The new Presidency took office in November. For the first time since 1995 it included a woman, who served as its chair for the first 8 months. Presidency members continued to take

opposite stances, most notably on foreign policy, thus failing to provide a clear political direction. In June 2023, the Presidency Chairwoman raised a vital entity interest veto on Bosnia and Herzegovina joining the three regional mobility agreements.

The outgoing Council of Ministers had a minimal legislative output, adopting only three draft laws and three strategic documents by end 2022.

The new Council of Ministers, appointed in late January, took some significant steps to adopt EU reforms following the granting of candidate status. A state budget for 2023 was adopted in March. The Council of Ministers adopted a strategy on organised crime, an updated risk assessment and accompanying action plan on anti-money laundering and combating the financing of terrorism, as well as the strategies and action plans on migration and on terrorism. It also appointed a supervisory body for the implementation of the national war crimes processing strategy. The contact point with Europol finally started operations in June 2023, after a 5-years long delay. The Council of Ministers also endorsed a set of draft laws, notably on integrity in the judiciary; torture prevention (designating the Ombudsman as national preventive mechanism); on foreigners, and freedom of access to information. These laws were adopted by Parliament in August and September 2023. Besides the political criteria, the Council of Ministers also adopted draft amendments on service in the armed forces and a strategy on climate change, and appointed the directors of several institutions and bodies (Intelligence and security agency, Service for foreigners, Railway regulatory board); other vacancies remain pending, including for the boards of the Central Bank and of the Communication Regulatory Agency. The Council of Ministers urgently needs to appoint the National IPA Coordinator (NIPAC).

Besides the chairwoman, there is only one woman out of nine ministers in the Council of Ministers, in charge of civil affairs (previously two, in charge of foreign affairs and defence).

Entity and cantonal governments worked regularly, adopting their own budgets.

The Federation government completed the whole 2018-2022 mandate in a caretaker capacity; in early April the outgoing prime minister was convicted in first instance for abuse of office. There were further delays in the appointment of a new Federation entity government after the October 2022 elections and the electoral changes imposed by the High Representative. In late April, the High Representative intervened once again by suspending the Federation entity constitution to ensure the appointment of a new government, supported by the same parties as the state-level ruling coalition.

The new Federation government includes 4 women ministers out of 17, with portfolios covering traditionally soft policy areas (education and science; culture and sport; transport and communications; environment and tourism). The 2015-2023 Federation government included 3 women ministers, including the deputy prime minister in charge of finance.

The new government of the *Republika Srpska* entity, in office since December 2022, adopted legislative initiatives aimed at restricting fundamental freedoms and the space for civil society, including amendments to re-criminalise defamation and a draft law targeting NGOs as foreign agents. The entity government again proposed legislation on immovable property, defying constitutional jurisprudence that had clarified that it had no competence to do so, and legalised the non-implementation of the rulings of the Constitutional Court in the entity.

Following the October election, eight cantons out of ten appointed new governments. The Brčko District assembly reshuffled its government in March 2023.

No steps were taken to develop and implement a common action plan of socio-economic

reforms in line with Commission recommendations and with the joint conclusions of the economic and financial dialogue. Formulating and enacting this package of socio-economic reforms requires good coordination among executives at all levels.

The **policy dialogue** with the EU resumed during the reporting period: the sixth cycle of sectoral subcommittees under the SAA, opened in 2020, was completed by the SA Committee in June 2023 and SA Council in July 2023. The Council of Ministers should urgently take measures to facilitate policy dialogue within the SAA bodies, including by simplifying procedures, empowering the Directorate for European Integration (DEI) to submit preparatory documents to the Commission without unnecessary and lengthy political adoption, and appointing permanent delegates to sectoral subcommittees. No action has yet been taken on the recommendations which the European Commission addressed to the Council of Ministers at an extraordinary meeting of the SA Committee in May 2022.

The Council of Ministers and the DEI should step up their coordinating role in EU matters, including by providing comprehensive assessment of the countrywide level of alignment with the EU *acquis* and by ensuring proactive follow-up to the Commission's recommendations with the competent authorities, including at political level where needed, ensuring accountability in case of non-performance. This is key to improving the quality of input for policy dialogue, including in view of the Commission's annual enlargement package.

Coordination on EU matters, including in the development of countrywide sector strategies, is essential to ensure harmonised alignment with the *acquis* and to access EU financial assistance and EU programmes. This requires the effective use of applicable legislation on coordination of EU matters and commitment of the coordination mechanism structures at political level (collegium and ministerial conferences).

As a key priority and outstanding obligation under the SAA, Bosnia and Herzegovina needs to develop and agree with the Commission a **national plan for the adoption of the *acquis*** (NPAA) that reflects the role that all levels of government play in aligning with and enforcing the EU *acquis*. The programme for EU integration, prepared by DEI and still pending approval by the Council of Ministers, is only a first step towards the necessary NPAA. The action plan on the 14 key priorities is also still pending agreement by the Council of Ministers.

Bosnia and Herzegovina adopted a number of protectionist measures that are in violation of SAA obligations, commitments and procedures, including a wood export bans and cantonal lists of medicines, and failed to address long outstanding breaches, e.g. on excise duties on beer. These actions marked a clear step backwards in the implementation of the SAA.

For the second year in a row, Bosnia and Herzegovina also submitted its **economic reform programme** (ERP) with a 2-month delay.

Authorities across the country have little capacity for coordination and policy planning, including on EU matters. The *Republika Srpska* entity adopted a strategy on **local self-government** in February 2023; such a strategy remains pending in the Federation entity.

Civil society

The Opinion's key priority 11 on ensuring an enabling environment for civil society still needs to be addressed, notably by upholding European standards on freedom of association and freedom of assembly. Meaningful and systematic consultations with civil society have yet to be ensured as part of an inclusive policy dialogue. A framework for the transparent funding of civil society organisations still needs to be adopted. The reintroduction of criminal

penalties for defamation in the *Republika Srpska* entity, which entered into force in August 2023, severely impacts the environment for civil society. Legislative initiatives in parliamentary procedure in the *Republika Srpska* entity to target civil society organisations as foreign agents, if adopted, would mark a regrettable and undeniable major step backwards.

An empowered civil society is a crucial component of any democratic system and should be recognised and treated as such by public institutions. While the overall legal and regulatory framework governing the establishment and functioning of civil society organisations is broadly in line with the EU *acquis*, much remains to be done for public institutions to ensure an enabling environment for civil society, including on freedom of association and of assembly, in line with Opinion key priority 11. The space for civil society is particularly under threat in the *Republika Srpska* entity, due to continued attacks by the political leaders, which have led to instances of physical assault, as in March 2023 in Banja Luka. The *Republika Srpska* entity also reintroduced criminal penalties for defamation in July 2023. The legislative initiative targeting civil society organisations as foreign agents, if adopted, would severely curtail civil liberties in the entity. (*See also Chapter 23 – Fundamental Rights*)

The legislation on public consultations is uneven across the country, and meaningful and systematic consultations must be ensured. The e-consultation web platform is underutilised and is not in use at entity or cantonal level, where most legislation of public interest is developed and adopted. Some six years after its adoption in 2017, the Council of Ministers still needs to enact its charter on cooperation with civil society organisations.

Grassroot civil society organisations proactively advocate for policy changes. Activists dealing with issues perceived as sensitive (anti-corruption, women’s rights, rights of LGBTIQ persons, migrants, the environment) continued to be subject to threats, abuse and physical attacks. A framework for the transparent and impartial distribution of public funds to associations is needed across the country. Civil society organisations that provide services to disadvantaged groups, in place of public authorities, should receive appropriate public funding. Women’s associations in particular play a key role in reaching out to the most vulnerable, including victims and survivors of domestic and gender-based violence. In some instances, the authorities abused the tax framework to intimidate civil society groups. There is no state-level legal framework on volunteering, which is regulated by the entities and Brčko District.

Civilian oversight of the security and intelligence sector

The Parliamentary Assembly’s joint committee on defence and security held 3 sessions in 2022 (6 in 2021, 10 in 2020). The joint committee for the oversight of the Intelligence-Security Agency (OSA) did not meet in 2022. A new OSA director was appointed in February 2023. The legislation on the OSA has not yet been amended to address the procedural shortcomings identified by the Constitutional Court in June 2017, 6 years ago. The Military Commissioner, who oversees the protection of the human rights and freedoms of defence personnel, opened 62 proceedings in 2022, completing 55 of them.

2.1.2. Public administration reform

Bosnia and Herzegovina is at an **early stage of preparation** and made **some progress** in public administration reform (PAR). Some positive steps were taken by (i) adopting the PAR coordination arrangement (‘common platform’), including a political decision-making body; (ii) implementing the comprehensive and countrywide public finance management strategy, (iii) improving capacity for public consultation at state level and on regulatory impact assessment in the *Republika Srpska* entity, (iv) adopting a strategy on human resource management in the

Federation entity, (v) improving the professional development and performance appraisal in the Federation entity and at state level, and (vi) adopting a Law on freedom of access to information, aimed at fostering pro-active disclosure and transparency. Some five years after adoption, the PAR action plan has been implemented only to a limited extent. Civil service laws are still not harmonised with each other and merit principles are not enshrined in recruitment procedures. The monitoring of human resources is not effective in detecting irregularities. The political decision-making body included in the ‘common platform’ still needs to become operational to steer reforms effectively. The capacity of entity-level PAR coordinators remains weak. In line with key priority 14 of the Commission Opinion, Bosnia and Herzegovina needs to complete essential steps to improve the overall functioning of the public administration by ensuring a professional and depoliticised civil service and a coordinated, countrywide approach to policymaking. Last year’s recommendations were partially implemented.

In the coming year, Bosnia and Herzegovina should in particular:

- adopt and start implementing the revised action plan on the PAR strategic framework 2023-2027 at each government level, while prioritising activities on digitalisation of services and adopting the outstanding legal framework for sectoral strategic planning at state level;
- establish a functioning coordination structure with a political decision-making body and upgrade the staffing and skills of PAR coordinators to steer the implementation of public administration reforms across all levels of government;
- ensure a professional civil service system by amending state and entities’ civil service laws in line with merit principles and establishing performance-based monitoring for transparent human-resource management at all levels of government to detect irregularities.

Strategic framework for public administration reform

The 2018-2022 **strategic framework** on public administration reform and the related 2020-2022 PAR action plan were extended. However, the action plan still needs to be revised and made more credible and realistic in its costing and in achieving tangible results, in particular on digital services. Some 5 years after its adoption in 2018, a first monitoring report showed that only 14% of the overall PAR action plan activities were implemented. Insufficient **political support** and weak PAR coordinator’s capacities at entities level continue to hinder effective steer of reforms. The political decision-making body foreseen in the ‘common platform’ still needs to become operational to steer the agenda on public administration reform. The **financial sustainability** of the reform is not guaranteed, and recent action plans on PAR remained donor-driven with very limited domestic budgetary contributions.

Policy development and coordination

The **policy-making system** in Bosnia and Herzegovina continues to be fragmented. The legislative framework on medium-term policy planning is unevenly developed and regulated through different laws. The Council of Ministers needs to expedite as matter of urgency the adoption of a valid regulatory framework on strategic planning based on the concept note developed by the Department of Economic Planning. There was no progress in developing methodological guidance for country-wide sectoral strategic planning at state level. The quality control functions at all centre of governments needs to be strengthened and capacities improved to coordinate policy-planning processes in the annual and medium term. Sectoral costs are not always reflected in strategies and no progress has been made in linking these to a medium-term budgetary framework. Some quality criteria for sectoral policies are in place, but they do not contain information on progress and objectives. Bosnia and Herzegovina has

not yet developed its first **national programme for the adoption of the *acquis* (NPAA)**, as required by the SAA, for which the proposed programme of EU integration is only a start.

The legal framework for **inclusive and evidence-based policy development** is in place but is implemented inconsistently. Some progress was noted in this area in *Republika Srpska* entity, by introducing regulatory impact assessment to be conducted also for draft secondary legislation. However, regulatory impact assessments are not used to prioritise policy proposals and are not used as planning tool. Collection and use of administrative data for policymaking are not ensured. The legal framework on **public consultations** needs to be consistently applied at all levels of government. The *Republika Srpska* entity government adopted new guidelines for consultations in order to improve transparency early in the legislative planning.

State level government undertook some efforts to improve capacities of various public bodies in using the e-consultation platform. However, entities' line ministries need to upgrade those and improve the oversight function to ensure their quality.

The regulatory framework for standards for monitoring and reporting on key government planning documents at all levels is in place. Some efforts were undertaken to improve sectoral monitoring by adopting a new Decision on annual work planning and method of monitoring and reporting at state level. However, regular sectoral monitoring reports remain unpublished, as is also the case for implementation reports of government annual working plans. All of this hampers **public scrutiny of government work**.

Public financial management

All levels of government in Bosnia and Herzegovina started implementing the comprehensive strategy for the reform of **public financial management (PFM)**, progressing with 40% of activities planned at each level. PFM monitoring reports for 2022 have been adopted at state and entities' level and a comprehensive 2022 PFM monitoring report is pending adoption. A functional and regular budget planning cycle needs to be in place for an effective public finance system. The credibility of the medium-term budget frameworks needs to be enhanced by (i) improving the links between annual strategic planning and annual budget process and (ii) strengthening capacities and regulation to improve public investment management at all levels of government. All levels of governance should establish the necessary IT pre-conditions in order to implement the law on programme budgeting and medium-term budget planning and adopt similar legislation at state level and in the *Republika Srpska* entity. Institutions at all levels need to improve the public internal financial control, and public procurement process as well as monitoring of fiscal risks related to public companies. Particularly, publicly available registers of public companies need to be established for better transparency.

Bosnia and Herzegovina has not yet achieved sufficient **budget transparency**. The lack of harmonisation of the charts of accounts at state and entity level makes it difficult to access consolidated data. In-year reporting still needs to improve at all levels of government. Available budgetary information is still incomplete and assessing the overall budgetary and fiscal policy is difficult.

Public service and human resources management

The **merit-based recruitment, promotion and dismissal** of civil servants using objective criteria is not fully ensured, particularly in the entities and the Brčko District. Civil service laws have not yet been amended to provide a clear and comparable scope of the civil service across the government levels. The laws do not clarify which institutions are included in the

civil service, which positions belong to civil servants, and what the senior and middle management categories are. These differences undermine the mobility of civil servants across government levels. Suitable coordination mechanism for human resources and civil service is needed to support that cooperation, and particularly so between the Federation and cantonal level government.

The recruitment process needs to become more transparent and better ensure the professionalisation of the civil service. The digitalisation of state-level recruitment is ongoing and e-application is being applied. The procedures for staff transfers in the case of competencies transfer to the State-level institutions have improved, with better specified. However, entity-level laws on civil service leave excessive discretion and do not require the best candidate to be appointed, allowing political appointees to influence recruitment, particularly for senior positions. As a result, at cantonal level, the final selection may depend on ethnic background rather than merit. Additionally, excessive use of acting positions should be constrained, especially in *Republika Srpska* entity. State-level senior managers should not remain in their posts after their mandate comes to an end, and regular open recruitments for such positions need to be organised. The system needs to offer the right incentives so that more professional candidates apply for public sector positions. Selection commissions should be free from political influence in order to guarantee that the best qualified candidates are recruited. Constitutional rules on the general representation of the population in the public administration should not be interpreted as requiring strict ethnic proportionality in the civil service, and the legislation should make sure that ethnic criteria do not prevail over professional criteria in recruitment.

The criteria for dismissals, disciplinary procedures and appeals set out in the legislation are still insufficiently applied. The appeal boards in the Federation entity face a significant backlog of civil servants' complaints and need to improve capacities. All levels of government need to improve the collection of data on gender equality in public administration and systematically promote the adoption of institutional policies on gender equality and sexual harassment.

Human resources management (HRM) remains highly fragmented. Pursuant to the common HRM policy framework, the Federation entity adopted the 2022-2027 strategy for the development of HRM in the civil service structures, including cooperation with the cantonal level. State level government and *Republika Srpska* entity need to do so as well, in coordination with each other. Transparent monitoring of HRM performance and related capacity and data on HRM are weak across all levels of government and there is a consistent lack of data. Bosnia and Herzegovina needs to revise the state-level civil service law in order to provide a legal basis for the human resource management information systems (HRMIS) and make it functional throughout the civil service. All levels of government should publish HRM monitoring reports and ensure interoperability of HRMIS with payroll databases.

Civil servant **remuneration** remains inconsistent across public institutions and lacks transparency. This is due to the differences across the country in salary legislation, job classification, pay grades, and the lack of job evaluations, all of which hinder fairness. Furthermore, criteria to award salary supplements are unclear, and there is no information published at any level of government on average salary levels by job category. The state budget adopted in March 2023 provides for some improvement and an increase in the salary base of state-level civil servants.

Civil service agencies need more resources for training and **professional development**. Some progress was made, as the Federation entity established the new online training management system that is now interoperable with the Human Resource Management Information System

for civil service. Overall, although a performance appraisal system is in place, it is not used properly and systematically to justify promotions or to distinguish good from bad performance.

There is no systemic and consolidated data on the **integrity of civil servants**. Measures to promote integrity in the public service are only partially in place and are not applied systematically. Additionally, there has been no legislative development at Federation level with regard to whistle-blower protection, and declaration of assets at *Republika Srpska* entity.

Accountability of administration

No progress was made on setting out in legislation the different functions of administrative bodies at all levels of government or the conditions for establishing, merging or abolishing them. There is still no clear supervision or reporting lines between ministries and subordinate institutions and delegation of decision-making to senior civil servants or middle management is lacking.

The level of parliamentary scrutiny varies across levels of government. No progress was made in improving the uptake of recommendations from oversight mechanisms such as parliamentary scrutiny and from independent institutions – such as Ombudsmans and State Audit Institutions, in the public administration, compromising **citizens' rights to good administration**.

Legislation on the **right to access information** remains fragmented. In August 2023 the Parliament adopted a Law on freedom of access to information, intended to improve the proactive disclosure of information and the transparency of state-level institutions. The independence of the appeal process still needs to be brought in line with international and European standards. Rules on data protection and access to information are still interpreted in a way that protects private rather than public interests and such rights are inconsistently ensured across government levels. The number of Ombudsman recommendations on access to information have slightly increased in 2022 compared to 2021.

The varying efficiency of courts across the country make citizens' rights to administrative justice uneven. No progress was made in putting in place effective remedies for the protection of rights to judgment within a reasonable time at any level of government and the situation remains particularly problematic in the Federation entity. There is also no systemic collection of data on the **citizens' right to seek compensation** for damage caused by unlawful actions or omissions of the public administration.

Service delivery to citizens and businesses

The legal framework for a **user-oriented administration** varies substantially across the country. A comprehensive countrywide policy on service delivery and clear institutional functions at any level of government together with a catalogue on e-service are lacking. There is a need to establish an inventory on administrative burden in service provision, while simplifying procedures and aligning sectoral laws with the Law on general administrative procedures. The lack of electronic signature infrastructure for citizens, impedes further digitalisation. Digitalisation has only advanced in taxes and customs, although slowly. Encouraging a user-oriented administration, including through the completion of a coherent legal framework, would enable an interoperable e-signature system across the country and facilitate the creation of a single digital market.

2.2. RULE OF LAW AND FUNDAMENTAL RIGHTS

2.2.1. Chapter 23: Judiciary and fundamental rights

The EU's founding values include the rule of law and respect for human rights. An effective (independent, high-quality and efficient) judicial system and an effective fight against corruption are of paramount importance, as is the respect for fundamental rights in law and in practice.

Bosnia and Herzegovina has **some level of preparation** to implement the EU *acquis* and European standards in the area of judiciary and fundamental rights. **Limited progress** was made during the reporting period to address the related Opinion key priorities and the findings of the Expert Report on rule of law issues ('Priebe Report')¹¹.

Functioning of the judiciary

Bosnia and Herzegovina is **in between an early stage and some level of preparation** in the area of the judiciary. **Some progress** was made in addressing Opinion key priority 6 on the functioning of the judiciary. Persistent and evident signs of deterioration continue to require urgent measures to strengthen integrity and regain public trust in the judiciary. The poor functioning of the judicial system continued to undermine citizens' enjoyment of rights and the fight against corruption.

In September 2023, Bosnia and Herzegovina amended the Law on the HJPC with the aim of establishing a system to verify the asset declarations of judges, prosecutors and HJPC members. Compared to the version on which the Venice Commission were consulted, the system of verification of assets provided for by the amendments that were adopted has been weakened as regards the right of the HJPC to request additional information from natural and legal persons. In addition, under the adopted amendments external experts tasked with monitoring the functioning and enforcement of the asset declaration system are not allowed to access personal data contained in asset declarations and supporting documents. These provisions hamper the effectiveness of the asset-declaration system and therefore need to be amended, to ensure that the HJPC and the external experts can effectively access all information that is necessary to exercise the functions provided for them in the law. All institutions in the country must now cooperate constructively and in good faith with the HJPC to fully implement the law and ensure the effectiveness of the integrity checks. Any issues that may impede the implementation of the law need to be addressed at the latest in the new comprehensive Law on the HJPC. The Council of Ministers also appointed a supervisory body to oversee the implementation of the national war crimes strategy.

The Constitutional Court suspended and then quashed several legal and political acts adopted by the *Republika Srpska* entity. By the end of 2022, the terms of office of two judges of the state-level Constitutional Court expired due to age limits. The entity assemblies have not yet proceeded to replace them, thus impairing the Court's decision making. The *Republika Srpska* entity assembly called on state-level constitutional judges to resign and legalised the non-implementation of the rulings of the Constitutional Court, in breach of the constitutional and legal framework of the country. While the High Representative annulled these laws, *Republika Srpska* entity authorities determined to enforce them anyway.

In the coming year, Bosnia and Herzegovina should, in particular:

→ urgently appoint constitutional judges from both entities to all vacant positions and thus

¹¹ <http://europa.ba/wp-content/uploads/2019/12/ExpertReportonRuleofLawissuesinBosniaandHerzegovina.pdf>

ensure the full composition and functioning of the Constitutional Court; and for the courts in general, consistently appoint judges based on merit, without prevalence of ethnic criteria, and appraise the performance of judges based on quality criteria;

- revise and implement the integrity-related provisions of the Law on the HJPC to ensure the effectiveness of integrity checks in line with European standards, including by enabling the HJPC and external experts to access all information that is necessary to properly perform their functions; finalise and adopt the new Law on the HJPC and the new law on the Courts of Bosnia and Herzegovina, in line with the Opinion of the Venice Commission;
- adopt a new justice sector reform strategy and increase efforts to effectively implement the revised national war crimes strategy;

Strategic documents

Bosnia and Herzegovina still needs to adopt a new Justice Sector Reform Strategy for 2021-2027 and the related action plan. The new strategy must include all key reforms recommended in the Commission Opinion and analytical report, in the Experts' Report on Rule of Law issues in Bosnia and Herzegovina ('Priebe Report'), and, where relevant, the activities included in the 2021-2023 HJPC reform programme and beyond. The strategy should be supported by sufficient budgetary allocations and an efficient mechanism of governance, monitoring and reporting on its performance, with the possibility to adopt corrective actions.

Management body

The High Judicial and Prosecutorial Council (HJPC) is the single judicial self-governance body. In the reporting period, it appointed the state-level Chief Prosecutor and the President of the Court of Bosnia and Herzegovina. The Council still struggles to regain public trust, including in the professional community, as it continued to adopt inconsistent and inadequately reasoned decisions on appointment decisions. The 2021-2023 HJPC reform programme has had little impact on merit-based appointments, accountability, efficiency and transparency, in the absence of an efficient monitoring mechanism and of a set of qualitative and quantitative indicators to monitor trends in organised crime and corruption cases. The HJPC has to step up its oversight role and assume responsibility for substantial reforms. More tangible results are expected, notably in the area of fighting corruption and nepotism in the judiciary. The HJPC should increase its own accountability by providing thorough and transparent reasoning of its final decisions, especially on appointments, in line with European standards. The HJPC has a communication strategy, its action plan, and a communication plan on ethics, integrity and prevention of conflict of interest. Training sessions for representatives of the media and the judiciary were organised by the HJPC in November 2022.

The HJPC should implement a smaller but better targeted number of result-driven activities to improve the quality of justice. Its secretariat has been further strengthened with more permanent staff. The HJPC must urgently improve its monitoring of the judicial management structures and ensure the accountability of court presidents and chief prosecutors in cases of poor performance.

Independence and impartiality

The **independence** and **impartiality** of the judiciary did not improve, despite the newly introduced amendments to the HJPC rules of procedure aiming at improving appointments. Executive and legislative authorities failed to adopt additional safeguards. The HJPC, as well

as all courts and prosecutor's offices, should undertake more efforts to restore public trust in the independence of the judiciary.

The HJPC strived to improve its appointment policies, most notably by amending the relevant rules of procedure to ensure that appointments are based on pre-determined, objective and accessible criteria. These amendments have yet to have a tangible impact. The duration of appointment procedures remains too long (8 to 10 months). The re-opening of vacancies, often without good reasons, can extend this period further. The amendments provide for obligatory processing of applications online, which has the potential to shorten procedures. However, rules on appointments, disciplinary responsibility, career advancement and conflict of interest of judges and prosecutors continue, in practice, to be applied inconsistently and with overly broad discretion. The adopted integrity-related amendments to the Law on the HJPC should be applied effectively so as to contribute to improvements in this regard.

A new comprehensive Law on the HJPC should provide for a single annual entry examination to join the judiciary, and more stringent appointment criteria. The HJPC has to provide for expedient testing procedures and improve the quality of first access to the judicial career by establishing a preparatory programme in line with the recommendations of the Priebe report.

The adopted integrity-related amendments to the Law on the HJPC introduce binding rules on conflict of interest for the entire judiciary and the HJPC. The random case allocation system remains vulnerable to abuses, which affects **impartiality**. Deviations have been reported from the automated random allocation of cases, and some even sanctioned. Any reallocation should only be possible for exceptional reasons and even then only when documented and explicitly justified. Such an exceptional procedure must be precisely and transparently documented to rule out personal and political influence. Court presidents and chief prosecutors in coordination with the HJPC need to take action to increase transparency and provide justification for reallocating cases manually. Undue external pressures have increased, especially by political leaders who publicly target certain judicial office holders and their decisions, notably the prosecutors in the case *Novalić et al.* on public procurement fraud of COVID-19 medical equipment. The threat reporting mechanism and subsequent public reactions of the HJPC must be reviewed to ensure consistency.

The Constitutional Court suspended and then quashed several legal and political acts adopted by the *Republika Srpska* entity. In June 2023, the *Republika Srpska* entity legalised the non-publication of decision of the High Representative and the non-implementation of the rulings of the Constitutional Court, in breach of the constitutional and legal framework. The High Representative annulled such laws in July. Entity authorities determined to enforce them anyway. By the end of 2022, the terms of office of two judges of the state-level Constitutional Court expired due to age limits. The entity assemblies have not yet replaced them, thus impairing the Court's decision-making.

Accountability

In September 2023, Bosnia and Herzegovina amended the Law on the HJPC with the aim of establishing a system to verify the **asset declarations** of judges, prosecutors and HJPC members. Compared to the version on which the Venice Commission were consulted, the system of verification of assets provided for by the amendments that were adopted has been weakened as regards the right of the HJPC to request additional information from natural and legal persons. In addition, under the adopted amendments external experts tasked with monitoring the functioning and enforcement of the asset declaration system are not allowed to access personal data contained in asset declarations and supporting documents. These

provisions hamper the effectiveness of the asset-declaration system and therefore need to be amended, to ensure that the HJPC and the external experts can effectively access all information that is necessary to exercise the functions provided for them in the law. All institutions in the country must now cooperate constructively and in good faith with the HJPC to fully implement the law and ensure the effectiveness of the integrity checks, which shall be under close external supervision. Any issues that may impede the implementation of the law need to be addressed at the latest in the new comprehensive Law on the HJPC. The HJPC should ensure the security for documents and correspondence of the special verification department within the HJPC Secretariat. In 2022, only 16% of all judicial office holders published their asset declarations voluntarily (221 declarations), including 31% of all managers (30 declarations from court presidents and chief and deputy chief prosecutors). The adopted amendments now oblige all judicial office holders to publish their asset declarations.

Integrity plans are in place in almost all courts and prosecutor's offices, yet with limited results. An improved and comprehensive ethics and integrity training is needed, including for newly appointed judges and prosecutors. In April 2023, the HJPC introduced a new system to evaluate candidates, notably for promotions, taking into account their disciplinary records. This system must be applied consistently.

Disciplinary procedures continue to have little dissuasive effect, despite their number being high compared to the European average. In 2022 the Office of the Disciplinary Counsel (ODC) registered 840 complaints (9.2% less than registered in 2021), of which 76 were initiated *ex officio* against judicial office holders (7% more than in 2021) and filed 41 disciplinary charges, including six against chief prosecutors and court presidents. The HJPC disciplinary commissions completed a total of 48 disciplinary proceedings (of which 24 registered in 2022). A total of 33 procedures led to disciplinary measures, including seven against managerial judicial office holders (court presidents, chief prosecutors), resulting in two demotions, 23 cases of salary reduction and six temporary suspensions. Disciplinary and criminal convictions or pending disciplinary proceedings have to be taken into account in the procedures for transfer, promotion and performance appraisal. To this end, the HJPC has to apply consistently the criteria of suitability of candidates for judicial posts laid down in the newly amended rules of procedure, and in line with Commission recommendations. Disciplinary hearings and decisions need to reach the wider public more effectively.

There has been no progress in addressing the shortcomings concerning composition and potential conflict of interest in the formation of disciplinary panels in the HJPC. Rules and training on evidence gathering before disciplinary panels should be improved in line with Commission recommendations, as should the evaluation of ethical standards. Introducing an inspectorate service or vesting an existing body with similar functions should be seriously considered.

Professionalism and competence

Appointments and career advancement of judges and prosecutors are core prerogatives of the HJPC. Although appointment rules are based on merit, exceptions based on ethnicity and other considerations continue to prevail. As a consequence, appointments significantly deviate from merit-based ranking, casting doubts as to fairness. This was again evident in a March-April 2023 appointment to the *Republika Srpska* entity Prosecutor's Office, where the HJPC appointed a candidate ranked last, on the pretext of ethnic balance. Trust in the appointment system is at its lowest, including within the professional community. In addition, there is a concern with continued delays in appointments, which results in courts being unable to appoint panels for cases, endangering the effective delivery of justice, especially in

cases of recusal. This further affects the courts' performance. The HJPC must urgently find methods to curtail delayed vacancy procedures, which are detrimental to its main function, namely, the merit-based, transparent, and timely appointment of judges and prosecutors.

While awaiting legislative reforms to introduce judicial review of HJPC decisions, the HJPC should provide clear reasoning for each appointment, strictly abiding by the amended rules of procedure and online application system.

Performance appraisals require reform to balance quality and quantity criteria, which should apply equally to all judges and prosecutors. Once the legislation allows for it, quality-based performance appraisal should be reintroduced as it is a European standard.

