. In 2022, the NPM conducted 40 visits and issued 81 recommendations to institutions and relevant ministries, 39 of which were implemented. The NPM received 70 complaints from people deprived of their liberty and found evidence of inhuman and degrading treatment in three cases, related to the poor material conditions of accommodation, inappropriate healthcare, and ineffective investigation into allegations of abuse. Despite some improvement, the material conditions in prisons, pre-trial detention facilities and psychiatric hospitals are still below international standards. Living conditions in the women's prison are decent and hygiene is satisfactory, but in the overcrowded Dobrota psychiatric hospital, living conditions and hygiene remain poor.

Montenegro must still adopt a new law on **personal data protection** in line with the EU *acquis*, the General Data Protection Regulation and the Law Enforcement Directive, and the EU Law Enforcement Directive. Subsequently, around 200 laws and implementing acts that contain rules on the processing of personal data will need to be harmonised with both new laws. Montenegro has not yet signed the 2018 Council of Europe Protocol amending the Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data (CETS 223). The human resources capacity of the Agency for Personal Data Protection and Free Access to Information needs to be strengthened as only 63% of its positions are effectively filled. The financial resources of the Agency should match its responsibilities, also in view of the planned broadening of its tasks, and the Agency's financial independence should be guaranteed. The lack of IT expertise in the Agency (with only one supervisor) and absence of a digital case management system negatively impact its work. The new tasks and powers planned for the Agency in the new draft law will exacerbate the issue of insufficient staff. In 2022, the Agency carried out 127 inspections in the field of personal data protection (13 control inspections, 78 inspections based on submitted initiatives, and 39 inspections based on requests for protection of rights). Following the dismissal of the Agency's President and one member of the Council in December 2021, the work of the Agency was blocked until the appointment of a new President and a new Council member in August 2022.

The state paid more than EUR 1.2 million to ca. 1 000 citizens who had won a lawsuit against the state for violating the right to privacy and personal data as well as the right to private and family life by publishing their names on a list of individuals subject to COVID-19 self-isolation measures in spring 2020.

In the area of **freedom of thought, conscience, and religion**, in 2022, the Ministry of Justice allocated EUR 610 581 to religious communities, EUR 585 000 of which to the Serbian Orthodox Church and EUR 30 000 to all other religious communities. In October 2022, the premises of the Montenegrin Orthodox Church in Podgorica were stoned. Also in October 2022, a day before the 10th Pride, the Serbian Orthodox Church organised a religious ceremony for the preservation of the sanctity of marriage and family. In November 2022, the Basic State Prosecutor opened an investigation into police behaviour during a six-hour interrogation of the late Metropolitan of Montenegro and the Littoral Amfilohije about violating anti-COVID-19 measures in June 2020. In February 2023, the Basic Court in Podgorica acquitted the Metropolitan of Montenegro and the Littoral Joanikije and 8 Niksic priests of charges of having acted contrary to the Health Ministry's orders to prevent the spread of a dangerous infectious disease by organising a prayer walk in Niksic in 2020 in which thousands of people participated. In February 2023, the Ombudsman opened a case

regarding the celebration of a Russian religious holiday in several schools in Podgorica, which is forbidden by law.

Freedom of expression

Montenegro has a pluralistic and diverse media landscape and has **some level of preparation** in the area of freedom of expression. Overall, **limited progress** was achieved. In general, the authorities provided prompt and effective law-enforcement and institutional responses to new cases of violence against journalists. However, there was no effective judicial follow-up of old cases. Despite the commendable practice of extensively involving civil society and media stakeholders in the drafting of new media legislation, the government failed to finalise the legislative proposals and present them to the Parliament. This is now long overdue. The authorities need to step up efforts to effectively address the pending recommendations of the ad hoc commission for monitoring violence against the media, particularly regarding important old cases. Radio Televizija Crne Gore (Radio Television of Montenegro – RTCG), the national public broadcaster, continued to produce politically balanced content, including during election periods. The RTCG must meet the highest standards of media integrity and accountability. Further sustained efforts are needed to counter disinformation and limit the effects of online harassment and hate speech without disproportionately limiting freedom of expression. The media environment remains highly politically polarised, with uneven application of the journalistic Code of Ethics and professional standards. Credible and effective self-regulation mechanisms have yet to be set up to strengthen media integrity and professionalism.

Last year's recommendations were only partly addressed and remain largely valid. In the coming year, Montenegro should in particular:

- provide prompt and effective law-enforcement and institutional protection to journalists against all forms of violence, including full and effective judicial follow-up in critical old cases;
- put in place clear safeguards against any form of undue influence on the editorial, institutional or financial independence of the public broadcaster, the RTCG, which needs to abide by the highest standards of professional integrity and accountability;
- urgently complete the revision and adoption of media legislation in line with the EU *acquis* and relevant European standards, and ensure these are introduced into the new media strategy.

Intimidation of journalists

The institutional and law-enforcement response to address new cases of violence against journalists and media workers continued to improve. During the reporting period, new cases of violence received a prompt and effective institutional and law-enforcement response. However, there was no tangible breakthrough in critical old cases, including the 2004 murder of the editor-in-chief of the daily newspaper Dan and the 2018 shooting of an investigative journalist. In 2022, the authorities registered 22 cases of violence against journalists, involving threats, intimidation, harassment and, in several instances, physical violence. In 13 of these cases, the prosecution authorities opened criminal proceedings. From 1 January to 31 May 2023, the police registered a total of five cases of violence against journalists, one of which was classified by the prosecution authorities as a criminal offence prosecutable *ex officio*. From 1 January 2023 until 31 March 2023, the courts dealt with 15 cases of crimes

committed against journalists or media property. The courts delivered judgments in eight cases, including seven convictions and one acquittal. In the remaining cases, criminal proceedings are ongoing.

In January 2023, the Appellate Court acquitted investigative journalist Jovo Martinovic of drug smuggling charges. The acquittal came after seven years of criminal proceedings, in which Martinovic received a sentence of one year in prison and spent 15 months in pre-trial custody.

In September, December 2022, and July 2023 the government adopted reports of the ad hoc commission for monitoring violence against the media. The commission issued new recommendations with reference to the long-lasting or ineffective investigations into cases of violence against journalists, while also urging the prosecution authorities to provide additional information on several cases. The authorities need to address, fully and effectively, the commission's pending recommendations, particularly regarding the critical old cases of attacks on journalists, and to provide the commission with all the necessary means to perform its work. In May 2023, the government extended the commission's term for two more years.

Instances of senior public officials engaging in strongly worded public criticism of media continued to occur. The authorities should promptly react to and publicly condemn all forms of violence against media, whereas public officials should refrain from exercising political pressure on journalists, including through public statements.

Legislative environment

The working group tasked with amending the media legislation prepared draft laws on media, on audiovisual media services and on the national public broadcaster, the RTCG, through an inclusive dialogue with media and civil society. The government organised a 40-day public debate on the three draft laws, which ended in December 2022. However, the adoption of the draft media laws was repeatedly delayed. The government adopted in October 2023 a new 2023-2027 media strategy .

Implementation of legislation/institutions

The media environment is pluralistic, but remains highly politically polarised, with generally ineffective self-regulation mechanisms and uneven application of the journalistic Code of Ethics and professional standards. In 2022, the Ombudsman registered 16 cases of hate speech and 14 cases in the area of public discourse and media, including discrimination on the grounds of ethnic and gender identity. In October 2022, the Council of the Agency for Electronic Media awarded a national broadcasting licence to another Serbian-owned media outlet. In December 2022, the Council appointed a new Director. In August 2022, the Council dismissed its former Director, after finding him in breach of conflicts of interest rules. The Podgorica Basic Court overturned the dismissal as unlawful in a first-instance ruling in May 2023, which the Council has appealed.

Public service broadcaster

The public broadcaster, the RTCG, continued to pursue a balanced editorial policy, providing a broad range of political stakeholders with opportunities to present diverse political views on all its platforms, including during municipal, presidential, and parliamentary elections. In January 2023, the Podgorica Basic Court overturned the RTCG Council's decision to appoint the public broadcaster's Director-General as unlawful. In May 2023, this ruling was upheld, in second instance, by the Podgorica High Court. In June 2023, the Council reappointed the same person as RTCG Director-General, causing a strong public reaction from multiple CSOs, which accused the RTCG Council of abuse of office and failure to comply with a final

and enforceable court decision. The prosecution authorities opened a criminal investigation into the case. An effective legal remedy in cases where the Parliament dismissed RTCG Council members has yet to be provided, either through case-law or through legislation.

Economic factors

Because of the relatively small size of Montenegro's economy, the advertising market is limited. This affects the economic sustainability of media outlets, leaving them particularly exposed to political and corporate interests, both from within the country and from abroad. All commercial TV channels with national broadcasting licences are controlled by Serbian owners. The authorities continued to provide state funding for content of public interest in broadcast, print and online media. They also continued to provide state funding for media self-regulation, through the Media Pluralism and Diversity Fund, introduced under the 2020 Media Law. The provisions of the Media Law that aim to ensure the transparency of public financing of the media are yet to be consistently and fully implemented. The long-overdue sectoral collective agreement for the media industry has yet to be signed, to improve the socio-economic position of media workers, providing them with additional rights and benefits not covered by the general collective agreement.

Internet

Although rarely present in the mainstream media, hate speech, disinformation, and hateful and insulting personal remarks remained prevalent in the comments sections of online news portals and on social media platforms. Multiple online news portals, including certain outlets with considerable readership, remained unregistered and continued to breach the applicable media legislation. The requirement under the applicable Law on media to remove illegal third-party comments from online media platforms should be amended in a manner that does not place an undue administrative burden on online media, particularly on smaller services.

Montenegro does not have a strategy for a better internet for children, including to ease the detection of and response to online child sexual abuse.

Freedom of artistic expression

Freedom of artistic creation and publication of works of art, as guaranteed by the Constitution, was generally respected, without any notable cases of restriction.

Professional organisations and working conditions

In January 2023, one of the national journalists' associations presented its annual award for the best news portal to Sputnik-Serbia.

Journalists and trade unions continued to report overall poor working conditions of most media professionals, including low salaries, unpaid overtime work, security risks, self-censorship, and various forms of pressure and undue influence both from media owners and third parties. Employees in local public broadcasters continued working in particularly challenging professional and socio-economic circumstances, being directly exposed to editorial influence and financial control by the local authorities.

The very weak media self-regulation remains a matter of concern. The rare existing self-regulatory bodies have a limited impact, as even media outlets and journalists themselves tend to bypass them and take cases against their competitors directly to courts.

The rights to **freedom of assembly and association** remain broadly respected. Of all public assemblies, 61% took place with authorisation following prior notification to the Police

Administration. In 2022, four public assemblies resulted in violence or disorder (2021: 21), none of the registered assemblies resulted in the use of police force, and 1 protest was temporarily banned by the police due to late notification. Amendments to the Law on public assemblies and public events to regulate spontaneous assemblies more precisely are still outstanding.

There was no progress regarding **property rights**. The process of restitution of properties expropriated in the past remained slow; some restitution cases have been pending for 19 years. The 2020 ECtHR decision in the ‘Nesic v. Montenegro’ case on returning coastal property expropriated by the Public Enterprise for Coastal Zone Management of Montenegro has not been implemented although the Montenegro Supreme Court ratified it in December 2020. Montenegro needs to ensure fair restitution proceedings within a reasonable time and full independence of the three Regional Restitution Commissions (Bijelo Polje, Bar and Podgorica).

There was no progress towards adoption of a new law that would ensure full compliance of national legislation with the EU *acquis*, European standards on **anti-discrimination**, and the 2017 recommendations of the European Commission against Racism and Intolerance.

Societal polarisation, misogyny and hate speech increased. Vulnerable groups, including Roma and Egyptians, persons with disabilities and the LGBTIQ community continued to experience multiple forms of discrimination and challenges in exercising their equal rights and were occasionally exposed to hate speech and hate crime. There is an urgent need to effectively address all forms of discrimination by using legal protection mechanisms. People’s acceptance of and respect for pluralism in society needs to be stimulated from an early age through engagement with young people and adults to promote behavioural changes and tolerance of diversity. According to a December 2022 Center for Democracy and Human Rights survey on discrimination, 67% of respondents (2020: 57%) believe that discrimination is present in Montenegro and mainly on the ground of political belief. In 2022, the Ombudsperson’s Office received 256 complaints of discrimination, an upward trend compared with 2021 (173). This may imply that trust in the work of the Ombudsman is growing, or that potential victims are more empowered to report discrimination. As in previous years, most complaints were related to labour and employment. In 2022, the Ombudsman processed 16 cases of hate speech and 14 cases in the field of public discourse / media. The Ombudsman established hate speech based on social or ethnic origin in one case; based on sex, change of sex and gender identity in three cases; based on nationality in two cases; and based on political or other opinion in one case. In the area of public discourse, the Ombudsman established discrimination based on nationality in one case; based on social or ethnic origin in one case; and based on political or other opinion in one case. The 2017 priority recommendation of the European Commission against Racism and Intolerance to put in place a system for collection of disaggregated data on hate crime has still not been implemented as this depends on the pending amendments to the Criminal Code.

On **gender equality**, limited progress was achieved. The implementation of the 2021-2025 national strategy continued. However, Montenegro must address the issue of gender-based violence and domestic violence by amending the strategy. The legislative framework on gender equality still has a limited impact due to insufficient political will to prioritise this issue in the overall governmental accountability mechanisms.

Women remain under-represented in political and economic decision-making. In the new Parliament, out of 81 MPs in total, only 17 are women, which represents a slight reduction compared with the previous Parliament, which had 18 women MPs. Women make up only a quarter of the public administration’s total management, often due to explicit or implicit bias

in hiring, training, and promotion practices. Smear campaigns, hate speech and use of gender-based violence against women in politics and public life still persist although the number of cases fell slightly.

The 2023-2024 action plan of the 2021-2025 national strategy for gender equality is under preparation. There is an urgent need to effectively address deeply rooted societal behaviour that degrades and discriminates against women, resulting in instances of gender-based violence.

The Ministry of Human and Minority Rights started to cooperate closely with the public broadcaster RTCG, and organised training courses on gender-based hate speech, sexism and misogyny for journalists and RTCG employees.

Gender-based violence, in particular domestic violence, remains a serious and persistent issue and the most extreme manifestation of gender inequality in Montenegro. Despite a solid legal framework, there is a lack of systemic gender responsiveness and women-friendly procedures for victims of violence. Limited specialisation of justice, social, health and police professionals dealing with gender-based violence and violence against women remains a challenge. The investigative and judicial practice remained very lenient, enforcing only some protective measures in misdemeanour proceedings and imposing very few security measures in criminal proceedings. Such practice is not in line with international standards, above all with the practice of the ECtHR, which requires state authorities to implement proper investigation in case of domestic violence and to take measures for appropriate criminal prosecution. In the reporting period, of all imposed misdemeanour penalties, fines made up one third (32, i.e. 36%) and suspended sentences one fifth (21, i.e. 6%), while prison sentences are still rarely imposed (10%).

Women's associations remain an important factor in supporting victims of gender-based violence and in organising various training sessions and awareness-raising campaigns. However, these organisations are facing constant financial constraints.

In August 2022, the Ministry of Labour and Social Welfare set up the Directorate for Gender Based Violence, which is an important milestone in developing a proper institutional infrastructure to enable appropriate implementation of the Istanbul Convention and to give due attention to monitoring and advancement of the protection and prevention systems. However, Montenegro should allocate appropriate funding to the Directorate, to ensure it is fully operational, as it is currently unable to provide efficient and appropriate support.

In December 2022, the Gender Equality Committee hosted the 15th session of the Women's Parliament, on the topic of combating violence against women, as part of the campaign '16 days of activism against gender-based violence'.

Crisis centres and clear protocols for victims of sexual violence have not been created yet.

In the area of **rights of the child**, the legislative and institutional framework is largely aligned with international human rights instruments, including all areas covered by the UN Convention on the Rights of the Child and its optional protocols. However, challenges remain in effective implementation due to a poor accountability framework, inappropriate and insufficient capacity, lack of systematic monitoring and sufficient funding, and lack of quality assurance of existing laws, strategies, and action plans. The systematic collection of reliable and comparable data disaggregated by age and sex is essential for setting evidence-based policy priorities and ensuring effective protection of children.

In July 2022, the government set up the Council for the Rights of the Child for the first time at Prime Minister level. However, its inaugural session took place only on 13 March 2023,

when it adopted an action plan for 2023-2024. On 26 May 2023, the Council adopted specific measures the government must implement in 2023 to prevent cases of violence among children, adolescents and young people. Montenegro must step up its efforts to monitor the implementation of the national strategy on exercise of child rights (2019-2023), evaluate its impact and prepare the fourth periodic report to the UN Committee on the Rights of the Child due by November 2023.

In 2022, the Ombudsman received 225 complaints related to rights of the child (2021: 216). These cases were predominantly related to education, social and child protection, healthcare, rights of children in family relationships, peer violence, as well as rights of children with disabilities. Besides an increase in domestic violence, peer violence at school remains an alarming trend. Child access to justice, in particular of vulnerable groups, has yet to be improved, and child-friendly proceedings for all children in contact with the law have yet to be ensured. This refers both to children in criminal proceedings (child offenders, child victims and children witnesses) and to children in proceedings related to civil or family law and misdemeanour proceedings. There was no progress regarding the follow-up on the UN monitoring bodies' recommendations and on Resolution 1468 of the Council of Europe Parliamentary Assembly to amend the Family Law and raise the minimum age for entering a marriage to 18 years. The practice of arranged child marriages, in particular among the Roma and Egyptian communities, remains a matter of serious concern. MONSTAT's 2021 survey on income and living conditions, published in December 2022, shows that every third child in Montenegro lives at risk of poverty.

There is no satisfactory level of protection of children from perpetrators of sexual offences and there is still a lack of systematically collected disaggregated data on child sexual abuse and sexual exploitation. The strategy for the prevention and protection of children against violence and its action plan expired in 2021 and have yet to be updated. The current Criminal Code envisages tightening the penal policy regarding crimes of child sexual abuse (in line with the recommendations of the Lanzarote Convention), drawing up a register of offenders and surveillance measures against perpetrators after their time in prison. However, these new rules are not implemented due to the lack of implementing legislation. In 2022, the Police Directorate registered 23 criminal acts of child sexual abuse (three related to rape, five were qualified as child molestation, 11 related to illicit sexual acts, and four related to child pornography). The Criminal Code is yet to be revised to fully comply with the Convention on the Rights of the Child and its First Optional Protocol (on the sale of children, child prostitution, and child pornography) and legislation needs to address online child sexual exploitation. The National SOS Children's Line restarted operating in autumn 2022 after it had been inactive due to lack of funding. However, its working hours were shortened to eight working hours per day from the previous 24/7 schedule due to lack of resources, both financial and human. Montenegro needs to take the necessary steps to ensure that all children are registered systematically in birth registers.

In December 2022, the number of children living in institutional care was 110, slightly lower than in February 2022 (115). The drafting of a national strategy on deinstitutionalisation has been slow and organisations of persons with disabilities are not involved in the process.

Regarding the **rights of persons with disabilities**, there was no progress. Persons with disabilities in Montenegro cannot fully exercise their rights and continue facing multiple forms of discrimination. In July 2022, the Ministry of Human and Minority Rights abolished the Directorate for the Protection and Equality of persons with disabilities. Montenegro should set up such a directorate again or assign the relevant responsibilities to another service to oversee the implementation of the 2022-2027 strategy for protection from discrimination

of persons with disabilities and promotion of equality and its action plans for 2023. Montenegro has yet to adopt the draft law on a unified disability assessment body, which will be the basis for reforming the system to bring about more just, more equal and easier access to rights, enabling a shift from a medical to a human rights-based model. A decision allocating premises for the future institute for disability determination is pending the adoption of the draft law on a unified disability assessment body. Montenegro has yet to adopt the law on professional rehabilitation and employment of persons with disabilities, which would also regulate the location and management of the corresponding fund. The National Council for the rights of persons with disabilities, the entity in charge of monitoring the implementation of all laws and strategies to promote rights and to support better coordination on disability, is not functional. In May 2023, the Ombudsperson Office established an independent monitoring mechanism under the Convention on the Rights of Persons with Disabilities. The recommendations of the UN Committee on the Rights of Persons with Disabilities from 2017 are not fulfilled, especially regarding the necessary reform of guardianship and decision-making on behalf of persons with disabilities. Montenegro has not adopted an action plan to implement the Committee's recommendations. Some definitions of disability in Montenegrin legislation use derogatory terminology. On 7 December 2022, the Higher Court in Podgorica confirmed an earlier judgment of the Basic Court in Podgorica, which found that a person had suffered repeated disability-related discrimination by the Social Work Centres of Kotor, Tivat and Budva and the State of Montenegro. This is the first final judgment in Montenegro regarding the protection of persons with disabilities from discrimination in access to information and in proceedings before authorities.

There was no progress regarding the protection of the **rights of lesbian, gay, bisexual, transgender, intersex, and queer (LGBTIQ) persons**. Several attacks on offices of LGBTIQ NGOs and private apartments of LGBTIQ activists during the reporting period as well as many incidents of hate speech against LGBTIQ persons including on social media are a matter of concern. As a result of the July 2022 reorganisation of the Ministry of Human and Minority Rights, the responsibility for promoting and protecting the rights of LGBTIQ persons is not allocated to any specific service. The law on legal gender recognition is yet to be adopted. In October 2022, the 10th Podgorica Pride took place with the participation of several ministers and without any incidents. There was no progress in harmonising relevant implementing legislation with the Law on same-sex partnerships. In 2022, the Ministry allocated EUR 250 000 to LGBTIQ NGOs, 43% more funds than in 2021 (EUR 174 904). In 2022, the courts for misdemeanours processed 76 cases of discrimination or other forms of attack on LGBTIQ persons.

The amendments to the Criminal Procedure Code and the Criminal Code to fully align criminal legislation with the EU *acquis* and European and International standards on **procedural rights** for suspects and accused persons in criminal proceedings, and victims of crime are being drafted with the support of EU expertise. The amendments aim to tackle provisions on the right to information, the right to be present and participate at all stages of the proceedings, unjustified prolonged pre-trial detentions, insufficient protection of victims, in particular women and children, as well as the overall length of proceedings. Montenegro has yet to adopt a law on the procedural safeguards for children/juveniles in criminal proceedings. Comprehensive data on free legal aid is lacking as it depends on the development of the new judicial information system. In 2022, the budget allocated and implemented to legal aid amounted to EUR 108 776 (2021: EUR 121 500).

Amendments to the Law on protection against domestic violence are not in place. A systematic approach to dealing with and providing information to victims is still lacking. A

national strategy for the protection of victims' rights is under preparation. Montenegro still needs to stop the suspension of the Law on victims' compensation and secure sufficient funding for victims' support.

Regarding the rights of persons belonging to **minorities**, in December 2022, Montenegro submitted its sixth report on the implementation of the European Charter for Regional or Minority Languages and its fourth report on the implementation of the Framework Convention for the Protection of National Minorities. In September 2023, the Committee of Experts of the European Charter for Regional or Minority Languages published its seventh monitoring report on Montenegro, noting that shortcomings remain for the adequate use and protection of the Romani language in line with European standards and legislation. In April 2023, the report on the implementation of the 2022 action plan to implement the minority policy strategy for 2019-2023 was adopted, while the 2023 action plan was adopted in May 2023. There is still no equal treatment of minorities in the Parliament. Data on the implementation of the 2019-2023 minority policy strategy is not available. In July 2022, the Ministry of Human and Minority Rights set up a new Directorate for the advancement and protection of the rights of minority nations and other minority communities. In 2022, the Ministry allocated EUR 150 000 to NGOs working on rights of persons belonging to minorities. In November 2022, the Fund for the Protection and Realisation of Minority Rights allocated more than EUR 1 million to 195 organisations and individuals for the promotion of rights of persons belonging to minorities. In August 2023, the Special Prosecution Office opened a criminal investigation into the financial management of the Minority Fund. In March 2022, the Ombudsman issued an opinion to the Ministry regarding possible amendments to the Law on minority rights and freedoms to ensure direct appointment in Minority Councils based on the freely expressed will of minority nations and other minority national communities.

Roma and Egyptians remain the most vulnerable and antigypsyism remains a problem. There were no developments regarding the reduction of the threshold for political representation of Roma in the Parliament, as the Law on the election of Councillors and MPs was not amended. On 6 April 2023, the Parliamentary Committee for human rights and freedoms in cooperation with the Ministry of Human and Minority Rights and the Ombudsman organised the first sitting of the Roma Parliament. The Roma Council boycotted the sitting. On 19 October 2022, the government organised the third Roma ministerial meeting in Podgorica. The Ministers of all Western Balkan countries responsible for Roma inclusion agreed to act upon the commitments made in Poznan in 2019 and the first two ministerial meetings organised in Tirana (2020) and Sarajevo (2021). They also agreed to strengthen the ongoing work on Roma integration in the areas of housing, employment, green and digital agendas, and Roma responsive budgeting, and to adopt strong monitoring and reporting systems to measure progress on implementation of the new Roma strategies and the Poznan Declaration objectives with the assistance of the national statistical offices.

On 2 November 2022, the government appointed its national Roma contact point (NRCP), a position vacant since August 2020. The NRCP comes from the Roma community and is a long-term employee of the Ministry. However, the NRCP does not have a decision-making role in the Ministry and its limited capacity and resources remain major weaknesses. On 26 May 2023, the government adopted a Decision on the establishment of the coordination body for monitoring the implementation of Poznan Declaration commitments, chaired by the NRCP.

In 2022, 26 civil society organisations received public funds to implement projects in the area of Roma inclusion. In addition, in 2022, the Minority Fund supported 10 projects in the area

of Roma inclusion. The budget allocated for projects supporting Roma inclusion is increasing, but appropriate planning, monitoring and financial control are lacking.

In the 2022/2023 school year, 202 Roma children attended preschool education (92 boys and 110 girls), 1 833 attended primary school (950 boys and 883 girls), and 214 attended secondary school (122 boys and 92 girls). Currently, there are 14 Roma university students. There is an increase in the number of Roma education mediators working in various municipalities, 30 of whom are supported by the Ministry of Education. The legal framework still does not sufficiently support the enrolment of Roma students in higher education. Although Montenegro provides scholarships of EUR 150 per month, there are no additional incentives. Overall, the quality of education of Roma children remains an area of great concern.

In 2022, the Ombudsman conducted a field survey in Roma settlements in 13 municipalities. Preliminary findings show that Roma and Egyptians live in less segregated settlements than 6 or 7 years ago, but 42.2% of Roma still live in settlements populated only by Roma. The problem of overcrowding in Roma households persists, with slight improvements in terms of access to water, power supply, and possession of basic appliances.

The country does still not systematically address child begging and child marriages, and neither does it take sufficient steps to fulfil its pledges to address statelessness as recommended by the United Nations High Commissioner for Refugees (UNHCR). The Romani language is underused and not taught in schools.

Regarding displaced and **internally displaced persons**, from 7 November 2009 to 1 June 2023, there were 15 271 requests for permanent or temporary residence. Of these, 15 159 requests were resolved, and 112 cases are still pending. A total of 12 410 people received permanent or temporary residence up to three years, 297 requests were refused, and 2 448 cases were suspended due to incomplete or duplicated requests.

Between the entry into force of the new Law on foreigners in 2018 and March 2023, nine people were recognised as stateless, while for 17 the procedure for determining statelessness is ongoing. Montenegro has yet to adopt amendments to the Law on foreigners to strengthen the statelessness determination procedure, primarily regarding procedural guarantees and access to rights during the procedure and upon recognition of stateless status. This is a concern.

According to the UNHCR, there are currently around 500 people at risk of statelessness in Montenegro. Through close cooperation between the Ministry of Interior and the UNHCR, the new birth registration practice for this specific group of people yielded results: the Ministry of Interior completed birth registration of all stateless children in Montenegro known to the UNHCR and continuously strengthens the birth registration procedure. The public consultation regarding the amendments to the Law on foreigners and statelessness determination procedure in Montenegro was completed. The Ministry of Interior proposal would grant the right to initiate the statelessness determination procedure to a person with habitual residence in Montenegro of at least three years before the initiation of statelessness determination procedure, or whose family members are citizens of Montenegro, or to foreigners with permanent/temporary residence. According to the UNHCR, access to statelessness determination procedure remains an issue of serious concern, as it limits the fairness of the process and is seen as not being in line with 1954 Statelessness Convention.

On **citizenship rights**, the investor citizenship scheme expired on 31 December 2022. There should be no further scheme. Pending applications should be thoroughly screened, as should the origin of funds generated by the scheme, for which no Montenegrin body has taken

responsibility.

2.2.2. Chapter 24: Justice, freedom and security

The EU has common rules for border control, visas, external migration and asylum. Schengen cooperation entails lifting border controls inside the EU. Member States also cooperate with Montenegro in the fight against organised crime and terrorism, and on judicial, police and custom matters, all with the support of the EU justice and home affairs agencies.

Montenegro is **moderately prepared** in the area of justice, freedom and security. The legislative and institutional frameworks are largely in place. **Limited progress** was achieved, by starting to address the critical lack of human resources for border management, taking initial steps to align the visa policy with the EU's list of visa-required third countries, and earmarking state funds to increase the accommodation capacity for migrants. However, overall, last year's recommendations remain largely valid.

In the coming year, Montenegro should in particular:

- limit the use of plea bargains to exceptional cases, to further increase the transparency and credibility of the judicial response to organised crime through a more deterrent and consistent sanctioning policy;
- align the legal and operational approach to financial investigations, asset seizure and confiscation and the fight against money laundering with EU and international standards, and establish a convincing track record in these areas;
- further strengthen border management capacity by addressing critical gaps in border surveillance equipment; take the necessary steps to set up an Advance Passenger Information System and a biometric migrant registration system; further align Montenegro's visa policy with the EU's list of visa-required countries, in particular with regard to countries presenting irregular migration or security risks to the EU; take measures to further address the protection needs of migrants and increase administrative capacity in the area of returns.

Fight against organised crime

Montenegro is **in between some and moderate level of preparation** in the fight against organised crime. **Some progress** was made in addressing last year's recommendations, in particular as regards the efficiency of criminal investigations. Montenegro increased the number of investigators and experts in key areas, such as financial investigations, cybercrime and special investigative measures.

Montenegro implemented an ambitious human resources reform of the police: it created new posts, set up new units and recruited new staff. Prominent members of organised crime groups were arrested, along with some top-level officials from law enforcement agencies, pointing to a deep infiltration of organised crime into state structures. However, there was no final court decision on organised crime in the areas of tobacco smuggling, money laundering, trafficking in human beings or cybercrime. The track record in final asset confiscation remained very limited. Montenegro has yet to address some systemic shortcomings affecting its criminal justice system across the board, including the way organised crime cases are handled in courts.

Last year's recommendations remain largely valid. In the coming year, Montenegro should in particular:

- continue increasing the efficiency of criminal investigations by setting up a fully

functional interoperable system with a single search feature and a case management system shared between prosecutors and investigators;

- address the lengthiness of trials and frequent adjournments in organised crime cases; ensure stronger mutual understanding between courts and the prosecution of key legal concepts such as money laundering and the quality of evidence;
- address the risks of corruption and infiltration of organised crime into law enforcement agencies and the judiciary by implementing a strong prevention policy and providing a stringent judicial response to detected cases.

Institutional set-up and legal alignment

The number of police officers fell to 3 980 in 2022 (from 4 586 in 2021). A total of 375 officers retired and 105 administrative staff moved to the Ministry of Interior. The ratio of police officers remains high, at 639 per 100 000 inhabitants, compared with an EU average of 335.3 per 100 000 inhabitants (Eurostat, 2019-2021). However, unlike most EU Member States, Montenegro counts border guards as police officers (1 540 staff members), as well as non-operational staff such as advisers and officers without police rank.

Montenegro continued to work on amendments to its legal framework for the fight against organised crime, often with EU expert support, to align it with the EU *acquis* and address existing loopholes. However, in most cases, adoption of the legislation is still pending. The draft amendments to the criminal code, that are needed to align it with the EU *acquis* on a large range of topics, such as trafficking in human beings and anti-money laundering, are still pending adoption.

Montenegro has yet to adopt the amendments to the Law on seizure and confiscation of material benefit derived from criminal activity, drafted to address legal obstacles to the confiscation of criminal assets. In February 2023, the government adopted a first version, which did not take into account the European Commission's comments. Eventually, a working group was set up to review the draft.

In December 2022, the Parliament adopted amendments to the Law on internal affairs relating to the conditions of retirement of police officers. It also adopted one amendment to the existing Law on games of chance and prize competitions, with the limited objective of introducing a mandatory audio-visual surveillance system for games of chance, but without addressing any of the other issues with the current law.

The Central Bank of Montenegro has a central register of resident accounts, but still does not have a register of non-resident accounts, a crucial tool for investigations involving non-residents. Montenegro did not address the problem of the incomplete and not fully digitalised land cadastre, which hampers the conduct of financial investigations, the confiscation of assets, and the implementation of internal penalties. A centralised database on organised crime and corruption cases, containing data collected from all relevant authorities is needed for reporting, monitoring and policymaking purposes.

In the area of firearms, a revised Law on weapons, aimed at aligning rules on marking of firearms and technical specifications with EU standards, has been pending adoption by the Parliament for two years. Adoption of the law was not on the parliamentary agenda during the reporting period.

In the area of trafficking in human beings, the revision of the criminal code is needed, to align it with the EU *acquis*.

Montenegro increased the budget allocated to the Special Prosecutor's Office (SPO) by

EUR 2 million. A total of 20 new posts were created for administrative staff and IT and financial experts, bringing the number of posts for support staff to 55. Recruitments are ongoing. However, the number of Special Prosecutors (11, including the Special Chief Prosecutor) remains insufficient to cope with the SPO's heavy workload. Special Prosecutors handle up to 100 organised crime or high-level corruption cases each. This is due to the very broad description of the SPO's mandate in the law, which includes smaller and simpler cases, which could be handled by other prosecution services. Some thematic specialisation of Special Prosecutors was introduced. In September 2022, the government adopted a decision to transfer the SPO (together with the State Supreme Prosecutor and the Special Police Unit) to another government building, to address its current precarious housing and security conditions. However, the SPO's removal can only take place after the necessary refurbishment.

In March 2023, a police development strategy for 2023-2026 was adopted. An ambitious human resources reform of the police was implemented in 2022. Further to the adoption of a new rulebook on internal organisation of the Ministry of Interior and the police in August 2022, 239 new posts were added to the Directorate for the fight against organised crime, either through internal transfers of posts from other Directorates or through the creation of new posts. The unit in charge of special investigative methods benefited the most from this increase, with an increase in posts from 72 to 121. The number of Special Police Unit posts rose from 32 to 50. A new unit in charge of financial investigations and the fight against corruption and economic crime was created. The number of posts in the group for fighting drug smuggling rose to 25. In the area of firearms, a specialised team was created, with 8 job positions dedicated to the investigation of firearms smuggling offences. However, only 50% of the new posts have been filled so far. For some posts, a 10 to 20% salary increase was introduced, to attract and retain more specialised profiles in the police.

At the same time, the government did not adopt a human resources plan, which is required by the Law on public administration and has been ready for adoption since 2020. Because of this, the appointment of all five Deputy Police Directors and other senior positions is blocked. The Deputy Police Directors have been in an acting position for three years.

In March 2023, the Deputy Police Director in charge of the fight against organised crime was arrested on the Special Prosecutor's order on suspicion of having collaborated with organised crime groups between 2018 to 2020. This prompted a major reshuffle in the police. On 30 March 2023, the government dismissed the Police Director, who had been in function since August 2021. He was replaced by the Chief of Budva's regional police branch. The decision was not taken in accordance with the rule on dismissal of Police Directors, which provides that the dismissal of Police Directors is triggered by the Parliament's Security and Defence Committee, and not by the government. The former Police Director lodged a complaint against the decision of the government with the Administrative Court of Montenegro.

At the same time, a large-scale reshuffling of heads of units and middle managers in the Criminal Police Directorate was launched. Some 19 new heads of regional offices and central units were appointed by the new Police Director. The department for the fight against serious criminal offences was dismantled and all its officers were temporarily suspended. The equipment of this department was transferred to the Special Police Unit. The Head of the Special Police Unit was promoted to the post of Deputy Police Director in charge of the fight against organised crime, replacing the arrested former Deputy Director, while remaining Head of the Special Police Unit. He was also appointed as main contact person for the cooperation with Europol. Merit-based appointments and procedural safeguards against

political influence need to be guiding principles in the reform of the police.

The percentage of women in the police has increased from 9% to 13.8% in the last ten years, with 20 women in middle- or low-level managerial positions (8.5% of all managerial positions). There is no woman at senior management level.

Implementation and enforcement capacity

In 2022, Montenegro's law enforcement agencies had key successes in the fight against criminal networks and arrested 24 members of the so-called Balkan Cartel group, suspected of drug smuggling. In 2022, the SPO launched 17 new investigations into organised crime against 140 people and five legal entities (2021: 13) and brought indictments in 13 cases against 103 people and six legal entities.

The proactive approach of the SPO was reflected in an unprecedented number of high-profile cases, suggesting a deep infiltration of organised crime into state structures and law enforcement agencies. The cases currently under investigation or pending before the courts involve, among other people, a former Special Prosecutor, the former President of the Commercial Court, the former President of the Supreme Court, the former Director and a staff member of the National Security Agency, the former Director of the customs and several customs senior officials, a former Acting Deputy Police Director and several police officers, a former official of the penitential administration, the mayor of Budva, a former prosecutor of a Basic Court, etc. The prosecution of the former President of the Supreme Court of Montenegro, of her son, her former bodyguard and nine other people led to an indictment in October 2022. They are suspected of creating a criminal organisation, drug smuggling, active and passive corruption, abuse of official position, illegal possession of weapons and concealment of evidence.

In November 2022, an indictment was brought against the former President of the Commercial Court of Montenegro and 12 other defendants (including bankruptcy trustees and four legal entities) on suspicion of creation of a criminal organisation and abuse of office. The case involving a former Special Prosecutor is related to his suspected links with one of the two main criminal groups of Montenegro and suspected protection of the interests of this group by deciding to close an investigation despite sufficient legal ground to continue it.

In March 2023, the police of Montenegro was targeted by a series of arrests. The Special Police Unit brought charges against 18 people, including six police officers and one former National Security Agency officer, for their suspected involvement in a broad trans-Atlantic cocaine smuggling network. A total of six suspects were arrested, while others are on the run or abroad. One week later, the Acting Deputy Police Director for the fight against organised crime was arrested on suspicion of involvement in the same case. A key protagonist in this case, a former police officer, is still at large.

The number of court judgments and convictions continued to rise in 2022, reflecting the upward trend in the number of investigations since 2020. The High Court in Podgorica handled 79 cases of organised crime and high-level corruption, against 606 defendants (2021: 73 and 492, respectively). A total of nine cases were partially resolved. Decisions against 20 people were taken, of which 18 were convictions based on a plea bargain and two were acquittals. The Special Department of the High Court of Podgorica in charge of organised crime and high-level corruption currently has six judges.

The external assessment of the sentencing policy of Montenegro conducted in 2021 concluded that courts tend to impose sentences in the bottom third or lower half of the sentencing ranges. This conclusion has not led to a review of sentencing policy. Until

October 2022, plea bargains continued to be widely used in organised and serious crime cases, to process cases more quickly by confirming the defendant's guilt and ensuring some asset confiscation, resulting in sentences, fines and asset confiscations that are disproportionally low compared with the gravity of the crime. A working group made up of prosecutors and judges from various jurisdictions was created to prepare guidelines to better regulate the use of plea bargain and set common standards for prosecutors. The use of plea bargains was temporarily suspended in October 2022. The High Court's organisational issues and constraints (including the insufficient space for hearings) were not addressed and continued to lead to frequent adjournments and lengthy trials. Some cases have been pending before the Court since 2017.

In 2022, Montenegro continued to be actively involved **in international police cooperation**. Montenegro exchanged a total of 4 225 communications through Europol's Secure Information Exchange Network Application (SIENA) (2021: 4 292) and 585 communications with foreign liaison officers (2021: 499). A total of 14 fugitives were targeted by active search. The connection of Montenegrin law enforcement agencies – including the department in charge of the fight against organised crime – to SIENA improved the proactivity and, to some extent, the efficiency of investigations. Montenegro also exchanged 36 991 communications through Interpol in 2022 (2021: 59 162).

Based on requests from Montenegro, 43 criminal group members were arrested abroad, including the leader of a Montenegrin organised crime group. The number of organised crime group members arrested in Montenegro based on arrest warrants from foreign Interpol offices and fugitive searches rose to 71 (from 55 in 2021), including three people from the FBI most wanted list, and the leader of a Turkish organised crime group. In March 2023, the police arrested a South Korean national under an international arrest warrant for an illegal financial scheme involving USD 40 billion in cryptocurrencies.

In 2022, Montenegro participated in 63 operational actions across 13 operational action plans (OAPs) of the European Multidisciplinary Platform against Criminal Threats (EMPACT) and was the co-leader of 4 operational activities, such as the operational activities on high-risk criminal networks and on weapons trafficking prevention, detection and counteraction. In 2023, Montenegro is participating in 54 operational actions across 14 OAPs, is the leader of one and the co-leader of two operational actions. An EMPACT working team was created in the police, headed by the national EMPACT coordinator.

In October 2022, Montenegro successfully hosted the biggest-ever EMPACT Joint Action Days organised in a non-EU country, under the coordination of Spain, with the support of Europol, Frontex, Eurojust, INTERPOL and many more. Montenegro provided material and human resources to support the operation.

Cooperation with the EU Agency for Law Enforcement Training (CEPOL) is based on the working arrangement signed in October 2021 which replaced the previous cooperation agreement. Montenegro continued to participate in the Partnership against Crime and Terrorism project in the Western Balkans led by CEPOL. .

As regards **the cooperation between law enforcement agencies at national level**, most institutions are connected at technical level through a common platform, except the cadastre and the penitentiary administration, which have not met the technical requirements yet. In the meantime, the SPO can access cadastral data by using a token. However, another challenge is the incomplete digitalisation of the cadastre, as most cadastral data exist only on paper. Investigators, Special Prosecutors and officers from the Asset Recovery Office have direct access to some but not all databases. Special Prosecutors still need to send prior requests to

some institutions to obtain data, at the expense of the efficiency and confidentiality of the investigation.

In addition, the absence of a digital case management system shared between the police and prosecution services creates long delays in investigations. Confidential material related to ongoing investigations is exchanged between investigators and prosecutors via drivers on paper, USB keys or DVDs and goes through lengthy registration procedures.

In 2022, the SPO initiated 10 **financial investigations** against 96 people (2021: 26 and 156, respectively), all of them launched in parallel with the preliminary criminal investigation. Against the background of the increase in police staff, a specialised unit for the fight against corruption and economic crime and financial investigations was created in September 2022, to initiate more financial investigations in parallel with criminal investigations and to improve their quality. Some 60 posts are allocated to this unit. The new rulebook introduced the possibility to recruit bank, accountancy and tax specialists without police background. As in previous years, temporary seizures of movable and immovable assets worth tens of millions of euro were conducted, based on notifications from the Financial Intelligence Unit or other sources. Substantial amounts were blocked on resident and non-resident accounts. However, there was only one final court decision on asset confiscation in 2022, for an amount of EUR 805.

In 2022, the **Asset Recovery Office** received from foreign partners 44 requests for identification of assets acquired in Montenegro with the proceeds of criminal activity, involving checks on 330 people and 16 legal entities. The number of requests from Montenegro to foreign partners through the Asset Recovery Office surged from 7 to 16 compared with 2021, boosted since September 2022 by the work of the newly created economic crime unit. These requests involved checks on 64 people (members of organised crime groups) and 16 legal entities. However, the incomplete land cadastre limits the scope of financial investigations and asset confiscations.

The confiscation of assets of equivalent value, in cases where the proceeds of the crime itself cannot be found, still needs to be inserted into the legal framework. Montenegro needs to substantially upgrade its capacity to trace, detect and confiscate the proceeds of crime, to durably hit the financial power of criminal networks. The capacity to manage seized assets and avoid the loss of their commercial value should also be strengthened.

In 2022, the initial track record of investigations into **trafficking in human beings** continued to improve. A stronger institutional capacity was reflected in a higher number of cases detected. A total of 13 new investigations were launched, while the four investigations launched in 2021 were still ongoing. A total of five indictments were filed against 12 people. Between January and March 2023, 10 new investigations were launched. However, there was no single court decision in any of the 11 cases pending before the courts in 2022 and in the first trimester of 2023. No verdict related to trafficking in human beings has been issued by courts in the last two and the half years.

The multi-disciplinary victim identification team, which is in charge of identification of, referral of and initial assistance to victims, identified 16 victims, nine of which were minor girls (victims of illicit marriage, i.e. before the legal age of 18, or forced beggary), four of which were women (victims of sexual exploitation or illicit marriage), and two were minor boys (victims of illicit marriage, or forced beggary). People from the Roma community, in particular women and children, remained at high risk of trafficking in human beings. A police action to prevent and combat forced beggary is being implemented continuously. However,

no case of large-scale organised trafficking for sexual exploitation has been unveiled in recent years.

The labour inspection services conducted 182 inspections of work facilities, in cooperation with the police, focusing on foreign workers. A total of 516 cases of illegal employment of foreigners were detected, but no cases of labour exploitation. The capacity of labour inspectors and law enforcement agencies to detect, identify and investigate trafficking for the purpose of labour exploitation needs to be strengthened.

State institutions closely cooperate with and provide financial support to civil society organisations, as key partners for victim protection and awareness raising. In 2022, EUR 40 000 of state funds were allocated to five NGOs under a programme addressing the priorities of the national strategy for combating trafficking in human beings for 2019-2024. However, the shelter for victims of trafficking in human beings, financed by the state and run by an NGO, was closed in December 2022, after two minor victims hosted in the shelter filed a complaint with the local police about violence exerted against them by the manager of the shelter (who also managed the NGO). Montenegro currently has no shelter for victims of trafficking in human beings, and no specialised shelter for children victims either. In 2023, the previous manager of the shelter received another grant from the Ministry of Interior, after having funded a new NGO. Montenegro needs to strengthen control over the allocation of state funds in this area, where the highest professionalism and ethical standards should prevail.

Overall, Montenegro needs to substantially improve the criminal justice response to trafficking in human beings, by shortening legal proceedings and applying deterrent sentences. Montenegro should strengthen its capacity to detect trafficking in human beings for all exploitative purposes and to identify victims at an early stage, especially in high-risk sectors and with targeted action for particularly vulnerable groups. The support and assistance services for victims of trafficking should be improved, in particular for victims belonging to vulnerable communities. A shelter for victims of trafficking in human beings should be opened as a matter of priority. Montenegro still needs to improve support to victims in trafficking-related trials. In the absence of specialised lawyers and proper legal advice, many victims do not request the free legal aid they are entitled to and do not access compensation. The Law on compensation of damages for victims of violent crimes, adopted in 2015, should be applied.

In the area of **firearms**, 246 criminal offences of unlawful possession of weapons and explosive substances were registered in 2022. A total of 729 weapons were seized in 2022 (2021: 556). The ‘Traffic’ application connects the Firearms Focal Point to the ballistic laboratory and to the police unit in charge of international cooperation. It enables the secured exchange of data on seized firearms at national and international levels. The number of users of the application was extended and police officers were trained to use the iARMS database. The Ministry of Interior also uses an information system for lost, stolen and wanted weapons. However, Montenegro’s data collection and reporting system on firearms have yet to be standardised. A group of experts was formed to prepare the accreditation of the ballistic laboratory under the relevant ISO standards. Despite the existence of a storage facility for small arms, light weapons and ammunition in Rogame, seized weapons are stored in the building of the SPO until the end of the legal proceedings, in inappropriate storage and safety conditions. Montenegro needs to increase efforts on awareness raising, outreach and education on the dangers and risks related to the misuse, illicit possession, and trafficking of firearms. Measures aimed at reducing illicit firearms through legalisation, voluntary

surrender, de-activation and destruction should be implemented, in line with the EU action plan on firearms trafficking.

Montenegro substantially increased its capacity to address **cybercrime**. The number of posts in the specialised unit was increased from 5 to 18. This includes posts open to IT specialists without police background. The SPO launched 11 preliminary investigations for cyber-related offences against 13 people. There was no final conviction in the area of cybercrime in 2022. The capacity of all institutions in this area should be strengthened, including on the use of electronic evidence in court handlings, a crucial aspect to address modern forms of communication in organised crime groups. Montenegro should ensure effective, proportionate and dissuasive penalties, including for legal persons, in line with the relevant EU *acquis*. Cybercrime offences and cyber incidents often remain unreported. More awareness-raising activities about risks and threats should be conducted, to encourage the public to report cybercrime offences.

In May 2022, Montenegro signed the Second Additional Protocol to the Convention on Cybercrime on Enhanced Cooperation and Disclosure of Electronic Evidence. Montenegro remains a member of the WePROTECT Global Alliance against **child sexual exploitation and abuse**. Draft amendments to the Criminal Code in relation to cybercrime were drafted. The cybercrime unit acquired a specialised software system to track online child sexual abuse.

In the area of **money laundering**, the institutional capacity and the initial track record continued to improve, but the number of cases remained limited. The number of suspicious transaction reports received by the Financial Intelligence Unit rose to 328 (2021: 299). The Financial Intelligence Unit issued 18 orders to suspend a transaction to commercial banks. The SPO launched Two investigations against four people, bringing the total number of ongoing investigations into money laundering to six. In 2022, two indictments were brought against three people. No financial investigation was launched in relation to money laundering in 2022 and in the first quarter of 2023. The High Court of Podgorica handled nine cases against 91 defendants in 2022, but despite an increased number of cases reaching the court, no final decision on money laundering was pronounced.

The complex Atlas Bank case, involving 248 defendants in various criminal proceedings for the creation of a criminal organisation, money laundering and tax evasion since 2019, is still ongoing. An extradition request was made for one key defendant, who fled from Montenegro to the UK. Out of the eight indictments filed by the SPO in this case, three still await confirmation. No court hearing has started. Since January 2022, the Council of Europe Committee of Experts on the Evaluation of Anti-Money Laundering Measures and the Financing of Terrorism (MONEYVAL) carries out the fifth round of evaluation of Montenegro.

In the area of **tobacco smuggling**, the ban on storage of tobacco products in the free zone of the port of Bar, imposed by the customs administration, entered into force in May 2022. It led to the seizure of an unprecedented number of cigarettes, which their owners had left on the spot. Other substantial seizures took place throughout the year. An estimated amount of 1 500 tonnes (or 13 cubic metres) of cigarettes is stored in Bar and awaits destruction. Large quantities of cigarettes had disappeared from warehouses before the entry into force of the ban. A total of seven customs officers working in the free zone were suspended. The transport of two trucks carrying cigarettes to a destruction facility in Nikšić in September 2022 ended with the disappearance of one of the two trucks, even though the transport was organised by the customs administration and escorted by the local police. The missing truck, with a cigarette shipment worth EUR 10 million, was eventually found by the SPO near

Podgorica and more arrests of customs officials took place, including the Director of the Revenues and Customs Administration in December 2022. In 2022, the SPO launched two new investigations into tobacco smuggling against six people. Parallel financial investigations were launched in both cases. The police also worked on numerous cases of smaller size and brought 35 charges relating to tobacco smuggling to Basic Prosecutors' offices. However, there was no final court decision on tobacco smuggling in 2022.

Montenegro needs to make stronger efforts to address the illicit trade of cigarettes. This would involve strengthening the capacity of all institutions involved, further strengthening the work of the whole judicial chain, dismantling criminal networks, and improving the track record in final convictions and confiscations of the proceeds of crime.

On **witness protection**, protection measures applied to six witness protection programmes, in cases under the jurisdiction of the SPO. Protection and support measures were implemented for 11 people on request of the International Criminal Court in The Hague.

Cooperation in the field of drugs

Institutional set-up and legal alignment

Montenegro's strategic and regulatory frameworks in this area are not fully aligned with the EU *acquis*. The national drug information system does not fully meet EU standards. The capacity of the Directorate for the prevention of drug abuse in the Ministry of Health, in which the National Drug Observatory is embedded, was strengthened by creating new posts and recruiting new staff members. In December 2022, Montenegro submitted to the European Monitoring Centre for Drugs and Drug Addiction a national drug situation overview and an information map, drafted through an inclusive process involving institutions and NGOs. In April 2023, thanks to the improvement of the cooperation with the Centre, activities involving Montenegro in an Instrument for Pre-accession Assistance project could be resumed, following a suspension of the cooperation in June 2022. The suspension was linked to the insufficient involvement of the National Drug Observatory in project-related activities at that time.

Montenegro has had no drug strategy in place since the previous strategy came to an end in 2020. The national early warning system is still not ready to be linked to the EU early warning system, as it has limited operational capacity. The government adopted a rulebook on the method of destroying drugs and keeping records of seized and destroyed drugs. Montenegro needs to adopt an overarching national drug strategy, to ensure the functioning of the national drug observatory and to improve the national early warning system in order to enable its connection with the EU early warning system.

Implementation and enforcement capacity

Montenegro continued to be a transit country for drugs, as a part of the Balkan route. A total of 2.3 tonnes of drugs were seized in 2022, in 1 395 seizures. They included marijuana (1.8 tonnes), heroin (3 kg), cocaine (500 kg), hashish, synthetic drugs and other illicit pharmaceutical products, pieces of marijuana stalks, cannabis oil and hallucinogenic mushrooms. The police filed six criminal charges against 65 people (of which 37 were members of organised crime groups).

In 2022, the SPO conducted eight drug-related criminal investigations in cooperation with international partners. The High State Prosecutor's Office handled three drug-related criminal investigations at international and national levels. These investigations led to drug seizures in Montenegro, Serbia and Albania. The police unit in charge of drug-related offences is now

divided into two groups, one for the fight against drug smuggling associated with organised crime and one for the prevention of drug abuse. It has 25 staff members in total.

The insufficient storage capacity for seized drugs has yet to be addressed. Montenegro has yet to adopt amendments to the Criminal Procedure Code to make it possible to keep only a sample of drugs as evidence for court proceedings, and not the entire amount as it is the case now. Meanwhile, tonnes of seized drugs are stored in the country's prosecution offices and courts, in inappropriate health and security conditions, awaiting trials. Montenegro needs to amend the legal framework on drug storage and drug sampling as a matter of priority and align it with EU health, security and environmental standards in the storage, transport and destruction of drugs.

Fight against terrorism

Institutional set-up and legal alignment

Montenegro's **legal framework** is largely aligned with the EU *acquis*.

In September 2022, the Parliament adopted the Law on the processing of data on passengers in air transport. It aims to prevent and detect criminal acts of terrorism and other serious crimes. A police unit was created to take charge of processing air passengers' data and conducting criminal investigations in this area. Montenegro has yet to create a legal framework regulating online terrorist content. Preventive monitoring of risk groups is being carried out, based on risk assessment.

Montenegro continued to implement the measures set in the EU-Montenegro Implementing Arrangement of the Joint Action Plan on Counter-Terrorism for the Western Balkans, signed in November 2019, and submitted its fifth implementing report in February 2023. In January 2023, a new national coordinator for combating violent extremism, terrorism, money laundering and terrorist financing was appointed. The previous national coordinator had been appointed Director of the Revenues and Customs Administration in 2022 and was subsequently arrested as part of an investigation into tobacco smuggling. The new national coordinator has reactivated the National Operational Team to coordinate the implementation of the two strategies (on counterterrorism and prevention of violent extremism).

Implementation and enforcement capacity

The threats of terrorism and violent extremism remained relatively low. There are currently no people convicted for a terrorism offence in Montenegrin prisons. However, a cause for concern are growing polarisation along ethnical lines, online and offline disinformation, ethno-nationalism and hate speech, exacerbated by Russia's war of aggression against Ukraine.

A criminal charge was filed by the police against one person related to encouragement of terrorism, after the suspect threatened on his blog to carry out a mass shooting in a school. Since 2020, one investigation against nine suspects has been ongoing. The retrial of the 13 defendants (including two Russian and eight Serbian citizens) found guilty of terrorism in the 2016 coup attempt case, started in June 2023, after the first instance judgment was revoked by the Appeal Court in 2022 and the case was returned to the High Court.

In 2022, practical implementation of the strategy on preventing and countering violent extremism was limited, mostly because of the National Operational Team's inaction. Measures to strengthen the capacity of operators for the prevention of extremism at local level had a limited impact and lacked local ownership. Their local risk assessment tool needs to be developed and implemented. Montenegro continued its good cooperation with Europol

in this area. In 2022, the number of messages exchanged with foreign counterterrorism units through Europol's SIENA communication link rose to 342 (from 203 in 2021).

The problem of foreign terrorist fighters is limited in Montenegro. However, 14 foreign terrorist fighters are reported to be still in conflict zones, while ten had returned to Montenegro before 2016. No one is currently in detention.

Montenegro's threat assessment still needs to be conducted in a more analytical and inclusive way, to create a common understanding of the main threats and risks among stakeholders, with special attention to hybrid and cyber threats. Comprehensive programmes for risk assessment and disengagement, rehabilitation and reintegration should be further developed and implemented within the prison and probation services. Montenegro's authorities need to improve capacity to properly address the terrorist and extremist content online, increasing efforts to refer terrorist content to internet companies and empowering civil society to develop effective counter narratives.

Judicial cooperation in civil and criminal matters

Montenegro's **legal framework** is largely aligned with the EU *acquis*. Montenegro initiated legal steps to accede to the 2019 Hague Convention on the Recognition and Enforcement of Foreign Judgments in Civil and Commercial Matters, and to the 2000 Hague Convention on the International Protection of Adults. Montenegro has yet to become a party to the 2007 Hague Protocol on the Law applicable to Maintenance Obligations.

In 2022, 958 cases of mutual legal assistance in criminal matters were processed (2021: 843) and 594 cases in civil matters (2021: 701). The main partners remained the Western Balkan countries and the EU Member States.

A cooperation agreement with Eurojust has been in place since 2016, with a liaison prosecutor on duty since December 2017. There was a surge in Montenegro's cooperation with Eurojust in 2022. In 2022, 55 cases of judicial cooperation were opened with the support of Eurojust (2021: 17), including 42 cases initiated by Montenegro. This reflects an increasing awareness among Montenegrin prosecutors of the benefits of using Eurojust cooperation channels. However, to date Montenegro has not engaged in any joint investigation team with an EU Member State. A working arrangement with the European Public Prosecutor's Office was signed in September 2022.

Montenegro should further increase the speed and efficiency of international judicial cooperation, by increasing its use of judicial cooperation instruments, such as joint investigations teams, and a more frequent use of direct court-to-court cooperation.

Legal and irregular migration

Institutional set-up and legal alignment

Montenegro's legal framework on legal and irregular migration is largely aligned with the EU *acquis*. Montenegro joined the European Migration Network as an observer in September 2022, and appointed a national coordinator in October 2022.

Montenegro has 12 **readmission agreements** with non-EU countries. However, it has no readmission agreement with any of the main country of origin of migrants, coming to Montenegro, which would be needed to process non-voluntary returns. In November and December 2022, meetings with representatives of Pakistan, Algeria and Morocco took place to discuss the readmission by Montenegro of irregular migrants to these countries. Cooperation methods still need to be developed to facilitate the official identification of migrants by their embassies (located in Sofia and Belgrade, respectively). Montenegro also

initiated diplomatic steps for negotiating a readmission agreement with the United Arab Emirates.

Implementation and enforcement capacity

Legal labour migration to Montenegro continued to increase. Seasonal labour migrants, mainly from neighbouring Western Balkan partners, are working primarily in the tourism and construction sectors. In 2022, 29 319 temporary residence and work permits were issued, a 40% surge compared with 2021. The grey economy, however, provided room for irregular labour migration and risks of exploitation.

Montenegro still does not have a modern migrant fingerprinting identification and registration system connected to a central biometric database. Instead, migrants' fingerprints are collected using ink on paper. A master plan laying down the technical requirements for setting up a modern system to register migrants was prepared in close cooperation with Frontex. The purchase of equipment and actual set-up of the system will be supported by a EUR 15 million project funded by the Instrument for Pre-accession Assistance.

According to the Ministry of Interior, 8 519 migrants were registered after illegally crossing the border in 2022, a twofold increase compared with 2021, reflecting regional trends. Afghan nationals made up 60% of the total, followed by Iranian and Bangladeshi nationals. During the summer 2022, the army was once again called upon to support the border police at the border with Albania. In 2022, 4 920 attempts of illegal entry were prevented (2021: 4 018). This concerns situations in which irregular migrants turned back when seeing border patrols or border equipment. The border police detained 511 people (2021: 239) for illegal entry, and prosecuted 202 of them (2021: 146).

The border police detected eight cases of migrant smuggling, leading to the arrest of nine people. In 2022, five indictments were brought in relation to migrant smuggling combined with organised crime, but no conviction was pronounced. A new unit for the fight against human smuggling and cross-border crime was created in the border police. Some 78 migrants were detained in the detention centre for foreigners in Spuž (2021: 83), including 19 migrants from Serbia and 12 from Kosovo*. This centre currently does not provide access to health services on the spot; detainees are taken to a medical centre in case of need.

The EU-Montenegro readmission agreement and its 15 implementing protocols with EU Member States continued to be implemented satisfactorily.

Reintegration plans for Montenegrin returnees were drawn up upon their return to Montenegro. An inter-ministerial team was created to support reintegration. This team is made up of representatives of the Ministries of Interior Affairs, Finance, Social Welfare, Education, Health, Employment and Labour, and of the International Organization for Migration and the Red Cross. The capacity of local teams to ensure readmission and reintegration was strengthened. A new reception space for Montenegrin returnees under the readmission procedure was created at the Podgorica airport, to conduct interviews with returnees upon their arrival.

Readmission from Montenegro to neighbouring countries fell to 33 people in 2022 (from 60 in 2021); readmissions from Western Balkan partners to Montenegro also dropped to 71 (from 104 in 2021), reflecting a higher mobility on the migratory road. In 2022, 37 voluntary returns were processed (2021: 36). The border police processed 25 returns to neighbouring

* This designation is without prejudice to positions on status, and is in line with UNSCR 1244(1999) and the ICJ Opinion on the Kosovo declaration of independence.

countries and the International Organization for Migration processed 12 returns to countries of origin.

Montenegro must continue its efforts to cope with migratory pressure, by developing its international cooperation on readmission, increasing its capacity to prosecute migrant smuggling networks, and setting up a modern migrant data collection system including biometric data.

Asylum

Institutional set-up and legal alignment

Montenegro's legal framework on asylum is largely aligned with the EU *acquis*. During the reporting period, the capacity of the asylum system was strengthened and a substantial State budget allocation was earmarked to expand reception capacity. The fruitful cooperation with the EU Agency for Asylum, within the cooperation roadmap, continued to strengthen the institutional capacity of the Directorate for Asylum and the overall asylum system of Montenegro in line with the Common European Asylum System. With the support of the EU Agency for Asylum, a new unit dealing with country-of-origin information was created, training modules were developed, and standard operating procedures were drafted to harmonise and systematise the procedures. A contingency plan, elaborated with the support of the EUAA is yet to be adopted, to ensure better preparedness for sudden influx and emergency situations.

Implementation and enforcement capacity

The asylum application in Montenegro is a two-step procedure, under which applicants first register an intention to request asylum with the border police and then have 15 days to lodge an asylum request with the Directorate for Asylum.

In 2022, the number of people registering an intention to request asylum increased by 150% compared with 2021 and reached 8 320 people, reflecting the upward trend in irregular entries. Afghan nationals represented 62% of them. Registration of intention to seek asylum is now possible in several municipalities, and not only in the Božaj migrant centre, close to the Albanian border. However, it is still not possible in all municipalities, border crossing points and airports. Migrants arriving to locations where it is not possible to register an intention to request asylum need to travel to Božaj to register their intention. The opening hours of the border police in Božaj were extended, to enable registration of intention to seek asylum throughout the day.

However, only 175 people, or 2.1% of those who registered an intention to request asylum, eventually lodged an asylum application, while the others absconded and continued their migratory movements. In 2022, for the first time ever, Russian nationals represented the largest group of asylum seekers in Montenegro, with 72 applicants. The profile of asylum seekers also changed compared with 2021: 18% of them were accompanied children and 29% were women. Legal counselling provided by NGOs is available to asylum seekers. The Directorate for Asylum processed 80 asylum requests in 2022. In 2022, nine asylum seekers received an international protection status (2021: 14). The main countries of origin were the Russian Federation, Cuba, China, Ukraine and Afghanistan.

Montenegro's Directorate for Asylum made efforts to reduce the backlog of asylum applications. While most applications were processed at the first instance level within the 6-month regular deadline, nine cases were processed within the 21-month exceptional deadline. Fewer decisions were overturned at second instance, reflecting a better quality of the determination process. The Directorate for Asylum has only two case officers and two

country-of-origin information officers. Yet it handles asylum applications coming from 24 different countries and five continents, including an increasing number of complex cases, where the applicant is the subject of an extradition request from their country.

The assistance package for people under international protection includes financial assistance, access to healthcare, education, employment, free legal aid, language courses and psychosocial assistance. Accommodation is provided for two years (with the support of the UN Refugee Agency). Asylum seekers and people under international and temporary protection have the right to open a bank account. However, most Montenegrin banks refuse this, which creates serious difficulties in accessing employment and even in receiving financial assistance from the state.

The number of migrants accommodated in the country's reception centres surged to 6 022 in 2022 (from 2 688 in 2021), mainly for short stays of one week. Some 7% of the migrants accommodated were women and 6% were children. Montenegro has two reception centres, with a total capacity of 164 beds, of which 60 beds are in a temporary container settlement in Božaj. Their average occupancy rate throughout the year is 30%, but it reaches peaks in spring and summer. A centre for unaccompanied children has 25 additional beds, but it is not devoted exclusively to migrant children. Montenegro is the only country in the Western Balkans that pays the running costs of the reception centres out of its state budget. Provision of health services and psychological assistance in the centres is ensured, but partly provided by NGOs and financed by international donors. New posts of managers of migrant centres were created and filled during the reporting period.

The EU allocated EUR 400 000 of financial assistance to Montenegro to build a fully-fledged migrant centre in Božaj, but Montenegro failed to prepare the tendering documentation on time, before the deadline for contracting in 2022, and the construction did not take place. In the meantime, EUR 645 000 was allocated from Montenegro's state budget to increase and refurbish the existing reception centres.

Montenegro is the Western Balkan partner hosting the highest number of Ukrainian nationals having fled Russia's war of aggression, both in absolute figures and proportionally to its population (1%). By the end of March 2023, 7 857 Ukrainian nationals had been granted temporary protection (70% of whom were women). On 15 February 2023, the Decision on granting temporary protection to people fleeing Ukraine of March 2022 was amended to prolong the temporary protection for people having fled the war until March 2024, in compliance with the Council Implementing Decision. The categories eligible for temporary protection in Montenegro include citizens of Ukraine, stateless persons with last residence in Ukraine, and people granted international protection in Ukraine. The amendments also simplified the application procedure. However, the temporary protection was not prolonged automatically and a request for prolongation had to be submitted before the expiry date. A total of 4 264 people prolonged their status, and 1 052 new applications were submitted after the deadline, bringing the number of people benefiting from temporary protection to 5 316 in June 2023 (including 3 226 women). In addition, 2 350 Ukrainians stay legally in Montenegro under the Law on foreigners.

An inter-ministerial coordinating body was set up between the Ministries of Interior, Labour, Health, Education, Finance and Foreign Affairs, the Consulate of Ukraine, the International Organization for Migration, the UN Refugee Agency and the Red Cross to coordinate support and integration measures for Ukrainian displaced persons.

Montenegro granted displaced persons fleeing Russia's war of aggression against Ukraine access to health services and accommodation to an extent that went beyond the minimum EU

standards. Some 104 Ukrainian displaced persons received free-of-charge accommodation in hotels, including meals and other services; 27 were hosted in a migrant centre. Around 2 500 medical services were delivered. However, in doing so, Montenegro relied largely on ad hoc and emergency solutions, which were not embedded in the state social system and at times faced practical implementation problems. Several sectoral laws still need to be aligned with the Asylum Law to ensure that people under temporary and international protection can exercise their social rights. Access to education is granted by law, but the number of Ukrainian children enrolled in Montenegrin schools remains low (151 children out of 1 114 children of school age). Administrative barriers hinder access to health and employment due to the absence of a personal identification number compatible with the social, health insurance and employment IT systems of the state.

Visa policy

In order to align national legislation with the EU *acquis*, Montenegro introduced visa requirements for residents of the United Arab Emirates as well as for Cuban and Ecuadorian nationals (in January, April and May 2023, respectively) who previously benefited from visa-free entry to Montenegro. However, there are 12 countries which are visa free for Montenegro, but not for the EU, of which seven enjoy permanent visa exemption (Azerbaijan, Belarus, China, Kuwait, Qatar, Russia, Türkiye) and five have a seasonal visa waiver to enter Montenegro for touristic reasons between April and October (Armenia, Egypt, Kazakhstan, Saudi Arabia, Uzbekistan). The decision on seasonal visa waivers, adopted by the government in April 2023, includes preventive measures against the risk of abuse of the visa-free regime, such as the need to be part of an organised tourist group, to fly in and out the territory of Montenegro by direct charter flights, and to have a paid tourist arrangement or an invitation letter from a Montenegrin tourist agency. Belarusian and Russian nationals are visa-exempted up to 30 days on a permanent basis, as well as Chinese nationals if they are in organised tourist groups.

The investor citizenship scheme was terminated at the end of 2022. Between January 2019 and December 2022, 556 applications were lodged (556 applicants and 1 281 family members). By 15 June 2023, the government had issued 954 positive decisions (293 applicants and 661 family members). On 15 June 2023, 398 applications were still pending. The remaining pending applications need to be checked properly to ensure that they fully comply with all EU restrictive measures. The screening of the source of related funds was carried out by external service providers.

The Sixth report under the Visa Suspension Mechanism⁴, adopted in October 2023, concluded that Montenegro continued to take action to address the recommendations from the previous year's report. However, further progress is needed on the alignment of Montenegro's visa policy with the EU's list of visa-required countries, in particular as regards countries presenting irregular migration or security risks to the EU. The report also recommends Montenegro to ensure that pending applications under the recently terminated investor citizenship scheme are screened and processed in accordance with the highest possible security standards. In this regard, in May 2023 the government adopted a decision on forming a Coordinating Body to monitor and implement the pending applications within this scheme.

Schengen and external borders

Institutional set-up and legal alignment

Montenegro's legal framework is largely aligned with the EU *acquis* in this area. Montenegro and the EU signed a new status agreement on 16 May 2023. The new agreement enables European Border and Coast Guard Agency (Frontex) deployments anywhere on the territory of Montenegro, at the request of Montenegro's authorities. The two joint operations being conducted on the basis of the current status agreement continue to be implemented: the deployment of Standing Corps officers with executive powers at Debeli Brijeg, a border crossing point with Croatia; and a joint maritime operation to strengthen blue borders' surveillance in the Adriatic. In addition, on the basis of a working arrangement between the Montenegrin border police and Frontex, Standing Corps officers are deployed with an advisory role (without executive powers) under Joint Operation Coordination Points. Montenegro also regularly participates in EMPACT operational activities, including Joint Action Days.

The good cooperation with Frontex further strengthened the capacity of Montenegro's Coordination Centre. Electronic sea surveillance enables real-time online image transmission to Montenegro's Coordinating Centre and Frontex Coordinating Centre in Warsaw, a key mechanism for border control in the Adriatic Sea and quick interception of suspicious vessels. The internal organisation of Montenegro's Coordination Centre was further developed and a number of vehicles and patrol boats were acquired, increasing the Centre's operational capacity. However, full coverage of critical areas is not ensured yet. A total of 11 border crossing points are now connected to this Centre, while two have yet to be connected.

A total of 168 new posts were created in the border police, bringing the total number of posts to 1 540 (a 14% rise) in order to start addressing the requirements of the Schengen action plan. However, 450 more posts need to be created. The new posts strengthen in particular local border police stations. Further to the adoption, in September 2022, of the Law on the processing of data on passengers in air transport, a new unit was created in the police to deal with passenger information issues. An operational advanced passenger information system has yet to be set up.

Implementation and enforcement capacity

In 2022, Montenegro conducted 500 joint border patrols with neighbouring countries (2021: 437; 2020: 723), including 218 joint patrols on the border with Albania (2021: 341). The activity of the joint police cooperation centres increased, with a higher volume of information exchanged. A total of 87 forged documents were seized.

Montenegro continued to implement its strategy on integrated border management and its Schengen action plan. Border management equipment continued to be progressively upgraded in accordance with the Schengen action plan, but reliance on EU and other donors' support remained high. The border police still lacks a proper IT tool to monitor the purchase of equipment, to set priorities and draw up a purchase plan, linked with the Schengen action plan. Its insufficient autonomy in criminal investigations continues to hamper the development of its analytical capacity and intelligence on smuggling networks. A new EUR 15 million sector budget support programme on integrated border management funded by the Instrument for Pre-accession Assistance is expected to start in 2023.

Montenegro continued to cooperate actively with Interpol, Europol and EU Member States, notably: (i) under the regional Anti-Smuggling Operational Partnership between the EU and the Western Balkans launched in November 2022; (ii) with Europol's European Migrant

Smuggling Centre; (iii) on EMPACT and its operational action plan on migrant smuggling; and (iv) in the Frontex Western Balkans Risk Analysis Network. In 2023, Montenegro expressed its willingness to participate in 18 (out of a total of 28) operational actions of the 2023 EMPACT operational action plan on migrant smuggling.

Montenegro continued to develop its cooperation with neighbouring Western Balkan partners under bilateral border traffic agreements. In October 2022, the Parliament adopted amendments to the bilateral agreement with Bosnia and Herzegovina on border crossing points for border traffic, to simplify cross-border procedures for inhabitants of cross-border areas. Montenegro still needs to demolish 15 alternative roads to Serbia and 13 roads to Bosnia and Herzegovina.

2.3. ECONOMIC CRITERIA

<i>Table 2.1:</i>	2014-19	2020	2021	2022
Montenegro - Key economic figures	average			
GDP per capita (% of EU-27 in PPS) ¹⁾	46	45	48	50
Real GDP growth	3.7	-15.3	13.0	6.1
Economic activity rate of the population aged 15-64 (%) , total	63.7	61.5	59.2	67.7
<i>female</i>	57.0	54.7	52.9	61.4
<i>male</i>	70.4	68.3	65.5	73.9
Unemployment rate of the population aged 15-64 (%) , total	16.9	18.3	16.8	15.0
<i>female</i>	17.0	18.8	16.1	13.1
<i>male</i>	16.8	17.8	17.3	16.6
Employment of the population aged 15-64 (annual growth %)	2.9	-10.1	-2.4	17.2
Nominal wages (annual growth %)	1.1	1.3	1.4	11.2
Consumer price index (annual growth %)	1.2	-0.8	2.5	11.9
Exchange rate against EUR	1.0	1.0	1.0	1.0

Source: national sources

In line with the conclusions of the European Council in Copenhagen in June 1993, EU accession requires the existence of a functioning market economy and the capacity to cope with competitive pressure and market forces within the Union.

2.3.1. The existence of a functioning market economy

Montenegro has made **limited progress** and is **moderately prepared** in developing a functioning market economy. Economic expansion continued at a strong pace in 2022, supported by private consumption and strong growth in tourism, partially due to a large influx of Russian and Ukrainian nationals following Russia's war of aggression against Ukraine. The main headwind came from inflationary pressures on the back of higher global commodity prices. The current account deficit increased as both exports and imports expanded rapidly. An expansionary fiscal policy fueled domestic demand and contributed to very high net wage growth. The budget deficit increased significantly and a comprehensive medium-term consolidation plan to address mounting fiscal challenges has not been

developed. The labour market situation improved, but structural problems persist, including large regional disparities and gender gaps, and high youth and long-term unemployment. The banking sector remained well capitalised and liquid. Efforts to improve the business environment and the governance of state-owned enterprises (SOEs) slowed down due to political uncertainty, even though the number of new businesses increased.

Last year's recommendations were addressed to a limited extent and remain mostly valid. In the coming year, in order to improve the functioning of the market economy, Montenegro should in particular:

- design and implement a medium-term fiscal consolidation plan targeting the achievement of a non-negative primary balance from 2025, and a reduction of the public debt ratio in the medium term;
- implement the Law on budget and fiscal responsibility to set up a fiscal council, while ensuring full transparency in selecting the council members;
- prepare an analysis of the economic and fiscal impact of current tax exemptions and provide specific budgetary recommendations to reduce tax expenditure such as exemptions, deductions, credits and deferrals;
- prepare a roadmap for reforming SOEs, prepare a framework for the monitoring and management of SOEs, and develop objective criteria for the selection of management bodies of SOEs;
- develop and implement specific measures to reduce the informal economy.

Economic governance

An unstable political situation led to lax fiscal policy and a slowdown in structural reforms. In August 2022, the incumbent government lost a vote of no confidence. The ensuing caretaker government was not in a position to advance priority reforms to address economic challenges. The reforms of SOEs were downscaled. The caretaker government did not adopt a medium-term fiscal consolidation strategy to address vulnerabilities in the light of forthcoming large debt repayments. By reducing taxes on basic consumption goods and fuels, the government tried to contain inflationary pressures and protect the most vulnerable. The caretaker government adopted several revenue strengthening measures in early 2023 and revised the 2023 budget in May. The controversial economic citizenship programme, which supported public revenue but clashed with the country's EU commitments, expired at the end of 2022. However, numerous pending applications were still processed well into 2023.

The policy guidance set out in the conclusions of the Economic and Financial Dialogue of May 2022 was implemented to a limited extent. Progress was made in setting up an independent body for fiscal oversight and strengthening financial stability, but only limited improvement was achieved on structural reforms aiming to address informality and improve the business environment and the labour market situation.

Macroeconomic stability

Economic expansion continued at a strong pace in 2022 despite slowing investment. Overall, real GDP grew by an estimated 6.1% in 2022 and the first quarter of 2023, following a 13% rebound in 2021 from the deep COVID-19-induced recession. The strong economic growth in 2022 was mainly driven by a surge in private consumption, on the back of increases in disposable income, employment, household lending, and remittances. Private consumption was also supported by Ukrainian and Russian nationals taking up temporary

residence. While export growth benefited from ongoing recovery in tourism as well as good

performance of merchandise exports, a strong surge in imports led to a negative contribution of net exports to growth. Capital investment remained weak and contracted due to a slowdown in private investment. Overall, the rebound of the economy brought Montenegro's per-capita income in purchasing power standards to 50% of the EU-27 average in 2022 (the highest in the Western Balkans),

up from 45% in 2020, bringing it back to the level registered in 2019.

Despite the strong export performance, the current account deficit widened in 2022.

Following a record low in 2021, the current account deficit widened again to 13.3% of GDP in 2022, as high growth of exports of goods and services was outweighed by rapidly rising imports due to price effects. Supported by good performance of aluminium and electricity, merchandise exports increased by 60% compared with 2021, while a successful tourism season led to a strong increase in exports of services (43%). However, goods imports, which are much larger than exports, also surged (by 41.3%), and the overall trade deficit rose to 23.4% of GDP, compared with 19.4% in 2021. This was partially offset by surpluses in the primary and secondary income accounts, which increased due to higher compensations of employees working abroad and higher remittances. The current account deficit was fully

financed by net foreign direct investment (FDI) inflows, which increased by 34.6% year on year and amounted to 13.5% of GDP, with a large share going into real estate. In early 2023, international reserves stood at EUR 1.9 billion, covering 4 months of imports of goods and services. The current account deficit deepened in the first quarter of 2023 to 14% of GDP in annualised terms, compared to 9.3% of GDP gap registered a year before. Net FDI declined slightly

to 12.2% of GDP compared to 12.9% over the same period.

Impacted by price rises following Russia's war of aggression against Ukraine, inflation peaked at a record high level in 2022. Driven by global inflationary pressures, especially on food and fuel, as well as large domestic policy-induced wage increases, average inflation jumped to 13% in 2022. Annual inflation peaked at 17.5% in November 2022 and eased to 6.9% in July 2023. The government adopted numerous and not always well-targeted support measures for households and firms to counterbalance the impact of higher inflation, including reduced value added tax rates for basic foodstuffs and a lower excise duty on sales of unleaded gasoline and gas oils. Based on regular and extraordinary adjustment to inflation, the government decided to raise pensions by 8.5% from June onwards.

The budget deficit increased substantially in 2022. The general government deficit increased significantly, to 5.2% of GDP, from 1.9% in 2021. Total revenues dropped markedly, by 4.5% of GDP, mainly due to the government's tax reform, which abolished

mandatory health contributions and introduced a non-taxable part of wage income. Revenues were also weakened by the temporary reduction of excise taxes on fuel and the reduction of VAT rates on basic foodstuffs and pellets. Public expenditure increased due to ad hoc spending decisions, such as the granting of additional allowances for all children and for mothers of three and more children; large increases in minimum pensions; wage increases in the public sector; and additional financing for the health insurance fund. Nevertheless, the 2022 budget outcome was better than envisaged in the October amendment to the Budget Law, which targeted a deficit of 8.3% of GDP. This was due to a combination of higher-than-projected revenue, mainly from VAT; and lower-than-expected spending, mainly on investment and on wages as there were delays in planned employment. Nominal GDP was also higher than previously projected. At the end of December 2022, the Parliament of Montenegro adopted the 2023 Budget Law with a projected deficit of 5.9% of GDP. In May 2023, however, the 2023 deficit target was revised to 3% (which would be in line with the rule on fiscal responsibility) as a result of higher assumed revenues (due to the EU energy support package, higher-than-expected inflation, and improved tax discipline) and some additional spending items related to early parliamentary elections and employment subsidies for people with a disability.

The debt ratio recorded a substantial decline, but vulnerabilities remain high in view of large upcoming repayment needs amid tightening financing conditions. The public debt stock declined substantially, to 69.5% of GDP at the end of 2022 after peaking at 105% of

GDP at the end of 2020. This large fall was driven by strong GDP growth in 2021-2022 and the use of government deposits to repay maturing debt. As a result, the stock of government deposits declined to 1.9% of GDP at the end of 2022, down from 9.4% in 2021. Large repayments of public debt, amounting to 11% of GDP, are due in 2025 and will require substantial new borrowing. With global financing conditions worsening,

debt-related vulnerabilities remain high.

While Montenegro's macroeconomic policy mix is constrained by the lack of an autonomous monetary policy, an expansionary fiscal policy contributed to widening budget and current account deficits and surging inflation. As the unilateral use of the euro means that the Central Bank of Montenegro cannot influence interest rates and money supply, prudent fiscal policy remains a key tool to manage the economic cycle. While global commodity prices had a substantial impact, higher wages and pensions added to rapidly rising inflation. Even though inflation is gradually abating, debt-related vulnerabilities, including large debt repayments in 2024-2027, require careful fiscal management in the years to come. Vulnerabilities in the health sector require a close monitoring.

Functioning of product markets

Business environment

A growing number of registered businesses was supported by the improving economic outlook and the influx of foreign citizens. Although electronic registration is still only available for single-member limited liability companies, but not for larger firms, the number of businesses had increased by 11.8% to 73 358 by the end of 2022. The number of newly

registered businesses reached 10 096 in 2022, compared with 5 559 in 2021. Around 80% of new companies were set up by foreign citizens. Following the adoption of a scheme to attract digital nomads in July 2022, the Parliament amended the Law on foreigners, which regulates the stay of digital nomads, as part of the broader efforts to attract foreign teleworkers to Montenegro.

Efforts to improve the regulatory business environment decelerated. The dynamic development of local companies and foreign investors' activities is hindered by weaknesses in the regulatory environment, such as inefficiencies and delays in dealings with the administration, excessive complexity of the legal framework, and the administrative burden of local taxation and parafiscal charges. Further obstacles are related to insufficient transparency in decision-making, arbitrary interpretation and law enforcement by public authorities, and access to finance for SMEs. Systematic involvement of business partners in designing and drafting measures that affect businesses remains the focus of the Competitiveness Council, but in 2022, the level of activity declined due to the political stalemate and uncertainty. The standstill in the decision-making of public administration also played a part in the slowdown in digital transformation reforms, which already suffered from a series of large-scale cyberattacks on the state's IT infrastructure in the second half of 2022. Due to the cyberattacks, the single online portal for SME support, which provides all necessary information and contacts regarding advice and assistance for businesses, has been disabled since August 2022, and its update is ongoing. At the end of 2022, 382 services were available on the eGovernment Portal, of which 73 were electronic, 254 for businesses, 109 for citizens, and the rest for the public administration.

The government is yet to develop specific reform measures to reduce the informal economy, which is a major obstacle to Montenegro's competitiveness. Deficiencies in the institutional and regulatory environment, weaknesses in the labour market, insufficient enforcement capacity of public authorities, corruption and tax non-compliance are conducive to informality, which is especially harmful to legally operating SMEs and microenterprises in the service sector. In July 2022, the Ministry of Finance published the results of a survey on informality, estimating the size of the informal economy at 20.6% of GDP, considering businesses and employees working in the formal sector. However, this estimate increases to 37.5% of GDP when including the fully informal sector. The government has yet to act on the survey's recommendations. The adoption of a comprehensive action plan on informality was postponed again, to the end of 2023.

State influence on product markets

While the most recent tax measures aimed to contain price increases, a broader issue relates to ensuring transparency and efficiency of State aid in Montenegro. The government reduced excise duties on the sale of unleaded fuel and gas oils by 50% in June 2022. When global oil prices stabilised, this reduction was revised, and finally abolished. The decision to reduce the VAT rate on the sale and import of basic foodstuffs (flour, sunflower oil, and salt) expired at the end of 2022, while the decision to reduce the VAT rate on bread (to 0%) and heating pellets (from 21% to 7%) is valid until the end of 2023. In March 2023, the government launched a 'Stop Inflation' programme in cooperation with the country's largest supermarket chains, in an effort to address the problem of surging staple food prices and to lower inflation expectations. The Agency for Protection of Competition (APC) carried out fewer State aid investigations in 2022 than in 2021. In August 2022, the APC issued a third decision ordering further recovery of illegal State aid to the major State aid beneficiary, Montenegro Airlines. The responsible Ministry of Capital Investments is still to adopt a plan and take action to recover the funds. In January 2023, EPCG, a state-owned national electric

power company, notified the APC of the purchase of the troubled steel producer Niksic, only after the contract was signed in late 2022. The APC has not yet published any opinion or decision concerning this case.

Privatisation and restructuring

Advancing reforms and privatisation of SOEs and improving their governance and profitability remain a challenge. The caretaker government stepped back from previous plans to formulate the state's ownership strategy and set out a portfolio of key companies that should remain in state possession, and improve SOEs' management practices and financial performance. As there was no political agreement on the direction and scope of such reforms, the government also stepped back from its plans for a holding company to manage and reform SOEs and limited the scope of its 2022 measures to set up a small unit in the Ministry of Finance to monitor fiscal risks related to SOEs. The performance of Montenegro's SOEs, including those at the local level, could be enhanced by transforming SOEs' management structures, eliminating political patronage and improve financial performance to reduce fiscal risks. Privatisation did not make much progress, as the government decided to increase the state capital in some SOEs, with the revised 2022 budget earmarking EUR 25 million for this purpose for the health institute of Simo Milosevic in Herceg Novi, the Meljine hospital, and wine producer Plantaze. The government also increased its ownership in the port of Bar to ensure a two-third majority in the managing board. In December 2022, the government decided to reintegrate the bankrupt (privatised) Meljine hospital into the public health system until the ongoing court proceedings are finalised. The government is yet to decide on the restructuring of wine producer Plantaze's tax debt. In February 2023, the government assigned the operation of the only ferry line crossing the Boka bay to the public company for coastal zone management (Morsko dobro), in an apparent violation of public procurement rules and transparency. At the same time, the government annulled its 2019 decision assigning the management of the ferry line in the Boka bay to a local private company (Maritime transport).

Functioning of the financial market

Financial stability

The banking system remains stable and liquid, but the quality of banks' balance sheets needs close monitoring in a rising interest rate environment. Despite the expiry of pandemic-related support measures, the banking system maintained strong capital and liquidity buffers, both of which exceeded pre-COVID-19 levels. However, risks remain to be closely monitored, in particular in view of recent strong credit growth and rising global interest rates. The capital adequacy ratio stood at 19.3% in late 2022, well above the statutory minimum of 10%. Banks continued to fund themselves mainly through domestic deposits. Non-performing loans made up 5.7% of total loans at the end of 2022, down from 6.2% in 2021. The banking system recorded a significant profit of EUR 83.3 million at the end of 2022, compared with EUR 27.5 million 1 year earlier.

Access to finance

Credit activity continued to grow, supporting the corporate sector in particular. Annual loan growth decelerated slightly to 6.1% in 2022, from 6.6% in 2021, before recovering to over 10% in January-February 2023. The main driver was lending to businesses and households (rising by 9% and 6.7% year on year, respectively) throughout the whole period, while there was a rapid increase in inter-bank lending in early 2023. Loans to the public sector have been declining since the beginning of 2022. The recovery of the economy was reflected in a very fast increase in banks' deposits, whose growth rate accelerated from 12.8%

year on year in 2021 to 23.3% in 2022 and continued to expand at over 20% year on year in the first 2 months of 2023. Non-resident deposits accounted for around one fourth of all deposits during this period. Borrowing costs increased with the nominal weighted averaged lending rate reaching 5.3% in early 2023, compared with 4.3% at the end of 2021.

The size of the non-bank financial sector remains very limited. Microfinance is the most commonly used source of alternative finance, with the sector's assets accounting for some 1.3% of GDP in 2022. The role of insurance in the local economy is also limited as their assets declined slightly to 1.8% of GDP in 2022.

Functioning of the labour market

With the economic recovery, labour market indicators also continued to improve and surpassed pre-crisis levels, but structural challenges remain.

According to the labour force survey (LFS), the average unemployment rate declined to 15% in 2022, down from 16.8% in 2021. The number of employed rose by 18.2% and the average employment rate stood at 57.5%. Despite these improvements, the 2022 LFS results once again confirmed large regional disparities, with the unemployment rate standing

at 5.6% in the tourism-heavy coastal region, at 9.3% in the central region, and at 31.6% in the poorer northern region. The gender gap widened after the pandemic, but the unemployment rate of women (aged 15-64) declined faster (by 2.3 percentage points) than that of men in 2022, while women's activity rate (61.4%) remained significantly below that of men (73.9%). Remaining major structural challenges are youth unemployment, standing at 29.4% for the population aged 15-24, and long-term unemployment, as 75.6% of all unemployed have been looking for a job for more than 12 months. Despite ongoing reform efforts, the public employment service's capacity for job mediation remains weak and lacks a continuous monitoring of active labour market policies, which in turn prevents the design of quality, targeted and effective employment activation measures. The Employment Agency of Montenegro's reform and readiness remain key challenges and are important for not only implementing the Youth Guarantee, but also for ensuring a healthy, well-functioning labour market in the long term. The average gross wage increased by 11% in nominal terms to EUR 883, while the average net wage rose by nearly 34% to EUR 793 in 2022, supported by a large decline in the labour tax wedge.

2.3.2. The capacity to cope with competitive pressure and market forces within the EU

Montenegro has made **limited progress** and is **moderately prepared** to cope with competitive pressure and market forces in the EU. The education system still faces numerous challenges, as shown by the results of international tests. Although public financing of research and development remains modest, some progress was made in attracting private investors. Efforts to advance a green and digital transition have continued, but large infrastructure gaps persist. The administrative and financial capacity to identify, prioritise and implement major public investments remains limited, hampering the use of EU support. Despite some progress in the metallurgy sector and the good performance of tourism, further efforts are needed to diversify Montenegro's narrow production base. The low value added of

domestic products, the small size of local companies, and their low level of participation in exports represent obstacles to increasing the productivity and competitiveness of local firms.

The 2022 recommendations were implemented to a limited extent and remain mostly valid. In the coming year, Montenegro should in particular:

- continue implementing digital services for micro, small and medium-sized enterprises and prioritise the development and implementation of an interactive e-government platform for transactional electronic services;
- improve programmes for dual vocational education and training and tertiary education in close cooperation with business associations;
- improve the institutional and regulatory environment for the green transition and increase energy resilience by adopting the national energy and climate plan and completing the implementation of the national energy action plan;
- implement the public investment management assessment recommendations, prioritising key public infrastructure works within the available fiscal space while avoiding exceptions regarding project selection.

Education and innovation

The quality of education needs further improvements. A comprehensive 2015-2020 education sector analysis (ESA) was presented in November 2022, focusing on early childhood, primary and secondary education. It underlined a low level of education quality (based on the results of the Programme for International Student Assessment and the Trends in International Mathematics and Science Study) both in the fourth grade of primary school and in the first year of upper-secondary education. An additional concern relates to the distribution of scores, as in both tests, more than 40% of students are below the level of the international benchmark for 'low performance', i.e. not reaching the minimum levels of competency, while only a negligible share of students had high achievements (less than 2%, compared with around 10% on average in OECD countries and 20% or more in the best-performing countries). The ESA underlines the need to provide more appropriate school infrastructure (70% of children attend primary schools with insufficient infrastructure) and improve the curriculum, the qualifications of teachers, the quality of teaching, enrolment rates, and the provision of support to the most vulnerable groups. A mismatch of skills remains a significant challenge, particularly for graduates of vocational education and training or higher education, despite some recent efforts to improve the transition from education and training to the labour market. Although tertiary educational attainment is still lower than the EU average, the labour market cannot absorb the numbers of tertiary graduates in certain areas, such as business and humanities. The OECD's report on labour migration in the Western Balkans found that in Montenegro, 28% of respondents disagree with the claim that skills learned in the education system meet the needs of their job, and 51% of surveyed firms identify applicants' lack of skills as a reason for unfilled vacancies.

Public and private investment in research, development and innovation is low. In the European Innovation Scoreboard for 2023, Montenegro has a summary innovation index of 47% relative to the EU's 100%, which is below the average of the 'emerging innovators' (50.0%). While the country's index has been improving, the performance gap with the EU has widened. The links between academia, research institutes and business are still weak. Only 2.2% of Montenegrin micro, small and medium-sized enterprises invest in research and development, compared with 22% at regional level. Research staff are employed almost exclusively by the government or in the higher education sector. With a rate of 0.36% of

GDP invested in research and development, Montenegro's spending was just over one sixth of the EU-28 average (2.18% of GDP) in 2019. In parallel with strengthening its capacity, the Innovation Fund continued to administer a collaborative grants programme and an innovation voucher scheme to encourage cooperation between private-sector and research institutions in developing innovative projects and products. As a result, private sector investment in innovation projects exceeded EUR 1 million in 2022. Innovation and Entrepreneurship Center Tehnopolis Nikšić continued to help start-ups through seven support programmes, and in parallel worked on strengthening cooperation with local universities. A 5-year strategic plan for the newly set up Science and Technology Park Montenegro was developed and a public call for tenants is under preparation.

Physical capital and quality of infrastructure

Productivity-enhancing investment remains low. In 2022, the share of gross fixed capital formation in GDP declined slightly to 21.7%. There was a slowdown in private investment, while public investment increased slightly to 5% of GDP. Net FDI rose to 13.5% of GDP, up from 11.7% in 2021, with more than one third of these inflows going into real estate, driven partly by purchases by Russian citizens.

Little progress was achieved in improving energy infrastructure. While the use of renewable energy sources is high, there is a lack of diversification of renewable sources and insufficient focus on environmental standards in energy infrastructure projects (some 43% of the electricity production in 2020 came from renewable sources, mostly hydropower and biomass). Montenegro needs to address a number of energy-related challenges, including energy efficiency. Montenegro needs to take a strategic decision on how to replace the thermal (lignite) power plant in Plevlja, which currently produces approximately 50% of Montenegro's electricity and is vital for security of supply and the stability of the country's power system but remains the main polluter. Finding an alternative solution for energy production did not progress, as any decisions in this regard are not expected until the government has adopted the national energy and climate plan in 2024. With regard to offshore exploration and production of hydrocarbons, two concession contracts signed in 2016 with Eni and Novatek were terminated in December 2022, following negative results of explorations, while the 2017 contract with Energean expired in July 2022.

Investment in digital infrastructure continued, albeit with some delay. While in the previous years, Montenegro made steady progress with digitalisation, the pace of digital transformation reforms slowed down in 2022, due to protracted political uncertainty, frequent organisational changes and a series of large-scale cyberattacks on the state's IT infrastructure in the second half of 2022, which interrupted the timeline of the digital transformation reforms. These cyberattacks spurred Montenegro's government to focus one of the new reforms on cybersecurity. The telecoms operator auctioned the 5G spectrum and awarded it to three major operators in December 2022. All three operators are obliged to activate 5G in every municipality by the end of 2024 while providing 5G coverage to 50% of population by 2026.

Modernising the transport sector requires broad action. The strategic steer for developing the sector should be revised, in line with the EU development priorities and Transport Community Treaty commitments (on sustainable and smart mobility), and move away from the current emphasis on road transport. Montenegro scores very low on connectivity. Progress on improving and modernising short sections of the road and rail networks is slow and mainly thanks to EU funding. The first section of the Bal-Boljare highway was finished in July 2022. For the completion of the entire Bal-Boljare highway, an outdated feasibility study needs to be updated, in line with the forecast traffic volumes and envisaging a

multimodal corridor, encompassing rail, road and the port of Bar. Works on upgrading the Bar-Vrbnica railway, a core network corridor, continued during the reporting period. Further action is needed to open up the rail market to competition and to complete regulatory reforms that have been neglected for years. The (currently suspended) tender for a concession to maintain and upgrade the country's two main airports in Podgorica and Tivat could help address the country's limited accessibility by air.

Sectoral and enterprise structure

The structure of the economy remains broadly unchanged, although certain adjustments are taking place within sectors. Micro, small and medium-sized enterprises constitute the backbone of the Montenegrin economy, accounting for 57.8% of total employees in 2022. They continue to be dominated by micro enterprises, accounting for 99% of all firms. Across sectors, the distribution of employment remained broadly stable in 2022, with the services sector absorbing 76.7% of total employment, while industry and construction (19%) as well as agriculture (4.3%) accounted for much lower shares. Employment in the ICT sector surged by 48% year on year in 2022, affected by the immigrant workers from Russia registering businesses in Montenegro, which coincides nevertheless with a severe drop in knowledge-intensive services exports. The share of agriculture in gross value added declined to 6.7% in 2021, compared with an average of 7.6% in the previous 10 years, while the shares of industry and construction were roughly stable at some 10% and 5%, respectively. Over the same period, the share of wholesale and retail trade increased to 14%, up from 12%. The metallurgy sector is undergoing a major transformation after the closure of aluminium smelter KAP and Nikšić steelworks due to unsustainable production costs. In December 2022, Nikšić steelworks was taken over by the state-owned electric power company EPCG, which plans to repurpose the plant for solar panel production.

Economic integration with the EU and price competitiveness

External trade surged to a record high in 2022. Montenegro's foreign trade expanded by 43.9% year on year, while bilateral trade with the EU grew by 33.7%. Overall, trade openness (the total exchange of goods and services as a share of GDP) increased significantly to 128.7% of GDP, largely surpassing pre-pandemic levels. Exports continued to be dominated by services, which at 40.6% of GDP exceeded goods exports (12.1% of GDP) by a very wide margin. The EU remains Montenegro's main trade partner, accounting for 30.3% of total exports and 44.3% of total imports of goods. CEFTA countries also constitute an important market, accounting for 41.7% of Montenegro's total exports and 26.1% of total imports of goods. The EU also remains the main source of FDI inflows for Montenegro, accounting for 33% of total FDI inflows in 2022, compared with 36.4% in 2021. Other countries with a sizeable share in Montenegro's FDI inflows include Russia and the United Arab Emirates, mainly due to active participation of investors in the controversial economic citizenship programme. Montenegro's price competitiveness was damaged by a widening inflation differential with the euro area.

2.4. PUBLIC PROCUREMENT, STATISTICS, FINANCIAL CONTROL

Chapter 5: Public procurement

EU rules ensure that the public procurement of goods, services and works in any Member State is transparent and open to all EU companies on the basis of non-discrimination and equal treatment.

Montenegro is **in between moderate and a good level of preparation** in the area of public procurement. **Some progress** was achieved in 2022 in aligning with the EU *acquis* and in further improving the functioning of the electronic procurement system.

The recommendations from last year were partially implemented. Therefore, some remain valid. In the coming year, Montenegro should, in particular:

- focus on the effective implementation of public procurement and public-private partnership legislation;
- greatly reduce the number and value of negotiated procedures without a prior publication of contract notice;
- fully respect the public procurement rules in all cases.

Institutional set-up and legal alignment

The **legal framework** on public procurement is well aligned with the EU *acquis*. Amendments to the Law on public procurement entered into force in January 2023. Together with the related implementing acts, these amendments further aligned Montenegrin legislation with the EU legal acts in this area. In February 2023, the government adopted a report on the implementation of the 2021-2025 strategy for enhancing public procurement and public-private partnership policy in Montenegro and a corresponding action plan for 2023.

The electronic public procurement system (CEJN) is fully operational. All public procurement procedures in the country are conducted through the system. Improvements to the CEJN were announced in 2022, but were postponed to the end of 2023. These include functional connections with other electronic registers of the state (criminal records of the Ministry of Justice, records on tax obligations and on mandatory social security contributions of the Revenue and Customs Administration and records of the Agency for the Prevention of Corruption).

The tender for the concession to operate Airports of Montenegro has been suspended since 2020. For Montenegro to meet the requirements of this negotiating chapter, it is essential to

comply fully with the EU rules on and standards of fair and transparent public procurement, providing value for money, competition, and strong safeguards against corruption.

Implementation and enforcement capacity

Montenegro's **public procurement market** corresponded to 8.74% of GDP in 2022 and the value of all public procurement procedures amounted to some EUR 506 million. This was much above the values achieved in 2021, but significantly below the record level of 2020 (13.1% of GDP, EUR 545 million). The use of the CEJN helped improve the implementation of public procurement procedures in the country, with a shorter average duration of procurement procedures and an increased average number of bids per procedure (3.5) in comparison to previous years. However, the number and value of negotiated procedures without a prior publication of contract notice remains very high, at over 11% of all procurements in terms of value, conducted through the CEJN. The use of such procedures by public authorities should be exceptional, given the potential for irregularities and corruption.

In the area of **monitoring of contract award and implementation**, the Public Procurement Inspectorate carried out 266 checks, which was 11% less than in 2021, due to the reduced number of inspectors. Most checks related to contract conclusion, contract execution and implementation of simple procurements.

A regulatory and institutional framework on **integrity and conflict of interest** in public procurement is in place.

The **capacity to manage public procurement** processes improved thanks to the full implementation of e-procurement. However, the high number of small contracting authorities undermines the efficiency of procurement processes. In particular, the capacity of small municipalities to conduct more complex procurement procedures, including for EU-financed projects, remains limited.

The administrative capacity of the Directorate for Public Procurement Policy in the Ministry of Finance and Social Welfare remained stable. The Directorate systematically organises training sessions on public procurement rules and preparation courses for procurement officers. The Directorate also prepares and publishes technical instructions and expert guidance on procurement rules.

Efficient remedy system

The legislation on the **right to appeal** is in line with the EU *acquis*. Cases are handled by the Commission for the Protection of Rights in Public Procurement Procedures. The Commission is currently understaffed. There were no significant delays in treating and resolving complaints and the remedy system works efficiently.

The Commission for the Protection of Rights resolved 169 complaints in 2022. The number of complaints remained stable in comparison to the previous period, even though the number and value of procurement procedures significantly increased year-to-year. Appeals to the Administrative Court of Montenegro were filed against some 16% of the cases resolved by the Commission. The Administrative Court returned roughly half of these appeals to the Commission for reconsideration.

The Supreme Court of Montenegro carried out six extraordinary reviews of the decisions taken by the Administrative Court on procurement procedures and in five cases rejected the lawsuits as unfounded, while in one case modified the decision as regards the costs of the dispute.

Chapter 18: Statistics

EU rules require Member States to produce statistics based on professional independence, impartiality, reliability, transparency and confidentiality. Common rules are in place for the methodology, production and dissemination of statistical information.

Montenegro is **moderately prepared** in the area of statistics. **Limited progress** was made on last year's recommendations. Work continued on harmonising the statistical methodology with EU standards and increasing transmission of data to Eurostat. However, pending issues remain regarding insufficient financial and human resources of the Statistical Office of Montenegro (MONSTAT) and its lack of expertise in some areas; systematic cooperation and coordination of tasks between the Ministry of Finance, the Central Bank of Montenegro and MONSTAT; and transmission of some fundamental datasets such as government finance statistics, as well as financial accounts and excessive deficit procedure tables to Eurostat. The planned national population and housing census requires careful handling by the authorities, notably as concerns sensitive issues of ethnicity, religion and language.

The recommendations from the 2022 report remain valid. In the coming year, Montenegro should in particular:

- considerably strengthen the human and financial resources of MONSTAT, so that it can fully fulfil its responsibilities and retain expert staff;
- make significant progress in aligning with the European System of Accounts (ESA) 2010, including by starting to transmit to Eurostat government finance statistical data, as well as properly filled excessive deficit procedure tables;
- carry out the national population and housing census in line with EU requirements and recommendations and allocate sufficient resources to it.

The legal framework for **statistical infrastructure** is broadly in line with the European Statistics Code of Practice. MONSTAT is the main producer and overall coordinator of statistics. The number of MONSTAT employees remains low at 60% of the number of posts envisaged in the organisation chart. The Ministry of Finance has still not made new premises available to MONSTAT. This remains a serious issue, as the current building is not appropriate for a national statistical office. In 2022, MONSTAT carried out a user satisfaction survey and published the results on its official website.

On **classifications and registers**, there is high compliance in terms of implementation of the current versions of the NACE (nomenclature of economic activities), CPA (classification of products by activity), ISCO (international standard classification of occupations) and ISCED (international standard classification of education) classifications.

In the area of **macroeconomic statistics**, Montenegro improved the presentation of the gross national income (GNI) inventory, including the process tables. Compliance with national accounts according to ESA 2010 is at medium level. In the next period, MONSTAT should focus on improving estimates and updating and extending the GNI inventory. Regarding the consumer price index / harmonised index of consumer prices (HICP), the automatisisation of the data processing and dissemination process was completed. MONSTAT has successfully corrected the aggregation inconsistencies in the HICP back series. Montenegro does not produce the HICP at constant taxes and is working on its introduction, and it needs to improve the production of the house price index (HPI) and send the data to Eurostat. Montenegro sends quarterly balance of payments (BOP) and international investment position (IIP) data according to the methodology set out in the balance of payments and international investment

position manual (BPM6) to Eurostat, but it still does not send monthly balance of payments statistics and needs to improve the geographical breakdown of BOP and IIP data. Government finance statistics (GFS) were never sent to Eurostat and excessive deficit procedure (EDP) tables are sent mostly empty. Work is also ongoing on amending the Law on official statistics.

In the area of **business and trade statistics**, Montenegro is fully compliant for 7, partly compliant for 5 and non-compliant for 2 datasets of the 14 short-term business statistics (STS) datasets (relevant out of the total of 16 STS datasets). Punctuality of the transmitted datasets is good and the reasons for non-compliance are partial coverage of NACE activities and lacking adjustments. Data on quarterly business demography and services producer prices is lacking. As regards structural business statistics, Eurostat received some data in 2022 with reference year 2020. Compliance in the area is low, but there is progress compared to last year. On international trade in services, Montenegro is highly compliant, while on international trade in goods, there is medium compliance and further work is needed.

In the area of **social statistics**, the Parliament adopted the Law on the census of population, households and dwellings in December 2022. The government decided that the census should be carried out in the first part of November 2023. MONSTAT is preparing for the implementation of the census and in that sense cooperates with the Administration for Cadastre and State Property, and local authorities responsible for updating the register of spatial units.

In the area of **agriculture statistics**, the preparation of the agricultural census in accordance with the new EU legislative framework is ongoing and its implementation is planned for 2024. The population and housing census will be used to check who will need to be covered by the agricultural census.

In the area of **environmental statistics**, Montenegro is considered fully compliant on waste statistics, but it does not report data on water statistics and on environmental accounts.

Energy statistics are overall moderately compliant. MONSTAT is fully compliant with semestral statistics, but on annual statistics progress is needed especially in terms of quality, while monthly statistics are non-compliant.

Chapter 32: Financial control

The EU promotes the reform of national governance systems to improve managerial accountability, sound financial management of income and expenditure, and external audit of public funds. The financial control rules further protect the EU's financial interests against fraud in the management of EU funds and the euro against counterfeiting.

Montenegro is **moderately prepared** in the area of financial control. Overall, **limited progress** was made in implementing last year's recommendations. A new public finance management reform programme was adopted in December 2022, which means that the strategic framework for public internal financial control is now broadly in place. The reform programme contains measures on the application of managerial accountability, complementing those in the public administration reform strategy, even though their implementation is still limited. On external audit, the State Audit Institution improved its capacity to monitor the implementation of audit recommendations and continued to work for more open and transparent communication with the Parliament. Nevertheless, efforts are needed notably to further strengthen the financial management and to complete the legal framework for the fight against fraud. Last year's recommendations remain valid.

In the coming year, Montenegro should in particular:

- further operationalise the centralised budget inspection function of the Ministry of Finance, by allocating appropriate human resources;
- extend the application of managerial accountability in public administration, with increased delegation of authority in the field of financial management and internal control;
- further align its legislation with the EU *acquis* on the fight against fraud to the EU's financial interests and further strengthen the coordination capacity of the National Anti-Fraud Coordination Service, including by adopting amendments to the Criminal Code and a new national anti-fraud strategy for 2024-2027.

Public internal financial control (PIFC)

Montenegro's **strategic framework for PIFC** is broadly in place. The public administration reform (PAR) strategy for 2022-2026 is now accompanied by a new public finance management (PFM) reform programme, which was adopted in December 2022. The government adopts annual reports on the implementation of the PAR strategy and the PFM reform programme as well as on governance and internal control in the public sector.

As concerns **managerial accountability**, the new strategic framework provides a solid basis for further work, as both the PAR strategy and the PFM reform programme include development of managerial accountability as one of the key objectives. However, the application of managerial accountability in public administration remains limited, notably as concerns the delegation of authority in the field of financial management and internal control.

The legislative and operational framework for **internal control and internal audit** is in place, covering also local government entities and state-owned enterprises. A revised Law on governance and internal control is in preparation. The legislative framework is in line with international standards based on the Committee of Sponsoring Organizations of the Treadway Commission (COSO) framework. In November 2022, the government adopted implementing legislation to harmonise the internal audit system with the Decree on the organisation and manner of work of the state administration.

The legal and operational framework for **financial management control** is largely in place and in line with international standards. Further efforts are necessary to align programme-based budgeting and performance reporting with managerial accountability, as well as to upgrade risk management from operational to strategic level. The centralised budget inspection function of the Ministry of Finance needs to be substantially strengthened.

In the area of **internal audit**, there is no appropriate staffing at neither central nor local level. In 2022, the Ministry of Public Administration created a specialised internal IT audit unit carrying out IT audits in all public institutions. An internal IT audit strategy is in preparation.

The **Central Harmonisation Unit** (CHU) is responsible for developing and disseminating methodological guidance on PIFC, and for monitoring and reporting on implementation of internal financial control. Moreover, the CHU ensures quality review of financial management, internal control and internal audit activities. Its annual reports contain recommendations on how to improve the effectiveness of the internal control systems in the public sector.

At the level of PIFC, an **anti-corruption** system exists but requires further improvement. All public entities are informing the CHU on suspicions of irregularities and fraud through the reporting system. CHU keeps the register on these cases and monitors the mitigation measures and actions undertaken. However, very few bodies have reported any irregularities.

External audit

The Constitution of Montenegro and the current legal framework ensure the functional, operational and financial independence of the State Audit Institution (SAI), in line with the standards of the International Organization of Supreme Audit Institutions (INTOSAI). The SAI further improved its **institutional capacity** in terms of auditing staff. Most of its auditors (90%) are certified and have access to internal and international training. The SAI president's tenure ended in July 2022, but the Parliament has not appointed a new president yet. Also, the position of one of the five members of the SAI Senate remains vacant.

On **quality of audit work**, the SAI adopts and implements its annual audit plan based on risk assessment and on clearly stated criteria. During the reference period, it performed 38 audits. The SAI improved its performance audit capacity. It now has more sectors, it can carry out a greater number of parallel audits, and its audit staff have improved their skills by attending training programmes. The SAI carried out a self-assessment of its work by applying the international methodology for performance measurement, forming the basis for the strategic development plan of the SAI for 2023-2027, which was adopted in March 2023.

The SAI continued to increase the **impact of its audit work** by improving the process of monitoring the implementation of audit recommendations and by strengthening cooperation with key stakeholders. All SAI reports are publicly available, and in 2022, the SAI also started to publish reports on the implementation of recommendations from audit reports. During the reporting period, the SAI published 30 such reports. Furthermore, the SAI drew up a register of audit recommendations, which enables the public to monitor the status of implementation of audit recommendations. The SAI submitted all reports timely to the Parliament, which considered the SAI's annual report on performed audits and activities, including the audit of the final state budget account. However, the Parliament still does not ensure a structured follow-up of the SAI recommendations.

The **Audit Authority** increased its oversight capacity in terms of both human resources and the number of performed audits, with improvements in management, accountability and transparency in the use of EU funds. In November 2022, the government appointed a new Head of the Audit Authority, but the Authority's human resources are yet to be further strengthened as 12 positions remain vacant.

Protection of the EU's financial interests

As concerns **alignment with the EU *acquis***, amendments to the Criminal Code are yet to be adopted to fully align national legislation with the EU Directive on the fight against fraud to the EU's financial interests by means of criminal law. Supported by an EU-funded twinning project, the Anti-Fraud Coordination Service (AFCOS) improved its capacity to fight irregularities and fraud and to coordinate the AFCOS network for the protection of the EU's financial interests. A new national anti-fraud strategy for 2024-2027 with a corresponding action plan is still not in place.

Cooperation and exchange of information with the European Commission (OLAF) during investigations remains active. The cyberattack of August 2022 negatively affected direct communication with OLAF as the Irregularity Management System (IMS) was disabled. Despite this, five new irregularity cases were reported in IMS. Montenegrin authorities should continue building a track record of reporting of irregularities and of cooperation with OLAF on investigations.

Protection of the euro against counterfeiting

Montenegro's **legislation** on protecting the euro against counterfeiting is in place. The

country has the necessary **structures** for technical analysis and classification of counterfeit money, including euro banknotes and coins.

Since 2021, the Decision of the **Central Bank of Montenegro** (CBCG) on authenticity and fitness checking and recirculation of euro banknotes and coins has been fully harmonised with the relevant Decision of the European Central Bank (ECB).

Activities to protect the euro against counterfeiting in line with harmonised EU and ECB regulations and standards continued. The CBCG monitored cash handlers' work standards and tested cash handling devices. It also continued cooperation and exchange of information with the Police Directorate and the Higher Prosecutor's Office. The CBCG continued cooperating and exchanging information under agreements signed with the ECB, the European Commission and other international institutions on protecting the euro against counterfeiting. Montenegro participated actively in the EU Pericles programme.

3. GOOD NEIGHBOURLY RELATIONS AND REGIONAL COOPERATION

Good neighbourly relations and regional cooperation form an essential part of Montenegro's European integration process and contribute to stability, reconciliation and a climate conducive to addressing open bilateral issues and the legacies of the past.

Montenegro maintained its engagement in a number of regional initiatives, such as the Central European Free Trade Agreement (CEFTA) where it took over the chairmanship in January 2023, the Energy Community, the Transport Community, the South-East European Cooperation Process and the Regional Cooperation Council. From 1 July 2022 to 30 June 2023, Montenegro chaired the South-East European Cooperation Process. The priorities of the Montenegrin Chairmanship-in-Office were to: strengthening of economic and security co-operation and infrastructural connectivity, protection of human rights rule of law, strengthening of democratic institutions, mitigating and overcoming the health, economic and other consequences of the Covid-19 pandemic, environmental protection and European integration of countries from the region of Southeast Europe. Montenegro also actively participates in initiatives such as the Central European Initiative (CEI) and the Centre for Security Co-operation (RACVIAC).

The **EU-Western Balkans Summit** in December 2022 took place for the first time in the region, in Tirana. The summit focused on support to the region in the fields of energy and migration, and on youth cooperation, roaming, green lanes and overall progress on implementing the Economic and Investment Plan.

In August 2023, President Milatovic participated at an informal discussion on EU enlargement in Athens, hosted by the Greek PM Mitsotakis, whereas PM Abazović participated at the Bled Strategic Forum together with the other WB leaders.

On the **Common Regional Market**, a political breakthrough was achieved at the Berlin Process Summit in Berlin in November 2022, where leaders adopted the three mobility agreements. The Parliament has ratified all three Common Regional Market agreements on the freedom of movement based on identity cards, on recognition of professional qualifications for regulated professions, and on recognition of academic qualifications. However, the agreements have not yet been signed by the President. A number of important decisions agreed at the technical level within CEFTA remain blocked.

In May 2023, Montenegro hosted the **Connectivity Summit**, which achieved a joint declaration *Taking forward the Green Lanes* signed by all participants, and a high-level understanding on indicative maps of the trans-European transport network in the Western

Balkans between the EU and the contracting parties to the Transport Community Treaty.

Montenegro continued to closely cooperate with Croatia, Bosnia and Herzegovina and Serbia under the **Sarajevo Declaration Process**, which aims to find sustainable solutions for refugees and displaced persons as a result of the armed conflicts in ex-Yugoslavia during the 1990s. By the end of March 2023, 617 housing units had been built, purchased or reconstructed in Montenegro under the **Regional Housing Programme**. These units can accommodate 2 117 people. Significant challenges remain regarding the economic and social integration and wellbeing of many families, needed to ensure sustainability of return.

Montenegro continued to participate actively in the regional **Missing Persons Group** and contributed to the implementation of the provisions of its framework plan. The Commission on Missing Persons of Montenegro continued to cooperate with neighbouring countries under bilateral cooperation protocols. There are 51 active cases of missing persons who are Montenegrin citizens or whose families reside in Montenegro.

Montenegro generally maintains good bilateral relations with other enlargement countries in the region and with neighbouring EU Member States.

Relations with **Albania** remained good with occasional high-level bilateral visits. In February 2023, the governments of Albania and Montenegro held the second joint government session in Podgorica, confirming the good and friendly relations between the two countries. The Prime Ministers signed a series of bilateral agreements/memorandums intended to improve cooperation in several areas of common interest related to energy, fishing, plant protection, labour and social protection, sports, culture, media, defence, health and infrastructure. On the latter, an agreement for the construction of a bridge on the Buna River to connect the coastal areas of Ulcinj (Montenegro) and Velipoja (Albania) was reached and the opening of the border point Saint Nicholas – Pulaj was announced.

Relations with **Bosnia and Herzegovina** remained good overall. The agreed border demarcation is yet to be physically marked and three joint border crossing points remain to be set up. In December 2022, the Council of Ministers of Bosnia and Herzegovina and the government of Montenegro signed a memorandum of understanding and cooperation on the implementation of infrastructure projects. The participation of the Montenegrin Finance and Justice Ministers on 9 January 2023 in a ceremony in Banja Luka celebrating the unconstitutional day of Republika Srpska sparked strong reactions and controversy in Montenegro and regionally. In February 2023, the Minister of Foreign Affairs of Bosnia and Herzegovina paid an official visit to Podgorica.

Relations with **Kosovo** remained good. In October 2022, Montenegro and Kosovo signed a Memorandum of Understanding on co-operation on the implementation of infrastructure projects. The President of Kosovo visited Montenegro in February 2023 and the Prime Minister of Montenegro visited Kosovo in April 2023. A number of meetings took place at the level of Prime Ministers and Foreign Ministers at the margins of international and regional events.

Relations with **North Macedonia** remained good. In February 2023, the Minister of Foreign Affairs of Montenegro and the Minister of Foreign Affairs of North Macedonia met in Skopje to discuss the development of bilateral relations, regional cooperation, the process of European integration, and the strengthening of the countries' partnership under the NATO alliance. In March 2023, the Prime Ministers met at the margins of the World Economic Forum in Davos. The Foreign Minister of North Macedonia held meetings with the President and Prime Minister of Montenegro in the margins of the Adriatic Charter Meeting in March 2023. The two Prime Ministers met in the margins of the Delphi Economic Forum in March

2023. The two countries signed a Programme of Cooperation in the area of culture for the period 2023-2026.

Relations with **Serbia** are overall stable, with occasional mutual accusations. In September 2022, the Prime Minister of Montenegro visited Serbia, for a wine fair. Controversy was sparked in mid-December 2022 when mayors and heads of local assemblies of six Montenegrin municipalities, all representatives of the former Democratic Front, attended a session of the Serbian Parliament's Committee for Diaspora and Serbs in the Region, discussing the position and status of ethnic Serbs in Montenegro. In ministerial meetings, economic opportunities and the strengthening of bilateral cooperation took the forefront rather than bilateral issues. After an inaugural visit to Brussels, in July 2023 the President of Montenegro paid his first official visit abroad to Belgrade to discuss with the President of Serbia the appointments of Ambassadors to their countries. The two Presidents met again shortly after in Athens. In August 2023, the entry ban of the former Serbian Ambassador to Montenegro Bozovic, was lifted.

Bilateral relations with **Türkiye** remained stable. Montenegro provided financial and humanitarian assistance to Türkiye following the devastating February 2023 earthquakes.

Relations with **Ukraine** remained good. Montenegro continued to provide unequivocal support to Ukraine in light of the Russia's war of aggression including humanitarian and military aid. In December 2022, the Prime Minister of Montenegro and the President of Ukraine signed a joint declaration on the Euro-Atlantic perspective of Ukraine.

Relations with the **Republic of Moldova** are overall good. In February 2023, allegations of Montenegrin and Serbian football fans' involvement in destabilising activities promoted by Russia in Moldova created short-lived tensions. The Presidents of Montenegro and Moldova met at the margins of the European Political Community in Chisinau in June 2023. Montenegro and Moldova also maintain relations through the South-East European Cooperation Process (SEECp).

Relations with **Georgia** are generally friendly, although the level of engagement is not as extensive as the relations with other enlargement countries. In April 2023, the Parliament Speaker of the Montenegrin Parliament met her Georgian counterpart.

Relations with **Croatia** remained good with occasional tensions arising in relation to pending bilateral issues and/or some historical events. In January 2023, the Prime Ministers met at the margins of the World Economic Forum in Davos. In September and October 2022, then Foreign Affairs and Defence Ministers, together with their Croatian counterparts, erected memorial plaques on the Croatian island Vis and at the former Yugoslav People's Army-run Moringj detention camp in Montenegro, commemorating events from the 1990s. This caused controversy and the Basic State Prosecution Office opened a preliminary investigation against the Ministers. There was no progress regarding the pending border demarcation between the two countries. The dispute between the two countries regarding the ownership of the sailing ship "Jadran" continues. In August 2023, the Croatian Ministry of Foreign Affairs sent a strong protest note to Montenegro due to Montenegro's celebration of the ship's 90th anniversary.

Relations with **Italy** remained good. In June 2022, the Ministers of Defence met in Rome, followed by meetings with the Chairman of the Defence Committee in the Lower House and the Chairman of the Defence Committee of the Senate. In July 2022, the Minister of Foreign Affairs met with the President of the Italian Chamber of Deputies.

4. ABILITY TO ASSUME THE OBLIGATIONS OF MEMBERSHIP

CLUSTER 2: INTERNAL MARKET

This cluster covers chapters 1-free movement of goods, 2-freedom of movement for workers, 3-right of establishment and freedom to provide services, 4-free movement of capital, 5-company law, 7-intellectual property law, 8-competition policy, 9-financial services, and 28-consumer and health protection. All nine chapters are open, with closing benchmarks that remain to be fulfilled in each chapter. This cluster is key for Montenegro's preparations for the requirements of the EU's internal market and is of high relevance for early integration and the development of the Common Regional Market.

Progress was achieved in different areas e.g. on market surveillance, accreditation and standardisation; continued alignment with the Services Directive and EU postal *acquis*; legislation on accounting, work on a new company law; progress on *acquis* alignment on intellectual property rights, adoption of a new national comprehensive strategy on Intellectual Property and accession to the European Patents Organisation and European Patents Convention. State aid transparency and strengthening of administrative capacities, alignment of the banking sector of Montenegro with the latest EU *acquis* also advanced, as well as adoption of implementation legislation on health protection.

In the coming period, Montenegro is invited to focus on the following areas: alignment with the EU *acquis* governing standardisation; step up efforts to improve the institutional set-up and administrative capacity of the Employment Agency, establish a fully operational point of single contact, continue with the implementation and enforcement of the new postal market rules, continue to develop qualifications for regulated professions; accelerate progress on electronic company registration, align with the *acquis* on capital movements and payments, including on the acquisition of property rights and monitor the phasing out of the investors' citizenship scheme; align with the Transparency Directive; adopt the new company law, finalise the revision of the Corporate Governance Code, start implementing the new national intellectual property strategy and the activities under its 2023 Action Plan; improve the track record in the area of competition and State aid, adopt a plan to ensure the financial independence of the Agency for the Protection of Competition and progress on the major State aid cases including follow up on the recovery of unlawful State aid; complete alignment of national legislation with the EU consumer protection and health protection *acquis*; significantly advance work on the insurance and capital market laws aligned with EU legislation.

Chapter 1: Free movement of goods

The free movement of goods ensures that many products can be traded freely across the EU based on common rules and procedures. Where products are governed by national rules, the principle of the free movement of goods prevents these creating unjustified barriers to trade.

Montenegro is **moderately prepared** in the area of free movement of goods. **Some progress** was made overall, by further aligning national legislation with the EU *acquis*, notably on technical requirements for products and conformity assessment as well as on standardisation and metrology. Montenegro also took further steps to make the national standardisation body a full member of both the European Committee for Standardization (CEN) and the European Committee for Electrotechnical Standardization (CENELEC). On chemicals management, Montenegro adopted implementation legislation and a new 2024-2026 chemicals management strategy. The sector's situation in terms of human resources and funding improved overall, but further strengthening of the quality infrastructure bodies is required.

Therefore, some of last year's recommendations remain valid.

In the coming year, Montenegro should in particular:

- continue to align its legislation with the EU *acquis*, as envisaged in Montenegro's accession programme;
- ensure the implementation and enforcement of the Montenegrin legislation on chemicals management that is aligned with the EU *acquis*;
- continue to strengthen the human and financial capacity of its quality infrastructure bodies.

General principles

Montenegro continued to make progress in aligning its legislation with the EU *acquis*, as envisaged in the national action plan. In December 2022, the Parliament adopted amendments to the Law on technical requirements for products and conformity assessment. The amendments introduce a 'multilateral clause' for all products belonging to the non-harmonised area. Under this clause, such products can be placed on the Montenegrin market without additional legal obstacles if they are placed on the market of the EU, the EFTA countries and Türkiye. The government adopted implementing legislation on standardisation and metrology. In March 2023, the government adopted the 2023 annual plan for the adoption of Montenegrin standards and related documents along with the 2023 work programme and financial plan of the Institute for Standardisation of Montenegro (ISME).

Non-harmonised areas

Montenegro continued to implement its action plan for compliance with **Articles 34-36 of the Treaty on the Functioning of the European Union** (TFEU) on prohibition of quantitative restrictions and with the new EU Regulation on notification of technical regulations.

Harmonised area: quality infrastructure

As concerns **standardisation**, ISME published 1 952 Montenegrin standards aligned with EU standards. In the first quarter of 2023, CEN/CENELEC assessed ISME's adoption rate at almost 91% of European standards at national level (89.27% for CEN standards and 91.46% for CENELEC standards), representing a slight improvement over the year. Following ISME's application for full membership of CEN/CENELEC, CEN/CENELEC conducted an assessment visit, during which it identified eight non-conformities. In January 2023, CEN/CENELEC sent formal recommendations to ISME to revise its action plan to ensure fulfilment of all required criteria. ISME's human resources require further strengthening as only 77% of established job positions are filled. ISME's 2023 budget increased by 62% compared to 2022.

On **metrology**, the capacity of laboratories for temperature and pressure and for testing precious metal articles improved. The Bureau for Metrology recruited two new staff but kept the same number of posts overall (49).

The **Accreditation Body of Montenegro** (ATCG) accredited 44 conformity assessment bodies (26 testing laboratories, 2 calibration laboratories, 2 medical examination laboratories, 8 inspection bodies, 3 bodies for product certification and 3 bodies for certification of management systems), broadly similar to the last reporting period. Of these, two accredited conformity assessment bodies are temporarily suspended. In October 2023, ATCG signed a Multilateral Agreement in the framework of the European co-operation for Accreditation

(EA).

On **market surveillance of products**, inspection services carried out 3 487 market surveillance inspections (3 114 inspections in the area of proactive surveillance and 373 inspections in the area of reactive surveillance) compared with 2 137 in the previous reporting period. A total of 1 284 types of dangerous and non-compliant products were identified (37 504 items). Relevant inspection services imposed corresponding administrative measures. The Administration for Inspection Affairs recruited two new health inspectors, but it needs further staff.

Harmonised area: sectoral legislation

Regarding **‘new and global approach product legislation’**, Montenegro amended implementing legislation in the areas of construction (transitioning to Eurocodes), energy efficiency and eco-design to ensure further alignment with the EU *acquis*. Since 1 January 2023, the application of Eurocodes for calculating building structures is mandatory in Montenegro.

Similarly, on **‘old approach product legislation’**, the government adopted implementing legislation on dangerous chemicals and on the content of information on cosmetic products placed on the market to increase the level of alignment with the relevant EU *acquis*. The government adopted a number of secondary legislative acts to implement the Law on chemicals, and the new chemicals management strategy for 2024-2026 was adopted in August 2023.

National legislation is not yet aligned to the latest EU *acquis* on motor vehicles, two or three wheeled vehicles, tractors (agricultural, forestry), or non-road mobile machinery emissions.

On **procedural measures**, Montenegro’s legislation is aligned with the EU *acquis* as concerns the technical requirements on crystal glass and textile labelling. In the reporting period, the maximum prices of all medicines were set according to Montenegro’s legal framework and made publicly available.

As concerns **anti-corruption measures** under this chapter, the Administration for Inspection Affairs adopts annually an integrity plan that determines anti-corruption measures and identifies risks. In addition, Montenegro’s Law on medicines contains provisions aiming at the prevention of corruption.

Chapter 2: Freedom of movement for workers

Citizens of one EU Member State have the right to work in another Member State and must be given the same working and social conditions as other workers.

Montenegro has **some level of preparation** in this area. In the reporting period, **limited progress** was achieved related to the further conclusion of bilateral social security agreements. Montenegro needs to address the long-standing recommendations to step up the administrative and technical capacity of the Employment Agency.

In the coming year, Montenegro should in particular:

- step up efforts to reform the institutional set-up and improve the administrative and technical capacity of the Employment Agency with a view to ensure the provision of relevant and evidence based active labour market policies;
- further strengthen structures to implement the EU *acquis* in this area;
- continue to work on the conclusion of further bilateral social security agreements.

Concerning **access to the labour market**, there were no major legislative developments. The constitutive meeting of the Chapter 2 Working Group only met once, on 27 March 2023 during which the new membership structure of the group was confirmed and the accession programme of Montenegro for 2023-2024 was discussed. The Commission notes that the Action Plan related to the implementation of EU *acquis* in this area expired in 2022. In July 2022, the Parliament adopted amendments to the Law on foreigners that defined the concept of digital nomads and introduced temporary residence permits for the said category of persons. Furthermore, three rulebooks related to this Law were adopted. These amendments are part of broader efforts to create sustainable solutions to attract foreign companies' teleworkers to Montenegro. Work is ongoing on further amendments to the Law on foreigners to align with a number of EU directives to ensure that EU migrant workers enjoy same work conditions, social and tax exemptions as domestic workers. In November 2022, due to lack of administrative and technical capacity, the government decided to postpone until EU accession, the application of procedures for handling foreigners' requests for temporary residence and seasonal employment permits through Montenegro's representations in their countries of origin. Based on the Decision on determining the annual number of permits for temporary residence and work of foreigners for 2023, in the period January-May 2023, a total of 14,185 permits for temporary residence and work were issued, which is about 30% more compared to the same period of the previous year.

In preparing to join **EURES** (European network of employment services) upon accession to the EU, there were limited developments due to delays in launching technical assistance projects. A twinning project to strengthen the capacity of the Employment Agency started in April 2023. On the **coordination of social security systems**, the number of signed bilateral agreements in force is 24. An agreement on social insurance was signed with Albania in February 2023. The ratification of the said agreement is pending in Parliament. In December 2022, the Parliament ratified the Agreement on Social Security between Montenegro and Romania. Negotiations with Serbia and Bosnia and Herzegovina remain pending. The draft Law on Voluntary Pension Funds is being prepared, to allow additional retirement rights of employees and self-employed persons in the context of freedom of movement of workers.

The **European Health Insurance Card** is recognised under the Law on compulsory health insurance but will only be introduced after EU accession. No progress was achieved during the reporting period. The number of agreements with EU Member States on the use of the card remained at five (Austria, Germany, Luxembourg, Slovakia and Slovenia). In line with the 2022 Health Insurance Fund staffing plan, three executors were hired for the position of senior adviser for international health insurance (Regional Units: Podgorica, Bar and Herceg Novi) through a public call. A public call was launched in March 2023 for two further similar posts in Pljevlja and Bijelo Polje.

Chapter 3: Right of establishment and freedom to provide services

EU natural and legal persons have the right to establish themselves in any Member State and to provide cross-border services. For certain regulated professions, there are rules on mutual recognition of qualifications. EU rules on postal services focus on improving the quality of universal service, gradual market opening to competition, and the establishment of an independent regulator.

Montenegro remains **moderately prepared** in this area. **Limited progress** was registered during the reporting period through the completion of alignment with the Regulation on cross border parcel delivery services as per last year's recommendations, which remain largely valid.

In the following period, Montenegro should in particular:

- set up a fully operational Point of Single Contact (PSC);
- continue inter-ministerial coordination and ensure proper monitoring of legislative alignment with the EU Services Directive, and the EU acquis on the mutual recognition of professional qualifications including the Professional Qualifications Directive and the Proportionality Test Directive, while continuing the implementation and enforcement of the new postal market rules;
- accelerate the alignment of all study programmes with the Professional Qualifications Directive and continue coordination with the Commission specifically on alignment with minimum training requirements under the Directive.

On the **right of establishment and freedom to provide cross-border services**, Montenegro continued to align its sectorial legislation with the EU Services Directive, along with efforts to improve the mechanism to monitor this legislative alignment. As part of an EU technical assistance project, preparatory activities to set up a PSC for services portal were launched. A Decree on cooperation and exchange of information between institutions for access and provision of PSC services was adopted in July 2023. Efforts to introduce electronic company registration continued, albeit at a much slower pace than in 2021.

On **postal services**, the national legislation is aligned with the EU Postal Services Directive where Montenegro has made good progress over the years. The reserved area was abolished already in 2013, and complemented by bylaws to implement European quality standards for the provision of postal services in 2020. Montenegro has also completed its alignment with the EU Regulation on cross-border parcel delivery services in December 2022, when the Agency for Electronic Communications and Postal Services adopted amendments to the rulebook on the type and method of submitting data by postal operators. The number of postal operators is currently 26. In April 2023, the government adopted the implementation report of the 2022 action plan on the postal development strategy and the 2023 action plan. A new Strategy for the Development of the Postal Service for the period 2024-2028 is envisaged. Montenegro should continue monitoring the proper implementation and enforcement of the new postal market rules.

On **mutual recognition of professional qualifications**, Montenegro has a satisfactory level of alignment with the EU *acquis*. Montenegro, however, should follow up on measures set out in the national plan to develop qualifications for regulated professions: this will ensure continuous alignment with the EU *acquis*. In April 2023, the Parliament adopted the Law on confirmation of the Agreement on the recognition of professional qualifications for doctors of medicine, dentists and architects under the Central European Free Trade Agreement signed within the framework of the Berlin Process. This law is currently pending signature by the President. More effort in the alignment with the minimum training requirements of all sectoral professions under Directive 2005/36/EC on the recognition of professional qualifications is needed.

Chapter 4: Free movement of capital

In the EU, capital and investments must be able to move without restrictions, with common rules for cross-border payments. Banks and other economic operators apply certain rules to support the fight against money laundering and terrorist financing.

Montenegro is **moderately prepared** in this area. **Some progress** was made during the reporting period. The legal framework on payment systems was further aligned with the EU

acquis. The investor citizenship scheme was phased out at the end of 2022, but a number of pending applications are still being processed.

All past recommendations not fully addressed remain valid. In the coming year, Montenegro should in particular:

- continue aligning with the EU *acquis* on capital movements and payments, including on the acquisition of property rights by EU nationals;
- strengthen the anti-money laundering supervision of the non-financial sector, particularly in high-risk areas, such as games of chance, by amending the Law on games of chance and the Law on the prevention of money laundering and terrorism financing;
- continue to monitor risks related to money laundering when processing pending applications to the investor citizenship scheme.

In the area of **capital movements and payments**, since 2017, a regime of free movement of capital, no limitation on the transfer of property, and no foreign exchange or currency control has been in place. However, Montenegro needs to further align its legal framework with the EU *acquis*. Montenegro has yet to implement its obligations under the Stabilisation and Association Agreement as regards amending the Law on ownership rights, removing preferential treatments and ensuring that EU nationals can buy real estate or farming land under the same conditions as Montenegro nationals.

As regards the **payment system**, the Parliament adopted amendments to the Law on payment systems in September 2022 to align it with the EU *acquis*. Four implementing acts to this law were adopted by the Central Bank of Montenegro, to align the regulatory technical standards in the area of payments to the ones of the EU. Further to the adoption in December 2021 of a Law on comparability of fees related to consumer payment accounts, payment account switching and payment accounts with basic features, in September 2022, the Central Bank adopted two implementing regulations, which entered into force on 9 January 2023.

In the area of **anti-money laundering and terrorist financing**, Montenegro has yet to align its legal framework with the fifth Anti-Money Laundering Directive and with the recommendations of the Financial Action Task Force. Amendments to the Law on games of chance were prepared but have yet to be adopted. The Law on international restrictive measures, a crucial act against the background of international and EU sanctions, has yet to be aligned with EU standards.

Montenegro currently has three payment institutions. The Central Bank continued to fulfil its supervisory function in the area of anti-money laundering and prevention of terrorist financing. In 2022, it performed regular on-site controls of nine banks, one payment institution, two microcredit institutions and one company, to check the compliance of their operations. It also performed one thematic targeted control upon request of the Financial Intelligence Unit, embedded in the police, and several follow up controls of financial institutions. In 2022, the Directorate for supervision in the area of prevention of money laundering and international restrictive measures of the Ministry of Interior conducted 136 inspections of reporting entities. Some 65 misdemeanour orders were issued, for an amount of EUR 113 900.

The Central Bank organised training sessions for the 28 reporting entities of Montenegro, to improve their knowledge and capacity on prevention of money laundering and terrorist financing. The fifth round of evaluation of the Committee of Experts on the Evaluation of Anti-Money Laundering Measures and the Financing of Terrorism (MONEYVAL) is ongoing.

The **economic citizenship scheme** expired at the end of 2022. Between January 2019 and December 2022, 556 applications were lodged (556 applicants and 1 281 family members). By 15 June 2023, the government had issued 954 positive decisions (293 applicants and 661 family members). Some 398 applications were still pending on 15 June 2023 (398 applicants and 710 family members). Montenegro should closely monitor risks related to money laundering when processing pending applications to the investor citizenship scheme, as such schemes pose risks as regards security, money laundering, tax evasion, terrorist financing, corruption and infiltration by organised crime, and are incompatible with the EU *acquis*.

Chapter 6: Company law

The EU has common rules on the formation, registration and disclosure requirements of a company, with complementary rules for accounting and financial reporting, and statutory audit.

Montenegro has a **good level of preparation** in the area of company law. **Limited progress** was made on the 2022 recommendations by adopting the implementing act to the Law on accounting.

All past recommendations not fully addressed remain valid. In the coming year, Montenegro should therefore, in particular:

- finalise, adopt and start implementing the draft Company Law to further align national legislation with the EU company law *acquis* including on the encouragement of long-term shareholder engagement, the use of digital tools and processes, and cross-border operations (mergers, divisions, conversions);
- complete alignment with the Transparency Directive, including the sanctioning regime;
- finalise the revision of the Corporate Governance Code.

In the area of **company law**, Montenegro is preparing a new company law to further align national legislation with the company law *acquis* including a number of directives in the areas of long-term shareholder engagement, the use of digital tools, cross-border operations (mergers, divisions, conversions), employee participation in cross-border operations, and the directive on gender balance on corporate boards. No progress was registered on revising the Corporate Governance Code. In the future, the national business register should be technically ready to interconnect with the EU Business Registers Interconnection.

In the area of **company reporting**, the government adopted implementing acts to the Law on accounting, including rules on company financial statements. An initiative to further amend the Law on accounting was launched. Currently, all companies must comply with international financial reporting standards (IFRS / IFRS for SMEs), while reduced obligations exist for micro and small companies (balance sheet and profit and loss account only). Montenegro will need to align with 2022 EU Directive on corporate sustainability reporting. Legislative work to achieve full alignment with the *acquis* on transparency requirements for listed companies is ongoing. The Capital Market Authority operates a registry as the Officially Appointed Mechanism for the central storage of regulated information. An initiative to amend the Law on auditing was also launched. Statutory audits are performed based on international auditing standards (ISAs) and are mandatory for public-interest entities. In February 2023, the government adopted a decision on the appointment of a new convocation of the Audit Council (composed of the chairperson and four members). The human resources capacity of the Department for Audit Oversight was strengthened with a quality assurance inspector, with two further posts to fill in the pipeline. Furthermore, a head

of accounting and one further independent adviser were appointed to the accounting division.

Chapter 7: Intellectual property law

The EU has harmonised rules for the legal protection of intellectual property rights (IPR), copyright and related rights. Rules for the legal protection of IPR cover, for instance, patents and trade marks, designs, biotechnological inventions and pharmaceuticals. Rules for the legal protection of copyright and related rights cover, for instance, books, films, software and broadcasting.

Montenegro has a **good level of preparation** in the area of intellectual property law. **Good** progress was made in aligning national legislation with the EU *acquis* in the area of industrial property notably by adopting amendments to respective Laws on patents and trademarks, , and with the adoption of the new national intellectual property strategy, and accession to the European Patent Convention and the European Patent Organisation. However, improvements need to be made concerning the track record on investigations, prosecutions and judicial follow-up due to staff shortage.

In the coming year, Montenegro should in particular:

- Start implementing the new and comprehensive national intellectual property strategy for 2023-2026 and the activities indicated in the Action Plan for 2023;
- further align its legislation on copyright and related rights and enforcement of Intellectual Property Rights (IPR) with the EU *acquis*;
- improve its track record on investigations, prosecutions and judicial follow-up including by addressing staff shortages.