Quality of justice

Training for judges and prosecutors is handled by the entity-level judicial and prosecutorial training centres, which are coordinated by the HJPC. The respective responsibilities of the HJPC and of the entity training centres remain unclear, leading to inconsistencies. The provisions on establishing training centres and their operation need to be clarified and the coordination role of the HJPC needs to be strengthened. Educating judges and prosecutors is crucial for the quality of the justice system. Selecting competent trainers, devising training programmes, assessing trainers and evaluating the impact of trainings conducted should be closely monitored and improved where needed. The total budget for training in 2022 was EUR 767 710 (EUR 645 616 in 2021), a 19% increase compared to 2021.

The national **case management system** (CMS) produces reliable, detailed statistics and reports at different levels (judges, courts, national) including on case flow, human resources, and duration of the pending cases. However, the information generated from this system is not being fully utilised for decision-making by the HJPC, court presidents and chief prosecutors. According to the Council of Europe's European Commission for the Efficiency of Justice (CEPEJ), the CMS index for Bosnia and Herzegovina is higher than the Western Balkans average (3.0 for civil or commercial cases, 3.5 for administrative cases, and 3.0 for criminal cases). Bosnia and Herzegovina delivers good quality and reliable judicial data in a timely manner to the CEPEJ Dashboard Western Balkans project. The HJPC needs to step up its oversight and management on the basis of reliable statistical data on the performance of the judicial system, including on case reallocations. In 2022, the cases reallocated manually by heads of courts and prosecution offices in courts in 2022 were 496 828 (91% of those unresolved cases were reallocated for "other reasons"). One chief prosecutor has been subjected to a disciplinary procedure for potential misuse, one has been removed from their managerial post and another one is subject to an ongoing disciplinary procedure.

The appraisal system needs specific indicators aligned with clear goals, targets and benchmarks. To address this issue, the HJPC needs to establish clear protocols and guidelines for decision making within the judiciary, and to regularly monitor performance data and crucial areas (anti-corruption, organised crime and electoral fraud). The quota system for courts has helped to reduce the cases backlog in courts by more than 50% since the start of its usage. Introducing an automatic case-weighting system and time limits as performance measures should also be considered, in order to improve the system. Furthermore, developing a fully inclusive and efficient justice sector monitoring mechanism with EU assistance will be key to ensuring effective implementation of the justice reform.

The justice system still lacks **transparency**, but some efforts for improvement were undertaken. The HJPC started to improve the communication of judicial institutions with media and citizens, notably through media and web toolkits, a media action plan, and

guidelines on social media for judicial office holders, whose effect should be closely monitored. Appropriate training on public outreach and communications for courts and prosecutors' offices remains necessary.

Regarding the **harmonisation of jurisprudence**, the case-law portal created in 2021 by the HJPC in coordination with the four highest judicial instances in Bosnia and Herzegovina now allows access to over 10 540 judicial stances, court decisions and legal interpretations. The issues as regards legal status and effectiveness of judicial harmonisation panels remain unresolved. Ultimately, as noted in the Opinion key priorities, Bosnia and Herzegovina needs to establish a judicial body capable of ensuring the consistent interpretation of the law and harmonisation of case-law across the country.

The 2022 **budget** for the judiciary, including the HJPC, is EUR 156.3 million (0.67% of GDP), slightly above 2021 (EUR 135.6 million). In 2022, EUR 118.7 million was allocated to courts and EUR 34.3 million to prosecutors' offices (compared to EUR 103.9 million and EUR 29.1 million in 2021). The budget is now the same as the Western Balkans' median. The funds remain insufficient to cover investments and to improve the judicial infrastructure, as only 1.7% of the budget was spent on this line and over 81.5% on salaries and compensations. The highly complex system of financing judicial institutions is fragmented with significant budget inequalities. It requires interaction with all levels of government and difficulties in the process of preparing the budget persist. While the budget of the judiciary has continuously increased over the last few years, the coordination of its implementation between the HJPC and certain levels of government still needs to be harmonised, with the HJPC taking a more active role in ensuring sufficient funds among judicial institutions. The budgeting system for prioritising prosecutorial resources was digitalised. The HJPC budget planning and fund allocation competences for all courts and prosecutors' offices in the country should be strengthened.

In 2022, Bosnia and Herzegovina had 1 000 full-time judges (23 per 100 000 inhabitants) and 358 full-time prosecutors (11 per 100 000), including 79 court presidents and 18 chief prosecutors. According to CEPEJ, the European averages are 22.2 judges and 11.8 prosecutors per 100 000 inhabitants. A total of 61% of judges and prosecutors and 56% of managers are women.

Efficiency

The **length of court proceedings** in first-instance cases (not for utility bills) further decreased to 378 days in 2022 (409 in 2021, 434 in 2020), but is still high. The clearance rate increased to 104% in 2021 (99% in 2021). Nevertheless, the still excessive length of proceedings hampers the citizens' right to trial within a reasonable time. A law to protect that right was adopted at state level in June 2022, but is yet to be introduced in the Federation entity. Civil and criminal procedural codes have to be revised to make judicial proceedings more efficient. Court presidents and chief prosecutors continue to manage poorly procedural discipline for trials, ignoring concrete recommendations issued by the HJPC. They need to take a more active role in managing their institutions under the strategic guidance of the HJPC.

There is a **backlog** of over 2 million pending court cases, of which some 1.7 million are cases of unpaid utility bills, which continue to hinder efficiency. The backlog of non-utility cases decreased slightly by 5% compared to 2021. Relevant authorities still did not follow the Commission's recommendations to transfer the enforcement of small and uncontested claims from courts to professional bailiffs. Entity and cantonal governments did not secure sufficient funds for enforcement departments in courts or for access to information on debtor's

properties. Entity-level laws and regulations on enforcement have to be amended urgently to increase efficiency.

The changes to the prosecutorial quota did not deliver positive outcomes and the performance of the prosecutorial system has not been satisfactory. Specifically, according to HJPC data, there has been an 8% decrease in the number of indictments in 2022 as compared to 2021. The HJPC needs to assess the impact of the previously amended prosecutorial quota on the overall number of indictments and convictions compared to dismissals and revise prosecutorial quotas accordingly.

Domestic handling of war crime cases

Bosnia and Herzegovina cooperates constructively with the International Residual Mechanism for Criminal Tribunals (IRMCT-Mechanism). The Prosecutor's Office of Bosnia and Herzegovina and the Office of the Prosecutor of the Mechanism continue to collaborate closely. In 2022, 40% of all requests for assistance from the region to the Mechanism's Prosecutor came from Bosnia and Herzegovina (90% in 2021). The number of indictments for war crimes increased in 2022, with 38 indictments against 90 defendants (21 against 56 in 2021).

War crime convictions by the International Criminal Tribunal for the former Yugoslavia and its successors are still not entered into domestic criminal records. To this end, the Ministry of Justice should maintain close cooperation with the IRMCT-Mechanism Registry.

The revised National War Crime Strategy (NWCS) continued to be implemented effectively. The HJPC, within its mandate, monitored the work of prosecutors and judges to that end, until March 2023, when the Council of Ministers finally appointed a new supervisory body to oversee implementation of the strategy.

Regional judicial cooperation in processing war crime cases has improved slightly. The bilateral protocols on cooperation related to war crimes, crimes against humanity and genocide between the Prosecutor's Office of Bosnia and Herzegovina and its counterparts of Serbia, Croatia and Montenegro have helped to reduce judicial impunity but must still be used systematically. Cooperation with Serbia continued to improve, with 6 indictments transferred to Serbia, resulting in 2 convictions so far (one each in 2018 and 2020). The prosecutor's offices of the two countries have signed a cooperation agreement to provide support for war crimes witnesses, injured parties and victims. Cooperation with Croatia continues to face a number of impediments on judicial assistance; two indictments and one investigation were transferred to Croatia, while other investigations have not yet led to indictments. The protocol with Montenegro is enhancing cooperation, with investigations conducted using transferred evidence.

Out of 237 cases by the end of 2022 (including 103 in main trial phase), 91 proceedings (against 99 individuals) are pending as the indicted persons are not available. Holding multiple citizenships, these individuals are often residing in neighbouring countries. This enables them to escape justice by taking advantage of prohibitions against extradition of own nationals for the criminal offences of genocide, crimes against humanity and war crimes. They also benefit from the lack of progress of neighbouring jurisdictions in addressing the crimes in question. Serbia still fails to enforce the final sentence handed down in Bosnia and Herzegovina in 2014 against Novak Djukić, despite the availability of the basic international judicial cooperation tools. A number of international arrest warrants (Interpol Red Notice) filed by Bosnia and Herzegovina for indicted war criminals remain unanswered. Similarly, Duško Kornjača – indicted for crimes against humanity in 2015 – and Tomislav Kovač –

indicted for genocide in 2018 – are freely residing in Serbia. Sakib Mahmuljin fled to Türkiye after a final sentence for command responsibility in war crimes; Türkiye has not responded to Bosnia and Herzegovina's March 2023 request for extradition.

The backlog in *war crime cases* continues to diminish; however, it is likely that the revised deadline to complete their processing by the end of 2023 will not be met. The new supervisory body has to propose updated realistic deadlines. From an estimated 1 210 cases in July 2013, unresolved war crime cases have been reduced to 395 (-67.5%) by the end of 2022; around 261 of these are complex cases (66%). An estimated 152 cases against 357 individuals (38.5% of the backlog) are pending as the suspects are not available. Reinforced regional cooperation is key to addressing the latter issue. In 2021, the number of confirmed indictments increased slightly, but conviction rates decreased in the entities and the Brčko District with 16 indictments confirmed (13 in 2021) and a 67% conviction rate (85% in 2021). At state level, there is some progress with 22 indictments confirmed (15 in 2021), although with a decrease of the conviction rate to 57% (86% in 2021). An additional 12 less complex cases were transferred to entities and the Brčko District in 2022 (25 in 2021), completing this process. The Prosecutor's Office may now focus only on the most complex cases, improving the quality of investigations and indictments leading to convictions.

Fight against corruption

Bosnia and Herzegovina is in **between an early stage and some level of preparation** in the fight against corruption. **No progress** was made in addressing Opinion key priority 7, the 2022 recommendations, and the findings of the Expert Report on Rule of Law issues. The Ministry of Justice is yet to submit a draft state-level law on the prevention of conflict of interest in line with European standards to the Council of Ministers for adoption. Selective and non-transparent judicial follow-up in corruption cases of public resonance is a cause of significant concern, alongside pressure and intimidation. Legislation is not harmonised across the country. Some indictments for high-level corruption were raised during the reporting period. The track record on preventing and repressing corruption (including at high level) remains insignificant, due to operational inefficiency and political interference. The number of final convictions in high-level cases remains very low. Unlike in other cantons, the Sarajevo Canton authorities continued corruption prevention activities, but there was a lack of efficient follow-up by the prosecution and judiciary. An efficient application of conflicts of interest rules and verification of asset declarations is only present in the Sarajevo Canton. Targeted risk assessments and dedicated measures to address corruption are needed, in particular in the most vulnerable sectors. Recommendations of the previous year have largely not been implemented and remain therefore valid.

In the coming year, Bosnia and Herzegovina should in particular:

- adopt the Law on the prevention of conflict of interest in state-level institutions, in line with European standards, and harmonise the legislation of entities and Brčko District with international standards and best European practices; complete the legal framework and step up implementation on the protection of whistle-blowers;
- demonstrate progress towards establishing a track record on preventing and repressing high-level corruption; improve cooperation between the police and the prosecutors' offices;
- prepare and adopt a new state-level anti-corruption strategy and action plan.

Track record

Efforts remain insufficient to establish a track record on proactive investigations,

prosecutions and final convictions for corruption. In particular, progress in tackling high-level corruption remains insignificant and needs to be seriously stepped up. It is imperative for the law enforcement agencies and the judiciary in Bosnia and Herzegovina to take a more proactive stance in combating organised crime and corruption.

In **high-level corruption cases**, in 2022 there were 23 ordered investigations (15 in 2021), 11 suspended investigations (6 in 2021), 18 filed indictments (12 in 2021), 5 final verdicts (3 in 2021), 3 convictions and 2 acquittal. This trend shows that there continues to be an alarmingly low number of final convictions in high-profile cases.

In 2022, the **State Investigation and Protection Agency (SIPA)** initiated 100 investigations (34 *ex officio* and 66 by order of the competent Prosecutor's Office) into cases of corruption, of which 52 were finalised (193 initiated and 20 finalised in 2022). Thirty-five reports against 57 individuals were sent to the competent prosecutors' offices. The trend at state level shows that only a few investigations have been finalised.

In 2022, Prosecutors' offices issued 314 orders to conduct investigations into corruption, leading to 188 indictments countrywide (317 and 229 in 2021); 175 indictments were confirmed (211 in 2021), including indictments from the previous period, while the number of convictions was 192 (143 in 2021), of which 132 were suspended sentences (98 in 2021). A total of 119 persons were convicted based on a plea bargain (134 in 2021). Sanctions are not sufficiently effective, dissuasive or proportionate. Plea bargain agreements are frequent and lenient sanctions are too often applied without sufficient justification. Prison sentences are often suspended or even converted into fines with little dissuasive effect. Reduced sentences are frequent in cases in which the severity of the violation of the protected property significantly exceeds the minimum amount necessary for the existence of a criminal offence. Most of the convictions were for abuse of office or authority. The prosecution does not use effectively the available mechanisms to confiscate criminal proceeds. Financial investigations are rare and indictments frequently fail to include relevant information or evidence related to the illegal gain.

The state-level commission on **conflicts of interest** established in July 2020 remains ineffective: it held a single session in 2022, and has only dealt with a few cases. The commission received 2 reports and acted *ex officio* in 8 cases. It determined that 5 public officials were in conflict of interest (3 in 2021). All cases concerned incompatible involvement of close family members in public companies or private companies benefiting from the public budget. In 2 cases, the commission imposed temporary salary reductions as a sanction, while in the other 3 it confirmed conflict of interest but did not impose a sanction as persons were no longer officials. As regards **asset declarations**, about 600 state-level officials are required to submit their financial reports for verification, out of whom only 212 submitted their financial reports in 2022 (291 in 2021). In 2022, no proceedings for failure to submit declarations or inaccuracies were initiated, no reports were checked and no sanctions were imposed. The mandate of the state-level commission expired in October 2022 and following the elections, a new commission was appointed in March 2023. In the *Republika Srpska* entity, around 4 000 office holders are obliged to submit financial reports, out of whom only 129 submitted financial reports in 2022 (990 in 2021). The *Republika Srpska* entity commission established conflict of interest in 13 cases, but did not impose any sanction. There is a dual system of asset declarations at state level. Elected officials, executive officeholders and advisors must submit regular financial statements and disclose their assets and interests to the commission on conflict of interest. In addition, elected officials at all levels must submit declarations of their assets to the Central Election Commission. Asset declarations of elected officials are made public through its website,

although the CEC has no obligation or means to check their accuracy. Rules on conflicts of interest are still not enforced in the Federation entity.

The Brčko District adopted a law on preventing conflict of interest in March 2021 and appointed a related commission in June 2021. In 2022 it established conflict of interest in 36 cases, set up public databases for asset declarations, and initiated 11 proceedings for inaccurate or incomplete data over 156 asset declarations received. In the Sarajevo Canton, office holders' asset declarations are published on the cantonal anti-corruption office website. Other cantons should introduce similar measures.

In the Sarajevo Canton, the positive trend continued. The cantonal Law on prevention of corruption entered into force in January 2023. In 2022, 1 194 asset declarations were submitted to the cantonal anti-corruption office (1 380 in 2021) and 47 office holders who failed to submit declarations were sanctioned with misdemeanour fines, of which 16 orders were appealed in court. In all cases, the courts finally imposed sanctions lower than the minimum provided by law; such judicial practice must be further scrutinised in light of the principle of dissuasiveness and efficiency of sanctions.

The Agency for Prevention of Corruption and Coordination of the Fight against Corruption (APIK) granted administrative protection to **whistle-blowers** in one case out of two requests in 2022, compared with two in 2021. In the *Republika Srpska* entity, three requests for protection to whistle-blowers were filed in 2022 (zero in 2021, one in 2020), granted in one case with two cases ongoing. There is still no legislation on whistle-blower protection in the Federation entity. A new law on whistle-blower protection, entered into force in the Sarajevo Canton in January 2023. In the first quarter of 2023, the cantonal anti-corruption office received six requests and granted protection in all six cases. In 2022, the Brčko District anti-corruption office received four requests and granted protection in all four cases. Legislation at all levels of government needs to be aligned with the EU *acquis*.

Institutional framework

Corruption prevention

The functioning of corruption prevention bodies and their coordination, including with APIK, continued to be ineffective. APIK faces challenges in ensuring its independence, including in the selection of its management. APIK should play a much more proactive role in implementing GRECO recommendations and aligning with international standards. The new parliamentary commission supervising the work of APIK was appointed in March 2023. APIK must exercise its legal competence as the main coordination body for corruption prevention and as the central point for anti-corruption activities in Bosnia and Herzegovina.

The independence of corruption prevention bodies at entity and cantonal levels and their human and material resources need to be significantly strengthened. The anti-corruption office of the Sarajevo Canton continued to make good progress and remains a good example among cantonal bodies. In 2022, the office processed 753 reports of corruption, most related to corruption in employment, of which 531 were sent on to the competent authorities for further investigation and action (919 and 83 in 2021, respectively) and 47 reports were referred to the Prosecutor's Office of the Sarajevo Canton. In two cases, the Prosecutor's Office filed an indictment. In 6 cases, there was a decision not to conduct or to suspend the investigation. The cantonal anti-corruption office continued increasing transparency standards, establishing in 2022 a register of vacancies in the public sector and an interactive map of building construction and forest cutting in the Sarajevo Canton. The anti-corruption office of Tuzla Canton started work in July 2022 with a director and two employees; it started

collecting asset declarations of public officials, but has not yet made them public. The Una Sana Canton is yet to establish the body that will implement the legislation on reporting and verifying asset declarations of public officials, which entered into force in February 2021. Canton 10 adopted a decree establishing an anti-corruption Office in October 2022.

Bosnia and Herzegovina needs to introduce a comprehensive and effective system for electronic public procurement to improve transparency and reduce the abuse of public resources. An enhanced monitoring and inspection control system remains necessary to tackle corruption and irregularities in public procurement procedures.

The audit department of the Central Election Commission needs more capacity to monitor compliance with political party financing laws.

Law enforcement

The criminal justice policy and the institutional and legislative frameworks across the country are largely ineffective and inadequate for the fight against corruption. This is in part due to insufficient law-enforcement capacity to investigate, and to penalties that do not sufficiently ensure deterrence. Deep legal fragmentation and frequent conflicts of jurisdiction leading to transfers of cases slow down proceedings and reduce efficiency. The police is not proactive in launching investigations and investigations are slow. In 2022, no law enforcement agency, including SIPA, submitted any report on high level corruption to the Prosecutor's Office of Bosnia and Herzegovina. The highly formalistic manner in which SIPA is enforcing actions aimed at obtaining evidence, including in high-level corruption cases, is a cause of serious concern. Systemic shortcomings in the operational cooperation of law-enforcement agencies and the very limited exchange of intelligence remains a persistent challenge. In the few high-level corruption cases reported, selective judicial follow-up and legal mistakes, negligence, abuse of procedures, political pressure, questionable court decisions and verbal attacks on the prosecution continued to take place, including at state level. Pressure, interference and verbal attacks on judicial office holders, especially in high-level cases, continued without a systemic and efficient response by the HJPC and remain a major concern.

In the reporting period, the limited cooperation of law-enforcement agencies with prosecutor's offices and lack of effective monitoring by the prosecutors over the work of police continued to seriously hamper the effectiveness of investigations. The selective unwillingness of the police, including at state level, to cooperate with prosecutor's offices, notably in high-level corruption cases, is a cause of serious concern, calling into question their independence and professionalism. Following the investigations of the Prosecutor's Office of Bosnia and Herzegovina, 15 employees of police and security agencies, including a judge and a lawyer, have been in custody and are being prosecuted, mainly for corrupt activities and aiding organised criminal groups. Diverging views regarding the authority of state-level prosecution offices to issue instructions directed at entity prosecution offices hamper the efficiency of investigations and proceedings in high-level corruption cases. Such conflicting legal views must be remedied immediately. The competent authorities of Bosnia and Herzegovina have not addressed the failure of Serbia to respond to repeated requests of the Prosecutor's Office of Bosnia and Herzegovina for international legal assistance since 2016, in a corruption case involving a high-level politician.

Special anti-corruption departments within prosecution offices were established at state level and in the *Republika Srpska* entity. However, their effectiveness in fighting corruption remains very weak. These specialised departments must start to deal effectively with high-level corruption cases and their independence must be significantly strengthened. Specialised departments at the Federation entity Prosecutor's Office and Supreme Court have not yet

been set up.

After very poor management of the trial, resulting in extensive and unjustified delays, in April 2023 the Court of Bosnia and Herzegovina reached a first-instance sentence in the *Novalić et al.* case related to public procurement fraud, finding three of the four accused, including the then-acting Prime Minister of the Federation entity, guilty of abuse of office and forging of documents, with sentences from 4 to 6 years.

The Prosecutor's Office of Bosnia and Herzegovina initiated two additional high-level corruption investigations, and the Sarajevo Canton Prosecutor's Office initiated one related case. In May 2023, the former mayor of Sarajevo was arrested and charged with criminal offences, including abuse of office and counterfeiting official documents. These cases were widely reported in the media and investigations are ongoing. It is essential that prosecution and judicial services ensure an independent, effective and impartial judicial follow-up in these cases, which are of great public resonance and raise concern about the state of corruption in the country.

The Prosecutor's Office of Bosnia and Herzegovina made good progress in efficiently investigating SKY ECC related cases, establishing a team of 12 prosecutors to cover them. It is conducting eight investigations, with four indictments submitted and three confirmed by the court. Prosecutors are expected to demonstrate firm determination to prioritise and efficiently finalise investigations of mid and high-level corruption cases arising out of the SKY ECC communication service tool. Efficient judicial follow up in those cases must be ensured.

With regard to transparency in the health sector, the Zenica Cantonal Hospital has been the first health care institution in the country to introduce the automatic creation and public disclosure of patient waiting lists, and new anti-corruption internal acts in the segments of public procurement, conflict of interest, human resources management and financial management. In addition, 15 health institutions throughout the country adopted new rulebooks introducing anti-corruption internal acts in the areas of public procurement in the health sector, conflict of interest, human resources management and financial management.

Legal framework

The lack of harmonisation of legislation across the country continued to hamper the fight against corruption. After a draft law on conflict of interest was rejected in Parliament in May 2022, the Ministry of Justice of Bosnia and Herzegovina is yet to submit a draft state-level law on the prevention of conflict of interest in line with European standards to the Council of Ministers for adoption. The Federation entity Parliament needs to adopt legislation on conflict of interest and on the effective protection of whistle-blowers that was adopted by the entity government in August 2022. In August 2022, the Sarajevo Canton adopted a Law on prevention, suppression and the fight against corruption. This is another step towards establishing a comprehensive legal anti-corruption framework at cantonal level in the absence of a uniform regulation at entity level. The Brčko District needs to maintain efforts to implement effectively the law on the prevention of conflict of interest adopted in March 2021 and further align with best European practices. The *Republika Srpska* entity also needs to align its conflict of interest legislation with international standards. Rules on conflicts of interest are still not enforced in the Federation entity.

Both entities are implementing the strategies adopted in 2021 to develop internal financial controls in the public sector. Lack of transparency seriously hinders the fight against corruption. The legislation on political party financing urgently needs to be aligned with

international standards, particularly with pending GRECO recommendations. In August 2023 the Parliament adopted a Law on freedom of access to information to improve the pro-active disclosure of information and the transparency of state-level institutions; the independence of the appeal process remains to be ensured. Legislation on freedom of access to information at state and entity level needs to be aligned with international and European standards. Data protection laws continued to be interpreted in a way that protects private rather than public interests, hindering the prevention and repression of corruption (*see also Chapter 23*). There is no legislation to effectively prevent and address corruption in the private sector and no regulation of lobbying. Barely 1 of 15 GRECO recommendations has been satisfactorily implemented in the 4th evaluation round. The authorities need to ensure appropriate legislative and institutional follow-up to fulfil the outstanding recommendations, notably on political party financing and conflict of interest.

Strategic framework

The state-level strategy on anti-corruption expired at the end of 2019 and the Council of Ministers has not adopted a new strategy since, further hampering a harmonised strategic approach across the country. This should be remedied as a priority. The Council of Ministers did not adopt the strategy for the 2022-2024 period, which had been drafted as an interim solution by the Agency for Prevention of Corruption and Coordination of the Fight against Corruption (APIK) and instructed APIK to draft a new strategic document for 2024-2028. New strategic documents need to be adopted and harmonised across the country, and their implementation should start without delay. Sufficient funding should be provided and strong monitoring mechanisms set up to ensure their implementation.

Fundamental rights

The legislative and institutional framework on fundamental rights is largely in place. Limited efforts were made to address Opinion key priorities 5 and 9-13 on fundamental rights. In August 2023 the Parliament amended the Law on the human rights Ombudsman, designating the institution as national preventive mechanism against torture and ill-treatment. There was backsliding in guaranteeing freedom of expression. The reintroduction of criminal penalties for defamation in the *Republika Srpska* entity in July 2023 severely impacts the environment for civil society, restricting freedom of expression and of the media and represents a major step backwards in the protection of fundamental rights. In September 2023, the entity assembly adopted in first reading a draft law targeting civil society groups as foreign agents; if fully adopted, would mark another regrettable and undeniable major step backwards. Freedom of assembly remains restricted in large parts of the country. The country needs to urgently finalise the pending constitutional and electoral reforms. These reforms should be advanced as an utmost priority. Significant reforms are needed to ensure that all citizens are able to effectively exercise their active and passive voting rights and thus bring the country's constitutional and legislative framework into line with the *Sejdić-Finci* case-law of the ECtHR. Divided education needs to end in order to ensure non-discriminatory, inclusive and quality education for all, including by overcoming the practice of 'two schools under one roof'. Gender-based violence, ill-treatment of detainees and the insufficient protection of minorities, including the Roma, continue to cause concern. The gender action plan was adopted in October 2023. The action plan on women, peace and security needs to be finalised and adopted. The country still needs to develop a comprehensive strategic framework on human rights and on the protection of minorities, including on transitional justice. Recommendations from previous years have not been implemented and remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- implement court rulings to end divided education;
- ensure full respect, protection and promotion of freedom of assembly, association and expression, and refrain from further actions that adversely impact their exercise;
- harmonise and improve legislation against domestic and gender-based violence to meet international standards and align laws across the country to the Gender Equality Law to increase the public and political participation of women.

Bosnia and Herzegovina has ratified all major European and **international human rights instruments**, most of which are included in its Constitution. No significant progress was made towards addressing most of the 204 accepted recommendations from the November 2019 Universal Periodic Review. Despite not having expressed interest in seeking observer status to the EU Agency for Fundamental Rights (FRA), Bosnia and Herzegovina is encouraged to replicate the Agency's data collection methodology.

In the reporting period, the **European Court of Human Rights (ECtHR)** delivered nine judgments that Bosnia and Herzegovina had violated rights guaranteed by the European Convention on Human Rights (ECHR) in six cases (10 in 2022). These violations concerned the right to a fair trial, the protection of property, and the general prohibition of discrimination. In the reporting period, there were 303 new applications allocated to a decision body of the ECtHR, bringing the total number of applications pending before the Court to 130. There are five cases under enhanced supervision by the Committee of Ministers. The *Sejdić-Finci*, *Zornić*, *Šlaku*, *Pilav* and *Pudarić* ECtHR rulings on electoral rights require constitutional amendments to ensure equality among all citizens; they have still not been implemented and remain under enhanced supervision. The August 2023 ECtHR ruling in the *Kovačević* case further extends the *Sejdić-Finci* case law to cover active voting rights too. Bosnia and Herzegovina lodged an appeal in September 2023 to the European Court of Human Rights against the verdict in the *Kovačević* case.

Bosnia and Herzegovina still lacks a comprehensive policy framework on the **promotion and enforcement of human rights**, including countrywide strategies on human rights, non-discrimination, and the protection of minorities. Consequently, the protection of human rights continues to be uneven across the country.

The tripartite composition and consensual decision-making of the Ombudsman institution needs to be revised in the mid-term to ensure its effective functioning. Its independence needs to be strengthened and it should continue its efforts to act more proactively. The Ombudsman registered 2 850 complaints in 2022, a similar number to previous years, and issued 359 recommendations, of which only 129 were fully implemented. The follow-up to these recommendations needs to be prioritised as there is often no reaction from the respondent authority. The Ombudsman has not opened any minor offence proceedings for non-compliance with its recommendations in the past 8 years, despite having the power to do so, nor has it initiated or intervened in administrative or judicial proceedings.

As regards **torture and ill-treatment**, Bosnia and Herzegovina still needs to ensure compliance with Article 17 of the Optional Protocol to the Convention Against Torture (OPCAT). In August 2023, the Parliament amended the Law on the human rights Ombudsman to strengthen the independence and effectiveness of this body and designate it as a national preventive mechanism against torture and ill-treatment – an international obligation of the country. The country needs to ensure the effective handling of reports of ill-treatment. So far, only a few officers have been sanctioned. Following its September 2021 visit, the Council of Europe's Committee for the Prevention of Torture reported numerous allegations of physical ill-treatment of detained persons by police officers and notes a lack of

effective action and progress in addressing previous recommendations. In 2022, the Ombudsman made 10 visits to the places of detention and deprivation of liberty and issued one recommendation.

No progress was made towards adopting a state-level framework law clearly defining countrywide criteria on the rights of civilian victims of wartime torture to meet Bosnia and Herzegovina's pending obligations under the Convention against Torture. Entity-level laws on victims of wartime torture needs to be improved. No substantial steps were taken to address the August 2019 decision of the UN Committee against Torture (UNCAT) on providing all forms of redress to victims of wartime torture through an effective reparation scheme, including by providing compensation and issuing a formal apology to the victim. The *Republika Srpska* entity government has not yet taken measures to waive court fees for victims of wartime torture to which statutes of limitations were applied in the past: as a consequence, victims continue to face repossession of property for defaulting on payments, which is worrying.

The continued absence of a countrywide strategy on the **prison system** and the lack of progress in improving detention conditions is a concern. The laws need to be harmonised across the country and brought in line with European and international standards. The Federation entity took no steps to adopt legislation to enable the transfer of prisoners between entities, staff professionalisation and a parole system. Digitalisation, reintegration programmes, and coordination with healthcare and social services still need to be improved. The country should further expand the use of alternatives to detention, in particular in the *Republika Srpska* entity. While the new state prison is now working at full capacity, several detention facilities in the country remain in need of infrastructural improvement. Prison regimes also require modernisation. The Ombudsman received 77 complaints from persons deprived of liberty in 2022 (91 in 2021).

Bosnia and Herzegovina still lacks a countrywide policy framework for dealing with the legacies of the past, including a countrywide strategy on transitional justice. Political leaders continued to engage in historical revisionism, including genocide denial and glorification of war criminals, also contesting established facts and the independence or impartiality of international and domestic tribunals. The Parliament should discuss and amend the criminal code to regulate genocide denial and glorification of war criminals in line with the 2008 EU Council framework decision on combating racism and xenophobia. No indictments have been made since the entry into force of the law criminalising denial of genocide and glorification of war criminals, imposed by the former High Representative Inzko in July 2021. The criminal designation in the *Republika Srpska* legislation for describing the entity or its peoples as aggressor or as genocidal continues to have a chilling effect on freedom of expression in the entity. Bosnia and Herzegovina is expected to act in a sovereign manner to promote an environment conducive to reconciliation in order to overcome the legacies of the war (Opinion key priority 5). Positive steps were taken at local level. The Brčko District unveiled a joint memorial for all civilian war victims in February 2023, the second in the country. In May 2023 the city of Mostar renamed six streets to remove references to officials from the *Ustasha* regime.

The continued unresolved issue of *missing persons* is a matter of concern. 7 600 persons are still missing as of June 2023 as a result of the 1990s conflict, of which 111 were identified in 2022, and 44 more in the first half of 2023. However, the Missing Persons Institute and Prosecutors' Offices at all levels assisted by the International Commission on Missing Persons are making steady progress in identifying the remaining 7 600 missing persons. In 2022, the authorities conducted 109 exhumations and over 1 500 terrain reconnaissance

operations. Further efforts are needed on a regional scale to solve the issue. There was no progress in establishing a support fund for the families of missing persons, as provided for by the law, and improving the work of the Missing Persons Institute and forensic capacity at state level.

No progress was made in aligning legislation with the EU *acquis* on **data protection**, notably the General Data Protection Regulation (GDPR). Protocol 223 to the Council of Europe Convention on the automatic processing of personal data was ratified in August 2022. No steps were taken to increase the independence and the human and financial resources of the Personal Data Protection Agency. The Agency needs to better balance the protection of privacy with the general public interest, notably media freedom, electoral integrity, and the fight against corruption. The exceptions are being exploited by public institutions in order not to disclose documents. The Agency conducted 95 procedures *ex officio* in 2022 (84 in 2021). It received 206 complaints, conducted 75 inspections and issued 14 minor offence orders (respectively, 183, 79 and 9 in 2021). The administrative proceedings against decisions of the Agency pending before the Court of Bosnia and Herzegovina were 15 (19 in 2021). While the state Parliament must consult the Agency on legislative proposals, other legislative assemblies are still not required to do so.

Freedom of thought, conscience and religion continue to be generally upheld but cases of discrimination, hate speech and hate crimes on religious grounds continue to occur. The Serbian Orthodox Church left the Inter-Religious Council in February 2023. The Islamic Community of Bosnia and Herzegovina still does not have an agreement (*concordat*) with the state. Incidents targeting religious sites also continue, particularly in minority and returnee areas, as highlighted by incidents involving Bosniak returnees to Višegrad in March and April 2023, and Serb returnees to the Mostar area. The partisan memorial cemetery in Mostar suffered large-scale vandalism in June 2022 and again in May 2023. Bosnia and Herzegovina is encouraged to promote Holocaust remembrance, education and research, in cooperation with the local Jewish community, in order to fight against antisemitism.

Freedom of expression

There is **some level of preparation** on freedom of expression. There was **backsliding** in addressing Opinion key priority 12 to guarantee freedom of expression and of the media and the protection of journalists. This key priority requires ensuring the appropriate judicial follow-up to threats and violence against journalists, including cases involving women journalists and media workers, and also ensuring the financial sustainability of the public broadcasting system. Political pressure, intimidation and harassment towards journalists, including physical and verbal attacks, continued during the reporting period, and there was no appropriate institutional follow-up. No steps were taken to align the legislative framework with European and international standards or to fully enforce it. Political influence over public broadcasters persists, and their financial sustainability remains in question. The Law on the public broadcasting system remains unimplemented and entity-level legislation is still not harmonised with this law. The reintroduction of criminal penalties for defamation in the *Republika Srpska* entity, adopted by law in July 2023, severely impacts freedom of expression and of the media and represents a major step backwards in the protection of fundamental rights. The Sarajevo Canton government endorsed a draft law that would introduce sanctions for online ‘fake news’; if adopted, it could be abused to restrict online communications and intimidate reporters. Any such norms must fully respect freedom of expression standards. Last year’s recommendations were not implemented and thus remain

valid.

In the coming year, Bosnia and Herzegovina should, in particular:

- ensure the protection of journalists and systematic institutional follow-up of threats and violence against them;
- ensure the financial sustainability and political independence of public broadcasters, and harmonise entity legislation with the state-level law on the public broadcasting system;
- adopt legislation on media ownership transparency and criteria for public advertising.

Intimidation of journalists

There continue to be serious concerns about political pressure, intimidation and threats against journalists. The polarised political climate, constant verbal attacks and nationalist rhetoric have created a hostile environment for media freedom. High-level politicians continued their public attacks and disparaging remarks against journalists, analysts and media workers, particularly against women. The authorities continue to downplay the issue with no public statements on these issues, and institutional follow-up is weak. No official countrywide data is collected on threats and attacks against journalists and media workers and their judicial follow-up. These statistics should also be disaggregated by sex.

The *BH Novinari* journalists' association recorded 73 cases of journalists' rights being violated in 2022 (70 in 2021, 69 in 2020). 31 cases of attacks (including two physical attacks), threats and intimidation of journalists were reported on the SafeJournalists platform, 40% more than in 2021. In 2022, the Ombudsman received 12 complaints (9 in 2021, 11 in 2019) and issued one recommendation, which was not implemented. In 2022, the Online Media and Press Council received 101 complaints about hate speech against journalists, compared to 509 in 2021. Authorities are expected to act swiftly and demonstrate zero tolerance for threats or attacks against the media, including by ensuring effective police investigations and judicial prosecution leading to final convictions of the perpetrators.

Legislative environment

Although defamation had been decriminalised since 2002, politicians and public officials continue to use civil lawsuits to intimidate journalists. The reintroduction of criminal penalties for defamation in the *Republika Srpska* entity, adopted by law in July 2023, severely impacts free speech and freedom of expression and of the media. To prevent an environment that forces journalists into self-censorship, courts should step up their efforts to ensure expedient processing of defamation cases and consistency of case-law on damages awarded. Legislation on free access to information and hate speech remains fragmented. In August 2023, the Parliament adopted a Law on freedom of access to information applying to the State-level institutions, intended to improve the pro-active disclosure of information and the transparency of state-level institutions. The independence of the appeal process still needs to be brought in line with international and European standards.

Implementation of legislation/institutions

The Communications Regulatory Agency (CRA) still lacks full political and financial independence. The procedure to appoint its management does not guarantee pluralistic representation of interested stakeholders and full independence from the regulated sector and from political influence. It must be amended to improve the public's perception of it as a neutral and independent body. The mandate of the CRA Board expired at the end of 2017; the Parliament has not appointed a new board for the whole 2018-2022 term. Legal provisions on

data protection and access to information are still interpreted in a way that protects private rather than public interests.

Public service broadcaster

The state-level public service broadcaster *Radiotelevizija Bosne i Hercegovine* (BHRT) remains in serious danger of shutting down, following years of deprivation of stable funding as a result of the non-enforcement of the 2003 Law on the public broadcasting system and of lengthy litigation in entity courts over the substantial debts of *Radio Televizija Republike Srpske* (RTRS) to BHRT (over EUR 31.5 million). These issues pose a serious threat to the financial independence and sustainability of the public broadcasting system. Bosnia and Herzegovina risks become the only country in Europe without a state-level public service broadcaster.

State and entity public broadcasters remain exposed to political influence, in particular through politically controlled steering boards. There is a continued worrying trend of self-censorship, heightened in the context of Russia's war of aggression against Ukraine. The Federation Parliament has not filled the vacancies on the steering board of the public broadcaster FTV nor appointed a director of FTV since 2013. *Republika Srpska's* RTRS public channel spreads Russian and Serbian disinformation, including on Russia's aggression on Ukraine and on Bosnia and Herzegovina's EU accession path. Banja Luka-based provider M-tel continued to carry the signal of the RT and Sputnik channels, despite Bosnia and Herzegovina's alignment with EU sanctions on Russia prohibiting the broadcasting of content from these Russian state-sponsored media outlets. (*See also Chapter 10 – Digital transformation and media*)

Economic factors

No steps were taken to adopt legislation on media ownership transparency (including on the prevention of hidden media concentration), legislation on advertising or criteria for the distribution of subsidies. The advertising practices of publicly owned businesses, such as telecom companies, and of advertising agencies linked to political parties continue to harm media integrity. Local broadcasters that receive funding from local authorities remain subject to political pressure and influence. The high number of strategic lawsuits against public participation (SLAPP) further fuels self-censorship. Two such cases were reported in 2021, with extremely high compensation claims threatening the financial survival of the media.

Internet

Online platforms are used to spread hate speech and disinformation, as self-regulation of online media has a limited effect. However, the trend is declining. The Press and Online Media Council received 566 complaints in 2022 (1 073 in 2021), almost all related to online content. Criminal prosecution is limited to the incitement of religious and ethnic hatred on the internet or social networks. In April 2023, the government of Sarajevo Canton endorsed a draft law defining the internet as a public space and introducing disproportionate sanctions for the online dissemination of undefined 'fake news'; if adopted, this provision could be abused to restrict online communications and intimidate reporters. Any such norms must fully respect freedom of expression standards.

Professional organisations and working conditions

Journalism in Bosnia and Herzegovina remains a precarious profession, with low wages and little job security. Labour rights are barely respected, unionisation is low, and there are no branch collective agreements for media workers. Consequently, many journalists receive a

salary significantly lower than average while also working overtime. Women journalists find themselves in a worse situation than men. The Press and Online Media Council's media code remains the basis of self-regulation, but compliance is inconsistent.

Freedom of artistic expression

Freedom of artistic expression is guaranteed by legislation and generally respected. No official data on intimidation of artists is collected. Although authorities have not formally introduced restrictions, the environment for reconciliation-related themes is challenging. For instance, in June 2023 the entity broadcaster RTRS withdrew support to the National Theatre of Republika Srpska due to its cooperation with Sarajevo's SARTR theatre.

Laws on **freedom of assembly** are still not harmonised across the country and are not in line with European standards, in particular as regards grounds for restriction and responsibility of organisers. The 2020 Brčko District law on freedom of assembly, largely in line with European standards, should be used as a model in other jurisdictions. The fourth Sarajevo Pride march took place without incidents in June 2023. The exercise of freedom of assembly remains restricted in the *Republika Srpska* entity, where in March 2023 the local police banned an LGBTIQ event.

Freedom of association continues to be generally respected. However, human rights defenders dealing with issues perceived as sensitive (e.g. anti-corruption, women's rights, LGBTIQ persons' rights, migrants, the environment) continue to be subject to threats, harassment, verbal abuse and even physical attacks. The authorities have failed to promptly and systematically condemn and properly investigate such attacks. In September 2023, the *Republika Srpska* entity adopted in first reading a legislative initiative on a special registry and transparency of work of non-profit organisations, which would impose excessive and unwarranted restrictions on civil society organisations and targeting them as 'foreign agents'. If fully adopted, this draft law would adversely affect civil society, including in engaging with stakeholders without fear of repercussions. This draft law should be abandoned, in line with the joint opinion of ODIHR and Venice Commission. Additionally, civil society organisations in the Herzegovina-Neretva Canton face continuous pressure from the authorities with repetitive and excessive inspections. As a key priority, the authorities need to promote a conducive and enabling environment for civil society, and ensure effective consultation on legislative developments on freedom of association.

***Labour and trade union rights** issues are covered in Chapter 19 – Social policy and employment.*

As regards **property rights**, the apportionment of property between the State and other levels of government remains one of the open issues under the '5+2' agenda for the closure of the Office of the High Representative. This requires the adoption of a state-level law, in line with jurisprudence of the Constitutional Court. Entities and cantons have legislation which is not in line with the constitutional and legal framework. There are no strategic documents that address this issue. No steps were taken to update and interconnect the entity-level cadastral and land registry databases and no solution was found to pending repossession cases. The Commission for real property claims of displaced persons and refugees is inoperative. There is no legislative framework on restitution claims, which are handled case by case. The Federation entity needs to amend its legislation, in line with several ECtHR cases on occupancy rights over military apartments, which are still pending implementation (*Đokić, Mago, Alekšić* cases).

Concerning **non-discrimination**, there was no progress towards adopting countrywide human rights and anti-discrimination strategies. The 2009 law on the prohibition of discrimination, which aims at full alignment with the EU *acquis*, is still not applied effectively due to a number of problems, including insufficient use of available legal remedies such as collective lawsuits, divergent court practice, excessive length of proceedings, and lack of a unified data collection system on discrimination cases. In 2022, the courts received 979 discrimination cases; 455 cases were completed.

Discrimination continues to be under-reported, particularly at the workplace, and judicial practice has shown lack of uniform application of burden of proof, excessive length and non-enforcement of final decisions. The Ombudsman registered 208 cases of discrimination in 2022 (173 in 2021, 288 in 2020), of which the most frequent concerned discrimination at the workplace, ethnic discrimination and discrimination on the basis of social position and gender. The Ombudsman issued 75 recommendations for these cases in 2022, compared to 26 in 2021. Disputes over education continue, while systemic solutions for ensuring inclusive and non-discriminatory education are not in place. The common core curriculum is not completed, nor is it applied throughout the country, and the availability of teaching in the national groups of subjects remains limited. No progress was made in eliminating the practice of ‘two schools under one roof’, which is in breach of 2014 and 2021 rulings by the Federation entity Supreme Court concerning the Herzegovina-Neretva and the Central Bosnia Canton. Despite Constitutional Court decisions, the name of the Bosnian language is still not recognised in schools in the *Republika Srpska* entity, leading to recurrent school boycotts.

Legislation on hate crimes is harmonised across the four criminal codes in the country. Entity-level legislation criminalises hate speech only when causing national, racial and religious hatred and it still needs to be aligned with the EU *acquis*. Failure to identify acts as hate crimes and the high burden of proof still make it difficult to establish intent, leading to few indictments and convictions. 157 ethnic-related hate incidents were recorded in 2022, and six convictions were handed down in 2022 (134 and eight in 2021, 119 and three in 2020). 15 trials are ongoing. The case-law on hate crimes is not consistent. The authorities have not taken any measures to counter hate speech, which remains present in official discourse. There is no monitoring or enforcement of the prohibition of hate speech in online media. 56 reports were filed and eight rulings, of which six convictions, were handed down for hate speech in 2022, compared to 70 reports and eight convictions in 2021. The Council of Europe Convention on cybercrime and its additional protocol is only partially implemented.

Legislation on **gender equality** is still not harmonised across the country or effectively enforced. The new gender action plan was adopted in October 2023. The new action plan on women, peace and security needs to be finalised and adopted, so that activities may resume at full speed. An effective mechanism of monitoring and accountability systems, and sufficient funding from the budget for implementing the action plans remain priorities in this area.

Despite being prescribed by law, gender impact assessments are still not being carried out. While Bosnia and Herzegovina has developed a partial index of gender equality, work on data collection needs to proceed to enable the development of sound policies targeting key gender gaps, providing relevant data on gender-based violence.

During the reporting period, a number of cases of **gender-based violence** leading up to the murder of women (femicide) garnered public attention and sparked protests across several cities in Bosnia and Herzegovina. These incidents exposed existing systemic shortcomings of the institutional response to gender-based violence. Improvements are particularly needed on

issuing and enforcing protective measures, continuous and comprehensive victim support, legal aid, and safe accommodation. The country needs to introduce urgent legislative changes to ensure the transposition of remaining obligations stemming from the Istanbul convention, including by amending its criminal legislation. The Federation entity still needs to harmonise its criminal code with the Istanbul Convention by opening the process for public consultations and involving women's rights organisations. Furthermore, it needs to finish developing and adopt legislation on protection against domestic violence. The Brčko District should allow for criminal prosecution of offenders. The *Republika Srpska* entity needs to implement legislation in this field and recognise the role of specialised civil society organisations contributing to the protection of victims. Bosnia and Herzegovina still needs to address the August 2020 decision of the UN Committee on the Elimination of Discrimination against Women (CEDAW) on providing all forms of redress to victims of wartime sexual violence. It further needs to accelerate the prosecution of crimes of sexual violence, secure witness protection and provide reparation to women victims of war crimes. The gender pay gap remains significant, at around 25%. Maternity, paternity and paternal leave continues to differ among entities and cantons. (See also Chapters 19 and 28; on women victims of trafficking, see Chapter 24)

As regards the **rights of the child**, no steps were taken by Bosnia and Herzegovina to develop and adopt a new action plan on child protection to replace the one for 2015-2018. In 2022, the Ombudsman received 219 complaints on children's rights (190 in 2021, 190 in 2020). There were 1 103 children without parental care in 2020 (1 623 in 2019), many of whom are children with disabilities. Transition towards community-based care needs to accelerate. To ensure the best interest of the child and avoid institutionalisation, measures are required to prevent family separation, provide foster care and alternative solutions, and support children leaving care institutions at the age of 18. Child exploitation and child begging remain a serious concern; no measures have been taken to address them despite the urgency. Violence against children continues to be under-reported. Some children are without compulsory health insurance, which needs to be addressed. Marginalised groups, such as the Roma, face multiple forms of discrimination; this affects girls and women in particular. The authorities have not taken any measures to collect precise and consistent data on violence against children and on child poverty. Bosnia and Herzegovina has ratified all key international instruments on child labour. The minimum age for work across the country is 15. However, this is not applied in practice with regard to children who are working without a formal employment relationship. Child begging is also not prohibited as a hazardous occupation for children. Roma children are particularly vulnerable to the worst forms of child labour. Unaccompanied migrant children face specific challenges, such as accessing safe accommodation and asylum procedures. 1 878 unaccompanied migrant children were identified in 2021 (351 in 2020, 533 in 2019). 817 were appointed a legal guardian, as provided for by law (987 in 2020, 304 in 2019). Alternatives must urgently be found to the detention of irregular migrant families with children, and the issue of registering births of children of undocumented migrants must be addressed.

Bosnia and Herzegovina needs to strengthen the implementation of child-friendly justice including for children belonging to minorities, migrant children and children with disabilities. Entity-level laws on **juvenile justice** have still not been fully implemented or harmonised with each other. There are no separate units for juveniles during pre-trial detention and in police stations, a serious breach of international law that urgently needs to be remedied. The use of alternative measures needs to be stepped up to ensure detention is only used as a measure of last resort. Only limited reintegration measures are available to juveniles upon release. As of July 2022, there were 29 minors in prisons (22 as of September 2021, 39 as of

December 2021).

Persons with disabilities are among the most vulnerable groups. No steps were taken to address concerns regarding deprivation of legal capacity, status-based discrimination, and accessibility. While the legal and institutional framework for persons with disabilities is in place, the lack of dedicated budgetary funds hampers implementing measures that would improve their position. The law continues to allow persons with disabilities to be deprived of their legal capacity through a judicial process, in violation of international conventions. The country needs to move from a status-based approach (with war veterans and civilian victims of war enjoying priority) to one based on needs, with a uniform definition of disability, and harmonised eligibility criteria, rights and standards of social protection across the country. Persons with disabilities continue to face hurdles in accessing education, healthcare and social assistance. The Council for Persons with Disabilities needs to be further engaged in all relevant processes. The authorities also need to improve data collection, including sex-disaggregated data.

Children with disabilities remain one of the most marginalised and excluded groups, facing stigma and discrimination along with inadequate services, especially in health and education. Many continue to be placed in residential institutions, which is a severe violation of their rights and international conventions. This needs to be urgently addressed. Bosnia and Herzegovina needs to urgently develop and adopt a deinstitutionalisation strategy to move towards community-based care. Both entities and the Brčko District have started developing their own roadmaps in cooperation with UNICEF.

In July 2022, the Council of Ministers adopted the action plan on the **rights of lesbian, gay, bisexual, transgender, intersex and queer (LGBTIQ) persons** which was developed in 2020. Active and persistent engagement is needed to achieve its objectives. While legislation includes provision on hate crimes on grounds of sexual orientation and gender identity, the prosecution of hate crimes and hate speech against LGBTIQ persons remains insufficient. No steps were taken to recognise and ensure the enjoyment of same-sex couples' social and economic rights, including the right to a family life. The social inclusion of intersex and transgender persons, who continue to be particularly marginalised, has yet to improve. In March 2023, the local police prohibited an LGBTIQ pride event in Banja Luka and did not protect activists from physical attacks, nor were the perpetrators prosecuted. Harmful comments by high-level politicians and public figures against the LGBTIQ community contributed to these developments. The fourth Sarajevo Pride march took place in June 2023. The Sarajevo Open Centre documented 13 hate incidents against LGBTIQ persons in 2022, including cases of domestic violence.

The **procedural rights** of suspects, accused persons, witnesses and victims are generally upheld, although access remains uneven across the country, particularly for witnesses and victims. The four criminal procedure codes have yet to be further harmonised, and their enforcement is inconsistent. Bosnia and Herzegovina needs to ensure the right to immediate access to a lawyer while in police detention, which is an essential procedural right. A state-level law to protect the right to be tried within a reasonable time was adopted and entered into force in June 2022; a similar law is still pending adoption in the Federation entity. This is key to addressing systemic violations of the right to a fair trial and ensuring the right to an effective remedy, in line with Constitutional Court rulings and European standards. The country has not aligned with the EU *acquis* on victims' rights and compensation to victims of crime, but has taken some steps through the provision of related services, in particular victim support and the development of referral mechanisms for long-term physical, psychological and practical assistance.

Without comprehensive coverage and clear minimum common standards, the right to legal aid continues to be upheld unevenly, to the detriment of the most vulnerable. The framework needs to be completed by adopting laws in the Federation entity and the Central Bosnia Canton, as well by as putting into operation the legal aid office of the Herzegovina-Neretva Canton. Conducting a needs assessment would help identify and address the main gaps and ensure effective equal access to justice for all, irrespective of place of residence. The budget implemented for legal aid in 2022 amounted to EUR 8 442 077 (up from EUR 7 073 171 in 2021).

The participation in political and public life of persons belonging to national **minorities** remains low. No progress was made towards adopting a countrywide strategy on national minorities. The authorities still need to comply with the recommendations of the fourth review cycle under the Framework Convention for the Protection of National Minorities from November 2017 to condemn statements of politicians and public figures inciting ethnic hatred and to take measures promoting intercultural dialogue and understanding. The national minorities' councils should become more active in developing practical, political and legislative initiatives. In 2022, the Ombudsman received 12 complaints concerning rights of persons belonging to minorities (compared to three in 2021 and two in 2020) and issued two recommendations. Minorities and unaffiliated citizens, remain barred from running for the Presidency and House of Peoples. This has been repeatedly condemned by the ECtHR since 2009 (*Sejdić-Finci* case law). Pending constitutional and electoral reforms are of utmost importance to ensure equality for all.

The **Roma** are the most vulnerable and disadvantaged minority. Anti-Roma stereotypes and prejudices, discrimination and anti-gypsyism still hinder their social inclusion.

Roma women in particular face multiple forms of discrimination. They often lack resources, access to services, awareness about their rights and information on protection mechanisms. Roma women's rights are also violated in cases of domestic violence, early marriages, trafficking in human beings and labour exploitation of children.

As one of the 17 officially recognised national minorities, the Roma are protected by the anti-discrimination law. The country allocated EUR 700 000 for 2023 for the implementation of the 2021-2025 countrywide action plan for the social inclusion of Roma men and women, compared to EUR 1 million for 2020, the last year a budget was allocated. As the action plan encompasses a broad scope of measures, it requires appropriate funding from all levels of government, reversing the downward trend, as well as constant monitoring, including by the Roma Advisory Board (Roma Committee). A total of 15 local communities have revised their local Roma action plans.

Upon completion of the mapping and assessment of the needs of the Roma in Bosnia and Herzegovina in December 2022, 47 cities and municipalities identified issues related to informal settlements and housing units. No progress was made in developing a methodology for data collection nor in developing a policy for the legalisation of informal economy practices concerning the Roma. Discrimination in employment remains rampant, with very high unemployment rates. Compulsory education enrolment rates have increased, but the number of school drop-outs is still very high. While classes or schools are not segregated, there is no teaching in and of the Romani language, and the awareness of Roma culture among the rest of the population is very limited. Around two thirds of Roma have access to healthcare; children outside education and elderly Roma face the biggest hurdles. The process of civil registration is well advanced; a roadmap to end statelessness has been developed. No step was taken to remove administrative obstacles, including residence requirements for birth

registration and for access to healthcare and education, and to recognise documents for children born abroad.

Bosnia and Herzegovina hosts around 90 000 **refugees and internally displaced persons**, following the conflict in the 1990s, of which 990 families (3 351 persons) still live in one of the 45 collective centres across the country and in alternative accommodation. The authorities need to address their housing needs with sustainable solutions. Minority returnees are among the most common targets of ethnically driven hate speech and hate crimes. The 2010 revised strategy for the implementation of Annex VII to the Dayton Peace Agreements has not yet been fully implemented. To complete the process of return and fulfil its obligations to allow closure of Annex VII, Bosnia and Herzegovina should ensure full cooperation among all levels of government so as to ensure the enjoyment of the rights of returnees and harmonise their access to services and resources. The country also needs to provide adequate humanitarian assistance and protection (including shelter, food and medical assistance) and effective access to the asylum procedure for asylum seekers and migrants. Arbitrary limitations to their human rights, including restrictions of movement introduced during the pandemic, should be removed.

2.2.2. Chapter 24: Justice, freedom and security

The EU has common rules for border control, visas, residence and work permits, external migration and asylum. Schengen cooperation entails lifting border controls inside the EU. Member States also cooperate with Bosnia and Herzegovina in the fight against organised crime and terrorism, and on judicial, police and custom matters, all with the support of the EU justice and home affairs agencies.

Bosnia and Herzegovina has achieved **some level of preparation** to implement the EU *acquis* in this area. **Some progress** was made, notably on the fight against organised crime (Opinion key priority 7) by finally putting into operation the Europol contact point, and on managing migration and asylum (Opinion key priority 8) by adopting a new 2021-2025 strategy and action plan on migration and asylum. The Parliament adopted a Law on foreigners in September 2023. Proactive engagement is required to fully take over responsibility for managing migration, which should be supported by all levels of government. Bosnia and Herzegovina is satisfactorily implementing the integrated border management strategy for 2019-2023. The next strategy and the action plan for 2024-2029 are broadly aligned with the EU *acquis* and need to be adopted in good time. The Council of Ministers adopted a new four-year strategy and the related action plan for countering terrorism and preventing and countering violent extremism, and an updated risk assessment and accompanying action plan on anti-money laundering and combating the financing of terrorism. Further steps are needed to adopt an action plan on drugs and to establish a drug observatory and an early warning system. While broadly aligned with the EU *acquis*, legislation is often not harmonised across the country, and institutional cooperation and coordination remain weak, leading to uneven and unsatisfactory implementation. Last year's recommendations remain broadly valid.

In the coming year, Bosnia and Herzegovina should in particular:

→ urgently adopt and start implementing legislation on anti-money laundering and combating the financing of terrorism (AML/CFT) in line with the EU *acquis*, to avoid the possibility of again being listed as a jurisdiction under increased monitoring for strategic AML/CFT deficiencies by the Financial Action Task Force (FATF) after evaluation of the regional body, the Committee of Experts on the Evaluation of Anti-Money

Laundering Measures and the Financing of Terrorism (MONEYVAL);

- draw up concrete plans for transition to increased responsibility of domestic authorities in managing migration, including taking over the management of reception centres; implement the strategy on migration and adopt the action plan; ensure effective coordination of border management and migration management capacity, including the fair distribution of reception capacity among all entities and cantons; and guarantee more efficient access to asylum procedures;
- adopt the action plan on drugs; improve civilian oversight mechanisms over police, at all levels; consistently appoint police directors on a merit basis; align with EU visa policy, in particular with regard to third countries presenting irregular migration or security risks to the EU.

Fight against organised crime

Bosnia and Herzegovina **is in between an early stage and some level of preparation** in the fight against organised crime. **Some progress** was made on the fight against organised crime, notably by finally putting into operation the Europol contact point and by concluding some relevant operations supported by Europol (Opinion key priority 7). The country has several strategies in place, notably the recently adopted strategy on organised crime, trafficking in human beings and integrated border management. However, the legal framework is not harmonised across the country. There are systemic shortcomings in the operational cooperation of law enforcement agencies due to non-harmonised criminal legislation, weak institutional coordination and very limited exchange of intelligence. Criminal organisations operating in Bosnia and Herzegovina take advantage of legal and administrative loopholes. The police are vulnerable to political interference. Financial investigations and asset seizures are largely ineffective. A proactive approach is essential to stop criminal infiltration in the political, legal and economic systems. Last year's recommendations remain broadly valid.

In the coming year, Bosnia and Herzegovina should in particular:

- implement the national strategy on trafficking in human beings and improve referral to appropriate support to victims;
- strengthen institutional cooperation among law enforcement agencies and with prosecutors' offices and courts, notably by establishing specialised multi-agency investigation teams for complex cases; improving mutual / standardised access to databases and the secure / timely exchange of information; strengthening financial investigations; and adopting standard operating procedures to run financial investigations;
- sign an agreement on operational cooperation with Eurojust, and establish a firearms focal point; urgently adopt legislation on the possession of weapons by civilians, harmonised and further aligned with the EU *acquis*, including on marking and deactivation standards.

Institutional set-up and legal alignment

There are multiple law enforcement agencies in the country, out of which 15 have investigative powers. The police had 438 police officers per 100 000 inhabitants in 2021, compared with an EU average of 335.3 (Eurostat, 2019-2021). Data for 2022 are not available.

Police legislation needs to be further aligned with the EU *acquis*. There was limited improvement and harmonisation of police legislation at all levels, which hampers effective police accountability, integrity and cooperation. The professionalism, integrity and

accountability of law enforcement agencies needs to be significantly improved. A comprehensive policy to ensure transparent appointments is needed. Police oversight mechanisms via parliamentary independent boards need to be strengthened. There was progress in ensuring merit-based, standardised and transparent appointments and promotions by some independent boards. Political interference remains a concern, notably for key managerial positions as well as for parliamentary independent board members. While the participation of women in police bodies has improved, women are still under-represented in positions of command and have limited promotion opportunities. Failure to comply with the rule of law and democratic principles, including political influence, remain a major concern. In the Herzegovina-Neretva Canton, amendments to the legislation led to ethnic criteria prevailing over merit in recruiting police; this is of concern for its independence and professionalism.

The legal framework on the **fight against organised crime** is only partially aligned with the EU *acquis*. Bosnia and Herzegovina adopted a strategy on the fight against **organised crime** for 2023-2026. All competent authorities need to implement the strategy through their own action plans. It is of particular concern that, since 2010, despite several legislative initiatives, Bosnia and Herzegovina has not developed capacity for asset management at state level. Extended and third-party confiscations are possible, but they are rarely used. Bosnia and Herzegovina should establish or designate an asset recovery office in charge of identifying and tracing criminal assets to improve effectiveness and facilitate operational cooperation with EU Member States.