In the area of **copyright and neighbouring rights**, in January 2023, the government adopted the Law on amendments to the Law on copyright and related rights, which was positively assessed by the European Commission and is currently pending adoption by the Parliament. Amongst other things, these amendments aim to align national legislation with three EU Directives on certain permitted uses of works and other subject matter protected by copyright and related rights for the benefit of persons who are blind, visually impaired or otherwise print-disabled, coordination of certain rules concerning copyright and rights related to copyright applicable to satellite broadcasting and cable retransmission and enforcement of intellectual property rights. Montenegro started work on the upcoming amendments to the Law on copyright and related rights, which will aim at implementing the Directive on online transmissions of broadcasting organisations and retransmissions of television and radio programmes (SatCab II) and the Directive on copyright and related rights in the Digital Single Market.

Concerning **industrial property rights**, in March 2023, Montenegro successfully completed the test phase for an electronic submission of applications system. On 1 October 2022, Montenegro became a member state of the European Patent Organisation and acceded to the European Patent Convention. In December 2022, the Parliament adopted the Law on amendments to the Law on patents for alignment with the EU industrial property *acquis* concerning the supplementary protection certificate for medicinal products, the Law on amendments to the Law on trademarks to approximate the laws of the Member States relating to trademarks, and the Law on ratification of the Singapore Treaty on the Law on trademarks. In March 2023, the Directorate for Intellectual Property completed the translation of new terms for the Harmonised Database. In June 2023, Montenegro acceded to the Geneva Act of the Lisbon Agreement on Appellations of Origin and Geographical Indications: its

ratification is pending by the parliament.

On **enforcement**, in March 2023, the Ministry of Economic Development and Tourism approved the 2023 action plan of the Working Group for organising and implementing joint action to combat infringements of IPR. In addition, the Ministry participated in international joint customs operations with the aim to detect, inter alia infringements of IPR. The number of misdemeanour warrants and the value of goods seized by the Administration for Inspection Affairs – Market Inspection show a slight increase in comparison to previous years. In the period June 2022 - April 2023, 729 controls were conducted, and 34 misdemeanour warrants were issued, amounting to EUR 34 600. More efforts are needed to improve the track record on investigations and judicial follow-up including addressing shortage of staff for both sectors. The Unit for Copyright and Related Rights carried out a special check of the compliance of the operations of all collective organisations with the 2021 amendments to the Law on copyright and related rights related to collective management of rights.

In July 2023, the country adopted the new national **intellectual property strategy** for 2023-2026 and its action plan for 2023. This comprehensive strategy aims to improve the efficiency of the system of registration and enforcement of intellectual property rights, by, inter alia, strengthening administrative capacity.

Chapter 8: Competition policy

EU rules protect free competition. They include antitrust rules against restrictive agreements between companies and abuse of a dominant position, and also include rules on concentrations between companies which would significantly impede effective competition. EU rules also set out a system of State aid control. Governments are only allowed to grant State aid if restrictive conditions are met, to prevent the distortion of competition.

Montenegro is **moderately prepared** in this area. **Some progress** was made by further following up on a number of State aid cases including the Montenegro Airlines and Air Montenegro cases, by adopting secondary legislation in the field of State aid and through recruitment of additional personnel thus strengthening the administrative capacity. Decisions and opinions issued by the State aid authority are timely published in the State aid registers, which further increases transparency. Last year's recommendations remain valid.

In the coming year, Montenegro should in particular:

- conclude the Montenegro Airlines case and follow up on the setting-up of the new national air carrier branded Air Montenegro to provide clarity on state aid and legal continuity between the two, as well as progress on other major ongoing investigations of non-notified/possible State aid (including UNIPROM KAP, Bar-Boljare highway) and if necessary, recover the corresponding funds;
- in addition to ensuring transparency on all State aid decisions and operational independence of the State aid authority, prepare legislation to empower the Agency for the Protection of Competition (APC) to impose fines and adopt a plan to ensure the APC's financial independence;
- further improve the track record in the areas of antitrust/mergers and State aid by continuing to increase staffing of the APC, building the administrative capacity of the APC and of courts, further promoting the use of leniency policy, and carrying out more in-depth investigations and on-site inspections.

Antitrust and mergers

The **legislative framework** is broadly aligned with the EU *acquis* (Articles 101 and 102

TFEU) and the Stabilisation and Association Agreement. The Roadmap for implementing measures to achieve the closing benchmarks under Chapter 8 has not been finalised; efforts should step up to redraft the Roadmap in the form of an Action Plan, adopt it and start its implementation. No legislation in the field of competition was adopted in the reporting period. In June 2023, the Ministry of Economic Development and Tourism adopted the Decree on the termination of the Block Exemption Decree.

As regards **the institutional framework**, in August 2022, the APC adopted the rulebook on internal systematisation and organisation, which is a positive step in strengthening its administrative capacity. The APC cannot impose administrative fines on companies breaching competition law, while the European Commission and many competition authorities of EU Member States have this power. In November 2022, the vacancy of APC director was finally filled: the APC director was appointed for a period of 5 years. This completes the composition of the APC Council and should significantly facilitate the implementation of APC's activities.

In the area of **enforcement capacity**, the APC's administrative and financial capacity need to be strengthened. Only 13 out of the 18 planned posts in the area of antitrust and mergers are occupied. The APC was further strengthened with the appointment of eight additional staff members.

As regards **implementation**, concerning prohibited agreements, the APC issued one decision while another proceeding is ongoing. Furthermore, seven procedures for individual exemption from prohibited agreements were initiated at the request of the parties, six were resolved (one from the previous period and five from the current period), while two procedures are ongoing. Out of five cases initiated before the Court, one case was resolved, while the other four cases are ongoing. The APC submitted a request to initiate proceedings for infringements before the Court, which are ongoing.

In the reporting period, the APC issued 52 decisions concerning concentration. During the reporting period, one request to investigate a possible infringement of competition law was submitted to the APC and is ongoing.

State aid

The **legislative framework** is largely in line with the EU *acquis* (Articles 107 and 108 TFEU). The 2018 Law on State aid control sets out the notion of aid as well as procedural State aid rules. Six related implementing acts were adopted during the reporting period. These set out, among other things, instructions on how to calculate the equivalent of the subsidy and the return interest rate. However, it is essential to further amend the Law on State aid control and related implementing acts to ensure full compliance with EU State aid rules.

As regards the **institutional framework**, the APC is responsible for enforcing the legal framework.

The **enforcement capacity** of the APC Council needs further strengthening. It has seven employees in the field of State aid, the same number as in 2021. To strengthen its expertise and enforcement capacity, the APC should make significant efforts to recruit new staff and build related capacity. All concerned institutions should help strengthen the position of the APC and its Council to ensure an independent and functioning system of State aid control. It is imperative that grantors of potential State aid notify and consult with the APC *ex ante* with sufficient notification. The APC should be perceived as a partner by aid grantors – advising on State aid rules in specific cases.

In the area of **implementation**, in 2022, the APC Council adopted 45 State aid decisions.

Concerning State aid to Montenegro Airlines, in August 2022, the APC issued a third decision ordering further recovery of illegal State aid. The bankruptcy case of Montenegro Airlines is pending at the Commercial Court. The APC also initiated examination procedure on possible State aid granted to Air Montenegro between 2012-2017. In the cases of the Bar-Boljare highway and its operations, UNIPROM KAP and the Niksic steel mill, the APC started pre-examination activities. The APC also started examining investigations on possible State aid granted to the Plantaže company, which was disbursed without proper notification to the APC. In the reporting period, two recovery decisions were adopted and appealed against before the Administrative Court. To prove a solid enforcement track record, the APC needs to have timely access to all necessary information to provide opinions and take binding decisions. The APC has not yet published any opinions or decisions concerning possible State aid cases in the energy sector. The APC should continue monitoring the implementation of State aid rules in large projects carried out in cooperation with third countries.

Montenegro made progress towards ensuring transparency on State aid decisions, with the APC publishing decisions and opinions, including its annual reports, on its website in a timely manner. Additionally, the APC created a general register of State aid cases, which can also help increase transparency, along with two specialised registers (related to COVID-19 and *de minimis* aid). The APC should continue to advocate for further strengthening of awareness of State aid rules among aid grantors at both central and local levels.

Liberalisation

The Law on the protection of competition and the Law on State aid control apply to public undertakings and undertakings with special or exclusive rights. This does not apply to cases where the laws would obstruct the performance of the particular tasks of services of general economic interest (SGEI) assigned to such undertakings, in line with Article 106 TFEU and with the Stabilisation and Association Agreement. There is no evidence of the existence of commercial monopolies within the meaning of Article 37 TFEU.

Chapter 9: Financial services

EU rules aim to ensure fair competition among, and the stability of, financial institutions, namely banking, insurance, supplementary pensions, investment services and securities markets. They include rules on authorisation, operation and supervision of these institutions.

Montenegro is **moderately prepared** in the area of financial services. Overall, **some progress** was achieved, with good progress on bank and financial conglomerates, some progress on insurance; and limited progress on capital markets. Last year's recommendations remain valid.

In the coming year, Montenegro should:

- complete legislative alignment with the latest revisions of the capital requirements and bank recovery and resolution legislation;
- continue to work on alignment with the insurance legislation,
- significantly advance work on the draft Law on investment funds, the draft Law on alternative investment funds and the draft Law on pension funds, aligned with EU legislation.

On **banks and financial conglomerates**, legislation is largely aligned with the EU *acquis*. Alignment with the latest bank recovery and resolution legislation continued, including by drafting amendments to the Law on resolution of credit institutions, and by preparing the

2023 resolution plans for credit institutions. In July 2022, banks made their first annual contributions to the Resolution Fund. In December 2022, the Central Bank of Montenegro adopted several implementing acts in the area of banking, including on capital adequacy of credit institutions. Work was also initiated on a draft Law regulating the area of supplementary supervision of financial conglomerates.

In the area of **insurance and occupational pensions**, in the second half of 2022, the Insurance Supervision Agency (ISA) adopted several implementing acts to the current Law on insurance. Work continued on a new draft Law on insurance, aligned with the latest EU rules, in particular Solvency II Directive. In 2023, the ISA adopted implementing acts on the internal organisation and governance structures of insurance companies and on pre-contractual information, bringing these aspects closer to EU standards.

Regarding financial market infrastructure, there were no relevant developments. Central Securities Depository and Clearing Company, supervised by the Capital Markets Authority, is the depository of securities, owner, and operator of the securities settlement system.

On securities markets and investment services, in the second half of 2022, public consultations were held on the draft Law on alternative investment funds, the draft Law on open-ended investment funds with public offering, and the draft Law on pension funds. Work on preparing the final drafts of these laws continued.

In the area of **sustainable and digital finance**, Montenegro's National Strategy for Sustainable Development contains a chapter on financing sustainable development. In March 2022, the Central Bank of Montenegro adopted a policy to reduce the adverse climate change impact on the financial system and on greening the financial system.

Chapter 28: Consumer and health protection

EU rules protect consumers' economic interests and in relation to product safety, dangerous imitations and liability for defective products. The EU also ensures high common standards for tobacco control, blood, tissues, cells and organs, and medicines for human and veterinary use. The EU also has rules for upholding patients' rights in cross-border healthcare and in preparing for and responding to cross-border health threats, including communicable diseases.

Montenegro is **moderately prepared** in the area of consumer and health protection. Overall, **limited progress** was made on last year's recommendations. Some alignment to the EU *acquis* took place in the field of health protection, notably the Law on health care was adopted. Also, the construction of a mental health clinic started, and the capacity of the healthcare institutions to fight against COVID-19 was strengthened by targeted financial allocations to healthcare institutions. The composition of the Consumer Protection Council, an advisory body to the government, was changed to include representatives of all stakeholders in the area of consumer protection. There is a need to strengthen administrative capacity and ensure full implementation of the EU *acquis*. Last year's recommendations remain valid.

In the coming year, Montenegro should in particular:

- complete the alignment of national legislation with the EU consumer protection *acquis* and health protection *acquis* on substances of human origin, tobacco control and patients' rights in cross-border healthcare, as set out in Montenegro's accession programme;
- strengthen the role and effectiveness of the Council for Consumer Protection;

→ adopt a new strategy for the development of the healthcare system and start its implementation.

Consumer protection

Regarding the **legislative framework for consumer protection**, several pieces of legislation are pending adoption: a law on consumer protection to align national legislation with the EU *acquis* on digital content, a law on collective actions to align national legislation with the EU *acquis* on representative actions for protection of collective interests of consumers, a law on consumer credits to align national legislation with the relevant EU *acquis*, a law on tourism and catering to align national legislation with the EU *acquis* on package travel and linked travel arrangements, and amendments to the Law on market surveillance to fully align national legislation with the latest EU *acquis* in this area. Further alignment should be ensured with the EU consumer protection cooperation regulation. Some measures were taken to implement the 2022 and 2023 action plans under the national **consumer protection programme** (2022–2024). These included the appointment in October 2022 of members of the new Council for Consumer Protection, which met twice. During the reporting period, a consumer protection NGO won a collective lawsuit against a bank; the court found that the bank violated the Law on consumer credit and the collective rights of consumers.

An **EU peer-review** visit concerning consumer protection concluded that Montenegro should ensure timely alignment of its national legislation with and implementation of relevant EU legislation, speeding up legislative processes and taking a more proactive approach in consultation processes. It also recommended that Montenegro: (i) strengthen the **administrative capacity** of its market surveillance authorities, in line with its relevant strategy and internal organisational structure; and (ii) develop relevant education and training programmes and allocate additional financial resources to them. Other recommendations included strengthening support to the non-governmental sector and out-of-court dispute resolution mechanisms and strengthening the engagement of local government in consumer protection.

As concerns the **protection of the economic interests of consumers**, the Administration of Inspection Affairs carried out 33 259 inspections, identifying 4 876 irregularities leading to administrative and punitive measures.

Montenegro's legal framework on **product safety** is mostly aligned with the EU *acquis*. During the reporting period, 3 487 inspections were conducted, of which 3 114 inspections in the area of proactive surveillance and 373 in the area of reactive surveillance. Based on these inspections, 1 284 types of dangerous and non-compliant products were found, amounting to 37 504 items. This led to 536 dangerous and non-compliant products (15 285 items) being withdrawn from the market. Temporary circulation bans for products not posing a serious risk and for non-compliant products (until the removal of identified non-compliances) were imposed on 761 types of products (22 627 items).

Public health

National legislation on **public health** is partly aligned with the EU *acquis*. Implementing legislation in the field of medically assisted reproduction was adopted to further align the national legislation with the EU *acquis* on substances of human origin. In 2022, the state budget for the health sector was EUR 420 million, an increase compared to 2021. The adoption of the 2023-2027 strategy for the development of the healthcare system is pending, while the Law on health care was adopted.

On **anti-microbial resistance**, awareness-raising and education activities were carried out by

the national authorities, the World Health Organization and other institutions, including on bacterial resistance to antibiotics, rational use of antibiotics and strengthening the diagnostic capacity in hospitals. However, further work on this remains necessary.

On **tobacco control**, national legislation on smoking in public places and the sale of tobacco products to minors is still not sufficiently enforced. In May 2023, the government adopted the strategic document "Program for the control of the use of tobacco products 2023-2025 with the Action Plan 2023-2025".

The government's 2022-2024 programme on **alcohol-related harm reduction** and its related action plan are being implemented. However, there is no overview of the situation due to lack of data collection on harmful consequences of alcohol consumption. Regarding **drug abuse prevention and harm reduction**, civil society organisations continued their prevention action and services, including some financed by the government. The public health institute organised educational activities on drug addiction for 56 service providers from 13 health institutions.

In February 2023, the Ministry of Health published a report on the implementation of the 2021-2023 action plan for the **mental health** strategy for 2019-2023, showing that only 16% of planned measures have been implemented. In July 2022, the construction of a mental health clinic started, still in process, with financial support from the government. When completed, it will have Montenegro's first child and adolescent psychiatry department.

On **blood, tissues, cells and organs**, the national blood transfusion institute continued to ensure that enough safe blood is available for people's needs. In the area of blood, Montenegro's legislation is almost fully aligned to the EU *acquis*. However, the system for reporting on adverse effects and reactions is not yet in place.

Regarding **patients' rights in cross-border healthcare**, Montenegro has yet to adopt implementing legislation on conditions, means and procedures for administering cross-border healthcare.

On **communicable diseases**, the Ministry of Health distributed more than EUR 5 million for the fight against COVID-19 to seven healthcare institutions to improve their capacity and raise the level of their healthcare services. Regarding HIV/AIDS, the Institute for Education organised training sessions for teachers and educators, while civil society organisations continued their services for key population groups. Between September and December 2022, Montenegro organised its first human papillomavirus (HPV) vaccination programme. It resulted in the vaccination of nine-year old girls. According to UNICEF, the coverage for the first vaccination dose against measles, mumps and rubella fell from 90% in 2010 to 18% in 2022. The situation is mostly due to focusing resources on COVID-19 vaccination and reluctance of parents to bring their children to health centres during the pandemic. In February 2023, the government adopted a programme for mandatory immunisation of population against certain communicable diseases and related implementing legislation.

Implementation of the programme for the control and prevention of **non-communicable diseases** continued.

In the area of **health inequalities**, vulnerable groups have access to healthcare services, with the exception of persons without regulated legal status, including Roma and Egyptians not having proper legal status. People, in particular the elderly, living in remote rural areas face difficulties to reach health care facilities. Also, the lack of accessible healthcare facilities, appropriate equipment and special healthcare services remains a concern for people with disabilities.

According to a public survey conducted by an NGO, almost 60% of people living in Montenegro have seen **corruption** in the healthcare sector. They mostly refer to irregular payments for health treatments, often voluntarily done by patients.

CLUSTER 3: COMPETITIVENESS AND INCLUSIVE GROWTH

This cluster covers chapters 10-digital transformation and media, 16-taxation, 17-economic and monetary policy, 19-social policy and employment, 20-industrial policy, 25-science and research, 26-education and culture, and 29-customs. All eight chapters are open, with closing benchmarks set in all but two, namely chapter 25-science and research and 26-education and culture – both of which are provisionally closed. Closing benchmarks remain to be fulfilled in each of the other six chapters. This cluster and the reforms concerned have significant links to Montenegro's Economic Reform Programme.

Some progress was achieved in different areas e.g. signature of the Association Agreement concerning the Digital Europe Programme, tax legislation and the automatic exchange of bank account information; as well as on further implementation of the revised industrial policy. There was slow progress on preparations for accession to the Convention on common transit procedure and implementation of the action plan for alignment with the EU *acquis* in the area of economic and monetary policies.

In the coming period, Montenegro is invited to step up legislative alignment in the electronic communications, information technologies and audiovisual media sectors, and ensure the media sector's independence; make further progress on removing VAT and other exemptions that are not aligned to the EU *acquis*; ensure practical cooperation amongst relevant public authorities and develop appropriate capacity to produce government finance statistics and fiscal notifications; monitor the implementation labour law, in addition to focusing on the employment activation measures in addition to the further development of the Youth Guarantee; continuing efforts on improving safety at work particularly regarding labour inspection; evaluate the results of its 2019-2023 industrial policy strategy and prepare a new industrial policy, in cooperation with relevant stakeholders; continue to support financially research and innovation especially regarding smart specialisation and the Green and Digital Agendas; build on the quality and accessibility of education and training and plan for further education reform; and finalise all preparations for the accession to the Convention on a common transit procedure.

Chapter 10: Digital transformation and media

The EU supports the smooth functioning of the internal market for electronic communications, electronic commerce and audiovisual services. The rules protect consumers and support the universal availability of modern services.

Montenegro remains **moderately prepared** in the area of digital transformation and media. There was **limited progress**, mainly directed at reducing the impact and addressing the consequences of the August 2022 cyberattack by making the government's IT infrastructure once again operational. Montenegro joined the Digital Europe Programme in June 2023. However, last year's recommendations have not been met and remain valid.

In the coming year, Montenegro should in particular:

- align national legislation with the EU *acquis* on electronic communications and information technologies and on audiovisual media, ensuring the operational independence of media regulators and the public service broadcaster;
- grant the Agency for Electronic Media (AEM) powers to impose a complete set of

measures, including warnings, fines, suspensions and revocation of licences ensuring proportionality and effectiveness;

→ achieve a track record on enforcement of the EU *acquis* on electronic communications, information society services, open data and in particular audiovisual media services, including as regards regulatory independence.

Concerning **electronic communications and information technologies**, Montenegro needs to intensify efforts to complete the alignment of its national legislation with the *acquis* on electronic communications and information technologies. Montenegro has not yet aligned its national legislation with the European Electronics Communication Code, the Toolbox for 5G Cybersecurity, the e-Privacy Directive and the eIDAS Regulation on digital identity and trust services.

In November 2022, the Ministry of Economic Development and Tourism set up a working group to draft the Law on electronic communications. However, in April 2023, in a separate procedure, the Parliament adopted amendments to the Law on electronic communications with a view to dismiss existing members of the EKIP Council and Executive Director before the end of their mandate. These Amendments were proposed by a number of Members of Parliament, without a public debate and despite a negative opinion from the Government and the Agency for Electronic Communications and Postal Services (EKIP). Such developments seriously risk intruding on the independence of the Agency.

Work continued on the draft strategy for the development of 5G mobile communication networks for 2023-2027. Broadband infrastructure development progressed with EU support. According to Montenegrin statistical information, the share of households with access to fixed high-speed internet (at least 100 Mb/s) and the share of the population with access to mobile high-speed internet both increased in 2022 compared to 2021, from 76.7% to 78.5% and from 97.2% to 97.5%, respectively. The total number of fixed broadband internet connections increased by 4.4% compared to 2021. In October 2022, the Agency for Electronic Communication launched an auction for the spectrum in the 700 MHz, 3.6 GHz and 26 GHz bands and awarded three existing telecom operators with frequency resources in the 700 MHz and 3.6 GHz bands.

Regarding **digital transformation**, the Ministry of Public Administration (MPA) should intensify efforts and accelerate alignment of the national legislation with the Network and Information Security Directive (NIS 2) and the Open Data directive. Alignment with the Digital Services Acts and Digital Markets Act needs to be stepped up, to provide predictability for the business community. In December 2022, the MPA set up the Digital Academy – an online platform for education and building digital and leadership skills of public servants, students, and vulnerable groups. The signature of the Association Agreement to the Digital Europe Programme between the European Commission and Montenegro took place in June 2023 during the meeting of the 2nd Regulatory Dialogue for the Western Balkans. The association agreement goes into retroactive effect from 1 January 2023. It would be highly advisable to seek alignment with the new legislation in place (namely, the Interoperable Europe Act) and with the services related to the Interoperable Europe Academy. A massive cyber-attack at the end of August 2022 disrupted the work of public services, businesses and people alike. The official gov.me website and all official email accounts of civil servants at state level were not operational for several months. In response, in December 2022, the MPA set up a new Directorate for Information Security known as the government CIRT (Computer Incident Response Team). At the end of 2022, the number of e-government services was 403, down from 410 in 2021, due to internal reorganizing and

preventive actions related to the cyber-attack. A small number of new services came into operation, including applications for enrolment in preschool institutions and student dormitories.

The Ministry of Culture and Media is responsible for audiovisual policy. In the area of **audiovisual policy**, the Regulatory Agency for Electronic Media (AEM) continued to exercise its mandate in a professional manner. In September 2022, the AEM suspended the broadcasting of the morning TV show of the Belgrade-based Pink M in Montenegro for a period of 6 months, for inciting hatred, intolerance and discrimination against ethnic Montenegrins. The AEM still lacks the authority and measures to effectively monitor and penalise broadcasters and rules, and its operational capacity has yet to be strengthened.

The Law on audiovisual media services, the amendments to the Law on media, and the Law on the national public broadcaster have not been adopted yet. Montenegro urgently needs to fully align its legislation with the 2018 revision of the EU Audiovisual Media Services Directive (AVMSD) and with the recommendations and legal opinions of the Council of Europe and the Organization for Security and Co-operation in Europe within the required timeline to ensure the country's continued participation in all aspects of the Creative Europe Programme. The new rulebook on the distribution of funds from the Media Pluralism Fund entered into force in January 2023. In October 2023, Montenegro adopted its media strategy for 2023-2027 together with an accompanying action plan 2023-2024.

Chapter 16: Taxation

EU rules on taxation cover value-added tax, excise duties and aspects of corporate taxation. They also cover cooperation between tax administrations, including the exchange of information to prevent tax evasion.

Montenegro is **moderately prepared** in the area of taxation. Overall, **limited progress** was made on last year's recommendations. Progress was made on tax legislation and in preparing the automatic exchange of bank account information.

In the coming year, Montenegro should in particular:

- further remove value added tax (VAT) and other tax exemptions that are not aligned with the EU *acquis*;
- ensure adequate administrative capacity and the required infrastructure in the central and local tax offices to implement and enforce tax legislation and to effectively collect taxes;
- strengthen the technical capacity and infrastructure needed for the application of the EU IT systems, such as Excise Movement Control System (EMCS) and VAT Information Exchange System (VIES), and the IT systems necessary for tax cooperation and exchange of information in the field of direct taxation.

In the area of **indirect taxation**, on 16 December 2022, the Parliament adopted amendments to the Law on value added tax to further harmonise it with the *acquis* on the common VAT system. On 28 February 2023, the Parliament adopted amendments to the Law on excise duties notably to gradually increase the specific part of the excise duty on cigarettes.

In the area of **direct taxation**, in December 2022, the Law on personal income tax was amended to widen the scope of taxable income and to create a normative environment conducive to attracting 'digital nomads'. To calculate interest on loans, credits and other financial instruments, implementing legislation requires the application of the 'arm's length' principle as of 2023. As concerns the rules on transfer prices of transactions, adopted implementing legislation is based on recommendations of the Organization for Economic Co-

operation and Development (OECD).

International assessment of the Revenue and Customs Administration (RCA) of Montenegro is ongoing to test the country's readiness to start the envisaged **automatic exchange of financial account information** in the OECD framework on base erosion and profit shifting, scheduled for September 2023. Montenegro adopted legislation requiring financial institutions to report such accounts.

On **operational capacity and computerisation**, some activities were carried out to address the issues highlighted by the TADAT analysis, notably to improve the programme of inspection supervision and risk assessment for VAT refund requests. Among the issues that are yet to be addressed are the structuring of the tax debt and the implementation of a modern approach to risk management in compliance with tax regulations.

The RCA still needs to adopt a **human resources** strategy and a personnel and training plan.

Chapter 17: Economic and monetary policy

EU rules require the independence of central banks and prohibit them from directly financing the public sector. Member States coordinate their economic policies and are subject to fiscal, economic and financial surveillance.

Montenegro is **moderately prepared** in the area of economic and monetary policy. **Limited progress** was achieved in implementing last year's recommendations, mainly on publishing quarterly statistics on international investment position data. The government adopted the 2023-2025 Economic Reform Programme (ERP) in time. Core reforms of the ERP focus on the identified key challenges to the economy, but macrofiscal plans do not include a medium-term fiscal consolidation strategy. The implementation of the reforms remains weak and last year's recommendations remain valid.

In the coming year, Montenegro should:

- continue to implement the revised action plan for alignment with the EU *acquis* under this chapter;
- ensure that the Ministry of Finance and Social Welfare, the Central Bank of Montenegro and Monstat cooperate, coordinate among themselves and have appropriate capacity to produce government finance statistics and fiscal notifications in accordance with the ESA 2010 methodology.

Montenegro does not have standard **monetary policy** tools at its disposal, as it uses the euro as legal tender, leaving fiscal policy as the main macroeconomic policy instrument. Montenegro's use of the euro is based on a decision that the authorities made under exceptional circumstances and is fully distinct from membership of the euro area.

In June 2023, proposals for amendments to the Law on the Central Bank of Montenegro (CBM), prepared by the CBM and aimed at further alignment of CBM operations with the EU *acquis*, were adopted by the government. In a fully separate procedure, in April 2023, the Montenegrin Parliament adopted its own amendment to the Law, which assigns to the Parliament the right to appoint the CBM governor and members of the CBM Council, based on a public competition. The amendment also shortens the remaining term of office of the governor and incumbent CBM Council members. However, the president of Montenegro refused to sign the new version of the Law, voted by the Parliament, while the draft prepared by the CBM and adopted by the government is yet to be transmitted to the parliament.

In the area of **economic policy**, there were no significant developments in terms of alignment

with Council Directive 2011/85/EU on requirements for budgetary frameworks of the Member States, or introduction of European System of Accounts (ESA 2010) standards. Delays in introducing accrual accounting and producing government finance statistics based on ESA 2010 standards remain a key obstacle in this chapter. Efforts should be made to ensure practical cooperation between the Ministry of Finance, Central Bank of Montenegro and Monstat, and development of appropriate capacity to produce government finance statistics and fiscal notifications, in accordance with the EU *acquis*.

In February 2023, the Parliament adopted amendments to the Law on budget and fiscal responsibility that make it possible to set up an independent Fiscal Council. A public call for three members of the Council was launched in April 2023. However, the president of Montenegro did not sign the amended law and the selection procedure remains stalled.

The government adopted and submitted its 2023-2025 **Economic Reform Programme** on 25 January 2023. The programme integrates macroeconomic, fiscal and structural reform plans into a single strategic document. Core reforms under the ERP continue from the previous programme and focus on the identified key challenges to the economy. However, macro-fiscal plans do not include a medium-term fiscal consolidation strategy. The limited implementation of 2022 policy guidance jointly agreed with the EU demonstrates the importance of strengthening the government's commitment to carrying out structural reforms.

Chapter 19: Social policy and employment

EU rules in the social field include minimum standards for labour law, equality, health and safety at work and non-discrimination. They also promote social inclusion and social protection, and social dialogue at EU level.

Montenegro has **some level of preparation** in the area of social policy and employment. **Some progress** was made during the reporting period on social protection through a significant increase in the expenditure on social benefit.

While some steps have been made, the recommendations from last year's report remain valid. In the coming year, Montenegro should in particular:

- strengthen the Employment Agency to enable it to efficiently play its role as a modern public employment service and to prepare it for the implementation of the Youth Guarantee and the future use of the European Social Fund (ESF);
- continue efforts to reform the provision of active labour market policy measures with an emphasis on their labour market relevance, including work-based learning, and establish a continuous monitoring mechanism that will enable evidence-based active labour market policy design;
- based on the Roadmap of reforms on social assistance and social and child protection services, establish a clear timeline and financial planning for the reform of the social and child protection system and start implementing the reforms.

During the reporting period, the Ministry of Labour and Social Welfare faced institutional and technical drawbacks, due to its previous repositioning within the government system and the August 2022 cyberattack. The reconstituted Ministry did not manage to adopt all relevant strategic documents in time. The Chapter 19 Working Group was set up again, but after the constitutive meeting on 27 March 2023, it did not meet again in the reporting period.

From 6 June 2022 until 31 March 2023, the Labour Inspection made 5 588 inspection visits in the area of labour relations and employment, and found 2 132 irregularities, of which 944 related to labour relations and 1 188 related to occupational safety and health. The Labour

Inspection detected 1 024 illegal employment cases (concerning 516 foreigners and 508 Montenegrin nationals); on the inspectors' order, 115 people (34 foreigners and 81 Montenegrin nationals) entered employment, in line with the law.

In 2022, the Labour Inspection detected 42 cases of non-formal employment of children aged between 15 and 18. In these cases, inspectors imposed fines on employers, warned them against irregularities, and requested documents (medical certificates and parental approval certificates) necessary for legal employment. The Labour Inspection did not discover any cases of severe forms of child labour in any economic activity.

Concerning **health and safety at work**, in December 2022 the government adopted the national strategy for occupational safety and health (2022-2027) and its 2023 action plan. There was no progress in setting up the occupational safety and health fund envisaged under the previous sector strategies (for 2010-2014 and for 2016-2020). During the reporting period, inspectors carried out 1 520 inspections in the field of occupational safety and health, including 14 investigations of work accidents (3 fatal accidents, 10 serious accidents and 1 collective accident). The Labour Inspection remained understaffed, with only 11 inspectors in charge of occupational safety and health.

In December 2022 social partners signed a new general collective bargaining agreement. Overall, **social dialogue** remains weak. The involvement of the tripartite Social Council in relevant policymaking is low. During the reporting period, the tripartite Social Council held only two sessions, and its Presidency three sessions.

In the area of **employment policy**, on 22 December 2022, the government adopted the 2023 action plan for employment. Monitoring the implementation of the action plan for employment and the national strategy for employment remains a challenge due to the lack of real-time and accurately disaggregated data. On 22 December 2022, the government adopted the action plan for the interoperability of selected information systems and databases that have a role in governing Montenegro's labour market. The plan sets out measures and activities required to bring about interoperability of the Employment Agency database with the tax administration databases. Appropriate exchange is also required with social welfare centres to enable high-quality monitoring of unemployed people. Several, mostly EU-funded, initiatives and activities started to strengthen the technical and human capacity of the Employment Agency. The local branches of the Agency remain understaffed. Multiple personnel and management changes and amendments to the Systematisation Act slowed down the reform process of the Employment Agency.

The Working Group for the Youth Guarantee Programme is working with experts from the International Labour Organization and the European Training Foundation on improving the draft Youth Guarantee implementation plan. The share of youth aged 15-29 in total registered unemployment in May 2023 was 19.92% (8 392 people, of whom 5 162 are women), compared to 23.83% (10 132 and 13 679 respectively) in 2021. The rate of NEETs among young people in 2022 decreased to 23.2%, compared to 26.5% in 2021.

In 2022, the labour market partially recovered compared to 2021. The overall activity rate grew from 54.4% in Q4 2021 to 59.9% in Q4 2022. The employment rate was 51.2% in Q4 2022, compared with 46.1% in Q4 2021. The unemployment rate was 14.5% in Q4 2022, compared with 15.4% in Q4 2021. The share of long-term unemployment in total registered unemployment was 57.49% in 2022, a large drop compared to 2021 (65.6% to 63.7% between Q1 and Q4 2021). The youth employment rate grew from 36.3% in Q1 2022 to 39.9% in Q4 2022, which is 5.3% higher than in Q4 2021. The share of women in total registered unemployment at the end of December 2022 was 57.64%, a reduction compared to

the same period in 2021, when this share amounted to 60.16%.

As regards labour inspection, an appropriate legislative framework involving sufficient resources and modernised planning of inspection activities and addressing issues such as gender that disproportionately impact on women, is not yet in place. A substantial turnover of staff is currently ongoing with the retirement of a significant number of experienced inspectors, increasing the need for training. No progress was made regarding legislative and non-legislative measures focused on work-life balance.

Regarding activities related to preparations for the **European Social Fund (ESF)**, Montenegro needs to decide which institutions will be the contracting and management authorities for setting up the sectoral operational programme on employment and social inclusion.

The **social protection and inclusion** sector continues to face human resource and capacity limitations. In light of the recent changes to the legal and strategic framework, taxes and social benefits for children, the overall social policy and employment system needs thorough assessment and reforms to effectively respond to the needs of most at-risk groups and labour market demands. The Social Protection Law and the social protection strategy have yet to be adopted. The Ministry of Labour and Social Welfare issued 36 licences to social and child protection services. However, much more involvement of, support to and cooperation with civil society is needed to achieve sustainable and effective results in the social sector, both in planning and monitoring of social policies and for implementing them through social services, including at the local level. In 2022, Montenegro adopted two amendments to the Child Protection Law, extending the right to child allowance to cover children up to 18 years old in an attempt to address the very high rate of children at risk of poverty and social exclusion (45.5% of children under the age of 18 in 2021). Centres for social work continued to be understaffed while their scope of work increased as they need to manage the new entitlements. Children from Roma and Egyptian communities are heavily engaged in child begging. The Institute of Social and Child Protection lacks resources and its role in the overall social protection system should be clarified. During the reporting period, the implementation of the integrated Social Welfare Information System (SWIS) enabled timely enforcement of all legislative changes. According to the MONSTAT Survey of Income and Living Conditions (data for December 2021), the national ‘at-risk-of-poverty’ or social exclusion rate (AROPE) was 38.9% (EU rate for 2021 was 21.7% of the population).

There was no progress on **deinstitutionalisation** and the transition to community and family-based services, especially regarding children. The deinstitutionalisation strategy, initially planned for Q4 2022, has yet to be adopted. Social welfare centres still do not have sufficient capacity to support the Ministry of Labour and Social Welfare in implementing the transition from institutional service provision to community-based care.

In the area of **non-discrimination** in employment and social policy, the Law on a unified disability determination system has not yet been adopted, although the draft law and the public consultation were completed in 2022. The Law on professional rehabilitation and employment of persons with disabilities, planned to be adopted in 2023 was also postponed. Civil society organisations are still not sufficiently included in policymaking processes. The number of people with disabilities included in the unemployment register at the end of 2022 was 9 864, of whom 6 755 or 61.78% were women (10 970 in 2020).

On **equality between women and men in employment and social policy**, Montenegro’s Gender equality index value in 2019 was 55 (out of maximum 100 points), which is lower than the EU average of 67.4. According to MONSTAT the difference between male and

female activity rates (population aged 20-64) is even bigger (79.7% for men and 66.8% for women). According to the World Bank, the share of women in top management is only 15%, and in business ownership 24%. In July 2022, the government adopted the report on the implementation of the 2021 action plan for implementing the strategy for development of women's entrepreneurship for 2021-2024 to respond to the lower share of women in entrepreneurship as opposed to men. The authorities and other institutions set up several programmes and took active labour market measures to increase the overall employment rates of women and young people. However, social support services for vulnerable groups remain scarce and unsustainable. They are mostly organised by civil society organisations, without continuous support from the local or national level.

Chapter 20: Enterprise and industrial policy

EU industrial policy strengthens competitiveness, facilitates structural change and encourages a business-friendly environment that stimulates small and medium-sized enterprises (SMEs)

Montenegro is **in between moderate and a good level of preparation** in the area of enterprise and industrial policy. In 2022, **some progress** was made in implementing enterprise and industrial policy. Further action by the government should ensure consistency of various national strategies and programmes in this area and the necessary inter-ministerial cooperation.

In the coming year, Montenegro should:

- evaluate the results of its 2019-2023 industrial policy strategy and prepare and adopt a new industrial policy, in cooperation with relevant stakeholders;
- align with the EU Late Payments Directive by adopting amendments to the Law on deadlines for settlement of monetary obligations;
- ensure continuous coordination of industrial policy with other key national strategies.

In the area of **enterprise and industrial policy principles**, in December 2022, the government adopted the national circular transition strategy for the period until 2030, with an action plan for 2023 and 2024. The strategy identifies four priority sectors – agriculture, forestry, construction and tourism – as well as horizontal focus areas necessary for circular transformation in key economic sectors. In June 2023, the government adopted a new 2023-2026 strategy for the development of micro, small and medium enterprises.

The government suspended work on setting up the Credit Guarantee Fund, intended to facilitate access to credit for micro, small and medium enterprises. Another concept to provide credit is under analysis. Reforms in the area of state-owned enterprises were downscaled by the government, despite commitments agreed in the 2022 Joint Conclusions of the Economic and Financial Dialogue. Future reform plans still need to be re-defined. Montenegro has yet to adopt the planned amendments to the Law on deadlines for settlement of monetary obligations, which aim to align the Law with the EU *acquis* on combating late payments.

In the area of **enterprise and industrial policy instruments**, the government implemented eight financial and non-financial programmes to develop entrepreneurship and the private sector under the overarching 2022 programme for improving the competitiveness of the economy. A total of 353 companies received support under this EUR 4 million programme. In March 2023, the government adopted the 2023 programme for improving the competitiveness of the economy, with nine programme lines, worth EUR 3 million, targeting

in particular support for young entrepreneurs and women. The single online portal for SME support (Single Access Point) was disabled due to the August 2022 cyber-attacks, and its update is ongoing.

In 2022, the Investment and Development Fund of Montenegro (IDF) provided financing worth EUR 185 million to Montenegrin enterprises, and an additional EUR 66 million in the first 5 months of 2023. In July 2022, the IDF signed a EUR 50 million loan agreement with the EIB, a second tranche of the previously approved loan of EUR 150 million. This loan aims to support climate-friendly and energy-efficient investment by local SMEs.

In April 2023, the government signed the Association Agreement for Montenegro's participation in the EU's Single Market Programme. Montenegro will participate in three pillars of the programme (Improving the Internal Market, SMEs, and Consumers).

In the area of **sectoral** policies, the report on the execution of the 2022 action plan for the implementation of industrial policy was adopted in March 2023. Out of the planned EUR 215.4 million, EUR 166.6 million was invested. In early 2023, the government launched the evaluation of the 2019-2023 industrial policy strategy.

The government decided to finance the Innovation Fund using part of the receipts from the controversial Economic Citizenship Programme without carrying out any due diligence on the origin of the funds. The Innovation Fund administered two programme lines – the collaborative grants programme and the innovation voucher scheme – to encourage cooperation between the private sector and research institutions in developing innovative projects and products. Following this support, the private sector investment in innovation projects through various programme lines exceeded EUR 1 million in 2022 (*see also Chapter 25: Science and research*).

In January 2023, to ensure consistency of the industrial policy with other national strategies and programmes, a coordination body was set up at management level in the Ministry of Economic Development and Tourism. The first test of the strengthened inter-ministerial cooperation would be the implementation of a newly developed programme of financial support to companies that wish to improve their energy efficiency using innovative technologies and renewable energy, which should start in 2023.

Chapter 25: Science and research

The EU provides significant support to research and innovation. All Member States can participate in the EU's research and innovation programmes and benefit from them, especially where there is scientific excellence and solid investment in research and innovation.

Montenegro has a **good level of preparation** in this sector. **Good progress** was made on each of the 2022 recommendations, by continuing the implementation of the smart specialisation strategy and by increasing participation in the Horizon Europe programme. In 2023, the government budget for science and innovation further increased. Two of last year's recommendations remain valid.

In the coming year, Montenegro should in particular:

- continue to implement the smart specialisation strategy;
- continue to strengthen academia-business cooperation, and further support knowledge transfer between them, also to deliver on green deal priorities;
- put in place the new strategy for scientific research activities.

In the area of **research and innovation policy**, Montenegro adopted two implementing acts that aim to fully implement the Law on scientific research activities. These acts laid down: (i) the conditions and more detailed criteria for awards for scientific achievements as well as award amounts; and (ii) further conditions for licensing scientific research institutions. Montenegro has yet to adopt the new strategy for scientific research activities, which will list instruments to increase the number of researchers.

The latest available statistics, from 2019, indicated that research and development funding stood at 0.36% of GDP in 2019 (0.50% in 2018), with an investment share of 0.12% provided by the private sector. For 2023, the government budget for science and innovation amounted to EUR 4.08 million. This increased budget supports the country's economic recovery, while helping to address the issue of brain drain of researchers and young people.

Montenegro continues to successfully implement the smart specialisation strategy. In June 2022, the government established a new composition of the Council for Innovation and Smart Specialisation, presided by the Minister of Science and Technological Development.

In December 2022, the Council adopted the Information on the innovation programmes of the Innovation Fund of Montenegro for 2023, based on which the Innovation Fund prepared the 2023 work plan, adopted by the government in April 2023. The Innovation Fund published a call for proposals under its collaborative grants programme with a budget of EUR 670 000. Seven project proposals were accepted for financing. The Innovation Fund also published a call for proposals under its Innovation Vouchers Programme and six additional programme lines have been launched in the period May-June 2023 (value EUR 1.65 million). The Call for co-financing national scientific research projects with total funds amounting to EUR 2.3 million was published in May 2023. Montenegro has yet to adopt the Programme for Encouraging Innovation in the Function of Energy Efficiency in Industry.

The cooperation with the European Innovation Council is good: the Collaborative Grants for Innovation scheme, managed by the Innovation Fund of Montenegro, was officially certified for the Plug-In scheme to the European Innovation Council Accelerator. The Law on incentive measures for research and innovation promoted the investment of EUR 1 934 000 in 19 start-ups. The cooperation with the European Institute of Innovation and Technology (EIT) is also good.

In the area of **framework programmes**, in Montenegro's first two years as a member of the Horizon Europe programme, Montenegrin participants gained already EUR 3 million (compared with EUR 4.62 million received over the seven years of Horizon 2020). The Ministry of Science and Technological Development provided EUR 230 000 to support co-financing of innovation activities under several strands of the programme, among other for covering participation in EUREKA.

Chapter 26: Education and culture

The EU supports cooperation in education and culture through funding programmes and the coordination of Member State policies through the 'open method of coordination'. The EU and the Member States must also prevent discrimination and ensure quality education for children of migrant workers, including those from disadvantaged backgrounds.

Montenegro has a **good level of preparation** in this area. **Some progress** was made during the reporting period although certain steps were taken towards achieving more inclusive education. However, increased efforts are needed to progress on other outstanding recommendations. Therefore, last year's recommendations remain valid.

In the coming year, Montenegro should in particular:

- adopt a budgeted plan including an economic impact analysis for wide-ranging education reforms, also addressing inclusive education, and improve access to quality education at all education levels;
- speed up the implementation of the new strategy on early and preschool education for 2021-2025 to improve preschool enrolment for all children;
- finalise and adopt the 2022-2023 national vocational education and training (VET) implementation plan under the VET strategy for 2020-2024, and put in place the mechanism to evaluate practical learning at VET and higher education levels;

In the area of **education and training**, in the period July 2022 till end of 2022, Montenegro adopted amendments to the Law on primary education, to the general Law on education, to the Law on higher education, and to the Law on professional training for persons with acquired higher education. On 4 April 2023, Montenegro adopted the Law on the confirmation of the Agreement on the Recognition of Qualifications in the Field of Higher Education in the Western Balkans.

In 2022 spending on education was EUR 231.8 million (4% of GDP), a slight decrease from 2021 (4.3%). The pre-school enrolment rate stood at 52.99% (male: 53.47% and female: 52.46%) in 2021/2022. In 2022/2023 the enrolment rate was 49.04% (male: 49.74% and female 48.28%).

Montenegro participates in other international assessments, by conducting a Trends in International Mathematics and Science Study (TIMSS), a study on progress in international reading literacy (PIRLS) as well as piloting a Teaching and Learning International Survey (TALIS). Montenegro is not participating in the ICILS (International Computer and Information Literacy Study).

In July 2022, Montenegro adopted quality standards for the creation of digital content as part of its digital strategy. The objectives of the 2022-2027 Montenegro Education System Digitalisation Strategy is to align with the EU Digital Education Action Plan 2021-2027. Efforts towards effective, coherent and inclusive digital transformation of the Montenegrin education and training systems, including the capacity of the systems to develop digital skills remain high on the agenda. Montenegro has made use of EU self-reflection tools, such as SELFIE for schools.

Regarding green education, Montenegro's education system implements the education for sustainable development by including, under all school subjects, the issues of climate change, green economy, environment protection, sustainable cities and settlements, biodiversity, and health education.

As part of the early and preschool education strategy for 2021-2025, the Ministry of Education continued efforts to increase the enrolment of children in public preschool institutions including through awareness-raising campaigns. For the 2022/2023 school year, nearly 25 000 children (out of which nearly 12 000 girls and nearly 13 000 boys) enrolled in public and private preschool institutions, which is 7% more than in 2021. However, regional disparities remain, with low -take-up in the north.

In terms of inclusive education, vulnerable children coming from the Roma and Egyptian communities now have greater possibilities for early childhood development and education. In June 2022, 26 educators received training for work with Roma and Egyptian families, which resulted in 267 children attending kindergarten. In accordance with the 2021-2025 action plan for the implementation of the strategy of social inclusion of Roma and Egyptians in Montenegro, scholarships (worth nearly EUR 54 500) were provided to high-school

students and students of the Roma and Egyptian community in September-December 2022. The engagement of Roma and Egyptian mediators in education continued, as 25 mediators were hired in primary schools. This practice proved to be very useful for including children from the Roma and Egyptian communities in the education system, as well as for reducing school dropout rates.

A programme was also set up to include children from Ukraine in the educational system of Montenegro.

Furthermore, the Bureau for Textbooks and Teaching Aids prepared didactic material for 520 students, mostly for mastering teaching material, support for literacy, mathematics, managing emotions and behaviour. A consultation of school principals was held on topics including augmentative and alternative communication, the picture exchange communication system, social stories and Cboard, an application for children and adults with speech and language impairments, aiding communication with symbols and text-to-speech. A training session for about 150 representatives from 40 schools (IT coordinators, professional service staff, and active classroom and/or practical teachers) followed. The Cboard application is used in 13 preschool institutions, in 4 primary schools, and in resource centres. In total, 81 tablets were allocated and are used in work with about 120 students.

In the area of skills and **VET**, the Ministry of Education is committed to the Osnabrueck Declaration and reforms to address skills mismatches, including work-based learning and curricula reforms. Montenegro is yet to draft and adopt its report on the implementation of the 2020-2022 action plan related to the VET strategy and the new action plan for the period until the expiration of the strategy in 2024. Montenegro helped prepare the report on the Turin Process with a focus on system performance indicators and lifelong learning. The implementation of dual education continued with around 400 students placed with more than 200 employers. Regarding skills mismatches, the main issues remain overqualification or working in professions for which people lack appropriate education/skills. The study on career guidance done together with the European Training Foundation (ETF) in 2022 includes proposals for guiding students and adults to help address skills mismatches.

Furthermore, Montenegro is still to adopt its strategy on higher education for 2023-2027 and a new law on higher education.

Montenegro benefits from the international dimension of the 2021-2027 Erasmus+ programme. In 2022, around 320 higher education staff members and 460 students from Montenegro were selected to undertake a mobility period in EU Member States or associated third countries to the programme, while Montenegrin higher education institutions are expected to host around 275 staff members and 240 students from Europe. Montenegro was invited to take part in the European Education Area working groups 2021-2025.

In the area of **culture**, Montenegro is yet to adopt a national strategy for the development of culture for 2023-2027. Montenegro participates in the EU Creative Europe Programme. The Ministry of Culture continued to raise awareness of opportunities for Montenegrins under the 2021-2027 programme.

The Ministry of Sports and Youth formed a working group end of August 2022 to work on the amendments to the **Youth Law**, to further specify youth services and implementation procedures. However, Montenegro is yet to approve the amendments to the Law and adopt its new youth strategy, which should replace the strategy that expired in 2020. The new strategy should be accompanied by a time-bound action plan on its implementation. The fact that the new strategy is still to be adopted is also preventing the operationalisation of the youth centres. Furthermore, intersectoral cooperation between various ministries dealing with youth

issues needs to improve.

Draft amendments to the Law on Sports and the Sports development Strategy 2023-2026 were not yet tabled.

Chapter 29: Customs union

All Member States are part of the EU customs union and follow the same customs rules and procedures. This requires legislative alignment, as well as adequate implementing and enforcement capacity and access to common computerised customs systems.

Montenegro is **moderately prepared** for the customs union. It made **some progress**, advancing preparations for its accession to the Convention on a common transit procedure, and implementing measures envisaged in the trade facilitation strategy for 2018-2022, thus partially addressing last year's recommendations. Staff shortage slowed down the implementation of many IT projects. Challenges related to the illicit tobacco trade through the port of Bar were partially addressed, but close monitoring and follow-up action is needed.

In the coming year, Montenegro should in particular:

- implement an EU-compatible computerised transit system and finalise accession to the Convention on a common transit procedure;
- ensure sufficient staffing levels and funding to implement and upgrade customs IT systems.

In the area of **customs legislation**, in February 2023, Montenegro started implementing a new Customs Code, aligned with the Union Customs Code. The Law on accession to the Convention on a common transit procedure (CTC) and the planned legislation to control the production of and trade in drug precursors are not yet adopted. Implementing legislation on the customs status of goods and the national transit procedure with a view to implementing the new computerised transit system (NCTS) and acceding to the CTC is already in place.

Montenegro applies the Regional Convention on pan-Euro-Mediterranean (PEM) preferential rules of origin and implements transitional rules of origin based on the revised PEM Convention.

Montenegro has yet to further align legislation on customs security with the EU *acquis*, and to adopt implementing legislation on the export control of cultural goods. Fees continue to be charged to lorries in inland customs terminals located in privately owned facilities, which is not in line with the EU *acquis*.

Agreements between the European Commission and Montenegro on participation in the Customs and Fiscalis programmes were concluded in November 2022.

In the area of **administrative and operational capacity**, the Revenue and Customs Administration (RCA) hired several new employees in the area of customs. However, staff shortages, in particular of IT specialists, remain a significant concern.

Work on the delayed implementation of the NCTS continued, with a pilot application of the system in progress. The start of the national implementation of the NCTS is planned for September 2023, with full application not expected before the second half of 2024. This also delays accession to the CTC until the second half of 2024. Several projects funded by the EU and its Member States are under way to upgrade various customs IT systems or build capacity in various areas of the customs service operation. The accreditation process for the customs laboratory is still ongoing.

In 2022, the gross collection of customs revenues amounted to approximately EUR 1 billion, over 24% more than in 2021. The upward trend continued in 2023, with customs revenues reaching EUR 1.22 billion by the end of June, 25% more than in the first 6 months of 2022.

Following the implementation of the decision to ban the storage of tobacco products in the free zone of the port of Bar, the RCA seized over 1.5 billion cigarettes worth some EUR 202 million. In February 2023, the government's stake in the port of Bar increased to 78.55% after the purchase of shares from minority shareholders. The government intends to become the sole owner of the port of Bar and take over Port of Adria, the operator of the free zone in the port of Bar. This could make it possible to introduce a much more efficient surveillance and control of all port operations, including any shipments of tobacco products. To address the gaps in the current monitoring and tracing arrangements, Montenegro should ensure close monitoring of all tobacco-related operations in the port, including by implementing the cargo targeting system, which enables pre-arrival risk analysis of containers in the port of Bar and electronic record keeping of containers.

CLUSTER 4: THE GREEN AGENDA AND SUSTAINABLE CONNECTIVITY

This cluster covers chapters 14-transport policy, 15-energy, 21-trans-European networks and 27-environment and climate change. All four chapters are open, with closing benchmarks that remain to be fulfilled in each chapter. This cluster and the reforms concerned have significant links to Montenegro's Economic Reform Programme, the Commission's Economic and Investment Plan and the Green Agenda for the Western Balkans endorsed by Montenegro.

Some progress was achieved on creating a functioning day-ahead energy market. Montenegro successfully joined the Paris Memorandum of Understanding on port state control. Good progress was made on the implementation of Intelligent Transport Systems in road transport. There was limited progress on implementing the Transport Development Strategy and none on its review. There was very limited progress concerning environment and climate change.

In the coming period, Montenegro is invited to focus on the following areas: complete key recommended reforms in the transport area, in particular on rail transport and on the review of Transport Development Strategy; adopt and implement the law on security of supply of oil products and couple the day-ahead energy market with neighbouring countries; strengthen the administrative capacities to prepare for trans-European networks in the areas of transport, telecommunications and energy; considerably step up ambitions towards a green transition and step up its efforts on implementation and enforcement work to achieve the closing benchmarks in Chapter 27 and in particular on waste management including organising awareness raising campaigns on recycling and waste separation and necessary enforcement targeting citizens and local authorities, adopt the Strategy on Air quality 2021-2029, address water quality issues, nature protection and adopt the national energy and climate plan to achieve decarbonisation by 2050 without further delays.

Chapter 14: Transport policy

The EU has common rules on technical and safety standards, security, social standards, state aid and market liberalisation in road transport, railways, inland waterways, combined transport, aviation and maritime transport.

Montenegro is **in between moderate and a good level of preparation** in the area of transport policy. There was **good progress** on key reforms, notably on the implementation of intelligent transport systems (ITS) in the road sector and on accession to the Paris Memorandum of Understanding on Port State Control. Other recommendations from last

year's report remain valid.

In the coming year, Montenegro should in particular:

- adopt a new railway law to ensure the operational independence and appropriate staffing of the railway regulatory body and railway safety authority;
- lay down the strategic ITS framework for the rail and maritime networks;
- urgently adopt and start implementing a new road safety strategy for 2023-2030.

As regards **general transport**, alignment of the national transport strategy with the sustainable and smart mobility strategy for the Western Balkans of the Transport Community, intended to provide a shift towards greener transport modes, is pending. Implementation of the action plans endorsed by the Transport Community continued, but progress was slow to moderate. Appropriate financing of the Commission for Investigation of Accidents in Maritime, Rail and Air Transport is yet to be secured. There was still no progress on alignment of national legislation with the *acquis* concerning public service obligations, procedures and criteria for the award of public service contracts in road, rail and maritime transport. For larger transport agglomerations, sustainable urban mobility plans that respect environmental and social standards should be developed, following EU practice.

In the area of **road transport**, in December 2022, the Parliament adopted amendments to the Law on roads, making it possible to collect charges for the use of roads and road land. Implementation of intelligent transport system solutions started on the Bar-Boljare road, including in the Sozina tunnel and on the section of the highway, opened in 2022.

The implementation of 2020-2022 programme for road safety brought some improvements to the data collection and analysis, but did not yield the expected results in terms of safety, with no improvement or reduction of fatal and serious road traffic accidents. A new road safety strategy for 2023-2030 is still at a draft stage and should be adopted as soon as possible. Montenegro should also set up a dedicated road safety agency. Challenges remain in effectively enforcing the international agreements on carriage of dangerous goods by road.

In March 2023, the government adopted the 2023 programme for reconstruction and maintenance of state roads. However, no mid-term road maintenance and rehabilitation programme has been prepared.

On **rail transport** legislation, there was no progress on alignment with the EU *acquis*. Montenegro is invited to align its legislation to the 4th railway package to ensure a fully open market for passenger and freight services. The government continued to heavily subsidise the state-owned company Railway Infrastructure of Montenegro to ensure regular maintenance of the railway infrastructure. Montenegro has yet to introduce performance-based multiannual maintenance contracts based on effective cost control, benchmarking and regulatory supervision. Plans for sustainable and rationalised railway infrastructure rehabilitation and multiannual maintenance still need to be urgently developed.

In the area of **maritime transport**, Montenegro is yet to align national legislation with the EU *acquis* on ports and to adopt legislation based on the Port Services Regulation. Following a successful assessment and removal of the last legal obstacles, Montenegro became a member to the Paris Memorandum of Understanding on Port State Control on 1 July 2023. Montenegro is currently implementing the national maritime single window and upgrading the vessel traffic monitoring and information system, but progress is moderate to slow due to pending administrative issues.

In February 2023, the government increased its ownership in the port of Bar to 78.55%,

increasing its majority in the management board. This provides additional leverage for future strategic decisions, including a potential takeover of Port of Adria, the operator of the free zone in the port of Bar. In February 2023, operation of the only ferry line crossing the Bay of Kotor was assigned to the public company for coastal zone management. The government terminated the contract with the private company that had previously operated this line. For sustainable and safe operations of ferry services it is important to ensure fair and transparent concession award and termination procedures.

In the area of **inland waterway transport** in Montenegro, no progress was achieved in aligning national legislation with relevant EU *acquis*.

As regards **aviation**, in April 2023, the Parliament ratified amendments to the European Common Aviation Area Agreement and its Annex I, on the rules applicable to civil aviation. However, the law was not signed by the president. Certification of Podgorica airport was successfully finalised in May 2023, the procedure is still ongoing for Tivat airport. The adoption of several implementing laws during 2023 provided further alignment on common rules in the field of civil aviation, air safety and air traffic operations. In November 2022, the national airline company, To Montenegro, received an Operational Safety Audit certificate from the International Air Transport Association. The company currently operates four aircrafts and slowly develops its connection network.

Concerning **combined transport**, the government is yet to start the implementation of a business plan prepared under the feasibility study for transforming the port of Bar into a sustainable multimodal platform. Again, there was no progress on drafting new legislation for combined freight transport.

Montenegro should increase efforts to align with and implement EU passenger rights legislation.

Chapter 15: Energy

EU energy policy covers energy supply, infrastructure, the internal energy market, consumers, renewable energy, energy efficiency, nuclear safety, radiation protection and nuclear safeguards.

Montenegro has reached a **good level of preparation** in the area of energy. **Some progress** was made, mainly by creating a day-ahead energy market and in moving to market-based schemes for renewable energy production. Last year's recommendations were thus partially addressed.

In the coming year, Montenegro should, in particular:

- finalise and adopt the national energy and climate plan (NECP);
- transpose and implement the Electricity Integration Package and accelerate the move to market-based support schemes for renewable energy production based on streamlined permitting and connection procedures;
- adopt the Law on security of supply of oil products and appoint the stockholding body for the mandatory oil reserves.

In the area of **security of supply**, Montenegro has an energy development strategy up to 2030. In July 2022, the government set up a national council responsible for analysing and monitoring the security of energy supply and adopted a decision on the long-term energy balance of Montenegro for 2023-2025. In November 2022, the government adopted the energy balance of Montenegro for 2023.

The Ministry of Capital Investments prepared a draft law on compulsory strategic reserves of

oil and petroleum products. The draft received a positive opinion from the Energy Community Secretariat, but a consultation procedure between various government departments is still ongoing. Oil stocks remain very low, and Montenegro intends to secure strategic oil reserves by introducing stock-keeping obligations on importers of petroleum products, in addition to the reserves to be kept and managed by Montenegro's Hydrocarbons Administration.

Work on the National Energy and Climate Plan (NECP) was delayed, with the expected adoption postponed to the second quarter of 2024. The NECP will become the new strategic plan for the development of the energy sector until 2030, include policy and measures in the field of renewable energy and energy efficiency and align Montenegro's energy policy with 2030 Energy Community targets.

Work on trans-Balkan electricity corridor continued, but the construction of the electricity interconnection with Serbia did not start. The costly refurbishment of the thermal power plant in Pljevlja progressed, despite numerous controversies concerning environmental and State aid aspects of this investment and Montenegro's international commitments on greenhouse gas emissions (*see also Chapter 27: Environment and climate change*).

Following the adoption of the Energy Support Package for the Western Balkans in November 2023, Montenegro received EUR 27 million of budget support from the European Commission to reduce the immediate socio-economic impact of the energy crisis on vulnerable social groups and SMEs. As part of the package, Montenegro's Parliament adopted the national energy action plan in January 2023. The plan consists of 13 measures, covering a range of targets, including the preparation of a strategic framework for the NECP and implementation of the Commission's recommendations on energy included in the annual report by January 2024.

The adoption of the Energy Support Package incentivised national authorities to strengthen the interinstitutional coordination and a multi-stakeholders dialogue. Nevertheless, administrative capacity still needs to be strengthened.

Concerning the **internal energy market**, the transposition and implementation of the Electricity Integration Package is still pending. Montenegrin Power Exchange LTD finalised preparatory activities to support the legal, operational and technical functioning of the day-ahead market. BELEN, the operator of the Montenegrin Power Exchange or MEPX launched the day-ahead market on 26 April 2023 for the territory of Montenegro. The launch of the intraday market is still pending. A total of 63 participants are registered to participate in the wholesale electricity market of Montenegro.

In the area of **hydrocarbons**, national legislation is aligned with the Hydrocarbons Licensing Directive. The Law on safety measures in offshore exploration and production of hydrocarbons is still pending adoption by the Parliament. The exploration period granted to concessionaires for offshore hydrocarbons exploration expired. The construction of Montenegro's section of the Ionian-Adriatic Gas Pipeline (IAP) did not progress. The advancement of the project depends on the ability of the government to conclude appropriate public consultations and reach an agreement with concerned municipalities on the preferred alignment.

In the area of **renewable energy**, in 2021, 39.3% of gross final consumption of energy came from renewable sources, which exceeded the 33% target to be achieved by 2020 under Montenegro's national action plan. Five large renewable energy projects (one hydropower plant, two wind energy and two solar energy plants) are in preparation and expected to be gradually implemented once the NECP is adopted. It remains essential that all new renewable

energy projects are developed in conformity with the *acquis* on concessions, State aid and the environment.

In the area of **energy efficiency**, in December 2022, the Parliament adopted amendments to the Law on energy efficiency, resulting in an improved legal framework and better alignment with EU directives on energy efficiency and energy performance of buildings. Preparations are ongoing to introduce the NECP as key planning document in the field of energy efficiency, instead of the current energy efficiency action plan. The Ministry of Capital Investments continued coordinating several programmes on energy-efficiency improvement for private households as well as for public buildings, with a focus on the healthcare and educational sectors. Nevertheless, the certification of the energy performance of buildings is not yet implemented and the long-term building renovation strategy is yet to be finalised and adopted.

Regarding **nuclear energy, nuclear safety and radiation**, Montenegro does not have a nuclear industry, research reactor or any other facility producing radioactive material. National legislation prohibits the construction of nuclear facilities. Montenegro continues to participate in several regional initiatives for the early exchange of information in the event of a radiological emergency or hazard including the European Community Urgent Radiological Information Exchange. Montenegro is yet to join the European Radiological Data Exchange Platform and currently has no intention to participate in the Capital and Advisory Committee of the Euratom Supply Agency.

On **nuclear safeguards**, upon accession, the existing systems of accountancy and control of nuclear materials in Montenegro would need to be adapted to accommodate for the safeguard provisions (chapter 7) of the Euratom Treaty.

Chapter 21: Trans-European networks

The EU promotes trans-European networks in transport, telecommunications and energy to strengthen the internal market and contribute to growth and employment.

Montenegro is **in between moderate and a good level of preparation** in trans-European networks. There was **limited progress** in this area, mostly on the implementation of rail projects. Numerous delays in developing transport and energy infrastructure demonstrate weaknesses in Montenegro's project design, decision making and management capacity. Last year's recommendations remain valid.

In the coming year, Montenegro should in particular:

- review the transport development strategy and align it with the strategy for sustainable and smart mobility in the Western Balkans, confirming a policy shift towards rail, multimodality, reduction of CO₂ emissions and other environmental impacts;
- develop institutional policies to hire and retain skilled staff to manage infrastructure projects in the areas of transport, telecommunications and energy;
- revise institutional policies to improve decision-making on infrastructure projects and increase the capacity to absorb funding.

In the area of **transport networks**, Montenegro continued cooperating with the Transport Community Secretariat and implementing its six action plans, but progress was moderate. The revision of the transport development strategy to align it with the strategy for sustainable and smart mobility in the Western Balkans, and to provide a shift towards greener transport modes is pending.

As part of the proposed revision of the Regulation on the trans-European transport network (TEN-T), the European Commission and Montenegro conducted bilateral discussions on adapting the indicative map of the transport-infrastructure network for Montenegro and agreed on two changes, adding the Montenegrin section of the rail line between Podgorica and Capljina (Bosnia and Herzegovina) and the airport of Tivat to the comprehensive TEN-T network. In May 2023, revised TEN-T maps for the Western Balkans were endorsed in a high-level understanding on indicative maps for TEN-T. The amended maps will become part of the revised TEN-T Regulation.

In the area of **transport-infrastructure development**, road and rail projects and investment faced significant delays, which shows that the responsible administrative bodies have limited absorption and management capacity.

The EU-funded feasibility study for the entire Bar-Boljare highway, including environmental and social assessments, was made public in October 2022. Montenegro's government confirmed its commitment to continue the highway project with the help and financing of the EU partners. In December 2022, the EU provided financial support for an update to the feasibility study and a detailed design of the next priority section. However, work on preliminary designs for the next highway sections (Matesevo-Andrijevisa and the Podgorica bypass) was delayed and remains incomplete.

Work was also delayed on the main design of the Scepan Polje-Pluzine road, part of TEN-T Route 2b, comprehensive network. Montenegro endorsed an agreement with Bosnia and Herzegovina for the construction of an interstate bridge over the Tara river on the same TEN-T route. The preliminary design work on the Budva bypass, a 30 km section of the Adriatic-Ionian highway, continued with further delays until its completion in April 2023. A public consultation on a new spatial plan for Montenegro covers a new alignment of the Adriatic-Ionian highway, disregarding previously adopted studies on this route. The newly proposed alignment is not included in the TEN-T extension to the Western Balkans.

As regards the rail network, work on various rail projects continued with EU funding, including on upgrading the Bar-Vrbnica railway, which is part of the core network corridor. The government considers the rail corridor, parallel to the Bar-Boljare highway, as subsidiary to the highway. A change in Montenegro's strategic thinking and planning is needed towards an integrated transport corridor approach with a focus on minimising CO₂ emissions and other environmental impacts.

A multimodality study for the port of Bar was completed. The study recommends investment to improve bulk cargo handling and make it environmentally friendly.

In the area of **energy networks**, work continued to interconnect the electricity systems of Serbia, Bosnia and Herzegovina, Italy and Montenegro. There was no progress on the Ionian-Adriatic Gas Pipeline (IAP) project. The progress of this project depends on the government's ability to complete the public consultations and reach an agreement with relevant municipalities on the preferred alignment of the pipeline.

Overall, infrastructure investment needs to comply fully with the EU standards on public procurement, State aid and environmental impact assessment. New investment needs to address changing strategic priorities, decarbonisation, digitalisation and resilience of transport and energy networks, including prior cost-benefit analyses carried out in line with EU best practice.

Montenegro is yet to fully align its legislation with the **EU *acquis*** on the TEN-T and the trans-European energy network.

Chapter 27: Environment and climate change

The EU promotes strong climate action, sustainable development and protection of the environment. EU rules contain provisions addressing climate change, water and air quality, waste management, nature protection, industrial pollution, chemicals, noise and civil protection.

Montenegro has **some level** of preparation in this area. **Limited progress** was made in further aligning national legislation with the EU *acquis* on water, nature protection and climate change. Significant efforts are still needed on implementation and enforcement, particularly on waste management, water and air quality, nature protection and climate change. Montenegro should considerably step up and accelerate its ambitions towards a green transition.

In the coming year, Montenegro should in particular:

- intensify implementation and enforcement work to achieve the closing benchmarks in Chapter 27, in particular in the water, nature protection, air quality, industrial pollution and climate change sectors;
- adopt and start implementing the Waste Management Law and the national waste management plan and the Strategy on air quality management for 2021-2029;
- finalise, adopt and start implementing the national energy and climate plan in a transparent manner, in line with the EU's 2050 zero emission target and the Green Agenda for the Western Balkans.

Environment

As regards horizontal **legislation**, in June 2023, the government adopted the fourth semi-annual report on the implementation of the action plan for fulfilment of the closing benchmarks in Chapter 27. The report showed that out of 102 planned activities, only 39 were implemented (38.23%). The highest level of implementation was in the area of water quality, industrial pollution and chemicals, the lowest in the area of air quality, noise and climate change. In the reporting period, Montenegro completed 1 strategic environmental assessment (SEA) and 65 environmental impact assessments (EIA). In the area of environmental crime, in the reporting period, 97 new cases were registered, and 53 cases were legally resolved. Montenegro still needs to urgently address the lack of sufficient administrative capacity at central and local level and in inspection bodies, the insufficient interinstitutional coordination, and the lack of a sustainable financial framework. In January 2023, the head of the working group for Chapter 27 was finally appointed. Public participation in decision making process is taking place but requires further improvement.

As regards **air quality**, there was no significant progress. The adoption of the strategy on air quality management for 2021-2029 and the related action plan are still pending. At the beginning of winter, an increase in air pollution was recorded due to heating with wood, specifically in the urban part of the Pljevlja municipality. During December 2022, the value of the average daily concentration of particulate matter 10 (PM10) particles exceeded the limit in several municipalities particularly in Pljevlja and Podgorica.

In the area of **waste management**, national legislation remains partially aligned with the EU *acquis*. Considerable efforts on strategic planning and investment are needed to implement the national strategy for waste management until 2030. The new Law on waste management, was finalised and is pending adoption by Parliament. Amongst other issues this new Law bans the use of lightweight plastic carrier bags with a thickness between 15 and 50 microns,

at retail establishments, and introduces the extended producer responsibility program. The drafting of the state waste management plan for 2023-2028 is ongoing. Infrastructure for separate waste collection and recycling exists, however it is not used properly by citizens, and illegal and temporary waste disposal have yet to be resolved. Media campaigns for awareness raising and proper enforcement rules, targeting citizens and local authorities, about separating waste disposal and recycling, are needed. The database on hazardous and non-hazardous waste treatment, hampered following the August 2022 cyber-attack, needs to become operational.