The legislation on **trafficking in human beings** needs to be further aligned with the EU *acquis*, notably on sanctions. A 2020-2023 strategy is in place and being implemented. The implementation of the strategy should be evaluated and a strategy for the following period should be developed. Bosnia and Herzegovina has intensified anti-trafficking operations but few victims and suspects have been identified. It should improve the early identification of victims and their referral to adequate support, assistance, protection services and possible compensation.

Bosnia and Herzegovina needs to further align its legislation on **cybercrime** with the EU *acquis*. It is party to the Budapest Convention on Cybercrime, and it should sign its second additional protocol on enhanced cooperation and disclosure of electronic evidence. The country needs to complete the strategic framework on fighting cybercrime; a strategy is only in place in the *Republika Srpska* entity.

Legislation on the **possession of weapons by civilians** needs to be harmonised and further aligned with the EU *acquis*, including on marking and deactivation standards. New legislation should be modelled on the Una-Sana Canton's 2021 law on weapons, which is broadly in line with the EU *acquis*. The legislative framework on explosives for civil use and the transport of dangerous goods remains fragmented and needs to be completed and aligned with the EU *acquis* across the country.

Legislation should urgently be adopted on **anti-money laundering and countering the financing of terrorism** (AML/CFT), in line with the fourth and fifth EU directives on AML/CFT. Bosnia and Herzegovina adopted an updated risk assessment and accompanying action plan on AML/CFT. If these necessary steps are not taken as a matter of urgency, there is a real possibility that Bosnia and Herzegovina will again be listed as a jurisdiction under increased monitoring for strategic AML/CFT shortcomings by the international standard-setting body, the Financial Action Task Force (FATF), after evaluation by the regional body MONEYVAL. Moreover, Bosnia and Herzegovina should align its criminal legislation with

the latest *acquis* on combating money laundering.

Bosnia and Herzegovina should demonstrate results in implementing the 2021-2024 strategy and action plan for the control of **small arms and light weapons** (SALW). Bosnia and Herzegovina is aligned with the actions within the EU Action Plan on firearms trafficking, which correspond with the goals of the Regional Roadmap to better control SALW in Western Balkans and progressed well on activities to improving firearms detection capacities and destruction of firearms. More efforts should be done to investigate firearm-related crimes, in particular establishing the firearms focal point, which is still at an impasse.

Implementation and enforcement capacity

In 2022, there were 39 investigations into **organised crime** with 336 suspects, 14 indictments with 58 accused, 20 convictions with 92 convicted, 38 with a conditional sentence, and 16 acquittals. This represents a drop compared with 2021 (735 suspects, 28, indictments with 190 accused and 22 sentences with 134 convicted). In 16 cases, plea bargain agreements were concluded with 58 individuals (90 in 2021). There were 138 orders to conduct investigations against 166 individuals for cybercrime including for online child sexual abuse in 2022, (181 investigations against 198 individuals in 2021), with 54 indictments against 65 individuals (45 and 41 in 2021). The number of convictions in 2022 is still very low, with 48 convictions for 58 individuals (43 and 51 in 2021) of which 27 convictions for 35 individuals resulted in suspended sentences (50%). In 2022 extended confiscation was proposed in five cases (seven in 2021) and three first-instance decisions and no second-instance decisions were delivered by courts. Confiscation of property from third parties was proposed in six cases (10 in 2021), and one first-instance court decision and no second-instance court decision were delivered.

The capacity to effectively dismantle criminal organisations is seriously hampered by the lack of harmonised criminal legislation, which is exacerbated by the systemic lack of capacity and institutional coordination. While there is some progress in carrying out joint operations tackling serious crimes, there is still limited exchange of intelligence. Some progress was made in the cooperation and exchange of criminal data between law enforcement agencies in Bosnia and Herzegovina and counterparts in the region. The absence of a register of beneficial owners, which competent authorities may access without restriction, contributes to these shortcomings. The country should also step up the fight against transnational organised crime networks.

There is no overall policy for carrying out timely and systematic **financial investigations**. In 2022, the State Investigation and Protection Agency (SIPA) carried out financial investigations in four cases and submitted six reports to the Prosecutor's Office of Bosnia and Herzegovina. While there is no information on the follow-up by the prosecution, the number of financial investigations remains very low. The High Judicial and Prosecutorial Council issued guidelines for chief prosecutors on the mandatory launch of financial investigations in corruption, organised crime and money laundering cases. These need to be followed up and implemented effectively. In 2022, there were 89 investigations into money laundering (61 in 2021) involving 145 individuals, 48 confirmed indictments against 66 suspects (respectively 49 and 66 in 2021), and 39 convictions against 51 defendants (respectively 55 and 70 in 2021). In 50 cases, a criminal report was filed by police authorities. For money laundering as a stand-alone crime, in 2022 there were 49 investigations against 71 individuals (33 and 36 respectively in 2021), 34 confirmed indictments against 47 individuals, 54 convictions against 72 individuals (41 and 42 respectively in 2021), out of which only six individuals were sentenced to prison; additionally, there were 24 fines against 30 individuals.

The Financial Investigation Unit within the SIPA needs to fulfil its responsibilities more efficiently. In 2022, SIPA submitted 28 reports against 59 individuals (12 and 25 respectively in 2021) and nine legal entities to the prosecutors' offices on suspicion of financial crimes, including money laundering, in the amount of EUR 18 million (5.5 in 2021). For money laundering as a stand-alone crime, in 2022 there were 49 investigations against 71 individuals (33 and 36 respectively in 2021), 34 confirmed indictments against 47 individuals, and 54 convictions against 72 individuals (41 and 42 respectively in 2021), out of which only six individuals were sentenced to prison.

The tools for **freezing, managing and confiscating criminal assets** are not effective enough. Confiscation of criminal assets needs to be stepped up in the fight against organised crime, terrorism and high-level corruption. Criminal assets need to be systematically frozen and their management need to be improved. Law enforcement authorities need to collect and analyse data on asset seizure and confiscation as a tool to improve the effectiveness of these sanctions. The value of asset confiscations pursuant to first-instance and final court verdicts in 2022 amounted to over EUR 9 million compared with EUR 4 million in 2021 and over EUR 11.5 million in 2020.

Proactive investigations that start with **intelligence-led policing** remain rare. The insufficient systematic cooperation between law enforcement agencies continues to seriously affect the quality of investigations despite some successful operations carried out in 2022 and 2023. Criminal justice needs standardised systems and processes to respond swiftly to serious and organised crime, corruption and new security threats. Operational cooperation with Europol is growing, with some room for improvement. Cooperation with Interpol needs to improve.

The tools for enhanced and practical **cooperation between prosecutors' offices and the police** are in place, but require structural improvements to guarantee more effective judicial follow-up, prevent procedural delays, and introduce good practices. Ineffective cooperation between police and prosecutors continues to hinder trials. The quality of reports, the collection, analysis and sharing of data, and the capacity of specialised joint investigation teams should be further improved. Continuous efforts should be undertaken on communication, coordination and sharing of information to further strengthen the operational and strategic effectiveness of police bodies.

The electronic data exchange system from the records of police authorities and prosecution offices needs to be fully functional and ready for use by all signatories of the 2009 agreement. Forensic capacity remains fragmented. There is no operational countrywide DNA database, and DNA-profiling capacity is limited. There is no swift exchange of forensic data with other countries. The creation of a new automated fingerprint information system (AFIS) is long overdue. Although required by law, there is no effective, coordinated and consistent countrywide approach to using undercover investigators. The use of special investigative measures needs to improve. Suitable equipment and sufficient staff are also needed.

There has finally been progress in implementing the 2017 agreement on operational and strategic cooperation with **Europol**. In June 2023, the contact point was put into operation and a liaison officer was deployed in July 2023 by Bosnia and Herzegovina to Europol in the Hague. This is an important step. Until then, exchange of information with Europol continued to take place through a unit in the Directorate for Coordination of Police Bodies of Bosnia and Herzegovina, whose mandate had expired, and with which the *Republika Srpska* entity had suspended operational cooperation. Making the Europol contact point fully operational enabled the resumption of direct cooperation between Europol and all police bodies in Bosnia and Herzegovina, allowing the latter to make use of Europol's services and operational tools.

Messages were exchanged through the Secure Information Exchange Network Application (SIENA) system. The roll-out of SIENA across the country should continue. In 2022, the number of new cases opened based on cooperation with Europol was 1 165 (1 022 cases in 2021). Messages exchanged through the Europol channel in 2022 amounted to 8 573 (4 721 received and 3 852 sent). Bosnia and Herzegovina's use of Europol products and services has been very limited during the reporting period, but is expected to grow with the start of operation of the Europol contact point.

Bosnia and Herzegovina participates in the European Multidisciplinary Platform against Criminal Threats (EMPACT). In 2023, the country committed to participating in 12 operational actions (eight in 2022). Bosnia and Herzegovina also appointed the Europol contact point coordinator as national EMPACT coordinator. Bosnia and Herzegovina continued to participate in EMPACT joint action days.

Bosnia and Herzegovina has not yet signed the agreement between the parties to the Police Cooperation Convention for Southeast Europe on the automated exchange of DNA, dactyloscopic and vehicle registration data, nor its implementing agreement.

Legislation on **trafficking in human beings** needs to be further aligned with EU *acquis*. The prosecutors and the police lack sufficient and trained staff to efficiently address trafficking. The establishment of a specialised department in the Prosecutor's Office of Bosnia and Herzegovina dedicated to trafficking has further improved the referral mechanism and quality of evidentiary and court processes. In 2022, 38 potential victims of trafficking in human beings (56 in 2021) were detected (29 children and nine adults, compared with 49 and seven in 2021). Nine perpetrators were convicted in 2022 (26 in 2021), following eight investigations involving 11 suspects (50 and 60 respectively in 2021).

Bosnia and Herzegovina still has no fully functional referral mechanism for trafficking victims. The task force against trafficking, established by the Council of Ministers, continued to ensure coordination, including with the regional monitoring teams at entity and cantonal level. The authorities should better detect and identify victims and perpetrators by standardising and improving evidentiary proceedings and further training practitioners in the judiciary and police. Despite efforts on increased property and damage compensations, Bosnia and Herzegovina still needs to introduce an appropriate compensation scheme for victims of crime, in particular of trafficking. The authorities should more systematically order financial investigations in connection with cases of trafficking in human beings and further improve international cooperation, notably through more intensive information exchange, participation in joint investigation teams and enhanced cooperation with EU task forces and agencies, including Europol.

Witness protection continued to improve, notably out-of-process protection. Specialised and regular training in EU and international practice and standards remains essential.

The authorities' capacity to effectively tackle **cybercrime**, including online child sexual abuse, and respond to cybersecurity threats should be enhanced. Law enforcement authorities make efforts to strengthen cooperation in the fight against sexual abuse of children through participation in the EMPACT activity on cybercrime child sexual abuse and exploitation, focused on the Western Balkans .

On **arms control**, a total of 1 234 weapons, 49 889 pieces of ammunition, 31 pieces of other mine-explosive devices and 10.8 kg of explosives were seized in 2022 (against 1 396, 14 009 and one in 2021). 2 609 pieces of weapons and weapons parts were destroyed (compared to 1 792 in 2021, 1 864 in 2020 and 3 479 in 2019). In 2022, there were 236 orders to

investigate firearms related criminal offences – illegal production, possession, and trafficking - (317 in 2021) involving 273 suspects (340 in 2021). 208 indictments were filed in 2022 against 233 accused (respectively 276 and 298 in 2021), leading to 217 convictions (223 in 2021), 35 prison sentences (23 in 2021), 22 fines (32 in 2021) and 160 suspended sentences (168 in 2021) with 235 convicted (239 in 2021). Bosnia and Herzegovina still needs to establish a focal point for firearms. The criminal codes are not yet aligned with the UN Firearms Protocol. Bosnia and Herzegovina stands out with the relatively high number of voluntarily surrendered firearms. The SEESAC¹² armed violence reporting platform recorded 506 incidents (567 in 2021) related to firearms in 2022.

Since 2021, Bosnia and Herzegovina needs to revise the working arrangement for cooperation with the EU Agency for Law Enforcement Training (CEPOL). The contact point was replaced in October 2022, but not much interaction has taken place ever since. Bosnia and Herzegovina has full access to the CEPOL exchange programme as well as to the free-of-charge electronic learning system of CEPOL. CEPOL has recommended designing, preparing and organising targeted training to address firearms trafficking and environmental crime as priority topics.

Cooperation in the field of drugs

Institutional set-up and legal alignment

Bosnia and Herzegovina has a 2018-2023 strategy on supervision of narcotic drugs, prevention and suppression of the abuse of narcotic drugs, but there is no action plan to implement it. The strategy needs to be implemented and its implementation be evaluated. An action plan for 2023 and beyond, in line with EU standards, should be adopted. The *Republika Srpska* entity has its own strategy and action plan on drugs that is outdated. The entities need to adopt action plans aligned with the state-level strategy. The Commission for the suppression of the abuse of narcotic drugs was completely ineffective: it was inaugurated in July 2022 and its mandate expired in October 2022.

The legal framework is only partly in line with the EU *acquis*, notably on minimum rules on drug-related criminal offences and sanctions. The legislation provides for the entire quantity of drugs seized to be preserved as material evidence for court proceedings, rather than just a sample, which creates risks.

Bosnia and Herzegovina cooperates with the European Monitoring Centre for Drugs and Drug Addiction (EMCDDA) and should designate by law a correspondent for cooperation. It should establish a national drug observatory to provide factual, objective, reliable and comparable information on drugs, drug addiction and their consequences. It should improve coordination among the competent agencies and align data reporting on epidemiological trends with the EMCDDA treatment indicators. Bosnia and Herzegovina should also adopt legislation on new psychoactive substances, establish a focal point for drug issues for the entire country and introduce an early warning system.

There is no early warning system on new psychoactive substances (NPS). The Ministry of Security facilitates the exchange of information on NPS; entity coordinators should be appointed.

Implementation and enforcement capacity

¹² South Eastern and Eastern Europe Clearinghouse for the Control of Small Arms and Light Weapons.

Track record of enforcement continued to be built in 2022. In 2022, there were a total of 3 166 (2 451 in 2021) reported crimes related to drug abuse and 2 033 (2 171 in 2021) orders issued to conduct an investigation. There were 1 337 indictments filed (1 409 in 2021), 1 804 confirmed (2 023 in 2021), 468 indictments with a criminal warrant (587 in 2021) and 7 indictments with plea agreement (6 in 2021). There were 32 acquittals (33 in 2021), 5 judgments rejecting charges (6 in 2021) and 1 678 convictions (1 967 in 2021), of which 1 conviction without a sanction (none in 2021); 86 fines (89 in 2021); 28 court reprimands (24 in 2021); 1 034 suspended sentences (1 304 in 2021); and 517 prison sentences (550 in 2021).

Bosnia and Herzegovina remains a transit country and a final destination for drugs. Bosnia and Herzegovina has not updated the list of criminalised psychoactive substances since 2011, in line with the recommendations of the Commission for the suppression of abuse of narcotic drugs. As a result, several psychoactive substances circulate freely. A more flexible mechanism is needed to regularly update this list. Professional capacity and cooperation with civil society needs to be improved. More funds are needed for harm reduction programmes and the social reintegration of addicted persons. In July 2022 the Council of Ministers extended the mandate of the Commission for the destruction of drugs. No drugs were destroyed in 2022. The lack of secure storage of drugs before destruction is still a concern.

Fight against terrorism

Institutional set-up and legal alignment

Anti-terrorism legislation is mostly aligned with the EU *acquis* and with international law. Criminal legislation needs to be amended to ensure stricter sanctions for the offence of training and travelling abroad for terrorist purposes as well as for publishing and sharing terrorist content online. A new law on anti-money laundering and terrorism financing in line with the EU *acquis* (fourth and fifth AML/CTF directives) needs to be urgently adopted. Laws on the protection of critical infrastructure (only present so far in the *Republika Srpska* entity) should be developed and adopted at all levels of government.

A new 4-year strategy for countering terrorism and preventing and countering violent extremism was adopted in November 2022 after a 2-year gap. This marks a step forward. Now, the authorities need to implement the strategy, including by addressing all forms of radicalisation and violent extremism (political, ethno-nationalist and religious). A 2021-2026 action plan was adopted in August 2023.

Policy dialogue on counter-terrorism with the EU takes place regularly. In April 2023, the country submitted the 5th report on the implementation of the bilateral arrangement in the framework of the Joint Action Plan on Counter Terrorism. Some progress was made, but many objectives still need to be implemented.

Implementation and enforcement capacity

Shortcomings still exist in implementing counter-terrorism laws, and cooperation between security agencies at all levels of government needs to become more structured and efficient. The high-security state prison is fully functional. Very limited assistance is available, in prison or upon release, for disengaging from violent extremism. Much more work is needed to prepare inmates for release, including former foreign terrorist fighters.

Around 160 citizens of Bosnia and Herzegovina, including women and children, are estimated to remain in Syria and Iraq. In August 2022, Bosnia and Herzegovina adopted a plan for the repatriation, reintegration, rehabilitation and resocialisation of its citizens in Syria and Iraq. In December 2022, the Presidency instructed competent institutions to coordinate

the safe return of citizens of Bosnia and Herzegovina located in the conflict zone of Syria and Iraq. None were repatriated in the reporting period.

In 2022, 10 investigations were initiated for terrorism-related offences; no final conviction was delivered. Authorities should improve preparations for the release of terrorist offenders who have served their sentences, in coordination with local authorities and law enforcement agencies.

The capacity and effectiveness of the counter-terrorism task force and the counter-terrorism section of the state-level Prosecution Office need to be significantly strengthened. Bosnia and Herzegovina's capacity to investigate and prosecute the financing of terrorism and to counter terrorist content online needs to be further developed. An asset recovery office and a beneficial ownership register of legal persons have yet to be established. Coordination, cooperation and intelligence-sharing between security agencies need to be improved, e.g. on identifying a firearms focal point or collaborating with the EU internet referral unit at Europol to deal with terrorist content online. The entry into operation of the Europol contact point should facilitate cooperation and exchange information on terrorism as well.

Civil society and the institutions responsible for labour, social welfare, education, youth and health at various levels of government need to be more effectively included in preventive efforts. Bosnia and Herzegovina is participating in implementing the Western Balkan counter-terrorism initiative as part of integrative internal security governance.

Judicial cooperation in civil and criminal matters

The legislative framework for mutual legal assistance in civil and criminal matters is in place but is not always applied effectively. The number of requests for judicial cooperation in criminal matters increased, while the number of requests for judicial cooperation in civil matters dropped. In 2022, the Ministry of Justice recorded a total of 2 891 requests for judicial cooperation in civil matters, 70% of them from EU Member States (primarily Austria, Croatia, Germany and Slovenia). In 2022 there were 3 920 requests for judicial cooperation in criminal matters, 70% from EU Member States (primarily Austria, Croatia, Germany and Slovenia). The statistics on enforcement of foreign judgments in criminal matters (transferring convicted persons and taking over enforcement of criminal sentences) have remained stable. There were 71 requests in 2022 (71 in 2021), of which seven were granted and four rejected. 70% of these requests originated from EU Member States. Completion averaged between 3 months and 1 year.

Bosnia and Herzegovina needs to undertake concrete action to accede to certain instruments developed under the Hague conference on private international law, including the 1996 Hague convention on child abduction and the 2007 Hague maintenance protocol.

Bosnia and Herzegovina has decided to open negotiations with the Commission for an international agreement on judicial cooperation in criminal matters with Eurojust. The draft agreement has been sent and the first round of negotiations is scheduled for October 2023. An accelerated approach to finalising a cooperation agreement is to be encouraged. As a prerequisite for the agreement to enter into force, Bosnia and Herzegovina needs to adopt a new Law on personal data protection in line with the EU *acquis* and ensure the full operational capacity of the Personal Data Protection Agency. Bosnia and Herzegovina has three contact points for relations with Eurojust and Eurojust-led projects. In 2022, it was involved in 11 cases supported by Eurojust.

In June 2023, the Presidency endorsed opening negotiations with the European Commission for an international agreement on cooperation with Eurojust and gave its consent to the

Prosecutor's Office of Bosnia and Herzegovina to sign a working arrangement with the European Public Prosecutor's Office (EPPO). The country was involved in two EPPO cases in 2022.

Legal and irregular migration

Institutional set-up and legal alignment

Some positive steps have been taken in this area. The legal framework on migration, including the Law on foreigners, is broadly aligned with the EU *acquis*. In August 2023, the Parliament adopted a new Law on foreigners. The principle of *non-refoulement* is ensured in the new law. Human rights safeguards should be sufficiently defined and guaranteed, including for minors and unaccompanied minors. The Council of Ministers adopted the new 2021-2025 strategy on migration and asylum in December 2022, and the related action plan in March 2023.

Bosnia and Herzegovina has concluded **readmission agreements** with the EU and with Schengen associated countries, as well as implementation protocols to the EU Readmission Agreement with 16 EU Member States. Their implementation is satisfactory overall. Accelerated readmission procedures with neighbouring countries are still to be fully and effectively implemented. Bosnia and Herzegovina has also concluded readmission agreements with all the Western Balkan partners, Türkiye, Russia, Moldova and Pakistan, as well as implementation protocols with 16 EU Member States. Their implementation is satisfactory overall¹³. The readmission agreement with Pakistan has been in force since July 2021.

Bosnia and Herzegovina participates in the regional Anti-Smuggling Operational Partnership with the Western Balkans launched in November 2022 to support law enforcement and judicial cooperation against criminal smuggling networks and to increase border management capacities.

Implementation and enforcement capacity

In 2022, the numbers of persons irregularly entering Bosnia and Herzegovina considerably increased compared with the previous year. In 2022, the authorities detected 27 429 arrivals (15 740 in 2021). 25 709 persons expressed their intention to seek asylum (14 688 in 2021). The top three declared countries of origin were Afghanistan, Burundi and Bangladesh. In 2022, a total of 48 051 migrants were registered staying in the five EU-funded **temporary reception centres** in the Una-Sana and Sarajevo cantons, and none estimated as staying outside the centres. In 2022, Bosnia and Herzegovina had capacity to host over 4 500 persons at any time, which is sufficient for the needs. The number of migrants accommodated in reception centres was the highest in October 2022 (3 300) and the lowest in February 2023 (below 700). The average stay of migrants in Bosnia and Herzegovina has dropped considerably to 7 days in May 2023, compared with 58 days in May 2022 and 103 in May 2021.

The Ministry of Security has continued to step up efforts to improve migration management and coordination between the State and local authorities. Despite constant EU advocacy and support, responsibility for hosting asylum seekers and migrants across the entire country is

¹³ To note that the Commission recommended Bosnia and Herzegovina in its sixth report under the Visa Suspension Mechanism to resolve in particular issues in readmission cooperation reported by 2 Member States.

not fairly shared. Most of the responsibilities continue to fall upon the Una-Sana and Sarajevo cantons. The Ministry of Security has continued efforts to take over responsibility for managing migration, which should be supported by all levels of government. The lack of political responsibility make it difficult for the authorities to provide the necessary assistance. The plan to progressively transfer management of reception centres to the authorities started in November 2021 with the direct management of the multi-purpose reception and identification centre in Lipa. The drawing up of a detailed transition plan on the transfer of responsibilities from international partners to the state has been delayed. The Ministry of Security continues efforts to boost regional and international cooperation on migration, hosting conferences for this purpose in September 2022 and June 2023.

The Sector for Immigration, the service for Foreigners' Affairs and the Border Police remain significantly understaffed and partly underequipped, which hampers their efficiency. Bosnia and Herzegovina needs to adopt or assign a budget for migration management. Only limited public funding is available to manage migration; this also impacts the state's effectiveness in developing a policy. More efficient information exchange is needed, including biometric data exchange between relevant stakeholders in migration management policy.

Bosnia and Herzegovina demonstrated a limited level of organisation and coordination in managing the influx of **Ukrainian refugees**, present in low fluctuating numbers. The country determined their legal status and the rights they would enjoy when entering the country. In 2022, 49 974 Ukrainian nationals entered and 48 051 exited Bosnia and Herzegovina. Very few stayed until the end of 2022.

The multi-purpose **reception and identification centre in Lipa**, near Bihać, established with EU support in 2021, is operational. Bosnia and Herzegovina needs to strengthen capacity and to manage the centre effectively, fully respecting fundamental rights, domestic legislation and international standards, including for screening and registration, the protection of vulnerable persons and detention.

Despite shortage of staff, the Service for Foreigners' Affairs demonstrated satisfactory management and coordination capacity. As additional reception places became available, the authorities intensified efforts to relocate migrants from informal settlements to these reception centres, with good coordination between the Service for Foreigners' Affairs, local police and other partners. The Una-Sana Canton maintains in place discriminatory and disproportionate restrictions of movement, including for migrants to use public transports as well as a restriction on the maximum number of migrants in the canton. Humanitarian partners continued to provide key assistance and to ensure respect for international standards. There has been some progress in providing essential services to refugees and migrants in cooperation with humanitarian partners. The authorities should step up efforts to protect the human rights of vulnerable persons, especially minors. The most vulnerable persons need to be identified and referred to adequate assistance in line with international standards. Only the Una-Sana and Sarajevo cantonal authorities provide access to legal guardianship and facilitate access to education for unaccompanied children. However, there are no accommodation facilities available to minors outside of the cities where reception centres are located. Assigning legal guardianship and access to education for all unaccompanied minors in Bosnia and Herzegovina remains a challenge. In 2022 the authorities registered 2 443 unaccompanied minors in the country (109 in 2021 and 351 in 2020; the increase is due to the upgrading of the Information System for Migration which previously only gave data for unaccompanied minors registered in government-run centres).

On **voluntary and forced return**, the return of persons not in need of international

protection needs to be improved in terms of both legal framework and implementation procedures, also as it is mostly based on donors' assistance. There was an improvement in the mechanisms for collecting, sharing and analysing **statistics** on migration in the information system for migration. However, biometric data collection requires further improvements. Cooperation with neighbouring countries is necessary to ensure the efficient management of the external borders, respecting fundamental rights and international obligations.

Cooperation on identification and return procedures needs to improve. Bosnia and Herzegovina should increase efforts to establish readmission agreements with countries of origin and further improve the mechanisms for assisted voluntary return and reintegration. Ensuring return and readmission remains challenging. In 2022, 103 foreigners were returned to neighbouring countries following readmission agreements (77 to Serbia, 26 to Montenegro and none to Croatia), compared with 89 in 2021. The number of third-country nationals returned to Bosnia and Herzegovina in 2022 under various readmission agreements amounted to 838, compared with 570 in 2021 and 686 in 2020. In 2022, 128 foreigners returned to their countries of origin via assisted voluntary return with support from the EU and the International Organisation for Migration (IOM), compared with 206 in 2021 and 232 in 2020. In 2022, seven minors, potential victims of trafficking of human beings, were repatriated from Bosnia and Herzegovina in line with their expressed wish and following the required security and humanitarian risk assessment. In 2022, Bosnia and Herzegovina carried out seven forced returns. Carrying out non-voluntary returns remains a challenge due to the absence of cooperation frameworks with countries of origin, the lack of documentation to establish the identity of migrants and the lack of diplomatic representation of various countries of origin in Bosnia and Herzegovina. A number of positive steps have been taken in this regard, including the operationalisation of the readmission agreement with Pakistan leading to the first returns under this agreement, identification missions from Bangladesh resulting in the issuance of travel documents, and planned returns and enhanced dialogue with the Moroccan authorities.

Bosnia and Herzegovina has one **immigration detention centre** in East Sarajevo (Lukavica) for those awaiting expulsion from the country, with a maximum capacity for 120 persons. In 2022, the immigration centre held a total of 714 persons, including 16 children. Representatives of the UNHCR and non-governmental organisations are granted access to the detainees on a regular basis to ensure that their rights are respected. A detention facility was also built adjacent to the Lipa centre, in line with domestic legislation and international standards.

Asylum

Institutional set-up and legal alignment

The institutional framework and legislation on asylum are broadly in line with the EU *acquis* and international standards and practices. The Law on asylum adopted in January 2016 should be further aligned with recent EU *acquis*, notably in relation to procedural safeguards to ensure standardised procedures for examining applications for international protection and systematic access to procedural guarantees, as well as on strengthening the asylum and reception systems in line with the Common European Asylum System (CEAS) and EU standards. Cooperation with the EU Agency for Asylum (EUAA) should continue to be further strengthened, including by adopting a 2024-2025 roadmap. Inter-agency cooperation and coordination needs to be further improved, particularly in the exchange of biometric data.

Implementation and enforcement capacity

The Sector for Asylum of the Ministry of Security has very limited **human resources** and operational capacity, with 75% of its posts filled (21 out of 28) and only five officers registering and assessing asylum claims for the entire country, which is clearly insufficient to ensure access to asylum. The lack of staff significantly hampers access to asylum, primarily registration and identification. There are insufficient interviewers and registration sites. The Sector for Asylum remains dependent on external support, including by the EU, to conduct registrations and examinations. No performance targets have been set for registration and examination officers. More staff, including interpreters and cultural mediators, are needed so as not to only rely on international support. The age assessment procedures for minors require further improvements. The overall capacity of the Sector for Asylum should be further strengthened. Cooperation and sharing of responsibilities in managing asylum with other institutions should improve.

Bosnia and Herzegovina should swiftly adopt the second-generation roadmap for cooperation with EUAA 2023-2025. The previous roadmap 2020-2022 was implemented only to a limited extent. Bosnia and Herzegovina is strongly encouraged to implement the pending recommendations, especially on the information of the country of origin, assessment of evidence and interview techniques for minors. The contact officers handling minors require appropriate trainings and resources, notably supporting guidance and technical solutions for more efficient family tracing processes.

There are still obstacles to ensuring effective access to asylum procedures. Inter-agency cooperation and coordination needs to be ensured. The processing time of asylum requests improved in 2022 with an average time to reach a decision of 247 days during the second semester (350 days during the first semester), reduced to 205 days in the first semester of 2023, according to UNHCR. However, the processing of asylum cases remains too lengthy. The Service for Foreigners' Affairs and the Border Police do not have enough staff or facilities to register asylum claims made upon entry in Bosnia and Herzegovina. This has been an issue since 2018. Access to asylum procedures and mechanisms should be strengthened to ensure faster processing of their claims and to ensure that people in need of international protection receive it.

Asylum seekers are not guaranteed the same rights evenly across the country, as their access to services varies depending on where the reception centres are located. As the authorities have not yet fully taken over legal responsibility for all reception centres in the Una-Sana Canton, these centres are not recognised as valid residential addresses for asylum applications; applicants are thus in a legal limbo, which increases their vulnerability. The system for collecting and storing biometric identifiers requires additional improvements, especially for inter-agency information exchange. Access to information for potential asylum seekers has improved through more intensive facilitation efforts and cooperation with international partners. Authorities are encouraged to improve contingency planning capacity on reception procedures.

In 2022, out of 25 709 persons who expressed their intention to claim asylum in Bosnia and Herzegovina, only 149 applied for international protection. 41 asylum requests were pending from 2022. Of them, none were granted refugee status, 46 persons were granted subsidiary protection, 25 individual applications were rejected on merit, and 22 asylum applications of 27 persons were closed as the applicants left or attempted to leave the country or failed to show up for an interview. In the first six months of 2023, 61 persons filed an asylum application in Bosnia and Herzegovina, with 36 requests completed, compared to 90 and 12 respectively in the same period the previous year.

The **asylum centre** in Delijaš near Sarajevo, which provides decent reception conditions and adequate access to rights, has 154 beds (which can be expanded to 300) but remains underutilised, primarily due to its remote location. As of June 2023, the centre did not host any asylum seekers. Living conditions and the provision of services at the centre have improved, such as possibility for daily educational activities for both adults and minors.

Cooperation with EUAA should continue and intensify.

Visa policy

Bosnia and Herzegovina continues to meet the visa liberalisation criteria and retains a visa-free regime with the EU. The Commission's sixth report under the visa suspension mechanism of October 2023 concluded that Bosnia and Herzegovina continues to meet the visa liberalisation benchmarks¹⁴. To ensure a well-managed migration and security environment, Bosnia and Herzegovina needs to be fully aligned with the EU's visa policy. Bosnia and Herzegovina still has visa-free agreements with the following countries whose citizens require visas for the EU: Azerbaijan, Bahrain, China, Kuwait, Oman, Qatar, Russia, Saudi Arabia and Türkiye. While it introduced a visa-free regime with Saudi Arabia for the summer tourist season 2023, Bosnia and Herzegovina terminated the visa-free arrangement with Bahrain from September 2023. Bosnia and Herzegovina maintains a policy of not issuing visas on the state border; exceptions are few (7 cases in 2021 and 27 in 2022). Bosnia and Herzegovina must improve its technical capacity and infrastructure in its diplomatic offices for the introduction of biometric visas.

Travel documents policy still requires additional state control mechanisms related to the procurement and manufacturing of biometric travel documents. Security features, application and issuing processes for travel documents, notably biometric passports, are fully aligned with EU and international standards.

The **visa-free regime** with the EU continued to be smoothly implemented. In 2022, 2 210 applications for international protection were submitted by nationals of Bosnia and Herzegovina in EU Member States, 18% less than in 2021 (2 695). The recognition rate (including humanitarian protection) increased from 5% in 2021 to 8% in 2022.

In 2022, the number of nationals from Bosnia and Herzegovina found to be irregularly staying in EU Member States rose by 19%, with 4 775 irregular stays in 2022 compared with 4 005 in 2021. The number of refusals of entry slightly increased in 2022 (by 5%), from 4 995 cases in 2021 to 5 260 in 2022.

Bosnia and Herzegovina continued good cooperation on readmission of its own and third-country nationals on the basis of the readmission agreement with the EU and implementing protocols, which are implemented in an efficient manner. The number of return decisions issued to nationals of Bosnia and Herzegovina (2 635 in 2022 against 2 785 in 2021) dropped by 5%, while the number of people returned (1 250 in 2022 against 900 in 2021) marked a rise of 40%. The return rate increased from 32% in 2021 to 47% in 2022, and stood at 42% for the first quarter of 2023 (275 out of 650). Attention should continue to be paid to the successful reintegration of returnees.

Schengen and external borders

Institutional set-up and legal alignment

¹⁴ COM(2023) 730 final.

The **legal framework** for border control is partly aligned with the EU/Schengen *acquis*. Bosnia and Herzegovina should urgently adopt the new Law on border control aimed at improving the efficiency of integrated border management.

Bosnia and Herzegovina is satisfactorily implementing the **integrated border management (IBM)** strategy for 2019-2023. The draft strategy and action plan for 2024-2029 are broadly aligned with the EU *acquis* and need to be adopted in good time.

Training was improved to align it with the common core curriculum of the European Border and Coast Guard Agency (Frontex). The Border Police, despite its limited resources, showed operational flexibility in border management operations with the support of other law enforcement agencies.

Bosnia and Herzegovina took initial steps to establish the **Advanced Passenger Information/Passenger Name Record (API/PNR)** systems, a necessary condition for the establishment of a future national coordination centre (NCC). The risk analysis process has been further improved.

Implementation and enforcement capacity

The state-level **Border Police** has around 25% vacancy rate (562 out of the planned 2 646 staff), mostly police officers for border surveillance operations.

Following the increased influx of refugees and migrants since 2018, the authorities have redeployed available border guards. However, the response remains inadequate. The Border Police remains understaffed. Additional police should be trained.

The implementation of the **integrated border management strategy** for 2019-2023 is satisfactory and the coordination body overseeing implementation of the strategy manages the process in a satisfactory manner. Border infrastructure and technical capacity have improved. Further improvement is needed, in particular in the area of border surveillance, inter-agency cooperation and capacity management.

Further improvements of **infrastructure and equipment** are needed at a large number of border crossing points. Despite the significant quantity of donated equipment, **border surveillance** still needs to improve, to respond to migratory challenges. Border patrol operations have been fully restored but are not sufficient to detect irregular border crossings, in particular on the border with Montenegro.

The Border Police and the Service for Foreigners' Affairs further significantly improved their risk analysis capacity. Frontex-certified trainers have trained 73 members of their staff in line with the most recent Common Integrated Risk Analysis Model (CIRAM) 2.0. Data access and exchange issues remain to be further improved.

Inter-agency law enforcement cooperation was satisfactory overall. The Border Police continued to rely on the support of other law enforcement agencies to patrol borders. In 2022, the Border Police handed over 213 criminal cases to other law enforcement agencies for further processing (130 in 2021), significantly improving implementation of this pillar of integrated border management. Cooperation in the fight against smuggling of migrants and trafficking of human beings should improve.

As the leading investigative and coordination component of the Border Police, with executive powers across the country, the central investigation office intensified its activities in the fight against migrant smuggling and trafficking in human beings. There was a higher detection rate, in particular on smuggling (59 compared with 26 in 2021) and forgery of documents

(183 compared with 144 in 2021). **International cooperation** should improve. Bosnia and Herzegovina has a number of agreements with neighbouring countries.

The Border Police cooperates satisfactorily with Frontex and Interpol. Bosnia and Herzegovina participates in the Western Balkan risk analysis network led by Frontex.

Bosnia and Herzegovina still needs to appoint a lead negotiator, negotiate and conclude a Frontex status agreement with the EU. Bosnia and Herzegovina initialled a status agreement in January 2019 which was not signed nor ratified. With the adoption of the new European Border and Coast Guard Regulation (EU) 1896/2019 and model status agreement, a new status agreement may be negotiated on the basis of the new Frontex mandate. This would enable Frontex to deploy its standing corps to both Bosnia and Herzegovina's EU and non-EU borders. Bosnia and Herzegovina has, however, still not responded to the January 2023 invitation by the Commission to initiate negotiations. Bosnia and Herzegovina should sign an upgraded working arrangement with Frontex for operational cooperation and deployment of Frontex personnel without executive powers. Cooperation with the European migrant smuggling centre of Europol has started to improve, with Bosnia and Herzegovina being actively involved in one regional operational task force established together with Slovenia and Croatia targeting the Western Balkan migratory route.

Negotiations on border agreements with Serbia and Croatia are on hold, and an agreement on border demarcation should be reached with Montenegro. The joint police cooperation centre in Trebinje continued to facilitate the exchange of police data with Serbia and Montenegro. Local border traffic agreements and joint patrols with neighbouring countries have been restored and are being satisfactorily implemented.

All aspects of customs cooperation are covered under Chapter 29 – Customs union.

2.3. ECONOMIC CRITERIA

<i>Table 6.1:</i>	2014-19	2020	2021	2022
Bosnia and Herzegovina - Key economic figures	average			
GDP per capita (% of EU-27 in PPS) ¹⁾	31	33	34	35
Real GDP growth	3.2	-3.1	7.4	4.0
Economic activity rate of the population aged 15-64 (%) , total	54.5	58.2	59.1	59.1
<i>female</i>	42.7	46.1	46.7	46.3
<i>male</i>	66.2	70.4	71.4	71.8
Unemployment rate of the population aged 15-64 (%) , total	23.1	16.2	17.5	15.5
<i>female</i>	26.4	19.0	22.2	19.9
<i>male</i>	21.0	14.4	14.5	12.7
Employment of total population (annual growth %)*	3.3	-1.2	0.9	2.3
Nominal wages (annual growth %)	1.6	4.0	4.4	11.7

Source: Eurostat, national sources

In line with the conclusions of the European Council in Copenhagen in June 1993, EU accession requires the existence of a functioning market economy and the capacity to cope with competitive pressure and market forces within the Union.

2.3.1. The existence of a functioning market economy

Bosnia and Herzegovina is at an **early stage** of establishing a functioning market economy and there was **no progress** in this area. After a strong rebound in 2021 from the pandemic-induced crisis, economic growth slowed down to about 4.0% in 2022, reflecting a deteriorating international environment and accelerating inflation. The labour market was resilient and unemployment fell, but it nevertheless remained very high, while labour out-migration persisted. Driven by high inflation, budget revenues increased strongly and the public debt ratio fell. However, the quality of public spending remained weak, while the public sector remained inefficient and oversized. The current account deficit increased but its financing was ensured. The financial sector remained stable. The business environment continued to be negatively affected by Bosnia and Herzegovina's fragmented internal market and a large informal economy. The rule of law and the functioning of the internal market deteriorated further, with recent disputes on the validity of constitutional court ruling for the whole country and traffic blockages at inter-entity boundary lines. Political stalemates and lack of cooperation among the various levels of government continued to hinder necessary structural reforms. Russia's war of aggression against Ukraine so far had mainly indirect effects, through higher import prices and uncertainty as well as weaker third-country external demand.

The implementation of last year's recommendations was very limited. The 2022 recommendations remain fully valid.

To improve the functioning of the market economy, Bosnia and Herzegovina should in particular:

- strengthen country-wide regulatory and supervisory institutions, reinforce country-wide analytical and policy-formulation capacity and publish complete and consistent country-wide data in a timely manner, in particular in the area of public finances;
- improve the business environment by simplifying business registration and licencing procedures and by harmonising and mutually recognising licences and certificates between entities;
- increase the transparency and efficiency of the public sector, in particular by establishing an appropriate institutional and regulatory framework for better, de-politicised governance and improving the efficiency and governance of publicly owned enterprises to reduce their burden on government spending; furthermore, improve the efficiency of tax collection by ensuring the effective exchange of taxpayer information between the country's tax authorities, and in particular clarify the constitutional competence for establishing a central (i.e. country-wide) registry of bank accounts of private individuals, in line with the EU acquis.

Economic governance

Economic governance did not make progress during the last year, resulting from a legislative recess in autumn in the run-up to the October 2022 general elections and time needed for the subsequent government formation. Bosnia and Herzegovina's short and medium-term track record in adopting and implementing overdue structural economic reforms remains very limited, in particular with respect to countrywide measures. The main reasons for this are lack of political commitment and insufficient cooperation among key stakeholders together with highly politicised decision-making processes and institutional fragmentation. The 2023-2025 Economic Reform Programme, an important element for Bosnia and Herzegovina's participation in the economic and financial dialogue with the EU, was again submitted with a significant delay and its quality was once again low, suffering from a lack of internal consistency and insufficient commitment towards country-wide reforms. Furthermore, the country failed to participate sufficiently in other EU meetings which try to prepare candidate countries for their integration into EU procedures. Russia's war of aggression against Ukraine affected Bosnia and Herzegovina mainly through indirect channels, leading to higher import prices and a slowdown in import demand from trading partners. In response to the higher cost of living the authorities increased public sector wages and pensions and raised social transfers.

Implementation of the policy guidance jointly adopted at the economic and financial dialogue with the EU in May 2022 was limited. The authorities took steps to cushion the effects of external shocks and to improve the countrywide public finance management system. However, in most other areas, in particular in improving the functioning of country-wide institutions, no progress was achieved.

Macroeconomic stability

Economic activity slowed down in 2022, reflecting a deteriorating international environment and accelerating inflation. Annual output growth slowed from 7.2% in 2021 to 4% in 2022. To some extent this slowdown reflects a base-year effect after the strong rebound in 2021 and early 2022, which however also led to increasing price pressures. The main drivers of growth in 2022 were exports, gross investment (in particular inventories) and private consumption. In 2023-Q1 economic activity slowed down further, with weaker

private consumption and investment bringing year-on-year output growth to 1% compared with 5.9% one year before. Increased prices for imported energy and primary commodities as

a result of Russia's war of aggression against Ukraine further contributed to inflationary pressures. At the same time, external demand decelerated, although from a high level. During 2018-2022, average growth was around 3%, with exports and private consumption as the main drivers of growth. Real GDP per capita in purchasing power standards was 35% of the EU average in 2022, compared

with 31% some 5 years earlier. The main impediments to faster income convergence with the EU are low investment, a poor business environment and lack of reforms resulting from persistent political tensions, cumbersome licencing procedures and economic and institutional fragmentation.

The current account deficit widened in 2022. The current account deficit increased to 4.5%

of GDP in 2022, compared with 2.4% in 2021, largely reflecting decelerating export revenues and higher spending on imports driven by increased commodity prices. In the first quarter of 2023 the deficit dropped to 3.6% of GDP, largely due to lower spending on imports. The deficit in the balance of goods and services has been largely financed by current transfers, primarily consisting of workers' remittances, accounting for more than 10% of GDP. Net FDI inflows rose to 2.5% in 2022 and to

3.6% of GDP in 2023-Q1. A large part of these FDI inflows was reinvested earnings, while foreign greenfield investment remained. Official foreign exchange reserves, which benefited from pandemic-related financial assistance including special drawing right (SDR) allocations by the IMF, dropped at the end of 2022 to a still-solid level equivalent to about 7 months of imports, largely due to higher spending on imports. Bosnia and Herzegovina relies strongly on longer-term financing at favourable rates by international financial institutions, such as the IMF, the EIB and the World Bank. The gross external debt ratio remained moderate, at some 58% of GDP at the end of 2022. Overall, the financing of Bosnia and Herzegovina's current account appears feasible, while external vulnerabilities are moderate.

Inflation surged in 2022 but moderated somewhat after the autumn. Headline inflation accelerated during 2022, especially after Russia's war of aggression against Ukraine which resulted in surging energy and food prices. Annual consumer price inflation reached a peak of 17.4% in October 2022, but moderated to 4.0% in July 2023. On average, inflation was 14% in 2022 and 8.5% in the first 7 months of 2023. Headline inflation was especially driven by increases in food prices which account for about one third of the consumption basket.

Monetary policy continued to be anchored by the currency board arrangement. This monetary regime has served the economy well so far as an important pillar of macroeconomic

stability. However, it also implies that the burden of adjustment to external shocks must be accommodated by other policy areas, in particular fiscal policy to manage demand, and structural reforms to improve the functioning of markets. Domestic political tensions have continued to prevent the appointment of a new board of the Central Bank, including the governor, whose mandate expired in August 2021 and which continued to operate only on a technical mandate.

Public finances continued to benefit from strong, primarily inflation-driven revenue growth, but weak fiscal governance continued to pose challenges.

General government revenues rose by 13.4% in 2022, in line with headline inflation. Tax revenues increased by 16.7%. In parallel, government spending was revised upward, rising by 13.6% for the

whole year. This additional revenue was used for increasing social benefits, such as pensions, extraordinary payments to vulnerable groups and an increase in public wages. In contrast to the focus on current spending, already approved funds for infrastructure investment, such as related to the energy sector, were suspended. According to preliminary data from the Central Bank, this resulted in a nominal drop of central governments' public investment by some 8% in the first three quarters of 2022. According to first estimates, the general government registered a deficit surplus of 0.14% of GDP in 2022, compared with a surplus deficit of 0.34% of GDP in 2021. Budget plans for 2023 are characterised by significantly higher spending targets for current expenditure, partly to compensate public employees and pensioners for the rapid increase in inflation, while capital spending is planned to remain subdued. The public debt ratio dropped to 29% of GDP in 2022 from 34% in 2021, driven by high nominal GDP growth. Overall, cooperation and information exchange among the various fiscal authorities has remained very limited, which facilitates tax avoidance. Bosnia and Herzegovina's tax revenues rely strongly on a single source, namely indirect taxes. Continued calls by the *Republika Srpska* entity to dismantle the state-level Indirect Taxation Authority thus pose a threat to the revenue collection system and the country's fiscal stability. Contingent liabilities pose a significant risk, in particular in the area of public enterprises. There is a high degree of non-alignment with EU public sector accounting standards, which strongly impedes the assessment of Bosnia and Herzegovina's actual fiscal position. As a result, both the deficit and debt ratio could be significantly higher than reported. Fiscal rules have been adopted in one entity only, and there is no independent fiscal institution to monitor and enforce compliance with fiscal discipline.

Overall, Bosnia and Herzegovina's macroeconomic policy mix does not adequately address the country's main challenges. Political disputes delay necessary reforms to improve its growth potential and fiscal policy focuses on short-term objectives, neglecting longer-term challenges. As Bosnia and Herzegovina's currency board regime limits the room for monetary policy, fiscal policy is one of the country's key macroeconomic policy tools. However, this policy tool is not used sufficiently to steer the country towards stronger growth and faster convergence with EU income levels. The effectiveness of fiscal policy for enhancing Bosnia and Herzegovina's growth potential is further severely limited by the insufficient degree of cooperation among the various fiscal policy stakeholders and the absence of an independent and competent fiscal council.

Functioning of product markets

Business environment

The business environment suffers from Bosnia and Herzegovina's fragmentation and political uncertainty. According to recent OECD surveys, over half of businesses in Bosnia and Herzegovina identify burdensome procedures, paperwork and cost as a major obstacle to obtaining licenses, a higher proportion than in any other country in the region and well above the regional average of 35%. Businesses that wish to operate across the entire economy still face technical and administrative obstacles, must frequently obtain the same licenses or permits in each entity or local government area and pay a range of different taxes and fees. This increases the costs of establishing a company, protects incumbent companies from competition and deters investors, hindering the functioning of an effective single economic space. Contract enforcement, in particular settling commercial disputes, remains difficult and there is a substantial backlog in court cases. Establishing and implementing property rights remains difficult in some areas, such as real estate registration. Lack of cooperation and coordination among the various stakeholders is another major impediment to establishing a countrywide level playing field, with wide-ranging negative effects on the business environment. Recently, the *Republika Srpska* entity adopted legislation contesting the application of Bosnia and Herzegovina's constitutional court rulings on the entity's territory. This ongoing dispute increases legal uncertainty and undermines the integrity of the country's single economic space. Furthermore, due to a different speed at entity level of aligning with the EU *acquis*, Bosnia and Herzegovina's economic and legal fragmentation has further deteriorated.

The informal economy remained significant. Despite some progress in boosting formal employment by increasing labour market controls, the informal sector is estimated to still account for up to one third of GDP. The pandemic might have increased the importance of the informal economy for livelihoods, compensating for job losses in the formal economy. Thus, informality still provides substantial (unregistered) employment and income but also distorts competition and erodes the tax base. This requires rates for taxes and social security contributions to be higher than would otherwise be necessary. It also results in lower pension benefits, increasing the poverty risk for the elderly and adds to a significant fiscal burden on labour, which in turn impedes formal employment and negatively affects Bosnia and Herzegovina's international competitiveness.

Political leaders and judicial institutions failed to tackle widespread corruption. Transparency International again ranks Bosnia and Herzegovina 110th out of 180 countries in its 2022 annual Corruption Perception Index, making it the worst performer in the Western Balkans after 6 years of declining performance. Just 14% of businesses surveyed in Bosnia and Herzegovina say that the fight against corruption there is effective, a lower proportion than any other country in the region, and a higher proportion of businesses than in any other Western Balkans country said that they had to make irregular payments. There was no progress on necessary reforms to strengthen legislation on anti-money laundering and countering the financing of terrorism, and Bosnia and Herzegovina risks being listed as a jurisdiction under increased monitoring by the international standard-setting body in this area, the Financial Action Task Force.

State influence on product markets

There was limited progress in reducing the still-strong footprint of the state in the economy. During 2022, some temporary measures related to COVID-19 were discontinued. However, the impact of the public sector on the factor allocation remained high, in particular

in the labour market, for example by continuing to support the oversized public administration and poorly performing state-owned enterprises (SOEs). Ineffective service delivery and poor human resource management and accountability have major implications for efficiency, quality and access to public services. Many public companies continue to rely on state support or accumulate payment arrears to the social security systems or to private suppliers (4% of GDP according to the IMF). Public procurement represents a significant share of public spending and thus plays an important role for the private sector, but procedures are complex and administrative capacity and competition remain low. This facilitates corruption and leads to a preference for domestic suppliers which is incompatible with the EU *acquis* (see also Chapter 5 – public procurement). There is still a wide range of regulated prices.

While recorded state aid is relatively low, significant indirect state support continues to undermine the level playing field. Available data on official state aid points to a rather low level (1.2% of GDP in 2021, according to the latest available report). However, this dataset appears to be rather incomplete. State aid control is still hindered by only partial legal alignment with European standards and the lack of consistent enforcement of state aid rules throughout the country. The competences of the State Aid Council continue to be limited. This leaves room for unfair distortions of competition. Many of Bosnia and Herzegovina's SOEs are in poor financial shape; close to half of them experience shortfalls in liquidity and require both explicit and implicit budgetary support. Monitoring and managing fiscal risks in ministries of finance is not sufficient. The cost of supporting public companies and guarantees, which often translate into substantial contingent liabilities, is a heavy burden on public finances and thus on taxpayers. SOEs' total debts are around 26% of GDP (IMF, 2019).

Privatisation and restructuring

No progress was achieved on privatisation and restructuring of publicly owned companies. According to IMF estimates, there are over 550 SOEs at entity and municipal level employing around 80 000 people, accounting for around 11% of total employment (about a quarter of public sector employment). They control assets worth an equivalent of 100% of GDP. Whereas legislation partially provides for open and transparent selection procedures, appointments to SOE boards are highly politicised in practice. Ownership responsibilities are usually exercised in a decentralised manner by various line ministries, subject to no central coordination. The rationale for public ownership is not based on clearly defined policy objectives. Actual steps to restructure or dissolve public enterprises remained very limited. Vested interests are largely responsible for the slow privatisation process and attempts to sell shares in public companies were largely unsuccessful. However, there have been some initial steps towards strengthen the SOE oversight at entity level.

Functioning of the financial market

Financial stability

The banking sector remained stable but the financial sector's supervisory and regulatory framework continues to be fragmented. Key elements of banking supervision and regulation are decentralised, while the central bank's role remained limited to coordinating the local regulatory and supervisory agencies, which might be challenging for financial stability. Despite some international financial sector turbulence, the stability of Bosnia and Herzegovina's financial sector was maintained. A few days after Russia's war of aggression against Ukraine, the two entity-level banking agencies had to take over the subsidiaries of Russian-owned but EU-based Sberbank when their liquidity deteriorated

rapidly due to quickly accelerating deposit withdrawals. Banking sector profitability improved during the last year, for example with the return-on-equity (ROE) ratio reaching 15.9% in 2023-Q2. The banking system's overall capital-adequacy ratio stood at 19.5% in 2023-Q2, well above the regulatory minimum of 12%. The non-performing loans ratio decreased to 4.1% at the end of 2023-Q2, and the ratio of foreign-denominated loans to total loans also continued to decline. However, there are sizeable differences among Bosnia and Herzegovina's 21 banks, with pockets of vulnerability remaining, especially among smaller, domestically owned banks.

Access to finance

Banking intermediation was adversely affected by high inflation and increasing international interest rates. Nominal bank loans rose by 4.2% and 4.4% on average in 2022 and the first half of 2023, which is rather low given the underlying double-digit inflation rates. Credit demand was negatively affected by declining real disposable income, the highly uncertain outlook on inflation and interest rate dynamics and rapidly increasing real estate prices. Nominal deposit growth slowed to 5.9% in 2022, but accelerated again to 7.4% in the first half of 2023. The five largest banks accounted for about 80% of the sector's assets. Private-sector debt declined to 56.5% of total debt at the end of 2022, which is markedly above Bosnia and Herzegovina's 5-year average before the pandemic. Financial literacy is limited in particular among small enterprises. The size of the non-bank alternative financing sector and of the capital markets remained small, with market capitalisation of Bosnia and Herzegovina's stock markets of about 17% of GDP at the end of 2022. The use of venture capital continued to be very limited. For many micro and small companies, gaining access to those guarantees appears to have remained difficult.

Functioning of the labour market

Despite a fall in unemployment, the labour market continues to be held back by lack of economic dynamism and structural problems such as skill shortages, a significant brain drain and work disincentives. Employment growth slowed down in the second half of 2022 and the first half of 2023, to 1.3% year-on-year in both periods, compared to 2% the year before. The number of registered unemployed declined by some 3.6%

(13 000 persons) between June 2022 and June 2023. This brought the administrative unemployment rate to 29.2% in June 2023 compared to 30.0% the year before. The Labour Force Survey (LFS) registered a decline in the LFS unemployment rate from 17.5% in 2021 to 15.5% in 2022. In the first half of 2023, the average LFS unemployment rate continued to decline to 13.4%. The registered labour force continued to decline, by 1.3% in the second half of 2022 and 1.1% in the first half of 2023. Due to the high share of informal employment, in particular in trade and tourism, administrative data provides only a partial picture of Bosnia and Herzegovina's labour market dynamics. Due to methodological changes, the comparability of labour-force survey data over time is limited. Official data registered an increase in labour participation from 2020 onwards, which could potentially be explained by government measures to counter external shocks and better registration of employment. However, this is coupled with a fall in the overall labour force, partly due to

persistent labour out-migration of qualified, but also less qualified workers leaving. This has a negative impact on the country's medium-term growth potential.

Youth unemployment (age group 15-24) returned to pre-COVID-19 levels, dropping to a still high rate of 29.1% in the second quarter of 2023, reflecting structural problems. Long-term unemployment also remained high, with about 75% of the unemployed looking for a job for more than 1 year. High unemployment has persisted for years due to challenges associated with skills mismatches, the insufficient pace of job creation and a high tax wedge, both, impeding job creating, but also reducing the financial attractiveness of wages on the lower end of the scale.. A large proportion (38%) of firms surveyed by the OECD identified applicants' lack of skills as a reason for unfilled vacancies. There is also a significant gender gap, with women's activity and employment rates around 25 pps lower than those for men. Reforms to make the public employment service more client-oriented are ongoing but provided budget and human resources are very limited. The still-substantial discrepancy between unemployment data according to administrative and according to survey-based data points to the need to improve Bosnia and Herzegovina's labour market statistics.

2.3.2. The capacity to cope with competitive pressure and market forces within the Union

Bosnia and Herzegovina has made **limited progress**, and is between an **early stage and some level of preparation** concerning its capacity to cope with competitive pressure and market forces in the EU. The overall quality of education remains inadequate despite relatively sizable spending on the sector. The country continues to lag behind in the energy and digital transition. However, in response to changes in global demand, some structural adjustment took place, with the focus of value-added moving towards services such as trade, IT and tourism. Economic integration with the EU remains high, but overall trade is below potential. The higher uncertainty due to Russia's war of aggression against Ukraine probably had an adverse impact on investment and thus on capital stock modernisation. The implementation of last year's recommendations has remained very limited. The 2022 recommendations remain valid.

To support long-term growth, Bosnia and Herzegovina should in particular:

- improve the quality of education and training, in particular accelerate the modernisation of curricula with a view to better alignment with labour market needs;
- increase the share of government capital spending in GDP, in particular by focusing on transport and energy infrastructure and on improving environmental standards. Improved management of public investment and accelerated implementation of investment projects that have been subject to a clear positive cost-benefit assessment are of particular importance in this respect.

Education and innovation

Education continues to be of low quality and there is a continuing skills mismatch. According to data from 2021, public spending on education accounted for some 4% of GDP. When adding private spending and support by foreign donors, the overall amount stands at nearly 5% of GDP. However, the education system fails to provide Bosnia and Herzegovina's labour force with the skills and knowledge necessary for smooth integration in the labour market. Inadequate education is one important factor for a particularly high LFS youth unemployment rate (30.1% in 2022-Q1), twice the country's overall unemployment rate. Insufficient coordination among the numerous stakeholders results in a lack of common standards for various levels of education and differences in the quality of teachers' training

and performance evaluation. Teaching curricula continue to be outdated and are still not sufficiently aligned with the country's needs. The average achievements of students in mathematics, reading and natural sciences are below the OECD average (Pisa 2018). The country has not confirmed participation in the 2025 PISA evaluation exercise. There has been little change in levels of educational attainment in recent years. There is a large share of low-skilled people in the population. Upskilling strategies to increase the skill levels of the workforce are not sufficiently developed and also lack sufficient providers. Participation in early childhood education and care is significantly lower than in the EU and elsewhere in the region. The illiteracy rate continues to be around 3%, largely as a result of a relatively high illiteracy rate among women.

Spending on research and innovation is limited and impeded by the low degree of cooperation and coordination among the various levels of government, leading to poor efficiency of the overall system. The lack of an efficient funding system is another factor preventing Bosnia and Herzegovina's innovation policy from achieving better results for the funds spent. However, in the area of establishing Science and Technology Parks some progress has been achieved recently. Research capacities remain limited, while brain drain continues, most notably in the health, medical, and IT sectors with no systematic measures having been introduced so far to address the issue.

Physical capital and quality of infrastructure

Investment in Bosnia and Herzegovina's capital stock remained behind the country's needs, partly due to uncertainties related to COVID-19 and the impact of Russia's war of aggression against Ukraine. Persistent political stalemates and uncertainties also have a negative bearing on investment. Gross fixed capital formation recovered from a low base in 2022, increasing by 6.6% in real terms. As a result, the investment's share in GDP rose slightly to 21.9% in 2022, but remained still below pre-pandemic levels, when it reached 23.1%. Public investment remained low, reflecting political disputes and administrative bottlenecks. Inflows of foreign direct investment (FDI) reached 2.5% of GDP in 2022, which is slightly higher than in the 5 preceding years but significantly lower than in other countries in the region. A large share of those FDI inflows continue to be re-invested earnings of foreign investors in the financial sector and in tourism. As in the case of gross fixed investment, the low level of FDI inflows is impeding Bosnia and Herzegovina's ability to achieve a higher growth trajectory. Environmental standards have remained low and are often neglected, leading to high levels of pollution, impeding the health (and thus productivity) of the labour force and constituting an additional factor supporting brain drain.

Moving away from coal-based electricity and improving energy efficiency requires legislation and investments. Bosnia and Herzegovina features one of the most energy-intensive output generation processes in the region and remains heavily reliant on lignite coal. Thus, the level of emissions from coal-fired power plants is a major concern. A reliable and secure energy supply is still impeded by the lack of a single regulatory framework to attract investment in a low-carbon energy sector. Adopting laws on renewable energy and energy efficiency should be a priority, as should state-level legislation on electricity and natural gas with which the entities must comply. Bosnia and Herzegovina should also design and implement a comprehensive building renovation strategy to improve energy efficiency. Lack of progress in these areas contributes to the poor business environment and will prolong the path to decarbonisation, transition to renewables and improved energy efficiency that the current energy crisis has made even more urgent.

Bosnia and Herzegovina is lagging behind in the digital transition. Businesses there are the least satisfied of any in the Western Balkans with the digitalisation of public services.