Alignment of national legislation with the EU *acquis* on **water quality** remains limited and significant efforts are needed to step up the process. The Ministry of Agriculture, Forestry and Water Management increased its administrative capacity in this area by hiring new personnel. On 12 January 2023, the government adopted the 2023 programme for monitoring surface and ground water. Montenegro ensured alignment of its legal framework with the Marine Strategy Directive by completing the marine environment monitoring programme and developing a database on the basis of the Geographic Information System. To further align its national legislation with the urban waste water *acquis*, the waste water treatment plants in Andrijevića and Petnjica as well as the Volujica sewage pumping station in Bar were completed. Work is also ongoing for the urban waste water treatment plants in Podgorica and Pljevlja.

In the area of **nature protection**, Montenegro's national legislation remains partially aligned with the EU *acquis*. Progress in this field was limited in the reporting year. The drafting of amendments to the Law on nature protection is still ongoing. Work has not yet started on the new national strategy for biodiversity and the amendments to the Law on forests and the amendments to the Law on wildlife and hunting remain pending. Activities continued regarding the identification of potential Natura 2000 areas. In the reporting period, a total of eight management plans were adopted, three for the marine protected areas: Platamuni, Stari Ulcinj, and Katić and five for the national parks: Biogradska gora, Durmitor, Lovćen, Skadarsko jezero and Prokletije. However, the management plan for the Ulcinj Salina is still pending. More active involvement of the municipality of Ulcinj and the government is essential to avoid delaying any decisions and advance towards the closing benchmark. Some activities are also ongoing to implement the recommendations of the Bern Convention regarding Lake Skadar.

No significant progress was registered on **industrial pollution control and risk management**; Montenegro's national legislation remains partially aligned with the EU *acquis*. In line with the Law on industrial emissions, the Agency for Environmental Protection received three new requests for an integrated permit and finalised two requests for revision of an integrated permit. One request for revision of an integrated permit and one request for termination of an integrated permit are still being processed. The European Commission notes that the ecological reconstruction plan for the Pljevlja coal power plant will not address the core issues. Montenegro needs to step up its efforts to permanently close the plant to meet EU emission standards. Montenegro needs to plan for a just transition in the region, by providing economic alternatives to the communities that will be affected the most by the coal phase-out.

On **chemicals**, Montenegro's legislation remains partially aligned with the EU *acquis*. In July 2022, the government adopted the report on the implementation of the 2021 action plan for the implementation of the national chemicals management strategy for 2019-2022. The 2024-2026 national chemicals management strategy was adopted in August 2023 and focus should now be directed towards its implementation to ensure enforcement of legislation and

measures to reduce the risks of hazardous chemicals for better protection of human health and the environment. Over the reporting period, the government adopted a number of secondary legislative acts to implement the Law on chemicals. Amendments to the Law on biocidal products are finalised and pending adoption by Parliament.

In the field of **noise**, the Ministry of Ecology, Spatial Planning and Urbanism (MESPU) is finalising the amendments to the Law on protection from noise in the environment with the aim of increasing inspection supervision in the field of environment noise protection. No measures were taken to raise public awareness on environmental noise protection.

As regards **civil protection**, Montenegro has been a member of the Union Civil Protection Mechanism (UCPM) since April 2015. In November 2022, the government adopted the national plan for rescue and protection from radiation and nuclear accidents. In December 2022, the Parliament adopted amendments to the Law on rescue and protection as well as related secondary legislation. The necessary communication equipment, the Secure Trans European Services for Telematics between Administrations (sTESTA), is installed in the Police Directorate, thus fulfilling the pre-requisite to connect to the Common Emergency Communication and Information System (CECIS). As a member of the UCPM Montenegro needs to swiftly proceed with establishing connection to the CECIS. Montenegro has provided assistance under the UCPM to Türkiye in response to the earthquake in February 2023.

Climate change

In the area of **climate change**, the level of alignment of Montenegro's national legislation with the EU *acquis* remains limited. Montenegro has a climate-change strategy in place but must intensify its work to ensure consistency with the EU's 2030 climate and energy policy framework. Montenegro needs to strengthen its administrative capacity to enable the implementation and enforcement of the EU *acquis*. Considerable work is still required to align national legislation with the EU *acquis*, such as incorporating the remaining aspects of the EU Emissions Trading System (ETS), the Effort Sharing Regulation and the Governance Regulation. In February 2023, the National Council for Sustainable Development set up a permanent working group for mitigation and adaptation to climate change. The aim of the working group is to set up a monitoring and reporting system for greenhouse gas emissions and to prepare policies and measures for adaptation and mitigation to climate change in accordance with the EU *acquis*. Concerning the implementation of the Decree on activities that emit gases that cause the greenhouse effect, a public auction for the allocation of emission credits was organised for the first time in February 2023. The proceeds – worth EUR 9.2 million – will encourage the construction of renewable energy sources, protecting and improving the environment, and encouraging innovation. The MESPU promoted the purchase of cars with low fuel consumption and CO₂ emissions by issuing a guide in 2022. Together with the United Nations Development Programme, the MESPU is also preparing a national climate-change adaptation plan. The national energy and climate plan to achieve decarbonisation by 2050 is not yet in place and is delayed for yet another year. Montenegro needs to take decisive steps for the establishment of a mechanism on carbon pricing, aligned with the EU ETS to advance the implementation of the EU *acquis* and adequately prepare for the EU Carbon Border Adjustment Mechanism that entered into force in its transitional phase on 1 October 2023.

CLUSTER 5: RESOURCES, AGRICULTURE AND COHESION

This cluster covers: agriculture and rural development (Chapter 11); food safety, veterinary

and phytosanitary policy (Chapter 12); fisheries and aquaculture (Chapter 13); regional policy and coordination of structural instruments (Chapter 22); and financial and budgetary provisions (Chapter 33). All five chapters are open, with closing benchmarks that remain to be fulfilled in each chapter. This cluster comprises policies linked to European structural funds requiring particular preparation for developing the capacities to assume responsibilities of a future Member State.

Progress was achieved in different areas e.g. in agriculture, food and fisheries through further support for agricultural establishments and rural food companies to align with the EU standards and in implementing IPARD II. The Strategy for agriculture and rural development for 2023-2028 was also adopted. On financial and budgetary provisions, progress was achieved through improved coordination and management of own resources. In the coming period, Montenegro is advised to accelerate the spending of EU funds under IPARD II to avoid de-commitments and start the implementation of IPARD III programme. Furthermore, Montenegro should accelerate legislative alignment in the area of agriculture (such as the Law on organic farming, Law on wine and on Olive Oil), and fisheries and aquaculture (adopt the Law on structural measures and State aid in fisheries and aquaculture and Law on marine fisheries and mariculture), adopt and start implementing the new 2023-2028 fisheries and aquaculture strategy; and in the area of food to continue upgrading food establishments and further strengthen administrative capacity in particular on food safety controls; to update the action plan for meeting EU cohesion policy requirements while strengthening capacities to manage IPA programmes; to further align the institutional framework and rules of administration for the own resources system.

Chapter 11: Agriculture and rural development

The EU's common agricultural policy supports farmers and ensures Europe's food security. It helps tackle climate change and the sustainable management of national resources; maintains rural areas and landscapes across the EU; and keeps the rural economy alive by promoting jobs in farming, agri-food industries and associated sectors. This requires strong management and control systems. There are also common EU rules for marketing standards, quality policy and organic farming.

Montenegro remains **moderately prepared** in the area of agriculture and rural development. **Some progress** was achieved on last year's recommendations, mainly in implementing the Instrument for Pre-accession Assistance for Rural Development (IPARD II and III) programmes, by organising further calls, adopting the Sectoral Agreement for IPARD III, requesting to roll over entrustment and receiving entrustment for the 'Farm diversification and businesses development' measure. The capacity of the IPARD Agency was strengthened. Progress was also registered with the adoption of the strategy for agriculture for 2023-2028. The implementation of the action plan on EU *acquis* on agriculture and rural development alignment was limited.

In the coming year, Montenegro should in particular:

- use to the best possible extent the remaining budget under IPARD II, open the first new calls for applications under IPARD III, work on completing the entrustment of the technical assistance, and submit new measures for entrustment;
- further implement the action plan for alignment with the EU *acquis* on agriculture and rural development, including by setting up a decentralised branch of the paying agency;
- significantly progress with the roll-out of the land parcel identification system (LPIS) across the whole territory.

As regards **horizontal issues**, the strategy for agriculture and rural development for 2023-2028 was adopted in June 2023. Montenegro still needs to bring its support measures fully in line with EU *acquis*.

Progress in setting up the integrated administration and control system (IACS) remained slow. The land parcel identification system (LPIS) has yet to be rolled out across the whole territory. Preparations are ongoing to secure new orthophotographs to update the system. Efforts to further develop the farm accountancy data network (FADN) need to continue. Farm advisory services have yet to be strengthened.

As regards the **common market organisation**, Montenegro needs to step up implementation of the activities under the action plan on EU *acquis* alignment. The Law on wine needs to be updated in line with EU *acquis*. Work is under way to develop an electronic vineyard register. In January 2023, a Law on spirit drinks in line with the EU *acquis* was adopted.

Amendments to the Law on olive growing and olive oil, laying down, clearer rules for the production and placing on the market of olive oil as well as on control provisions are pending adoption by Parliament.

The 2023 programme for improving the availability of food under the schools scheme was adopted. Procedures and conditions for administering preferential customs quotas for the import of agricultural products were improved.

In the area of **rural development**, two new calls were issued which means that Montenegro now has a total of 11 IPARD II calls. In March 2023, the European Commission entrusted Montenegro with budget implementation tasks for the IPARD measure ‘Farm diversification and business development’, which enables the country to contract projects from its first call. The external audit assessment of the IPARD measure ‘Technical assistance’ was provided to complete the entrustment package that Montenegro sent to the European Commission in February 2022. A second automatic decommitment of funds took place after the end of the financial year 2022, and there is significant risk of losing additional funds at the end of 2023. The last call under the IPARD II programme closed in June 2023. The fact that the IPARD II programme is still running should not slow down the start of the implementation of the IPARD III programme. Authorities are encouraged to put further efforts into ensuring full absorption of available funds.

In June 2022, the European Commission approved Montenegro’s IPARD III. After adoption by the government, the Montenegrin Parliament confirmed the programme in December 2022 by adopting the national Law on the management and implementation of the IPARD III. The instrument’s implementation can be launched once the full regulatory framework is in place. Montenegro continued to strengthen the administrative capacity of the IPARD Agency by hiring additional staff. Work on setting up IPARD Agency’s regional offices is ongoing, albeit slowly.

As regards **quality policy**, the registration of products under the National Quality Scheme continued. All recommendations of the 2019 EU peer-review mission require proper follow-up, including activities to strengthen the control system.

The **organic farming** sector needs support to fulfil its potential for further development and expansion. The Ministry of Agriculture, Forestry and Water Management is implementing a pilot scheme to apply for entrustment of IPARD measure 4 ‘Agri-environment-climate and organic farming’. Work is still ongoing in drafting the Law on organic production, which aims to further align national legislation with the EU *acquis*.

Chapter 12: Food safety, veterinary and phytosanitary policy

EU hygiene rules for foodstuff production ensure a high level of food safety. Animal health and welfare and the safety of food of animal origin are safeguarded together with quality of seeds, plant protection material, protection against harmful organisms and animal nutrition.

Montenegro remains **moderately prepared** on this chapter. **Some progress** was achieved over the reporting period, including the adoption of the second update of Montenegro's strategy for transposition and implementation of the EU *acquis* together with a general action plan and a specific action plan for control and eradication of classical swine fever and the adoption of implementing legislation to align with the EU *acquis* in the food safety, veterinary and phytosanitary area. There is a need to step up the strengthening of administrative capacity and infrastructure. The Commission's recommendations from last year remains valid.

In the coming year, Montenegro should in particular:

- continue to implement the strategy for aligning national legislation with and implementing the EU *acquis*;
- further increase the share of food establishments compliant with EU standards;
- continue to strengthen administrative capacity and infrastructures in particular on food safety controls and implement robust disease surveillance and vaccination, as applicable.

In the area of **general food safety**, the government adopted in September 2023, the second update of Montenegro's strategy for alignment with and implementation of the EU *acquis* relevant for Chapter 12 including a General action plan and a Specific action plan for control and eradication of classical swine fever. The Administration for Food Safety, Veterinary and Phytosanitary Affairs (AFSVPA) implemented the 2022 programme for food and feed safety and quality measures and adopted the 2023 programme. The AFSVPA strengthened its administrative capacity to a certain extent by recruiting one food inspector.

As regards **veterinary policy** and animal welfare, the AFSVPA adopted further implementing legislation to align national legislation with the EU *acquis*. The AFSVPA implemented the 2022 programme of mandatory animal health protection measures, despite problems related to the August 2022 cyber-attack and the subsequent blockage of the electronic database on animals and the central register of farms. The AFSVPA adopted the 2023 programme envisaging intensified awareness-raising campaigns, strengthening passive surveillance of priority diseases (avian influenza, bluetongue disease, African swine fever and rabies) and fulfilling the conditions for acquiring status for some of the diseases (bovine tuberculosis, brucellosis and enzootic bovine leucosis).

The AFSVPA implemented disease surveillance programmes. Montenegro successfully implemented the autumn 2022 and spring 2023 rabies vaccination campaigns with EU support. In November 2022, the World Organisation for Animal Health accepted the self-declaration of Montenegro as a rabies-free country. Montenegro's application to be added to the European Commission's list of rabies-free countries, which would enable exemptions from serological tests and thus ease the conditions for non-commercial movement of pets, is currently under consideration by the Commission. There were no new cases of avian influenza during the reporting period; measures to prevent, detect and control the disease are in force.

The AFSVPA continued harmonising legislation and improving the national system for residual control and veterinary medicines. The 2022 programme for monitoring residues in animals and products of animal origin was implemented. Furthermore, a new programme for

monitoring prohibited substances in intestines was introduced as a new monitoring product. Montenegro's request to be included in the list of countries for which residue monitoring has been approved, was approved by the European Commission in June 2023.

The AFSVPA continued to improve the national regulatory and control system for poultry production and poultry products, and to harmonise it with systems in the EU. The finalisation of the veterinary information system was delayed because of the August 2022 cyber-attack. Four calls have been published under IPARD II (2014-2020), focusing on education about improving existing animal welfare conditions in housing facilities for food producing animals.

As regards administrative and inspection capacity, the AFSVPA hired two veterinary inspectors.

In the area of **placing on the market of food, feed and animal by-products**, the AFSVPA continued implementing the national programme for the upgrading of food establishments. This resulted in a high percentage of establishments fulfilling their obligations under the improvement plans. The number of facilities licensed to export to the EU remained the same at 19.

The outstanding issues regarding the location of the facility for processing animal by-products resulted in a delay in the implementation of activities linked to the management of animal by-products not intended for human consumption.

Montenegro continued to implement its national programme for improving raw milk quality and handling non-compliant milk. National milk laboratory staff received training on all laboratory information management system modules. Their connection with the veterinary information system is delayed due to the August 2022 cyber-attack. In the area of **food safety rules and specific rules for feed**, the AFSVPA implemented the 2022 programme of food and feed safety measures and adopted the 2023 programme.

The 2022 programme of **phytosanitary measures** was implemented along with the programme of control of production of seed and propagating material. The 2023 programme was also adopted. The AFSVPA adopted further implementing legislation in the phytosanitary area and timely carried out the 2021-2026 national plan for sustainable use of pesticides. On 31 March 2023, the European Commission accepted Montenegro's self-declaration as a country that it is free from *Xylella fastidiosa*. The AFSVPA strengthened its administrative capacity by hiring two phytosanitary inspectors and one consultant in the department for pesticides.

On **genetically modified organisms**, the AFSVPA implemented the 2022 programme for genetically modified food and feed monitoring and started implementing the 2023 programme.

Chapter 13: Fisheries and aquaculture

The common fisheries policy lays down rules on fisheries management, protects living resources of the sea and limits the environmental impact of fisheries. This includes setting catch quotas, managing fleet capacity, rules on control and inspection, rules on markets and aquaculture and support for fisheries and coastal communities. Further, it promotes a sustainable aquaculture.

Montenegro has **some level of preparation** in this area. **Limited progress** was made in the areas of strengthening the administrative capacity, improving data collection and good cooperation within the General Fisheries Commission for the Mediterranean (GFCM)

framework. Last year's recommendations remain valid. Montenegro continued to be a reliable partner in international fora.

In the coming period, Montenegro should in particular:

- finalise and adopt the new fisheries and aquaculture strategy with the action plan on aligning national legislation with and enforcing the EU *acquis*;
- adopt the pending legislation on market organisation, structural measures and State aid in fisheries and aquaculture and on governing marine fisheries and aquaculture;
- continue to strengthen administrative, data collection, scientific advice, inspection and control capacity.

Montenegro is still preparing the new 2023-2028 fisheries and aquaculture strategy and its action plan. The Law on market organisation in fisheries and aquaculture and the Law on structural measures and State aid in fisheries and aquaculture are still pending adoption by the Parliament. Work is ongoing on the organisation of a Technical Assistance and Information Exchange mission to review the draft law on marine fisheries and mariculture with a view to adopt the Law by end of 2023. In April 2023, the Ministry of Agriculture, Forestry and Water Management (MAFWM) adopted secondary legislation on the technical conditions applicable to the place of first sale of fish and fisheries products and the conditions and method of sale.

Concerning **administrative capacity**, the MAFWM hired one additional member of staff in its Directorate for Fisheries, Department for Structural Measures, Market and State Aid. The ecologic and social feasibility of a port construction in Ulcinj continued.

As regards **resource management**, the MAFWM's Directorate for Fisheries, in cooperation with the Institute of Marine Biology, implemented activities set out in the 2022 annual data collection programme on Montenegrin fisheries, for both commercial catches and biological data. The said programme continued in 2023. The development of management plans for demersal and pelagic resources, as well as certain types of small coastal fisheries (beach seines) is ongoing. In the area of **fleet management**, through the first grant support for investments in fishing vessels, including fishing equipment and electronic devices, three vessels were successfully acquired (MIDAS 2 project). As an outcome of the second call that was launched in March 2023, 9 new applications for the support were received.

Regarding **inspections and control**, the Directorate for Fisheries set up the electronic licensing system for sport and recreational fishing at sea. Montenegro is currently developing new functionalities within the existing subsystems of the Fisheries Information System related to gathering socio-economic data in fisheries. Equipping ten landing places with devices for measuring and registering catches is underway. Dialogue continued with Albania to harmonise the management of the joint European eel resources and on control of illegal, unreported and unregulated fishing. In February 2023, the two countries signed an agreement on the joint management of fisheries on Lake Skadar and in the Bojana river. The next step in the process is the formation of a joint committee and harmonisation of legislation for managing common fisheries resources. There were no developments in the areas of **structural action, market policy and State aid**.

Montenegro remained a reliable partner in **international fora**. Work on implementing the EU Strategy for the Adriatic and Ionian Region (EUSAIR) continued, especially on implementing the first pillar of the EUSAIR related to blue growth, jointly coordinated by Montenegro and Greece. Montenegro also continued its cooperation with the General Fisheries Commission for the Mediterranean (GFCM). Montenegro is encouraged to promote

regional cooperation with partner countries in the Adriatic-Ionian. Montenegro needs to fully implement a significant number of GFCM recommendations particularly on the Adriatic small pelagics multiannual plan and the European eel recommendation. In addition, Montenegro should work to reduce by-catch of sensitive species and should promote the use of selective gear.

Chapter 22: Regional policy and coordination of structural instruments

Regional policy is the EU's main tool for reducing regional disparities and investing in sustainable and inclusive socio-economic growth. It is operating through "shared management" between the Commission and EU Member States. The implementation of cohesion policy programmes requires appropriate administrative capacity on programme and project level, the establishment of systems of sound financial management and control and also the fulfilment of other EU acquis elements such as environmental or public procurement legislation.

Montenegro is **moderately prepared** in the area of regional policy and coordination of structural instruments. **Limited progress** was made over the reporting period, particularly in respect of key decisions yet to be reached on the institutional framework for preparing future cohesion policy programmes and on administrative capacity, which requires strengthening. The 2022 recommendations remain valid.

In the coming year, Montenegro should in particular:

- update and restart implementation of the action plan to meet requirements under EU cohesion policy;
- safeguard Instrument for Pre-accession Assistance (IPA) funds more effectively by increasing and consolidating the administrative capacity of central, regional and local bodies and put in place a structure to manage the administration of future cohesion policy funds; strengthen capacity in procurement, management and monitoring of capital investment, while also strengthening existing coordination mechanisms;
- work on a credible pipeline of projects, along with a framework for strategic sectoral orientations and policies, while improving project preparation, procurement and implementation in line with EU and international standards.

Regarding the legislative framework, on 27 December 2022, the Parliament adopted Amendments to the Public Procurement Law, in force as of January 2023. Amendments to the Law on the Budget and Fiscal responsibilities were adopted on 28 February 2023

On the **institutional framework**, limited progress was made. According to the action plan for Chapter 22, the work on the Law on European Structural and Investment Funds, which is to formalise and lay down the institutional framework, is ongoing while the adoption is only planned for Q3 2024. However, the EU Regulation setting up IPA III for 2021-2027 emphasised the importance and urgency of laying down such framework. The institutional set-up and the system for managing IPA funds under indirect management still need to be adapted to IPA III requirements. Decisions on the appointment of institutions and bodies that will implement IPA III need to be urgently formalised, taking into account these institutions and bodies' future role in cohesion policy. In March 2023, the government set up the working group for Chapter 22 again to revamp the work on fulfilling the remaining obligations under Chapter 22.

In the area of **administrative capacity**, Montenegro must strengthen its resources for procurement, contract management, preparation and implementation of key structural

reforms. Montenegro continued its staff retention policy and maintained the salary supplement for staff in the IPA structure. To build capacity and motivate staff, the hiring and retention of staff should be based on merits and a transparent recruitment process, and for ministries' management boards to provide clearer strategic directions. Training programmes continue to be needed for further capacity development in the IPA structure. By the deadline of end-December 2022, Montenegro contracted only 76.41% of the 2018 IPA allocation for indirect management. The pace of procurement by entrusted contracting authorities remains suboptimal with only 6.31% of 2020 IPA funds contracted by the end of 2022. The contracting rate for the IPA II indirect management stands at 81.29%. Preparatory activities to disburse 2021 IPA funds are slow. Coordination between contracting authorities and line ministries needs strengthening. Investment in resources must be stepped up, by ensuring that recruitment and retention are based on quality and merits, and by providing targeted training. The capacity of indirect management structures still needs to be strengthened to ensure they are compatible for an *ex post* control environment.

In the area of **monitoring and evaluation**, regular activities continued in line with IPA procedures. On **financial management, control and audit**, the Audit Authority appointed its Auditor General in Q4 2022.

Chapter 33: Financial and budgetary provisions

This chapter covers the rules governing the funding of the EU budget ('own resources'). These resources mainly consist of: (i) contributions based on the gross national income of each Member State; (ii) customs duties; (iii) the non-recycled plastic resource and (iv) a resource based on value-added tax. Member States must have the appropriate administrative capacity to adequately coordinate and ensure the correct calculation, collection, payment and control of own resources.

Montenegro has **some level of preparation** regarding EU financial and budgetary provisions. **Some progress** was made in meeting last year's recommendations, mostly in aligning the legal basis for the underlying policy areas affecting the own-resources system, notably taxation, and in strengthening the coordination and management of EU own resources in the Ministry of Finance and other institutions.

In the coming year, Montenegro should in particular:

- strengthen the administrative capacity of the Directorate for Coordination and Management of EU Own Resources and of all other institutions involved in the own-resources system, notably by developing organisational and procedural links between these institutions;
- fully implement the improvements to the IT system of the Revenue and Customs Administration enabling a full audit trail and reporting on customs duties;
- adopt implementing legislation on collection of debts on movable and immovable property and procedures for writing off uncollectible customs debt and start their implementation.

There was some progress in the underlying policy areas indirectly affecting the own-resources system (*for progress in these areas, see Chapters 16: Taxation, 18: Statistics, 29: Customs union, and 32: Financial control*).

On **traditional own resources**, the analysis of accounting rules continued, and progress was made on marking and identifying income. Simulation exercises were organised for accounting and reporting of observed cases of fraud and irregularities. Fraud reporting in

accordance with the own resources database (OWNRES) requirements was improved by preparing several reports on seized goods. Several improvements to the IT system of the Revenue and Customs Administration were introduced, more specifically for generating reports related to A and B accounts. These improvements included a complete audit trail from the determination of the claim to its payment, subsequent control, administrative procedures and all other steps related to the collection of all customs duties on behalf of the European Commission. However, these improvements are yet to be fully implemented. Montenegro is preparing implementing legislation on compulsory collection of debt on movable and immovable property in line with the Law on tax administration. Instructions for writing off customs debt in conformity with the new Customs Code adopted in July 2022 have yet to be finalised. A manual on recognition and write-off of uncollectible customs debt, interest and penalties is pending approval, in order to align national legislation with the EU *acquis*.

As regards **VAT-based resources**, in December 2022, the Law on VAT was amended to further align the VAT system with the EU *acquis*, notably on energy import.

In the area of **gross national income-based resources**, Montenegro's GDP is calculated using the European system of national and regional accounts 2010 methodology.

As regards **administrative infrastructure**, the Directorate for Coordination and Management of EU Own Resources in the Ministry of Finance continued to improve its capacity, focusing on planning, coordination, calculation and administrative conditions of own resources. However, it is necessary to substantially strengthen all institutions involved in the own-resources system, notably by developing organisational and procedural links between these institutions. Implementation of the government own resources action plan is ongoing.

CLUSTER 6: EXTERNAL RELATIONS

There are two chapters in this cluster, namely Chapter 30: External relations, which was provisionally closed in June 2017, and Chapter 31: Foreign, security and defence policy, where the single closing benchmark (concerning Montenegro's bilateral immunity agreement with the United States) has yet to be fulfilled.

Montenegro is invited to continue legislative alignment where necessary, and is also encouraged to implement actions under the Common Regional Market, based on the EU rules.

Chapter 30: External relations

The EU has a common commercial policy towards third countries, based on multilateral and bilateral agreements and autonomous measures. There are also EU rules in the field of humanitarian aid and development policy.

Montenegro has achieved a **good level of preparation**. During the reporting period, **limited progress** was achieved, mainly in the field of regional cooperation. While the parliament voted on ratifying Common Regional Market agreements on the freedom of movement based on identity cards, on recognition of professional qualifications for regulated professions, and on recognition of academic qualifications, the laws were not signed by the president. Amendments to the country's legal and institutional framework on development and humanitarian aid have yet to be adopted. Montenegro should continue working on this chapter in accordance with its overall action plan on external relations. The recommendations from last year remain valid.

In the coming year, Montenegro should in particular:

- continue to actively participate in the implementation of measures under the Common Regional Market action plan for 2021-2024 and ensure constructive participation in the negotiations on Additional Protocol 7 to the Central European Free Trade Agreement (CEFTA) on dispute settlement;
- adopt amendments to the Laws on international development cooperation and international humanitarian assistance.

As regards the **common commercial policy**, Montenegro continued to coordinate its positions with those of the EU, including in the World Trade Organization.

Montenegro continued to participate actively in CEFTA working groups, including in the negotiations on CEFTA Additional Protocol 7 on trade dispute settlement. In April 2023, the Parliament ratified three agreements of the Common Regional Market concerning freedom of movement based on identity cards, recognition of professional qualifications for regulated professions (medical doctors, dentists and architects), and recognition of academic qualifications. However, the agreements were not signed by the president.

In May 2023, the government established the Trade Facilitation Council, which will be in charge of planning and coordinating reforms of Montenegrin administration in the field of trade and trade facilitation. The Council will monitor the implementation of WTO Trade Facilitation Agreement, CEFTA Additional Protocol 5 and other bilateral and multilateral agreements. It will also manage the loan agreement with International Bank for Reconstruction and Development for establishment of a single window in cross-border trade.

Legislation on **dual-use goods** is in force and aligned with EU rules. Montenegro's application process to join the Wassenaar Arrangement is ongoing. The application for membership in the Australia Group is still in preparation.

Montenegro is still preparing implementing legislation to the Law on the Investment and Development Fund, which regulates the issuing and financing of export credits. The implementing legislation will address the issue of export credit insurance against non-market risks. The Investment and Development Fund did not issue any credits yet.

Montenegro has 24 bilateral investment treaties in force, 15 of which are with EU Member States.

In December 2022, the government launched negotiations with Hungary on an agreement on mutual protection and promotion of investment. The Montenegrin Bilateral Investment Treaty model serves as a basis for these negotiations.

Regarding **bilateral trade agreements**, in November 2022, the government launched negotiations with Ukraine to amend the Free Trade Agreement concerning rules of origin and methods of administrative cooperation. In March 2023, the Parliament ratified the Agreement on Economic Cooperation with South Korea.

The negotiations for an Agreement on Trade, Partnership and Cooperation between Montenegro and the United Kingdom of Great Britain and Northern Ireland continued. In these negotiations, Montenegro should avoid any violation of its obligations under the Stabilisation and Association Agreement.

In the area of **development policy and humanitarian aid**, Montenegro has yet to adopt amendments to the Law on international development cooperation and international humanitarian assistance, aiming to improve and update the country's legal and institutional

framework in these areas. A database on donor support projects that would use the OECD Development Assistance Committee methodology has yet to be developed.

Chapter 31: Foreign, security and defence policy

Member States must be able to conduct political dialogue under the EU foreign, security and defence policy, align with EU statements, take part in EU actions, and apply agreed sanctions and restrictive measures.

Concerning EU foreign, security and defence policy, Montenegro has a **good level of preparation**. **Good progress** was made as the country continued its track-record of full alignment with the EU's common foreign and security policy (CFSP), including with the EU restrictive measures following Russia's war of aggression against Ukraine and has provided assistance to Ukraine. As a member of the Human Rights Council, Montenegro has been actively engaged in promoting and defending international law, the UN Charter and the rules-based international order. In line with the Declaration of the EU – Western Balkans Summit of December 2022, Montenegro needs to make further efforts on closing space for foreign interference and information manipulation, including disinformation. Montenegro continued to participate in EU crisis management missions and operations under the common security and defence policy (CSDP).

In the coming year, Montenegro should, in particular:

- maintain its full alignment with the EU foreign, security and defence policy.
- improve implementation and enforcement of restrictive measures, including preventing attempts to use its territory for their circumvention,
- make further efforts to close space for foreign interference and information manipulation, including disinformation, and take actions towards building resilience against all forms of hybrid threats.

The **political dialogue** between the EU and Montenegro on foreign and security policy issues continued, including through Montenegro's active engagement in the EU-Western Balkans informal CFSP Dialogue at political directors' level. In March 2023, Montenegro participated at ministerial level at the first Schuman Security and Defence Forum and in May 2023 in the working lunch with members of the Foreign Affairs Council. The institutional framework enabling Montenegro's participation in the EU CFSP and CSDP is in place. Ministry of Foreign Affairs has appropriate structures to participate in the **CFSP** while the Ministry of Defence deals more specifically with the common security and defence policy (CSDP).

In the reporting period, Montenegro maintained its 100% **alignment with the EU common foreign and security policy**, including all EU restrictive measures targeting Russia and Belarus. This is a strong signal of Montenegro's strategic commitment to the EU path. In March 2023, Albania, North Macedonia, Kosovo and Montenegro launched the informal 'Western Balkan QUAD – 100% alignment with EU CFSP' a platform aimed at facilitating their full alignment with the EU's CFSP. Montenegro provided assistance to Ukraine and to Ukrainians staying in Montenegro. Montenegro also aligned with the EU position in UNGA when voting on resolutions regarding Russia's war of aggression against Ukraine and its humanitarian impact and on initiatives in the UN Human Rights Council with regard to the human rights situation in China or Iran.

On **sanctions implementation**, the government adopted four decisions on the practical implementation of restrictive measures against Russia and established a co-ordination body to monitor the implementation of international measures following Russia's aggression against

Ukraine. However, implementation and enforcement remained mixed, in part due to limited administrative capacity and the need to update Montenegro's legal framework. Montenegro needs to continue to strengthen its capacity to implement and enforce the sanctions in place, including by adopting the draft Law on international restrictive measures to strengthen the national system for the enforcement.

Montenegro continued **co-operation with international organisations** (UN, OSCE and Council of Europe) and remained an active member of NATO. The country maintains a bilateral immunity agreement with the United States, granting US citizen's exemptions from the jurisdiction of the International Criminal Court. In doing so, the country does not comply with the EU common positions on the integrity of the Rome Statute or related EU guiding principles on bilateral immunity agreements. Alignment with the relevant EU position is therefore needed.

Concerning **conflict prevention**, during the reporting period, the Ministry of Foreign Affairs fulfilled all obligations in accordance with the OSCE Conflict Prevention Centre Implementation Calendar in the area of arms control. In the second half of 2022, Montenegro held the chair of the Sub-regional Consultative Commission of the Agreement on Sub-Regional Arms Control, Annex 1-B, Article IV of the General Framework Agreement for Peace in Bosnia and Herzegovina. Montenegro continued supporting EU measures and documents on **conflict prevention**.

Regarding **non-proliferation**, Montenegro remained actively engaged in the implementation of the Western Balkans **Small Arms and Light Weapons** (SALW) Roadmap and implemented its 2019-2025 strategy and action plan for combating illegal possession, misuse and trafficking of SALW. Montenegro is a state party to 29 international agreements in the field of CBRN and proliferation threats and risks. It is member to the Arms Trade Treaty, and is in the process of joining the Wassenaar Arrangement (WA). In relation to the accession to the Australian Group (AG), a formal application that will contain detailed information on the legislative framework and export control policy is underway, as well as implementation measures relevant to the objectives of the AG. The Ministry of Foreign Affairs co-ordinated drafting a new strategic document for the period 2023-2028, for prevention, detection, suppression and protection against Chemical, Biological, Radiological and Nuclear (CBRN) threats and risks, prevention and suppression of the proliferation of weapons of mass destruction and the means for their delivery and preventing them from falling into the hands of non-state actors.

In the area of **security and defence**, the implementation of the defence strategy and related action plan adopted in 2019 continued. In March 2023, the government adopted the final report on the Implementation of the Action Plan for the implementation of the Defence Strategy (2019-2022). In terms of **security measures**, Montenegro has continued to implement its agreement on security of information with the EU on procedures regarding exchange of classified information]

Montenegro continued contributing to **EU crisis management missions and operations** under the common security and defence policy, namely to EU NAVFOR ATALANTA.

Montenegro takes part in the European Peace Facility Balkan Medical Task Force assistance measure.

Regarding **hybrid threats**, adoption of the strategy on countering hybrid threats and related action plan is pending. Active response of the government to enhancing cyber resilience against malicious behaviour in cyberspace continued following the August 2022 cyber-attack.

ANNEX I – RELATIONS BETWEEN THE EU AND MONTENEGRO

Within the framework of the **accession negotiations**, by October 2021, all 33 screened chapters, including chapters 23 and 24 on the rule of law, had been opened, three of which, i.e. science and research, education and culture, and external relations, have been provisionally closed.

Montenegro is participating in the **Stabilisation and Association Process**. Overall, Montenegro continued to broadly implement its obligations under the **Stabilisation and Association Agreement (SAA)**. Regular political and economic dialogue between the EU and Montenegro has continued through the SAA structures. Regular subcommittee meetings were held throughout the period. The Stabilisation and Association Committee met in January 2023 and the SA Council in July 2022. The Stabilisation and Association Parliamentary Committee met in December 2022.

Montenegro participates in the ministerial dialogue between the economic and finance ministers of the EU and the candidate countries, which aims at helping the latter to gradually meet the economic accession criteria and be better prepared in terms of economic reforms, competitiveness and job creation. The most recent meeting was held on 16 May 2023.

Montenegro has maintained its full **alignment with the EU common foreign and security policy** and has continued contributing to **EU crisis management missions and operations** under the common security and defence policy.

Visa liberalisation for citizens of Montenegro travelling to the Schengen area has been in force since December 2009. As part of the visa liberalisation monitoring mechanism, the Commission has been regularly assessing the progress made by the country in implementing reforms introduced under the visa roadmap. The Commission's sixth report under the Visa Suspension Mechanism adopted in October 2023 concluded that Montenegro continues to take action to address the recommendations from the previous year's report. A **readmission agreement** between the European Union and Montenegro has been in force since 2008.

The **Instrument for Pre-accession Assistance 2021-2027 (IPA III)**⁵ continues financial support to the region and finances the Economic and Investment Plan for the Western Balkans. The **2022 annual programme** was adopted in December 2022 with an envelope of EUR 36.72 million, and three actions focusing on supporting Montenegro in its improvement of border management, reforming its public administration, and supporting further alignment with the *EU acquis*.

At the EU-WB Summit in Tirana in December 2022, the Commission put forward an **Energy Support Package** of EUR 1 billion for the Western Balkans to address immediate, short-term, and medium-term needs in the region in the context of the energy crisis and of Russian war of aggression against Ukraine. Following this announcement, a EUR 30 million budget support programme for Montenegro was adopted at the end of 2022 to cushion the energy price increase to SMEs and vulnerable households and to accelerate energy diversification.

The bilateral annual programmes are complemented by a package of multi-country and regional programmes, supporting the environmental sector, dealing with migration, social housing, as well as TAIEX and competitiveness programmes together with IFIs and IOs. Montenegro is also benefitting from the rural development programme **IPARD III** (a

⁵ Official Journal L 330, 20.9.2021

continuation of the IPARD II support), providing a significant contribution to the implementation of the Economic and Investment Plan for the Western Balkans and the Green Agenda. Montenegro continues to participate actively also in cross-border cooperation programmes with neighbouring countries and EU Member States (Adriatic and Danube – macro regional strategies), as well as transnational cooperation programmes and Union Programmes.

The new activities are built on and add to the closed and the few on-going programmes under **IPA II (2014-2020)**, which are providing significant support through EU integration facility, Union Programmes, the Civil Society Facility, as well as IPARD, aiming at the social and economic development of the country and improving the reform process of the Rule of Law sector, Fundamental Rights, Public Administration Reform, and other critical sectors.

The EU provides support via IPA and the Foreign Policy Instrument to strengthen Western Balkans partners' resilience to face hybrid threats including cyber and foreign information manipulation and interference.

ANNEX I – RELATIONS BETWEEN THE EU AND NORTH MACEDONIA.....	120

1. INTRODUCTION

1.1. CONTEXT

The first intergovernmental conference on accession negotiations with North Macedonia took place in July 2022. At the same time, the first step in the accession negotiations process was taken with the launch of the analytical examination of the EU *acquis*, the ‘screening’. This has progressed smoothly. North Macedonia continued to implement the Stabilisation and Association Agreement and the joint bodies under the agreement met at regular intervals.

The EU accession negotiation process with North Macedonia is conducted in line with the revised enlargement methodology, and with the requirements set out in the Negotiating Framework, which have an even stronger focus on the fundamentals (cluster 1) of the accession process.

The authorities have continued to demonstrate and to declare publicly their commitment to advancing on their EU path. Now that the accession negotiations process has begun, the pace of EU-related reforms needs to pick up.

North Macedonia has also fully aligned with the EU positions on Russia’s war of aggression against Ukraine, sending a strong signal of its strategic choice of EU accession and showing itself once more to be a reliable partner. In 2023, North Macedonia has played an active role in a complex geopolitical context during its term as chair of the Organisation for Security and Cooperation in Europe (OSCE). The impact of Russia’s war of aggression against Ukraine, including high energy, commodity and food prices and disruptions in supply chains, has weighed heavily on the economy and seriously affected vulnerable households and small and medium-sized enterprises.

1.2. SUMMARY OF THE REPORT¹

The reporting period was marked by the start of the EU accession negotiations process, including the screening process. The political situation remained polarised, which had an impact on the proper functioning of democratic institutions.

On the **political criteria**, North Macedonia continued its efforts to strengthen democracy, while it faced significant challenges in the area of the rule of law. Overall, the legal framework remains conducive to the holding of democratic elections in North Macedonia. However, no progress was made to address and implement the outstanding recommendations by the OSCE's Office for Democratic Institutions and Human Rights and the Venice Commission. As mentioned repeatedly in previous reports, electoral legislation should be comprehensively reviewed to address inconsistencies in a timely, inclusive and transparent manner.

Parliament’s work was marred by political polarisation, which deepened further, delaying the adoption of many reform laws and important appointments. The EU accession negotiation process requires broad consensus of major political parties. All parties need to start engaging in a constructive and inclusive political debate, to strengthen the role of Parliament.

¹ This report covers the period from June 2022 to June 2023. It is based on input from a variety of sources, including contributions from the government of North Macedonia, the EU Member States, European Parliament reports and information from various international and non-governmental organisations. It also includes the results of comparative assessments and indices produced by other stakeholders, in particular in rule of law.

The report uses the following assessment scale to describe the state of play: early stage, some level of preparation, moderately prepared, good level of preparation and well advanced. To describe progress made during the reporting period, it uses the following scale: backsliding, no progress, limited progress, some progress, good progress and very good progress. Where appropriate, interim steps have also been used.

Parliament and government committed to launch and achieve as a matter of priority the relevant constitutional changes, with a view to including in the Constitution citizens who live within the borders of the state and who are part of other peoples, such as Bulgarians. Excessive and sometimes inappropriate use was made of fast-track procedures and of the ‘EU flag’ procedure, in some cases due to the lack of consultations and poor planning of the legislative calendar. The ‘EU flag’ should be used when directly linked to the adoption of laws whose main goal is aligning with the EU *acquis*, and not to short-cut public debate on important issues. Parliamentary oversight of the executive was regularly exercised through parliamentary questions to ministers. Parties should spare no efforts in meeting long-overdue commitments for internal reform dating from the third round of the ‘Jean Monnet Dialogue’ in early 2020. Work continued on establishing criminal responsibility for those who orchestrated or committed violence in the attack on Parliament on 27 April 2017. Prompt implementation of recommendations by the Group of States against Corruption is required to increase the transparency of funding for political parties. Parliament should ensure the timely review of the statutory reports sent to it by state agencies and bodies.

Overall, **civil society** organisations (CSOs) in North Macedonia continue to operate in an enabling environment. However, the government should increase its efforts to mainstream civil society engagement in priority areas and consultation activities. CSOs should play an important role in the reform process and be involved in decision-making processes. Existing legal and financial frameworks still need to be amended and implemented in practice, notably to provide consistent mechanisms for awarding public funding to CSOs. There is a need for the Council for Cooperation between the Government and Civil Society to resume its activities.

The country needs to strengthen its capacity for parliamentary oversight of the **intelligence services**.

North Macedonia remains moderately prepared in terms of **public administration reform**. Limited progress was made in the reporting period with the adoption of the new public administration reform strategy and the accompanying action plan in July 2023. Despite having started the process five years ago, the country still has not adopted the revised legislative framework for human resources management, which includes the revised Law on administrative servants, the Law on public sector employees and new legal provisions on top-level management. The new framework should improve human resource management across the administration and help ensure merit-based recruitments, promotions, and dismissals at all levels, including senior management. Legislation has not yet taken on board the State Commission for the Prevention of Corruption’s recommendations on nepotism, cronyism, and political influence in the recruitment of public sector employees and in the appointment of members of supervisory and management boards. Improvements in accountability in the public administration are undermined by the failure to adopt the new Law on state organisation. There are ongoing efforts to improve delivery of services to citizens and businesses.

The **judicial system** of North Macedonia is in between some and moderate level of preparation. There was no progress on the judiciary during the reporting period. The Judicial Council should strive to protect the integrity and independence of judges and institutions and should resist any external influence. The controversial dismissal of the President of the Judicial Council raised concerns about undue political influence. The adoption of a new judicial reform strategy aimed at improving the performance of institutions is behind schedule. Progress on implementation of the human resource strategies for the judiciary and prosecution services was limited. The lack of measures to address the impact of scheduled

retirements affected efficiency. Most promotions for higher courts faced further delays. Work continued on upgrading the automated court case management information system for random distribution of cases in courts. A similar system was introduced in the Public Prosecutor's Office.

The country is in between some and moderate level of preparation in the **prevention and fight against corruption**. No progress was made. Corruption remains prevalent in many areas and is an issue of concern. Delays and reversals in trials of high-level corruption cases increased, resulting in some cases in the expiration of the statute of limitations. The Criminal Code was amended through an expedited parliamentary procedure. The maximum legal penalties for specific corruption-related criminal offences were reduced, having implications on the application of the statute of limitations and affecting, halting or even terminating a large number of high-level corruption cases, including from the former Special Public Prosecutor's Office (SPO). The amendments also hamper the authorities' ability to investigate and prosecute such offences. This is a matter of serious concern.

The State Commission for the Prevention of Corruption was proactive in providing public institutions with policy guidance on preventing corruption. It opened several cases, but its recommendations need to be followed up. Efforts to improve the functioning of the SCPC should continue, especially by allocating additional funding for the recruitment of specialist staff. Additional human and financial resources should also be made available to the Public Prosecution Office, investigative centres and law enforcements units in charge of investigating corruption. The sectors most vulnerable to corruption require targeted risk assessments and dedicated actions.

North Macedonia has some level of preparation in the fight against **organised crime**. Some progress was made during the reporting period. The country continues to have a good level of operational cooperation with EU Members States, non-EU neighbouring countries, Europol and Eurojust. A new Law on money laundering and financing of terrorism entered into force in July 2022. Implementing legislation now needs to be drafted and adopted promptly. More needs to be done to improve the effectiveness of law enforcement in fighting certain forms of crime, such as money laundering and financial crimes. North Macedonia needs to adopt and implement the necessary legislation to regulate the activity of the Asset Recovery Office. The capacity of the National Coordination Centre for the Fight against Organised Crime needs to be improved. Coordination remains crucial for all stakeholders involved in fighting organised crime, including between prosecutors and police.

Some progress was made in the **fight against terrorism and violent extremism** in line with the objectives set out in the joint action plan on counterterrorism for the Western Balkans and the new bilateral implementing arrangement. The national strategies for countering terrorism (2023-2027) and countering violent extremism (2023-2027) were adopted in May 2023, with the related action plans.

North Macedonia is on one of the main transit routes for migration movements. The country continues to play an active role in the management of **mixed migration flows**. Efforts continued to ensure basic living conditions and services for all migrants in the country. There is, however, a need to enhance institutional and administrative capacities for all aspects of migration management. More staff and additional material and technical resources are required to increase capacity to a satisfactory level. Systematic registration of migrants is needed, and protection-sensitive profiling needs to be improved. The country should establish a proper system for managing irregular movement and stop the practice of returning migrants outside a legal framework. A contingency plan to manage large migratory flows needs to be finalised and adopted. The Status Agreement for operational cooperation in border

management with the European Border and Coast Guard Agency (Frontex) entered into force on 1 April 2023, allowing the launch of a joint operation with the deployment of officers from EU Member States to provide support with border control and the management of irregular migration and cross-border crime.

The legal framework on the **protection of fundamental rights** is partially aligned with the EU *acquis* and standards on fundamental rights. The country continues to meet its general obligations on fundamental rights, but the legislation should be implemented in a more systematic manner. Some significant amendments to the Criminal Code were adopted in February 2023, regulating criminal acts of gender-based violence. Parliament should make appointments to independent and regulatory bodies based on merit. The functional independence of human rights bodies must be guaranteed at all times. This means, amongst other things, allocating sufficient funds. Services for victims of gender-based violence still need reinforcement and proper funding to meet the standards laid down by the Istanbul Convention. Persons with disabilities continue to face direct and indirect discrimination, social exclusion and barriers. The Ombudsman's Office and the Commission for the Prevention and Protection against Discrimination signed a memorandum of understanding to formalise their coordination. The situation in prisons is still dire. The recommendations made by the European Committee for the Prevention of Torture on the treatment of detained and convicted persons were not addressed, which is a matter of serious concern. Detention conditions should be improved with the utmost urgency. Special attention should be given to promoting non-discrimination, increasing effectiveness in addressing hate crime and hate speech and strengthening the capacity and independence of institutions in charge of protecting the rights of persons belonging to minorities or communities. The Agency for Community Rights Realisation needs to receive sufficient funding to further promote the protection of minorities and the implementation of the national 'One Society for All and Interculturalism' strategy. The capacity of law enforcement and criminal justice officials to effectively prevent and prosecute all instances of violence, hate crimes and hate speech needs to be enhanced. The external oversight mechanism for the police, including the prison police, is still not fully functional, with the three CSOs representatives still to be selected by the Parliament. The enacted amendments to the Law on civil registry pave the way to resolving cases of statelessness and fulfilling the country's international obligations.

North Macedonia is in between some and moderate level of preparation in the area of **freedom of expression**. Overall, it made limited progress. The general context is favourable to media freedom and allows for critical media reporting. The amended Criminal Code and Law on civil liability for defamation raised the overall level legal protection for journalists. However, a number of attacks, threats and some intimidating behaviour towards journalists were noted. Greater transparency is needed regarding media advertising by state institutions and political parties. Reform of the public service broadcaster is required to strengthen its independence, professional standards and financial sustainability. Since December 2018, Parliament has been delaying the appointment of the public service broadcaster's programming council and media regulator's council. Working conditions for journalists remain challenging.

On the **economic criteria**, North Macedonia has made some progress and is at a good level of preparation in developing a functioning market economy. In 2022, the economy was badly hit by the fallout from Russia's war of aggression against Ukraine, which significantly slowed down its post-COVID-19 recovery. The government supported households and businesses through large-scale energy subsidies, tax reductions and targeted direct income support. Owing to an inflation-driven boost to tax income and under-execution of several

expenditure categories, the general government deficit remained below the revised target. Capital expenditure was raised significantly, but still fell short of the revised plan. The public debt ratio dropped but remains significantly above pre-COVID-19 levels. The central bank tightened its policy stance further in view of still elevated inflationary pressures, which began to subside gradually towards the end of 2022 and beyond. The current account deficit rose substantially as energy import prices surged, but external financing needs were met with the help of market-based and IMF borrowing. The Organic Budget Law (OBL) adopted in September 2022 provides for the introduction of fiscal rules and a fiscal council, strengthening fiscal sustainability. However, progress has been slow in implementing wider-ranging measures to improve the management of public investment, vital for underpinning the government's plans for a sizeable increase in capital expenditure. The banking sector was resilient throughout the crises. The labour market showed some improvement, but structural problems persist, including high youth and long-term unemployment and a large gender gap. The business environment continued to be impeded by the large size of the informal economy, slow progress in streamlining parafiscal charges and an untransparent and inefficient State aid regime.

North Macedonia has made some progress and is moderately prepared to cope with **competitive pressure and market forces** within the EU. Integration with the EU in trade and investment remained at a high level in 2022. The share of high-value products in exports increased further and trade openness surged to a record high. There was further progress in improving vocational educational training, but major skills shortages persist relative to labour market needs, entailing long school-to-work transitions. These, coupled with large gaps in transport and energy infrastructure, low investment and low innovation funding, are restricting potential growth. Digitalisation of the economy is advancing, but the competitiveness of domestic businesses could be improved through a wider offering of public e-Services.

As regards its ability to assume the obligations of membership, North Macedonia is moderately prepared in most of the areas covered by **cluster 2 on the internal market**, namely the free movement of goods, services and capital, intellectual property, competition policy, financial services and consumer and health protection. The country has achieved a good level of preparation on company law, although it is still at an early stage on freedom of movement for workers. North Macedonia made good progress on free movement of capital and some progress on financial services and consumer and health protection. Limited progress was made on the free movement of goods, rights of establishment to provide services. No progress was made on company law, intellectual property law and competition policy and freedom of movement for workers. Overall, more progress is needed in the coming year in the areas covered by this cluster, to feed into North Macedonia's preparations to meet the requirements of the EU's internal market. Work on this cluster is highly relevant for the development of the Common Regional Market.

Overall, North Macedonia is moderately prepared in most of the areas covered by **cluster 3 on competitiveness and inclusive growth**, including digital transformation and media, taxation, social policy and employment, and enterprise and industrial policy. The country is in between a moderate and a good level of preparation in the area of economic and monetary policy. It has a good level of preparation in the areas of science and research and customs union. Some progress was made on taxation, economic and monetary policy, enterprise and industrial policy, science and research policy, social policy and employment. More efforts are needed, however, particularly in areas where limited progress was made, such as digital transformation and media, customs union, and education and culture.

On **cluster 4 on the green agenda and sustainable connectivity**, North Macedonia has a good level of preparation on trans-European networks and some level of preparation on environment and climate change. The country is moderately prepared on transport and energy policy with some progress made on energy, particularly on regional gas interconnectors and on renewables. Substantial efforts are needed in areas where limited progress was achieved, such as transport, trans-European networks and the protection of the environment. In the upcoming period, the country needs to accelerate implementation of the Economic and Investment Plan and of the Green Agenda for the Western Balkans².

North Macedonia is moderately prepared in most areas of **cluster 5 on resources, agriculture and cohesion**. It has a good level of preparation on food safety, veterinary and phytosanitary policy and is at an early stage of preparation in financial and budgetary provisions. Over the reporting period, some progress was made on agriculture and rural development, fisheries and food safety, veterinary and phytosanitary policy. However, further efforts are needed, in particular in areas where limited or no progress was made, such as regional policy and the coordination of structural instruments and financial and budgetary provisions.

Concerning **cluster 6 on external relations**, North Macedonia is moderately prepared in the area of external relations and has reached a good level of preparation on the common foreign and security policy. The country made some progress during the reporting period on common commercial policy. It has made good progress by maintaining full alignment with EU common foreign and security policy. By doing so, North Macedonia has shown itself to be a reliable partner, including at international level.

On **regional cooperation**, the country maintained good relations with other enlargement countries and continued its engagement in regional initiatives. Existing bilateral agreements need to be implemented in good faith by all parties, including the Prespa Agreement between North Macedonia and Greece and the Treaty of Friendship, Good-Neighbourliness and Cooperation with Bulgaria, including its protocols.

1.3. STATE OF PLAY OF THE ACCESSION NEGOTIATIONS

Following the political inter-governmental conference on accession negotiations with North Macedonia that took place on 19 July 2022, the Commission immediately launched the **screening** process, which is progressing smoothly. All sessions on Cluster 1 (Fundamentals) and Cluster 2 (Internal Market), Cluster 3 (Competitiveness and Inclusive Growth) and Cluster 4 (Green Agenda and Sustainable Connectivity) have taken place. Explanatory sessions on Cluster 5 (Resources, Agriculture and Cohesion) and Cluster 6 (External Relations) have been completed and bilateral sessions on these are ongoing. The remaining screening meetings are scheduled until December 2023.

2. CLUSTER 1: THE FUNDAMENTALS OF THE ACCESSION PROCESS

2.1. FUNCTIONING OF DEMOCRATIC INSTITUTIONS AND PUBLIC ADMINISTRATION REFORM

2.1.1. Democracy

The political situation remained polarised, which had an impact on the proper functioning of democratic institutions.

² COM(2020) 641 final

Elections

Overall, the legal framework remains conducive to the organisation of democratic elections in North Macedonia. However, no progress was made over the reporting period to address and implement the outstanding recommendations by the OSCE's Office for Democratic Institutions and Human Rights (ODIHR) and the Venice Commission. As mentioned repeatedly in previous reports, electoral legislation should be comprehensively reviewed to address inconsistencies in a timely, inclusive and transparent manner.

In August 2022, **local elections** took place for the Tetovo municipal council and mayoral elections in Centar Zhupa and in Mavrovo-Rostushe. These were conducted in an orderly manner.

Concerning the legal framework, there was no progress in addressing or implementing any outstanding OSCE/ODIHR recommendations.

In April 2023, the Ministry of Justice set up a working group on electoral reform tasked with implementing outstanding OSCE/ODIHR recommendations and ideally drafting a new Electoral Code. The main opposition party decided not to take part in the working group officially. The working group has yet to produce any significant outcome. A comprehensive review of legislation on the electoral process is needed to address existing inconsistencies and further align the system with European and international standards. A broad consultative process should underpin this reform. The accuracy of the electoral register should be improved through systematic checks, reviews and data updates.

Ahead of the next elections, the State Election Commission needs to be allocated the necessary resources in good time, so that it can carry out its mandate efficiently and independently.

Parliament

Political polarisation in Parliament deepened further, delaying the adoption of many reform laws and important appointments. The EU accession negotiation process requires broad consensus of major political parties. All parties need to start engaging in a constructive and inclusive political debate, to strengthen the role of Parliament. Excessive and sometimes inappropriate use was made of fast-track procedures and of the 'EU flag' procedure, in some cases due to the lack of consultations and poor planning of the legislative calendar. The 'EU flag' should be used when directly linked to the adoption of laws whose main goal is aligning with the EU *acquis*, and not to short-cut public debate on important issues. Parliamentary oversight of the executive was regularly exercised through parliamentary questions to ministers. Parties should spare no efforts to implement long-overdue commitments to internal reform dating from the third round of the 'Jean Monnet Dialogue' in early 2020. Work continued on establishing criminal responsibility for those who orchestrated or took part in the violent attack on Parliament on 27 April 2017. Prompt implementation of recommendations by the Group of States against Corruption is required to increase the transparency of funding for political parties. Parliament should ensure the timely review of the statutory reports sent to it by state agencies and bodies.

After some Members of Parliament (MPs) were replaced, the number of women MPs increased from 50 to 51 out of 120, reaching the highest percentage ever (42.5%). The number of MPs from non-majority communities decreased (from 42 to 41 out of 120 (34%). The Alliance for Albanians joined the ruling coalition in March 2023, while Alternativa moved to the opposition. *See Governance.*

Political dialogue in Parliament suffered from the lack of cross-party consensus, though the opposition did support some economic, energy and social measures. Parliamentary parties need to collaborate on the EU accession negotiation process and accelerate implementation of EU-related reforms. The National Council for EU Integration does not meet frequently. It held only three sessions including a joint one with the Committee on EU Affairs. Decisive steps are needed to ensure that the Council fulfils its function as the principal vehicle for advancing EU integration in Parliament.

Persisting polarisation between the ruling parties and the opposition prevented Parliament from functioning properly. The main opposition party VMRO-DPMNE³ actively blocked parliamentary work, which was a significant obstacle to progress in Parliament's legislative agenda. Nevertheless, it did participate in some debates on important issues even though it abstained from the vote, for example on ratification of the Frontex Status Agreement. Following government coalition reshuffle, the composition of parliamentary bodies was changed to proportionally reflect the new coalition and to ensure it had a majority in key bodies. No consensus was reached on long-overdue important appointments. These concern two new judges for the Constitutional Court, five deputy ombudspersons, members of the programme council of the public service broadcaster and the Council of the Agency for Audio and Audiovisual Media Services, and a member of the Commission for Protection and Prevention against Discrimination. It is imperative that appointments to these positions are based on merit and not on political grounds.

The **law-making process** would benefit from more efficient planning and coordination between the ruling coalition and the opposition. From January 2022 to 15 June 2023, out of 165 laws adopted, 51 were adopted by regular procedure, 86 under shortened procedure and 28 concerned ratification. The opposition criticised the government for misusing the fast-track 'EU flag' procedure for aligning legislation with the EU *acquis*. The 'EU flag' procedure was used, among other things, to amend the Criminal Code by introducing lower penalties for crimes of corruption, and to amend laws on labour relations, expropriation, urban planning, construction and highways to be built (notably road corridor VIII and Xd), despite the fact that the amendments did not generally concern the alignment of existing legislation with the EU *acquis*. The use of 'EU flag' procedure must be consistent, and clearly linked to laws aiming primarily at aligning national law with the EU *acquis*. Comprehensive consultations should consistently take place, including with the European Commission. The number of laws adopted by shortened procedure increased from 38 % to 58% at the expense of meaningful debate and inclusive legislative process. The use of fast-track procedures should be limited. They should not be used to short-cut public consultation or resolve procedural difficulties in the legislature, or to compensate for poor planning at government level. *See 2.1.2. Public administration reform.*

Parliamentary **oversight** of the executive continued with regular sessions for parliamentary questions. The executive provided answers to 167 parliamentary written questions received in 2022 and the first quarter of 2023. Two interpellations were not considered during the reporting period – on the work of the Chairpersons of the Committee on Political System and Relations among Communities, and the Committee on Elections and Appointments. Discussions in plenary and relevant committees on the 2021 annual reports from regulatory, monitoring and supervisory bodies were completed only early 2023.

Implementation of the commitments made during the third round of the 'Jean Monnet Dialogue' in early 2020 remains outstanding. These include amending **rules of procedure**,

³ Internal Macedonian Revolutionary Organisation – Democratic Party for Macedonian National Unity.

for example on the constitutive session, greater governmental oversight, public hearings, the parliamentary calendar and procedures for ‘EU-flagged’ laws. The working group on the ‘Jean Monnet Dialogue’ convened in November and December 2022 and in June and September 2023, and agreed on several aspects of the review of legislative procedures. The rules of procedure should be adopted without further delay to improve the functioning of Parliament.

As regards the **protection of human rights** and fundamental freedoms, the permanent oversight committee remained inactive. The Women Members of Parliament Club organised the first ever plenary session on gender issues to mark its 20th anniversary. The inter-party parliamentary groups on youth; on lesbian, gay, bisexual, transgender, intersex and queer (LGBTIQ) persons; on persons with disabilities; on Roma⁴; and on environment successfully completed numerous activities, in close cooperation with relevant civil society organisations. Parliament and government committed to launch and achieve as a matter of priority relevant constitutional changes, with a view to including in the Constitution citizens who live within the borders of the state.

A working group tasked with preparing **constitutional amendments** was established in April 2023. It was composed of 23 representatives from different political parties, including four MPs and experts. Opposition parties, including VMRO-DPMNE and Levica, did not nominate representatives. The working group unanimously approved and submitted a draft initiative proposing amendments to the government in May 2023. On 18 July, the government adopted the initiative for constitutional changes, which was submitted to Parliament. The draft makes provision for the inclusion of six further communities in the preamble and in two articles of the Constitution, namely Bulgarian people, Croatian people, Montenegrin people, Slovenian people, Jewish people, and Egyptian people. On 18 August, a plenary session on the adoption of the initiative to amend the Constitution was held but was put on hold as the required two-third majority votes could not be ensured.

In May, the Supreme Court rejected a request for a retrial of those convicted for the storming of Parliament on 27 April 2017. It dismissed, as unfounded, the request for an extraordinary re-examination of the verdicts of both the Criminal Court and the Court of Appeals.

Action is needed to ensure the transparency of **funding for political parties**. Action should include addressing the recommendations made by the Group of States against Corruption (GRECO). (*See Chapter 23 – Judiciary and fundamental rights.*) Political parties should improve their internal democratic processes, including the transparency of elections to party bodies.

Governance

Since the first political intergovernmental conference opening EU accession negotiations with North Macedonia in July 2022, the institutions have mobilised significant resources to engage actively in the screening process, which is proceeding smoothly. The government also increased its efforts to communicate the practical benefits of EU accession for the citizens. The government needs to intensify its work to advance the EU reform agenda. Permanent and decisive steps are required to accelerate implementation of EU reforms and move forward in the EU accession negotiation process. Cross-party collaboration remains vital in this regard. The authorities should refrain from adopting *ad hoc* measures which are not in line with the

⁴ In line with the terminology of European institutions the umbrella term ‘Roma’ is used here to refer to a number of different groups, without denying the specificities of these groups.

EU *acquis* and European standards. Inter-ethnic relations remained stable, and the Ohrid Framework Agreement continued to be implemented.

In March 2023, 65 MPs out of 120 supported the formation of the new government coalition. The ruling coalition is now composed of SDSM⁵, DUI⁶ and the Alliance for Albanians and is supported by several smaller political parties. In the government, 25% of ministers, 31% of deputy ministers, and 29% of state secretaries are women. Women held 15% of the executive positions in different government bodies and agencies.

After the reshuffle, the key priorities of the government programme for 2022-2024 remained unchanged. These include sustainable economic growth, social inclusion and human capital development, rule of law and good governance, promotion of democracy and freedom as well as NATO and EU integration.

As part of the EU accession negotiation process, relevant national representatives, coordinated by the Chief Negotiator, actively participated in the screening meetings organised by the Commission starting in July 2022. Building on the experience of the screening process, North Macedonia needs to continue strengthening its **EU negotiating structures** and achieve sound coordination among line ministries and institutions, while further developing EU-*acquis*-related expertise across the public administration.

The **inter-ethnic situation** remained calm overall, with isolated cases of tension amid protests in the summer of 2022 against the proposals designed to remove the obstacles to the opening of EU accession negotiations. The Committee on Inter-Community Relations continued to foster the multi-ethnic and multi-cultural dimension of the society, notably by organising intercultural activities among students. The 2001 Ohrid Framework Agreement, which fosters the multi-ethnic character of the society, continued to be implemented.

There was limited progress as regards reform of **local self-government**, mostly related to fiscal decentralisation. However, the fiscal benefits deriving from last year's amendment to the Law on financing of local self-government units have not yet been felt by municipalities. The government should urgently improve the normative and financial framework in line with the 2021-2026 programme for sustainable local development and decentralisation. Municipalities have continued to experience severe financial difficulties as a result of inflation and increased energy costs. The government and the municipalities should consider setting up a permanent cooperation mechanism with the aim of reviving interinstitutional dialogue between different levels of government, particularly in relation to the EU accession negotiations process.

Civil society

Overall, civil society organisations (CSOs) in North Macedonia continue to operate in an enabling environment. However, the government should increase its efforts to mainstream civil society engagement in priority areas and consultation activities. CSOs should play an important role in the reform process and be involved in decision-making processes. Existing legal and financial frameworks still need to be amended and implemented in practice, notably to provide consistent mechanisms for awarding public funding to CSOs. There is a need for the Council for Cooperation between the Government and Civil Society to resume its activities.

⁵ *Social Democratic Union of Macedonia*

⁶ *Democratic Union for Integration*

Civil society is a key component of any democratic system and is recognised as such by the state institutions. CSOs continue to operate in an enabling environment. They play a vital role in promoting and advancing human rights, the rule of law and stability, by being steadfast in their roles as watchdogs and seeking to take part in decision-making processes. CSOs need to be consulted on draft legislation more systematically and meaningfully. The role of civil society in the EU accession negotiation process needs to be strengthened.

The Council for Cooperation between the Government and Civil Society is still the main structural channel for consulting and involving civil society in policy dialogue and decision-making. Budget allocations for the annual programme for cooperation with civil society were not reinstated in the supplement to the 2022 budget. This contradicts the policy aims of the strategy of cooperation with civil society 2022-2024. CSOs have boycotted the work of the Council since March 2022 as a result of the government decision to transfer funds for financing of CSOs from the General Secretariat to the Ministry of Political System and Relations among the Communities. There is a need to rebuild trust and cooperation. The role of the Council and of the relevant unit within the General Secretariat of the government needs to be enhanced.

Implementation of the strategy for cooperation with and development of civil society 2022-2024 is ongoing, although an effective monitoring framework is needed to check on its implementation. Local authorities need to be more proactive and to develop a consistent approach to involving CSOs in policymaking at local level.

Civilian oversight of the security/intelligence sector

The parliamentary committees that oversee the intelligence services held several meetings, but further efforts are needed to improve their efficiency.

The Special Department for investigation and prosecution of crimes committed by persons with police powers and members of the prison police is operational. However, the lack of sufficient staff hampers its efficiency.

The civil control mechanism is composed only of the representative of the Ombudsman's Office. Parliament has not selected the civil associations, which should be part of the mechanism.

The Council for Civilian Supervision, which is regulated by the Law on interception of communication, has not been set up in practice. In July 2023, Parliament adopted Amendments to the Law necessary for operationalising the Council for Civilian Supervision.

2.1.2. Public administration reform

North Macedonia is **moderately prepared** in the reform of its public administration. **Limited progress** was made in the reporting period with the adoption of the new public administration reform strategy and the accompanying action plan in July 2023. Despite having started the process 5 years ago, the country still has not adopted the revised legislative framework for human resources management, which includes the revised law on administrative servants and the law on public sector employees and new legal provisions on top level of management. The new framework should improve human resources management across the administration and help ensure merit-based recruitments, promotions and dismissals at all levels, including senior management. Legislation has not yet taken on board the State Commission for the Prevention of Corruption's recommendations on nepotism, cronyism and political influence in the recruitment of public sector employees and in the appointment of members of supervisory and management boards. Improvements in

accountability in the public administration are undermined by the failure to adopt the new law on state organisation. There are ongoing efforts to improve delivery of services to citizens and businesses.

As last year's recommendations were only partially addressed, they remain valid. In the coming period, the country should, in particular:

- adopt and start implementing the revised law on administrative servants, the revised law on public service employees and the legal provisions on top management service;
- adopt and start implementing the law on state organisation and other related laws in line with the recommendations on the new organisation of state administrative bodies;
- ensure full implementation of the law on general administrative procedures by completing the digitalisation of institutions' registers and data exchange, and simplifying electronic procedures.

Strategic framework for public administration reform

The new 2023-2030 **public administration strategy** and its accompanying action plan were adopted in July 2023. Several actions have been carried over from the previous strategy without any mitigation measures proposed despite past challenges with their implementation. Measures planned for the first year of the 2022-2025 **public financial management reform programme** fell behind schedule due to delays in the adoption of key legislation. The high-level Public Administration Reform Council met once during the reporting period. There is insufficient **political support**, leadership and supervision of reforms. The Ministry of Information Society and Administration does not have sufficient human resources to drive forward the reforms at technical level. National funding for the public administration reform strategy and the public financial management reform needs to be increased as key reform activities are still largely dependent on donor support.

Policy development and coordination

A legal framework and institutional structures for a coherent **policymaking system** are in place. However, further efforts are needed to clarify the responsibilities of policymaking institutions, ensure their proper functioning and streamline reporting lines. Medium-term budgetary planning and fiscal policies remain consistent with the government's strategic priorities. The central coordination and quality control role of the General Secretariat slightly improved, but remains insufficient. No regular update or reports on the implementation of the 2021-2025 national programme for the adoption of the *acquis* have been forthcoming.

Evidence-based policymaking and legislative development have been partially successful. However, certain pieces of adopted legislation, such as the Law on construction of corridors VIII and X-d, to be implemented by Bechtel Enka, conflict with parts of the legal framework and with international commitments. Many institutions have not yet digitalised their registers. The sharing of administrative data needs to be expanded and data need to be simplified in order to better inform policymaking and new legislation. Regulatory impact assessments continued to be carried out only as a formality, rather than as an assessment of the potential impact of new laws. Efforts to improve the use and quality of regulatory impact assessments continued, in particular for budgetary impact assessment. However, the Ministry of Information Society and Administration has insufficient resources to ensure effective and consistent quality control.

The national electronic consultation system is an inclusive one, enabling all stakeholders to participate in **public consultations**. However, it is not used to its full potential, in particular

by citizens and businesses. Quality control, feedback and follow-up to the public consultation process need to be improved. The share of laws adopted under shortened procedures went up to 58% 2022. These laws did not undergo a proper public consultation process and were not regularly accompanied by impact assessments. The quality of legislative drafting also needs to improve. Frequent legislative amendments create legal uncertainty and impede proper implementation. Abuse of the use of the ‘EU flag’ procedure continued. The ‘EU flag’ should only be used when directly linked to the adoption of laws whose main goal is aligning with the EU *acquis* (see 2.1.1 Democracy).

Public scrutiny of government work is supported by regular government press releases. However, the publication of the agendas and minutes of government sessions was occasionally delayed. Documents adopted at government sessions are not published consistently. Moreover, the government has failed to publish annual reports on its work for the years 2020, 2021 and 2022.

Public financial management

In June 2022, the government adopted a new **public financial management reform programme** for 2022-2025. The programme is made up of eight pillars. In April 2023, the government published the first annual monitoring report for 2022 and draft action plan for 2023. This report revealed poor implementation and results, suggesting that planning needs to be more realistic.