Only around 60% of small businesses have a webpage and only 18% are active in e-commerce. Economy-wide implementation of service digitalisation is still hampered by the lack of political ownership and coordination between different levels of the government, which also leads to the insufficient allocation of budgetary resources for implementation. The lack of interoperable information and domestic support systems across entities and different levels of government in Bosnia and Herzegovina is a major obstacle to developing economy-wide digital government services (OECD, 2021). Despite repeated requests, there is still no countrywide harmonisation of the e-signature and the related coordination, cooperation and data exchange between different administrations is still needed. Furthermore, Bosnia and Herzegovina has yet to adopt a new law on electronic identification and trust services for electronic transactions with a single supervisory body for the whole country in line with the EU *acquis*.

Sectoral and enterprise structure

Bosnia and Herzegovina's production structure shifted slowly over the last 5 years from industrial activities towards trade, transport and IT services. Between 2017 and 2022 the share of value-added in the trade, transport, tourism and IT sectors rose slightly from 19.9% to 20.6% and from 4.4% of GDP to 5.1% respectively, while the share of the manufacturing sector dropped, from 12.5% to 11.9%. Public administration's share in value-added dropped from 17.1% to 15.7%. Furthermore, the company structure registered some increase in the share of micro companies (0-9 employees), and medium-sized companies employing between 50 and 249 employees. However, the majority of new companies were often trading companies with lower value-added. Some 93% of all companies are in the category of small and micro businesses, i.e. those with less than 50 employees. Overall, the speed of structural change has been rather limited.

Economic integration with the EU and price competitiveness

Trade and investment integration with the EU remained high but overall trade is below its potential. The main export destinations continued to be the EU (Germany, Italy, Croatia), but also CEFTA countries, such as Serbia. Over the last 5 years, trade shifted towards the neighbouring region, in particular Croatia and Serbia. The share of exports to the EU-27 in total merchandise exports rose from some 71.4% in 2017 to 73.5% in 2022. Exports to CEFTA countries also increased their share in total exports, from 16.1% in 2017 to 18.3% in 2022. Bosnia and Herzegovina's openness to trade (exports and imports as a percentage of GDP) recovered from a pandemic-induced low of 82.1% in 2020 to 107% of GDP in 2022. Nevertheless, Bosnia and Herzegovina's openness to trade is still relatively low when taking into account the small size of its economy. The export structure is not very diversified and relies mainly on basic metals, furniture, and textiles. The integration of Bosnia and Herzegovina's financial and capital markets with the EU is also still rather low, although a large part of the banking sector is owned by European banks. About two thirds of the country's stock in FDI originates from EU countries. Annual FDI inflows largely show a similar pattern.

Bosnia and Herzegovina's overall price competitiveness has continued to deteriorate slightly. After a long period of gradual depreciation during 2017-2020, its real effective exchange rate started to appreciate in the second half of 2022 and the first half of 2023 by 4.7% and 0.6%, respectively. The key underlying factor was a rising positive inflation differential with its trade partners. In nominal effective terms, the currency appreciated by 1.6% and 1.5% during those two periods, mainly reflecting exchange rate movements of the Turkish lira, the Chinese yuan and the British pound against the euro, to which the Convertible Mark is pegged.

2.4. PUBLIC PROCUREMENT, STATISTICS AND FINANCIAL CONTROL

Chapter 5: – Public procurement

EU rules ensure that public procurement of goods, services and works in any Member State is transparent and open to all EU companies on the basis of non-discrimination and equal treatment.

Bosnia and Herzegovina has **some level of preparation** in the area of public procurement. There was **limited progress**. Bylaws to implement the amended Law on public procurement have been put in place. However, public procurement remains prone to irregularities and vulnerable to corruption. Selective and non-transparent judicial follow-up in cases of corruption in public procurement is a cause of significant concern. The country needs to ensure continued equal treatment of domestic and EU bidders in awarding public contracts in line with SAA provisions. Recommendations from last year remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- further align the public procurement law with the EU public procurement *acquis*, including in the area of concessions;
- adopt a new 2023-2027 public procurement strategy and an accompanying action plan that supports its implementation;
- increase staffing level and strengthen capacity in the Public Procurement Agency and the Public Procurement Review Body.

Institutional set-up and legal alignment

The **legal framework** is partially in line with the EU *acquis*. The Law on public procurement was amended in August 2022. Relevant bylaws were adopted in December 2022 on the procedure for awarding service contracts in line with the 2014 EU Directives. The legal framework on concessions and public-private partnerships is still highly fragmented and needs to be aligned with the EU *acquis*. A roadmap should be prepared for this purpose. All

legal and financial instruments used for public procurement and concessions, including intergovernmental agreements concluded with third countries, should comply with the principles of transparency, competition, equal treatment and non-discrimination. The authorities should increase cooperation between the respective stakeholders active in public procurement to guarantee fair competition and ensure coherent implementation of the legal framework.

The new 2023-2027 **strategy for the development of public procurement** and relevant action plan have not been adopted yet. The Public Procurement Agency is implementing the plan for integrity and the plan for the fight against corruption both adopted in 2022. The Procurement Review Body is implementing the 2023-2025 mid-term work plan to improve the processing of complaints.

The Public Procurement Agency is the body authorised to initiate, implement and monitor the public procurement policy in all sectors. The Agency's administrative capacity is insufficient, particularly for monitoring and support functions (22 employees versus 32 planned) The Agency should coordinate better with the Competition Council to avoid diverging interpretations of the legislation and to ensure the systematic application of public procurement procedures. Coordination needs to be improved with the audit and judiciary institutions.

The Agency manages the public procurement portal. Tender documents and guidelines can be downloaded from the portal. However, the exchange of information and submission of tenders is not conducted electronically, as per EU standards, but still partly in paper form. Some upgrading has started, but the e-procurement system needs to be further developed and made use of, for increased transparency. Some contracting authorities still do not publish public procurement reports, and existing tender documents are only available to registered users, not including civil society groups or the general public. Only a few ministries at state level have published their procurement reports over the last 3 years.

Implementation and enforcement capacity

In 2022, the **public procurement market** represented 10.65% of the country's GDP, an increase of 3.14% compared with 2021. The average number of bids per tender remains low at two in 2022.

In **monitoring the award and implementation of contracts**, the administrative capacity of the Public Procurement Agency is insufficient to fulfil its tasks. Statistics collected from contracting authorities show a decline in the use of the negotiated procedure without prior publication (6.69% in 2022 compared with 11.87% in 2021). The share of tenders with one submitted bid represented 51% in 2022. The use of price as the only award criterion remains high with 70% of public contracts. The Agency's monitoring role should be strengthened to identify potential weaknesses and irregularities in procurement procedures. In 2022, Agency monitored 629 individual public procurement procedures, initiated misdemeanour proceedings in 18 cases and submitted two criminal offences including upon initiative by civil society. The Agency has improved public awareness of the legislation governing public procurement and started preparing practical tools for the implementation of the public procurement law such as non-binding guidelines and information on best practices. However, no mechanism has been put in place to regularly and systematically coordinate the interpretation of public procurement legislation between the key institutions involved.

The capacity to manage public procurement processes is weak. Specialised procurement functions need to be established in each contracting authority and staffed with officials who have the relevant skills and expertise. There was no new development to improve **integrity**

and conflicts of interest in this area. Public procurement remains prone to irregularities and vulnerable to corruption during the procurement process and contract implementation. The courts have not penalised yet any corruption case in the area of public procurement. The Public Procurement Agency organised training on public procurement for most contracting authorities across the country and strengthened its cooperation with prosecutors and civil society to monitor violations of procurement rules.

Efficient remedy system

The legislation on the **right to appeal** is broadly in line with the EU *acquis*, although time limits are excessively short. The Procurement Review Body is a quasi-judicial body reviewing complaints from bidders. It has offices in three locations (Sarajevo, Banja Luka and Mostar), but no formal mechanism to coordinate them or ensure consistent decision-making and legal certainty. The functioning of the Procurement Review Body is weak due to its insufficient staffing and technical capacity. 94% of all complaints received were solved within the deadline. Only a small number of decisions have been challenged before the Court of Bosnia and Herzegovina. The transparency of the decision-making of the Procurement Review Body needs to be significantly improved.

Chapter 18: Statistics

EU rules require Member States to produce statistics based on professional independence, impartiality, reliability, transparency and confidentiality. Common rules are in place for the methodology, production and dissemination of statistical information.

Bosnia and Herzegovina is at an **early stage of preparation** in the area of statistics. **Limited progress** was made, mainly in the quality of government finance statistics. Bosnia and Herzegovina should enhance cooperation, coordination, decision-making processes and the legal basis to develop the national statistical system in key areas, increasingly applying European and international standards. In order to better support policy analysis, improvement is needed on the provision of timely, exhaustive and country-wide statistics on government finances, national accounts and the labour market. Bosnia and Herzegovina still needs to finalise the classification of regions equivalent to the NUTS classification (Nomenclature of territorial units for statistics). Last year's recommendations remain mostly valid.

In the coming year, Bosnia and Herzegovina should in particular:

- adopt a master plan for the production of national accounts;
- adopt a methodology, responsibilities and funding for the next agricultural census and adopt a roadmap for preparation of the next population census;
- intensify the use of administrative data sources including by establishment of a comprehensive and reliable National Statistical Business Register for precise and extensive data collection.

As regards **statistical infrastructure**, the law on statistics still needs to be aligned with the principles of the European Statistics Code of Practice. Statistics are only to some extent timely, relevant and reliable. The Agency for Statistics of Bosnia and Herzegovina (BHAS) and other data producers, including the entities' statistical offices, need to strengthen their cooperation. The statistical offices need to carry out surveys in time and according to the overall statistical programme.

The Agency for Statistics needs to have access to administrative data beyond that of the Indirect Taxation Authority. The Agency for Identification of Documents, Registers and Data Exchange (IDDEEA) has continued to cooperate to improve transport statistics.

On **classifications and registers**, the statistical business register is in place, but data received from administrative sources remains insufficient. The main statistical classifications are in place. However, the equivalent to NUTS II regions has only been provisionally defined and is accepted by the European Commission until Bosnia and Herzegovina finalises the entire classification and includes in it the definition of the equivalent to NUTS III level as well.

On **macroeconomic statistics**, the production of national accounts continues to deviate from the EU *acquis*, and a master plan needs to be agreed among the three statistical institutes. Annual accounts are compiled using production, expenditure and income approaches, while quarterly accounts are compiled only according to the production and expenditure approaches. Sector accounts are not produced.

Regarding the transition to ESA 2010 methodology, the sector classification is complete except for sub-sectors of the general government sector. Moreover, responsibility for implementation is still unclear. Bosnia and Herzegovina needs to provide the Commission with its GDP *per capita* figures, harmonised at NUTS II level. Balance of payments statistics are harmonised with current international statistical standards.

As regards government finance statistics and excessive deficit procedure (EDP) tables, Bosnia and Herzegovina should continue efforts to comply with ESA 2010, in particular to improve sector coverage, timeliness, compliance with ESA 2010 rules and coverage of transactions. Progress was made in the quality of government finance statistics and Eurostat started to publish data for Bosnia and Herzegovina in 2022. Government finance statistics and excessive deficit procedure tables are transmitted to Eurostat on a regular basis, although not fully in line with ESA 2010. Quarterly balance of payments and international investment position data were transmitted without geographical breakdown, and yearly data for the international trade in services was also provided. Foreign direct investment data are only partially compliant with EU requirements. The GDP time series by production, income and expenditure is available for 2000-2022. Bosnia and Herzegovina has also put in place adequate infrastructure for data transmission to Eurostat and the European Central Bank. The country does not transmit harmonised indices of consumer prices data to Eurostat. While data transmission is still significantly below EU requirements, visible progress has been made in recent years with 145 data sets being regularly transmitted to Eurostat. Statistical sectorisation for 2020 was published in early 2023.

On **business statistics**, short-term statistics for industry, construction and services are not fully available and will need to be established in line with the requirements of the EU *acquis*. The structure for all required datasets for short-term business indicators has been prepared and the data was sent to Eurostat. Statistics related to the production of manufactured goods (PRODCOM) are sent to Eurostat on an annual basis.

Foreign affiliates statistics are produced by the Agency for Statistics for inward statistics and by the Central Bank for outward statistics, but full compliance with regulations for these statistics needs to be ensured. Inward foreign affiliates statistics for 2020 were submitted to Eurostat. A private and business travel survey was conducted for the reference year 2021.

On **social statistics**, preparation for the next population and housing census has hardly progressed. The necessary legislation has not been agreed among the institutions involved. A new master sample frame is now available and was used not only for the household budget survey but will also be used for upcoming surveys, such as the labour force survey and a full-scale survey of income and living conditions. The labour force survey is conducted annually and on a quarterly basis, and data for the first quarter of 2023 was published by BHAS. The labour cost index is not compiled. Intensified cooperation with the institutions responsible for

monitoring migration flows is needed. Education statistics covering all levels of government are published annually. Culture statistics include 15 domains, although coverage is not yet adjusted to Eurostat requirements.

The lack of a recent agricultural census – the last one took place in 1960 – is a major limitation for **agricultural statistics**. Special attention needs to be paid to agreeing the methodology, responsibilities and budgetary aspects of a census. The continued delay in organising an agricultural census means a step back on Bosnia and Herzegovina's plans for 2023. A very limited number of statistical indicators are produced, including some experimental estimates. Supply balance sheets are not available. Statistics on crops and animal production are not in line with the EU *acquis*.

As for **energy statistics**, further work is needed to improve the quality of data in line with EU requirements, in particular annual data on renewable energy sources and basic monthly data on oil.

Regarding **environmental statistics**, the Agency for Statistics continued to publish data from the annual statistical surveys on climate change and greenhouse gas emissions from agriculture and waste disposal. The Agency for Statistics reported environmental protection expenditures to Eurostat for the first time but has yet to report environment-related taxes.

Chapter 32: Financial control

The EU promotes the reform of national governance systems to improve managerial accountability, sound financial management of income and expenditure, and external audit of public funds. The financial control rules protect the EU's financial interests against fraud in the management of EU funds and protect the euro against counterfeiting.

Bosnia and Herzegovina has **some level of preparation** in this area. **Some progress** was made, notably in implementing the strategies on public internal financial control (PIFC) at state level and in both entities, producing consolidated reports while improving capacities for online reporting, and better training civil servants in charge of PIFC. Managerial accountability remains weak and no efforts undertaken to improve practices or legislative framework in this area. All central harmonisation units need to continue strengthening their capacities and monitor the effectiveness of internal control functions in the public sector, with particular attention to the risk management and internal audit functions, including for public companies. The financial and operational independence of supreme audit institutions must be ensured in practice. Bosnia and Herzegovina should improve the quality of audit reports and step-up communication efforts to reinforce public awareness. As last year's recommendations are only partially implemented, they remain largely valid.

In the coming year, Bosnia and Herzegovina should in particular:

- improve relevant legislation in public administration and public finance management area at all levels of government to better implement managerial accountability across public bodies;
- establish and improve the oversight function of fiscal risk of entity-level public companies and ensure data collection on PIFC of public companies at all levels of government by using the relevant IT application;
- increase the impact of the work of supreme audit institutions through adoption and implementation of 2021-2025 communication strategies at entity level.

Public internal financial control

State-level institutions, both entity governments and the Brčko District have continued to implement the comprehensive **strategic framework** for public internal financial control (PIFC) alongside their individual 2020-2025 PIFC strategies. Annual PIFC reports for 2022 were adopted at state and entity level. Governments and parliaments should better monitor the implementation of recommendations provided by the central harmonisation units (CHU), the supreme audit institutions (SAIs) and the internal auditors, particularly those concerning risk management and internal control. The IT tool was used to produce PIFC monitoring reports for state-level institutions, the *Republika Srpska* entity and the Brčko District, while the Federation entity still needs to fully digitalise its reporting.

Managerial accountability is embedded in the countrywide strategy on public administration, the comprehensive public internal financial control and public financial management and the relevant legislation defines managerial responsibility for PIFC processes. The Federation entity government has adopted broader guidelines for the development of management accountability in the public sector, but these remain weakly implemented. Across the other levels of government, the delegation of authority within the public service is defined only with regard to financial and not administrative matters and remains regulated only in the legislation on internal control, while implementation remains slow. The problem lies not only in a lack of effective management responsibility on PIFC, but also in the blurry accountability lines in the public administration, as well as confused policy-making roles across various institutions and lack of adequate performance management of subordinated bodies. Policy content is not coordinated with government priorities throughout the public administration. Most public bodies have strategic plans with objectives and performance indicators. However, managers need to improve the assessment of performance. (*Also see Public administration reform*).

The legal framework for the functioning of **internal control** is largely in place at all levels of government, including rulebooks on internal control standards and risk management. However, effective implementation has not improved, and even less so over public companies. The annual PIFC reports do not include data on basic performance indicators on PIFC over public companies. More broadly, the legal provisions on internal control are still not well integrated in the general regulations on public finance management, business processes and management information systems at all levels of government and in the public companies. The PIFC IT tool needs to be used for risk assessment, risk mitigation and internal audit particularly and it needs to cover public companies.

In 2022, there was a substantial increase in the number of first-level budget spending units that submitted an internal control self-assessment report. Risk management data has been increasingly recorded in the risk register of the PIFC application. Risk registers are established in most state-level public institutions; entities need to increase the coverage of institutions in this area and particularly so in the Federation. Risk management is not yet seen as a management activity and is still not incorporated in the decision-making cycle. Budget inspection is in place at each level of government. The legal basis ensures a separation of budget inspection from internal audit function and this is maintained also in practice.

Internal audit practice is regulated at state and entity levels as well as in the Brčko District and is in line with international audit standards. The internal audit function across all levels needs to be improved. The internal audit manuals at all levels of government have been updated and embedded in the internal audit management module of the PIFC IT application, including quality assurance provisions. The CHUs have a methodology in place on quality reviews for internal control and internal audit. State institutions regularly conduct such reviews, whereas entities still need to do so. Despite the positive trend in filling vacancies for

internal audit for 2022, problems persist with a fragmented system of internal audit and the weak capacity of those units. The CHUs should consider the further strengthening of joint internal audit services through better coordination. Nearly all internal auditors in the public sector are certified, with a positive trend also in 2022. Internal audit certification procedures are in place and implemented at all levels of government, except in the Brčko District. Although the training plans for professional development of audit staff have improved, an upgrade in capacities in risk assessment, using IT and analytical tools is required across all levels of government.

Central harmonisation units (CHUs) have been established at state and entity levels and in Brčko District. Some improvement was undertaken in increasing staffing of the Federation CHU, as well as capacity to provide methodological guidance and promote and monitor PIFC reforms via the PIFC application across levels of government. The quality of the PIFC reports at entity level needs to be improved by including risk management and performance indicators for public companies for monitoring fiscal risks, as such data is lacking. Additionally, the fiscal oversight function over public companies in both entities needs to be improved. Their impact on internal control remains weak, as recommendations remain not well implemented by public bodies across all levels of government. The coordination board of CHUs met regularly.

External audit

Regarding the **constitutional and legal framework**, the functional, operational and financial independence is regulated in the respective laws at each level of government. However, in practice, in the Federation entity, the supreme audit institutions were unable to carry out their external audit function in two instances, as some institutions were resisting the auditing process.

The **institutional capacity** of supreme audit institutions needs to be strengthened at all levels of government. The Federation entity continues to face the particular challenge of ensuring external audit coverage of its cantonal level. All supreme audit institutions have been implementing their strategic development plans for 2021-2025. Supreme audit institutions should continue to work closely with prosecutors to address instances of possible fraud and corruption uncovered during audits. The coordination board of supreme audit institutions needs to be further strengthened in following-up effectively with audit offices on how the legal framework and related procedures for external audit can be implemented better across public bodies and at all government levels.

With regard to the **quality of audit work**, all the supreme audit institutions have a broad mandate, which covers financial, compliance and performance audit. The number of performance audits remained stable, with a slight increase in the Federation entity. The supreme audit institutions have INTOSAI-compliant methodologies and manuals. They should consider improving the quality of their audits in providing compliance assurance and increasing the number of performance audits. The supreme audit institutions need to apply comprehensive internal control assessments tailored to the audited areas, types of transactions and type of organisations.

The **impact of the audit work** of all supreme audit institutions is limited. Recommendations continue to focus mainly on formal compliance and do not address the causes of weaknesses or the likelihood of implementation. The rate of implementation of external audit recommendations remains unchanged at some 20%-40% across all levels of government, with some improvement in the *Republika Srpska* entity. The level of parliamentary scrutiny of audit reports remains weak across all levels of government. Supreme audit institutions

need to establish closer partnerships with the parliaments in making recommendations of audit institution-building for the government.

The quality of audit findings needs to be improved. The results should be better communicated in the audit reports and in the media, while showing the importance of the SAI's recommendations for a better functioning public administration. Some efforts were undertaken at the state level in the outreach activities of supreme audit institutions in the framework of the new 2022-2025 communications strategy. Both entities still need to adopt their own communication strategy.

Protection of the EU's financial interests

The legislation at all levels of government ensures some degree of EU **acquis alignment** as it covers many elements of the Directive on the fight against fraud to the EU's financial interests by means of criminal law. In the reporting period, no changes in this area have been made. The scope and definitions of the offences are not always in line with the Directive: for example in the case of the offence of corruption and misappropriation. Further alignment of the legislation is needed, including on the freezing and confiscation of criminal assets. Effective implementation and enforcement of the legislation also needs to be ensured.

Bosnia and Herzegovina should also set up an **anti-fraud coordination service** (AFCOS) to facilitate effective cooperation and exchange of information with the Commission, and adopt an anti-fraud strategy for protecting the EU's financial interests.

While there is no solid track record on **cooperation with the Commission** during investigations, the State Investigation and Protection Agency and the Ministry of Finance and Treasury provided adequate cooperation on an *ad hoc* basis in the reporting period. As EU funds are not managed indirectly by national authorities, Bosnia and Herzegovina does not report on irregularities to the Commission through the Irregularity Management System. Bosnia and Herzegovina should develop a track record of cooperation with the Commission on investigations.

Protection of the euro against counterfeiting

Bosnia and Herzegovina has not ratified the 1929 Geneva Convention for the suppression of counterfeiting currency. The level of EU *acquis* alignment for technical aspects needs to be determined. The Central Bank has a regulation in place that obliges commercial banks and other entities to withdraw all suspect banknotes and coins from circulation.

The Central Bank has continuously worked on improving professional knowledge and strengthening institutional capacities for analysing and processing monetary counterfeit data. The Central Bank also has the counterfeit registration system (CRS) application, through which all requests for the analysis of suspicious money, technical data on counterfeits, i.e. analysis results, and various statistical data related to counterfeit money are registered. However, no sanctions are imposed for failure to fulfil this obligation. There is no legal obligation for credit institutions and other payment service providers to ensure that euro banknotes and coins are checked for authenticity and that counterfeits are detected.

To enable all counterfeit banknotes and coins to be submitted for analysis to the Central Bank, in the future, the legal basis needs to be enforced and implemented. The Central Bank should sign an agreement obliging the signatory parties to exchange technical and other data on counterfeits that were the subject of their analysis with the European Commission and OLAF for counterfeit coins, as well as an agreement with the European Central Bank for banknotes.

3. GOOD NEIGHBOURLY RELATIONS AND REGIONAL COOPERATION

Good neighbourly relations and regional cooperation form an essential part of Bosnia and Herzegovina's European integration process. They contribute to stability, reconciliation and a climate conducive to addressing open bilateral issues and the legacies of the past.

Bosnia and Herzegovina maintained its involvement in a number of **regional cooperation initiatives** such as the Central European Free Trade Agreement (CEFTA), the Energy Community, the Transport Community, the South-East European Cooperation Process (SEECP) and the Regional Cooperation Council, of which it hosts the seat¹⁵. Bosnia and Herzegovina chaired the Adriatic and Ionian Initiative from June 2022 until May 2023.

The **EU-Western Balkans Summit** in December 2022 took place for the first time in the region, in Tirana. The summit focused on support for the region in the fields of energy and migration, and on youth cooperation, roaming, green lanes and overall progress on implementing the Economic and Investment Plan.

On the **Common Regional Market**, a political breakthrough was achieved at the Berlin Process Summit in Berlin in November 2022, where leaders adopted the three mobility agreements on higher education qualifications, on professional qualifications and on free movement with identity cards. Bosnia and Herzegovina needs to swiftly ratify the three regional mobility agreements. A number of important decisions agreed at the technical level within CEFTA remain blocked.

Bosnia and Herzegovina has continued to cooperate closely with Croatia, Montenegro and Serbia under the **Sarajevo Declaration Process**, which aims to find sustainable solutions for refugees and displaced persons as a result of the armed conflicts in ex-Yugoslavia during the 1990s. Under the regional housing programme, 2 790 housing units were built, purchased or reconstructed by the end of August 2023 in Bosnia and Herzegovina, able to accommodate around 8 200 persons. The completion of the programme is at risk due to significant delays in construction, particularly in the *Republika Srpska* entity. Bosnia and Herzegovina also needs to urgently secure the agreed amount of co-funding from the state budget (EUR 11.5 million). Significant challenges remain with regard to the economic and social integration and well-being of many families, which is required to ensure the sustainability of return.

The unresolved fate of **missing persons** who disappeared during the conflicts of the 1990s remains a key issue to be solved in the Western Balkans. Despite steady progress in identification (70 persons in 2021 and 127 in the first half of 2022), 7 590 persons are still missing as a result of the conflict. Further efforts are needed at the regional level through the missing persons group established in 2018 under the Berlin Process to strengthen cooperation.

Bosnia and Herzegovina generally maintains good **bilateral relations** with other enlargement countries and neighbouring EU Member States.

Relations with **Albania** are friendly and without open issues, with occasional bilateral visits. The two countries have yet to establish fully fledged embassies. Trade flows remain low.

¹⁵ Bosnia and Herzegovina also actively participates in initiatives such as the Brdo-Brijuni Process, the Central European Initiative, the Adriatic-Ionian Initiative, the EU Strategies for the Danube Region and for the Adriatic-Ionian Region, the Migration, Asylum, Refugees Regional Initiative (MARRI), the Regional School of Public Administration (ReSPA), the Regional Youth Cooperation Office in the Western Balkans (RYCO), the South East European Cooperation Process (SEECP) and the Western Balkans Fund.

There are no official relations with **Kosovo**^{*}, as Bosnia and Herzegovina does not recognise Kosovo's independence and the two maintain a strict visa regime. Bilateral meetings took place occasionally in the margins of regional and multilateral summits. An initiative to simplify the visa procedure for citizens of Kosovo is still pending.

Bilateral relations with **Montenegro** are good, with occasional high-level bilateral visits. The agreed border demarcation is yet to be physically marked. Three joint border crossing points remains to be set up.

Relations with **North Macedonia** are good, with occasional high-level bilateral visits. Several bilateral agreements are in place, including on cooperation on EU integration.

Relations with **Serbia** are good and stable overall, with regular high-level bilateral visits. Bosnia and Herzegovina re-initiated internal discussion on tackling outstanding issues, including on state borders. The two countries also need to reach an agreement on two dams on the Drina river and a part of the Belgrade-Bar railway which crosses into Bosnia and Herzegovina's territory. The Commission for Concessions still needs to decide on the construction of three hydroelectric power plants on the upper Drina by Serbia and the *Republika Srpska* entity. Bosnia and Herzegovina opened a consulate general in Novi Pazar in August 2022.

Türkiye is a strong international supporter of Bosnia and Herzegovina and exchanges at high level are frequent. The two countries reaffirmed their commitment to the construction of the Sarajevo-Belgrade highway, which Türkiye committed to finance. Bosnia and Herzegovina sent financial assistance and entities' rescue teams to the areas hit by the February 2023 earthquake.

Relations with **Georgia** are good and without open issues, with sporadic bilateral contact. The two countries enjoy the visa-free regime. Trade flows remain low.

Relation with the **Republic of Moldova** are good. The two countries have several bilateral agreements in place including on investment protection, double taxation and tax evasion. The visa-free regime is in force since 2016. While both countries are part of CEFTA, trade flows remain low. Official exchanges mainly take place at the margins of regional summits.

Bosnia and Herzegovina supports the territorial integrity and sovereignty of **Ukraine**, condemning Russia's war of aggression. Bilateral relations are generally good but have been affected by statements, by certain members of the Presidency, on Russia's role in Europe and significant hindrances, due to political contestation, in the implementation of restrictive measures against Russia. The two countries enjoy the visa-free regime. A number of agreements are in place, including on trade and on investment protection. Trade flows remain low.

Relations with **Croatia** are good overall, although affected by outstanding bilateral issues. Bilateral visits took place at high level. The two governments held a joint session in Zagreb in June 2023, discussing open issues and joint projects. Bosnia and Herzegovina opened a consulate general in Rijeka in August 2022. There are open issues concerning land and sea borders. Bosnia and Herzegovina relaunched procedures for concluding the 1999 border agreement, which has not been ratified by either side. Implementation of the 2001 succession agreement has been affected by issues on private property and acquired rights. Bosnia and Herzegovina adopted a strategy for legal protection of its interests in October 2022, and

^{*} This designation is without prejudice to positions on status and is line with UNSCR 1244/1999 and the ICJ Opinion on the Kosovo declaration of independence.

reaffirmed its support for an expert and legal team to dispute Croatia's plan to build a facility for radioactive waste at Trgovska Gora near the border.

4. ABILITY TO ASSUME THE OBLIGATIONS OF MEMBERSHIP

CLUSTER 2: INTERNAL MARKET

This cluster covers: the free movement of goods (Chapter 1); freedom of movement for workers (Chapter 2); right of establishment and freedom to provide services (Chapter 3); free movement of capital (Chapter 4); company law (Chapter 6); intellectual property law (Chapter 7); competition policy (Chapter 8); financial services (Chapter 9), and consumer and health protection (Chapter 28).

This cluster is key for Bosnia and Herzegovina's preparations for the requirements of the EU's internal market and is of high relevance for accelerated integration and growth, including the development of the Common Regional Market. Bosnia and Herzegovina has some level of preparation in the areas of free movement of workers, company law, competition and financial services, while it is moderately prepared in free movement of capital and intellectual property. It is at an early stage of preparation on free movement of goods, services and right of establishment as well as on consumer and health protection. Unfortunately, Bosnia and Herzegovina has made no progress in any of the internal market areas. There is no clear overview of the country level alignment and implementation of the SAA. Preparing to join the EU internal market means that there cannot be separate markets within one country.

Chapter 1: Free movement of goods

The free movement of goods ensures that many products can be traded freely across the EU based on common rules and procedures. Where products are governed by national rules, the principle of the free movement of goods prevents these creating unjustified barriers to trade.

Bosnia and Herzegovina is at an **early stage of preparation** in the area of free movement of goods. **No progress** was made in this area. Bosnia and Herzegovina still needs to take major steps to align its legislative framework with the EU *acquis*, in particular on technical requirements for products, accreditation, conformity assessment and market surveillance. Last year's recommendations were not addressed and remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- establish a list of technical regulations in force and start to repeal country-wide the domestic legislation that conflicts with EU legislation, including ex-Yugoslav standards that conflict with those aligned with European standards;
- adopt a country-wide strategy for the quality infrastructure;
- examine all existing legislation and administrative practices in the non-harmonised area to assess if they comply with Articles 34-36 of the Treaty on the Functioning of the European Union and start to plan how to address all non-compliant elements.

General principles

On the general principles, the legislative and institutional framework for the **production, distribution and marketing of industrial products** is still not in place. Bosnia and Herzegovina has not taken any steps to comply with commitments under the SAA or to repeal conflicting regulations at all levels of government. It does not have a coherent country-wide approach or a strategy or action plan for alignment with the EU *acquis* in this chapter.

In September 2023, the Constitutional Court annulled the RS Law on technical regulations due to lack of entity competence on the matter, which is already regulated by state-level law. Bosnia and Herzegovina should also improve access to and information on regulations and standards and conformity-relevant information for economic operators and the public on the obligations of this chapter.

Non-harmonised area

No steps were taken to ensure that legislation and administrative practices for the non-harmonised area are aligned with the obligations of **Articles 34-36** of the Treaty on the Functioning of the European Union. No specific body is established or empowered to fulfil the obligation of notifying technical regulations.

Harmonised area: quality infrastructure

While Bosnia and Herzegovina's legal bases and administrative structures to ensure technical regulations, standards, conformity assessment, accreditation, metrology and market surveillance are in place, they are not aligned with the EU *acquis* and remain uneven and fragmented. The relevant institutions exist at both state and entity levels, but coordination between them remains weak. There is still no country-wide strategy for the quality infrastructure, which is necessary for Bosnia and Herzegovina to have a coherent country-wide approach.

The Institute for **Standardisation** of Bosnia and Herzegovina is a full member of the European Telecommunications Standards Institute (ETSI) and an affiliate member of the European Committee for Standardisation (CEN) and the European Committee for Electrotechnical Standardisation (CENELEC). In 2022, the standardisation institute adopted 7 050 European standards as national standards. The percentage of adopted European standards is 93.60%. However, the standardisation institute remains understaffed and conflicting mandatory ex-Yugoslav standards have still not been withdrawn in a systematic manner across the country. There is still no country-wide register of the legislation in force.

The Institute for **Accreditation** of Bosnia and Herzegovina (BATA) is the single national accreditation body and full member of the European Cooperation for Accreditation (EA) and party to the International Laboratory Accreditation Cooperation Mutual Recognition Agreement (ILAC). The Institute remains understaffed. There are 178 conformity assessment bodies in Bosnia and Herzegovina, comprising 91 testing laboratories, 4 medical and 11 calibration laboratories, 6 product certification bodies and 66 inspection bodies. The Law on accreditation is still not aligned with the EU *acquis*. The designation of conformity assessment bodies and conformity assessment procedures are still not applied consistently throughout the country.

The Institute of **Metrology** of Bosnia and Herzegovina participates in EU technical committees, European development programmes and cooperation projects with EU metrology institutes. It became a member of International Measurement Confederation (IMEKO) in August 2022. Metrology institutes in Bosnia and Herzegovina need to cooperate and coordinate their activities when implementing the legislation. Legislation on Metrology is not applied evenly across the country undermining legal certainty and the single economic space including the adoption of a new Law on metrology in the *Republika Srpska* entity.

The **market surveillance** system is still largely based on mandatory standards and pre-market control. The legal base dates from 2009 and is not aligned with the EU *acquis*. In the reporting period, the Market Surveillance Agency, which remains understaffed, and the inspection bodies of the entities and the Brčko District carried out 221 checks as part of

proactive surveillance and 14 checks on reactive surveillance. As a result of 189 product models checked, 3 906 unsafe products were withdrawn from the market (of which 2 313 were destroyed), and 8 612 products were brought into compliance with safety requirements.

Harmonised area: sectoral legislation

On the EU ‘**new and global approach**’ **product *acquis***, no alignment has taken place over the past 11 years. Bosnia and Herzegovina adopted legislation designed to align with the EU *acquis* on low-voltage devices, machinery, electromagnetic compatibility, lifts, personal protection equipment, non-automatic weighing instruments and pressure equipment. However, all EU legislation apart from the EU product *acquis* on machinery were replaced between 2014 and 2019, so *de facto* the level of alignment is constantly going down. Furthermore, even legislation designed to align with the EU *acquis* is not applied across the country, as the legislative framework is fragmented and the *Republika Srpska* entity implements its legislation separately.

There is no country-wide approach to align with the EU ‘**old approach**’ **product *acquis*** or with **procedural measures**. No progress has been made since 2013 on aligning the legislation with the EU *acquis* on registration, evaluation, authorisation and restriction of chemicals (REACH), on classification, labelling and packaging (CLP), or on strengthening administrative capacity in this area. Bosnia and Herzegovina is not aligned with the EU *acquis* on motor vehicles, two or three wheeled vehicles, tractors (agricultural, forestry), or non-road mobile machinery emissions.

There were no activities noted on alignment at national level on drug precursors, firearms, crystal glass, textile labelling, mixtures and footwear. Bosnia and Herzegovina’s legislation remains to be further aligned with the EU *acquis* on the pricing of medical products. On **civil explosives**, Bosnia and Herzegovina still does not have a comprehensive legal framework for the transport of dangerous goods. Legislation on returning **cultural objects** unlawfully removed from the territory of an EU Member State is not aligned with the EU *acquis*.

As regards anti-corruption under this chapter there are no specific nor cross-cutting measures in place to monitor and analyse the transparency of public bodies when acting in the areas of market surveillance and conformity assessment.

Chapter 2: Freedom of movements for workers

Citizens of one Member State have the right to work in another Member State and must be given the same working and social conditions as other workers.

Bosnia and Herzegovina has **some level of preparation** in the field of free movement of workers. However, **no progress** was made in the reporting period, due to the fragmentation of the country’s system of coordinating social security schemes, limited administrative capacity and lack of formal cooperation among relevant authorities. Last year’s recommendations therefore remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- start developing a country-wide database on vacancies;
- continue negotiating and concluding new bilateral agreements on social security, notably with EU Member States.

Regarding access to the labour market, the legislation does not differentiate between EU workers and other third-country nationals. To work in Bosnia and Herzegovina, an EU citizen must obtain a work permit and meet certain conditions (with several exceptions) as provided

by the Law on foreigners. Employment in the public administration is reserved for Bosnia and Herzegovina citizens. In 2022, 3 780 work permits were issued to third-country nationals (in 2021, 955), of which 367 to EU citizens (in 2021, 418). The main sectors are civil construction, trade, art and recreation, real estate, manufacturing and services.

The laws on the employment of foreigners of the entities and of the Brčko District still need to be fully harmonised with the state-level Law on foreigners, especially when it comes to regulating the issuance/approval of a residence permit for the purpose of work.

Bosnia and Herzegovina still lacks a country-wide database of vacancies.

As regards the **coordination of social security systems**, Bosnia and Herzegovina has 10 bilateral agreements on social security in place, of which six are with EU Member States. Another 16 agreements (of which 12 with EU Member States) are implemented on the basis of succession from the former Yugoslavia. The country's system of coordinating social security schemes remains fragmented, with limited administrative capacity and lack of formal cooperation among relevant authorities covering all levels of government.

There has been no progress on the European Health Insurance Card (EHIC).

Chapter 3: Right of establishment and freedom to provide services

EU natural and legal persons have the right to establish themselves in any Member State and to provide cross-border services. For certain regulated professions, there are rules on mutual recognition of qualifications. EU rules on postal services focus on improving the quality of universal service, gradual market opening to competition, and the establishment of an independent regulator.

Bosnia and Herzegovina is at an **early stage of preparation** regarding the right of establishment and the freedom to provide services. **No progress** was made in this area and last year's recommendations remain valid. The existing legislation needs to be aligned with the EU Services Directive and does not provide for the mutual recognition of qualifications for regulated professions. A country-wide strategy for the development of postal services needs to be established to adopt a consistent regulatory framework that is aligned with the EU *acquis*.

In the coming year, Bosnia and Herzegovina should in particular:

- establish a monitoring mechanism to screen, check and align relevant legislation in force with the EU Services Directive and to identify and remove barriers to the right of establishment and freedom to provide services in the single economic space;
- adopt a country-wide law on postal services to further align the legislation with the EU *acquis*, including the Regulation on cross-border parcel delivery services, and open the postal market to competition;
- align with the EU *acquis* on mutual recognition of professional qualifications, including with the Directive on recognition of professional qualifications and with the Directive on a proportionality test before adoption of new regulation of professions.

The legislation on the **right of establishment and freedom to provide cross-border services** is not aligned with the EU *acquis*. In particular, no progress was made to develop a horizontal law that covers its principles, and no screening of sector-specific legislation took place to prepare it, due to diverging views on how to align with the Services Directive. A register of service-related legislation needs to be established to identify laws that need to be amended and to further align them with the EU Services Directive. Also lacking is a

comprehensive inventory of the administrative and technical steps needed for companies to register and/or operate country-wide. Compiling such an inventory would help abolish requirements that hamper the creation of a single economic space. No point of single contact was established. Legislative alignment in this area requires administrative capacity and strong coordination between administrative bodies at all levels of government.

The legal framework for **postal services** is partly aligned with the EU *acquis*. Further efforts are needed to prepare a state-level strategy with a timeline on the development of postal services and adopt a consistent country-wide regulatory framework aligned with the EU Postal Services Directive. The reserved area to the universal service provider is still to be abolished and the postal market needs to be gradually opened up to full competition in line with the Postal Services Directive. The institutional and the administrative capacity of the Agency for Postal Traffic needs strengthening to carry out its regulatory and monitoring functions in the postal market. There was no progress in aligning national legislation with the EU Regulation on cross-border parcel delivery services.

The legislation does not provide for the **mutual recognition of qualifications for regulated professions** as required by the EU *acquis*. The general roadmap for alignment with the EU *acquis* has not been implemented. Significant efforts are needed to establish an adequate institutional framework that includes e-government facilities and national contact points assisting citizens who request the recognition of their professional qualifications. Bosnia and Herzegovina needs to establish a list of regulated professions.

Chapter 4: Free movement of capital

In the EU, capital and investments must be able to move without restrictions, with common rules for cross-border payments. Banks and other economic operators apply certain rules to support the fight against money laundering and terrorist financing.

Bosnia and Herzegovina is **moderately prepared** in the area of free movement of capital. There was **no progress** in alignment with the EU *acquis* on the free movement of capital. Last year's recommendations were not addressed and remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- reduce the extensive administrative requirements for short-term capital transactions and amend the legislation to comply with SAA commitments on the acquisition of real estate by EU citizens;
- adopt urgently a new law on anti-money laundering and countering the financing of terrorism, including a country-wide, central register of beneficial ownership information for legal persons and private individuals and a register of beneficial ownership information for legal arrangements, in line with the EU *acquis*;
- adopt legislation to align with the Payment Services Directive 2, the Electronic Money Directive 2 and the SEPA Regulation.

As regards **capital movements and payments**, Bosnia and Herzegovina continues to apply full current account convertibility. Long-term capital transactions are mostly liberalised, but restrictions remain for short-term capital transactions, including financial credits and loans provided by residents to non-residents and residents' payments of life-insurance premiums to non-residents. Investment rules for institutional investors are subject to limitations on investment in foreign securities. In addition, residents may only open and hold a foreign exchange account abroad for a limited amount of time, in specific cases stipulated by law and only after obtaining the prior approval of the Ministry of Finance.

Entity laws on foreign investments still provide for a cap of 49% of foreign ownership for companies operating in media affairs and the military industry unless, in case of justified interest, the entity government issues a decision to exceed 49% of the founding capital.

The state-level law on foreign direct investments does not provide for equal treatment of foreign and domestic natural persons for the acquisition of real estate. The Stabilisation and Association Agreement (SAA) requires Bosnia and Herzegovina to adjust its legislation on the acquisition of real estate so that as of 2021 nationals of EU Member States should be treated in the same manner as nationals of Bosnia and Herzegovina. However, Bosnia and Herzegovina still lags this commitment, as the possibility for foreign natural persons, including nationals of EU Member States, to acquire real estate depends on the regime applied to citizens of Bosnia and Herzegovina by their countries of origin (reciprocity) or on bilateral agreements. Moreover, agricultural land cannot yet be owned by foreign natural or legal persons.

The Central Bank of Bosnia and Herzegovina (CBBH) has operated a modern **payment system** since introducing a new current account clearing system in 2019. Although since mid-2020 all banks in the country have the required technical specifications to handle Single Euro Payment Area (SEPA) payments, Bosnia and Herzegovina needs to adopt legislation to align with the EU *acquis* (Payment Services Directive 2, the Electronic Money Directive 2 and the SEPA Regulation) before being able to adhere to the SEPA schemes for communities of banks or financial institutions outside the European Economic Area.

Payment services need to be further liberalised and modernised to benefit existing and new players on the market. The system should be open to operators other than banks, including Electronic Money Institutions. No Electronic Money Institutions have been licensed so far in either entity.

Bosnia and Herzegovina needs to adopt a new law on **anti-money-laundering and countering the financing of terrorism (AML/CFT)** in line with international standards and further align with the EU *acquis* on anti-money laundering and countering the financing of terrorism. It should in particular address customer due diligence requirements, the reporting of suspicious transactions and the transparency of beneficial ownership. Bosnia and Herzegovina should continue to improve its AML/CFT framework, including by introducing a register of beneficial ownership information for legal persons and a register of beneficial ownership information for legal arrangements, in line with the EU *acquis*. The activities envisaged in the AML/CFT action plan need to be implemented without further delay. Moneyval's evaluators will visit Bosnia and Herzegovina in February 2024, assessing its AML/CFT framework, in order to complete the 5th Round Mutual Evaluation Report. The risk for Bosnia and Herzegovina of being listed by the Financial Action Task Force (FATF) remains, and in addition, no track record on investigations, prosecutions and final court rulings has been provided.

Bosnia and Herzegovina therefore needs to improve its track record of financial investigations, prosecutions and convictions for related offences; make more consistent use of legal rules on asset confiscation; and establish an asset recovery office. Preventive measures, supervisory action and penalties in case of breaches – especially in the non-financial sector – also still need to be implemented.

Chapter 6: Company law

The EU has common rules on the formation, registration and disclosure requirements of a company, with complementary rules for accounting and financial reporting and statutory audit.

Bosnia and Herzegovina has **some level of preparation** in the field of company law, corporate accounting, and audit. **No progress** was made in this area. Further efforts are needed to align with the EU *acquis* on company law, on accounting and on non-financial reporting. No harmonisation of company law requirements across the country has been carried out and the different regional business registers operate independently and without any communication or coordination between them. There is still no single country-wide authority for the oversight of statutory auditors. The Commission's recommendations from last year were not implemented and remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- finalise the review of the existing legislation in the area of company law to identify amendments needed to further align with the EU *acquis*;
- improve the connection and coordination of business registers among entities and the Brčko District;
- review the existing legislation in the area of accounting, transparency, and statutory audit to identify the legislative amendments necessary to align with the EU *acquis*.

On **company law and corporate governance**, Bosnia and Herzegovina is aligned to a limited extent with the EU *acquis*. The existing legislation needs to be reviewed to identify the amendments needed to harmonise company law at country level. The different independent business registers among entities and the Brčko District are not connected and have no established ways of coordination. Due to the lack of coordination, different requirements exist for setting up and manage a company between the entities. Companies have to register several times to be allowed to operate throughout the country which is not in line with the EU Company Law *acquis*. Further alignment is needed with the Directive on the use of digital tools and the Directive on cross-border operations (mergers, divisions, conversions) as well as with rules on shareholder rights, including the encouragement of long-term shareholder engagement (Shareholder Rights Directive) and gender equality on boards of directors.

The legislation on **company reporting** remains partially aligned with the EU *acquis*. Bosnia and Herzegovina will need to align its legal framework with the EU *acquis* on corporate reporting in terms of financial and non-financial information and on transparency requirements for listed companies. It also needs to align with the most recent EU *acquis* on corporate sustainability reporting. The state-level Accounting and Audit Commission of Bosnia and Herzegovina acts as an expert body responsible for accounting and auditing standards, accompanying instructions and practices. The respective laws in the entities and the Brčko District prescribe the use of international financial reporting standards (IFRS) for annual and consolidated accounts of all legal entities. In December 2022, the *Republika Srpska* entity amended its Law on accounting and auditing companies on additional financial reports and on the double-entry accounting. The Federation entity amended several rulebooks related to the FBiH Law on accounting and auditing. Bosnia and Herzegovina still needs to designate, in line with the EU *acquis* requirements, one single supervisory authority with country-wide competence responsible for the oversight of statutory auditors.

Chapter 7: Intellectual property law

The EU has harmonised rules for the legal protection of intellectual property rights (IPR), copyright and related rights. Rules for the legal protection of IPR cover, for instance, patents and trade marks, designs, biotechnological inventions and pharmaceuticals. Rules for the legal protection of copyright and related rights cover, for instance, books, films, software and

broadcasting.

Bosnia and Herzegovina is **moderately prepared** in the area of intellectual property law. **No progress** was made in this area. Significant efforts are required on legislative alignment and, in particular, on improving enforcement and coordination. An intellectual property strategy 2022-2026 has not yet been adopted. The recommendations from last year were not addressed and remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- adopt and implement the strategy on intellectual property 2022-2026 and implement the strategy on enforcement of intellectual property rights;
- further align the legal framework on copyright and related rights with the EU *acquis* and amend the Law on patents;
- take steps to increase the coordination and capacity of policymaking institutions to enforce intellectual, industrial, and commercial property rights.

The legal framework on **copyright and related rights** is moderately aligned with the EU *acquis*. The rules in the area of orphan works and collective management rights need to be revised to align with the EU *acquis*. No strategy on intellectual property is in place. Copyright works and related rights are deposited and registered in the Institute for Intellectual Property. Six organisations in the country are authorised for the collective management of copyright and related rights. The intellectual property strategy 2022-2026 has not yet been adopted.

On **industrial property rights**, the legislative framework is partially aligned with the EU *acquis*. Further alignment is needed in most areas, in particular on patents, trademarks and trade secrets, but also on topographies of semiconductor products and on industrial designs. Bosnia and Herzegovina has acceded to the relevant multilateral conventions, as required by the SAA, except for the European Patent Convention, for which it still needs to adopt relevant amendments to the Law on patents.

Regarding **enforcement**, in the reporting period, the Indirect Taxation Authority received 79 requests for customs measures based on protected trademarks, designs and one due to the violation against the indication of geographical origin. It issued 82 decisions on temporary retention and seizure of goods (compared with 113 requests and 114 decisions in the previous reporting period). The State Investigation and Protection Agency investigated 40 cases, of which 13 were closed.

The administrative and judicial capacity of enforcement institutions on intellectual property rights is insufficient and their coordination needs to improve. The coordination body has been established in 2021 and is composed of representatives of enforcement institutions from all levels of government. The body held two sessions since its creation and remains understaffed. Bosnia and Herzegovina's existing strategy on IPR enforcement remains to be implemented. Nor is there a reliable system for collecting, analysing and exchanging data between enforcement institutions. Steps need to be taken to raise the awareness of businesses and consumers on IPR in general as well as on the prevention of counterfeiting and piracy. Prosecutors, judges, and court panels following infringement cases are not sufficiently trained on intellectual property rights to handle cases efficiently and consistently.

Chapter 8: Competition policy

EU rules protect free competition. They include antitrust rules against restrictive agreements between companies and abuse of dominant position, and also include rules on concentrations

between companies which would significantly impede effective competition. EU rules also set out a system of State aid control. Governments are only allowed to grant State aid if restrictive conditions are met, with a view to preventing distortion of competition.

Bosnia and Herzegovina has **some level of preparation** in the area of competition policy. There was **no progress** in this area. Bosnia and Herzegovina took no steps to remove all ethnic-based decision-making procedures and vetoes from the Competition Council and State Aid Council, in line with the Commission Opinion's key priorities. Bosnia and Herzegovina should further align its implementing legislation on State aid with the EU *acquis*. Recommendations from last year were not addressed and remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- amend the Law on competition and the Law on State aid to revise the voting procedures in line with the Commission's Opinion;
- improve the enforcement record of the State Aid Council by ensuring that State aid measures are notified *ex-ante* by granting authorities;
- in line with SAA provisions, ensure that the State Aid Council operates independently and that the existing aid schemes introduced before the State Aid Council's establishment are aligned with the EU *acquis*.

Antitrust and mergers

The **legislative framework** on antitrust and mergers is broadly aligned with the EU *acquis*. The Law on competition of Bosnia and Herzegovina largely mirrors the rules in the EU treaties on restrictive agreements and abuse of dominant position. It still needs to be brought into line with the most recent EU *acquis*, including implementing legislation.

As for the **institutional framework**, the functioning of the Competition Council is still significantly impeded by tight procedural deadlines and ethnic-based decision-making procedures, which require decisions to be supported by at least one representative of each constituent people to have legal effect. The Law on competition needs to be amended, notably to revise such voting procedures in line with the Commission's Opinion.

Regarding **enforcement capacity**, the Competition Council is composed of six members assisted by 20 staff. The staff's level of expertise needs to be further developed and supported through relevant training.

On **implementation**, in 2022 the Competition Council took 35 decisions, including 2 on prohibited agreements, 3 on abuse of dominant position and 12 on concentrations. It issued 18 expert opinions, and 3 fines were imposed for about EUR 155 000. The Competition Council should strengthen the enforcement of competition rules, as the impact of competition enforcement is limited and fines are negligible. No dawn raids were carried out in the reporting period. The leniency programme for companies providing information on cartel cases has never been used. The Competition Council should conduct more on-site inspections and raise awareness about its leniency programme and mergers, by imposing remedies where necessary. The judiciary's capacity to handle complex competition cases is improving and needs to be further strengthened. In advocacy, the Competition Council should conduct market studies so as to gain a better understanding of competition in key sectors, detect sources of competition problems and identify solutions. To tackle unfair competition in the market, the Competition Council needs to increase cooperation with other regulatory bodies, such as the Public Procurement Agency and the Procurement Review Body.

State aid

The **legislative framework** on State aid, including the Law on the State aid system, is partially aligned with the EU *acquis* and with SAA provisions. The implementing legislation is not developed evenly across the country and needs to be aligned with the EU *acquis*, including on *de minimis* aid and on services of general economic interest. A regional aid map has not yet been drawn up and the existing aid schemes have not been aligned with the EU *acquis* on State aid as per SAA rules and deadlines.

As for the **institutional framework**, the State Aid Council responsible for the consistent implementation of the State aid law is composed of eight members appointed by the Council of Ministers and the governments of the entities and Brčko District. As in the case of the Competition Council, the functioning of the State Aid Council is significantly impeded by ethnic-based decision-making procedures, which require decisions to be supported by at least one representative of each constituent people to have legal effect. The Law on State aid needs to be amended, notably to revise the voting procedure in line with the Commission's Opinion. The mandate of the members of the State Aid Council from the *Republika Srpska* entity expired in 2020, while that of the Federation entity and the state level ended in 2021. The appointments of the new members by the relevant authorities are still pending.

The **enforcement capacity** of the State Aid Council is insufficient. With only six staff members, its secretariat is not able to fulfil its tasks. Furthermore, its capacity needs to be developed through relevant training.

On **implementation**, the State Aid Council issued six decisions during the reporting period. Most State aid measures are put in place by granting authorities without notification or prior approval by the State Aid Council. Bosnia and Herzegovina needs to ensure the transparency of all State aid measures. The State Aid Council should continue monitoring the implementation of State aid rules in large projects carried out in cooperation with third countries.

Liberalisation

Concerning **liberalisation**, the Law on competition and the Law on State aid apply to public undertakings and undertakings with special or exclusive rights. Bosnia and Herzegovina needs to demonstrate that these rules are being enforced. The rules on financing services of general economic interest are not fully aligned with the EU *acquis*.

Chapter 9: Financial services

EU rules aim to ensure fair competition among, and the stability of, financial institutions, namely banking, insurance, supplementary pensions, investment services and securities markets. They include rules on authorisation, operation and supervision of these institutions.

Bosnia and Herzegovina is **in between some and moderate level of preparation** in the area of financial services. There was **no progress** in implementing last year's recommendations. Further steps are needed to significantly improve coordination in supervision and enforcement within the sector. The overall level of preparedness in the securities market remains low.

Last year's recommendations remain largely valid. In the coming year, Bosnia and Herzegovina should in particular:

- improve cooperation in the area of financial stability among all stakeholders through a Memorandum of Understanding;
- strengthen the bank resolution framework by amending the entities' banking laws and the law on deposit insurance to enable the creation of a financial stability fund;

→ demonstrate improvements in the coordination between corrective and enforcement powers of supervisory bodies, including banking agencies.

As regards **banks and financial conglomerates**, the banking sector appears sufficiently capitalised and liquid. The overall capital adequacy ratio was 19.6% at the end of 2022, well above the regulatory minimum of 12%. However, the fragmented market remains a drag on the moderate profitability of the banking sector. Strategies on implementing Basel III are in place.

In September 2022 and April 2023, banking agencies adopted decisions on temporary measures to reduce the risk of increasing interest rates and to limit banks' exposures. The aim of these temporary measures was to introduce additional rules for expected credit losses and offset the consequences of a potentially significant increase in the amount of debt repayment. Financial stability will have to be closely monitored, including through more frequent meetings of the Standing Committee for Financial Stability, which brings together the Central Bank, the ministries of finance at State and entity level, the entity banking agencies and the Deposit Insurance Agency.

The fragmentation of the institutional and regulatory set-up continues to impede effective banking supervision. The Standing Committee for Financial Stability did not meet during the reporting period, raising concerns about the coordination and regularity of financial stability monitoring. To ensure financial stability, Bosnia and Herzegovina needs to improve cooperation among the banking agencies, the Central Bank, the Deposit Insurance Agency and relevant ministries (a memorandum of understanding to this end has yet to be signed), and to adopt a common methodology to determine systematically important banks.

The deposit insurance scheme is operational, but the amount of insured deposits (increased to EUR 35 800 in November 2022) still remains below the requirements of the EU *acquis*. While the implementation of the Law on deposit insurance strengthens depositors' confidence and should prevent bank runs, the bank resolution framework should be established to enable the creation of a single financial stability fund that could enable bank resolution and provide sufficient liquidity. This is a major shortcoming as, without such a fund, the financial sector safety net remains inadequately prepared to deal with a potential bank failure which, unlike the case of the Sberbank subsidiaries in March 2022, might not be quickly resolved through change of ownership.

The implementation of the methodology for the supervisory review and evaluation process (SREP) continued and enabled risks and corrective measures to be identified for individual banks. To be complete, the legal framework must notably strengthen supervisors' corrective and enforcement powers and introduce consolidated supervision of banking groups across the entities.

The ratio of non-performing loans declined to 4.7% of the outstanding loan portfolio at the end of 2022. Nevertheless, institutional and legal obstacles to swift and effective resolution need to be reduced.

Regarding **insurance and occupational pensions**, no progress was made in the alignment and harmonisation of the entities' legislation on compulsory vehicle insurance to ensure a country-wide harmonised approach to the liberalisation of the insurance market in Bosnia and Herzegovina.

Some preparatory steps were made at entity level for the transition to a Solvency II-based regulatory framework. The Insurance Agency of Bosnia and Herzegovina has to finalise a conformity analysis of the entity laws with the Solvency II Directive. The Federation entity

postponed application of International Financial Reporting Standard 17 (IFRS 17) to January 2026 due to the low level of readiness of insurance companies, for which a working group has been established to prepare for implementation. No progress was made on voluntary pensions.

Alignment with the *acquis* governing financial supervision of institutions for occupational retirement provision has yet to be addressed.

No progress was made in terms of **financial market infrastructure**. The legislation is not in line with the EU *acquis*.

The regulatory framework for **securities markets and investment services** is under the entities' competence. Both entities have a securities market regulator (the Securities Commissions) and a dedicated, though not harmonised, legal framework on the securities market and investment funds.

With regard to the **investment funds sector**, some progress was made on alignment with the Directive 2011/61/EU on Alternative Investment Fund Managers and Directive 2009/65/EC for collective investment in transferable securities (UCITS). The Ministry of Finance adopted a proposal for a Law on amendments to the Law on investment funds. Coordination between the entities needs to be improved to ensure consistent alignment with key areas of the EU securities market *acquis*, such as market manipulation and market abuse rules. The entity-level Securities Commissions is fully operational and holds monthly sessions.

On **digital finance**, the presence of fintech start-ups is marginal compared to traditional banks, which are perceived as the main financial institutions for utilising digital financial technologies. Approximately 80% of executed payments are carried out in cash, due to a lack of consumer trust in online payments, high credit-card fees and inadequate legislation to enable payment service providers to enter the market. The banking sector in Bosnia and Herzegovina is dominated by foreign capital and allows transfer of knowledge and solutions. However, without a legal and regulatory framework for digital identity, banks can only offer hybrid solutions, i.e. using digital solutions and technology to the level permitted by this framework. The majority of banks in Bosnia and Herzegovina have already digitalised some processes and introduced principles of sustainability in their day-to-day operations and credit analysis, but further development is subject to comprehensive reform.

On **sustainable finance**, the management and monitoring of climate-related and environmental risks in the banking sector were included in the Strategic Priorities for 2023-2025. This envisages a series of concrete measures to be implemented in the area of risk assessment, supervision and international cooperation, as well as the establishment of rules for managing to climate-related and environmental risks. Bosnia and Herzegovina should ensure these Strategic Priorities are fully implemented and make further progress on the integration of sustainable considerations in its regulatory financial framework.

Chapter 28: Consumer and health protection

EU rules protect consumers' economic interests and in relation to product safety, dangerous imitations and liability for defective products. The EU also ensures high common standards for tobacco control, blood, tissues, cells and organs, and medicines for human and veterinary use. The EU also has rules for upholding patients' rights in cross-border healthcare and in preparing for and responding to cross-border health threats, including communicable diseases.

Bosnia and Herzegovina is at an early stage of preparation in the field of consumer protection and public health. No progress was made in the area - none of last year's
--

recommendations were implemented, so they remain valid. The legislation on serious cross-border health threats, including communicable diseases, is not yet aligned with the EU *acquis* at all levels of government.

In the coming year, Bosnia and Herzegovina should in particular:

- adopt legislation at all levels banning smoking in public places in line with the EU *acquis*, ratify the protocol to eliminate illicit trade in tobacco, and start to enforce both measures;
- further align its legislation with the *acquis* on substances of human origin and on medicines for human use, and establish an oversight system in this field with a view to ensuring efficient coordination in the whole country;
- further align the state-level law on consumer protection and product safety with the EU *acquis*.

Consumer protection

On **horizontal aspects**, the state-level law on **consumer protection** was adopted in 2006 and is now very outdated. It needs urgent alignment with the latest EU *acquis* to address rapidly changing digital markets and to address the risk of unequal protection of consumers in the entities. The legal framework for consumer credit and distance marketing of financial services is also not aligned with the EU *acquis*. The Ombudsperson's office for consumer protection failed to provide data on decisions issued in 2022.

The legal framework for **product safety** is still not aligned with the EU *acquis*. Over the reporting period, the Market Surveillance Agency and the inspection bodies of the entities and the Brčko District conducted 221 checks as part of proactive surveillance, and 14 checks on reactive surveillance. As a result of 189 product models checked, 3 906 unsafe products were withdrawn from the market (of which 2 313 were destroyed), and businesses brought 8 612 products into compliance with safety requirements.