In September 2022, the Organic Budget Law (OBL) was adopted by the Parliament. The law provides a legal foundation for several key public financial management reforms, including strengthening medium-term budget preparation, reviewing budget classifications and putting in place an Integrated Financial Management Information System. The OBL also aims to make the fiscal strategy more comprehensive and to develop a broader system to monitor fiscal risks, including for state-owned enterprises and municipalities. The public financial management reform agenda has gained momentum after the adoption of the OBL but progress is still slow in several key reform areas.

The Ministry of Finance continued to improve the **transparency** of public finance management by publishing data on the revenue and expenditure of public institutions, local governments and state-owned companies every quarter. The human resources capacity of the Ministry of Finance remains limited.

The Ministry of Finance must invest further in increasing public participation at every phase of budget preparation, execution and reporting. Budgetary transparency and **public expenditure effectiveness** need to increase further through the efficient implementation of the OBL.

Public service and human resources management

No progress was made on the adoption of the long-awaited revised legislation on administrative servants and on public sector employees, or on the new legislation on top levels of management, aimed at ensuring **merit-based recruitment** and fair **promotions** and **dismissals**. The regular amendments to the laws on administrative servants and on public sector employees since their adoption in 2014 have led to an inconsistent application of recruitment and promotion procedures across the public sector. Contradictory rules in the law on internal affairs and other sectoral laws allow employees in these sectors to be excluded from the scope of the law on administrative servants. Moreover, the administration still uses procedures to convert temporary or service employment contracts into permanent ones.

The supreme audit institution found irregularities and the misuse of the IT system for testing candidates for positions in the public administration. The performance appraisal system, although established on paper, is still not systematically used. In addition, insufficient transparency on the grounds for dismissal of civil servants continues, and data on dismissals of non-managerial staff is lacking. Proper follow-up to the recommendations of the State Commission for Prevention of Corruption on improving public sector recruitment procedures should be ensured. The national authorities need to develop a retention policy for the public administration in order to avoid further losses of valuable expertise and a decline in administrative capacity. A large number of vacancies in senior ranks were not filled via competitive procedures (18 vacancies) but by appointing acting managers (40 appointments).

The Ministry of Information Society and Administration is responsible for coordinating and monitoring **human resources management** across the public administration. The number of institutions using the human resources management information system has increased. Reports from individual state audit institutions indicate that some public service employees still receive a salary despite not having a formal assignment and without having to show up for work. Initiatives have been launched to revise the **remuneration system** to ensure more consistent levels of pay and to promote mobility. Some institutions have developed legal solutions allowing a unilateral increase of salaries for some staff categories. The practice of paying salary supplements continued under the 2022 and 2023 budget execution laws. Nevertheless, the turnover rates of staff working on the management of EU funds puts in question the effectiveness of these measures.

On 31 December 2022, women represented 56.29% of all public service employees according to the register of public sector employees, not including staff of institutions such as the army and law enforcement agencies. Concerns remain over the percentages applied in the formula of 'BalancER' - a human resources tool that determines the proportion of public employees from each ethnic group. The revised formula includes the non-resident population and does not take into account the percentage of citizens that have not declared their ethnicity in the census. The transfer of employees from the Ministry of Political System and Relations between Communities to various institutions has not yet been completed. Furthermore, the ministry conducted a new recruitment procedure aiming to deploy the new recruits to various institutions.

On **professional development**, there is still no centralised database of all training provided by the various institutions and projects. **Integrity** guidelines were developed at both central and local level. Whistle-blower legislation is in place, but the protection of whistle-blowers needs to be improved. According to the annual report of the State Commission for Prevention of Corruption, the institutions reported 24 instances involving whistle-blowers in 2022 and sent 10 reports directly to the State Commission.

Accountability of the administration

The reorganisation of central government institutions, which aims to streamline the institutional framework, eliminate overlapping powers, improve the administration's efficiency and improve **lines of accountability**, was delayed due to the new law on state organisation not yet being adopted. This also held back the reorganisation of the three pilot ministerial systems. Delegating decision-making authority to middle management remains limited both at central and local level. Continued efforts are needed to efficiently mainstream managerial accountability across the entire public administration (*see chapter 32 - Financial control*).

Legislation on **scrutiny by independent oversight bodies**, in particular the State Audit Office and the Ombudsperson, is in place. There needs to be a more systematic follow-up to their findings and recommendations, both by the government in addressing shortcomings and preventing further irregularities (*see e.g. chapter 20 - Enterprise and Industrial Policy, chapter 25 - Science and Research and chapter 15 - Energy*), and by law enforcement agencies in prosecuting offences. **Citizens' right to access public information** is embedded in legislation. The proactive disclosure of information and datasets on official websites needs to be further encouraged, in particular at local level. The Agency for Protection of Free Access to Public Information processes lodged appeals promptly and proactively monitors information holders despite limited funding.

The legal framework for **citizens' rights to good administration** is in place, both as regards administrative justice and judicial review. In practice, however, administrative disputes continue to face unreasonable delays. Appeal procedures are complex and lengthy, consisting of several appeal layers. There are repetitions of procedures, as most decisions are based on procedural considerations and not on merit. Delays continue to occur in enforcing Administrative Court rulings by the respective institutions. The legislation lays down **citizens' rights to seek compensation** and the liability of public authorities in cases of wrongdoing.

Service delivery to citizens and businesses

On **user-oriented service delivery**, legislation and IT infrastructure allow most administrative services to be offered both online and offline – through the national e-portal for services, including facilities for people with special needs. The update of the portal with 135 new services should be completed. Currently, the number of digital services available to citizens is symbolic and mainly consists of services that are rarely requested with the most common services, such as issuing of personal documents, not yet available online. Even offline, these basic services have deteriorated with additional administrative requirements from citizens. The quality of data in the population register needs to improve as it is the country's principal register. The legislation on an interoperability framework is not updated in line with the latest EU standards, while the tool itself is not used to its full potential by the relevant institutions, which is an obstacle for progress on provision of digital services. North Macedonia should ensure alignment with both the European Interoperability Framework (latest revision in 2017) and the Interoperable Europe Act (2022).

No progress was made on **simplifying administrative procedures**. The law on general administrative procedures is still not systematically implemented across the administration.

2.2. RULE OF LAW AND FUNDAMENTAL RIGHTS

2.2.1. Chapter 23: Judiciary and fundamental rights

The EU's founding values include the rule of law and respect for human rights. An effective (independent, high-quality and efficient) judicial system and an effective fight against corruption are of paramount importance, as is the respect for fundamental rights in law and in practice.

North Macedonia has in between some and moderate level of preparation to apply the EU <i>acquis</i> and European standards in this area. Overall, there was no progress on strengthening judicial independence and improving the legal framework for fundamental rights protection.

Functioning of the judiciary

The judicial system of North Macedonia is in between **some and moderate level of preparation**. There was **no progress** in the field of the judiciary during the reporting period. The Judicial Council should strive to protect the integrity and independence of judges and institutions and should resist any external influence. The controversial dismissal of the President of the Judicial Council raised concerns about undue political influence. The adoption of a new judicial reform strategy is behind schedule. It should aim to improve the performance of institutions. Progress on implementation of the human resources strategies for the judiciary and prosecution services was limited. The lack of measures to address the impact of scheduled retirements affected efficiency. Most promotions for higher courts faced further delays. Work continued on upgrading the automated court case management information system (ACCMIS) for random distribution of cases in courts. A similar system was introduced in the Public Prosecutor's Office.

The Commission's recommendations from last year have not been implemented and remain valid. In the coming year, the country should in particular:

- complete the implementation of the judicial reform strategy and the updated action plan, with a specific focus on adopting a new Law on civil procedure, in line with European standards and prepare the new strategy on judicial reform (2023-2027) without delay;
- revise the legislative framework and overall functioning of the Judicial Council to enhance its transparency and independence and step up the implementation of the human resources strategies for the judiciary and the prosecution;
- ensure that ACCMIS is fully functional and compatible with level of complexity of court cases and the method for assessing judges and presidents of courts.

Strategic documents

According to the 2022 assessment report on implementation of the **judicial reform strategy** (2017-2022), out of 227 activities, 140 have been fully implemented, 18 are ongoing, 14 are delayed, 43 require continuous implementation, 6 concern legislative measures that are pending in Parliament, and 6 were abandoned due to a change in the approach. The process to adopt the new judicial reform strategy for 2023-2027, which started in September 2022, is delayed. Implementation of the Law on the Public Prosecutor's Office continued. Limited progress was made in implementing the strategies for human resources management in the courts and in the Public Prosecutor's Offices.

Management bodies

There are serious concerns about undue external influence over the work of the Judicial Council and judiciary. In November 2022, the President of the **Judicial Council** resigned to protest against alleged attempts to exert undue influence from within the judiciary and the business community. The new President, who took office in December 2022, was demoted in April 2023 through a controversial procedure, raising questions about respect for laws and procedures. Civil society organisations and legal scholars condemned this unprecedented step and called on all members of the Council to resign. The demoted President continued to serve as a member of the Council. In May, she filed a lawsuit with the Administrative Court challenging the legality of her demotion, and a criminal report with the Skopje Basic Public Prosecutor's Office against some of her Judicial Council peers for misuse of official duty and authorisation. Two members of the Judicial Council, judges elected by their peers, resigned in June 2023. One explained that she was resigning over the unlawful and non-transparent

demotion of the former President, and disagreement with some of the Council's stances. The other announced that he would contribute better if serving as a judge. In July, judges elected two new members, one of whom, a judge of the Supreme Court, resigned shortly afterwards citing personal reasons. Attempts by the new President to limit the presence of camera crews to Council sessions ceased after interventions of several CSOs and the Judicial Media Council. According to the Corruption Risk Assessment of the Judiciary, published in June 2023, 72% of the judges interviewed either fully disagree (27%) or partially disagree (45%) that the Judicial Council effectively safeguards judicial independence. Only 26% agree.

In March 2023, the Constitutional Court annulled two articles of the Law on the Judicial Council, thus allowing all Council members, and not only those elected by Parliament, to be elected as president or deputy. The new President and his Deputy, elected in May and June 2023, are both judges. In October 2022, the Judicial Council adopted a code of ethics for its members. In December, the Council amended its rules of procedure to better regulate procedures for determining the responsibility of a judge or a president of court. Transparency in the Council decision-making process should increase.

In February and April 2023, prosecutors elected two new members to the **Council of Public Prosecutors (CPP)**. Parliament, with a delay, elected two members of the CPP. In November 2022, over 160 public prosecutors throughout the country, directly elected the new Head of the Public Prosecutor's Office for Prosecuting Organised Crime and Corruption (OCCPPO), applying for the first time the 2020 Law on the Public Prosecutor's Office and amendments to the Law on the CPP. The election did not help to build public trust in the transparency of the process, given that no qualifying criteria were set at the outset and serious concerns about possible external influence in the process were raised. The CPP improved its transparency by making sessions available on social media platforms but stills needs to provide reasoning for its decisions. The media have regular access to the Council but limited physical space in Council sessions is a constraint. The budget allocation for the Council increased but it remains understaffed and lacks IT resources to perform its tasks effectively.

Independence and impartiality

Judicial independence is enshrined in the Constitution. Both the Judicial Council and the CPP need to act decisively to promote and safeguard the independence, integrity and professionalism of judges and prosecutors. Further efforts are needed to increase transparency and prevent any attempt to exert undue influence or intimidation. The implementation of the Declaration on Open Judiciary, signed in March 2022 by 12 different judicial institutions, CSOs and professional associations, led by the Supreme Court, continued and helped to improve transparency in the judiciary. The Judicial Media Council adopted a two-year work plan focusing on preparation of its communication strategy and conducted training on communication skills for 40 judges and courts' spokespersons. Political actors should refrain from publicly commenting on judicial proceedings. The Commission for the supervision of the functionality of the **automated court case management information system** carried out 9 out of 19 supervisions planned for 2022. A system for electronic distribution of cases in the Public Prosecutor's Office became operational in January 2023. Reliable statistical data are needed on the performance of the judiciary and the prosecution service, in line with the recommendations and methodology of the European Commission for the Efficiency of Justice (CEPEJ) (a Council of Europe body).

Accountability

The Association of Judges' Advisory Body for Judicial Ethics received no new requests for opinions.

In 2022, the Judicial Council received 72 requests to determine the responsibility of 144 judges or presidents of court. It dismissed 5 judges. The Judicial Council issued a written reprimand to 2 judges and fined a court president and a judge. The CPP dismissed 1 prosecutor and, at their own request, ended the tenure of 2 prosecutors against whom it had initiated disciplinary proceedings. 4 judges were dismissed for reasons relating to unprofessional performance, and 1 for a severe disciplinary offence. According to opinion polls, public trust in the judiciary dropped to the lowest level ever (around 8%).

In 2022, the State Commission for the Prevention of Corruption issued 11 misdemeanour payment orders against 6 judges, 3 court presidents and 2 prosecutors for failing to submit asset declarations or reports on the change of their property status and interests.

Professionalism and competence

The Judicial Council elected four court presidents, two Supreme Court judges, two Court of Appeal judges in Gostivar, 27 basic court judges and one court president. The Council assigned 17 judges to serve in different courts for a one-year period. Elections to the higher courts were further delayed by some attempts to interfere in the process of appointing judges and by the lack of an accredited company to perform psychological and integrity tests for candidate judges.

The CPP appointed two prosecutors in the State Public Prosecutor's Office (PPO), four in the higher PPOs, two heads of basic PPOs and two new prosecutors to the Public Prosecutor's Office for Prosecuting Organised Crime and Corruption (OCCPPO). In 2022, a total of 5 574 professionals participated in 227 in-service training sessions organised by the Academy for Judges and Prosecutors.

Quality of justice

The new Law on the **Academy for Judges and Prosecutors**, adopted in June 2023 maintained the Academy as the sole entry point to the judiciary and prosecution service, and heeded the European Commission's recommendation not to shorten initial training. In anticipation of the adoption of the Law, the Academy informed the candidates for the ninth intake that the entry qualification exam scheduled for 29 May to 4 June would be postponed, as the new Law sets a different order for entry tests.

The 57 graduates from the seventh intake were recruited in basic courts and PPOs. The Judicial Council published a vacancy in June 2023. The CPP elected 18 prosecutors and published a new vacancy. The Academy continued its active cooperation with the European Judicial Training Network and the Academy for European Law. The total budget for training initiatives in 2022 amounted to EUR 1.74 million, a 46.3% increase compared to the previous year. One interpreter was recruited.

The Supreme Court and the four Courts of Appeal contributed to the **consistency of judgments** and harmonised court practices. They focused on reviewing high-profile cases and cases of public interest. The Supreme Court, upon an initiative of its President, adopted a principled stance that all courts should publish their decisions, whether final or not, on their websites. The Court also adopted a principled stance on the direct application of the Constitution and the European Convention on Human Rights in appeals procedures against decisions of the Judicial Council on the dismissal of judges or court presidents. The Supreme Court adopted and published 17 additional principled legal opinions, stances and conclusions.

At the end of 2022, there were 409 judges, (22.3 per 100 000 inhabitants) 61.3% of whom were female and 157 prosecutors (8.5 per 100 000 inhabitants), 55% of whom were female. According to CEPEJ, the European averages are 22.2 judges and 18.8 prosecutors per

100 000 inhabitants. The 2022 budgetary allocation for the judicial system was about EUR 83.5 million. Scheduled retirements were one of the factors driving numbers down: 64 judges and 16 prosecutors retired (48 retired judges and 11 prosecutors in 2022). It remains crucial to speed up implementation of the human resources strategies for the courts and public prosecutors' offices and to plan ahead for staffing needs. The Council for Digitalisation in the Judiciary continued to implement the IT strategy. To recruit additional IT staff, the judiciary will have to offer working conditions comparable with those in the private sector.

There are 46 licensed mediators. In 2022, a mediation agreement was reached in 397 out of 918 cases, and 121 are ongoing. The relevant chambers, the Academy for Judges and Prosecutors and the Association of Judges, should continue to promote of mediation and other **alternative dispute resolution** methods. The body tasked with assessing and ensuring the quality of mediation is the National Council for Mediation, which is not yet functional.

Efficiency

Efficiency of the judiciary was affected by the Judicial Council's lateness in electing new judges, and by limited progress in the implementing a human resources strategy in the courts, which would include setting up a new network of courts.

The average **clearance rate** for the basic courts dropped from 100.8% to 97.8%. The number of unfinished cases under the old procedural laws increased. No efforts were made to address the Venice Commission recommendations to re-examine the provisions of the Law on the use of languages related to bilingualism in judicial proceedings. The Constitutional Court's decision to annul two articles of the Law on salaries and emoluments of elected and appointed persons resulted in an increase of salaries for judges and prosecutors. A systemic solution has yet to be found to the issue of salaries in the judiciary, considered inadequate. No steps were taken to reduce the overall cost and duration of the enforcement process (the bailiff's services).

Fight against corruption

The country is in between **some and moderate level of preparation** in the prevention and fight against corruption. **No progress** was made. Corruption remains prevalent in many areas and is an issue of concern. Delays and reversals in trials of high-level corruption cases increased, resulting some cases in the expiration of the statute of limitations. The Criminal Code was amended through an expedited parliamentary procedure. The maximum legal penalties for specific corruption-related criminal offences were reduced, having implications on the application of the statute of limitations and affecting, halting or even terminating, a large number of high-level corruption cases, including from the former Special Public Prosecutor's Office (SPO). The amendments also hamper the authorities' ability to investigate and prosecute such offences. This is a matter of serious concern.

The State Commission for the Prevention of Corruption was proactive in providing public institutions with policy guidance on preventing corruption. It opened several cases, but its recommendations need to be effectively followed up on. Efforts to improve the functioning of the State Commission for the Prevention of Corruption should continue, especially by allocating additional funding for the recruitment of specialist staff. Additional human resources and financial means should also be made available to the PPO, investigative centres and law enforcements units in charge of investigating corruption. The sectors most vulnerable to corruption require targeted risk assessments and dedicated actions.

Last year's recommendations have not been fully addressed and remain valid. In the coming year, the country should in particular:

- enhance implementation of the national strategy for the prevention of corruption and conflict of interests and properly implement GRECO's recommendations;
- allocate sufficient human and financial resources, including financial experts, to the Office of the Basic Public Prosecutor for Organised Crime and Corruption to ensure effective accountability in high-level corruption cases;
- improve its track record in high-level corruption cases – with timely, professional and transparent proactive investigations, prosecutions, final convictions and recovery, including confiscation of criminal assets, value-based confiscation, extended confiscation and third-party confiscation.

Track record

North Macedonia continues to investigate, prosecute and try corruption cases, including high-level corruption cases. There are concerns about patterns emerging from, but not limited to, several cases previously dealt with by **the former Special Prosecutor's Office** after first-instance verdicts have been delivered. These include an increasing number of delays and reversals, resulting in the expiration of the statute of limitations in some cases. The most frequent reasons for postponement include the absence of defendants or defence counsel, prosecutors, mainly due to health issues, and members of trial panels, when these are appointed to another court. Judges must proactively and efficiently manage their cases to ensure timely justice. Judicial accountability should be ensured in this respect.

The cases of the former Special Prosecutor's Office continued to be tried mostly by the Public Prosecutor's Office for Prosecuting Organised Crime and Corruption (OCCPPO). So far, there have been **final convictions** in 12 high-level corruption cases. **First-instance verdicts** were issued in 37 high-level corruption cases. In the 27 former SPO cases to be tried by the OCCPPO, there have been final convictions in six cases while trials are ongoing for most of the remaining ones. In 2022, the OCCPPO opened 39 cases of alleged corruption against 148 individuals and 6 legal entities. The September 2023 amendments to the Criminal Code are cause of serious concern because of their impact on former SPO cases, since a large part of the cases pertained to the offences whose provisions were altered. The reduced statutes of limitations affect, halt or even lead to the termination, of a large number of cases. Since the amendments took effect mid-September, some former SPO case have already been terminated, or had hearings postponed because the charges were no longer valid, or the statute of limitations had expired.

In 2022, 12 investigations were opened, charges were filed in four cases against 20 individuals. One is a high-profile case against a former Secretary General of the Government, for abuse of an official position.

In 2022, 16 first-instance judgments were handed down against 62 individuals. and 8 second-instance judgments were issued against 40 individuals.

In 2022, 35 criminal sentences were passed (compared with 23 in 2021). In these cases, six individuals (14 in 2021) were sentenced to prison, while 29 (nine in 2021) received suspended sentences.

The **State Commission for the Prevention of Corruption** continued to fulfil its role and opened several new cases. In 2022, the SCPC processed a total of 145 cases (106 in 2021) of alleged **conflict of interest**, of which 27 (17 in 2021) were initiated by the SCPC itself and

118 (89 in 2021) at the request of other parties. In 2022, 161 cases were closed (152 in 2021), of which 18 dated from 2019, 20 from 2020 and 53 from 2021. In 2022, a conflict of interest was established in six cases (two in 2021). Initiatives were submitted to the competent authority calling on it to determine responsibility, resulting in two disciplinary procedures. The SCPC issued opinions on 87 out of the 88 requests it received. In 2022, the SCPC found grounds for suspecting breaches of the Law on the prevention of corruption and conflict of interest, resulting in 37 misdemeanour payment orders (32 in 2021).

The SCPC also submitted three requests to the SCPC Misdemeanour Commission to initiate misdemeanour proceedings against public officials. As regards irregularities in **asset declarations**, in 2022, the SCPC issued 372 misdemeanour payment orders (86 in 2021), of which 367 related to fines for offences committed under Article 82 of the Civil Code, and 5 to failure to report an increase in property. In January 2023, the SCPC adopted an annual plan to monitor property ownership and other interests, involving 21 officials: 5 prosecutors, 5 judges, 6 MPs and 5 public office holders in the government.

In 2022, 583 cases of **corruption** were initiated (599 in 2021), 20 at the initiative of the SCPC (16 in 2021), and 563 based on reports submitted by third parties (583 in 2021). Of the cases initiated, 560 were addressed (404 in 2021). Of the cases submitted on the basis of reports, the SCPC found grounds for suspected breaches of the Criminal Code in 12 (11 in 2021) and submitted initiatives to the public prosecutor in all 12 cases. The SCPC launched initiatives asking the competent authorities to ascertain which officials were responsible for what breaches in 6 cases (5 in 2021). In addition, 12 recommendations and 2 indications were submitted to state institutions and authorities calling on them to take specific measures in response to the circumstances ascertained.

GRECO's Fourth Round Evaluation Report on the prevention of corruption in respect of Members of Parliament, judges and prosecutors contained 19 recommendations for North Macedonia. In its report on implementing these recommendations, GRECO concluded that nine of the 19 recommendations had been implemented (or dealt with) satisfactorily, 9 had been partly implemented and 1 had not been implemented. In March 2023, North Macedonia submitted a situational report to GRECO on the measures taken to implement the remaining recommendations.

The Parliamentary Committee on Issues of Rules of Procedure and Immunity adopted a training curriculum for a code of ethics workshop for Members of Parliament, as recommended by GRECO.

In June 2023, GRECO adopted the second compliance report on preventing corruption and promoting integrity (as part of the Fifth Evaluation Round), which concluded that 13 of the 23 recommendations had been implemented satisfactorily, 9 partially implemented and 1 not implemented.

Institutional framework

Preventive measures

The Law on the prevention of corruption and conflict of interest needs to be fully implemented. The SCPC continued to fulfil its role in providing policy advice to public institutions proactively.

The SCPC needs to further strengthen its capacity to instigate initiatives before the competent authorities at its own initiative, identifying possible wrongdoings not yet reported in the media. Too often, the conclusions of the SCPC reports are not followed up by the institutions concerned. The SCPC's ability to verify declarations of interest and asset

declarations is limited because the data is not systematically cross-checked with the data recorded in the cadastre (property register) or held by other relevant institutions. Cross-checks are only carried out on the asset declarations of around 20 officials a year, selected according to specific criteria.

By the end of 2022, the number of SCPC staff had increased from 34 in 2021 to 48 (compared with the 64 planned). The 2023 SCPC budget also increased by approximately 15% compared to the 2022 budget, mainly thanks to support from donors. Further action is needed to strengthen and support the SCPC, and to make sure it is adequately resourced. The SCPC would benefit from specialist staff with investigative experience, for more effective verification of asset declarations. Furthermore, the SCPC should be strengthened to allow for an exchange of information with neighbouring countries. New IT software solutions are in place to increase information-sharing with all public institutions for the prevention of corruption and to increase integrity in the public sector, provide protection for whistle-blowers and monitor implementation of the national strategy for the prevention of corruption. Software enabling communication between the IT systems of the cadastre, the Revenue Service, the Ministry of the Interior and the central register must be operational on time and must enable more effective checks of asset declarations. Efforts continue to improve the transparency and integrity of public institutions. The SCPC adopted an integrity policy with guidelines for state bodies and public sector institutions, and guidelines for local self-government. As of the end of 2022, a total of 85 institutions had signed an integrity policy and appointed contact persons on these issues (18 state bodies and public sector institutions and 67 local authorities).

Training on integrity was organised for ministries, state bodies and local authorities. A training centre was set up within the SCPC. The SCPC is also working on software solutions for trainings, and public awareness-raising campaigns were organised on integrity, on whistle-blower protection, and more generally on the fight against corruption.

In 2022, the Ministry of the Interior adopted its regular internal anti-corruption programme with an action plan and provided training on related topics for staff members.

Law enforcement

The main law enforcement institutions dealing with corruption are the Public Prosecutor's Office for Prosecuting Organised Crime and Corruption (OCCPPO) within the Public Prosecutor's Office and the Department for Serious and Organised Crime within the Ministry of the Interior. The OCCPPO inherited most of the former Special Prosecutor's Office high-profile cases. The OCCPPO has not yet moved to its new premises. Budget and staffing levels are still insufficient to effectively tackle cases of corruption and organised crime. Currently, the OCCPPO is working with 14 prosecutors. This is still not enough given the OCCPPO's wide range of responsibilities. There are 4 investigators, 9 associates and 16 support staff assisting the prosecutors but no financial experts or analysts. The Office still lacks strategic planning in handling investigations and cases, which affects its overall efficiency. The Office could be more efficient, if more specialisations were introduced and if resources were focused on the most complicated cases.

At the end of 2022, the OCCPPO signed cooperation agreements with the Central Registry and the Real Estate Cadastre Agency allowing it direct access to their databases. Similar agreements need to be concluded with the Association of Banks, the Ministry of the Interior and the Employment Agency. The OCCPPO should increase cooperation, information-sharing and follow-up to SCPC's initiatives and recommendations.

The State Audit Office, investigative centre/judicial police in the PPO and the police all lack sufficient resources to pursue high-profile cases. Limited and partially inadequate technical equipment and facilities remain a central problem. The quality and efficiency of investigations need to improve. Moreover, in many cases there is a need for investigations to be accompanied by parallel financial investigations into persons and companies suspected of involvement in wrongdoing. Limited use is made of freezing and confiscation mechanisms. To increase the number of financial investigations, the prosecution service should be allocated appropriate financial and human resources, the relevant institutions should coordinate with each other more and have better access to integrated databases.

The State Audit Office carries out *ex post* checks and publishes annual reports on its website. In November 2022, the State Audit Office sent the Public Prosecutor's Office two requests for them to take action in response to alleged irregularities which came to light during the audit of two participants in the election campaign. No requests for public prosecutorial action were submitted following the audit performed on political parties' financial statements and accounts. The State Audit Office produces quality audit reports, in which it identifies key findings and gives appropriate recommendations, which the authorities should follow up on systematically.

Legal framework

The country is party to all international anti-corruption conventions, including the United Nations Convention against Corruption.

The Law on the **financing of political parties** stipulates how funding can be provided to political parties and managed correctly. The Electoral Code sets out the rules on the financing of electoral campaigns. The Law on **free access to public information** allows applicants to obtain information on the public financing of political parties. The Law on **lobbying** entered into force in June 2022. The Law extends the role of the SCPC adding the responsibility to keep a register of lobbyists and lobbying organisations. No organisations have been registered to date. The Law on the protection of **whistle-blowers** still needs to be further aligned with the EU *acquis*.

In September 2023, Parliament adopted amendments to the Criminal Code through an expedited procedure, which prevented the comprehensive consultations with domestic stakeholders and the European Commission prior to their adoption. Whilst some changes on strengthening confiscation measures can be considered as limited improvements, these should be paired with strong legal and procedural safeguards, as well as functioning tracing, freezing, and management measures for an effective national asset recovery system. Other amendments, in relation to specific corruption-related criminal offences, are of concern since they reduce the maximum legal penalties, have implications on the statute of limitations, and delete a specific category of offences, notably abuse of office in public procurement. In addition, the amendments raise serious concerns as they also affect the applicable criminal procedures, limiting the scope of investigations, and thus hampering the authorities' ability to effectively prosecute high level corruption cases.

Strategic framework

Implementation of the national strategy for the prevention of corruption and conflict of interest (2021-2025) and the related action plan continues to proceed very slow, indicating an overall lack of commitment and sense of ownership from the institutions concerned. Only 10% of the activities planned for 2022 were implemented in full, 35% are ongoing, 55% have not been implemented. This is a significant decrease from the previous year when 20% of the

activities planned for 2021 were implemented in full, 27% were ongoing and 59% were not implemented. Parliament has yet to discuss the report on implementation of the strategy in 2021 and the SCPC report on the 2021 local elections.

Fundamental rights

The legal framework on the protection of fundamental rights is partially aligned with the EU *acquis* and European standards on fundamental rights. The country continues to meet its general obligations on fundamental rights, but legislation should be implemented in a systematic manner. Some significant amendments were made to the Criminal Code regulating criminal acts of gender-based violence. Parliament should make appointments to independent and regulatory bodies based on merit. The functional independence of human rights bodies must be guaranteed at all times. This means, amongst other things, allocating sufficient funds. Services for victims of gender-based violence still need improvement – and proper budgeting – to meet the standards laid down by the Istanbul Convention. Persons with disabilities continue to face direct and indirect discrimination, social exclusion and barriers. The Ombudsman's Office and the Commission for the Prevention and Protection against Discrimination signed a memorandum of understanding to formalise their coordination. The situation in prisons is still dire. The recommendations made by the European Committee for the Prevention of Torture on the treatment of detained and convicted persons were not addressed, which is a matter of serious concern. Detention conditions should be improved with the utmost urgency. Special attention should be given to promoting non-discrimination, increasing effectiveness in addressing hate crime and hate speech, strengthening the capacity and independence of institutions in charge of the protection of rights of persons belonging to minorities or communities. The Agency for Community Rights Realisation needs to receive sufficient funding to further promote the protection of minorities and the implementation of the national strategy 'One Society for All and Interculturalism'. The external oversight mechanism for the police, including the prison police, is still not fully functional, with the three CSOs representatives still to be selected by the Parliament. The enacted amendments to the Law on civil registry pave the way to resolving cases of statelessness and fulfilling the country's international obligations.

Last year's recommendations were addressed only partially and remain valid. In the coming year, the country should in particular:

- address the dire conditions in prisons and step up efforts to promote alternatives to incarceration and implement relevant recommendations on detention conditions, made by national and international institutions;
- allocate the necessary resources to the Commission for the Prevention and Protection against Discrimination enabling it to fulfil its mandate;
- ensure proper implementation of the Law on civil registry in order to end statelessness.

North Macedonia has ratified most **international human rights instruments**. On 20 March 2023, Parliament ratified Protocol No 16 to the European Convention for the Protection of Human Rights and Fundamental Freedoms allowing the highest courts to request the European Court of Human Rights (ECtHR) to give advisory opinions on questions of principle relating to the interpretation or application of the rights and freedoms established by the Convention.

In June 2023, there were 368 applications pending before the **ECtHR**, which delivered judgments on 8 applications and found breaches of the European Convention on Human Rights in 6 out of 7 cases (compared with 3 in 2022). Most of these related to the right to a

fair trial, the right to liberty and security and the protection of property. In the reporting period, there were 354 new applications allocated to a decision body. Currently, there are 8 cases under enhanced supervision by the Committee of Ministers.

In order for North Macedonia to fully benefit from its observer status in the European Union Agency for Fundamental Rights (FRA), it needs to develop a comprehensive monitoring and data collection system in order to assess the level of implementation of human rights legislation, policies, and strategies. The Ombudsman's Office remains the central body for the **promotion and enforcement of human rights**. Following a protracted delay in the appointment, by Parliament, of five Deputy Ombudspersons, the Ombudsman withdrew the names proposed and a new vacancy was published in May 2023. The Office strengthened its cooperation with CSOs, including those dealing with the protection of rights of the child. Its budget increased by 0.9% compared to 2022. There were no new recruitments. In 2022, the Office dealt with 3 482 complaints of which 3 209 had been received in 2022 and 273 had been rolled over from the previous year. Based on these, the Office initiated 2 173 procedures. Violations were confirmed in 683 cases (31.43% of all cases). Amongst the Office's other activities, it referred 120 cases to higher instances (17.57% of the total) and was still waiting for a response in 57 cases (8.35% of the total).

Regarding the **prevention of torture and ill treatment**, North Macedonia still needs to implement the recommendations published by the European Committee for the Prevention of Torture (CPT) in 2021 and those from previous reports.

The external oversight mechanism for the police, including the prison police, is still not fully functional, with the three CSO representatives provided by statute still to be selected by Parliament. In 2022, the Ombudsman's civil control mechanism acted on 11 complaints, up from 8 complaints in 2021. It submitted 3 requests to the PPO to initiate a procedure for determining criminal responsibility, compared to 1 similar request sent in 2021. In one case, brought before the Skopje Basic Criminal Court, a police officer was found guilty of harassment when on duty. In 2022, the relevant section in the PPO opened 163 new cases (criminal charges) against 299 individuals with police powers or members of the prison police suspected of having committed criminal offences. All reported cases must be investigated without delay and safeguards against ill treatment by the police must be implemented systematically. There needs to be more awareness raising about the external oversight mechanism for the police, and better training opportunities to promote a good understanding of the system.

In 2022, the Department for Internal Control, Criminal Investigations and Professional Standards at the Ministry of the Interior handled 52 complaints on the use of excessive physical force by police officers (63 complaints in 2021), of which 28 were found to be ungrounded and 20 lacked evidence. Four criminal charges were filed with the PPO against 6 police officers for ill treatment when on duty. In 2022, the prisons submitted 129 reports on the use of coercion against sentenced persons to the Directorate for the Execution of Sanctions.

North Macedonia should urgently tackle the persistent issue of inadequate detention conditions in prisons, police stations, social care and psychiatric facilities, in line with the recommendations in the last CPT report. ECtHR case law shows that poor detention conditions can be considered grounds for a violation of Article 3 on prohibition of torture. In 2022, the National Preventive Mechanism made 18 visits to police stations, prisons, educational correctional institutions, psychiatric hospitals and places where foreigners and asylum-seekers are accommodated or detained. Issues raised in the previous years remain pending, especially the lack of appropriate working conditions for police officers and the lack

of adequate healthcare in prisons. In addition, the National Preventive Mechanism reported a worrying deterioration in security conditions in the Idrizovo closed ward.

Although infrastructure was renovated and improved in a number of prison facilities, conditions in parts of Idrizovo prison and other detention facilities of the **prison system** remain inhumane. Reported overcrowding raises additional concerns for prison population (2 476 persons sentenced and detained according to data from April 2023). Renovating the most derelict building in line with the CPT recommendations is a priority.

The appointment of a new acting Head of the Directorate for the Execution of Sanctions and an acting Director of Idrizovo prison was a positive step, taking account of their relevant professional backgrounds. However, the requirements of the 2019 Law on executions of sanctions for the selection of prison management were not consistently applied.

Regular inspections of prisons should continue. Corruption in prisons continues to be a recurrent issue. In 2022, a plan for the prevention of corruption in the national prison system 2022-26 was adopted, together with the 2023 annual plan. Despite a positive effort to incentivise medical staff working in prisons with a hardship allowance, the lack of adequate healthcare or measures to treat drug addiction in prisons remains an issue of serious concern.

In order to be fully implemented, the 2021-2025 strategy for developing the prison system requires funds, additional staff and political commitment.

The probation system continues to develop, and the number of cases is increasing. In 2022, the total number of cases handled by the 11 probation offices increased to 475 (451 in 2021). Cooperation should continue between the public and private sector and civil society, and between agencies. Coordination has improved between probation officers, judges, public prosecutors, prison staff and other institutions before a convict is released and this should continue. The concentration of most of the probation cases in the Skopje Basic Criminal Court of, highlights the need for training and awareness raising on the benefits of probation in other courts in the country. No progress was made in adopting amendments to the legal framework regarding alternative sentences and alternative procedures to increase their use. No meaningful progress was made in addressing the overall lack of purposeful educational, recreational and vocational activities for sentenced and remand prisoners. Educational and resocialisation services, and treatment programmes should be run in all penitentiary facilities and educational correctional facilities.

Regarding the **protection of personal data**, full alignment with the General Data Protection Regulation is needed. Areas requiring alignment are: the transfer of personal data; the independence of the Personal Data Protection Agency (PDPA); obsolete parts of old national laws that need to be repealed. The PDPA submitted amendments to the Law on personal data protection (LPDP). The country needs to adopt national legislation in line with the EU Law Enforcement Directive.

Many sector laws that contain provisions on the processing of personal data have yet to be harmonised with the LPDP. Additionally, the PDPA is not always consulted on sectoral laws or implementing legislation and its advice is not always taken on board.

In general, data controllers do not implement the LPDP. In 2022, the Agency received 19 notifications on breaches of personal data rules, compared with 1 notification in 2021.

The Agency's capacity does not match its tasks and powers. The Agency presently works with only 21 staff among which there are only 5 supervisors and 1 IT specialist. The Agency is not fully autonomous financially. State funds allocated to the Agency are just sufficient to cover basic functions without any room for investment in staff professional development or

replacement of outdated vehicles and IT equipment.

In 2022, the Agency carried out 170 supervisions (compared to 304 in 2021), received 300 complaints (540 in 2021), and issued reprimands in 10 cases (17 in 2021). The Agency issued 15 opinions on draft laws and implementing legislation. The Agency delivered 13 training sessions and held 19 coordination meetings with personal data protection officers, in line with good practice. Recent changes in the Law on financial companies led to an increase in the number of complaints. Due to an inconsistency in the Law, there have been complaints by citizens about the misuse of personal data when obtaining ‘fast loans’. The Agency started to issue misdemeanour charges against some of the relevant companies. The Agency’s annual report in Parliament revealed that genuine consideration and follow-up of recommendations was lacking.

Thematic supervision on the interception of communications involved the relevant institutions. Improvements are needed in the field of data protection in the electoral sector.

In the absence of accurate data on the number of cybercrime attacks involving personal data violations and the number of indictments and final judgments regarding these cases, there is a public perception that institutions have weak capacity or commitment to prosecute these cases. There is a strong need for further awareness raising and to foster a culture of personal data protection in all sectors.

Freedom of thought, conscience and religion is guaranteed by the Constitution and is implemented in practice. The law prohibits discrimination on grounds of religion. The Commission for Relations with Religious Communities and Groups is the main government body responsible for cooperation between the government and registered religious communities and is encouraged to continue to foster inter-religious dialogue and cooperation between the religious communities. The government is delaying accreditation of religious secondary schools in the country, which prevents students with diplomas from these schools from accessing higher education.

Freedom of expression

North Macedonia is in between **some and moderate level of preparation** on freedom of expression. Overall, it made **limited progress**. The general context is favourable to media freedom and allows for critical media reporting. The amended Criminal Code and Law on civil liability for defamation raised the overall level legal protection for journalists. However, a number of attacks, threats and some intimidating behaviour towards journalists were noted. Greater transparency is needed regarding media advertising by state institutions and political parties. Reform of the public service broadcaster is required to strengthen its independence, professional standards and financial sustainability. Since December 2018, Parliament has been delaying the appointment of the public service broadcaster’s programming council and media regulator’s council. Working conditions for journalists remain challenging.

The Commission’s recommendations from last year remain valid. In the coming year, North Macedonia should:

- revise the legal framework governing the media to bring it into line with the EU *acquis* and European standards, in particular on competition and state aid rules, intellectual property rights, part of the EU Single Market;

- step up implementation of the strategy to reform the public broadcaster and finalise appointments for the public service broadcaster's programme council and the media regulator's council;
- continue to promptly address all threats and acts of violence against journalists and ensure perpetrators are brought to justice.

The overall environment enables freedom of expression and critical reporting. The legal framework was strengthened: the amended Criminal Code and the Law on civil liability for defamation, adopted in November 2022, have increased legal protection for journalists. Systemic challenges remain to be addressed: deep media polarisation, physical and verbal violence against journalists, working conditions for media workers, especially their labour and social rights. The laws encompassing the functioning of the media need to be implemented. Digital technologies and disruptions on the media market point to the need for a general strategy on reform of media in cooperation with all stakeholders.

Intimidation of journalists

In 2022, the Ministry of the Interior recorded 17 cases of attacks against journalists and opened investigations. The Association of Journalists recorded 14 incidents involving journalists, of which 4 involved physical attacks or illegal detention, and 11 involved verbal attacks, threats and other forms of intimidation. The Agency for Audio and Audiovisual Media Services and the media associations regularly condemned such incidents. In February 2023, Parliament adopted amendments to the Criminal Code increasing protection for journalists while performing their professional duties. The Public Prosecution Office in Skopje appointed of a prosecutor to monitor the proceedings in response to attacks on journalists. This is a positive development. The public prosecutor appointed has the authority to monitor proceedings in which journalists appear as injured parties, witnesses or reported persons while performing their work. The Ministry of the Interior appointed a contact person at the Department of Cybercrime and Digital Forensics making it easier for journalists to report incidents involving cyberbullying and other online threats to their safety. The authorities need to ensure impartial, speedy and effective investigations in bringing perpetrators to justice. Politicians and public officials on different occasions used unacceptable language against journalists. Online harassment and verbal attacks continued, especially on social media, with an increase in cases against female journalists. Old cases of physical attacks against journalists remain unresolved.

Legislative environment

The Law on audio and audiovisual media services is broadly in line with the EU *acquis*, following the legislative changes of July 2023. Furthermore, the legal framework encompassing the functioning of the media needs to further improve, in line with EU *acquis* and international standards. The OSCE ODIHR recommendations on the electoral legal framework have still to be addressed. The concerns raised by media associations about state-funded political advertising in the media need to be addressed in line with the EU *acquis* and European best practices.

In November 2022, a group of parliamentarians proposed amendments to the Law on audio and audio-visual media services that impose, on the government and local authorities, duties to organise and fund public interest campaigns. However, the media regulator and some associations of journalists criticised the proposals, stressing that they could undermine the independence of the media and disrupt the media market. More sustainable solutions are needed to support media viability.

In 2022, the government continued to reduce funding for the broadcasting sector. Parliament, once more, failed to appoint new members to the Public Service Broadcaster's Programme Council and Media Regulator's Council. The terms of office of the current members of both councils was extended until Parliament elects new members.

Implementation of legislation/institutions

In 2022, the media regulator continued its supervisory role over various forms of media and over illicit media concentration and ownership. The regulator continued to work with CSOs and media outlets to promote media literacy and human rights topics such as gender equality and respect for the rights of persons with disabilities by broadcasters.

The financial stability and independence of the media regulator need to be strengthened. This is even more important since it received additional responsibilities following the alignment of the national legislation with the EU Audiovisual Media Services Directive.

In 2022, the Council of Media Ethics received 78 complaints about breaches of ethical standards. The most frequent complaint, accounting for 49.37% of cases, was about violations of the legal provision that '*the journalist should publish accurate and verified information*'. Though hate speech is prohibited online and offline, it persists online. In 2022, the association of journalists expressed particular concern about hate speech and insults directed at journalists and media workers by politicians and other public office holders. The number of defamation and insult lawsuits involving journalists was more than double the number for last year: 54 cases in 2022 against 20 in 2021.

Public service broadcaster

Reform of the public service broadcaster was further delayed. Despite the 2021 Law on audio and audiovisual media services, in 2022, the authorities once again used discretionary powers granted by law to cut funding to the broadcasting sector. Budgetary fluctuations create uncertainty in planning. The authorities need to provide sufficient and stable funding for the public broadcaster. No solution was found to settle the public service broadcaster's old debts towards state institutions. Further efforts are needed to ensure the independence and sustainability of the public broadcaster, both financially and legally.

Economic factors

The COVID-19 pandemic, Russia's war of aggression against Ukraine and the global economic and energy crises created additional pressures on the media industry. The authorities supported media outlets through a range of economic measures, including a reduction in the broadcasting licence fee for radio and television for 2023. Media associations continued to raise concerns about media integrity and editorial independence, and indicated the need for an assessment of the impact of ownership concentration on media pluralism and editorial independence. They also pointed to the risk of individuals or a group of media owners having excessive influence on media outlets. Further support is needed for the development of professional and investigative journalism. Media independence should be further safeguarded.

In November 2022, a group of MPs submitted amendments to the Law on audio and audiovisual media services to lift the ban on government advertising on commercial channels. Some media associations oppose this, fearing it could undermine the independence of the media and disrupt the media market. Media associations continued to express concern over legal provisions enabling political parties to use state funding to advertise in the media and over the lack of transparency of party-political advertising generally and on online media

platforms in particular. In 2022, there were five daily newspapers, including two in Albanian. The authorities continued to support the print media with just over EUR 300 000 in funding.

As required by law, the media regulator publishes a register of broadcasting and print media, including information on the number of employees and type of employment. The number of online media outlets is estimated at between 150 and 200.

Internet

Online media are not governed by any specific law. There is a shift in the advertising market towards digital, with growing threats from disinformation, breaches of intellectual rights, and a lack of transparency concerning paid political advertising. Certain online media outlets are subject to influence from political figures. Political parties are not obliged to disclose their spending on social media campaigns. There is inadequate oversight regarding the utilisation of personal data for election campaign purposes.

The public's understanding of the risks of disinformation needs to be improved as do and media literacy skills throughout society. Current counter-disinformation measures are not very effective.

Stronger self-regulation is needed for online media, in particular through promotion of the registry of online media (promedia.mk) and the development of professional standards for online journalism. With regard to access to information, the Agency for the Protection of Free Access to Public Information received 343 complaints, of which 195 were predominantly from CSOs, while 148 complaints were filed by individuals.

Freedom of artistic expression

Freedom of artistic expression is broadly guaranteed.

Professional organisations and working conditions

In 2022, the Independent Trade Union of Journalists and Media Workers registered various breaches of labour rights, notably the high number of short-term or part-time contracts with no health and social insurance, no right to annual leave, unpaid overtime and compulsory night shifts. Dialogue with the government needs to be improved. Advocacy aimed at improving working conditions in the media is hindered by economic challenges in the sector and opposition to the unionising of journalists. Further efforts are needed to protect journalists' professional and labour rights, freedoms and security, in particular by strengthening the legal framework for the work of unions. Many journalists have no choice but to accept precarious contractual arrangements. This, together with difficult socio-economic conditions in the sector, contribute to a culture of self-censorship and create opportunities for media owners to influence editorial policy.

The Agency for Audio and Audio-visual Media Services launched a new specialised website on gender equality and media, aiming to serve as a resource centre for journalists. Analysis showed that there are too few women executives in the private media. Additional measures to promote gender equality in the media industry are needed.

(See also Chapter 10 – Digital transformation and media)

The right to **freedom of assembly and association** is guaranteed by the Constitution and the government ensures that the legislation is thoroughly implemented. The country's legal framework is largely aligned with its international obligations in terms of freedom of

association. Further efforts are needed to implement rulings of the ECtHR relating to the registration of associations.

Following the amendments to the current Law on associations and foundations, introduced in November 2022, the Central Registry rejected the use of the names ‘Ivan Mihailov’ and ‘Tsar Boris III’, thus removing the two Bulgarian cultural associations in Bitola and Ohrid from the list of associations and foundations that are allowed to legally operate in the country. This followed an assessment by the Commission for the Uses of Names, which established that the naming of the two cultural clubs after controversial historical figures had triggered a reaction in society. The drafting of new legislation on associations and foundations should be subject to a broad consultation process with civil society and concerned stakeholders. The law should aim to apply the highest international standards and guidance in this area, including by consulting the Venice Commission prior to the adoption of the law, in line with the recommendation of the European Commission against Racism and Intolerance (ECRI).

Issues of **labour and trade union rights** are covered in *Chapter 19 – Social policy and employment*.

No significant progress was made with regard to **property rights**. Procedures remain lengthy and expensive, due to the lack of an efficient central institution and the lack of coordination between institutions dealing with these rights. There was no progress with the national strategy on property rights. At municipal level, property registers are not regularly updated and are still kept in analogue format. The Cadastre Office maintained a satisfactory rate of over 90% of cases resolved. The registration of land and properties has been completed, and laser-scanning has covered the whole country. The administrations that handle restitution, compensation and legalisation processes still struggle to manage their caseload, mainly due to understaffing and lack of funds. Over 6 000 denationalisation cases are still open and form the bulk of complaints addressed to the Ombudsman’s Office, even though this process was officially declared closed in 2013.

Non-discrimination principles are enshrined in the Constitution and national legislation. The authorities should align the national legal framework with anti-discrimination provisions, based on the Law on promotion and protection against discrimination. On the back of the 2021-2026 strategy for equality and non-discrimination, the authorities adopted an action plan for implementation of the strategy, accompanied by a financial forecast. The Commission for the Prevention and Protection against Discrimination continued to be proactive, despite existing logistical and financial challenges. The Commission’s annual budget was slightly higher than the previous year, but this is considered insufficient to enable the Commission to perform its functions. Among the issues hindering the Commission’s work are: two unfilled commissioner posts (out of seven in total), a lack of financial independence, low numbers of administrative staff and some limitations in the current anti-discrimination Law. Parliament once more failed to agree on the appointment of commissioners, which affects the enforcement of the Law on the prevention of and protection against discrimination. The lack of diversity in the Commission, notably as regards gender and persons with disabilities, continues to attract criticism from certain commissioners and civil society. Despite existing challenges, in 2022, the Commission worked on 248 complaints and 7 *ex officio* procedures and issued two recommendations. It confirmed discrimination in 30% of cases, particularly in public information and media and labour relations. Based on its wide-ranging powers, the Commission submitted 14 requests for misdemeanour procedures. In response to a request made by the Commission, a court passed judgment confirming the discrimination findings.

The legal framework on combating hate speech needs further improvements, in line with the European Commission against Racism and Intolerance (ECRI) General's Policy Recommendation No 15 on combating hate speech. Furthermore, the country should fully address ECRI's findings and recommendations in its sixth report of September 2023.

The availability of official data on hate crime remains sporadic, despite efforts by the authorities to develop a recording and data collection framework. A civil society database continues to register hate crime cases successfully. Among law enforcement and criminal justice officials, a greater capacity to prevent and prosecute all instances of violence, hate crimes and hate speech is needed. Strengthening of the capacities and understanding of law enforcement officials and legal experts is needed, as part of a wider effort to foster a more tolerant and non-discriminatory culture in society.

In October 2022, 49 members of the National Coordination Body for Equality and Non-discrimination were appointed. The Ombudsman's Office worked *ex officio* on three cases and received 76 complaints on grounds of discrimination (43 in 2021), predominantly concerning work and labour relations, and it issued 16 opinions. The Ombudsman's Department for Anti-Discrimination Protection remains understaffed.

In 2022, the Ministry of the Interior opened investigations into 11 online crimes. CSOs report that hate speech is on the rise in the country. There should be a systematic practice of collecting data and addressing hate speech and hate crime.

Some progress was made on promoting **gender equality** through further alignment with the Istanbul Convention on Preventing and Combating Violence against Women and Domestic Violence and developing a policy framework for integrating gender perspectives and aligning with the EU gender equality *acquis*. A national strategy for gender equality was adopted in July 2022, together with an action plan for 2023-2024. In February 2023, amendments were made to the Criminal Code, regulating criminal acts of gender-based violence, including stalking and hate crimes based on gender identity and gender differences. The Ministry of Defence continues to implement the operational plan for implementing the Second National Action Plan on the UN Security Council Resolution 1325 *Women, Peace and Security* (2020 - 2025). However, there is no progress in implementing the objective on communication and capacity building for the implementation of Resolution 1325 at local level, including the local self-government units and the Association of the units of local self-government. The cross-institutional mechanisms for implementing and monitoring gender equality policy need to be strengthened with an improved structure, technical capacity, adequate funding and trained professionals in line with international standards. The Law on Gender Equality has not been adopted yet. This is largely due to a growing anti-gender movement countrywide. Anti-gender campaigns, at times supported by local government officials, religious and political leaders, raise serious concern.

Implementation of the Istanbul Convention remains a challenge. While the Law on the prevention of and protection from violence against women and domestic violence was adopted in 2021, the implementing legislation was not adopted. Implementation also suffers from the lack of adequate funding (including for the National Coordinative Body on Domestic Violence), effective operating procedures and programmes for the reintegration of victims of violence.

Operational cross-institutional protocols are missing, and the police and health workers still struggle to assess the consequences of violence and respond to them. Victims of gender-based and domestic violence faced several challenges in accessing health services due to a lack of adequately trained staff and limited accommodation facilities. CSOs providing services for

victims outside the capital are still entirely dependent on donor funding.

Persistent gender gaps exist also in employment and in labour force participation. Among the working age population, 46% of women have consistently been out of the labour force compared to 23.3% of men. The gaps are even wider for marginalised women. Roma women aged between 40 and 44, in particular, have the highest unemployment rate. Women registered as individual farmers are excluded from the Law on health insurance when it comes to compensation due to illness, workplace injury and absence due to pregnancy, birth and motherhood.

In addition, 50.5% of women are out of the labour force because of their caring responsibilities towards other people, compared to 1.7% of men. This shows that unpaid care work directly contributes to inequalities in women's participation in the labour force and women's exclusion more generally. The adoption of a draft Law on labour relations, which includes shared parental leave, and a Law on harassment at the workplace has been pending for a number of years now.

The lack of reliable sex disaggregated data across sectors is a significant obstacle to developing evidence-based policies and proper measures. The first national gender equality index, published in 2019, has not yet been updated. The relevant institutions lack the capacity and coordination needed for proper gathering and analysis of gender statistics.

Various legislative, institutional and policy measures protect the **rights of the child** in line with international standards and EU *acquis*. However, a better legislative framework, more funding and more human resources are needed across most sectors. Further reforms and better interinstitutional cooperation are needed to ensure respect for children's rights to education, health, protection from violence, non-discrimination, etc.

The preparation of a national action plan for children was further delayed. North Macedonia still has no national body responsible for coordinating all policies relating to implementation of the UN Convention on Child Rights and the Optional Protocols. Family law provisions on adoption and marriage under the age of 18 fall short of international standards. This has to be addressed as a matter of urgency. The third optional protocol on communications procedure is still not ratified. In 2022, 252 complaints were filed with the Ombudsman related to breaches of children's rights, 12 of which concern children with disabilities. The Ombudsman issued 103 opinions, which were accepted in 87 cases. Awareness raising is needed on the possibility for children to file complaints themselves. Further action is needed to strengthen the capacity, in particular, the human and financial resources, of the Ombudsman's Department for the Rights of the Child and Persons with Disabilities. The Ombudsman also needs to be more independent and to have a stronger remit.

Children need to be more involved in the making of policies related to or affecting children's rights. The best interests of the child should be the primary consideration when institutions devise policies relevant to children and this principle should be incorporated into all relevant laws and policy documents. Mechanisms for protecting children from violence need more support, in the form of sufficient funding and implementation of the national strategy to end violence against children (2020-2025). To ensure a cultural shift and dismantle the social acceptance of violence against children, appropriate educational support for parents is needed, aimed at strengthening positive, non-violent parenting skills. Measures are needed to strengthen the child protection system and improve the collection of data on violence and abuse, both online and offline. There is currently no provision for specialised therapy and child-friendly rehabilitation for children who are victims of violence. Reliable and

comparable data disaggregated by age and sex is essential for the implementation and monitoring of the National Strategy on addressing violence against children.

There is lack of up-to-date information on measures undertaken to combat child poverty and to assess the impact of the existing legal protection. Despite social protection measures aimed at combating the socioeconomic consequences of COVID-19, further efforts to prevent and mitigate the effects of child poverty are needed. Authorities need to commit to making changes to the social protection system to be more child-sensitive and based on a child-centred service delivery model. Cooperation at local level needs to improve among stakeholders, to involve child rights CSOs and children themselves in decisions that affect them. The capacity of social work centres needs to be expanded, so that they can develop and support new community services around the country, including services to support children at risk, Roma children and children with disabilities who are victims of discrimination and segregation.

North Macedonia continued its efforts to include children with disabilities in regular schools and pre-schools. However, there are insufficient financial and human resources to implement the Law on primary education and the social model of disability assessment based on human rights. Despite improvements in the legal framework, some issues remain, relating to the collection of centrally disaggregated data on children with disabilities, the lack of suitable facilities, the lack of community services, and prejudice. This leads to marginalisation and discrimination against children with disabilities in terms of access to education, health and social protection services. With regard to children without parental care, community-based services and sub-regional centres for foster family assistance were made available throughout the country and no children are in institutionalised care. However, the authorities should continue to reform the child protection system in ways that would prioritise family placement for children over small group homes.

The authorities identified 7 child victims of trafficking in human beings in 2022. More measures are needed to ensure effective support for vulnerable children, including protection from sexual exploitation. The authorities need to set up training programmes on children's rights for all professionals. Continuing professional development training should be provided to judges and public prosecutors on issues such as discrimination based on disability, gender-based violence against women, and violence against children. The National Action Plan and Strategy for the fight against trafficking in children (2021–2025) should be aligned with the Lanzarote Convention.

The new Law on justice for children was adopted, in line with international standards and the EU *acquis*, including the Directive on procedural safeguards for children who are suspects or accused persons in criminal proceedings.

The administration of child justice was enhanced by the adoption of a 2022-2026 strategy on justice for children and a 2022-2023 action plan, further promoting alternative measures to custody and children's resocialisation. There is a need for concrete measures supporting the judicial training providers and all relevant professionals' bodies to address the rights of the child and child friendly and accessible justice in their activities. Legislation needs to be amended to find child-friendly solutions for educational correctional measures for girls. The educational correctional facility in Volkovija hosts only young males; in the absence of a female section, there is no long-term provision for statutory education for girls. There is a need for regular monitoring and inspection of the educational correctional facility in Tetovo and Ohrid prison, to ensure that the authorities provide proper protection and other services for the children detained there. Access to justice and legal representation is still inadequate, as is the capacity of public officials involved with child victims, child witnesses and children

in conflict with the law. Juvenile justice professionals need to take a more consistently inter-sectoral and streamlined approach to implementing the legal framework.

The rights of **persons with disabilities** are constitutionally guaranteed and set out in greater detail in the Law on prevention and protection from discrimination. A number of other laws specifically regulating social policy and assistance are also relevant in this context. The new 2023-2030 national strategy for the rights of persons with disabilities was adopted, along with the 2023-2025 action document. Rules were adopted for the functional assessment of children with disabilities according to the international classification of functioning, disability and health. The rules are in line with the Convention on the Rights of Persons with Disabilities (CPRD) and will enable assistance to be given based on children's individual needs. Implementation of the 2018-2027 national deinstitutionalisation strategy continues. This involves a transition from institutional care to family and community-based care with support from social services. The national coordination body for the implementation of the CPRD consists of representatives from the relevant ministries and two representatives of CSOs for persons with disabilities. A team for monitoring implementation has been incorporated into the Ombudsman's Office. The new Law on primary education promotes the full inclusion of students with disabilities by transforming special schools and classes into learning support centres. There are no more children with disabilities in large-scale social care institutions. To support the mainstreaming of education for children with disabilities, 725 education assistants are now employed, covering 850 children. A number of adults with disabilities are being gradually rehoused in 57 newly established residential units for supported living. Home care and day-care services have also been set up. (*see Chapter 19 – Social policy and employment for aspects related to social services, assistance and benefits*).

Negative stereotypes and hate speech against **lesbian, gay, bisexual, transgender, intersex and queer (LGBTIQ)** persons prevail in society. There was no progress in removing negative stereotypes and hate speech toward LGBTIQ persons from textbooks, nor in adopting a national action plan for LGBTIQ as part of systematic promotion of equality and prevention of discrimination. There was no progress in implementing the ECtHR judgment (January 2019) concerning legal gender recognition by amending the Law on the civil registry. The legal framework does not allow for the official recognition of same-sex couples.

No progress was made in investigating the attacks on the LGBTIQ support centre which took place in 2012, 2013 and 2014. Law enforcement agencies did not pursue the investigation into the acts of vandalism on the office of an LGBTIQ organisation in Tetovo or into death threats against activists. The court in Strumica handed down a six-month prison sentence for an attack against an LGBTI activist. In June 2023, the authorities facilitated the successful organisation of a LGBTIQ pride parade. However, CSOs and LGBTIQ activists criticise the authorities for shrinking the space for CSOs, especially those working on sexual and reproductive rights. Growing anti-LGBTIQ rhetoric, at times involving political and religious figures, has led to increased intolerance and hate-speech within society. Serious efforts are needed to enable LGBTIQ persons to enjoy their rights.

Concerning **procedural rights**, the country remains partially aligned with the EU *acquis*. The Law on compensation for victims of violent crime was adopted by Parliament and entered into force in May 2023.

The country has a solid network providing primary and secondary free legal aid to those who cannot afford to hire an attorney. Free legal aid is accessible through the 34 regional branch offices of the Ministry of Justice, civic associations authorised to give legal aid, legal clinics within the faculties of law and lawyers certified to give secondary legal aid. A register of associations and individual lawyers who provide legal aid is available on the website of the

Ministry of Justice. Increasing numbers of requests were submitted and approved for primary and secondary legal aid. The system of legal aid in criminal proceedings needs to be reformed to improve access to justice. Most of all, the authorities need to revise the eligibility criteria for legal aid in criminal proceedings (for mandatory defence, defence of indigent persons and representation of the interests of victims of crime). The budget allocated for legal aid in 2022 amounted to EUR 616 304, while the budget implemented amounted to EUR 521 612 (a 0.7% increase compared with 2021).

The country is not yet aligned with the European Protection Order Directive. Further amendments are needed to the Law on criminal procedure to ensure alignment with the Victims' Rights Directive (for instance, regarding the individual assessment of victims). The Law on the payment of monetary compensation to victims of violent crimes entered into force in May 2023. This includes victims of trafficking in human beings. The authorities should also take concrete steps to adopt legislation in line with the Directive on procedural safeguards for children who are suspects or accused persons in criminal proceedings.

As regards the **protection of minorities**, the authorities continued to partially implement the national strategy to promote a multi-ethnic society, 'One Society for All and Interculturalism'. However, further efforts are still needed to ensure sufficient political support, coordination between relevant authorities, adequate funding and other resources, in order to promote equal opportunities and to improve social cohesion in the country. The Language Implementation Agency and the Agency for Community Rights Realisation remain under-staffed and under-funded. There is a need for the training and recruitment of translators and interpreters. Further efforts are needed to strengthen the financial independence of these two institutions, which will enhance their ability to resist political influence. Representation of non-majority communities at local level remains poor. The authorities should implement the recommendation issued by the Advisory Committee of the Framework Convention on National Minorities to ratify the European Charter for Regional or Minority Languages, signed in 1996. The authorities need to organise a public consultation and top adopt in a timely manner a new strategy building on the concept of 'one society and interculturalism', for 2023-2025.

There was some progress with inclusion of **Roma**. With the 2022-2030 Roma inclusion strategy now in place, the action plans were adopted in October 2023 covering anti-gypsyism, education, employment, social care, healthcare, housing, civic registration and culture. An adviser to the Prime Minister overseeing Roma inclusion issues was also appointed as the National Roma Contact Point. Enrolment of Roma children in kindergartens increased slightly by 1.25% from 420 last year to 462. In the 2022/23 school year, 4 429 Roma children enrolled in the first grade of primary education and 202 children were identified by CSOs as not registered. The annual dropout rate for Roma children in primary schools is still relatively high. According to the Ministry of Education and Science, 93.17% Roma pupils remained in school after the academic year 2021/22, while 6.83% left. 89.08% of Roma children of school-leaving age successfully completed their secondary education. The employment of 35 Roma education mediators is a positive step, while segregation in schools remains a significant issue. There are no systematic measures in place to prevent irregular attendance or to reintegrate children who have left education, or systematic enforcement of compulsory education at primary and secondary level as required by the law.

Access to preventive and curative health services, reducing mortality, addressing discrimination and unequal treatment by health professionals and women's health remain key challenges in the field of Roma healthcare. There is a slight decrease in the number of unemployed Roma. Measures were introduced to target Roma individuals with low levels of

education and promote their inclusion in the labour market. 969 Roma were included in the Youth Guarantee scheme. A geographic mapping of Roma settlements in five municipalities identified areas where housing interventions are needed. Most Roma settlements are still not covered by urban plans. The enacted amendments to the Law on civil registry, the Law on Registering the Place of Residence and the Law on ID pave the way to resolving all known cases of statelessness and fulfil the country's international obligations. They guarantee the right of registration for children born in the territory of North Macedonia within 45 days of birth, regardless of the status of their parents. Ending statelessness can have a significant positive impact on the affected Roma and society as a whole.

Cases of discrimination and police brutality based on Roma ethnicity were recorded, particularly against young Roma, girls and Roma in detention. Other barriers such as a lack of digital skills and access to technology continue to prevent Roma people from fully enjoying their rights and accessing most services, most of which are now digital (healthcare, education, employment, social protection etc.). Additional efforts and resources are required to speed up inclusion of Roma, to tackle anti-gypsyism, discrimination and educational and spatial segregation, and to reduce inequalities with the rest of the population. The government is working on implementing the priorities identified in the Poznan Declaration and on priority measures identified in the EU Roma bilateral seminars. Overall, while progress has been made, further efforts are needed to fully promote inclusion and protection of Roma and tackle anti-gypsyism and discrimination, including multiple and structural discrimination, against Roma. Systematic participation, empowerment and capacity building are required.

Citizenship rights

In December 2012, North Macedonia amended the law allowing the **acquisition of citizenship for special economic interests**. The scheme could pose migratory and security risks, especially given the different criteria for granting citizenship. In line with the Commission's recommendation on this matter in its sixth report under the visa suspension mechanism, North Macedonia should refrain from systematically granting citizenship based on special economic interest (investor citizenship schemes), as such schemes pose risks as regards security, money laundering, tax evasion, terrorist financing, corruption and infiltration by organised crime, and are incompatible with the EU acquis.

2.2.2. Chapter 24: Justice, freedom and security

The EU has common rules for border control, visas, residence and work permits, external migration and asylum. Schengen cooperation entails the lifting of border controls within the EU. Member States also cooperate with North Macedonia in the fight against organised crime and terrorism, and on judicial, police and customs matters all with the support of the EU justice and home affairs agencies.

North Macedonia is **moderately prepared** to implement the EU *acquis*. **Some progress** was made. Cooperation in the field of counterterrorism, and the prevention and countering of violent extremism was further upgraded by the new arrangement for the implementation of a joint action plan on counterterrorism. The national strategies for countering terrorism (2023-2027) and countering violent extremism (2023-2027) were adopted in May 2023, along with the related action plans. Registration of migrants needs to be done in a systematic manner and protection-sensitive profiling needs to be improved. The country should establish a proper system for managing irregular movement and stop the practice of returning migrants outside a legal framework. A contingency plan to manage large migratory flows needs to be finalised and adopted. The Status Agreement for operational cooperation in border management with Frontex entered into force on 1 April 2023. This made it possible to launch a joint operation

with the deployment of officers from EU Member States to provide support with border control and the management of irregular migration and cross-border crime. Last year's recommendations were only partially addressed, and remain valid. In the coming year, the country should in particular:

- continue to proactively reform the structures responsible for fighting organised crime with a focus on increasing operational capacity and cooperation;
- ensure effective implementation and monitoring of the national strategies for countering terrorism (2023-2027), countering violent extremism (2023-2027) and of the joint action plan on counterterrorism;
- systematically register migrants and improve protection-sensitive profiling, adopt a more systematic approach to fighting migrant smuggling and align national legislation with the EU's list of visa-required countries.

Fight against organised crime

North Macedonia has **some level of preparation** in the fight against organised crime. **Some progress** was made in the area of the fight against terrorism and violent extremism. The country continues to have a good level of operational cooperation with EU Members States, non-EU neighbouring countries, Europol and Eurojust. A new Law on money laundering and financing of terrorism entered into force in July 2022. Certain forms of crime, such as money laundering and financial crimes still need to be addressed more effectively.

The capacity of the National Coordination Centre for the Fight against Organised Crime needs to be improved. Coordination remains crucial for all stakeholders involved in fighting organised crime, including coordination between prosecutors and police.

Most of the recommendations from last year remain valid. In the coming year, North Macedonia should in particular:

- improve its track record on investigations, prosecutions and rendering convictions in organised crime and money laundering cases with a focus on confiscation of proceeds of crime;
- adopt and implement the necessary legislation for an Asset Recovery Office;
- strengthen human and financial capacities of the law enforcement agencies investigating organised and serious crimes, financial crimes and money laundering.

Institutional set-up and legal alignment

The number of police officers increased in 2022, reaching 347.6 per 100 000 inhabitants (330 in 2021), which is higher than the EU average of 335.3/100 000 (Eurostat, 2019-2021).

Key **institutions** in the fight against organised crime include the specialised police units within the Ministry of the Interior, which have jurisdiction and competence over different types of organised crime and financial investigations. Medium-term priorities and objectives for the development of the police force are determined in the Ministry of the Interior's strategic plan for 2022-2024. In 2022, 47% of the planned activities were implemented.

In 2018 and 2019, North Macedonia comprehensively reformed its intelligence services in line with the findings of the report by the Senior Experts' Group on Systemic Rule of Law Issues. The former Bureau for Security and Counterintelligence (UBK) was replaced by the National Security Agency (NSA) which, contrary to its predecessor, is no longer under the authority of the Ministry of the Interior and does not have police powers. The NSA is located

within the premises of the Ministry of the Interior, which is against international standards and continues to be a matter of concern.

The Operational and Technical Agency can be authorised by a court order to monitor communications as part of a criminal investigation or in the interests of state security and defence or as part of monitoring of mobile operators. It does not yet have its own independent premises and is located in a building owned by one of national telecommunications operators. The Agency has modernised its technical systems and started to digitalise the procedure for obtaining court orders. The mandate of the Director of the OTA expired in September 2023, leading to a gap in the functioning of the agency until the appointment by the Parliament of a new director.

The National Coordination Centre for the Fight against Organised Crime (NCCFOC) is operational but, to ensure its proper functioning, permanent staff should be recruited to cover positions currently filled by temporary staff. A database for better data management and software for information analysis have been developed and are expected to be fully operational before the end of 2023.

There are three structures with a role in conducting **financial investigations**: the Financial Police Office within the Ministry of the Interior, responsible for financial crimes under police jurisdiction; the Financial Intelligence Office within the Ministry of Finance, responsible for intelligence analysis related to money laundering and terrorism financing; and the Sector for Control and Investigation within the Customs Administration, responsible for investigating crimes within its jurisdiction.

The Asset Recovery Office is part of the Unit for International Legal Assistance in the Public Prosecutor's Office. Though preparations have been underway since 2021, the Office, is not yet regulated by law. and functions on the basis of standard operational procedures.

Both the Ministry of Defence and the Ministry of the Interior have responsibilities for cybercrime and cybersecurity. The army is also developing capacity for cyber defence and cooperates with international organisations in the field of global cyber security and hybrid threats. The Ministry of the Interior's Sector for Computer Crime and Digital Forensics carries out investigations into cybercrime, using digital forensics.

Regarding the **legal framework**, the Criminal Code is regularly updated to stay in line with EU and international standards. Its scope has been extended to criminalise activities such as trafficking in human beings, online child pornography, drug trafficking, computer crime. More recently, provisions were added to bring the Criminal Code into line the Council of Europe's Convention on Preventing and Combating Violence against Women and Domestic Violence.

The country is a signatory to the 'Convention on Cybercrime on Enhanced Cooperation and Disclosure of Electronic Evidence' (Budapest Convention). North Macedonia signed the Convention's second additional protocol in May 2022, but it has not yet been ratified by Parliament.

North Macedonia is implementing a wide range of **strategic documents** concerning organised crime and other forms of serious crime, based on the corresponding EU strategies. These include: a national strategy against human trafficking and irregular migration together, accompanied by an action plan (2021-2025), a national strategy against children trafficking (2021-2025), a national drug strategy (2021-2025), a strategy for building capacity to conduct financial investigations and confiscate property, with action plan (2021-2023), a national

strategy for control of small arms and light weapons, with action plan (2022-2024), and a national strategy for preventing money laundering and terrorism financing (2021-2023).

In line with Europol methodology and policy, in 2022, the Ministry of the Interior prepared and presented a 'national serious and organised crime threat assessment (SOCTA) 2021'. Launched at the beginning of 2022, it defines the priorities in the fight against organised and serious crime.

Concerning **trafficking in human beings**, in compliance with the recommendations from the Group of Experts on Action against Trafficking in Human Beings, in November 2022, a Law on state compensation for victims of violent crime was adopted, also covering the crime of human trafficking. In March 2023, the Ministry of the Interior and the State Labour Inspectorate signed a cooperation memorandum at the initiative of the National Anti-trafficking Commission, to strengthen cooperation on prevention, detection and suppression of trafficking in human beings for the purpose of labour exploitation, and to ensure timely protection of victims of labour exploitation and child victims of all forms of exploitation.

Concerning **small arms and light weapons**, national legislation is not yet harmonised with EU directives and regulations. After the adoption of the Law on Development, Production and Trade in Military Goods, implementing legislation was finalised in 2022. The Law on Weapons of North Macedonia is partly aligned with Directives 2021/555(EU) and still pending the alignment with Implementing Directive 2019/68 on marking of firearms and Implementing Directive 2019/69 on technical specification of alarm and signal weapons. The responsible authority is the Ministry of Interior. There is a national commission for the control of weapons, that cooperates with the relevant national authorities (ministries of interior, defence, justice, finance (customs administration), foreign affairs, and agency for seized and confiscated property (for the destruction of weapons).

In the framework of the actions in Western Balkans within the EU Action Plan on firearms trafficking, which correspond with the goals of the Regional Roadmap to better control SALW in Western Balkans, North Macedonia improved the investigation and record keeping of firearms capacities and made some progress with limited destructions of the confiscated firearms and ammunition and surplus ammunition. Several activities related to the implementation of the Roadmap continued to be limited, including awareness raising, outreach and education on the dangers and risks related to the misuse, illicit possession, and trafficking of firearms/SALW, as well as reduction of illicit firearms through legalization, voluntary surrender and deactivation.

Concerning **child sexual abuse**, the Cybercrime and Digital Forensics Section liaises with the Interpol I-24/7 Child Sexual Exploitation-ICSE network.

Implementation and enforcement capacity

In 2022, 21 investigations on organised crime groups were initiated involving a total of 102 persons (compared with 17 investigations in 2021); of these, 13 are still ongoing (compared with 11 in 2021) and 8 were closed in 2022 (six in 2021), of which 1 was transferred and 1 dismissed. Seizure measures were applied in nine cases. 27 individuals were indicted, and eight verdicts were reached, resulting in prison sentences or suspended sentences with probation. The external oversight mechanism is being implemented. Within the Public Prosecutor's Office, the Special Department for investigation and prosecution of crimes committed by persons with police powers and members of the prison police has only two investigators. Two posts are vacant. In the reporting period, the Department registered 183 cases against 299 individuals (135 in 2021), 25 verdicts were reached / penalties handed down, eight cases were transferred, and 74 cases were dismissed.

The NCCFOC is operational, and its role and activities increased in 2022. All institutions participating in NCCFOC nominated their representatives in 2022. The Centre: facilitates the exchange of data and information among the affiliated institutions; shares information among institutions on a 'need-to-know' basis; coordinates activities among institutions in cases where more than one received a request about a natural or legal person; and supports the international exchange of information, especially between police forces.

The Basic Public Prosecutor's Office for Organised Crime and Corruption has insufficient human resources and lacks financial resources for expert services. Specialisation within the Office is needed, as well as a pro-active approach in pursuing cases.

The investigative centres within the Basic Public Prosecution Office, located in Skopje, Kumanovo and Tetovo, and within the Basic Public Prosecutor's Office for Organised Crime and Corruption, are operational, but they still lack sufficient human and financial resources and adequate equipment to perform properly. These investigative centres have not achieved their objectives of more efficient investigations and better coordination among prosecutors, police and other relevant bodies.

The country participates in **international police cooperation** activities through the main cooperation channels (INTERPOL, Europol and the South-Eastern Law Enforcement Centre (SELEC)). The level of cooperation and exchange of information with Europol is good and increased in 2022. North Macedonia is participating in Europol analysis projects in the field of organised and serious crime and combating terrorism. The Ministry also provided input for the development of Europol's EU serious and organised crime threat assessment (SOCTA). In 2022, the relevant authorities participated in activities forming part of Europol's analysis project 'Hydra', on Islamic terrorism.

The National Central Bureau (NCB) INTERPOL Skopje is working on expanding INTERPOL I-24/7 communication system. Connectivity has been provided with some of the databases available in I-24/7. The national authorities and NCB INTERPOL are working to expand access to other databases in that system.

In 2022, 1 887 new cases were opened in the International Police Cooperation Sector (1 429 at NCB INTERPOL, 254 at Europol, 151 at Liaison Officers, and 53 at SELEC). Most cases concern the illegal drug trade, illegal arms trade, financial and computer crime, violent crime, motor vehicles, irregular migration and human trafficking, computer crime and missing persons.

Operational international police cooperation with neighbouring countries includes Albania, Serbia, Greece and Bulgaria, and has been conducted through established channels: NCB INTERPOL, Europol National Units, and SELEC.

North Macedonia is participating in the European Multidisciplinary Platform against Criminal Threats (EMPACT). In 2022, the country participated in 26 operational actions, and was co-leader of one operational action (part of the operational action plan (OAP) on firearms). In 2023, North Macedonia has substantially increased its participation in EMPACT and is involved in 98 operational actions. It is co-leader of four operational actions (two as part of the OAP on firearms trafficking, 1 as part of the OAP on migrant smuggling and 1 as part of the OAP on cocaine, cannabis and heroin trafficking). North Macedonia continued to participate in EMPACT joint action days.

Cooperation with CEPOL has been based on a Working Arrangement since 2017. In accordance with the EU strategic training needs assessment, 27 specialised/resident training courses were developed by CEPOL, the EU agency for law enforcement training, and were

attended by 150 representatives from the Ministry of the Interior in 2022. Law enforcement officers also participated in the exchange programme training organised by CEPOL. It is recommended that the authorities of North Macedonia, with the assistance of CEPOL, design, prepare and organise targeted training to address the priority training topics at national level as follows: Counter Terrorism: Prevent; Counter Terrorism: Protect; Counter Terrorism: Respond; Firearms trafficking; and Environmental crime.

Since 2014, an **intelligence-led policing** model has been implemented in the Ministry of the Interior's Public Security Bureau. The Ministry is now able to detect current needs and set strategic priorities and activities for each year, for greater efficiency in fight against organised and serious crime.

The Financial Intelligence Unit conducted four financial investigations against 44 individuals and four entities in 2022. A total of nine law enforcement officers were assigned to the unit. There is still a need for additional technical equipment and other material. Access to several databases was provided and negotiations are underway to provide access to the cadastral (property) register database.

The Financial Police Office (FPO) currently has five positions for investigators occupied, with four still vacant. A standard operating procedure for conducting financial investigations was adopted in July 2022. It conducted 25 financial investigations in 2022. The FPO has access to several databases of other institutions. An additional database is currently being developed which connects the FPO database to those of the Customs Office, the Public Revenue Department and the Ministry of the Interior.

The Sector for Control and Investigation within the Customs Administration initiated a total of 14 financial investigations against 22 individuals and nine legal entities in 2022. All eight available positions for executors in the service have been filled. The Customs Administration adopted a procedure for financial investigations in July 2022.

In May 2023, the Council of Europe's Committee of Experts on the Evaluation of Anti-Money Laundering Measures and the Financing of Terrorism (MONEYVAL) discussed and approved a report regarding the country's technical compliance and effective implementation of the international anti-money laundering and combating the financing of terrorism (AML/CFT) standards, in accordance with the 2013 Financial Action Task Force (FATF) methodology. According to the conclusions set out in the evaluation report published in July 2023, the legal framework has improved, but the authorities should further strengthen measures to combat money laundering, the financing of terrorism and proliferation, in particular through investigations and prosecutions (*see chapter 4*).

The Law on prevention of money laundering and financing of terrorism entered into force in July 2022. The Law aims to align with EU Directive 2018/843, the fifth Directive on the prevention of the use of the financial system for the purposes of money laundering and financing of terrorism and to address the revised Financial Action Task Force recommendations. Additional implementing laws deriving from the Law need to be drafted and adopted. North Macedonia needs to align its legislation with Directive (EU) 2018/1673 on combating money laundering by criminal law.

In 2022, the authorities managed to freeze assets worth around EUR 40 million, including cash, land, business premises, apartments, shares and securities. They confiscated assets worth some EUR 28 million.

North Macedonia is currently implementing its national strategy against human trafficking and illegal migration. This is accompanied by an action plan and a national strategy against

trafficking in children – both covering 2021-2025. The Group of Experts on Action against Trafficking in Human Beings published its third-round evaluation report on North Macedonia. Recommendations were made to the authorities to address gaps and weaknesses in the legal framework and in other areas. To further align with the EU *acquis*, amendments to the legislative framework should be adopted, including on the referral to the Centre for Victims of Trafficking in Human Beings of foreign victims of trafficking in human beings who cooperate with the authorities. Adequate avenues for compensation for victims should be provided.

In 2022, 9 victims were identified as part of investigations and prosecutions of perpetrators of trafficking in human beings. Of these, 8 were victims of internal trafficking while 1 was exploited abroad (in a neighbouring country). As a result of the investigations, 6 criminal charges were brought against 19 individuals for alleged trafficking in human beings offences.

In 2022, the Ministry of the Interior filed charges against 210 individuals, accused of committing 199 crimes involving **small arms and light weapons**. Moreover, 139 weapons were seized in 2022. Under the supervision of the State Commission for destroying weapons, 270 seized weapons were destroyed in February 2023.

Concerning **cybercrime**, in 2022, the authorities registered 287 criminal acts constituting computer crimes under the Criminal Code, committed by 220 perpetrators. The most common computer crimes are: ‘damage and unauthorised entry into a computer system’, ‘spreading xenophobic material via information systems’, ‘processing and use of a false payment card’, ‘endangering safety’.

Regarding online child sexual exploitation, the number of registered crimes in 2022 was 14. Of the reported crimes, eight were solved and eight perpetrators were identified. The remaining cases are being investigated. There were seven reported cyber-attacks against public institutions and public infrastructure in 2022 and 11 against private institutions. The Ministry of the Interior’s Sector for Computer Crime and Digital Forensics participated actively in EMPACT.

The Central Register has kept a register of beneficial owners since January 2021, but not all entities that are required to have provided the necessary information.

In accordance with the Law on payment services and payment systems, a single register of accounts was set up and maintained by the Central Register. Infrastructure for the register is currently being constructed, and technical specifications have been defined for the software and its main components. It is expected that the register will be operational by the second quarter of 2024.

In the reporting period, witness protection measures were applied in 4 cases.

Cooperation in the field of drugs

Institutional set-up and legal alignment

The national strategy against drugs covers the period 2021-2025 and is being implemented through a specific action plan. The National Drugs Observatory was set up in 2007, but its operational capacity remains limited. It lacks resources to cope with its daily drug monitoring tasks. There is still no national early warning system capable of connecting with relevant national bodies to enable fast exchange of information about illegal manufacturing and illicit trade on a national and international level.

The European Monitoring Centre for Drugs and Drug Addiction has had technical cooperation arrangements with North Macedonia since 2007. The focal point for this cooperation is the Ministry of Health, which also cooperates with the International Narcotics Control Board, and United Nations Office on Drugs and Crime.

National legislation on drugs, psychotropic substances and precursors does not comply with the EU *acquis* or international standards.

Implementation and enforcement capacity

There was a positive trend in the prevention of drug trafficking. A total of 749 crimes were detected in 2022 (compared with 701 in 2021), leading to criminal prosecution against 9 legal entities and 853 perpetrators (840 in 2021). Police action broke up 12 organised groups (10 in 2021) with 46 members (36 in 2021).

In 2022, the authorities seized 2 561 kg of marijuana and 8 723 kg of cannabis stems (18 301 kg for both in 2021) from legal entities with licences for the cultivation of cannabis for medicinal purposes, which raises concerns about deficiencies in the system for legal cultivation. Law enforcement authorities need to gain tighter control over those entities and their activities, to prevent illegal activity and take effective measures against infringements.

Regarding international police cooperation, throughout 2022 the Ministry of the Interior received 62 pieces of information concerning the illegal trafficking of drugs through INTERPOL from EU and non-EU countries. The relevant police structures also maintained a good level of cooperation with Europol, with 481 messages concerning ‘illicit drug trafficking’ exchanged through Europol’s secure information exchange network application (SIENA) in 2022. In addition, 18 cases of illicit drug trafficking were opened as a result of exchanges of information through SELEC.

Harm-reduction activities, one of the main pillars of the country’s drug policy, are implemented by local CSOs through a nationwide network of national focal points.

Preparatory work was done on the register of drug users by the Institute for Public Health in cooperation with the Ministry of the Interior. The register now needs to be finalised.

In February 2023, the Agency for the Management of Confiscated Property destroyed 1 400 kg of confiscated drugs and illegal psychotropic substances following a final court decision.

Cooperation with Eurojust continues. Between April 2022 and February 2023, North Macedonia was involved in 20 new cases at Eurojust – 17 as requested country and three as requesting country. Most cases related to money laundering, swindling or fraud. North Macedonia’s acting Eurojust Liaison Prosecutor was actively engaged in facilitating ongoing investigations.

Fight against terrorism

Institutional set-up and legal alignment

North Macedonia has a national committee for countering violent extremism and counterterrorism, but the draft rulebook for its work needs to be adopted.

North Macedonia’s legislative framework is broadly aligned with the EU *acquis* and international counterterrorism instruments and is sufficient for the prosecution of individuals suspected of committing or aiding terrorist activities or participating in foreign wars.

National strategies for countering terrorism (2023-2027) and countering violent extremism (2023-2027) were adopted in May 2023. These are based on the four pillars of the UN and EU's global strategies: prevention, protection, prosecution/enforcement and response.

The country continues to implement its national plan for the re-integration, re-socialisation and rehabilitation of returnees from foreign armies and members of their families. A variety of activities are implemented daily in the work with foreign terrorist fighters and their families.

In December 2022, the European Commission and North Macedonia's Ministry of the Interior signed a new arrangement for the implementation of a joint action plan on counterterrorism for the Western Balkans. The arrangement upgrades cooperation on counterterrorism and action to prevent / counter violent extremism. It requires national authorities to submit interim reports twice a year.

Implementation and enforcement capacity

North Macedonia submitted in July 2023 a first progress report on the implementation of the bilateral arrangement for the implementation of the Joint Action Plan on Counterterrorism for the Western Balkans. Implementation of the newly signed counterterrorism arrangement began with some priority activities, undertaken in accordance with the schedule.

At local level, measures to prevent violent extremism and terrorism continue to be implemented by local councils for prevention, action teams in community, and local multidisciplinary teams. Two additional local action teams were set up in November 2022 in Prilep and Struga. Local multidisciplinary teams now operate in 9 municipalities – Skopje, Kumanovo, Gostivar, Tetovo, Kicevo, Ohrid, Struga, Stip and Prilep – to provide support for returnees and their families. These teams work in coordination with social service centres. Greater clarity is needed around the division of powers, tasks and responsibilities between local and central level, for better cooperation on prevention and countering of violent extremism. The state needs to adopt additional legal provisions to legitimise and regulate the activities of local-level bodies.

The practice of handing down light sentences for terrorism-related offences remains a challenge for prevention efforts, and more effective follow-up is required for convicted foreign terrorist fighters after they are released from prison.

Radicalisation in prisons remains a concern despite the existence of a strategy on the penitentiary system (2021-2025) which includes provides measures against radicalisation in prisons. Online radicalisation should be addressed effectively, which requires better equipment and training, and human capacity building.

No foreign terrorist fighters were repatriated in the reporting period. In 2022, five individuals were indicted for allegedly perpetrating five separate crimes involving 'terrorism' and 'participation in foreign paramilitary or para-police formations'. In 2022, 3 cases resulted in convictions for the crime of 'terrorism', of which two were final and one under appeal procedure. In comparison, court verdicts were passed against four repatriated foreign terrorist fighters and one person was indicted for terrorism in 2021.

In 2022, the sector dealing with the fight against terrorism, violent extremism and radicalism located within the Ministry of Interior participated in Europol's analytical projects on the fight against terrorism and financing for terrorism. A total of 387 messages were exchanged with partner services from other countries, through SIENA, Europol's counterterrorism platform.

The Financial Intelligence Office updated indicators for the recognition of suspicious transactions potentially linked to the financing of terrorism or proliferation financing. In 2022, a number of strategic analyses were adopted by the Head of the Financial Intelligence Office, such as the strategic analysis for proliferation finance, a strategic analysis for transactions through fast money transfer services, and a manual to facilitate the use of practical indicators for identifying suspicious financial transactions.

A memorandum for cooperation, coordination and exchange of information for effective and efficient application of the Law on restrictive measures was signed in September 2022 by the Minister of Interior, the Minister of Foreign Affairs, the Director of the Intelligence Agency, the Director of the Financial Intelligence Office, the Director of the Agency for National Security and the Public Prosecutor. Financial restrictive measures were introduced for 15 individuals who participated in foreign armies, police, paramilitary or para-police formations outside North Macedonia.

Additional multidisciplinary teams were set up within the state prison system to monitor the behaviour of inmates convicted of terrorism.

Pre-release standard operating procedures and post-penal assistance were introduced for radicalised convicts.

Judicial cooperation in civil and criminal matters

Progress regarding the legal framework for cooperation in civil and commercial matters was limited. North Macedonia should ratify the 2005 Hague Choice of Court Convention, the 1996 Hague Child Protection Convention, the 2007 Hague Child Support Convention and its Protocol on Applicable law, which have been already signed. Furthermore, the country should take the necessary steps to ratify the 2019 Hague Convention on the Recognition and Enforcement of Foreign Judgments in Civil or Commercial Matters (the 'Hague Judgments Convention').

The Ministry of Justice's Criminal Department is currently understaffed, with just a head of department and four civil servants, out of a planned seven.

In 2022, there were 789 incoming and 220 outgoing requests for mutual legal assistance in civil matters (compared with 429 incoming and 141 outgoing in 2021). The requests are forwarded to the relevant authority within seven days.

In 2022, there were 1 147 incoming and 824 outgoing requests for mutual legal assistance in criminal matters (compared with 856 incoming and 233 outgoing requests in 2021). These cases have not been fully processed and the Ministry of Justice does not have accurate data on the number of ongoing procedures.

Cooperation with Eurojust continues. The Ministry of Justice issued Rules on cooperation between the State PPO, the Ministry of Justice and Eurojust. These Rules are based on the 2021 Law on international legal cooperation in criminal matters. North Macedonia's acting Eurojust Liaison Prosecutor was actively engaged in facilitating ongoing investigations. The procedure for selecting a permanent Eurojust Liaison Prosecutor, upon a call published in December 2022, is ongoing.

In October 2022, the European Public Prosecutor's Office and North Macedonia's State Public Prosecutor's Office concluded a working arrangement.

Legal and irregular migration

Institutional set-up and legal alignment

The legal framework for migration is largely in line with EU standards. The state of crisis declared at the country's borders was further extended until the end of December 2023, allowing for the continued deployment of the army.

The Ministry of the Interior is the main operator in the field of migration.

North Macedonia has a series of strategic documents in place on migration: the 2021-2025 national strategy for integrated border management with an action plan for implementation (2022-2025); the resolution on migration policy for 2021-2025; the 2021 migration profile and the 2019-2023 national strategy for cooperation with the diaspora. The new strategy for the integration of refugees and foreigners has been pending adoption since September 2021. A contingency plan to manage large migratory flows still needs to be finalised and adopted.

North Macedonia participates in the regional Anti-Smuggling Operational Partnership with the Western Balkans launched in November 2022 to support law enforcement and judicial cooperation against criminal smuggling networks and to increase border management capacities.

Implementation and enforcement capacity

The country continued to play an active role in the management of mixed migration flows. Further efforts were made to ensure basic living conditions and services for all migrants in North Macedonia. However, there is a need to enhance institutional and administrative capacities for all aspects of migration management by increasing the number of employees and by providing additional material and technical resources. As of April 2023, Frontex has been deployed and has provided operational support on the country's southern border.

The strategic framework should be further strengthened, particularly on implementation of support measures. While registration of migrants resumed in 2021, the lack of adequate protection-sensitive profiling needs addressing as a priority. Better, more systematic registration and protection-sensitive profiling is required. The fragmentation of tasks between the multiple institutions dealing with migration makes migration management less effective. Implementation of the in-depth assessment (masterplan) for North Macedonia developed by Frontex last year is still pending.

The readmission agreements and implementing protocols signed with eight EU Member States continue to be implemented. Four additional agreements are under negotiation. In addition, North Macedonia has bilateral readmission agreements with eight non-EU countries (six further agreements are being negotiated). Cooperation with neighbouring countries continues to be satisfactory. However, there is room for more cross-border cooperation with neighbouring countries in implementing returns and addressing trafficking in human beings and smuggling of migrants.

The number of irregular movements through North Macedonia increased, with 27 391 irregular arrivals in 2022 compared to 20 874 in 2021. Most of these people were travelling from Greece towards Serbia. Nationals of Syria (11 018), Pakistan (5 594) and Morocco (2 541) constituted the largest groups, most of whom were single males. Irregular migrants in transit remain targets for organised criminal groups engaged in people smuggling, who often extort money and abuse the migrants in various ways. A new phenomenon in the Western Balkans is the misuse of North Macedonia's visa-free regime by individuals coming

from Türkiye, Tunisia, India, Burundi and China, among others. North Macedonia re-introduced visa requirements for nationals of Azerbaijan, Botswana and Cuba.

In 2022, 107 cases of smuggling were detected, involving 1 454 migrants (compared with 64 cases involving 815 migrants in 2021 – an increase of 67.2% and almost 80% respectively). The number of migrants smuggled remained high and combating smuggling networks remains a priority.

Regular reception capacity was unchanged and is appropriate to current needs. The arbitrary detention of persons apprehended in irregular movements for the purpose of taking statements as evidence before the Criminal Court remains an issue of concern. The percentage of asylum applications registered at the reception centre for foreigners in Gazi Baba significantly increased to 62.5% in the first quarter of 2023, from just 8% in 2022.

Since the attempt to build a new EU-funded reception centre for foreigners was blocked by a government decision in October 2021, no improvements have been made in the existing reception centre, where living conditions are poor and basic rights are not respected. The National Preventive Mechanism within the Ombudsman repeatedly pointed out that this facility does not meet the required standards for hosting persons with restricted freedom of movement. The detainees do not receive the information about legal remedies they would need to fully understand their legal status or the length of detention.

Two temporary transit centres providing short-term housing remain operational (Vinojug capable of housing 1 500 persons and Tabanovce with a capacity of 500). However, both transit centres are unsuitable for longer stays and the legal status of both centres breaches international standards. The lack of legal oversight over migrants' freedom of movement in the Vinojug transit centre is also a major issue.

Since the summer of 2021, North Macedonia has temporarily hosted some 791 evacuees/refugees from Afghanistan. By September 2023, 674 had been resettled. Since March 2022, North Macedonia has been hosting refugees from Ukraine. By September 2023, 67 151 Ukrainians have arrived in North Macedonia, 48 807 of which left the country. By June 2023, 405 Ukrainians had received temporary residence in North Macedonia on humanitarian grounds. Under the Law on foreigners, temporary residence means the right to legally reside in the country for 1 year with the possibility of extension.

There are 235 Roma, Askhali and Egyptian individuals from Kosovo* in the country, including 11 with refugee status, 64 under subsidiary protection and approximately 160 whose protection status has ended. The individuals remain in a vulnerable situation due to the lack of legal status and insufficient access to basic rights.

In 2022, a total of nine persons were assisted with voluntary returns to their countries of origin within the assisted voluntary return and reintegration programme.

Asylum

Institutional set-up and legal alignment

The asylum sector in the Ministry of the Interior is the authority responsible for asylum procedures. The Law on international and temporary protection is largely aligned with the EU *acquis*. However, efforts are still needed to improve information and counselling in detention facilities and at border crossings. Efforts are also needed to improve personal interview and border procedures. Further efforts are needed to improve working rights of applicants for

* This designation is without prejudice to positions on status, and is in line with UNSCR 1244/1999 and the ICJ Opinion on the Kosovo declaration of independence.

international protection, and access to a personal identification number so they can work, open a bank account and manage property. Furthermore, there is a need for the current legislation to provide alternatives to detention for persons involved in irregular movements. Further efforts are required to improve delays in family reunification for persons under subsidiary protection, particularly for unaccompanied minors. Delays can be counter to the principle of the best interest of the child.

Under the Law on foreigners, persons who enjoy international protection can be granted long-term residence. However, they must still present proof of regular income and a registered place of residence to benefit from this provision. Given the vulnerability of some applicants, notably Roma people from Kosovo under subsidiary protection, there is a risk that the rights under this provision remain theoretical, without practical implementation. The existing database on foreigners still needs to be upgraded with a new asylum module to provide a case management tool for processing asylum claims. There is no backlog of asylum cases. Most cases are discontinued due to the high rate of claim abandonment.

Implementation and enforcement capacity

Implementation of asylum procedures is not fully aligned with the EU *acquis*. Developing the asylum authorities' administrative capacity remains a challenge, particularly as regards the recruitment and retention of highly qualified and dedicated staff, which is a prerequisite for high-quality administrative processing of asylum claims. The government has not invested enough in improving the asylum system, for example by through funding, technical expertise and staff to fill specific roles.

There is no problem with access to the asylum procedure and asylum claims are promptly registered and processed. However, the quality and speed of asylum decisions remains of concern. Most of those granted subsidiary protection are vulnerable persons and unaccompanied minors. Decisions are based on humanitarian needs but without proper consideration of the merits of the claim. The overall length of the entire asylum procedure is unreasonable; it may last for several years from initial registration of an asylum claim.

The Administrative Court and the High Administrative Court take decisions on procedural grounds rather than on the merits of individual asylum claims. The cases returned to the administrative authority remain unchanged despite court rulings. This lengthens the asylum procedure, without providing asylum-seekers with an effective remedy. The practice continued of holding in-person hearings with attorneys and asylum officials present but without the asylum-seekers themselves. Although guaranteed by law, no procedure has been implemented to adequately cater for persons with specific needs. Furthermore, decisions on expulsion are made with no quality assessment, and without the necessary steps being taken to ensure that returning asylum-seekers will not be subjected to persecution in their country of destination.

A lack of personal identification numbers for asylum-seekers and persons under temporary protection remains unaddressed and is a critical gap in the legal protection of rights.

Further efforts are needed to ensure that the children of asylum-seekers are provided with proper educational services in accordance with the Law on primary education. There is a lack of national data on refugee and asylum-seeker children in primary and secondary education.

In 2022, 168 asylum applications were submitted (compared with 100 applications in 2021), with most applicants coming from Syria (49%), Morocco (10%), Afghanistan (6%), Türkiye (5%) and Iraq (5%). The registration of asylum applications is not integrated, with different entities within the Ministry of the Interior being involved. These include police stations

where applications are first registered, reception centres and the Sector for Asylum. By the end of 2022, the Sector for Asylum had conducted 14 asylum interviews (mostly online), rejected 20 asylum applications, and granted no form of international protection (refugee status has not been granted to anyone since 2016), while most decisions were written off due to high rates of absconding. In the first quarter of 2023, 71 asylum applications were registered, a 500% increase compared to the same period in 2022. Most of the applicants came from Afghanistan, the Democratic Republic of the Congo, Pakistan and Syria.

The roadmap for cooperation agreed on between the European Union Agency for Asylum and North Macedonia for the period October 2020–September 2022 remained an important tool for: strengthening the asylum system, particularly for persons with special needs and unaccompanied minors; strengthening the training system on asylum and reception; increasing the quality of asylum decisions; and strengthening the reception system for vulnerable migrants and unaccompanied minors.

Visa policy

The national visa regime is largely aligned with that of the EU. To date, only Türkiye is accessible without visa for North Macedonia but not for the EU. In January 2023, North Macedonia reintroduced a visa requirement for nationals of Botswana and Cuba. The decision to temporarily allow nationals of Azerbaijan to enter North Macedonia without a visa expired in March 2023 and was not extended. The Commission's sixth report under the Visa Suspension Mechanism of 2023⁷ concluded that North Macedonia continued taking action to address the Commission's previous recommendations and recommended North Macedonia to continue this good progress. North Macedonia has a high level of compliance with International Civilian Aviation Organisation standards. The visa sticker meets the EU requirements.

Schengen and external borders

Institutional set-up and legal alignment

The legislative framework for the management of North Macedonia's external borders is largely aligned with the EU *acquis*. The Department of Border Affairs and Migration is a specialised unit within the Ministry of the Interior. The country has eight border crossing points. The border police are structured into four regional centres, within which police stations for border surveillance and border checks operate. North Macedonia has a National Coordination Centre for Border Management.

A new integrated border management strategy for 2021-2025 was adopted in 2022. It aims to achieve safe and open borders that allow fast and secure transit of passengers and goods, while enabling effective measure to be taken against irregular cross-border activities.

Implementation and enforcement capacity

A Status Agreement for operational cooperation in border management with Frontex was signed in October 2022, including a Macedonian language version. Following the entry into force of the status agreement on 1 April 2023, a North Macedonia 2023 joint operation was launched on 19 April with the deployment of 110 officers to provide support for border control and the management of irregular migration and cross-border crime along the entire border section with Greece. Reinforcing controls along North Macedonia's borders will help increase security at the EU's external borders.

⁷ COM(2023) 730 final

Cooperation with the border services of Albania, Bulgaria, Kosovo and Serbia is carried out in accordance with the Schengen catalogue of recommendations and best practice. The following agreements were signed and are being implemented: Agreement on freedom of movement with identity cards (Western Balkans); Agreement on regulation of local traffic; and Agreement on systematic prosecution of perpetrators of crimes. In 2022, a total of 786 meetings and other contacts at all levels were held with these countries' border services (compared with 708 in 2021); 355 mixed patrols were carried out (compared with 96 in 2021); and 1 247 information exchanges took place through the Joint Contact Centres (compared with 1 988 in 2021). There are no mixed patrols with Greece and no Joint Contact Centre has yet been set up.

In 2022, 85 disciplinary procedures were conducted against police officers from the Department for Border Affairs and Migration and from the four regional centres for border affairs. These procedures resulted in 54 fines, 11 dismissal decisions and one warning; 19 procedures were terminated. In 2022, an investigative procedure was launched in a case established in 2021 against 11 persons for criminal offences under Articles 353 (abuse of official position and authorisation) and 357 (receiving a bribe) of the Criminal Code, and in March 2023, an indictment was filed against five persons for the crimes of criminal association and of receiving bribes and against one person for the crime of receiving a bribe.

All aspects of customs cooperation are now covered in Chapter 29 – Customs Union.

2.3. ECONOMIC CRITERIA

	2014-19 average	2020	2021	2022
North Macedonia - Key economic figures				
GDP per capita (% of EU-27 in PPS) ¹⁾	37	38	42	42

2) From Q1-2022, the Labour Force Survey is based on the results of the 2021 population census, restricting comparability with previous year's data. In a first step, the Statistical Office has recently revised 2021 data based on census data.

Source: national sources

In line with the conclusions of the European Council in Copenhagen in June 1993, EU accession requires the existence of a functioning market economy and the capacity to cope with competitive pressure and market forces within the Union.

2.3.1. The existence of a functioning market economy

North Macedonia has made **some progress** and is at a **good level of preparation** in developing a functioning market economy. In 2022, the economy was badly hit by the fallout from Russia's war of aggression against Ukraine, which significantly slowed down its post-COVID recovery. The government supported households and businesses through large-scale energy subsidies, tax reductions and targeted direct income support. Owing to an inflation-driven boost to tax income and under-execution of several expenditure categories, the general government deficit remained below the revised target. Capital expenditure was raised significantly, but still fell short of the revised plan. The public debt ratio dropped, but remains significantly above pre-COVID-19 levels. The central bank tightened its policy stance further in view of still elevated inflationary pressures, which began to subside gradually towards the end of 2022 and beyond. The current account deficit rose substantially as energy import prices surged, but external financing needs were met with the help of market-based and IMF borrowing.

A new Organic Budget Law (OBL) provides for the introduction of fiscal rules and a fiscal council, considerably strengthening fiscal sustainability. However, progress has been slow in implementing wider-ranging measures to improve the management of public investment, vital for underpinning the government's plans for a sizeable increase in capital expenditure.

The banking sector was resilient throughout the crises, and financial stability was bolstered by progress on some key legislation. The labour market showed some improvement, but structural problems persist, including high youth and long-term unemployment rates and a large gender gap. The business environment continued to be impeded by the large size of the informal economy, slow progress in streamlining parafiscal charges and an opaque and inefficient State aid regime.

Last year's recommendations were only partly implemented and remain partially valid. To improve the functioning of the market economy, North Macedonia should in particular:

- provide targeted and temporary support to vulnerable households and firms to cushion the impact of the energy crisis, if needed, and at the same time start to phase out untargeted subsidies to the energy sector;
- adopt and submit to Parliament the next set of revenue-enhancing measures, in line with the tax system reform strategy;
- accelerate implementation of the public investment management action plan, in particular by ensuring the new Department for Public Investment Management in the Ministry of Finance becomes fully staffed and operational;
- strengthen access to active labour market measures, in particular for the low-skilled unemployed and people in vulnerable situations.

Economic governance

The government provided fiscal support to help the economy cope with rising price pressures, but progress on important reforms was slow. While phasing out the broad-based pandemic-related support measures adopted in 2020 and 2021, the government adopted two sets of – partially – better targeted and temporary measures in 2022, to ease the burden of high food and energy prices on households and small business. These include a temporary reduction in the VAT rate on electricity for households, as well as sizeable subsidies for the state-owned electricity producer, ESM, which supplies the electricity to the universal supplier in the regulated market, to lower the price of electricity for its customers. It currently satisfies 100 percent of the demand of the regulated market, through government decision. Through the Law on financial support for socially vulnerable categories of citizens to deal with the energy crisis, adopted in November 2022, the government has provided targeted direct income support. It also introduced temporary price caps on certain food products, which were lifted on 1 June 2023. The new Organic Budget Law, enacted by Parliament in September 2022, introduced fiscal rules and a fiscal council as well as an improved medium-term budget framework. However, progress has been slow in other key reform areas. Improvements to the management of public investment are hampered by staffing and IT issues. Some of the public revenue-enhancing tax reforms adopted by the government in December 2022, which aim to reduce tax exemptions, were stalled in Parliament. The new legal framework for public-private partnerships (PPPs), which would address a number of shortcomings in the management of PPPs and of concessions, has yet to be adopted by the government. The government has advanced in implementing the green transition, notably by adopting major legislation to increase the use of renewable energies.

The policy guidance jointly agreed on at the May 2022 Economic and Financial Dialogue between the EU and the Western Balkans and Türkiye has been partially implemented. The country benefits from EU budget support worth EUR 80 million to cushion the impact of energy price increases on households, small and medium-sized enterprises and public service providers, of which EUR 72 million was disbursed in March

2023. In November 2022, the country received the first EUR 110 million tranche from an arrangement under the IMF's Precautionary and Liquidity Line (PLL)⁹. On 12 July 2023, in view of the country's large financing needs in 2023 and 2024, and following a request from the government, the Council and the European Parliament endorsed a Commission proposal for macro-financial assistance to North Macedonia of up to EUR 100 million.

Macroeconomic stability

GDP growth slowed, as the economy was hit by the fallout from Russia's war of aggression against Ukraine. Following a partial recovery from the recession caused by the COVID-19 pandemic, annual GDP growth slowed down to 2.1% in 2022, from 3.9% in 2021, as external demand weakened, disruptions in global supply chains persisted, and global food and energy prices rose rapidly. Trade dynamics were buoyant, but the rate of import growth

exceeded the export growth rate, which meant that external trade made a negative contribution to economic growth. Investment rose strongly, partly on account of the build-up of stocks of intermediate products and raw materials, as companies anticipated further price rises. Private consumption growth slowed sharply despite being bolstered by remittances from abroad and government support measures. While industrial production and construction output declined, the service sector continued its post-COVID trend of strong annual increases. In the first half of 2023, annual GDP growth dropped to 1.6% on average. Convergence with EU income levels has been slow, with real GDP per capita increasing from 37% of the EU-27 average in 2017 to 42% in 2022.

Reflecting the country's large dependence on energy imports and surging import prices, the external position deteriorated in 2022. The current account deficit rose markedly in

2022, to 6% of GDP from 3.1% in 2021, much above its average in the pre-COVID-19 period 2017 to 2019 (1.5%). This rise is accounted for by a widening energy trade deficit, which reflects the country's high dependence on energy imports and skyrocketing international energy prices. In addition, in an uncertain environment, companies built up their inventories of imported production inputs. Deterioration in the energy and trade balance in 2022 was

partly offset by a sizeable increase in private transfers (remittances) and in the services surplus, helped by a rebound in tourism. In the first half of 2023, the merchandise deficit has narrowed sharply, in annual terms, largely reflecting the drop in energy import prices and driving a large improvement in the current account balance. Foreign direct investment (FDI) inflows recovered after a fall triggered by the COVID-19 pandemic, increasing to 5.2% of GDP in 2022, and almost covered the surging deficit. External debt amounted to 84.3% of

⁹ The IMF's first review of the PLL program has been delayed from April 2023, mainly as the IMF is seeking more clarity on the fiscal implications of the (single-sourced) contract with the US-Turkish consortium Bechtel-Enka to build a EUR 1.6 billion (around 10 percent of GDP) highway section of Road Corridor 8/10d.

GDP at end-2022 (+2.3 percentage points (pps) year on year), with long-term debt accounting for the bulk of the total (70%). The increase was largely due to a rise in private intercompany lending, which is an important instrument for improving liquidity for foreign-owned companies in the country. About 40% of total external debt is made up of intercompany loans and trade credits, which is a less risky and more flexible category of debt.

Foreign reserves have more than recovered following pressures in the first half of 2022.

Exchange markets dropped sharply in the first half of 2022 (-14% year on year at end-June 2022), mainly on account of increased conversion of domestic denar-denominated savings into euro-denominated deposits, surging energy imports, and high external debt payments. Subsequently, however, the exchange markets stabilised, supported by a good tourism season in 2022, external market borrowing, including a EUR 250 million private placement of government securities in Germany in September 2022 and a EUR 500 million Eurobond issuance in March 2023, as well as the disbursement of the first instalment from an arrangement under the IMF's Precautionary and Liquidity Line (PLL). Inflows from foreign direct investment surged in 2022, catching up after a pandemic-related trough, but became more muted in 2023 so far. Foreign reserves declined again with the government's redemption of the 2016 Eurobond in July 2023. At the end of August 2023, they stood higher by 26% y-o-y, corresponding to around 4 months of prospective imports. The denar has remained in a stable, *de facto* pegged exchange rate regime with the euro.

Monetary policy was appropriately tightened in view of persistent inflation. Annual average inflation in 2022 was at a record high of 14.2%, driven by the global energy and food price shock. The annual inflation rate peaked at 19.8% in October 2022, which was more than in peer countries in the region, before abating gradually to reach 8.3% in August 2023. Core inflation, however, has remained persistent, reflecting the high transmission from the recent energy price hikes into core sectors of the economy such as industrial production, transport, and hotels and restaurants. Appropriately, the central bank continued its tightening of monetary policy throughout 2022 and beyond. It raised the policy rate by 495 basis points in ten consecutive steps between April 2022 and August 2023, to 6.15%, thereby increasing the spread to the European Central Bank (ECB) policy rate. Furthermore, it adjusted reserve requirement rates, both in June and September 2022, and again in August 2023, to disincentivize shifts into euro deposits, that were a significant factor behind the drop in foreign reserves in early 2022. It also eased reserve requirements for bank lending for renewable energy projects. A 2020 repo line from the ECB, intended to provide Euro liquidity to the central bank, was extended in 2022. Concerns about the operational independence of the central bank persist, as the central bank has not been exempted from the draft laws on administrative servants and the Law on public sector employees. Overall, the monetary policy stance has been in line with current economic fundamentals, responding to market expectations of further rising inflation, while mitigating the negative impact on the economy stemming from the pandemic and the energy crisis.

An inflation-driven boost to tax revenue and under-execution of expenditure underpinned the lower-than-projected budget deficit in 2022.

The fiscal deficit came in at 4.5% of GDP, down from 5.4% in 2021 and remaining below the revised target of 5.3% of GDP adopted in the July 2022 budget revision. Central government revenue rose by 11.3% compared with 2021, driven by a 22.4% surge in VAT receipts. Current expenditure increased by 6.9% in 2022, which was less than the 8.3% increase in total expenditure. At 89.2% of budget, implementation of capital expenditure was higher than the average for the previous 5 years. The government has phased out some untargeted support measures. VAT on electricity for households was raised from the reduced 5% rate to a still reduced 10% on

1 January 2023¹⁰ and was normalised to the standard rate of 18% from 1 July. Several expenditure categories, most notably transfers to the state-owned electricity company, ESM, and capital expenditure, on the other hand, were heavily under-implemented in 2022. In January-July 2023 the budget deficit stood at 2.9% of the projected full-year GDP, with a weak performance on the revenue side from VAT, in particular. In July, the government raised public sector wages by 10%, effective from September 2023, and subsequently adopted a budget reallocation in order to accommodate the additional expenditure within the initial deficit target of 4.6% of GDP. In the 5 years preceding the pandemic, the general government fiscal deficit declined each year, in terms of GDP, partly on the back of under-execution of budgeted capital expenditure, before jumping to 8.2% of GDP in 2020 as the COVID-19 crisis hit public finances. The revenue ratio has remained largely unchanged at a relatively low level (2022: 30.6%) in the past 5 years, suggesting the need to take further measures to increase public revenue. The expenditure structure remains dominated by transfers to the pensions fund (2022: 28% of total expenditure), where a recent policy reversal back to linking annual pensions increases to both prices and average wages, has further exacerbated the financing pressures.

Inflation helped lower the public debt to GDP ratio in 2022 which however remains well above pre-pandemic levels. After having increased by some 10 pps to more than 50% in

2020, the general government debt-to-GDP ratio stabilised in 2021, and subsequently posted a slight decline in 2022 (-1.1 pps year on year to 50.9% of GDP). The public debt ratio dropped by more (-1.2 pps), to 59.8%, reflecting a decrease in the debt of public enterprises. Still, in nominal terms, the debt stock gradually increased further also in 2022 and in the first half of 2023. At the end of

June 2023, the general government debt level was higher by 19.3% compared to end-21. The share of fixed interest rate debt in total debt remained high throughout 2022 (74% at end-year) but stood somewhat lower than one year earlier (-1.3 pps). External debt accounted for some 60% of total general government debt at the end of 2022, the same as in 2021. Foreign currency debt, mostly denominated in euro (92% of total foreign currency debt), accounted for 76% of total debt (also unchanged year on year). The de facto exchange rate peg to the euro limits debt vulnerabilities stemming from fluctuations in the value of the denar. In March 2023, the government successfully issued a Eurobond, its ninth since 2005, for EUR 500 million, for refinancing the 2016 Eurobond (EUR 450 million) repayment in July 2023. The country has a proven track record of timely debt repayments.

The fiscal framework has been strengthened through a new Organic Budget Law (OBL), but deficiencies in public finance management remain. In September 2022, Parliament passed the OBL, which provides for the introduction of fiscal rules and a fiscal council and strengthens the medium-term budget procedure. Key provisions, such as the fiscal rules, are due to enter into force in 2025. Preparations for setting up the new fiscal council are advancing, with the members of the council nominated and appointed by Parliament in September 2023. However, the adoption of by-laws, which is necessary for the full implementation of the OBL, is not progressing. Furthermore, shortcomings in revenue

¹⁰ The planned increase from 5% to 10% had been postponed from July 2022 to January 2023.

collection and a large number of tax exemptions eroding the tax base hamper a potential increase in public revenue ratios. In December 2022, the government adopted tax policy reform measures in the areas of personal income tax, corporate income tax, and value-added tax, with a view to broadening the tax base. While amendments to the Law on Personal Income Tax entered into force in January 2023, amendments to the Law on Corporate Income Tax, to the Law on Value Added Tax, as well as a new Law on the Solidarity Tax were adopted by Parliament only in September 2023¹¹. Implementation of measures to improve the planning, allocation and execution of public investment projects, as presented by the government in its 2021 Action Plan, is progressing only slowly, hampered by staff shortages and IT requirements. The government set up a dedicated unit for public investment management in the Ministry of Finance in December 2022, to ensure centralised oversight of public sector investment, but it still has to become fully operational.

Fiscal risks are sizeable and not always well monitored. Risks to the government's fiscal consolidation plans have increased, notably from the government's March 2023 contract with the Bechtel-Enka consortium for the construction of part of Road Corridor 8/10d. The project is expected to cost EUR 1.3 billion (10% of 2022 GDP) and to be completed over a 6-year period, with EUR 215 million (1.7% of 2022 GDP) earmarked in the 2023 budget. A special law that replaces standard public procurement rules for this project has been adopted and enacted by Parliament. To solidify the fiscal cost and manage fiscal risks, in particular recent rises in construction costs and uncertain cost evolution of the project, the IMF requested the authorities to provide an independent due diligence study as a structural benchmark under the 2022 precautionary and liquidity line for North Macedonia, which is delayed. Further fiscal risks stem from expenditure arrears, which remain consistently above 3 percent of GDP, as well as from public sector wage growth, and the July 2023 decision by the government to link future rises in public sector wages to average wage growth, in addition to price developments. The rising pensions bill poses further risks to fiscal sustainability, also exacerbated by the recent change in the indexation formula. The steep rise in minimum wages (+12% as of April 2023), in line with the new methodology for alignment adopted in 2022, further impacts on general wage and pension developments. Some fiscal risks, such as contingent liabilities arising from PPPs and other off-budget entities are not systematically reported to the central government¹².

The policy mix has been somewhat inconsistent, in addressing the challenges posed by the cost-of-living crisis and high energy imports, but financial and macroeconomic stability was secured. Monetary policy was appropriately tightened in view of soaring inflation, and measures to promote savings in domestic currency ('denarisation') were stepped up, which contributed to the stability of the exchange rate. Fiscal support to households and companies, on the other hand, could have been better targeted and fiscal consolidation plans could be more ambitious, also in order to help monetary policy to contain inflation. Energy subsidies remained large, against the background of falling market prices. Furthermore, the government's decision to revise the indexation mechanism of public wages and the minimum wage from 2024 is likely to fuel domestic price pressures and put at risk fiscal consolidation plans. Further improvements in the fiscal framework, such as monitoring and addressing fiscal risks and improving public investment management, would make a

¹¹ Furthermore, in August 2023, the government passed tax base-broadening amendments to the Excises Law, with parliamentary adoption still pending. These changes include the introduction of ad-valorem excise for cigars and cigarillos at 9 percent and the introduction of the new excise calendar that envisages a gradual increase of specific excises over time.

¹² There is a requirement in the new Organic Budget Law for the government to include a description of fiscal risks (at a minimum those pertaining to the government's contingent liabilities) in the annual fiscal strategy; and for the Fiscal Council to assess fiscal risks relating to various public entities, including public enterprises and public-private partnerships.

significant contribution to further safeguarding macroeconomic stability and raising the economy's growth potential.

Functioning of product markets

Business environment

Challenges in the business environment are undermining the competitiveness of domestic companies, investment and global value chain integration. North Macedonia's economy relies heavily on its integration in global value chains, in particular in the automotive sector, with export-destined production concentrated among a few firms. The reliance on imported inputs makes the economy vulnerable to external shocks. These competitive pressures are exacerbated by low productivity, partly stemming from a lack of skills and from sluggish adoption of innovation and new technology, as well as by a complex legal and regulatory environment and the large informal economy. The impact of the COVID-19 pandemic and Russia's invasion of Ukraine has intensified these structural challenges. The government's approach to simplifying the business environment is not sufficiently systematic and consistent.

The government has progressed somewhat in streamlining the array of parafiscal charges. Activities to optimise, consolidate and streamline parafiscal charges are ongoing. The government has tasked the Ministry of the Economy with coordinating the process, but the decision to streamline 100 selected parafiscal charges will have to be adopted by the government as a whole. Implementation of other key measures to improve the business environment is protracted, such as implementation of the 2019 Law on inspection supervision and implementing transparent and consistent procedures for inspections. The new Bankruptcy Law, intended to facilitate market exit by reducing the cost and duration of procedures, has not yet been adopted. The use of fast-track procedures for public consultation has not abated, while quality control and *ex post* follow-up to consultations remains deficient. Work is ongoing to upgrade the e-portal in order to develop a more user-oriented service delivery. The number of registered users and completed services on the portal is increasing, but remains below expectations. Many of these services remain purely informational and cannot be fully performed online (OECD, 2022).

Challenges posed by the large informal economy are not addressed in a decisive manner. The informal economy continues to present a major obstacle to business operations. According to IMF estimates, it likely accounts for as much as 38% of GDP¹³. The number of informal employees as a proportion of total employees is estimated to have decreased from 18.6% in 2018 to 13% in 2022. Implementation of the government's 2018 Strategy and Action Plan to combat the informal economy remains sluggish, particularly regarding the formalisation of undeclared workers. In October 2022, to enable more efficient coordination between relevant institutions and stakeholders, the Ministry of Finance took over responsibility for preparing the new 2023-2027 Strategy for Formalisation of the Informal Economy with an Action Plan which were adopted by the government in September 2023. The government adopted tax legislation at the end of 2022 to strengthen the tax-paying culture and thereby fight the informal economy. The country's informal sector takes various forms, of which the most prominent are unregistered labour, partially undeclared wages and other irregularities in the enforcement of the Labour Relations Act.

State influence on the product market

The transparency and efficiency of State aid remains deficient. Instead of tackling the

¹³ The IMF figure is at the upper range of estimates.

country's underlying structural challenges and business environment issues, the government's flagship policy to attract FDI and improve domestic firms' competitiveness relies on providing various forms of State aid to businesses. The effects of State aid on efficiency and competition have not yet been assessed. The transparency and effectiveness of State aid is affected by the high number of State aid providers, the lack of an updated registry, and the still marginal powers of the Commission for the Protection of Competition in State aid supervision. The public information provided by the government on State aid to companies remains incomplete and the criteria for the selection of beneficiaries are often unclear. As a precondition for the establishment of a State aid registry, the government is setting up a management information system connecting different institutions, but overall, the process is delayed. There is no strategy for properly determining priorities, goals and policies for investment activities in the country's technological industrial development zones.

Competition in the energy market is increasing. While the energy market was fully liberalised in 2019, almost all households and small companies remain in the regulated electricity market being provided with heavily-subsidized electricity. In the last quarter of 2022, 24 639 consumers (per metering point) purchased electricity from active suppliers in the open electricity market, according to mutually agreed (unregulated) prices. This makes up about 55% of the market, compared to some 53% at the end of 2019. In 2022, there were 18 electricity suppliers in the open market and one electricity supplier in the regulated electricity market. An increasing number of consumers have been switching electricity suppliers. In 2019, 2 350 consumers switched supplier. In 2020, that figure rose by 10.8% to 2 603 consumers, in 2021 by a further 37.1% to 3 568 consumers and in 2022 by 11.7% to 3 986 consumers.

Privatisation and restructuring

The public sector's stake in the economy remains low. In 2022, the number of companies in full-state ownership declined by two, to 15, compared to the preceding years. The number of companies in partial ownership decreased by one, to 38, most of these with a state ownership share of below 1% of issued capital¹⁴. The total value of state ownership in enterprises was unchanged, at about 10% of GDP. There are currently no plans for further privatisations.

Functioning of the financial market

Financial stability

Bank capitalisation and profitability have improved since the pandemic. The banking sector remained resilient throughout the recent crises. Banks' capital adequacy ratio increased further in 2022, and in December 2022, it was well above its level of 5 years earlier, far exceeding the regulatory minimum. Liquid assets accounted for over a third of total assets at end-2022 and covered more than half of short-term liabilities. At 12.2%, return on equity was above its pre-pandemic level at end-2019 (11.7%). The proportion of loans to the non-financial sector which were non-performing has been steadily decreasing since the end of 2013, to a record low of 2.8% at the end of 2022 (-0.2 pps year on year). However, financial diversification is progressing slowly, with banks still accounting for some 79.1% of financial sector assets at end-2021, only slightly lower than the end-2016 figure (84.7%). The share of foreign equity in total bank equity has been consistently high in the past 5 years, at about

¹⁴ The figures are based on information from the government. A new harmonised and internationally standardised global database of state-owned enterprises (SOEs) by the World Bank indicates that there are 88 SOEs, of which 35 are 100% owned by the government of North Macedonia.

75%.

The legal and institutional framework for ensuring financial stability has been strengthened. In July 2022, the new Financial Stability Law was enacted, giving the relevant authorities in the financial sector a legal mandate to develop and implement macroprudential measures to maintain the stability of the financial system. The Law sets up the Financial Stability Council, which held its first meeting in November 2022 and submitted the first annual financial stability report to Parliament at end-March 2023. In February 2023, the Council of the National Bank adopted a new decision on the credit risk management methodology, so as to strengthen the management of non-performing and restructured loans, due to enter into force on 1 January 2024. In August 2023, the National Bank's decision to increase the countercyclical capital buffer to 0.5%, adopted in July 2022, entered into force. The National Bank has already scheduled increases in the countercyclical buffers to 0.75 by 2024Q2 and to 1% by 2024Q4. However, critical legislation including the Bank Resolution Law and the Deposit Insurance Law is not yet enacted by Parliament.

Access to finance

Growth in credit to the private sector decelerated, while deposit growth remained robust. Annual growth in loans to households and non-financial companies has also been decelerating since autumn 2022, with corporate loans particularly affected. Lending to nonfinancial corporations slowed down mainly on account of repayments of working capital loans linked to the surge in energy costs. Even so, over 2022 as a whole, private-sector credit growth accelerated by 3.8 pps to 9.6% year on year, before slowing in the first quarter of 2023 to 8.3%, and further to 6.4% in the second quarter. Foreign exchange loans are contributing most to the annual increases. The proportion of loans that were foreign-denominated rose by 0.8 pp year on year to 43.2% in the first quarter of 2023. The increase was more pronounced in the corporate sector, partly because corporations needed extra liquidity to cover their energy purchases. Overall, however, the currency denomination of domestic credit shifted further towards denar-denominated loans in the latter part of the year. While household demand for foreign currency deposits strengthened throughout the pandemic and energy crises, deposits in national currency have rebounded since early 2023, supported by the central bank's strategy of applying different reserve requirements for bank deposits in foreign and local currency. The share of foreign currency-denominated in total bank deposits amounted to 46.7% at the end of the first quarter 2023 (-0.7 pp year on year).

Functioning of the labour market

The labour market's resilience masks persistent structural problems. While fiscal support to employers was gradually withdrawn in the second half of 2022, the labour market continued to prove resilient. The employment rate has steadily increased over the last decade. The COVID-19 pandemic interrupted this trend, but in the first quarter of 2023 the employment rate stood above the pre-pandemic level, at 56.5%. For 2022 as a whole, the average unemployment rate (15-64 age group) was 14.5%, compared with 15.6% in 2021. The labour force decreased by 1.3% year on year, with the bulk of the drop accounted for by women (-2%, compared with 0.8% for men). The labour market participation rate dropped to 66.4% in 2022 (-0.4 pps year on year). Young people in particular continue to

face obstacles to entering the labour market. In 2022, the government adopted a new implementation plan to strengthen the Youth Guarantee which has been in place since 2018 and which has contributed to a significant reduction in youth unemployment from 45.4% in 2018 to a still high 32.5% in 2022. The rate of inactivity in the labour market is particularly high for women and, after steadily narrowing between 2014 and 2019, the gender gap widened for the third year in a row in 2022 (by 0.8 pps to 24.1 pps.), as the participation rate for men remained stable (at 78.4%), while it dropped for women (to 54.3%). Long-term unemployment stands at around 80% of total unemployed, largely reflecting an entrenched skills mismatch. Spending on active labour market policies (0.3% of GDP in 2022) is relatively high in regional comparison, but lower than the EU average (0.6% of GDP). Given limited human and financial resources in employment agencies, the government faces the challenge of better targeting the vulnerable unemployed, with a view to their participation in the labour market. Average gross nominal wages rose by 11.1% in 2022, with the annual increase accelerating to 14.3% on average in the first half of 2023. Real wage growth turned positive as of April 2023 after raising the minimum wage according to the indexation mechanism that takes into account inflation and changes in average wages. The average tax wedge is regressive at the bottom of the income distribution: the average contribution rate therefore takes a much higher share of low-wage earners' total income.

2.3.2. The capacity to cope with competitive pressure and market forces within the Union

North Macedonia has made **some progress** and is **moderately prepared** to cope with competitive pressure and market forces within the EU. Integration with the EU in trade and investment remained at a high level in 2022. The share of high-value products in exports increased further and trade openness surged to a record high. There was further progress towards improving vocational educational training (VET), but major skills shortages persist relative to labour market needs, entailing long school-to-work transitions. These, coupled with large gaps in transport and energy infrastructure and low investment and innovation funding, are restricting potential growth. Digitalisation of the economy is advancing, but the competitiveness of domestic businesses could be improved through a wider offering of public e-services.

As the 2022 recommendations have not been fully implemented and remain mostly valid, North Macedonia should in particular:

- adopt the new Law on VET, the Law on secondary education and the Law on adult education, and increase financial and human resources to speed up reforms of the VET system;
- finish unbundling gas transmission systems, increase investment in new energy sources and enhance administrative capacity in the Energy Department of the Ministry of Economy and the Energy Agency;
- adopt secondary legislation under the Energy Efficiency Law and operationalise the energy efficiency fund; adopt the Law on biofuels and the energy efficiency renovation strategy for buildings; and establish a renewable energy guarantee of origin scheme.

Education and innovation

Progress in reforming education curricula and reducing skills mismatches is hampered by lack of funding and capacity. While North Macedonia has progressed well in terms of the number of people with higher education qualifications, curricula are not well suited to equipping graduates with skills to match labour demand. State financial support for education

is insufficient and coordination between the education sector and businesses is weak. In 2022, public spending on education and training amounted to 3.7% of GDP, about the average of the preceding 5 years. This is below both the EU-level (5%) and peer-country averages, and impedes implementation of the 2018-2025 education strategy. Moreover, spending is inefficient, mainly on account of outdated formulas for the redistribution of public education funds by the municipalities. There was substantial improvement in the 2018 PISA ranking¹⁵, compared to 2015, but the country still ranks in the lowest quartile. VET curricula have been under review since 2019 to align them with labour market needs. However, the government has not yet adopted a new VET Law with a focus on inclusion, labour market needs and a new methodology of financing VET. The envisaged annual report on the implementation of the education strategy, which should include recommendations for a new formula for higher education funding, has not yet been published. The percentage of adults participating in learning was 2.6% in 2020, which is significantly below the EU-27 average of 10.8% (2021). Further development of qualifications is key to bringing medium-skilled and low-skilled people into the labour market.

Innovation activity remains overall low. At 0.4% of GDP (including a small share from the private sector), the economy's expenditure on research and innovation remains significantly below the EU average. Participation of the private sector in overall research spending remains particularly weak, at 0.1% of GDP. Allocations to the Fund for Innovation and Technological Development and its programmes have increased, but their effectiveness, design and methodology could benefit from an independent evaluation. Links between businesses and others involved in innovation are very weak. To overcome the lack of strategic direction towards innovation, a smart specialisation strategy has yet to be adopted and implementation measures to be developed.

Physical capital and quality of infrastructure

Investment spending remains moderate despite a major need to increase physical capital. Gross capital formation (including inventories) rose to 35% of GDP in 2022 (+1.8 pps year on year), exceeding its pre-COVID level (2019: 34.5%). Investment in fixed assets (gross fixed capital formation) increased steadily in the 5 years to 2021 (latest data), when it reached 22.5%. This is above the average of 21.9% in the preceding 5 years, and close to the EU-27 average of 22.8% (2022). Investment in construction as a percentage of total investment in 2021 (55.2%) was down on its 5-year average (58.2%), while investment in machinery and equipment rose to 35.3% of total investment, above the average (32.8%). The share of private-sector investment in total investment remained steady in the 5 years up to 2021, at around 75%. In the face of the current energy crisis and protracted works on a number of major road and rail projects, the need to modernise the country's capital stock, in particular the transport and energy networks, appears ever more pressing.

Regional transport connectivity is progressing slowly. Road transport continues to dominate the transport sector. There is limited investment in other means of transportation and no consistent and intelligent system for managing and controlling traffic. Relatively low-quality transport infrastructure, as well as weak trade and transport logistics continue to present barriers for businesses. The joint electronic toll collection system between Serbia and North Macedonia has become operational, facilitating trade and travel between the two countries. There has been some progress on upgrading major road sections to highway level. Work has started on Railway Corridor VIII, which aims to link North Macedonia with Albania and Bulgaria and will give the country's companies an alternative export option via

¹⁵ PISA is the OECD's Programme for International Student Assessment.

Albanian and Bulgarian ports.

The digitalisation of the economy continues to advance, but is still at a low level compared with the EU. The percentage of households with internet access at home increased by 10.1 pps. between 2017 and 2021, to 83.6%. A fixed broadband connection to the internet is used by 88% of household users, and by 92% of businesses with 10 or more employees, but smaller companies still face obstacles. Of the total number of enterprises, 54.5% had a website/homepage. Overall, there is a particular need to increase access to broadband, expand e-government services and develop digital skills.

The government is taking steps to incentive investment in energy efficiency improvements in the public sector. The economy is characterised by high-energy intensity with low efficiency in energy production and consumption. North Macedonia is a contracting party to the Energy Community Treaty and its government has committed to reducing the use of energy, which requires substantial investment. Further improving energy efficiency, including in residential and public buildings, is also important to lower the economy's dependence on energy imports and to enable a reduction in fiscal subsidies for energy. Yet, implementation of the 2020 Law on Energy Efficiency and the adoption of by-laws is lagging behind. In order to support energy efficiency investments in the public sector, which has the greatest potential to improve energy efficiency, the government is establishing an Energy Efficiency Fund (EEF). At the end of 2022, the government decided to establish the EEF within the Development Bank. The legal and regulatory framework for its establishment and operationalisation requires amendments to the Law on the Development Bank, which have been adopted by the Parliament in October 2023. Rules of procedure of the Fund and a project pipeline remain to be established.

The legal framework for investment in renewable energy sources was improved. Electricity generation is highly dependent on coal, and, with domestic coal reserves declining, on imports. The proportion of energy from renewable sources remains comparatively low, at 17.3% in 2021. The government plans to increase renewable energy to 35-45% of energy consumption by 2040, to reduce the country's high reliance on imported liquid fuel and natural gas. In November 2022, Parliament enacted amendments to the 2018 Energy Law incentivising investment in renewable energy sources, notably solar power. At the same time, the central bank began implementing a measure to encourage lending to the corporate sector to finance domestic electricity production projects from renewable sources.

The distribution of natural gas remains limited. Meanwhile, the distribution of natural gas is advancing, as an intermediate step in the decarbonisation process, with efforts made to enhance the transmission and distribution network. The natural gas market was liberalised in 2015. The number of connected users remains limited; in 2022, it increased by 10% year on year, to 550. Similarly limited are the length of the transmissions network (+5% year on year to 210 km) and the total distributed quantities. Gas accounts for some 11% of electricity production. There was little progress in the unbundling of the gas transmission system operator, now planned for end-2023. The work to connect to regional gas pipelines is making slow headway. Works on the gas interconnection with Greece have not yet started. This project would support diversification of natural gas sources and facilitate access to transit pipelines.

Sectoral and enterprise structure

The diversification of the economy continued after the pandemic. The economy's output is strongly reliant on the manufacturing sector. Services and trade have only gradually increased their share in value added in recent years. Together, they accounted for some 66%

of total value added in 2022, about the same as a year earlier, and up from 60.4% in 2016. The share of manufacturing decreased slightly for the second year in a row, to 14.6% of value added in 2022, having progressively gained ground in the pre-pandemic years. The share of construction increased somewhat, in annual comparison, in 2022, to 6.2%, reflecting a recovery of investment after the pandemic, yet remaining below its average of 7% in 2017-2021. After steadily dropping over a number of years, the share of agriculture remained at 9% of value added, as in 2021.

Trade and services increasingly dominate the employment structure. In employment, too, trade and services assume an increasingly important role, accounting for close to 60% of total employment in 2022, compared with 58.4% in 2021. The manufacturing sector's share in total employment also rose in 2022, compared to the preceding year (+0.4 pps to 19.6 %), possibly reflecting in part the post-pandemic end of short working hour regimes and a pick-up in production. The construction sector accounted for 6.5 % of all employment, as in 2021, and the share of agriculture dropped by 1.8 pps year on year, to 10%.

Economic integration with the EU and price competitiveness

Trade openness increased steeply as both exports and imports surged. The economy posted a large increase in trade openness (exports and imports in goods and services as a percentage of GDP) in 2022, to a record high of 171% (2021: 148.5%, 2015-19 average: 120%), which is by far the highest level in the Western Balkans. Trade values increased by more than nominal GDP in 2022, largely reflecting the steep rise in energy imports, but also a large increase in export values. The share of higher-value added products in the export structure rose further in 2022, including chemicals (32% of total exports) and machinery and transport equipment (31%), at the expense of traditional exports such as iron and textiles (below 20%). In 2022, the EU was the country's most significant trading partner, accounting for 59.6% of total trade (78.3% of total exports compared with 77.3% in 2021 and 46.8% of total imports compared with 46.2% in 2021). As the second most important trading partner region, the Central European Free Trade Agreement accounted for 10% of total trade, with the share of exports slightly higher and the share of imports lower than in the preceding year (12.1% of total exports and 8.6% of total imports). EU countries also remain the biggest investors in North Macedonia, accounting for some 50% of total FDI inflows in 2022 (2021: 56%), but the EU-27 share in the total stock of direct investment has declined to 64% at end-2021, compared to 66% in 2015.

External competitiveness slightly deteriorated. In 2022, the real effective exchange rate (REER) of the local currency appreciated by 2.1%, on an annual basis, due to an increase in the nominal effective exchange rate in relation to the currencies of some of the trading partner countries, with relative prices remaining stable. The rise in real wages coupled with stagnant or declining productivity erodes price competitiveness. Nominal unit labour cost rose by some 7% in 2022, reflecting the stark increase in nominal wages, while productivity

growth remained muted. Over the last 5 years, the REER of the denar deflated by inflation has seen little change in either direction (on average a small appreciation of 1%). Concerns over external competitiveness have increased as wage growth has accelerated, fuelled by the 12% hike in minimum wages starting from April 2023¹⁶.

2.4. PUBLIC PROCUREMENT, STATISTICS, FINANCIAL CONTROL

Chapter 5: Public procurement

EU rules ensure that the public procurement of goods, services and works in any Member State is transparent and open to all EU companies on the basis of non-discrimination and equal treatment.

North Macedonia is **moderately prepared** in the area of public procurement. **Limited progress** was made in the reporting period. The capacity of key institutions, contracting authorities and economic operators should be increased through continuous training. National authorities should introduce more effective anti-corruption measures across the procurement cycle. The direct award of the contract for the construction of Corridor VIII and X-d raises concerns as it exempts the project from applying the law on public procurement.

The recommendations from last year's report were not fully implemented and therefore remain valid. In the coming year, the country should in particular:

- adopt the public-private partnership law and the law on concessions, to further align the legal framework in these areas with the EU *acquis*;
- improve coordination among key stakeholders and strengthen their capacity to implement the principles of transparency, free competition, equal treatment and non-discrimination;
- further increase the use of 'most economically-advantageous tender' (MEAT) criteria for the award of contracts, and improve the monitoring of public procurement procedures through reporting and efficient follow-up of irregularities, conflict of interest cases and fraudulent practices.

Institutional set-up and legal alignment

The **legal framework** on public procurement is broadly aligned with the EU *acquis*. The practice of 'blacklisting' companies due to professional misconduct during the procurement phase continued, although this is not in line with EU rules. In 2022, 55 negative references were issued against 50 economic operators, of which 21 expired and nine were removed by the Public Procurement Bureau. By the end of 2022, 25 negative references issued in 2022 were active, as well as six negative references issued in 2018 and 2019.

The finalisation and adoption of the Law on PPP and the Law on concessions are still pending.

In March 2023, the government approved a contract for the construction of highway sections along Corridor VIII and X-d. The contract was directly awarded to an international consortium without a competitive procedure as the ad hoc Law on determining the public

¹⁶ Public sector wages were increased by 10 percent in September 2023, in addition to the linear increase as a result of the minimum wage increase in March 2023, as well as several separate decisions granting larger wage increases implemented in 2023. Higher average nominal wages accelerate the increase in pensions under the new indexation formula, thus creating additional demand pressures.

interest and the Law on nominating a strategic partner for the implementation of the project for the construction of infrastructure Corridor VIII and X-d adopted by the Parliament in 2021 exempts the project from the application of the law on public procurement. In May 2023, the Government submitted for adoption to the Parliament legal amendments that are necessary for the implementation of the project. These laws were labelled with the EU flag to fast-track the procedure although this was not an appropriate use of the procedure.

The 2022-2026 public procurement strategy is under way. According to the first monitoring report of 2022, 68% of the activities have been fully implemented, 8% are ongoing and 24% were moved forward to 2023. The Public Procurement Bureau (PPB) continued to modernise and improve the country's public procurement system and to enhance the system's performance and functionalities. However, the PPB's capacity, monitoring and control competencies need to be strengthened.

The Public Procurement Bureau and Ministry of Economy continued activities to accede to the WTO Agreement on Government Procurement (GPA). On 7 June 2023, the Committee on Government Procurement decided on the accession of North Macedonia to the GPA.

In 2022, a Memorandum of Understanding to exchange information and standardise procedures was signed between the Public Procurement Bureau, the State Appeals Commission, the Commission for the Protection of Competition, the State Audit Office and the State Commission for Preventing Corruption. This should result in a more effective exchange of data and information with the objective of enhancing consistency and integrity in implementing the legal framework.

The capacity of the Ministry of Economy, the Ministry that deals with concessions and PPPs, remains limited. In 2022, only one new agreement establishing a PPP was concluded. The PPP register and the register on concessions still need to be set up.

The electronic system for public procurement is working efficiently. Despite the development of an e-marketplace platform and e-catalogues, procuring entities demonstrated little interest in using this system. In 2022, 70 small value procurements were concluded using e-market. Contracting authorities' annual procurement plans are regularly published on the electronic system for public procurement. The electronic archive module ensures the integrity of electronic procedures by keeping the documentation in original electronic form, while the e-complaints module provides for an electronic exchange of data with the appeals procedures.

Implementation and enforcement capacity

In 2022, the **public procurement market** amounted to 8.6% of the country's GDP as compared to 11% in 2021. It represented 25% of the state budget. The capacity of both central and local contracting authorities needs to be strengthened.

On the award criteria used in public procurement procedures, the use of 'most economically-advantageous tender' (MEAT) is still limited. In 2022, only 1 383 procurement notices out of 22 901 applied MEAT criteria (6.03%). There is a need for organisation of continuous training of contracting authorities on how to apply this criterion.

Contract award and implementation monitoring shows that the use of negotiated procurement procedures (number of procedures) fell to 6.6% in 2022, from 8% in 2021. An assessment of the use of centralised procurement and framework agreements by the Public Procurement Bureau is under way. The proportion of the overall value of public procurement awarded to SMEs increased to 57% in 2022 compared to 53% in 2021. Tender cancellation (number of procedures) increased to 31% compared to 28.8% in 2021. In 2022 the average

number of bids accounted for three bids per tender procedure and approximately one third of contracts were awarded in tender procedures with a single bid.

Capacity to manage public procurement processes needs to be further enhanced, especially by local authorities, to ensure a more coherent approach in managing the procurement cycle. The quality of tender documentation remains a challenge for smaller contracting authorities.

The regulatory and institutional mechanisms on **integrity and conflict of interest** are still insufficient. There is no risk assessment system embedded in the procurement cycle to ensure timely information on possible corrupt practices or to flag irregularities.

Efficient remedy system

The legislation on the **right to legal remedy** is broadly aligned with the EU *acquis*. The **implementation capacity** of the State Appeals Commission is insufficient for handling the number of appeals (967 in 2022, 1 109 in 2021). Additional qualified staff are needed to ensure timely processing of the appeals. In the reporting period, 83 complaints were filed against the decisions of the State Appeals Commission before the Administrative Court.

On the **prevention of corruption**, the public procurement strategy includes measures to fight against corruption and conflict of interest. However, the follow-up of red flag reports published on the PPB's website is insufficient. The country should improve institutional coordination with the State Commission for Prevention of Corruption and law enforcement institutions to follow up on the findings of red flag reports.

Chapter 18: Statistics

EU rules require Member States produce statistics based on the principles of professional independence, impartiality, reliability, transparency, and confidentiality. Common rules are in place for the methodology, production and dissemination of statistical information.

The country is **moderately prepared** in the area of statistics. **Good progress** was made, in particular with finalising the publication of the population census data in December 2022. Improvements are noted in most statistical areas and in aligning sectoral statistics with EU standards, including better use of administrative sources. Continued efforts are needed to improve the scope and data quality underpinning macroeconomic and social statistics.

In the coming year, the country should, in particular:

- carry out the agriculture census by June 2024;
- urgently ensure adequate staffing and sufficient financial resources for the State Statistical Office;
- continue to improve macroeconomic statistics, notably by enhancing consistency, timeliness and coverage of excessive deficit procedure and government finance statistics and by further aligning financial accounts and quarterly national accounts with the European System of Accounts 2010 (ESA 2010).

The **statistical infrastructure** has reached a high level of alignment with the EU *acquis* and international standards. In February 2023, the government adopted a new programme for statistical surveys for 2023-2027. Another main statistical producer - the central bank, remains fully committed to the European Statistics Code of Practice. The Ministry of Finance has yet to appoint a head of statistics. On quality management, in 2023 the State Statistical Office (SSO) introduced an internal quality audit to monitor the quality of products and processes. Human resources in the SSO have increased only slightly. However, the SSO's

annual budget for regular operations increased by 9.4% in nominal terms in 2023 compared to 2022, reversing the previous negative trend.

On **classifications and registers**, the main classifications comply with the EU *acquis* and are updated regularly. Progress was made in the use of administrative data for the development of an employment register. In June 2022, the SSO started to test the logical design of the new national statistical business register. Overall data submission to Eurostat has further increased.

The country made some progress on **macroeconomic statistics**. The SSO made very limited progress regarding the excessive deficit procedure (EDP) tables. The SSO transmitted EDP notification tables for North Macedonia to Eurostat in October 2022 and in April 2023. The latest submission included 2022 data (i.e. for the first time data for t-1). Significant further efforts are needed to improve the quality, consistency, coverage and timeliness of EDP tables and government finance statistics provided through ESA 2010 transmission programme. Moreover, to comply with ESA 2010 rules on sector classification, it is needed to reclassify without further delay inside the government sector a large public company with a substantial impact on government deficit and debt. For the quarterly accounts, tables on GDP by income approach were compiled and sent to ESTAT for publication in August 2023. However, further efforts are needed to ensure the completeness and quality of data submitted on quarterly national accounts.

Trade by invoicing currency (TIC) statistics for 2022 were submitted to Eurostat in March 2023 in line with the latest European Business Statistics Regulation requirements. In October 2022, the SSO began compiling quality reports in Eurostat's European Statistical System metadata handling tool. It also compiled quality reports on detailed data for 2020 and on TEC data (trade by enterprise characteristics - TEC) for 2019. 2020 TEC data are fully harmonised with the Methodological Manual for TEC statistics. In January 2023, these data were transmitted to Eurostat in SDMX format.

The central bank continued to transmit annual financial accounts stock data to Eurostat (data series 2013-2021, non-consolidated balance sheets only) and to prepare experimental quarterly financial accounts data (stocks and flows), and annual flows data by sub-sector and financial instrument. It produced and disseminated external sector data in line with the latest 6th BoP Manual (BPM6).

On **business statistics**, good progress was made. Regarding inward foreign affiliates statistics, data for 2020 were published in December 2022. In June 2023, the SSO carried out a third pilot survey on international trade in services statistics by geographical breakdown. Work on tourism satellite accounts (TSA) was completed. In September 2022, the first TSA data for 2019 was published and submitted to Eurostat. Based on the European business statistics requirement, the structural business statistics (SBS) compilation methodology improved, extending the coverage of activities, and refining the calculation of the variables and the technical format for the data transmission. An algorithm for calculating the basic variables for firms providing financial services was created and in October 2022, preliminary data for 2021 was sent to Eurostat. In March 2023, the final business data for 2021 were published. Work is under way to set up a 'complex enterprises' statistical unit. Regarding business demography, in June 2022 the SSO provided Eurostat with the complete set of data for 2020 as required by the Regulation.

Good progress was made on **social statistics**. The SSO published the 2021 population census data. Based on this census data, in June 2023 the SSO produced new time series of the population data at national level. Submission of the results of the survey on income and living

conditions has been delayed due to shortage of staff. The SSO started using administrative registers for education statistics. Crime statistics data for 2018-2021 were submitted to Eurostat in August 2023. In summer 2022, the SSO conducted a gender-based violence survey. The results were submitted to Eurostat but metadata are missing and the data are not disseminated. Labour force survey micro data and the 2020 labour cost survey data were not submitted to Eurostat during the reporting period.

Good progress is noted for **agricultural statistics**. In June 2022, the SSO carried out the pilot agricultural census. Preparations for the main agricultural census in 2024 need to be stepped up, including the legislative and budgetary framework. Data for fishery statistics were aligned to EU standards, published by the SSO and submitted to Eurostat in December 2022. For forestry statistics, the SSO assessed the data sources for the compilation of forestry accounts.

On **energy and environmental statistics**, in May 2023 monetary environmental accounts were compiled for the main tax categories as well as for expenditure on environmental protection. The scope of the environmental goods and services sector accounts was broadened. Moreover, physical energy flow accounts (PEFA) were compiled for each reference year between 2018 and 2020 using the 'PEFA builder'. Material flow accounts data were also regularly reported to Eurostat, although material flow balances are not yet included. The inclusiveness of energy balances data increased thanks to the inclusion of solar heat energy. Data collection for energy statistics improved thanks to the re-design and reduction of number of statistical surveys for data collection.

Chapter 32: Financial control

The EU promotes the reform of national governance systems to improve managerial accountability, sound financial management of income and expenditure, and external audit of public funds. The financial control rules further protect the EU's financial interests against fraud in the management of EU funds and the euro against counterfeiting.

The country is **moderately prepared** in the area of financial control. **Some progress** included the setting up of the Anti-Fraud Coordination Service Network, the adoption of the Organic budget Law and the Law on inspection, and the signature of a Memorandum of Understanding between the Parliament and the State Audit Office to strengthen follow-up on individual audit reports. On internal control and managerial accountability, the adoption of the public internal financial control (PIFC) Law has been delayed for more than two years. The efficiency of financial inspection needs to be strengthened. The independence of the State Audit Office is not yet guaranteed by the Constitution. The efficiency of parliamentary oversight of public funds and follow-up to audit recommendations needs to improve.

As last year's recommendations were only partially addressed, they remain valid. In the coming year, the country should in particular:

- adopt the new PIFC Law and related methodological tools and start to implement them to improve transparency, managerial accountability and sound management of public funds;
- adopt the draft state audit Law to strengthen the State Audit Office's (SAO's) independence, boost cooperation between the SAO and the Parliament, improve parliamentary scrutiny of individual audit reports and the follow-up of recommendations provided by SAO;
- ensure the efficient functioning of the Anti-Fraud Coordination Service Network (AFCOS) and improve the prevention, management and reporting of irregularities that affect EU funds.

Public internal financial control

PIFC initiatives are included under pillar VI of the 2022-2025 public finance reform programme. The implementation of the PIFC policy paper is included in the public financial management reform programme's annual monitoring report for 2022. The Organic Budget Law was adopted in September 2022 after a long delay but PIFC reforms continued to be undermined due to delays in adoption of the PIFC law and limited capacity of key institutions.

The legal framework for **internal control** is broadly harmonised with international standards. Its implementation needs to be further strengthened. Despite ongoing work to provide further guidance, the efficient implementation of **managerial accountability** remains a challenge for budget users at central and local levels. Coherent and consistent application of the manual on managerial accountability is yet to be ensured.

A new financial inspection Law was adopted by Parliament in January 2023 but **financial inspections** are not yet working efficiently. This will require strengthening capacity, further developing methodological tools and ensuring their implementation.

Fragmentation and inadequate staffing of the **internal audit** function undermine its organisational capacity and quality assurance. A national certification system for internal auditors still needs to be introduced.

The **Central Harmonisation Unit** (CHU) continued to coordinate financial management and control and internal audit in the public sector, and to provide methodological guidance. A new unit for quality check on the financial management and control and internal audit operations was established. However, the capacity of CHU remains insufficient. CHU currently has eight staff for monitoring and reporting on the functioning of the overall internal control system, which encompasses more than 1 300 public entities.

External audit

The current **state audit** Law is broadly harmonised with international standards. The new state audit Law aimed at strengthening the public sector's external audit function and increasing the SAO's financial and operational independence - not yet guaranteed under the Constitution, should be adopted. The SAO carries out a compliance audit on the final government accounts of the core budget by June each year. In 2022, the audit covered 82% of expenditure, which is an increase of 2% from last year. This included expenditure covered by the regularity audit for an amount of EUR 3 182 million EUR (i.e. 77%), expenditure covered by the performance audit for an amount of EUR 188 million (i.e. 4%), and expenditure covered by the compliance audit for an amount of EUR 39 (i.e. 1%).

The 2021 annual report on the audits carried out was adopted by the Parliament in March 2023 and published on the SAO's website. Its **quality** was deemed sufficient. In 2022, the SAO carried out the full audit work programme consisting of 188 audits, including 171 regularity (financial and compliance) audits, 10 performance audits, two IT audits and five compliance audits. Reports were sent to Parliament for deliberation and published on the SAO's website. The quality of the audit reports is acknowledged by local and international stakeholders.

Regarding its **institutional capacity**, a new 2023-2027 SAO development strategy and related action plan were adopted in September 2022. The strategy closely aligns with the priorities and measures set out in 2022-2025 public financial management reform programme. The SAO continues to work on the 2020-2023 human resources management strategy. The new SAO systematisation act, approved in December 2022, provides for 245

job posts, of which 114 or 46% are filled (104 audit staff, seven administrative support staff and three technical staff).. In 2022, SAO staff increased by one person. The SAO's 2023 budget was approved, and it has continued to implement the annual plan for the professional development and training of state auditors, to raise awareness of its activities among citizens and the media, and to implement the 2020-2023 communication strategy.

On the **impact of audits**, in 2022 some actions were taken in response to 80% of the audit recommendations. Cooperation between the SAO and the Parliament continued to improve and a Memorandum of Understanding between the two was signed in October 2022. Nevertheless, parliamentary scrutiny over budget preparation and implementation needs to be further enhanced. Transparency and accountability in the management of public funds needs to be strengthened. This will require efficient monitoring mechanisms by the executive and the Parliament and the effective implementation of audit recommendations.

To combat corruption, PIFC institutions and the SAO should strengthen cooperation with anti-corruption/law enforcement institutions. Moreover, monitoring systems should be strengthened and mechanisms to monitor the number of cases investigated, prosecuted and subject to court resolutions as a result of internal audits or inspections should be developed.

Protection of the EU's financial interests

Some progress was made in 2022 on the protection of EU's financial interests. The legal basis to formally establish the framework for the protection of EU's financial interests (AFCOS) was adopted in December 2022 and AFCOS' staff has been extended to five employees. National legislation is broadly aligned with the EU Directive on fighting fraud affecting EU's financial interests by means of criminal law. Amendments to the Criminal Code to further align it with the EU *acquis* were adopted by the Parliament in February 2023. The national 2022-2025 anti-fraud strategy and related action plan were adopted by the government in June 2022. The national authorities reported 85 cases of irregularities through the irregularity management system in 2022, of which one case was reported as suspected fraud. This is a further consolidation of the reporting trend of the last four years, which has seen a considerable improvement in comparison with previous years. The national authorities should continue their good cooperation with the European Commission on investigations.

Protecting the euro against counterfeiting

On **alignment with the EU *acquis***, national legislation is to some extent aligned with EU regulations setting out the system for fighting euro counterfeiting. Progress in the reporting period has been limited. The National Bank continued to improve its capacity by organising online trainings courses and by involving experts from all key institutions in capacity building.

The capacity of the Ministry of the Interior to prevent, detect and investigate criminal offences related to counterfeiting money, remain limited. An electronic system for exchange, processing, analysis and reporting of cases still needs to be set up.

3. GOOD NEIGHBOURLY RELATIONS AND REGIONAL COOPERATION

Good neighbourly relations and regional cooperation form an essential part of North Macedonia's European integration process. They contribute to stability, reconciliation and a climate conducive to addressing constructively open bilateral issues and the legacies of the past.

North Macedonia maintained its engagement in a number of regional initiatives such as the Central European Free Trade Agreement, the Energy Community, the Transport Community,

the South-East European Cooperation Process and the Regional Cooperation Council. North Macedonia also actively participated in initiatives such as the Central European Initiative and the Centre for Security Cooperation.

The **EU-Western Balkans Summit** in December 2022 took place for the first time in the region, in Tirana. The summit focused on the support to the region in the fields of energy and migration, and on youth cooperation, roaming, green lanes and overall progress on implementing the Economic and Investment Plan.

On the **Common Regional Market**, a political breakthrough was achieved at the Berlin Process Summit in Berlin in November 2022, where leaders adopted three mobility agreements respectively on higher education qualifications, on professional qualifications and on free movement with identity cards. North Macedonia has ratified all three mobility agreements and has deposited the related notification instruments. A number of important decisions agreed at the technical level within CEFTA remain blocked.

Overall, the country's cooperation and **bilateral relations** with other enlargement countries and neighbouring EU Member States continued to evolve positively.

Bilateral relations with *Albania* remained good. In November 2022, the governments of North Macedonia and Albania held a second joint session in Skopje, during which the two countries signed 21 bilateral agreements and memorandums of understanding for joint cooperation in a number of areas, including security, defence, infrastructure, energy, education, science and culture. Both governments agreed on three initiatives on Corridor VIII infrastructure of, the construction of a dry port in Struga, and the opening of the new Struga-Pogradec border crossing point. Albania and North Macedonia will also set up joint investigation teams in the fight against organised crime. The countries also agreed to pursue cooperation on defence, security, digitalisation, border control, improving child protection and the use of Albanian sign language in both countries.

Relations between the North Macedonia and *Bosnia and Herzegovina* continue to be good. The two Foreign Ministers met in the margins of the meeting of the Berlin Process and Foreign Ministers of the six Western Balkan countries in London. At the beginning of 2023, the Foreign Minister of Bosnia and Herzegovina paid an official visit to North Macedonia. Several bilateral agreements are in place, including on cooperation on EU integration.

Bilateral cooperation with *Kosovo* continues to be intensive and constructive, with several meetings held at the highest level. The President of Kosovo visited North Macedonia in April 2023. The Parliament of Kosovo set up a Group for Friendship with North Macedonia. The Speaker of the Parliament of Kosovo paid an official visit to North Macedonia in December 2022. In March 2023, the two Prime Ministers met in the margins of the Delphi Economic Forum.

Bilateral relations with *Montenegro* continued to be good. In February 2023, there were comprehensive political consultations between the Foreign Ministries of both countries at State Secretary level, focusing on bilateral, EU and NATO-related issues. In February 2023, the President of North Macedonia met with the Prime Minister of Montenegro in the margins of the World Economic Forum in Davos. The Foreign Minister held meetings with the President and Prime Minister of Montenegro in the margins of the Adriatic Charter meeting in March 2023. The two Prime Ministers met in the margins of the Delphi Economic Forum in March 2023. The two countries signed a Programme of Cooperation on culture for 2023-2026.

Bilateral relations with **Serbia** are good. The two Prime Ministers met in the margins of the Munich Security Conference and the Foreign Ministers met twice in the margins of other international events. In January 2023, the Serbian Defence Minister paid an official visit to North Macedonia, and the two Ministers of the Interior signed a Protocol on border controls at the joint Lojane-Miratovac border crossing point. In March 2023, the Prime Minister of North Macedonia visited Belgrade. During the visit, three memorandums of understanding were signed on measures promoting the movement of persons and goods, cooperation in the mining and energy sector, and a project to establish an interoperable electronic road tolling system. In April 2023, a memorandum of understanding on cooperation in EU integration was signed.

Relations with **Türkiye** are good. The two countries celebrated 30 years of diplomatic relations. The Chairperson of the Turkish Grand National Assembly paid a visit to North Macedonia in November 2022. In the wake of the devastating earthquake in the eastern part of Türkiye in February 2023, the government dispatched humanitarian aid, and soldiers and members of the Directorate for Rescue and Protection to provide aid. In February 2023, the two countries signed a memorandum of cooperation on youth and sports.

Relations with **Ukraine** have intensified since the beginning of Russia's aggression. North Macedonia declared support for Ukraine as a priority for its OSCE Chairmanship in 2023. North Macedonia supports the territorial integrity and sovereignty of Ukraine, condemning Russia's aggression against Ukraine. North Macedonia has provided humanitarian and military assistance and is fully aligned with the EU's package of restrictive measures against Russia. North Macedonia and Ukraine have agreements on trade, the protection of investments, culture, education, tourism, transport and military cooperation. A visa-free regime has been in place for short stays since 2019.

Relations with **Georgia** are good. In his capacity as incoming OSCE Chairperson-in-office, North Macedonia's Minister of Foreign Affairs met with his Georgian counterpart December 2022. An agreement on culture is in place.

Relations with **Moldova** are good. North Macedonia, through its chairpersonship of OSCE follows the Transnistrian settlement process. In his capacity as OSCE Chairperson-in-office, North Macedonia's Minister of Foreign Affairs travelled to Chisinau to address some of the challenges Moldova is facing, in particular the situation in Transnistria. Both countries have agreements in place on transport, trade, customs, finance, medicine and health, police, foreign affairs and consular matters. There is no visa-free regime between both countries.

During the reporting period, relations with **Bulgaria** focused on the next steps in North Macedonia's EU accession negotiations process and on the bilateral commitments under the Treaty of Friendship, Good-Neighbourliness and Cooperation and its Protocol. North Macedonia set up an inter-ministerial working group, chaired by the Minister of Foreign Affairs, to coordinate implementation of measures provided for in Protocol. Thematic sub-groups were also created on: hate speech; rehabilitation of victims of repression from the communist period; implementation of recommendations adopted by the Multidisciplinary Expert Commission on Historical and Educational Issues; and protection against discrimination. The Multidisciplinary Expert Commission on Historical and Educational Issues held several meetings during the reporting period. In October 2022, the President of North Macedonia paid an official visit to Bulgaria, and a month later the Foreign Minister went on an official visit to Sofia. In October 2022, the two Prime Ministers launched the construction works on the eastern railway segment of Corridor VIII in North Macedonia at a ceremony attended by several ministers from both countries. In December 2022, the two Foreign Ministers opened a bilateral business forum in Skopje. At the forum, four agreements

worth over EUR 3 million were signed by companies from both countries. Bilateral relations were negatively affected by statements made by individual politicians and by several incidents, in particular those relating to Bulgarian cultural clubs, to celebrations of historical events and historical figures, football events and to the denial of entry of citizens, including Members of the European Parliament. The relevant authorities in North Macedonia took some steps to address these situations, and, where necessary, establish accountability, including by launching investigations and bringing those responsible for criminal acts to justice. Further efforts are needed to promote an atmosphere of dialogue and mutual respect.

Cooperation with *Greece* intensified, particularly in key areas of mutual interest. Progress was made on implementation of the Prespa Agreement and further efforts should continue in this regard. Several meetings were held at Prime Minister and Foreign Minister level. In October 2022, the two Prime Ministers met in the margins of the European Political Community in Prague. In November 2022, the permanent mixed border commission held its 10th meeting. In December 2022, the Foreign Minister of North Macedonia paid an official visit to Greece, followed by a visit by the Deputy Prime Minister in charge of EU Affairs in January. The Greek Foreign Minister visited Struga in June 2023 to participate in the Prespa Forum Dialogue. The two countries intensified energy cooperation on the construction of the natural gas interconnector between North Macedonia and Greece.

4. ABILITY TO ASSUME THE OBLIGATIONS OF MEMBERSHIP

CLUSTER 2: INTERNAL MARKET

The internal market cluster covers: free movement of goods (Chapter 1); freedom of movement for workers (Chapter 2); right of establishment and freedom to provide services (Chapter 3); free movement of capital (Chapter 4); company law (Chapter 6); intellectual property law (Chapter 7); competition policy (Chapter 8); financial services (Chapter 9); and consumer and health protection (Chapter 28).

North Macedonia is moderately prepared in most of the areas covered by Cluster 2 on internal market, namely the free movement of goods, services and capital, intellectual property, competition policy, financial services and consumer and health protection. The country has achieved a good level of preparation on company law, although it is still at an early stage on freedom of movement for workers. In the reporting period, North Macedonia made good progress on free movement of capital and some progress on financial services and on consumer and health protection. Limited progress was made on the free movement of goods, rights of establishment to provide services. No progress was made on company law, intellectual property law and competition policy and freedom of movement for workers.

Overall, more progress is needed in the coming year in the areas covered by this cluster as it will feed into the preparations of North Macedonia to meet the requirements of the EU's internal market. Work on this cluster is highly relevant for the development of the Common Regional Market.

Chapter 1: Free movement of goods

The free movement of goods ensures that many products can be traded freely across the EU based on common rules and procedures. Where products are governed by national rules, the principle of the free movement of goods prevents these creating unjustified barriers to trade.

North Macedonia is moderately prepared on the free movement of goods. Although national legislation allows products to be traded freely, alignment with the latest EU <i>acquis</i> needs to be intensified. Limited progress was made on last year's recommendations by the
--

adoption of two laws to align with the EU General Products Safety Directive. Most of last year's recommendations therefore remain valid.

In the coming year the country should, in particular:

- adopt the Law on market surveillance and the implementing legislation necessary to complete the alignment with the EU General Products Safety Directive, and start to significantly increase the human resources that ensure market surveillance;
- prepare and adopt a new action plan to eliminate non-tariff barriers to trade and ensure compliance with Articles 34-36 of the Treaty on Functioning of the European Union (TFEU);
- finalise and adopt a strategy for the free movement of goods to ensure further alignment of national legislation with the relevant EU *acquis*.

General principles

The country has set up the institutional framework for the **production, distribution and marketing of industrial products**. A new Law on technical requirements and a Law on general product safety designed to align with the relevant EU *acquis* were adopted, but the relevant implementing legislation has not yet been adopted. A new Law on market surveillance also needs to be adopted.

Non-harmonised area

The follow-up and implementation of compliance with **Articles 34-36** TFEU is ensured by the Ministry of Economy. The Ministry has completed a screening of the national legal framework to identify areas not compliant with these articles. The drafting of an action plan for the elimination of non-tariff barriers to trade and to ensure compliance with Articles 34-36 TFEU is under way. This should be completed, adopted, and implemented.

Harmonised area: quality infrastructure

The necessary institutional and legal structure for technical regulations, standards, conformity assessment, accreditation, metrology and market surveillance is in place. The National **Standardisation** Institute is a full member of the European Committee for Standardisation (CEN) and the European Committee for Electro-technical Standardisation (CENELEC), and participates in the work of relevant EU standardisation bodies. It adopted 24 953 European standards as national standards and adopted 84 national standards.

By June 2023, North Macedonia had 19 active **conformity assessment** bodies for calibration, testing, medicinal laboratories, product and process certification and inspection. The Institute for **Accreditation** of the Republic of North Macedonia is a member of the International Accreditation Forum, of the European co-operation for Accreditation (with which it has signed a Multilateral Agreement) and also party to the Mutual Recognition Agreement of International Laboratory Accreditation Cooperation (ILAC). It ensures the accreditation procedures for testing, calibration and medical laboratories, product certification bodies, and inspection bodies. There is no national accreditation scheme for the certification of personnel and for skills testing.

The Bureau of Metrology, the national **metrology** body, is an official member of the European Association of National Metrology Institutes and the General Conference on Weights and Measures. It has well equipped calibration laboratories for mass, temperature and relative humidity, length and angle, pressure, volume and flow, time and frequency, electrical quantities, acoustics and vibration and one laboratory for testing the quality of

fuels. All accredited laboratories are signatories to the European Accreditation Multilateral agreement.

The State Market Inspectorate (SMI) is the **main market surveillance** body, along with the State Technical Inspectorate and the State Sanitary Inspectorate. There is also a coordination body for market surveillance. In 2022, the SMI carried out 539 inspections under the general **product safety** law (up from 428 in 2021) and 168 under the construction products law (up from 20 in 2020). This led to 59 harmful products being taken off the market, in particular textiles and toys. The Inspectorate has 257 employees, but an insufficient number of licenced inspectors (151). There is no efficient software system for market surveillance document management in place, including for the recording of inspection results or proper risk planning and management.

Harmonised area: sectoral legislation

On **‘new and global approach’ product legislation**, the level of alignment with the EU *acquis* remains low. No progress was made on aligning with the relevant EU *acquis* during the reporting period. Since January 2023, 10 Eurocodes with 58 standards and 57 national annexes have become obligatory in the construction sector.

National legislation is not yet aligned to the latest EU **‘old approach’ product acquis** on motor vehicles, two or three wheeled vehicles, tractors (agricultural, forestry), or non-road mobile machinery emissions. New laws on these products aligned with the relevant EU *acquis* need to be adopted. No progress has been made on alignment with the EU *acquis* on chemicals, including the Regulations on Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), chemicals, classification, labelling and packaging of substances and mixtures (CLP), good laboratory practices (GLP), and **fertilisers** and **detergents**. Administrative capacity in the area of **firearms** also remains insufficient.

On **procedural measures, notification procedures** for standards and technical regulations are ensured by the Ministry of Economy and the Standardisation Institute. National legislation is partly aligned with the EU *acquis* on returning **cultural goods** unlawfully removed from a Member State. On **drug precursors**, import or export of these products has to be pre-approved, and is tracked by a national IT system, and legal entities are obliged to report to the authorities any suspicion of abuse of manufacturing, marketing, unusual orders, theft or any other illegal activity regarding narcotic drugs and psychotropic substances. On **civil explosives**, economic operators need to be licenced by the authorities to buy, sell, import and export, and use these products, and an electronic system is in place to track the purchase, transfer, import, transit, and export of explosive for civil use.

The national strategy for the prevention of corruption pointed out that the inspectorates responsible for market surveillance and product safety are vulnerable to corruption, and that they have unclear and overlapping powers, and inadequate staffing.

Chapter 2: Freedom of movement for workers

Citizens of one Member State have the right to work in another Member State and must be given the same working and social conditions as other workers.

North Macedonia is at an **early stage of preparation** in the area of freedom of movement for workers. **No progress** was made in addressing last year’s recommendations, but the authorities organised capacity building activities for civil servants who will work on the European network of employment services (EURES) and the European Labour Authority (ELA).

Last year's recommendations therefore remain valid. In the coming year, North Macedonia should in particular:

- strengthen the capacity of the Employment Service Agency, by continuing training activities, and further align legislation and exchange of good practices, in line with EURES and ELA regulations;
- continue to adapt the legal framework to the EU *acquis* on access to the labour market, particularly to rules on non-discrimination on grounds of nationality against EU workers in all sectors;
- continue negotiating and concluding bilateral agreements on social security coordination and healthcare insurance with EU Member States and put in place administrative measures to prepare for accession.

No progress was made on aligning national legislation with the EU *acquis* on **access to the labour market**. Foreign workers entering the country require a work permit. The Agency for Employment issues several types of work permits for foreign workers in line with the annual quotas set out in the Law on employment of foreigners. EU citizens still cannot access public administration posts and some posts in private companies are also exclusive to citizens of North Macedonia. In 2022, North Macedonia issued 800 work permits to foreign workers and 334 during the first five months of 2023.

Capacity building activities for public servants took place in the area of **EURES** and the **European Labour Authority** over the reporting period.

No new agreements for bilateral **coordination of social security systems** or for mutual recognition of the healthcare services were concluded in the reporting period. The country has 23 bilateral agreements in place for the coordination of social security systems, out of which 13 are with EU Member States. It also has 18 agreements in place for mutual health insurance, out of which 12 are with EU Member States.

Citizens of nine EU Member States may use the **European Health Insurance Card** and the Card is recognised by public and private healthcare institutions in the country that have a contract with the Fund for Health Insurance.

The Employment Service Agency needs to adopt an integrity policy document strengthening the efforts to fight corruption.

Chapter 3: Right of establishment and freedom to provide services

EU natural and legal persons have the right to establish themselves in any Member State and to provide cross-border services. For certain regulated professions, there are rules on mutual recognition of qualifications. EU rules on postal services focus on improving the quality of universal service, gradually opening the market to competition, and the establishment of an independent regulator.

On the right of establishment and the freedom to provide services, North Macedonia is **moderately prepared**. It made **limited progress** notably on alignment with the Services Directive. The legislative framework in the areas of postal services and mutual recognition of professional qualifications remains to be aligned with the EU *acquis*.

Last year's recommendations remain valid. In the coming year, North Macedonia should in particular:

- adopt and start implementing the 2024-2025 action plan to ensure that sectoral laws

comply with the EU Services Directive, and increase the amount of information and ensure online access to services under a Point of Single Contact;

- further align legislation with the EU *acquis* on postal services, including with the Postal Services Directive and with the Regulation on cross-border parcel delivery;
- align with the EU *acquis* on mutual recognition of professional qualifications, including Directive on recognition of professional qualifications and Directive on a proportionality test before adoption of new regulation of professions.

On the **right of establishment and freedom to provide cross-border services**, North Macedonia continued to align its legislation with the EU Services Directive by adopting amendments to the Law on performing accounting activities and the Law on mineral resources. A new 2024-2025 action plan to address non-compliance of sectoral laws is being prepared. The point of single contact (www.uslugi.gov.mk) needs to be developed and upgraded to meet the requirements set out in the Services Directive. By September 2023, 238 services for citizens and businesses were accessible online (applications may be submitted electronically).

In the area of **postal services**, national legislation is aligned with the 1997 and 2002 Postal Services Directives and partly with the 2008 Postal Services Directive, as the designated universal service provider (the Post of North Macedonia) still has the exclusive right to provide reserved postal services until 31 December 2023. The Postal Agency is the independent regulatory authority ensuring compliance with postal law and monitoring quality of service against European standards for universal service provision in North Macedonia. There are currently one universal service provider and 33 other postal operators. In view of the near future postal market opening to full competition, preparations are ongoing to set up systems for accounting separation and net cost calculation of the universal service, in line with the Postal Services Directive. North Macedonia is preparing to align its framework with the Regulation on cross-border parcel delivery services. The Postal Agency and the Ministry of Transport and Communications should ensure they have sufficient administrative capacity to monitor and enforce the new postal market rules.

No progress was made on the **mutual recognition of professional qualifications**. The law designed to align with the relevant EU *acquis* has not yet been adopted. National legislation still needs to align with EU Directive 2005/36/EC to comply with minimum training requirements. A transparent list of all regulated professions and an electronic register are yet to be put in place. The institutional capacity of the Ministry of Education and Science's section dealing with the mutual recognition of professional qualifications needs to be strengthened.

Chapter 4: Free movement of capital

In the EU, capital and investments must be able to move without restriction, with common rules for cross-border payments. Banks and other economic operators apply certain rules to support the fight against money laundering and terrorist financing.

North Macedonia is **moderately prepared** in the area of free movement of capital. **Good progress** was made on further aligning national law with the EU *acquis*, with the adoption of a new law to fight money laundering and financing of terrorism and implementing legislation on the law on payment systems and services. There is a need to swiftly further strengthen administrative capacity. In the coming year, the country should, in particular:

- refine, adopt and implement the roadmap with actions and timelines for applying EU rules on the free movement of capital, including the acquisition of agricultural land;
- continue to implement the new law on payment systems and services, including through market entry of new payment services providers, contributing to a broader high quality set of secure payment services, and through advancing the establishment of the unified register of bank accounts;
- on the fight against corruption, implement the new legislation on prevention of money laundering and financing of terrorism in line with the EU *acquis*, including by adopting the implementing legislation and by upgrading the register of beneficial owners.

North Macedonia maintained some restrictions on **capital movements and payments**. For example, the opening of a bank account abroad by residents is still subject to restrictions and authorisation. The same conditions apply if residents want to receive insurance services abroad. Non-residents can still not acquire agricultural land. In this respect, North Macedonia is lagging on its obligations under the Stabilisation and Association Agreement. The country should further refine and begin to implement the roadmap for applying EU rules in this area, in line with obligations under the Stabilisation and Association Agreement. North Macedonia maintains a register of direct investments and a register of real estate investments for both non-residents investing in North Macedonia and residents investing abroad. The registries are largely for statistical purposes and transactions cannot be blocked for failing to be registered therein.

In January 2023, the law on **payment systems and services** entered into force. Good progress was made in terms of alignment of national legislation with EU rules on payment services, as the National Bank adopted a significant number of implementing acts on payment institution licensing, e-money institutions and payment system operators, as well as on their oversight. Moreover, steps were taken to facilitate the comparison of fees among payment service providers. As required by the fifth Anti-Money Laundering (AML) Directive, the law on payment systems and services also plans for a unified register of bank accounts to be set up under the Central Registry.

The new Law on the fight against money laundering and the financing of terrorism that aims to align with the fifth AML Directive entered into force in July 2022. After the onsite visit of the Council of Europe's Committee of Experts on the Evaluation of AML Measures and the Financing of Terrorism in September 2022, the Moneyval plenary adopted the fifth Moneyval report in May 2023. In this report, North Macedonia has been rated compliant or largely compliant in 28 of 40 FATF recommendations. Among the shortcomings identified are a modest number of convictions related to money laundering, concerns about the proportionality, dissuasiveness and effectiveness of pecuniary sanctions, the data quality of the Beneficial Ownership Register, lack of sanctions for failures related to basic or beneficial ownership information, technical deficiencies on confiscation, lack of systematic approach to conducting a financial investigation, and a low number of Suspicious Transaction Reports compared to the to the risk, context, and size of the country. The Financial Intelligence Office prepared ad hoc assessments of specific trends, such as money laundering threats, proliferation financing and transactions conducted through fast money transfer service providers. It also improved its IT applications. In 2022, obliged entities submitted 258 suspicious transactions reports (315 in 2021). The Office sent 44 reports (92 in 2021) of money laundering and terrorism financing cases and 159 notifications (305 in 2021) of other cases to law enforcement bodies. (See also Chapter 23 - Judiciary and fundamental rights and Chapter 24 - Justice, Freedom and Security).

Chapter 6: Company law

The EU has common rules on the formation, registration and disclosure requirements of a company, with complementary rules for accounting and financial reporting, and statutory audit.

The country has a **good level of preparation** in the area of company law. **No progress** was made during the reporting period. The country needs to step up efforts to align its legislation with the EU *acquis* in this area.

As last year's recommendations were not fully implemented, they remain valid. In the coming year, North Macedonia should in particular:

- align national legislation with the *acquis* on encouraging long-term shareholder engagement, on cross-border conversions, mergers and divisions and on the use of digital tools and processes in company law;
- adopt legislation on accounting and on audit aligned with the latest EU *acquis* in these areas, to include strengthening the role and capacity of the Council for Advancement and Oversight of Audit.

On **company law and corporate governance**, alignment with the Company Law Directive is well advanced on the formation, registration and domestic, mergers of companies. The Central Registry provides a modern one-stop-shop system where company registration and the filing of documents - including financial documents - can be carried out fully online. In the future, the national business register should be technically ready to interconnect with the EU Business Registers Interconnection System. The 2021 Corporate Governance Code is only mandatory for listed companies that meet certain criteria. National legislation is broadly harmonised with the EU *acquis* on the legal forms *Societas Europaea* and European Economic Interest Grouping, while draft legislation to partially align with the EU *acquis* on a European cooperative society awaits adoption by Parliament. Further alignment is necessary with the EU *acquis* on cross-border operations (mergers, divisions, conversions), as well as with the rules on the encouragement of long-term shareholder engagement (2017 Directive), and 2022 Directive on gender equality on boards of directors.

On **company reporting**, a draft Law on accounting, aimed at further alignment with the EU *acquis* in this area, is going through the adoption process. North Macedonia will need to align with the most recent *acquis* (2022) on corporate sustainability reporting. International financial reporting standards apply to all companies, with no reduced obligations for small and medium enterprises as provided for in the EU *acquis*. Although certain provisions of the *acquis* on transparency requirements for listed companies are already well reflected in current national legislation, further alignment is needed in this area. Adoption is also pending of a new draft law on audit, aimed at reaching greater harmonisation with the EU *acquis*, including the area of investigations and sanctions. Currently, there is no body with ultimate responsibility for statutory audit oversight, as required by the EU Audit Directive. The visibility and overall performance of the Council for Advancement and Oversight of the Audit remains poor. Efforts are needed to ensure its independence.

Chapter 7: Intellectual property law

The EU has harmonised rules for the legal protection of intellectual property rights (IPR), copyright and related rights. Rules for the legal protection of IPR cover for instance, patents and trade marks, designs, biotechnological inventions and pharmaceuticals. Rules for the legal protection of copyright and related rights cover, for instance, books, films, software and broadcasting.

North Macedonia remains **moderately prepared** in the area of intellectual property law. **No progress** was made over the reporting period. Further efforts are needed to align the legislation with the EU *acquis* in this area.

As last year's recommendations were not implemented, they remain valid. In the coming year, North Macedonia should in particular:

- further improve the legal framework on copyright and related rights, notably by aligning with the Directive on collective rights management and the Directive on orphan works;
- further improve the legal framework on industrial property rights, by aligning with the Directive on the enforcement of intellectual property rights and with the Directive on trade secrets;
- implement the 2021-2026 intellectual property strategy and make operational the online information platform for law enforcement institutions to exchange data on intellectual property rights.

In the area of **copyright and related rights**, the adoption of the amendments to the Law on copyright to further align it with the EU *acquis*, including on the collective rights management system, orphan works and certain permitted uses of certain works and other subject matter protected by copyright and related rights, for the benefit of persons who are blind, visually impaired or otherwise print-disabled remains delayed. North Macedonia is not yet aligned with the Directives on online transmissions of broadcasting organisations and retransmissions of television and radio programmes (SatCab II Directive), on copyright and related rights in the Digital Single Market (DSM Directive). The relevant intellectual property rights unit in the Ministry of Culture remains significantly understaffed.

Regarding **industrial property rights**, the State Office for Industrial Property (SOIP) continued its cooperation with the EU and international bodies, in particular with the EU Intellectual Property Office (EUIPO). The SOIP also started to fully use EUIPO's harmonised database of products and services for the registration of trade marks. North Macedonia needs to further align its legislation with the EU *acquis* in this area, in particular on patents, trade secrets, and the Directive on IPR enforcement.

On **enforcement**, the hardware infrastructure of the information platform for exchanging IPR-related data, still needs to be made operational, in order to provide full insight into the institutional handling of IPR infringements. The coordination body for the protection of intellectual property needs to step up its activity to address the key challenges related to IPR. Substantial work is needed on the overall enforcement of IPR.

From January until the end of August 2023, there were 18 cases of suspected infringement of intellectual property rights involving 22 380 pieces of 43 trademarks of seized goods. Violation of intellectual property rights was confirmed in 7 cases (for 9 588 pieces) involving 12 international trade marks.

Chapter 8: Competition policy

EU rules protect free competition. They include antitrust rules against restrictive agreements between companies and the abuse of a dominant position, and also include rules on concentrations between companies which would significantly impede effective competition. EU rules also set out a system of State aid control. Governments are only allowed to grant State aid if restrictive conditions are met, with a view to preventing distortion of competition.

The country is **moderately prepared** in the area of competition. **No progress** was made in the reporting period. The Commission for Protection of Competition (CPC) continues to face budgetary and capacity constraints. The enforcement record remains low.

As last year's recommendations were not addressed, they remain valid. In the coming year, the country should in particular:

- further align the legislative framework, in particular the implementing legislation in the area of State aid and antitrust, with the EU *acquis*.
- ensure full transparency of State aid granted by the authorities;
- strengthen the administrative and financial capacity of the national competition authority.

Antitrust and mergers

The **legislative framework** is broadly aligned with the EU *acquis* in the area of antitrust and mergers, although parts of implementing legislation remain to be aligned.

On the **institutional framework**, the CPC is responsible for implementing the Law on the protection of competition. It can impose fines, propose remedies, or issue an opinion if competition rules are breached. The CPC may approve mergers, with or without conditions, or prohibit them. Its decisions are binding and can be subject to an appeal before the Administrative Court.

The CPC remains understaffed, leading to a limited enforcement capacity. Its annual budget remains insufficient. The poor capacity of the CPC as well as of the courts dealing with antitrust cases undermines enforcement.

On **implementation**, the number of merger decisions increased from 81 in 2021 to 101 in 2022, including decisions on small cases. The CPC should increase onsite inspections and use the leniency instrument to strengthen enforcement. Further strengthening, including training of judicial professionals is needed on the application of antitrust and merger rules.

State aid

The **legislative framework** on State aid broadly reflects Articles 107 and 108 TFEU. The Law on State aid and its implementing legislation need to be further aligned with the EU *acquis*. The State aid inventory still lacks transparency.

On the **institutional framework**, the CPC is also responsible for implementing the Law on State aid. The CPC issues non-binding opinions and binding decisions on State aid. The enforcement capacity of CPC staff dealing with State aid control remains insufficient.

Concerning **implementation**, the CPC issued 27 decisions and 33 opinions on State aid in 2022. No negative or conditional decisions were adopted by the CPC in the reporting period. One procedural order has been adopted on completion of procedure examining the existence of unlawful State aid. Increased awareness among aid-granting public bodies of the existence of State aid rules is reflected in the growing number of requests for opinions and notifications of State aid submitted by the ministries to the CPC.

Liberalisation

Antitrust and State aid rules also apply to state-owned undertakings and undertakings entrusted with special or exclusive rights, except when applying them would obstruct the performance of the particular tasks assigned to them. There is no evidence of the existence of commercial monopolies within the meaning of Article 37 TFEU.

Chapter 9: Financial services

EU rules aim to ensure fair competition among, and the stability of, financial institutions, namely banking, insurance, supplementary pensions, investment services and securities markets. They include rules on authorisation, operation and supervision of these institutions.

The country remains **moderately prepared** in the area of financial services. **Some progress** was made on further alignment with the EU *acquis* on banks and financial market infrastructure, namely through adoption and entry into force of new legislation on payment services and payment systems, on financial stability, on credit risk management, and on disclosure of banks' data and reports. Alignment with the EU *acquis* on the supervisory and regulatory framework for credit institutions and financial market infrastructure is well advanced. Alignment in the area of insurance and capital market is still lagging behind, partly due to the size and the structure of the market. The central bank organisational set up was restructured to reflect its function of a bank resolution authority. The continued failure to effectively tackle and prevent unregistered and uninsured vehicles is a concern.

Last year's recommendations were partially implemented. In the coming year, the country should in particular:

- adopt the recovery and resolution law to allow for the possibility to design a bank resolution authority and amend the law on deposit insurance as well as the banking law to improve deposit insurance in line with EU requirements;
- advance with the preparation and adoption of key pieces of legislation that regulate capital markets, namely the Law on financial instruments and the Law on prospectuses and transparency of security issuers;
- address gaps in alignment with the revised versions of Capital Requirements Regulation and Directive, notably with the net stable funding ratio and align with the Solvency II Directive, notably pillar 1 and pillar 3 of that Directive.

On **banks and financial conglomerates**, North Macedonia adopted in February 2023 a new methodology on credit risk management and a decision on disclosure of banks' data and reports, partly aligning with both the Capital Requirements Regulation and Directive. The central bank restructured its organisational set-up by establishing a new department for banking regulation and bank resolution, separate from the bank supervision sector. Basic ratios of the banking sector continue to be well above the minimum requirements. The Law on deposit insurance and the Banking Law have not yet been amended to improve deposit insurance, including to introduce depositor preference, in line with EU requirements and to address the concerns raised by the Constitutional Court in June 2021 revoking priority to the claims of the deposit insurance fund on a failed bank. Neither the legislation nor the capacity of the Ministry of Finance to license and supervise financial companies sufficiently protect consumers and both therefore require reinforcement. Legislation on the bank resolution authority (including a Law on bank resolution and its implementing legislation and amendments to the Law on the central bank and the Banking Law) is yet to be adopted. The legal and institutional set-up for establishing the financial Ombudsperson is yet to be finalised. Legislation aligning with the requirements of the Covered Bond legislation is yet to be implemented.

On **insurance and occupational pensions**, legislation aligning with the Solvency II Directive is yet to be adopted. A new rulebook on life insurance was issued linked to the

investment risks an insured person undertakes when investing in shares via investment firms. Legislation still allows the Ministry of Finance to set premiums for motor vehicle insurance, which is contrary to the EU *acquis*. Data on the proportion of vehicles that are uninsured is available, but it is unclear whether these vehicles are actually in circulation. Based on the number of non-insured vehicles discovered through controls, the portion of uninsured vehicles was 5.8% in 2022. No systemic measures are taken to prevent uninsured driving. The 50% limit on investing in non-domestic securities by pension funds is still in place, contrary to the EU *acquis* and the second stage of the Stabilisation and Association Agreement (SAA).

On **financial market infrastructure**, provisions of the new Law on payment systems and services aim to achieve a high level of alignment with the settlement Finality in payment systems. Provisions of the *acquis* related to securities settlement systems still need to be reflected in the domestic legislation of North Macedonia. The country's legislation is not yet aligned with the Financial Collateral Directive and new legislation in this area remains to be adopted. The new Law on financial stability adopted in August 2022 regulates the status, composition, tasks and functioning of the Financial Stability Committee, an interinstitutional body that monitors the financial system and foresees actions to prevent financial instability.

As regards **securities markets and investment services**, the Securities and Exchange Commission issued legislation on the issuance and registration of foreign securities on domestic markets, as planned under the second stage of the SAA. Legislation still needs to be further aligned with the EU *acquis*, including the Markets in Financial Instruments Directive, the Prospectus Regulation, and the Capital Requirements Directive, as well as provisions on liquidity and solvency ratios for brokerage houses. Moreover, North Macedonia is still to align with the EU *acquis* with respect to MiFIR (Markets in Financial Instruments and Amending Regulation) and benchmarks. As regards investment funds, North Macedonia has adopted legislation to align with the Directive relating to undertakings for collective investment in transferable securities but further alignment with the EU *acquis* is required in this area. Moreover, North Macedonia is still to align with the EU *acquis* with respect to the Directive on alternative investment fund managers and the Directive on the cross-border distribution of undertakings for collective investment in transferable securities.

On **sustainable and digital finance**, North Macedonia is not yet aligned with the EU *acquis* on taxonomy, nor on EU Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks. The National Bank has started working on the development of a Strategy for the management of climate-related risks, which will cover regulatory and supervisory activities, as well as activities related to monitoring the impact of these risks on financial stability. As part of the Strategy, North Macedonia adopted a Decision on the methodology for credit risk management in February 2023, according to which banks will be required to adequately incorporate the climate-related risks in their credit risk management from January 2025. Finally, the country's Stock Exchange has prepared a Guide for environmental, social and governance (ESG) reporting for listed companies, in order to raise awareness among policy makers, regulatory and institutional investors.

Chapter 28: Consumer and health protection

EU rules protect consumers' economic interests and in relation to product safety, dangerous imitations and liability for defective products. The EU also ensures high common standards for tobacco control, blood, tissues, cells and organs, and medicines for human and veterinary use. The EU also has rules for upholding patients' rights in cross-border healthcare and in preparing for and responding to cross-border health threats.

In the area of consumer and health protection North Macedonia remains **moderately prepared**. **Some progress** was made on addressing last year's recommendations, by the adoption of the new Law on consumer protection, which is designed to align with many items of the EU consumer *acquis*. The other recommendations remain valid. The country's first-ever liver transplantation was made. Many challenges remain to be addressed in the area of public health, notably in regard to tobacco control, and the availability, scope of services, geographical distribution and funding of primary healthcare and on cancer screening could be improved. Alignment with EU health *acquis* remains incomplete.

In the coming year, the country should in particular:

- adopt and start to implement the next three-year consumer protection strategy and reinforce the capacity for market surveillance;
- intensify efforts on tobacco control by implementing the relevant EU *acquis* effectively and ratifying the Protocol to Eliminate Illicit Trade in Tobacco Products;
- ensure adequate funding and capacity to ensure the early detection of cancer and rare diseases based on data from the registers.

Consumer protection

The country adopted a new Law on **consumer protection** designed to align with several of the EU consumer *acquis*, including the *acquis* establishing rules on unfair terms in consumer contracts, unfair business-to-consumer commercial practices, price indication timeshare and long-term holiday product, resale and exchange contracts, consumer rights, digital content and services, and the sale of goods. The Law on consumer protection is also designed to be aligned with the latest changes to EU consumer *acquis* introduced by Directive (EU) 2019/2161 on the better enforcement and modernisation of Union consumer protection rules and the EU *acquis* on liability for defective products (relevant to product safety – see below), though implementing legislation on this still needs to be adopted. National legislation is not yet aligned with the current EU *acquis* on package travel. The law on consumer protection clearly defines the responsibilities of the physical and legal commercial bodies towards consumers. The next three-year consumer protection strategy is yet to be adopted. The web platform providing information on consumer protection still needs to be developed. The mediation scheme remains expensive and difficult for consumers to access.

Some progress was also made in aligning national **product safety** rules with the EU *acquis* (*see above*). The country now needs to adopt the implementing legislation necessary to complete the alignment with the EU General Product Safety Directive. The State Market Inspectorate intensified inspections under the national Law on general product safety (500 in 2022, up from 428 in 2021) and carried out 130 inspections under the Law on construction products. The Inspectorate maintained its good cooperation with the customs for control of harmful products on the market. The number of inspections increased to 4 838 in the reporting period. The number of licenced inspectors (170) remains insufficient as many of the staff are close to retirement. On **non-safety-related issues** further efforts are needed on developing the guidance and procedure for consumers' appeals and means of compensation.

Public health

Primary **healthcare** in North Macedonia is provided free of charge. However, the availability, scope of services, geographical distribution and funding of primary healthcare could be improved. During the reporting period, the **e-health** application was updated with new functionalities and new modules, and a mobile application called "MyHealth" was

launched. This allows patients access to their health record, including what medical examinations they have had, referrals to specialists, prescriptions, vaccines received, and relevant certificates. Certain specialists continue to be lacking. The ratio of doctors and nurses per 100 000 inhabitants continues to be below the EU average, and medical staff, nurses and specialists continue to leave the public health sector to work either in the private sector or abroad. Out-of-pocket healthcare costs remain high, at 38%, constituting a barrier to equal access to healthcare.

No progress was made on **tobacco control**. Though the institutional and legal setup in place are broadly aligned with the EU *acquis* on smoking in public places, it is not systematically implemented and is still broadly tolerated and unsanctioned, especially in restaurants and other facilities, even in some closed areas. Smoking in public areas should be penalised in line with the EU *acquis*, but this is not fully applied. North Macedonia has not yet ratified the Protocol to Eliminate Illicit Trade in Tobacco Products. On **communicable diseases**, the upgrade of the syndromic disease reporting system in real time was completed. On **COVID-19**, few preventive measures remain in place.

Progress was made on **blood, tissues, cells and organs**. The number of performed transplantations continued to increase, including the first-ever liver transplantation. However, the country is yet to align with the *acquis* on **patients' rights in cross-border healthcare**.

On **medicines for human and veterinary use**, legislation was adopted, designed to align to the *acquis* on residues of pharmacologically active substances, residues of pesticides and the maximum levels of individual contaminants in and on food from animal origin. As regards **cancer screening**, the first report on the National Register of Malignant Neoplasms was published. A comprehensive and proactive approach on cancer screening is lacking, and funding for cancer screening is insufficient. Following public pressure, funding for **rare diseases** somewhat increased but not sufficiently to cover the costs for medical treatment of all registered patients. An online survey was done on **drug abuse prevention**, and there was awareness raising in schools on drug abuse and **alcohol related harm reduction**. There was no progress on **healthy environments**. Some efforts were made with regard to fighting **health inequalities**, particularly for people living in poverty and people living in remote areas, though these were led by international organisations and the non-governmental sector rather than by the health authorities.

The national strategy for the prevention of corruption identified the health sector and inspectorates as vulnerable to corruption, in particular as there are no effective criteria for determining the prices of health services or of medicines. Procedures for treatment abroad are non-transparent and not objective. The inspectorates responsible for market surveillance and product safety have unclear and overlapping jurisdictions, and inadequate staffing. Most of the anti-corruption strategy activities in the health area have not been carried out. Strengthening integrity, asset declarations and digitalisation are considered key tools for preventing corruption.

CLUSTER 3: COMPETITIVENESS AND INCLUSIVE GROWTH

Cluster 3 on competitiveness and inclusive growth covers the following chapters: digital transformation and media (chapter 10); taxation (chapter 16); economic and monetary policy (chapter 17); social policy and employment (chapter 19); enterprise and industrial policy (chapter 20); science and research (chapter 25); education and culture (chapter 26) and customs union (chapter 29).

Overall, North Macedonia is moderately prepared in most of the areas covered by this cluster. The country is in between a moderate and a good level of preparation in the area of economic

and monetary policy. It has a good level of preparation in the areas of science and research and in the customs union. Some progress was made in the areas of taxation, economic and monetary policy, enterprise and industrial policy, science and research policy, as well as social policy and employment. More efforts are needed, however, particularly in areas where limited progress was made, such as digital transformation and media, customs union, and education and culture.

Chapter 10: Digital transformation and media

The EU supports the smooth functioning of the internal market for electronic communications, electronic commerce and audio-visual services. The rules protect consumers and support the universal availability of modern services.

The country is **moderately prepared** in the area of digital transformation and media. **Limited progress** was made during the reporting period, consisting of a slight increase in the number of electronic services offered to citizens and businesses. The Law on audio-visual media was amended in order to align with the EU Directive on Audiovisual Media Services of 2018 in July 2023. North Macedonia joined the Digital Europe Programme in 2023. The services of the 112 European emergency number were further developed.

Last year's recommendations remain valid. In the coming year the country should:

- finalise and adopt the long-term information and communication technology (ICT) strategy; finalise and adopt the national cybersecurity strategy for 2023-2027; align national legislation with the European Electronic Communications Code, the EU broadband cost reduction Directive; the EU Directive on security of network and information systems (NIS 2 Directive) and the 5G toolbox;
- strengthen the independence and capacity of the media regulator, the Public Service Broadcaster and the regulator on electronic communication;
- improve the functioning of the 112 emergency number by ensuring adequate human resources and improve communication among emergency services.

The country continued to successfully participate in the Digital Agenda for the Western Balkans and benefit from the regional roaming-free agreement. In line with the 2019-2023 national broadband operational plan's targets, 5G signal was expanded to Skopje. Authorities continued to carry out activities included in the 2018-2022 national cybersecurity strategy. However, there is need for better coordination and interinstitutional cooperation. North Macedonia needs to adopt the national cybersecurity strategy for 2023-2027. The 112 European emergency number services increased their capacity, but communication among emergency services and human resources need further improvement.

On **electronic communications and information technologies**, in 2022, 75.57% of all households had access to fixed broadband internet, while nationwide broadband coverage with 30-100 Mbps stood at 82.84% and >100Mbps at 63.1%. Mobile broadband take-up increased to 86.12%. Only 2.53% of all households had access to ultrafast broadband internet. Segregated data on access to internet by schools, hospitals, enterprises, etc., is not collected by the Agency for Electronic Communications. This Agency granted approvals for the use of radiofrequencies for 5G. Telecom operators continued to invest throughout the country. No progress was made on aligning the legal framework on electronic communications with the EU *acquis*. The Broadband Competence Office publishes biannual reports on the broadband development in the country and the implementation of the National

Operational Broadband Plan. Authorities need to align national legislation with the EU Broadband Cost Reduction Directive.

The alignment of national legislation with the EU Regulation on electronic identification and trust services for electronic transactions in the internal market (eIDAS Regulation) was further delayed. Alignment with the Digital Services Acts and Digital Markets Act needs to be stepped up, to provide predictability for the business community. Amendments to the Law on audio and audio-visual media services were adopted on 18 July 2023, thus aligning the legislation with the Audiovisual Media Services Directive.

On **competitive safeguards**, the telecom market remains predominantly shared by the two biggest mobile operators.

Regarding **digital transformation**, the long-term information and communication technologies strategy for 2021-2026 has not been adopted. The strategy's activities on digital skills development should be built upon and supported with specific measures. The country signed an association agreement to the Digital Europe Programme on 30 June 2023.

The national regulator promoted cybersecurity through its national centre responding to computer incidents. Cyber-related incidents were reported in 145 entities such as state institutions, banking, health, energy, transport and communications organisations. Better coordination and interinstitutional cooperation is needed on cybersecurity and on strengthening the National Cybersecurity Council's capacity. State institutions need to further strengthen their cyber capacity and infrastructure.

The new law on security of networks and information systems, needs to be adopted to align with the NIS and NIS2 Directives. The Ministry of Information Society and Administration needs to strengthen its capacity to drive the digital transformation and media reforms. The full independence of the regulator for electronic communications needs to be ensured.

The national e-portal for services has been upgraded. The number of institutions connected to the interoperability platform was increased, but the platform is not being used by most of the state institutions because of the lack of communications software. To modernise and digitalise the public sector, more efforts and better cooperation among institutions are still required. The quality of data in the population register needs to be improved and continuously verified with other registers. The number of digital services offered through the governmental e-portal remains modest, 392, mainly consisting of services that are rarely requested and used. State institutions need to ensure better cooperation in advancing the digitalisation of the government 96.940 users were registered on the national e-portal.

With regard to **e-commerce**, online shopping increased. On statistical performance and digital competitiveness, the collection of data based on the Digital Economy and Society Index (DESI) indicators needs to be improved.

On **audio-visual policy**, the Parliament failed to appoint new members of the media regulator and the public broadcaster councils, despite this being a precondition for accelerating media reforms. The Public Service Broadcaster received additional funding, thus slightly increasing its percentage. (*See also the section: freedom of expression*). In July 2023, the Law on audio and audio-visual media services was amended to align with the 2018 EU Directive on Audiovisual Media Services.

During the reporting period, the Agency for Audio and Audio-visual Media Services continued to fulfil its legal obligations on the promotion of media literacy, to analyse gender equality in the media and to supervise the broadcasters. The media regulator publicly condemned the pressure and threats on journalists and media outlets. The national strategy

and action plan on building resilience and confronting hybrid threats (2021-2025) includes measures to address disinformation and hybrid threats. However, efforts to combat disinformation are limited. The audio-visual sector continued to benefit from the country's participation in the MEDIA and cross-sectoral strands of the Creative Europe programme.

Chapter 16: Taxation

EU rules on taxation cover value-added tax, excise duties and aspects of corporate taxation. They also cover cooperation between tax administrations, including the exchange of information to prevent tax evasion.

North Macedonia is **moderately prepared** in the area of taxation. **Some progress** was made specifically in amending its preferential tax regime in the technological and industrial development zones. As a result, North Macedonia was removed from the Annex II list of the non-cooperative jurisdictions for tax purposes. The country has yet to start the automatic exchange of financial account information as per the Organisation for Economic Co-operation and Development (OECD) standard.

As some of last year's recommendations were not fully implemented, they remain valid. In the coming year, North Macedonia should in particular:

- develop a new integrated IT tax system for the Public Revenue Office (PRO), improve its compliance risk management and the strategic reform process of the PRO;
- start preparations for putting in place a mechanism to implement the automatic exchange of financial account information with EU Member States effectively, in line with the OECD global standard.

On **indirect taxation**, the VAT exemptions and preferential rates for essential products were removed at the end of 2022. A preferential VAT rate of 10 % was applied for some energy products to alleviate the effects of high international energy prices. The preferential VAT rate of 10% for electricity for households was applied until 30 June 2023. Delays still remain in the VAT refund process, as only 45% of the requests submitted in 2022 were refunded within the legal deadline of 30 days.

There were some changes to **direct taxation**. A personal income tax flat rate of 10% was complemented with a rate of 15% for income stemming from games of chance. Exemption from taxation on interest on savings and from taxation on capital gains on securities was abolished with the amendments to the Law on personal income tax, as of 1 January 2023. The country still needs to align its legislation with the Merger Directive.

On **administrative cooperation and mutual assistance**, North Macedonia has signed 49 double taxation agreements, including with all EU Member States except Cyprus, Malta, Portugal and Greece, with whom negotiations are ongoing. The country has not yet committed on a date to start the automatic exchange of financial account information as per the OECD standard. The country remains dedicated to implementing the Inclusive Framework on Base Erosion and Profit Shifting (BEPS) minimum standards. In January 2023, North Macedonia amended its preferential tax regime in the free economic zones, thus meeting the Forum on Harmful Tax Practices and the EU's requirements to promote good governance in the area of taxation.

Regarding **operational capacity and computerisation**, the PRO still has to improve its business processes, implement a new integrated IT tax system replacing the current fragmented IT system, develop compliance risk management and continue to expand e-services. Work on the 2021-2025 tax system reform strategy continues. During the reporting

period, the Law on PRO was amended to allow for a more dynamic organisational structure to correspond with the ongoing IT modernisation process. A stronger monetary incentive for customers to request invoices on their purchases was introduced, with the aim of combating the informal economy. The PRO took part in joint inspections with other national bodies to identify unpaid tax liabilities and unregistered taxpayers in order to improve tax collection. The PRO and the State Commission for the Prevention of Corruption signed an Agreement on data exchange and cooperation. The PRO is obliged to provide data from the unique register of taxpayers to the SCPC, in accordance with the Law on prevention of corruption and conflict of interest.

Chapter 17: Economic and monetary policy

EU rules require the independence of central banks and prohibit them from directly financing the public sector. EU Member States coordinate their economic policies and are subject to fiscal, economic and financial surveillance.

The country is **in between a moderate and a good level of preparation** in the area of economic and monetary policy and **some progress** was made. A new Organic Budget Law was adopted by Parliament in September 2022 and the drafting of implementing legislation was initiated. The three members of the new Fiscal Council were appointed by Parliament in September 2023. On monetary policy, alignment of the country's legal framework with the EU *acquis* remains at an advanced stage. On economic policy, the information provided in the fiscal strategy has been enhanced, but alignment with the EU fiscal framework is only partial and shortcomings on the monitoring of the fiscal risks persist.

In the coming year, North Macedonia should in particular:

- adopt implementing legislation to the Organic Budget Law with a view to fully applying fiscal rules, a strengthened medium-term budgetary framework and a prudent management of fiscal risks;
- take the necessary legislative and organisational steps to enable the Fiscal Council to take up operations and assess the 2024 budget and the new fiscal strategy;
- exclude the central bank from the scope of the Law on administrative servants, the Law on public sector employees and the Law on the payroll system.

On **monetary policy**, the alignment of the legal framework of North Macedonia with the EU *acquis* remains at an advanced stage. In line with the objectives of the European System of Central Banks, the central bank pursues price stability as its primary objective. The central bank also supports economic growth through its policies. A subordinate objective is to contribute to safeguarding a stable, competitive and market oriented financing system. Monetary policy has been appropriately tightened in response to rising inflation. Continued vigilance remains important, also in view of a wide, albeit narrowing inflation differential with the euro area. The functional and financial independence of the central bank is provided for in the Law on the National Bank. There is a need to maintain the central bank's independence in its key statutory tasks, including in staffing issues, in line with the Law. In that vein, the central bank needs to be excluded from the scope of laws which may affect its independence, including the law on administrative servants, the law on public sector employees as well as the newly proposed public sector payroll law. The central bank should be able to conduct internal organisations and employment plans without having to seek the approval of the government.

Regarding **economic policy**, North Macedonia began drafting implementing legislation for the 2022 Organic Budget Law (OBL) in line with the EU Budgetary Frameworks Directive.

The new Law provides for numerical fiscal rules for the general government deficit and debt , the establishment of an independent fiscal council, and improvements in the medium-term budgetary framework. The provisions of the new OBL should be swiftly implemented in full. The medium-term fiscal consolidation presented in the 2023-2027 Fiscal Strategy is reflected in the 2023 budget, supported by a rules-based budget framework under the new Organic Budget Law. Preparations have advanced on setting up an independent Fiscal Council to monitor compliance with the rules and verify macro-fiscal projections, and the medium-term fiscal framework was strengthened within the 2024-2028 fiscal strategy which was adopted in June 2023. Limited progress was made on strengthening the monitoring of fiscal risks related to state-owned enterprises, public-private partnerships and local government units. As envisaged by the OBL, there is a need to develop a comprehensive registry of state-owned enterprises and a methodology to assess related risks.

The 2023-2025 **Economic Reform Programme** (ERP) was submitted on 1 February 2023. The country has partially implemented the country-specific policy guidance jointly adopted by the EU and the Western Balkans and Türkiye at ministerial level in May 2022. The level of implementation of the policy guidance has improved compared to last year, notably due to progress in the macro-fiscal area. The ERP's macro-economic framework is coherent and consistent, while somewhat optimistic. For structural reforms, the focus is on addressing properly-identified key structural challenges, including the green transition. Implementation of the ERP's structural reforms measures needs to improve, as it has been affected by the limited capacity of public institutions and a focus on short-term measures to offset the energy crisis.

Chapter 19: Social policy and employment

EU rules in the social field include minimum standards for labour law, equality, health and safety at work and non-discrimination. They also promote social inclusion and social protection, and social dialogue at EU level.

The country remains **moderately prepared** in the area of social policy and employment. **Some progress** was made, notably on steadily reducing unemployment and increasing social assistance benefits. The Youth Guarantee scheme was implemented successfully throughout the country. The negative impact of the energy crisis was offset by the continuous application of social protection measures, ensuring that the poverty rate did not increase.

Last year's recommendations were partially implemented. In the coming year, the country should in particular:

- continue to implement the Youth Guarantee as well as activation measures for vulnerable groups, and set up systems to properly evaluate the measures;
- enhance the capacity of the State Labour Inspectorate to better address matters related to occupational safety and health; develop a system for tracking and monitoring injuries and fatalities at work; and continue to reinforce bipartite social dialogue focusing on collective bargaining and to strengthen the role and activity of social partners in the private sector;
- finalise the set-up of a monitoring system, ensure proper evaluation of social services and continue the social protection reform with emphasis on employment activation.

On labour law, extensive public consultations were held across the country on the yet-to-be-adopted new law on labour relations. As of March 2023, the minimum salary increased by approximately 12%. The capacity to implement labour policies and legislation did not

increase, and a reduction in the number of competent staff in public institutions was noted. The capacity of the State Labour Inspectorate (SLI) is as insufficient as last year. The annual plan for individual professional development and training of labour inspectors is under way but capacity needs to be increased further, in particular in the area of occupational safety and health. The SLI signed a memorandum for cooperation with the Public Revenue Office and the Ministry of Interior to improve efficiency and cooperation for preventing irregularities in labour law, the fight against human trafficking and labour exploitation.

On **health and safety at work**, the 2021-2025 strategy for occupational safety and health and 2021-2023 action plan remain valid. The main challenge remains the inadequate application of the provisions of the existing Law. Employers' and employees' knowledge of their respective rights and obligations on health and safety at work remains limited whereas the capacities of labour inspectorates need to be further increased. However, the national award on health and safety has raised awareness among employees. The SLI carried out 24 965 inspections (16 026 on labour relations and 8 939 on occupational safety and health). Shortcomings and irregularities were identified in 38% of the inspections, mainly resulting in warnings (3 202).

On **social dialogue**, social partners engaged in constructive tripartite social dialogue both at national and local level. The level of their involvement in policy development and policy change is inconsistent, representing a significant challenge. In July 2023, a new collective agreement for public sector employees was signed between unions and authorities. The bipartite social dialogue continues to face challenges due to poor adoption and enforcement of collective agreements affecting workers' rights and job security. Measures to encourage collective bargaining and strengthen the role of social partners in the private sector are insufficient. Overall implementation of the Law on the peaceful settlement of labour disputes remains poor, with only five recorded cases of successful amicable resolution in 2022. The capacity of social partners remains low, affecting the efficiency of social dialogue. Overall, more strengthening of social dialogue and promoting collective bargaining in both the public and private sectors is required including from the authorities.

On **employment policy**, the labour market forecasting model was extended to 11 additional descriptions, bringing the number of occupations covered to 85. The 2021-2027 national employment strategy and the 2021-2023 employment action plan remain valid. Measures to tackle undeclared work included in the 2018-2022 strategy for the formalisation of the informal economy continued. Authorities adopted the strategy for the formalisation of the informal economy 2023-2027 along with the Action Plan for the period 2023-2025 in September 2023. Active labour market measures and the reinforced Youth Guarantee scheme are currently not sufficiently monitored, evaluated and assessed. The Employment Service Agency is under-staffed.

The employment rate (aged 20-64) in Q4-2022 was 61.8% for the whole population. The unemployment rate decreased further to 13.7 % in Q4-2022. The female employment rate increased by 3.2% (51.8% of 15-64 year-olds). Youth (15-24 year-olds) employment remained at 18.3% and youth unemployment decreased to 31.8% in Q4-2022, compared to 34.9% in Q4-2021. The main measure addressing youth unemployment remains the Youth Guarantee scheme. A new plan for implementing the 2023-2026 Youth Guarantee was adopted by the authorities in March 2023. In 2022, more than 20 000 young people participated in the scheme, with 43% of them successfully finding employment or training opportunities. 969 Roma people participated in the scheme, out of which 148 found employment.

On participation in the **European Social Fund**, it is important to ensure that state bodies have the necessary capacity to manage the indirect management with the beneficiary country system. *(See also Chapter 22 - Regional policy and coordination of structural instruments).*

Progress was made on **social inclusion and protection** and on minimising the impact of the pandemic and energy crises. Additional subsidies were introduced, ensuring more comprehensive coverage for people in need. Guaranteed minimum assistance (GMA) was extended to reach 35 748 households. In addition, 31.7% of GMA recipients benefited from the child allowance and 21.2% from education allowances. Coordinators were appointed to facilitate communication between employment services and social work centres, and guidelines for supporting individual activation plans were developed. The 2022-2032 national programme for the development of social protection was adopted along with a roadmap for future improvements. The new 2023-2030 strategy for rights of persons with a disability and the 2023-2025 action document are yet to be adopted. The software for integrating cash benefits and social protection services needs to become operational. The decentralisation of social assistance remains at a moderate level. The accessibility of public services such as socio-health, employment, vocational education, and in particular specialised services for the people with disabilities and Roma, remained limited. The employment of Roma, the long-term and low-skilled unemployed, and people with disabilities is supported by the guaranteed minimum assistance scheme introduced by the Law on social protection.

As part of the national strategy on **de-institutionalisation** a total of 57 residential units were made functional by June 2023, providing living support to children and adults with disabilities. The number of children under the age of 18 in institutional care remained stable. The adoption of a methodology for licensing and calculating social service costs enabled services such as home care, personal assistance, supported living, and respite care to be set up and improved. A total of 85 civil society organisations and private providers of social service assistance are now available to serve the diverse needs of individuals.

On **non-discrimination in employment and social policy**, a comprehensive legislative framework is in place. However, the Law on promotion and protection against discrimination needs to fully align with EU anti-discrimination provisions. 53.5% of the cases on which the Commission for the Prevention and Protection against Discrimination worked referred to employment and labour relations. *(See also Chapter 23 - Judiciary and fundamental rights).*

On **equality between women and men in employment and social policy**, the gender gap in the labour market remains. In particular, the employment rate for men was 56.3% compared to 38.3% for women in 2021. Furthermore, 55.5% of women are inactive compared to 33.3% of men. Data on and a monitoring system for incidents of sexual harassment in the workplace are still not available. Some progress was made with the adoption of the 2023 programme for social security support for women in agriculture, entitling women with 'insured individual farmer' status to maternity benefits for the first time. Childcare and pre-school capacity increased during 2022 with the opening of seven new institutions and 10 facilities within public institutions. Childcare facilities increased, reaching a total of 36 125. Childcare capacity needs to be increased in urban areas in particular. The gender pay gap persists and authorities need to produce reliable data monitoring the gap. The 2022 Labour Force Survey indicated that the gap is a result of the fact that women are mostly concentrated in low-paying sectors and positions. The average net wage for men in 2021 was 2.6% higher than the average net wage, while the average net wage for women was 3.9% lower than the average net wage.

The work to prepare the Law on the prevention and protection against workplace harassment continued while the ILO convention 190 – 2019 Violence and Harassment was adopted in June 2023.

Chapter 20: Enterprise and industrial policy

EU industrial policy strengthens competitiveness, facilitates structural change and encourages a business-friendly environment that stimulates small and medium-sized enterprises (SMEs).

The country is **moderately prepared** in the area of enterprise and industrial policy. **Some progress** was made on last year's recommendations and entailed measures to increase the competitiveness of domestic companies. Recommendations from last year therefore remain largely valid and in the coming year, the country should, in particular:

- consolidate the institutional structure and mandates of public bodies and increase the effectiveness of industry and enterprise policy measures;
- adopt and start implementing the export promotion strategy;
- start implementing the new 2023-2027 strategy for formalising the informal economy, with an action plan, and ensure high-level political commitment.

Enterprise and industrial policy principles are incorporated in numerous strategic documents under the competence of different national authorities. Overall coherence and coordination is lacking in this area. Overlapping and conflicting mandates continue to make the institutional set-up complex and resources inefficient. To address this issue, the government adopted a plan to consolidate part of the administrative structure, with merging some institutions and integrating others into the Ministry of Economy. However, the plan is yet to be implemented (*see also the section on public administration reform*). Progress in implementing the 2022-2026 growth acceleration plan is slow.

The State Audit Office identified shortcomings in measures for tourism, for companies affected by COVID-19, the operation of the Fund for Innovations and Technological Development as well as in the Directorate for technological zones (*see also the section on Accountability of the administration and chapter 32 – Financial Control*).

The dialogue with chambers of commerce through the joint platform continued throughout the reporting period. The conduct of stakeholder consultations though is irregular (*see also sections on Economic Criteria and Public administration reform*). Legislation related to companies is frequently amended without an adjustment period for companies.

The business environment was negatively affected by several factors, such as an increase in the minimum wage and in some para-fiscal charges. There was some progress against informal business activities: a methodology to streamline para-fiscal charges was developed and taxation got somewhat less distortive. The 2023-2027 strategy for formalising the informal economy and an action plan 2023-2025 were adopted in September 2023. Cooperation of SMEs in innovation activities and ICT training by enterprises require more attention to reverse an unfavourable development over the past years. The export promotion strategy, targeting the internationalisation of domestic companies is still to be adopted.

On **policy instruments**, in April 2023, North Macedonia signed the Association Agreement for the participation in the EU Programme “Single Market Programme”.

Amendments to the Law on financial discipline to further align with the EU Late Payments Directive were adopted in June 2023. Nevertheless, still some key issues need to be clarified,

for example the criteria of calculation of the payment periods or the right to the flat fee compensation.

The Development Fund was established in 2022 and the mechanism for the functioning of the Hybrid Strategic Green Investment Fund has been put into operation for support to export of innovations and to European Green Deal practices. To mitigate the effects of the energy crisis and high inflation, the government introduced support measures that should be better targeted. Numerous policy measures based on grants to companies are in place, but as they have the potential to distort market competition and incentivise informal business while lacking transparency, they need to undergo an in-depth evaluation.

In terms of **sectoral policies**, as a first step towards developing a circular economy roadmap, the Ministry of Economy completed the mapping of the circular economy potential.

Chapter 25: Science and research

The EU provides significant support to research and innovation. All Member States can participate in the EU's research and innovation programmes and benefit from them, especially where there is scientific excellence and a solid investment in research and innovation.

The country has a **good level of preparation** in the area of science and research. **Some progress** was made on strengthening the research and innovation capacity of the public and private sector by increasing the budget for science, by developing the yet to be adopted smart specialisation strategy and through the country's continuous improvement in the Horizon Europe participation. Some of last year's recommendations remain valid.

In the coming year, the country should:

- increase investment in research in line with the new European Research Area priorities;
- develop dedicated measures aiming to promote and increase participation in Horizon Europe and other relevant EU financing instruments in this area;
- adopt the smart specialisation strategy and start developing measures for its implementation.

Some progress was made to align with European standards on **research and innovation**. The budget for science in 2022 and 2023 has been increased significantly compared to 2021 (to approximately EUR 3.5 million from EUR 1.3 million). However, investment in research and innovation continues to remain low, at 0.38% of GDP, while the participation of the private sector in the overall research is even lower, at 0.1% of GDP.

The country's participation in **Horizon Europe**, the EU's framework programme for research and innovation, has continued to increase, reaching for 2022 (according to data availability at publication date), 10 projects with EUR 4 million funding, surpassing the whole 2021 performance. Authorities need to strengthen their participation in the new European Research Area and in the new European Innovation Agenda. No progress is noted on the European Charter for researchers, the Code of Conduct for the recruitment of researchers and the number of HR Excellence in Research logos issued over the reporting period. The national technology transfer roadmap has not yet been developed.

On **innovation**, the European Innovation Scoreboard classifies for a second consecutive year North Macedonia as an 'emerging innovator' marking however an increase in its score performance from 45.6% in 2022 to 46.3% of the EU average in 2023. In 2022, the Fund for Innovation and Technological Development committed nearly EUR 16.5 million to support

innovation and research in 209 private companies. The Fund's efforts to intensify synergies between businesses and academia need to continue to increase prioritising the facilitation the green and digital transitions. The Fund needs to comply with the findings of the State Audit Office's compliance audit report, issued in December 2022. Authorities should further support the academia-business cooperation. The European Institute of Innovation and Technology (EIT) announced that in the 2023 EIT higher education initiative, two higher education institutions from North Macedonia were selected for funding as full partners of large consortia.

The **smart specialisation strategy**, the main policy document for innovation and research with clear sector-specific priorities, has not been adopted yet, providing a safeguarded framework for an efficient use of research and innovation funds.

Chapter 26: Education and culture

The EU supports cooperation in education and culture through funding programmes and the coordination of Member State policy through the 'open method of coordination'. The EU and the Member States must also prevent discrimination and ensure quality education for children of migrant workers, including those from disadvantaged backgrounds.

North Macedonia is **moderately prepared** in the area of education and culture. **Limited progress** was made in the reporting period with the adoption and introduction of guidelines and programmes to strengthen inclusiveness and promote green skills. The implementation of the 2018-2025 education strategy continued to be slow, as did the development of a proper monitoring system. The adoption of key legislation was further delayed.

The recommendations of last year's report remain valid. In the coming year, North Macedonia should in particular:

- finalise and adopt the Law on secondary education and the Law on vocational education and training and set up and operationalise the regional VET centres;
- adopt the Law for adult education;
- improve access to quality education for all, in particular children with disabilities and children from Roma communities; and increase pre-school enrolment and continue improving support for teachers' training and professional development.

The 2018-2025 strategy for education is the main document governing the education sector, but its monitoring mechanisms are not well defined. Targets and indicators need to be improved to allow a proper evaluation of the implementation of the reforms. Authorities need to strengthen coordination among institutions in developing legislation, ensuring a conducive institutional environment able to deliver its implementation.

The new law on VET which is essential for the VET reform is yet to be adopted. Its adoption is also needed to enforce the role of the country's five regional VET (RVET) centres. A cooperation scheme is in place between business companies, vocational high schools, the Chambers of Commerce and the Ministry of Education to support students' internships in private companies. Approximately 100 dual-education classes opened under this scheme, supported by public-private partnerships.

The Law for adult education has not yet been adopted. The Bureau for Development of Education continued its activities for the Concept for primary education by preparing curricula for primary grade 6, based on the national standards, including green skills provision.

In November 2022, the Ministry of Education and Science adopted the 'Concept for secondary adult education' to help improve quality of life for citizens and enable social development.

Public spending on **education and training** decreased slightly to 3.71% of GDP in 2022 (3.98% in 2021), which is still far below the EU average of 5%. Although some progress was made on pre-school education, the overall level of enrolment remained lower than the regional and EU standards, especially for Roma children. Whereas the EU education and training target on early childhood education and care attendance is set at 96%, only 42% of 3-6 years-olds were enrolled in licenced early childhood education institutions in 2022. In addition to expanding capacity to extend pre-school education to more children, the quality of pre-school education was increased.

96.63% of children were enrolled in primary education (of which 51.46% were boys, 48.54% were girls) and 85.59% in secondary education (of which 49% were girls, 51% were boys) in the 2021/2022 school year. In higher education, the overall enrolment remains low. The number of university students enrolled in the first year of studies has been declining in the last 3 years.

Although North Macedonia has taken steps toward the digital transformation of its education and training system and digital skills are addressed throughout primary and secondary either cross-subject or through the subject of informatics, authorities need to continue to strengthen efforts towards effective, coherent and inclusive digital transformation of the education and training systems in North Macedonia, including the capacity of the systems to develop digital skills.

The country had engaged in international assessments of the education system (TALIS 2022, PISA 2022) during the reporting period. North Macedonia is not taking part in ICILS (International Computer and Information Literacy Study). The country continued to participate in the European Education Area (EEA) Working Groups 2021 - 2025.

The National Agency for Erasmus organised and supported more than 100 activities and events targeted at young people. The number of participants in funded youth exchange projects was 465 in 2022 (compared to 294 in 2020).

North Macedonia continued to participate in Erasmus+ and the European Solidarity Corps and participated also in the call for proposals for the European universities initiative, with one university winning a grant as part of a successful alliance. North Macedonia is participating in the European Education Area working groups 2021-2025.

With regard to **inclusion**, a modified programme for students with complex needs was launched in October 2022. The Bureau for the Development of Education prepared guidelines for developing and implementing a modified curriculum for primary students with complex needs. The Bureau also developed two training modules for inclusive school teams, and courses were conducted online. The number of Roma educational mediators increased further to reach 40, up from 35 in 2021, making their services available to 28 municipalities, up from 26 in 2021. In higher education, authorities granted 135 scholarships to Roma students. During the reporting period 450 scholarships were granted to children in primary education to support inclusiveness

On **culture** and the protection of cultural heritage, a new national strategy for 2023-2027 on the development of culture needs to be developed by the Ministry of Culture, ensuring also the appropriate budget allocations. The annual budget allocations for culture have decreased steadily in the last 3 years. Reforms following the recommendations of the functional analysis

of the Ministry of Culture and specialised bodies were further delayed. The Ministry of Culture and other relevant institutions need to strengthen their capacity to create and manage cultural policies based on sound public administration principles. In September 2023 Skopje was recommended to become the European Capital of Culture for 2028.

Further efforts are needed to reinforce institutional response and interinstitutional cooperation to protect cultural heritage and prevent illegal constructions. This includes the protection of cultural heritage sites of ‘particular importance’, such as lake Ohrid and the Skopje Old Bazaar. The country’s cultural heritage is not sufficiently safeguarded.

North Macedonia continued to fully participate in the Creative Europe programme's media and cross-sectoral strands. Authorities amended the national legislation in order to align it with the 2018 Audio Visual Media Directive, which is a prerequisite for country’s continuous participation in the programme. The number of beneficiaries of the Creative Europe programme remains satisfactory.

In the reporting period authorities developed the national **youth** strategy for 2023-2027, which is yet to be adopted.

In October 2022, North Macedonia signed the Council of Europe’s Convention on the Manipulation of **Sports** Competitions (Macolin Convention), which calls on public authorities to cooperate with sports organisations, betting operators and competition organisers to prevent, detect and penalise the manipulation of sports competitions.

With regard to transparency, the State Educational Inspectorate in cooperation with the Bureau for the Development of Education, is responsible for the implementation of the national curricula and supervises the implementation of the relevant legislation in all educational institutions.

Chapter 29: Customs union

All Member States are part of the EU customs union and follow the same customs rules and procedures. This requires legislative alignment as well as adequate implementing and enforcement capacity and access to the common computerised customs systems.

North Macedonia has a **good level of preparation** in this area. **Limited progress** was made on consolidation, application and upgrade of IT systems while the Concept of authorised economic operators (AEO) was further promoted, including through regional cooperation initiatives among the customs administrations of the WB6 countries. The implementation of the New Computerised Transit System Phase (NCTS) Phase 5 is facing delays. North Macedonia has yet to ratify the Protocol on Elimination of Illicit Trade in Tobacco Products.

Last year’s recommendations were partially implemented. In the coming year, the country should, in particular:

- implement the New Computerised Transit System Phase 5;
- continue the consolidation and full application of its IT systems, including alignment with the Commission's Multiannual Strategic Plan (MASP) modules, ensure their continuous upgrade, and business continuity;
- ratify the Protocol on Elimination of Illicit Trade in Tobacco Products.

The **customs legislation** is highly aligned with the EU *acquis*. The 2023 customs tariff was adopted to reflect the latest changes in the EU Combined Nomenclature. The CEFTA Additional Protocol 5 on trade facilitation was implemented, and the authorised economic

operators (AEO) concept was further promoted. So far, 27 companies have been AEO-certified. North Macedonia is yet to ratify the Protocol on Elimination of Illicit Trade in Tobacco Products, signed in 2014.

On **administrative and operational capacity**, the standards of professional integrity and anti-corruption are consistently applied. A comprehensive intelligence system in support of investigation and enforcement is in place. Risk management is applied systematically with the percentage of physical controls at 5.9 % and documentary controls accounting for 15.7 % of all shipments in 2022.

Revenues collected by the Customs Administration increased by 15% compared to 2021, totalling close to EUR 2 billion. The one-stop control with Serbia was implemented and the one-stop system was also established at the main border crossing with Albania in August 2023. The digitalisation of customs procedures continued and a green customs declaration was introduced, enabling import and export procedures to be completed in one hour, fully paperless. The 2021-2025 strategy for ICT development, aimed at coordinating the alignment of national systems with those of the EU, was implemented. The implementation of NCTS Phase 5 is facing delays. The System for Electronic Exchange of Data (SEED+) is operational, ensuring harmonised work of the agencies present at the borders.

The number of seizures doubled compared to the previous year, with 114 seizures in 2022, including drugs, as well as foreign currency, gold and undeclared excise goods. Cooperation and exchange of intelligence with the customs agencies from the region and with international and regional organisations continued.

CLUSTER 4: THE GREEN AGENDA AND SUSTAINABLE CONNECTIVITY

The cluster on Green Agenda and sustainable connectivity covers: transport policy (chapter 14); energy (chapter 15); trans-European networks (chapter 21); and environment and climate change (chapter 27).

North Macedonia has achieved a good level of preparation in trans-European networks and some level of preparation on environment and climate change. The country is moderately prepared on transport and energy policy with some progress made in the area of energy, particularly on regional gas interconnectors and on renewables. Substantial efforts are needed in areas where limited progress was achieved, such as transport, trans-European networks and environment. The country needs to accelerate the implementation of the Economic and Investment Plan and of the Green Agenda for the Western Balkans in the upcoming period.

Chapter 14: Transport policy

The EU has common rules for technical and safety standards, security, social standards, State aid and market liberalisation in road transport, railways, inland waterways, combined transport, aviation and maritime transport.

The country is **moderately prepared** in the area of transport. **Limited progress** was made in the reporting period in all transport modes though there was a partial alignment with the aviation safety legislation. The sector inspection bodies still lack administrative and operational capacity. Political commitment is still missing to deliver on necessary rail sectoral reforms.

As the previous year's recommendations were not implemented, they remain valid. In the coming year, North Macedonia should, in particular:

- ensure qualified operational and administrative capacity of the inspection bodies and develop their enforcement capacity to reduce deaths on the road and on rail infrastructure;
- implement the connectivity reform measures on rail reform and open the rail transport market, amend national law to remove breaches of provisions of the Transport Community Treaty on opening up the rail market, and finalise pending border-crossing agreements/protocols;
- adopt and implement legislation on intelligent transport systems (ITS).

On the **general transport** *acquis*, the key strategic documents for transport and its sub-sectors are in place. Limited progress has been made in developing the action plan to accompany the 2018-2030 national transport strategy. Preparation of the national ITS strategy has progressed but it has not yet approved and national laws are still not aligned with the ITS Directive.

The operational and administrative capacity for all modes of transport is still lacking and no effort has been made to strengthen them. The result of this situation is the ineffective implementation of the Green Agenda for the Western Balkans. The law on air and railway accident investigation has still not been fully implemented. The independent rail accident investigation body has still not been created. Larger cities should develop sustainable urban mobility plans, which respect environmental and social standards, following best EU practices. Further efforts are needed to align with the *acquis* on public passenger transport services by rail and by road.

Although North Macedonia is actively engaged in the work of the Transport Community, there was limited progress on the implementation of the Transport Community Treaty action plan and elements of the smart and sustainable mobility strategy for the Western Balkans.

The legal framework for **road transport** is broadly aligned with the EU *acquis* and no progress was made during the reporting period. The Law on dangerous goods is aligned with the EU *acquis*, but there is still no legal entity appointed to conduct a conformity assessment on the existing equipment for the transport of dangerous goods. The executive body for road traffic safety has still not been set up as the law has not been adopted. Further efforts are needed to align with the social and safety *acquis*. The national accident and investigation body still needs to be set up. Similarly, no action plans on road safety inspection and audit have been adopted and implemented. The scope and the quality of the road safety statistics have been improved though additional steps are required to align fully with the EU *acquis*. Enforcement and the technical capacity of the State Transport Inspectorate remain weak. Penalties for infringing the European agreement on the work of crews of vehicles engaged in international road transport (AETR) still lack harmonisation. The five-year road maintenance plan has not been published since 2017; road maintenance is still carried out inefficiently and needs to be improved. More efforts are needed to align with the EU *acquis* on road infrastructure safety management and minimum safety requirements for tunnels in the trans-European road network. Legislation on clean energy and energy efficient road transport vehicles is not aligned with the EU *acquis*.

On **rail transport**, the main requirements of the EU *acquis* are met in terms of the unbundling of the infrastructure manager and the national operator. Further alignment with large parts of the single European railway area *acquis* continue to be delayed. The rail market is yet to be opened at domestic level. Amended railway safety and interoperability legislation was adopted in 2016, but lacks proper enforcement. Preparations for strengthening the operational capacity of the Railway Safety Directorate have started. There has been no

progress in setting up an accident and investigation body. The agreement on cross-border railway cooperation with Greece is yet to be finalised.

In the area of **maritime transport**, North Macedonia, as a landlocked country, participates in all basic transport conventions of the International Maritime Organisation, including the European Maritime Safety Agency (EMSA).

On **inland waterway transport**, North Macedonia is aligned with most of the EU *acquis*, but not with the Regulation on the recognition of certification and transportation of goods and passengers. The country does not participate in the EU strategy for the development of the Danube Region but continues to contribute actively in the International Commission of the Sava River Basin. More efforts are needed in aligning the legislation with common rules applicable to the passengers by inland waterway.

In the area of **aviation**, the country has maintained a good level of alignment with the EU *acquis* and has partially aligned with the aviation safety legislation. Further efforts are still needed to facilitate European Aviation Safety Agency standardisation inspections.

On **combined transport**, progress was made and technical experts have started work on setting up a multimodal node near Skopje. The specific legislation is partially aligned with EU rules. Progress needs to be made on adopting relevant legislation and setting up systems for electronic freight transport information exchange.

North Macedonia should increase efforts to align with and implement **EU passenger rights** legislation.

Chapter 15: Energy

EU energy policy covers energy supply, infrastructure, the internal energy market, consumers, renewable energy, energy efficiency, nuclear energy and nuclear safety, radiation protection and nuclear safeguards.

North Macedonia is **moderately prepared** in the area of energy. **Some progress** was made in regional gas interconnectors and on renewable energy, with investments in solar power plants. As the energy crisis has demonstrated, North Macedonia needs to accelerate its transition towards green energy and reduce its dependence on gas and coal.

As last year's recommendations were not fully implemented, in the coming year the country should, in particular:

- ensure coherent energy policy, improve governance and institutional capacity in the energy sector and improve strategic investment programming and accelerate the transition towards green energy in accordance with the Green Agenda for the Western Balkans and the national energy strategy, as well as update and implement the national energy and climate plan-NECP), in line with the 2030 Energy Community climate and energy targets;
- adopt and implement the energy efficiency implementing legislation;
- complete the unbundling (certification) of the gas transmission systems operators and foster market development and regional market integration;

The government adopted a national energy action plan in December 2022, which includes measures to mitigate the socio-economic impact of the energy crisis in North Macedonia, as well as a review of the energy sector's strategic, institutional and legislative framework. The action plan formed the basis for a policy dialogue on the EU Energy Support Package (of EUR 80 million).

The need for a coherent and coordinated energy policy became even more evident with the energy crises. The government should increase its administrative capacity for dealing with energy policy, strategic planning and investments in the energy sector.

Concerning **security of supply**, the energy crises have demonstrated the country's dependence on coal and the need to accelerate the transition towards green energy. Both Bitola and Oslomej thermal power plants were operating on coal from limited domestic resources and imports. The lack of availability of coal for the Bitola thermal power plant still needs to be urgently addressed, by investment in new renewable resources. The Compulsory Oil Reserves Agency adopted a 2023-2025 action plan for the formation of mandatory reserves to release stocks in the case of an emergency. The oil stocks correspond to at least 53 days of average daily consumption.

The construction of a new 400kV electricity transmission interconnector line with Albania is under way. An electricity day ahead market has been established and the market coupling with Bulgaria is progressing while the establishment of the intra-day market is still pending. On gas interconnections, the government has finalised the initial design phase for the construction of an interconnection line with Greece and has drawn up feasibility studies for a line to Serbia and to Kosovo.

Concerning the **internal energy market**, the national framework legislation is in line with the EU's third energy package in gas and electricity, and the country's electricity and gas markets are open for competition. However, the transposition and implementation of the newly adopted electricity integration package is pending.

The electricity transmission and distribution network operators have been unbundled, in accordance with the EU *acquis*. The gas transmission system operator has not yet been certified as required by the third energy package. Amendments to the Energy Law were adopted, transposing the Regulation on wholesale energy market integrity and transparency (REMIT) and the TEN-E regulations.

Third-party access to the natural gas infrastructure is in line with the EU *acquis*, but transparency needs to be improved. Works to build the gas transmission pipeline between Skopje, Tetovo, and Gostivar are progressing. The tendering process for awarding a public-private partnership for gas distribution system is ongoing.

Wholesale gas prices are fully deregulated; however the market remains illiquid, without a virtual trading point. All contracts are concluded bilaterally, on a monthly and yearly basis.

The Energy Regulatory Commission is functional and has continued to demonstrate regulatory independence. The Commission for the Protection of Competition carried out an investigation concerning the sales of electricity to the universal supply company. The State Audit Office has conducted several audits in relation to the energy crises and the operators. The electricity transmission system operator must address the findings of the 2016 and 2023 audit reports and improve their operations.

In the area of **hydrocarbons**, the Law on mineral resources remains to be aligned with the Hydrocarbon-Licensing Directive.

On **renewable energy**, the Renewable Energy Directive (REDI) remains to be transposed. The amended Energy Law makes the adoption of the national energy climate plan (NECP) a legal obligation for the country, replacing the renewable energy sources (RES) action plan. The NECP sets the target for the share of renewable energy sources in gross final consumption of energy in 2030 at 38%, and the indicative target for 2023 at 26%. The share of RES in the gross final energy consumption for 2022 was 18.8%. Investments in

hydropower should be compliant with the relevant environmental *acquis*. Optimising balancing services and investments in energy transmission and energy storage should be promoted to improve the integration of renewable energy sources into the grid. An upgrade of the grid system is necessary.

The capacity cap per type of renewable energy technology has to be removed to enable the achievement of the 2025 renewable energy targets. An electronic system for issuing, transferring and cancelling guarantees of origin is not in place. Electricity prosumers are supported by the rulebook on renewables, and implementation should be enhanced. The procedures for the installation of photovoltaics on buildings is complicated and an obstacle to new investments.

The Government adopted a Just Transition roadmap and a coordination mechanism for governing and monitoring, in June 2023. The transition towards clean energy should include measures mitigating the negative social and economic impacts of the planned phase-out of coal-fired power plants in the concerned regions.

The Law on **energy efficiency** is aligned with the Directive on energy efficiency and the Directive on the energy performance of buildings. Following the latest amendments to the Energy Efficiency Directive, the update of the Law on energy efficiency is under way. The implementation of the current legislation has not improved. Energy performance certification requirements for buildings are not applied according to the legislation. The adoption of implementing legislation remains a challenge due to the limited human and technical capacity at the Energy Department of the Ministry of Economy and the Energy Efficiency Agency.

The structure of the energy efficiency fund is being set up. Municipalities are encouraged to take steps to fully respect their obligations to develop and implement energy efficiency programmes.

For **nuclear energy, nuclear safety and radiation protection**, North Macedonia has ratified the relevant international conventions and is a full member of the European Community Urgent Radiological Information Exchange system (ECURIE). There is still no long-term and safe radioactive waste storage facility in place. The capacity of the Radiation Safety Directorate needs to be strengthened.

On **nuclear safeguards**, upon accession, the existing systems of accountancy and control of nuclear materials in North Macedonia would need to be adapted to accommodate for the safeguard provisions (chapter 7) of the Euratom Treaty.

Chapter 21: Trans-European networks

The EU promotes trans-European networks (TENs) in the areas of transport, telecommunication and energy to strengthen the internal market and contribute to growth and employment.

North Macedonia has a **good level of preparation** in the area of trans-European networks. **Limited progress** was achieved during the reporting period. However, the required legislative process was not completed, in particular the action plans to implement the Transport Community Treaty.

As last year's recommendations were not fully implemented, they remain valid. In the coming year, the country should in particular:

→ further strengthen the operational and technical capacity of all management and stakeholder institutions dealing with the development of both Trans-European Transport

(TEN-T) and Trans-European Energy (TEN-E) networks, and harmonise the legal framework with the Trans-European Network Regulation;

- mobilise sufficient resources to implement the Transport Community Treaty and achieve the goals and deadlines set out in the action plans;
- implement the final provisions of the Railway Border-Crossing Protocol with Kosovo and urgently accelerate progress on completing rail Corridor VIII phase III (Kriva Palanka border with Bulgaria).

On **transport networks**, further efforts are needed to achieve the goals and deadlines.

Investments in the sector should be based on feasibility studies conducted in line with EU best practices, and should apply transparent procurement procedures. The staff retention policy by bodies involved in large investment projects remains limited, which considerably hampers the completion of strategic projects.

In May 2023, North Macedonia signed a high-level understanding with the European Commission updating the TEN-T maps. The amended maps for the new European Western Balkans Corridor will be part of the revised TEN-T Regulation, which is currently being discussed by co-legislators. Road Corridor X is functional, but works along Corridor X-d have accumulated additional delays. Contracts have been signed for the construction of four highway sections along Corridors VIII and X-d. The construction of the rail Corridor VIII towards Bulgaria started in November 2022 with two new contractors for phase I and II respectively, but the preparation of the tender documentation for phase III (Kriva Palanka border with Bulgaria) has accumulated significant delays. Additional and urgent efforts are needed to accelerate progress on rail Corridor VIII and other priority sections of the core network for both rail and road. Amendments to accelerate construction of four highway sections along Corridors VIII and X-d were adopted in May 2023 by using the ‘EU flag’ fast-track procedure, although this was not an appropriate use of the procedure. North Macedonia is expected to respect the obligations stemming from the Stabilisation and Association Agreement as well as to keep aligning with the EU *acquis* during the accession negotiation process.

To date, no agreement has been reached on establishing the Kremenica-Neos Kafkasos railway border-crossing with Greece. Finalising the mutual border agreement and ensuring the railway line becomes fully operational are key. Funding to build adequate infrastructure close to the Serbian border at the Tabanovce railway border station has still not been completely secured. No progress was made on adopting five-year road and rail maintenance plans.

On **energy networks**, the construction of a new 400kV electricity transmission interconnector line Bitola-Elbasan (Albania), is still under way. Technical assistance to strengthen the transmission network in the south-eastern region of North Macedonia is ongoing. Works are also ongoing to build the gas transmission pipeline between Negotino and Bitola, and Skopje, Tetovo and Gostivar. The development of a natural gas interconnector between North Macedonia and Greece, a flagship project in the Economic and Investment Plan (EIP) for the Western Balkans, is a priority to enable security of gas supply in North Macedonia and is progressing well.

Chapter 27: Environment and climate change

The EU promotes strong climate action, sustainable development and protection of the environment. EU law contains provisions addressing climate change, water and air quality,

waste management, nature protection, industrial pollution, chemicals, noise and civil protection.

North Macedonia has **some level of preparation** in this area. Overall, there was **limited progress** during the reporting period. In the waste management sector, the first national plan for waste prevention was adopted. On nature protection, the management plans for Shara Mountain and Osogovski Mountains were adopted. Implementation in all sectors needs to be strengthened to keep up with developments in the EU *acquis*. North Macedonia is encouraged to take further steps towards the green transition, notably under the Green Agenda for the Western Balkans.

Last year's recommendations were partially fulfilled. In the coming year, the country should in particular:

- implement concrete measures to reduce air pollution at local and national level and to reduce point and diffuse pollution of freshwater resources;
- make operational the regional waste management system in the eastern and north-eastern regions; implement the Paris Agreement, including by adopting a Climate Law, consistent with the EU 2030 framework, and by adopting the national adaptation plan.
- strengthen significantly the administrative and inspection capacities, and implement structural reforms in all the sectors covered under this Chapter.

Environment

On **horizontal legislation**, North Macedonia needs to intensify the work to achieve full alignment with the cornerstone Directives on Environmental Impact Assessment and Strategic Environmental Assessment. This negatively impacts all other environmental sectors, infrastructure investments and overall public participation and perception. The Law on the environment was amended in July 2022 to introduce a ban on the construction/reconstruction of new installations for heavy and polluting industries less than five kilometres from a settlement or a nature protected area. The country has not yet aligned with the Directive on environmental liability and the Directive on environmental crime. The lack of specialised staff and weak institutional and administrative capacity are undermining quality control and the performance of environmental impact assessments.

Whilst air pollution remains a major concern in large cities, limited progress was made on **air quality** monitoring and no legislative developments on air quality were made during the reporting period. The automatic monitoring network continued to be maintained and was upgraded with a new station operating in Ohrid. The cadastres for air emission for Kicevo, Kocani, Stip, Kavadarci, Gevgelija and Prilep were finalised in 2022 While the ones for Veles, Tetovo, Gostivar and Struga are still under development. Air quality plans have been approved for Gostivar Municipality in February 2023 and by the Municipality of Kumanovo in December 2022.

In the area of **waste management**, the first (2022-2028) national plan for waste prevention was adopted in September 2022, setting out regulatory, policy and practical measures to be taken by various stakeholders across the public and private sectors.

The process for closing non-standard landfills in the eastern regions is ongoing. The use of plastic bags has decreased by 80% since their ban by end-2021 was introduced. A system set up by collective operators for the extended producer responsibility (EPR) scheme comprising public utilities and licenced private operators for the separate collection of plastic, paper and glass from households and businesses is operational, but capacity is limited. Activities aimed

at further improving the EPR system have begun. Nevertheless, implementation remains a significant challenge in the waste management sector.

North Macedonia needs to continue efforts to align national legislation with the EU *acquis* on **water quality management**. In February 2023, the 2023 water management programme was adopted for the design and construction of new - and maintenance and improvement of existing - public facilities for water supply and regulation of watercourses. The legal and policy framework for integrated water management aligning with the water *acquis* is largely in place. However, the slow pace of implementation and enforcement is an overwhelming, systemic weakness. Some progress was made on increasing the very low level of funding. The contract for the major construction project of the Skopje wastewater treatment plant (WWTP) was signed in April 2023 and that of the major construction project of the Kichevo sewerage network was signed in January 2023. To tackle water pollution the Urban Wastewater Treatment Directive (UWWTD)-related legislation needs to be implemented. No progress was made on completing the implementing rules and regulations, including on the designation of areas sensitive to eutrophication.

On **nature protection**, the process of designating Studenchishko Blato, Matka Canyon, Lake Ohrid and Belchisko Blato as protected areas has yet to be concluded. The management plans for Shara Mountain (and the Osogovski Mountains have been adopted and aim to strengthen the protection of these areas. The Law on nature, designed to align with the requirements of the EU Habitat and Wild Bird Directives, needs to be adopted. The national funds available for nature protection have been increased but are still far from sufficient. The lack of sustainable financing and of administrative capacity to manage protected areas remain a major challenge.

Activities to identify potential Natura 2000 sites continued throughout the country. Initial steps were taken to digitalise the system for issuing permits, promoting information exchange and cooperation to facilitate the implementation of CITES. Progress was made on cross-border cooperation for the protection of Prespa Lake during meetings of the Prespa Park Management Committee and the Water Management Working Group.

The implementation of UNESCO recommendations on the natural and cultural heritage of the Ohrid region remains insufficient. The Secretariat of the Bern Convention carried out a mission in connection with the open file “Alleged negative impacts on Ohrid Lake and Galichica National Park - candidates for Emerald areas”, due to infrastructure development.

In July 2023 the EU and North Macedonia signed the agreement on the country's participation in the LIFE programme. Joining the LIFE programme will allow North Macedonia to participate in the various environmental protection activities, including support for nature and biodiversity and climate action.

On **industrial pollution and risk management**, the law on industrial emissions is yet to be adopted and there have been no developments on integrated permitting. North Macedonia should align with the Seveso III Directive, the EU Ecolabel Regulation and the EU Eco-Management and Audit System.

No significant developments have been made in the area of **chemicals** and of **noise pollution** in the reporting period.

On **civil protection**, the European emergency call number E 112 has been available to people across the country since February 2022. Furthermore, the fleet of firefighting planes was serviced and new firefighting equipment was acquired. North Macedonia signed the revision of the administrative arrangement with the Union Civil Protection Mechanism.

Despite its longstanding participation in the system, no progress has been made in linking the national emergency communication system to the European Commission's Common, Emergency, Communication and Information System (CECIS) or in better defining the role of the national coordinator for the National Platform on Disaster Risk Reduction. The new national protection and rescue strategy for 2022-2025 is yet to be adopted. The country needs to take concrete steps to introduce a mandatory training programme for all territorial, fire and rescue/civil protection staff.

Climate change

The national energy and climate plan (2021-2030) was adopted in June 2022 but the Law on climate action is yet to be adopted. The fourth National Communication to the UN Framework Convention on Climate Change was adopted in February 2023.

CLUSTER 5: RESOURCES, AGRICULTURE AND COHESION

Cluster 5 on resources, agriculture and cohesion covers: agriculture and rural development (chapter 11); food safety, veterinary and phytosanitary policy (chapter 12); fisheries and aquaculture (chapter 13); regional policy and coordination of structural instruments (chapter 22); financial and budgetary provisions (chapter 33).

North Macedonia is moderately prepared in most areas of Cluster 5. It has a good level of preparation in the area of food safety, veterinary and phytosanitary policy and is at an early stage of preparation in financial and budgetary provisions. Over the reporting period, some progress was made in agriculture and rural development, fisheries and aquaculture and in food safety, veterinary and phytosanitary policy. However, further efforts are needed, in particular in areas where limited or no progress was made, such as regional policy and the coordination of structural instruments and financial and budgetary provisions.

Chapter 11: Agriculture and rural development

The EU's common agricultural policy supports farmers and ensures Europe's food security. It helps tackle climate change and the sustainable management of national resources; maintains rural areas and landscapes across the EU; and keeps the rural economy alive by promoting jobs in farming, agri-food industries and associated sectors. This requires strong management and control systems. There are also common EU rules for marketing standards, quality policy and organic farming.

North Macedonia remains **moderately prepared** in the area of agriculture and rural development. **Some progress** was made during the reporting period, notably with the preparation of the 2021-2027 action plan for the national strategy for agriculture and rural development, including budgeting for support measures under the 2023-2027 national programme for the development of agriculture.

Some recommendations from last year's report were not fully implemented and remain valid. In the coming year, North Macedonia should in particular:

- ensure transfer of the farm register and the land parcel identification system (LPIS) to the paying agency;
- adopt a legislative framework to further align with the EU *acquis* on areas such as support payments, common market organisation and farm advisory services;

→ improve the administrative capacity in the instrument for pre-accession assistance for rural development (IPARD) operating structures to ensure robust implementation of the IPARD III programme.

On **horizontal issues**, an action plan for the 2021-2027 national strategy for agriculture and rural development (NSARD) was prepared. Its alignment with the action plan on the Green Agenda for the Western Balkans needs to be ensured. The financing of the NSARD has been budgeted under the 2023-2027 national programme for the development agriculture and rural development and nearly 80% of the funds are allocated to direct support measures. North Macedonia continued a policy of complex coupled schemes of direct support to farmers. A new e-application system for direct support has simplified the application process and control system. The new Law for agriculture and rural development has been prepared. North Macedonia needs to align its national support measures to the EU *acquis*. Solutions for long-term staffing and for the premises of the paying agency, remain to be found.

All elements of the integrated administration and control system (IACS) are in place and comply with the EU *acquis*. However, data transfers and the inter-operability of the various elements need to be improved. The area-based payments continue to be determined based on the land parcel identification system (LPIS). New orthophoto maps are to be acquired and updates to the LPIS completed in 2023. The legislative framework for transferring the farmers' register and LPIS to the Paying Agency is still pending. On the farm accountancy data network (FADN), a new plan for selecting representative agricultural holdings has been prepared ensuring the expansion of the sample for data collection. Additional human and financial resources are essential to ensure the sustainability of the FADN system. Efforts are underway to develop the farm advisory services in line with the EU *acquis*.

Little progress was made on further aligning with the **common market organisation (CMO)**. Legislation in this area remains to be adopted. Development of a school schemes for fruit and vegetables continued in 2023.

On **rural development**, good progress was made in absorbing EU funds under IPARD II. By the end of 2022, payments to recipients reached around EUR 42 million. It is critical that the IPARD authorities improve the disbursement of funds in 2023 to avoid the decommitment of the remaining IPARD II funds and to support the thorough implementation of the IPARD III funds for which entrustment was granted by the European Commission Overall, the capacity and staff retention of the IPARD authorities needs to be strengthened. No significant progress has been made in aligning national rural development policy with the EU *acquis*.

On **quality policy**, progress in implementing quality schemes has been limited but 2023 saw some developments in the registration process for a number of products. The legislative framework, including on spirit drinks remains to be fully aligned with the EU *acquis*. Administrative capacity remains insufficient, despite the sector's potential.

As regards **organic farming**, the legislation, competent authority, control bodies, and accreditation and certification system are in place. A new law on organics further aligning with EU *acquis* remains to be adopted and actions to enhance the monitoring and control of organic certification and traceability of organic products can be intensified. Efforts should be made to further develop the sector, making use of the support available under the IPARD III programme.

Chapter 12: Food safety, veterinary and phytosanitary policy

EU hygiene rules for foodstuff production ensure a high level of food safety. Animal health and welfare and the safety of food of animal origin are safeguarded together with quality of seeds, plant protection material, protection against harmful organisms and animal nutrition.

North Macedonia has a **good level of preparation** in the areas of food safety, and veterinary and phytosanitary policy. **Some progress** was made over the reporting period, particularly in fighting animal diseases, plant health control and implementing pest eradication measures based on phytosanitary monitoring programmes results.

The Commission's recommendations from last year were not met and therefore remain valid.

In the coming year, North Macedonia should in particular:

- adopt the draft laws on food safety, official controls and the new Law on animal health;
- strengthen capacity for data analysis in the Food Veterinary Agency;
- implement measures on the sustainable use of pesticides.

On **general food safety**, amendments to the Law on food safety and a new Law on official controls have been prepared but are yet to be adopted. The national rapid alert system for food and feed and the Food and Veterinary Agency's internal audit and training systems continued to operate efficiently. The Agency continued to perform its work in line with quality management standards and 566 consumer complaints were received and resolved in 2022.

On **veterinary policy**, a new Law on animal health, aimed at aligning with the new EU animal health legislation, is yet to be adopted. The Food and Veterinary Agency provides regular updates on safeguard measures for imports and import requirements for live animals and animal products.

Progress was made on control measures for animal diseases. The Agency has an active and passive surveillance programme in place for various diseases, but the collection, verification and analysis of data remains insufficient. The Agency continued implementing the monitoring programme on antimicrobial resistance. The 2023 national monitoring programme on control of residues of veterinary medicinal products and contaminants in live animals and foodstuffs of animal origin is in line with the EU *acquis* on bovine, ovine/caprine, porcine, poultry, aquaculture, milk, eggs, wild game and honey. The new Law on zoo-technics was adopted in April 2023. The capacity to align with and implement the EU *acquis* on zoo-technical issues remains to be improved.

Some progress was made in the **placing of food, feed and animal by-products on the market** with the adoption of implementing legislation, aiming at aligning with the EU *acquis*. The revised law on animal by-products has been adopted.

Some progress was also made on **food safety rules**. The legislation was amended in December 2022 to align with the EU *acquis* on specific requirements for microbiological criteria for food. The Agency continued implementing a programme to monitor food safety, but the data is to be further analysed.

Regarding **specific rules for feed**, the legislation was aligned with EU requirements for processed proteins, and with procedures for sampling and laboratory testing. The Agency continued to implement a programme to monitor feed safety and the Agency collected 90% of the 500 planned feed samples.

Some progress was made on **phytosanitary policy**. The Phytosanitary Directorate regularly updated the list of harmful organisms in line with the new EU *acquis* and the country's pest status. The phytosanitary monitoring programme for plant health was implemented, and the phytosanitary information system further developed. The Law on phyto-pharmacy is aligned with the EU *acquis*. However, measures on the sustainable use of pesticides have not been implemented. Substantial work is still necessary to collect reliable data on national pesticides use and its impact on human health. The phytosanitary inspection body continued to implement measures to eradicate pests identified through monitoring and control programmes.

The Law on **genetically modified organisms** was aligned with the EU *acquis*.

Chapter 13: Fisheries and aquaculture

The common fisheries policy lays down rules on fisheries management, protects living resources of the sea and limits the environmental impact of fisheries. This includes setting catch quotas, managing fleet capacity, rules on control and inspection, rules on markets and aquaculture and support for fisheries and coastal communities. Further, it promotes a sustainable aquaculture.

North Macedonia is **moderately prepared** in the area of fisheries and aquaculture. In the reporting period, **some progress** was made in aligning marketing standards, structural measures and State aid with the EU *acquis*.

Some recommendations from last year's report were not fully implemented. In the coming year, North Macedonia should in particular:

- adopt the Law on fisheries and aquaculture and the implementing legislation on marketing standards, consumer information, traceability and producer's organisations as well as a national strategy on aquaculture;
- improve the data collection system and reporting, such as establishing a data framework for collection of fisheries and aquaculture data, integration of all data sources and analysis;
- establish a multi-annual programming of structural measures.

As North Macedonia only has inland fishing in lakes and aquaculture, a large part of the EU *acquis* on fisheries is not applicable. Progress was made in aligning the national legal framework with the preparation of a new Law on fisheries and aquaculture. A new law on fisheries and aquaculture including relevant EU provisions on marketing standards, structural support and state aid, is yet to be adopted. The adoption of a multi-annual national strategy dedicated to aquaculture is pending.

The institutional framework for fisheries policy, inspections and control has been set up, but administrative capacity for **resource and fleet management**, and **inspections and control** remains insufficient although the *acquis* on catch quotas, inspection and control is only partially applicable due to lack of a coastline in the country. The Fisheries and Aquaculture Unit in the Ministry for Agriculture is understaffed. Some progress was made on capacity building, with intensive training courses organised. However, human resources for fisheries management and the control of IUU fishing need to be further improved in line with EU requirements.

North Macedonia should carry out activities to raise the public's awareness about illegal, unreported and unregulated fishing and its legal consequences. Specific attention should be given to preventing the illegal fishing of protected species and European eel.

The annual budget for **structural measures** is insufficient for developing aquaculture and restoring fish stocks. The government should increase structural support and prepare a multiannual financial and policy programme to address the sector's needs. The data collection system for fisheries and aquaculture needs to be further developed in line with the EU *acquis*. Interinstitutional coordination with the environment authorities needs to improve.

Alignment of the Market policy, structural support and State aid as well as alignment with the EU Eel Regulation is still outstanding due to the pending adoption of the new Law on fisheries and aquaculture.

No cooperation meetings on the **international agreements** for fisheries management of the transboundary lakes took place in 2022. Greece and North Macedonia applied a regular synchronised fishing ban at the Dojran lake each year. Cooperation meetings with Albania for the management of Ohrid lake fish stocks were held in June 2023.

Chapter 22: Regional policy and coordination of structural instruments

*Regional policy is the EU's main tool for reducing regional disparities and investing in sustainable and inclusive socio-economic growth. It is operating through "shared management" between the Commission and EU Member States. The implementation of cohesion policy programmes requires appropriate administrative capacity on programme and project level, the establishment of systems of sound financial management and control and also the fulfilment of other EU *acquis* elements such as environmental or public procurement legislation.*

North Macedonia is **moderately prepared** in the area of regional policy and coordination of structural instruments. **No progress** was made over the reporting period.

Therefore, last year's recommendations remain valid. In the coming year, the country should:

- upgrade its institutional, administrative and technical capacity to manage EU funds by adopting an overall staff retention policy, strengthening capacities, improving the implementation of EU and audit recommendations, aligning management and control systems with the Instrument for Pre-Accession Assistance (IPA) III requirements;
- strengthen investment policy as a matter of urgency by streamlining investment pipelines underpinned by sound, transparent and inclusive methodology, clear responsibilities of the stakeholders and a viable public-private partnership framework;
- enhance the decentralisation process through a credible financing framework for municipalities and strengthen policy dialogue on regional development.

No progress was made on the **legislative framework**, but basic principles remain broadly in line with EU *acquis* on public procurement, public finance management, regional and municipal development, equal opportunities and non-discrimination, environmental protection, transport connectivity and energy transition. The strategic framework was strengthened with the adoption of new strategies on public procurement and gender equality, and the national energy action plan. No significant progress was made on the decentralisation of services and reorganisation of competencies between the central and the subnational level.

The **institutional framework** for the management of EU funds under IPA III is being further aligned with IPA III requirements in view of its future role in EU cohesion policy. However, the performance of the existing and new institutional set-up for multiannual operational programmes is jeopardised by weak administrative capacity.

Weaknesses persist in the **administrative capacity** of key institutions managing EU funds. The lack of a national staff retention policy, shortcomings in human resources management and exceptionally high staff turnover across the IPA structures remain key concerns. Overall, the structures managing EU funds operated last year with 79% of the optimal staff levels and with key managerial positions vacant. Progress with the IPA training centre was modest, taking the form of new furniture, IT and media equipment. Training plans were developed and effective training of new IPA practitioners began. However, the training centre is understaffed and a roster of trainers has not been established. North Macedonia needs to implement the government's August 2022 decision on setting up a roster of trainers and developing a training methodology effectively.

The **financial management and control** systems are functioning, but are under pressure due to staffing challenges. This continued to negatively affect actions under indirect management by the beneficiary country. At the end of 2022, EU funds for a total of EUR 24.8 million were decommitted under the IPA II multiannual programme for environment and transport (2014-2020), while the risk of further substantial decommitment remains high. To address the critical shortcomings and to be able to operate in an *ex-post* control environment, North Macedonia has stepped up the reorganisation of the financial and control systems for the new operational programmes under IPA III. Further efforts are needed to address the EU and audit recommendations on staff management and retention policy, procurement and contract planning, internal audit function and quality assurance.

The Financial Framework Partnership Agreement on the implementation of IPA III entered into force. The **programming** of IPA 2022 and IPA 2023 was completed and advances were made in the programming of IPA 2024 and operational programmes for 2024-2027. The sector policy dialogue, which supports strategic planning and programming, weakened in the last year as reflected by the infrequent meetings of the sector working groups.

North Macedonia continues to gain experience in regional policy and territorial cooperation programming and implementation through its participation in cross-border, transnational, and interregional cooperation programmes, including the EU Strategy for the Adriatic Ionian region.

On **monitoring and evaluation**, North Macedonia actively participates in the IPA and sector monitoring committees, however only 30% of the jointly-agreed conclusions have been implemented. The lack of political steer, the weak interinstitutional coordination and the weak central reporting and monitoring function of the office of the national IPA coordinator negatively affects the timeliness and quality of IPA reports.

Internal and external **audit** functions are in place. However, internal audit needs to be strengthened to better support the functioning of the management and control systems. The delay in adopting the new Law on public internal financial control is concerning. The Audit Authority continues to perform well and follows sound audit methodology with good audit coverage. The new 2023-2025 audit strategy was adopted in November 2022. However, the operational and technical capacity of the Audit Authority is undermined by staffing challenges. The implementation of the audit findings by the auditees remains very low. Out of 96 findings from previous audits, 23 were closed in 2022, representing an implementation rate of 24%, which is a serious concern.

As regards anti-corruption, in line with the new Organic Budget Law, in December 2022, the government adopted the decree on setting up the anti-fraud coordination service (AFCOS) network, which is the backbone of the system for protecting EU's financial interests in North Macedonia. The AFCOS network is now fully operational. In addition, the institutions

managing EU funds implement a financial management and control system accredited by the Commission, which is under the scrutiny of an external audit body and Commission services.

Chapter 33: Financial and budgetary provisions

This chapter covers the rules governing the funding of the EU budget ('own resources'). These resources mainly consist of: (i) contributions based on the gross national income of each Member State; (ii) customs duties; (iii) the non-recycled plastic resource and (iv) a resource based on value-added tax. Member States must have the appropriate administrative capacity to adequately coordinate and ensure the correct calculation, collection, payment and control of own resources.

The country is at an **early stage** of preparation in this chapter. **Limited progress** was made during the reporting period. North Macedonia reports national accounts data according to the ESA 2010 (European System of Accounts) methodology, however further improvements regarding the complete and timely transmission of annual national accounts are needed. The institutional set-up for the efficient functioning of the own resources system is yet to be established.

Since the recommendations from last year's report were not fully implemented, in the coming year, the country should:

- further improve the legal basis for the own resources system in the areas of taxation (VAT), customs union, financial control and statistics;
- strengthen administrative capacity and coordination mechanisms among key stakeholders in the own resources system.

North Macedonia made limited progress on the administrative conditions for own resources laid down in the relevant Regulations, on reducing the administrative burden for taxpayers and on the VAT refund process. Measures to fight and reduce tax evasion, fraud and the informal economy, as well as to improve internal control in public sector are yet to be efficiently applied. North Macedonia continued its efforts to align its legislation with ESA 2010 standards but further efforts are needed to improve compliance with the ESA 2010 methodology. All customs declarations and excise documents are processed electronically and progress continued in the reporting period on consolidation, application and upgrade of IT systems (*for further information, see chapter 16 - taxation, chapter 18 - statistics, chapter 29 - customs union and chapter 32 - financial control*).

On **traditional own resources**, progress was made on consolidation, application and upgrading IT systems. The Customs Administration is fully paperless, processing customs declarations and excise documents electronically. The digitalisation of customs procedures continued with the introduction of a 'green' customs declaration, with import and export procedures being completed in 1 hour.

Concerning **VAT**, the 2021-2025 tax system reform strategy is still ongoing. In April 2023, the Public Revenue Office published the strategic plan for 2023-2025. On indirect taxation, the VAT exemptions and preferential rates for essential products were removed at the end of 2022. A preferential VAT rate was introduced for some energy products to alleviate the effects of the significant global increase in energy prices. The preferential VAT rate for electricity for households ceased to be applied on 30 June 2023. Delays remain in the VAT refund process. (*See chapter 16 - taxation*).

With regard to the **administrative infrastructure**, further efforts are needed to ensure the timely and efficient calculation, collection, payment and control of own resources as well as

to improve reporting and coordination mechanisms among all bodies involved. This is needed upon accession to the EU.

CLUSTER 6: EXTERNAL RELATIONS

Cluster 6 covers external relations (chapter 30) and foreign, security and defence policy (chapter 31).

North Macedonia is moderately prepared in the area of external relations and has reached a good level of preparation on the common foreign and security policy. The country made some progress during the reporting period on common commercial policy. It has made good progress by maintaining full alignment with EU common foreign and security policy. By doing so, North Macedonia has shown itself to be a reliable partner, including at international level.

Chapter 30: External relations

The EU has a common commercial policy towards third countries, based on multilateral and bilateral agreements, and autonomous measures. There are also EU rules in the field of humanitarian aid and development policy.

North Macedonia is **moderately prepared** in the area of external relations and made **some progress** in the reporting period. The country continued to cooperate closely with the EU, including within the World Trade Organization (WTO), and to implement CEFTA protocols. Trade restrictions on certain products were removed or expired by the end of 2022. Its institutional capacity to fully participate in EU commercial, development and humanitarian policies is still insufficient. Last year's recommendations were partially implemented. In the coming year, the country should in particular:

- further implement CEFTA Additional Protocol 6 on trade in services, and conclude and adopt Additional Protocol 7 on dispute settlement;
- set up a legal framework covering international cooperation and development policy and humanitarian aid towards non-EU countries in line with EU policies and principles.

On **common commercial policy**, North Macedonia continued to coordinate its positions and align its policies with those of the EU, including within the WTO, and is supporting the WTO reform. The country completed the certification process for the Services Domestic Regulation in the WTO framework. The provisions of the Trade Facilitation Agreement are fully applied and the National Committee on Trade Facilitation met twice in 2022. On 7 June 2023 the WTO Government Procurement Agreement (GPA) members decided to accept North Macedonia to the GPA.

The administrative capacity of the Ministry of Economy, the Ministry in charge of trade policy, should be further strengthened. Quantitative restrictions on the export of certain products, introduced in March 2022, were either removed or expired by the end of 2022.

North Macedonia continued to participate actively in CEFTA and has committed to implement the 2021-2024 Common Regional Market (CRM). Three agreements related to CRM implementation - freedom of movement with identity cards, recognition of professional qualifications and recognition of academic qualifications - were ratified by the Parliament in April 2023. The implementation of Additional Protocol 6 on services is under way.

The system for export control of **dual-use goods** and technologies is operational. In June 2023, the government adopted an updated list of dual-use products in order to align with the

EU Regulation on control of exports, transfer, brokering and transit of dual-use goods and technologies.

North Macedonia has 38 **bilateral investment treaties with third countries** (BITs) in force, of which 18 are with EU Member States. The country is updating the existing model agreement for BITs. The amended free trade agreement between North Macedonia and Ukraine was ratified in April 2023, further liberalising trade in food and agricultural products.

No progress was made on **development policy** and **humanitarian aid**. The country is encouraged to set up a policy framework on development, international cooperation and humanitarian aid, in line with EU policies and standards.

Chapter 31: Foreign, security and defence policy

Member States must be able to conduct political dialogues in the framework of foreign, security and defence policy, align with EU statements, take part in EU action, and apply agreed sanctions and restrictive measures.

North Macedonia has **a good level of preparation** in the area of common foreign, security and defence policy. **Good progress** was made during the reporting period, as the country maintained full alignment with EU common foreign and security policy, including with the EU restrictive measures following Russia's war of aggression against Ukraine. North Macedonia continued to participate in EU crisis management missions and operations under the common security and defence policy.

In the coming year, the country should in particular:

- maintain full alignment with EU common foreign and security policy.
- make further efforts to close space for foreign interference and information manipulation, including disinformation, and take actions towards building societal resilience against it and other forms of hybrid threats.

Political dialogue on foreign and security policy continued between North Macedonia and the EU, including through regular dialogues on foreign and security policy at all levels. In April 2023, North Macedonia participated in the ninth EU-Western Balkans meeting of Political Directors. In March 2023, North Macedonia participated at ministerial level at the first Schuman Security and Defence Forum and in May 2023 in the working lunch with members of the Foreign Affairs Council. The institutional framework enabling the country's participation in the common foreign and security policy and the common security and defence policy is in place. The country subscribes to the global strategy for EU's foreign and security policy and the Strategic Compass for Security and Defence.

On **common foreign and security policy (CFSP)**, the country's alignment rate with relevant High Representative statements on behalf of the EU and relevant Council Decisions has remained at 100%. This included all EU restrictive measures targeting following Russia's war of aggression against Ukraine. This is a strong signal of the country's strategic commitment to its EU path. North Macedonia also aligned with all EU statements submitted at international organisations, including co-sponsoring the resolution adopted at the UN General Assembly Emergency Special Session on Ukraine on 23 February 2023. The country continues to implement the EU *restrictive measures*, with the Law on restrictive measures providing the legal framework for introducing and monitoring the restrictive measures, including economic ones. The authorities should continue to strengthen their capacity to implement and enforce the sanctions in place. As there is no direct legal effect of aligning

with EU restrictive measures, a new legal act must be adopted by government decision for every new measure or amendment, creating a time gap between alignment and implementation.

Reflecting the strained relations with Russia, the visa agreement between the two countries was terminated taking effect in January 2023 and the license to work of the Honorary Consul of Russia in Bitola was withdrawn.

North Macedonia maintains a bilateral immunity agreement with the United States, granting US citizens exemptions from the jurisdiction of the **International Criminal Court**. In doing so, the country does not comply with the EU common positions on the integrity of the Rome Statute or with the related EU guiding principles on bilateral immunity agreements. Alignment with the EU position is needed.

On conflict prevention, North Macedonia took over as OSCE Chair in January 2023 for the duration of one year. In his capacity as OSCE Chairperson-in-Office, the Minister of Foreign Affairs of North Macedonia visited Georgia, Azerbaijan and Armenia in April 2023 and Serbia and Kosovo in May 2023. In March 2023, North Macedonia provided a venue for a High-level Dialogue meeting in Ohrid between the President of Serbia and the Prime Minister of Kosovo, convened by HRVP Borrell. North Macedonia continued supporting EU measures and documents on conflict prevention.

On non-proliferation, North Macedonia continued to implement the 2018 regional roadmap for a sustainable solution to the illegal possession, misuse and trafficking of **small arms and light weapons** and their ammunition in the Western Balkans, and adopted a 2022-2024 national strategy and action plan for the control of small arms and light weapons in October 2022.

North Macedonia participates in some, but not all, international export control arrangements and instruments. It participates in the Proliferation Security Initiative and the Hague Code of Conduct. The country is committed to meeting the requirements to join the Wassenaar Arrangement. The Law on the prohibition of the development, production, storage and use of chemical weapons implements the obligations of the Chemicals Weapons Convention and provides for the establishment of the cross-sector Committee charged with its administrative implementation.

North Macedonia continued its active **cooperation with international organisations**. Its priorities in the UN are in line with important EU priorities, including on security, protection of human rights and the climate, countering violent extremism, implementing the resolution on women, peace and security, promoting the role and participation of women and strengthening the role of youth. The second national action plan on the implementation of UNSC 1325 is monitored by a working group which published its second report in April 2023. In January 2023, the country assumed the position of Chair of the Organisation for Security and Co-operation in Europe (OSCE) with a focus on human security. Since then, it has been actively promoting European standards and values and seeking to meet the threats arising from Russia's war of aggression against Ukraine. In 2023, North Macedonia assumed the chairmanship of the US-Adriatic Charter. In March 2023, Albania, North Macedonia, Kosovo and Montenegro launched the informal 'Western Balkan QUAD – 100% alignment with EU CFSP' a platform aimed at facilitating their full alignment with the EU's CFSP.

On security measures, the Law on classified information, based on the 2013 Council Decision, is in force. Implementing legislation is in place on the inspection and supervision of work involving classified information and on personnel security. North Macedonia continued

to implement its security of information agreement with the EU on procedures regarding exchange of classified information.

Regarding the **common security and defence policy** (CSDP), the country continued to actively participate and contribute substantially to EU crisis management operations, notably EUFOR ALTHEA in Bosnia and Herzegovina. North Macedonia participates in the military training mission in the Central African Republic (EUTM RCA) and in the EU Battle Group HELBROC BG with one platoon. North Macedonia takes part in the EPF Balkan Medical Task Force assistance measure. North Macedonia participated in the Dynamic Employment of Forces to Europe for NATO Deterrence and Enhanced Readiness 2023 Exercise and maintained a presence in NATO-led missions 'KFOR' in Kosovo, NATO Mission Iraq (NMI) and in the Enhanced Forward Presence in the Baltic (eFP). The country continues to participate in the UN Interim Force in Lebanon operation with three army personnel. During the reporting period, North Macedonia provided significant military equipment to Ukraine.

North Macedonia takes part in the European Peace Facility Balkan Medical Task Force assistance measure and is a beneficiary of an assistance measure for the army of North Macedonia.

The country has begun the procedure to join the European Centre of Excellence for Countering **Hybrid Threats**, located in Helsinki. The country was the target of a sustained campaign of hoax bomb threats to schools and critical infrastructure for 5 months starting in October 2022. The authorities classified these events as a hybrid threats. As a result of the attacks, the Council for the Coordination of the Security-Intelligence Community set up an operational team for cybersecurity and hybrid threats, which is managed by the Public Security Bureau of the Ministry of Interior. North Macedonia completed the EU's hybrid risk survey with the objective of identifying systemic vulnerabilities and streamlining the assistance provided by the EU in this field.

ANNEX I – RELATIONS BETWEEN THE EU AND NORTH MACEDONIA

North Macedonia is a candidate country since 2005. On 26 March 2020, the European Council endorsed the Council's decision to open accession negotiations with North Macedonia. The first Intergovernmental Conference took place on 19 July 2022, following the approval by the Council of the negotiating framework. The Commission launched the screening process on the same day.

North Macedonia has been participating in **the Stabilisation and Association process** since 1999. The Stabilisation and Association Agreement (SAA) with the EU, signed in 2001 and in force since 2004, sets the framework for relations with the EU, including political, economic and technical dialogues. Experts met in seven sub-committees and one special group, according to schedule. The Stabilisation and Association Council took place in March 2023 in Skopje.

Visa liberalisation for citizens of North Macedonia travelling to the Schengen area has been in force since December 2009. A readmission agreement has been in force since 2008. The Commission's fifth report under the visa suspension mechanism concluded that North Macedonia continues to meet the visa liberalisation benchmarks.

North Macedonia has maintained its full alignment with **EU common foreign and security policy** over the reporting period. Substantial participation in EU crisis management missions and operations continued.

Under the **Instrument for Pre-accession Assistance 2021 – 2027 (IPA III)**¹⁷, the first financing decision of EUR 90.45 million, adopted at the end of 2021, provides support for EU accession and post-COVID-19 recovery and enhancing the country's reforms in the areas of rule of law, fight against corruption and organised crime, protection of environment, sustainable economic development and facilitating trade with the EU. The second financing decision of EUR 72.5 million was adopted at the end of 2022, providing support for the country's reforms in the areas of border and migration management, public administration, environment, health, social protection and gender equality and to back-up the EU accession process. At the EU-WB Summit in Tirana in December 2022, the Commission put forward an **Energy Support Package** of EUR 1 billion for the Western Balkans to address immediate, short-term, and medium-term needs in the region in the context of the energy crisis and of the Russian war of aggression against Ukraine. Following this announcement, a EUR 80 million budget support programme for North Macedonia was adopted at the end of 2022 to cushion the energy price increase to SMEs and vulnerable households and to accelerate the energy diversification.

These programmes, complemented by a significant package of multi-country programmes and the EUR 97 million rural development programme (IPARD III), provide a significant contribution to the implementation of the **Economic and Investment Plan for the Western Balkans and the Green Agenda**. North Macedonia benefits from complementary support for civil society and migration management. North Macedonia participates also in cross-border cooperation programmes, transnational cooperation programmes and Union Programmes.

The new activities complement the on-going programmes under **IPA II (2014-2020)**. Progress was achieved on the implementation of IPA II, which is still providing significant support for the social and economic development of the country and contribute to key

¹⁷ OJ L 330, 20.9.2021

structural reforms. On the fundamentals, the ongoing EU assistance continued to back up the reforms in the areas of rule of law, public administration and public finance and advanced the fight against corruption. With EU assistance, the reorganisation of state institutions at central level was launched and the digital transformation of the country advanced, with 230 fully automated public e-services for citizens and businesses put in place. The EU-supported Youth Guarantee benefitted over 9 400 young people in the regions facing the highest youth unemployment and schooling was improved for Roma children and children with disabilities. Significant EU financial assistance has been allocated to North Macedonia for protecting the environment and boosting the connectivity with the EU transport systems, including State Road A2 Kumanovo-Stracin (Corridor VIII) and the new expressway section Gradsko-Drenovo (Corridor X). Media, civil society and private sector continue to benefit of important EU assistance providing opportunities to grow and develop in a favourable environment. The EU support for the private sector benefitted over 5 000 companies, created over 1 300 new jobs and secured over 15 000 jobs in risk, 70% of which in eco-friendly business.

The **Western Balkans Investment Framework** (WBIF) has supported North Macedonia in the amount of EUR 296.7 million provided as IPA III grants for flagship projects in the area of clean energy, environment and climate, and sustainable transport.

On 12 July 2023, in view of the country's large financing needs in 2023 and 2024, and following a request from the government, the Council and the European Parliament endorsed a Commission proposal for **macro-financial assistance** to North Macedonia of up to EUR 100 million. Payments can follow, provided conditions attached to this assistance have been adequately respected.

The Council of the European Union adopted an assistance measure under the **European Peace Facility** worth EUR 9 million to the benefit of the army of North Macedonia, which will help its capacity to maintain and enhance operating standards to participate in EU military CSDP missions. The proposed support will include logistics, medical equipment, communication and information systems, intelligence capacities, chemical, biological, radiological and nuclear (CBRN), engineering and training equipment.

The EU provides support via IPA and the Foreign Policy Instrument to strengthen Western Balkans partners' resilience to face hybrid threats including cyber and foreign information manipulation and interference.

Public expenditure on education relative to GDP (%)		:	:	:	:	:	:
*Gross domestic expenditure on R&D relative to GDP (%)	8)	0.22 sw	0.35	0.36	0.37	0.37	:

Government budget appropriations or outlays on R&D (GBAORD), as a percentage of GDP (%)		:	:	:	:	:	:
Percentage of households who have internet access at home (%)		46.1	73.6	79.3	81.6	79.4	83.7

Environment	Note	2010	2017	2018	2019	2020	2021
*Index of greenhouse gas emissions, CO ₂ equivalent (1990 = 100)	9)	99.8 w	113.0 w	79.5 w	118.7 w	:	:
Energy intensity of the economy (kg of oil equivalent per 1 000 euro GDP at 2015 constant prices)		358.4	293.0	267.1	283.8	270.1	268.2
Electricity generated from renewable sources relative to gross electricity consumption (%)		15.8	24.8	24.8	23.8	23.5	21.5
Road share of inland freight transport (based on tonne-km) (%)		89.0 w	96.4 w	97.2 w	96.7 w	96.9 w	96.8 w

Energy	Note	2010	2017	2018	2019	2020	2021
Primary production of all energy products (thousand TOE)		1 607	1 166	1 148	1 160	992	877
Primary production of crude oil (thousand TOE)		0	0	0	0	0	0
Primary production of solid fuels (thousand TOE)		1 194	849	800	860	685	552
Primary production of gas (thousand TOE)		0	0	0	0	0	0
Net imports of all energy products (thousand TOE)		1 268 s	1 553 s	1 513 s	1 664 s	1 648 s	1 822 s
Gross inland energy consumption (thousand TOE)		2 881	2 763	2 592	2 862	2 596	2 678
Gross electricity generation (GWh)		7 260	5 600	5 607	5 870	5 347	5 506

Agriculture	Note	2010	2017	2018	2019	2020	2021
Agricultural production volume index of goods and services (at producer prices) (2010 = 100)		100.0 w	99.9 w	111.8 w	105.4 w	108.8 w	:
Utilised agricultural area (thousand hectares)		1 120.6	1 266.0	1 264.1	1 264.6	1 270.5	1 268.8
Livestock numbers: live bovine animals (thousand heads, end of period)		:	255.0	256.0	219.0	222.0	178.0
Livestock numbers: live swine (thousand heads, end of period)		:	202.0	196.0	136.0	164.0	186.0
Livestock numbers: live sheep and live goats (thousand heads, end of period)		:	832.0 s	844.0 s	771.0 s	726.0 s	709.0 s
Raw milk available on farms (thousand tonnes)		:	462.2	478.5	456.1	461.1	389.2
Harvested crop production: cereals (including rice) (thousand tonnes)		547.8	452.9	605.3	569.6	585.5	568.9
Harvested crop production: sugar beet (thousand tonnes)		0.0	0.0	0.0	0.0	0.0	0.0
Harvested crop production: vegetables (thousand tonnes)		741.7	769.6	792.9	772.7	794.2	798.0 p

Source: Eurostat and/or the statistical authorities in North Macedonia

: = not available

b = break in series

d = definition differs

e = estimated value

p = provisional

s = Eurostat estimate

w= data supplied by and under the responsibility of the national statistical authority and published on an "as is" basis and without any assurance as regards their quality and adherence to EU statistical methodology

* = Europe 2020 indicator

** = Macroeconomic Imbalance Procedure (MIP) indicator

Footnotes:

- 1) Data is harmonised with the surface area in the Register of territorial units that is maintained by Agency for Real Estate Cadastre, as the official source of the surface areas of the territorial units in the country.
- 2) Data cover bilateral over-night transactions. The interest rates are calculated as weighted averages.
- 3) End of year (31 December).
- 4) Laspeyres unit value index. 2015 = 100.
- 5) The new IESS regulation has not been implemented
- 6) In the public sector are included data: Other (mixed, collective, state, undefined)
- 7) Source: Agency for electronic communications (AEC).
- 8) Total expenditures for R&D as published in statistical reviews for R&D activity.
- 9) Part of the greenhouse gas inventory prepared in the context of the Fourth National Communication (UNFCCC).