Public health

On **horizontal aspects**, no progress was made in drafting a health strategy at the state level or in the Brčko District. There is no state-level health information strategy and no progress was made on **e-health** or on an integrated health information system.

On **tobacco control** policies, legislation at the level of the entities and the Brčko District is not aligned with the relevant EU *acquis*. The Federation entity Law on tobacco control entered into force in May 2023. It regulates the use, advertising, flavouring and packaging of tobacco and other smoking products. However, the law includes extensive exceptions and is likely to have a limited impact, including on indoor smoking in public and commercial areas. Although Bosnia and Herzegovina is a party to the WHO Framework Convention on tobacco control, it does not fully implement it due to the lack of systematic monitoring, and it has still not ratified the protocol to eliminate illicit trade in tobacco products.

The legal framework on **blood, tissues, cells and organs** at the level of the entities and the Brčko District is not aligned with the EU *acquis*. The legal framework on biomedically assisted fertilisation remains fragmented, so it cannot be evaluated as aligned with the EU *acquis* across the country. Bosnia and Herzegovina does not have the necessary administrative capacity to fulfil the requirements laid down in the *acquis* on human organ, tissue and cell transplantation. The entities have established institutes for transfusion medicine, whose transplantation programmes are organised at entity level with very limited cooperation between them. No progress has been made in setting up a state-level oversight system to ensure efficient coordination throughout the country.

Legislation on **serious cross-border health threats, including communicable diseases**, has not yet been aligned with the EU *acquis* at all levels of government. Bosnia and Herzegovina needs to strengthen coordination between the entities and the state level on communicable disease surveillance and response. Bosnia and Herzegovina's participation in the technical activities of the European Centre for Disease Control and Prevention (ECDC) remains limited and it has not yet taken part in the ECDC assessment on the status of communicable diseases.

Measures to promote healthy lifestyles in connection with the prevention of **non-communicable diseases** are regulated and partially implemented by the competent institutions of the entities and the Brčko District. On **cancer screening**, Bosnia and Herzegovina still has no country-wide cancer control plan or country-wide early detection programme, and the Federation entity has no systematic cancer registers or screening programmes for the treatment of cancer, due to legislative issues and limited financial capacity. Both entities have cancer registers. The *Republika Srpska* entity has an early detection programme in place. The Brčko District has no register or early detection programmes.

Bosnia and Herzegovina has 74 community-based **mental health** centres with multidisciplinary teams and some of them have additional specialists. A special forensic psychiatric hospital provides treatment to forensic patients from across the country. On preventive measures, activities to reduce **alcoholism** and for the prevention of alcohol-induced disorders were carried out with the participation of NGOs. **Drug abuse** prevention and harm-reduction preventive measures are not implemented systematically, though some are implemented through education and NGO activities. There is no systematic approach to rehabilitation and social reintegration, and such programmes have been introduced unequally in different parts of the country.

In September 2022 the *Republika Srpska* entity expanded the scope of health insurance and increases its coverage by introducing the right to health protection and right to salary compensation due to health incapacity.

On **health inequalities**, accessibility to healthcare for all citizens is still a key challenge despite legislation stipulating that equal access to health should be in place. One of Bosnia and Herzegovina's key reform priorities is to provide good quality accessible public healthcare for all, including marginalised groups. Access to healthcare services for Roma is only possible if they are registered at the employment or education administrations, which means that many Roma do not have health insurance. Obstacles to the mobility of patients between different entities or cantons persist and illustrate the complexity and inefficiency of the system; this must be improved and harmonised with the EU *acquis*. Women and girls face problems with healthcare due to lack of health insurance and poorly organised services related to sexual and reproductive health, among other things. This especially affects women from marginalised groups (including Roma women, women from rural areas, women with disabilities), through a disproportionate lack of access to healthcare. Women and girls were disproportionately affected by the COVID-19 pandemic, most particularly by being on the frontlines of the pandemic and owing to the loss of jobs in care, hospitality and service. Bosnia and Herzegovina still needs to take concrete steps to include a gender perspective in the planning and implementation of relief and recovery measures in case of a healthcare crisis. Bosnia and Herzegovina needs to improve conditions in hospitals and maternity hospitals and ban obstetric violence, in line with its obligations under the Istanbul Convention. While there has been improvement in addressing gender-based violence, Bosnia and Herzegovina still needs to make significant investments in developing its multi-sectoral response mechanisms, including in healthcare institutions, for victims of gender-based

violence, including sexual violence. Bosnia and Herzegovina needs to continue aligning healthcare, maternity, paternity and parental leave benefits and ensure that women, including women from marginalised groups, have equal access to health insurance and services. (See also Chapter 19)

For **medicinal products for human use** and **medical devices** the state-level Agency for Medicines and Medical Devices (ALMBiH) is the regulatory body in charge of securing the functional, coordinated and uniform system for regulation of such products, supervising a single market for them, and ensuring their availability on the entire territory of the country. The *Republika Srpska* entity Law on pharmaceuticals and medical devices, which provides for the establishment of an entity-level agency with the same responsibilities as ALMBiH, was repealed by the Constitutional Court in December 2022.

CLUSTER 3: COMPETITIVENESS AND INCLUSIVE GROWTH

This cluster covers: Digital transformation and media (Chapter 10); Taxation (Chapter 16); Economic and monetary policy (Chapter 17); Social policy and employment (Chapter 19); Industrial policy (Chapter 20); Science and research (Chapter 25); Education and culture (Chapter 26); and Customs union (Chapter 29).

Bosnia and Herzegovina has some level of preparation in the areas of taxation, social policy and employment, science and research and customs. It is at an early stage of preparation on digital transformation and media, economic and monetary policy, industrial policy, and education and culture. Unfortunately, Bosnia and Herzegovina has made limited or no progress in any of these areas.

Chapter 10: Digital transformation and media

The EU supports the smooth functioning of the internal market for electronic communications, electronic commerce and audiovisual services. The rules protect consumers and support the universal availability of modern services.

Bosnia and Herzegovina is at an **early stage of preparations** in the area of digital transformation and media. **No progress** was achieved in implementing last year's recommendations, which remain valid. The legislation and strategic framework are not in place and not aligned with the EU *acquis*. The country still needs to introduce the European emergency number 112. The regional roaming agreement, enabling 'roam like at home' (RLAH), was successfully implemented. Negotiations on association to the Digital Europe Programme should be finalised by the end of 2023. Last year's recommendations remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- complete phase two of the digital switchover and adopt a framework strategy for access to the broadband network;
- develop and adopt a law on electronic identity and trust services for electronic transactions with a single supervisory body for the whole country in line with the EU *acquis*; develop a legislative framework on cybersecurity in line with the EU *acquis*;
- develop and adopt a law on electronic communications and electronic media in line with the EU *acquis*.

Regarding **electronic communications and information and communication technology**, Bosnia and Herzegovina has still made no progress in adopting the legislation related to electronic communications and electronic media in line with the 2018 EU regulatory

framework, nor has it made progress in aligning with the EU Broadband Cost Reduction Directive. Bosnia and Herzegovina has not developed a broadband strategy, even though it introduced the 4G network in 2019. The Communications Regulatory Agency still lacks financial independence and no efforts were made to improve the procedure for appointing its management to ensure full political independence. The mandate of its Board expired at the end of 2017 and the Parliament has still not appointed a new board.

In 2022, there were 61 internet providers, 875 598 broadband subscribers and 3 705 589 internet users (110.9% penetration rate, counting both households and business connections), with a penetration rate of 24.8% for broadband internet.

Regarding **information society services**, Bosnia and Herzegovina made no progress in adopting a country-wide strategy and action plan for development of the information society. No progress was made in the adoption of the law on electronic identity and trust services for electronic transactions with a single supervisory body for the whole country in line with the EU *acquis*. Nor has progress been made in ensuring the interoperability of the electronic signature system aligned with the EU *acquis* throughout the country. A functional and interoperable electronic signature system would facilitate secure electronic communication and digital transactions, allowing various sectors (public administration, taxation, customs, banking, judiciary) to operate in a more efficient and effective manner, improving business environment and enabling swift access of citizens to public services. One company and two state-level institutions now offer e-signature services. Bosnia and Herzegovina has no national open data policy in place. Alignment with the Digital Services Act and Digital Markets Act needs to be stepped up, to provide predictability for the business community. Bosnia and Herzegovina should also align with the European Interoperability Framework and the Interoperable Europe Act.

Concerning **cybersecurity**, Bosnia and Herzegovina does not have a comprehensive legislative framework on the security of networks and information systems (a law on information security is in place only in the *Republika Srpska* entity), and made no progress in adopting a country-wide strategy. Moreover, the country made no progress in designating a country-wide single point of contact responsible for coordination and cross-border cooperation. Bosnia and Herzegovina needs to establish a network of computer security incident response teams (CSIRT) to facilitate strategic cooperation and the exchange of information; a CSIRT is operational only at the Ministry of Defence and in the *Republika Srpska* entity.

As regards **audiovisual policy**, Bosnia and Herzegovina made no progress in developing and adopting a law on electronic communications and electronic media in compliance with the EU *acquis* and to harmonise entity legislation with the state-level law on the public broadcasting system. No progress has been made in adopting legislation on media ownership transparency, including a register of ownership structures, or in adopting legislation on advertising in the media. The Communications Regulatory Agency adopted by-laws to align national rules with the EU *acquis*. The government also committed to strengthen the independence of the media regulatory authority. Bosnia and Herzegovina has thus met the requirements for continuing their participation in the MEDIA and cross-sectoral strands of the Creative Europe programme. Bosnia and Herzegovina took limited steps in the preparation of the second phase of the digital switchover, with public broadcasting services acquiring equipment needed to switch to digital terrestrial broadcasting. Bosnia and Herzegovina has failed to introduce a suitable model to collect broadcasting fees that would ensure the public broadcasting system's financial sustainability and political independence. The Public Services Broadcasting Corporation, as prescribed by the respective law, is still not

established. The financing of local public broadcasters from the public budget also needs to be brought in line with the EU *acquis*, as it constitutes State aid and provides opportunities for political pressure and influence. (See also Chapter 23 – Freedom of expression)

Chapter 16: Taxation

EU rules on taxation cover value-added tax, excise duties and aspects of corporate taxation. They also cover cooperation between tax administrations, including the exchange of information to prevent tax evasion.

Bosnia and Herzegovina has **some level of preparation** in the area of taxation. **No progress** was made in implementing the recommendations from last year which therefore remain valid. Country-wide harmonisation remains insufficient, hindering progress towards a single economic space.

In the coming year, Bosnia and Herzegovina should in particular:

- bring the legislation on VAT and on excise duties in line with the EU *acquis*, notably on excise duties on beer;
- make progress on the electronic signature (e-signature) in order to ensure its interoperability and a harmonised country-wide system.

The legislative framework for **indirect taxation** is partially aligned with the EU *acquis*. The country needs to further align VAT legislation with the EU *acquis* and improve cooperation between the Indirect Taxation Authority and the tax administrations of the entities and Brčko District, including through joint audits. Its ability to fulfil its vital country-wide role must be maintained.

As regards excise duties on tobacco, alcohol and energy, there are considerable discrepancies with the *acquis* on the scope and classification of excisable goods as well as exemptions, structures and minimum rates. The country needs to align its Law on excise tax fully with the EU *acquis*.

On **direct taxation**, the tax and social contribution regimes in the two entities have continued to diverge, hindering progress towards a single economic space. There was no progress in the field of direct taxation in the Federation entity, as new legislation on income tax and social contributions to reduce the tax burden on labour and increase take-home pay has yet to be adopted.

On **administrative cooperation and mutual assistance**, Bosnia and Herzegovina has ratified the OECD/Council of Europe Convention on Mutual Administrative Assistance in Tax Matters. The country has not yet committed to automatically exchanging financial account information based on the OECD single global standard. Bosnia and Herzegovina has signed and implemented 38 double taxation agreements, of which 19 with EU Member States.

Concerning **operational capacity and computerisation**, there needs to be further improvement of coordination, cooperation and data exchange among Bosnia and Herzegovina's different tax administrations, including the country-wide harmonisation and interoperability of the e-signature. The administrative capacity and staffing levels of the Indirect Taxation Agency should be substantially strengthened, especially in key operational posts.

Chapter 17: Economic and monetary policy

EU rules require the independence of central banks and prohibit them from directly financing the public sector. Member States coordinate their economic policies and are subject to fiscal, economic and financial surveillance.

Bosnia and Herzegovina is at an **early stage** of preparation on economic and monetary policy and there was **no progress**, in particular in terms of the cooperation and coordination of macroeconomic and fiscal policies, as evidenced by the difficulties in the preparation and execution of the Economic Reform Programme (ERP) and the failure to appoint a new governing board of the Central Bank. Monetary policy underpins economic stability, but the full independence of the Central Bank has yet to be ensured.

The 2022 Commission's last year's recommendations were not met and therefore remain valid. In the coming year, Bosnia and Herzegovina should in particular:

- maintain the integrity of the currency board arrangement and the independence of the Central Bank, and appoint the members of its governing board without any further delay;
- enhance cooperation and coordination on socio-economic reforms among the different levels of the government and strengthen the analytical capacity of governmental institutions, in particular of the state-level Ministry of Finance and Treasury;
- ensure consistent political support for and high visibility, country-wide ownership and coherence of the Economic Reform Programme, including its medium-term macro-fiscal framework; enhance administrative capacity to design, implement and monitor economic reforms.

As regards **monetary policy**, the exchange rate regime continues to be characterised by a currency board arrangement, which links the convertible mark (BAM) to the euro as the anchor currency. This provides stability within the country's complex institutional environment. The Central Bank's objective of keeping the domestic currency stable remains in contrast with the primary objective of monetary policy in the EU, which is price stability.

The Law on the Central Bank does not ensure the Bank's unconditional independence and is not fully aligned with the EU *acquis* as regards the prohibition of monetary financing. The Central Bank is required to report to the Parliamentary Assembly on its audited annual financial statements and to the Presidency on the preliminary financial reports.

The mandate of the Central Bank's governing board expired in August 2021 and the Presidency has still not appointed a new one. The outgoing governing board remains in office *ad interim*, to ensure the core tasks and functions of the Central Bank. The circumstances of the appointments in 2020 of now-acting members of the board (following a change in the composition of the Presidency) and previous dismissals, as well as the failure to appoint a new board after the expiry of the previous mandate, raise concerns about the vulnerability of the Central Bank to political interference. Proposals for the use of Central Bank reserves for fiscal purposes resurfaced occasionally, although such measures would undermine the currency board arrangement. Therefore, preserving the integrity of the currency board arrangement and the independence of the Central Bank remains crucial.

The Central Bank has improved its operational risk management and became a member of the International Operational Risk Working Group (IORWG). In July and December 2022, the Central Bank amended the reserve remuneration rates in order to harmonise with the ECB reference rate, but also to partly cushion the impact of the increasing ECB reference rate on banking sector operations.

Banking supervision powers lie with the two entities' banking agencies, but remain impeded by fragmented competences and insufficient coordination, cooperation and information sharing.

Concerning the **budgetary framework**, some work has been going on in order to improve the reporting in the context of the EU's excessive deficit procedure. Fiscal rules remain at entity level and there is still no independent fiscal institution to monitor and enforce compliance with country-wide fiscal rules. The medium-term budgetary framework remains insufficiently developed and underused as a policy-guiding instrument, as its adoption is often severely delayed by political disagreements. The alignment of the underlying statistical framework with the requirements and definitions of the European System of National and Regional Accounts (ESA 2010) remains limited. The still outstanding agreement on the sectorisation of public accounts as well as the country's fragmented institutional set-up and limited cooperation between the different authorities and bodies involved are important impediments in this respect. The Central Bank and the Directorate for Economic Planning (DEP), which is an independent state-level institution, are producing regular macroeconomic forecasts. However, their quality is strongly impeded by the poor quality and late submission of country-wide statistics. While the Central Bank's methodological underpinning of its forecast is publicly available, this is not the case with the forecast method of the DEP. The Medium-Term Budgetary Framework forms the base of the country's annual budgets, although with a strong entity-level emphasis. The adoption of this framework is often impeded by the country's frequent political stalemates. The underlying assumptions are not very transparent and the description of medium-term policies and their fiscal implications is very limited and usually only focussed on entity level. The country does not have a fiscal council, as required by the EU *acquis*.

Regarding **economic policy**, the overall quality of Bosnia and Herzegovina's medium-term economic reform programme (ERP) did not improve this year and was again submitted with a two-month delay. The Council of Ministers was late in adopting the activity plan formally empowering the Directorate for Economic Planning to effectively coordinate the preparation of the programme. All of this points to long-standing and significant weaknesses in administrative cooperation and policy formulation. The policy guidance jointly agreed at the July 2022 Economic and Financial Dialogue between the EU and the Western Balkans and Türkiye was implemented only to a limited extent. The capacity to design, implement and monitor structural reforms remains very limited. A country-wide medium-term reform programme that is coherent, consistent and based on a jointly agreed prioritisation has not been established yet. In addition, the coordination role of the Directorate for Economic Planning remains weak and lacks sufficient resources and competences.

Chapter 19: Social policy and employment

EU rules in the social field include minimum standards for labour law, equality, health and safety at work and non-discrimination. They also promote social inclusion and social protection, and social dialogue at EU level.

Bosnia and Herzegovina has **some level of preparation** in the field of social policy and employment. There was **limited progress** in the area. Serious challenges remain to be addressed as regards employment, social inclusion and protection, and poverty reduction, especially related to coordination among the responsible institutions across the country. Limited progress was made on the recommendation related to development of the Youth Guarantee implementation plan. The Commission's recommendations from last year were only partially implemented and therefore remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- develop and adopt entity-level and country-wide employment strategies as a policy framework, while providing for additional capacity for implementation and monitoring;
- finalise and adopt the Youth Guarantee implementation plan in line with the EU model and guidance;
- introduce a uniform minimum level of maternity leave benefits and protection throughout the country, starting by harmonising the definitions of maternity, paternity and parental leave.

The **labour laws**, in place at the level of the entities and Brčko District, apply to all employees except civil servants, and guarantee a minimum level of protection of employee rights. In order to fully meet EU standards, the legal framework would need to be further improved, notably as concerns the protection of workers from discrimination.

In January 2023, the new Brčko District Law on employment and rights during unemployment entered into force, replacing an earlier law. The new law increases unemployment benefits, extends the duration of the right to unemployment benefit, regulates public works and establishes the obligation to develop a Brčko District employment strategy.

The right to strike is regulated by the entity-level labour laws and by the laws on striking that are in place at all levels of the government. Implementation of the labour laws remains inadequate, especially when it comes to social dialogue, protection of workers and the enforcement of labour inspections. Shortcomings in labour laws as concerns crisis management, were made clear during the COVID-19 pandemic. For instance, the labour legislation generally lacks provisions regarding remote work and organisation of work during emergency situations.

Laws on **health and safety at work** are in place in the entities and the Brčko District. Following the adoption of new occupational safety and health law in the Federation entity, new bylaws regulate risk assessment, the licencing of authorised entities and the performance of periodic review in the area of occupational safety and health. The bylaws regulating specific aspects of occupational safety and health are not harmonised with the EU *acquis* throughout the country.

The enforcement and implementation of legislation remains partial, especially when it comes to inspection capacity, proper prevention of injuries at work, investment in safety and relevant training for employers, and assistance to conduct a proper risk assessment in the workplace. The system of collection and dissemination of statistical data on work-related injuries and diseases still needs to be improved. Official data on reported accidents and fatalities, along with the most affected sectors, was not published for 2022.

Social dialogue remains weak at all levels and no significant improvements have been made. The involvement of social partners in the implementation of policies is limited as well as their internal capacity. The number of branch and sectoral collective agreements concluded remains low. Economic and Social Councils operate at entity level, with different approaches and effectiveness. The state-level Economic and Social Council has not been established. There are no general collective agreements in the two entities, but a number of branch agreements are in place, limited mainly to the public sector and some state-owned enterprises.

Although laws on social entrepreneurship are adopted in the *Republika Srpska* entity and in Brčko District, their adoption is still pending in the Federation entity. Regarding

employment policy, there is still no country-wide employment strategy in place. A 2021-2027 employment strategy was adopted in the *Republika Srpska* entity, including the Youth Guarantee. An employment strategy still needs to be adopted in the Federation entity.

According to the data of the labour force survey in 2022, only 40.2% of the working age population is employed, but only 47.6% of the working age population is actually active in the labour market, with a markedly lower share of women (less than 40% of the total). When it comes to employment, the share of women is even lower, standing at 36.8% of the total number of employed people. Shares of men and women in the unemployed population are roughly the same, pointing to the significantly lower activity rate of women of working age (over 60% of the inactive population are women). Youth unemployment remains high, as 40% of those aged 15-24 actually looking for work are unable to find it. 81% of the unemployed are younger than 50. Long-term unemployment prevails, as almost 57.8% of the total unemployed have been looking for work for more than 2 years and have been unable to find it. This also points to a mismatch between the outputs of the education system and the real needs of the labour market, and the predominantly structural nature of unemployment.

The highest share in educational structure of unemployed people are those who completed secondary education and specialisation (70.1%), followed by those who completed primary school or lower education (15.3%), and those with a college, university, master and doctoral degree (14.5%).

The trend of labour emigration from Bosnia and Herzegovina to the EU has been increasing for years, with the number of first residence permits in EU Member States granted to Bosnia and Herzegovina nationals rising steadily from 11 506 in 2011 to 56 363 in 2019 and decreasing to 33 147 only in 2021 due to the COVID-19 pandemic.

The capacity of **public employment services** to provide quality services to jobseekers has been gradually improving, but remains weak. The administration of social benefits further limits the ability of public employment services to assist active jobseekers. In the *Republika Srpska* entity the public employment service has been discharged from administrative duties related to health insurance and other social benefits for the registered unemployed. This is not yet the case in other parts of the country.

Bosnia and Herzegovina needs to swiftly complete and adopt the Youth Guarantee Implementation Plan.

The level of informal employment remains high. Measures to reduce informal employment are supported by active employment measures such as self-employment, incentive programmes for employers and improvement of business climate, and some repressive measures and efforts to reduce para-fiscal charges.

On **social inclusion and protection**, there are still no country-wide strategies on poverty reduction, social inclusion and protection. Nor is there a system at state level for monitoring policy implementation. For persons with disabilities, institutional care is still prevalent. The issue of accessibility to public buildings needs to be addressed in a systematic manner. Services within the community that enable independent living are not adequately supported and there is no comprehensive strategy for deinstitutionalisation. At entity level, there is a wide range of strategies and laws related to social inclusion and protection, but they are not enforced due to lack of funding, inadequate procedures, standards and referral practices, and a general lack of coordination.

The social protection system remains underdeveloped and the effectiveness of social transfers is limited. Social assistance is neither well targeted nor needs-based due to the absence of an

adequate system for data collection. A large number of people in Bosnia and Herzegovina are not covered by public health insurance and as such are not entitled to the basic package of healthcare services. In addition, because of the highly decentralised governance structure, the eligibility conditions for social assistance differ between entities, districts and cantons. Along with differences in eligibility criteria, there are differences in coverage, targeting efficiency and generosity. Cooperation between social service centres and employment services is not well established. The transformation of institutions for social protection and, in particular, of institutions for children without parental care is still ongoing. **Deinstitutionalisation** requires comprehensive reform of financing of new services for both capacity building and support for social service centres across the country. Both entities and Brčko District started developing the roadmap for deinstitutionalisation.

The scope and duration of the employment and social rights related to maternity, paternity and parental leave remains uneven throughout the country. Although most of the existing legislation envisages various rights including mandatory maternity leave and protection from dismissal, the issue of wage compensation for employed parents during maternity leave is still unresolved.

There are still no country-wide systematic measures to improve the situation of older persons. Bosnia and Herzegovina should adopt a new action plan for children, as each entity implements the child reform activities based on their existing strategies and legal framework.

In the Federation entity, a new Law on material support for families with children entered into force in October 2022, introducing uniform standards for the financial support of children and unemployed mothers and reducing some of the inequalities among cantons. However, this law does not regulate wage compensation for employed parents during maternity leave, which remains regulated separately by each canton.

The EU statistics on income and living conditions (EU-SILC) are still not available in Bosnia and Herzegovina, although the country conducted the necessary surveys in 2022 and spring 2023

On **non-discrimination in employment and social policy**, although labour laws within the country address the issue of non-discrimination, there are still different maternity leave benefits and definitions of parental leave across the country. Bosnia and Herzegovina needs to establish uniform minimum maternity leave benefits across the country and harmonise the definition of maternity, paternity and parental leave to eliminate discrimination. Apart from policy frameworks that target the increase of employment opportunities for persons with disabilities, there are no strategies or action plans in place specifically developed for employment-related discrimination. No official data on the employment of persons with disabilities were published. The labour market and social policies have not been very successful in addressing the specific needs of vulnerable populations, including the Roma. According to the mapping performed under the EU supported analysis of persons with disabilities and Roma, around 82% of the Roma interviewed reported that they are either unemployed (40%) or inactive of the labour market (42%). The weak links between the responsible ministries and lack of cooperation constitutes a barrier to progress. In 2022, the Ombudsperson dealt with 387 cases of employment-related discrimination. Complaints concern mainly irregularities in employment, labour rights in general, dismissal procedures and in the payment of pensions. A significant number of workers do not initiate proceedings, nor do they seek judicial protection for fear of being fired. Most public bodies do not have mechanisms for dealing with complaints of harassment and discrimination, as required by the anti-discrimination legal framework.

The principle of **equal opportunities and equal treatment of men and women in matters of employment and social policy** is regulated by the laws on gender equality and antidiscrimination, and by the entity-level labour laws. These laws contain rules on gender equality covering different areas (employment, education, training and professional qualification) but in practice the enforcement of non-discrimination legislation remains low. The employment rate for the population aged 20-64 slightly increased from 39.1% in 2021 to 40% in 2022 for females, and from 66% to 67.7% for men, resulting in a high gender employment gap of 27.7 percentage points. The gender pay gap remains significant, at around 25%.

Chapter 20: Enterprise and industrial policy

EU industrial policy strengthens competitiveness, facilitates structural change and encourages a business-friendly environment that stimulates small and medium-sized enterprises (SMEs).

Bosnia and Herzegovina remains at an **early stage of preparation** in the area of enterprise and industrial policy. **Limited progress** was made, notably in updating entity-level industrial policy strategies. The investment environment remains unsatisfactory.

The recommendations from last year were partially implemented, therefore remain in large part valid. In the coming year, Bosnia and Herzegovina should in particular:

- simplify and harmonise business registration in both entities in order to reduce the administrative burden on entrepreneurs, by centralising company registration and licencing under one-stop-shops and by broadening online registration;
- harmonise the industrial policy strategies and action plans of the various levels of government, ensuring coordination and involvement of industrial enterprises in policy formulation and implementation;
- assess the needs of businesses, particularly SMEs, when it comes to modernising skills and adopt strategic guidelines for harmonisation of SMEs and entrepreneurship support.

During the reporting period, the entities and Brčko District continued COVID-19 supported measures for businesses in the form of subsidies and tax relief, while guarantee funds continued operations.

Regarding **enterprise and industrial policy principles**, the *Republika Srpska* entity introduced new indicators and improved databases to monitor implementation of its industrial development strategy and its accompanying action plan. Nevertheless, Bosnia and Herzegovina still lacks a country-wide industrial development strategy and a state-level body promoting consistency between industrial strategies and coherence with other related policies, notably to encourage foreign direct investment, improve the business environment and SME's development, and to effectively adapt to the emerging energy crisis and the rising prices of production inputs.

Limited steps were taken to **improve the business environment** and to attract investments. The *Republika Srpska* entity adopted a decree on direct investments of special importance, aiming to attract investors who will provide better jobs and new technologies. New administrative procedures include the option of electronic access to registration documents and e-settlement of taxes. While electronic registration of businesses was launched in the *Republika Srpska* entity and in Brčko District, the systems are not yet fully functional and interoperable due to delays in the issuing of e-signatures and e-seals. Although laws on bankruptcy are in place throughout the country, bankruptcy proceedings are not resolved in a

timely manner, with insufficient emphasis on companies' rehabilitation and reorganisation.

Despite these developments, the investment environment and the level of competitiveness remain unsatisfactory. Bosnia and Herzegovina still lacks a country-wide strategic framework to encourage foreign direct investment and to improve the business environment. Common causes of informality like high barriers to starting a business and rules on taxes and para-fiscal charges continue to be among the most salient business environment issues, together with 'red tape' and the regulatory differences across various levels of government. Bosnia and Herzegovina lacks a comprehensive inventory of all administrative and technical steps needed for domestic and foreign companies to register and operate, in order to abolish requirements that hamper the single economic space across the country. Bosnia and Herzegovina has not yet provided for the electronic registration of businesses by all levels of government, nor has it improved the connection and coordination of business registers among entities and with the Brčko District. Regulatory impact assessment is applied across the country and has been expanded to cover the impact on SMEs, though it is still often perceived as a mere formal obligation. Overall, the simplification of business-related legislation is being carried out on an *ad hoc* basis and is not harmonised throughout the country, e.g. as regards additional administrative and compliance requirements between entities.

Bosnia and Herzegovina continued to participate in ongoing multi-annual projects funded by the previous EU Programme for the competitiveness of enterprises and SMEs (COSME). The Association Agreement for participation of Bosnia and Herzegovina in the Single Market Programme was signed in July 2023.

Oversight and governance of public enterprises still need to be strengthened, including actions to put public companies on an equal footing with other industrial enterprises and to reduce substantial payment arrears. The *Republika Srpska* still does not have a single register of public companies containing all the required information. Oversight and risk management units have been established and incorporated respectively in the General Secretariat of the *Republika Srpska* entity government and the entity Ministry of Finance. The Federation entity has a single register of public enterprises and has added comprehensive non-financial information. However, no oversight and management units have been put in place in the Federation entity.

Preparations for the **green and digital transitions and global competitiveness of industry**, in line with the EU industrial strategy, are at a very early stage. Only 4% of companies rely on digitalisation and innovation as a key driver to their business growth.

Energy diversification is slowly progressing and Bosnia and Herzegovina's economy is about six times more carbon-intensive than the EU average. Therefore, a greater focus on green investments is required, including actions at the SME level. Evidence-based government support should also improve accountability for the use of public funds and ensure that businesses, in particular SMEs, can obtain financing for the twin transition.

The innovation performance of Bosnia and Herzegovina decreased between 2016 and 2022, in contrast to increasing EU average, widening the gap in innovation performance. As the 2022 Global Innovation Index shows, Bosnia and Herzegovina produces less innovation compared to its level of innovation investments. The low-level commercialisation of research and development is linked to low public investments in this area and the weak linkages for technology transfer and cooperation in clusters (*see Chapter 25 – Science and research*). The collaboration of SMEs and research institutions is not sufficiently developed to create conditions for the application of innovative financing models like innovation vouchers or

collaborative grants. Amending the Law on patents could improve both collaboration and financing of innovation activities for higher value-added business. (*see Chapter 7 – Intellectual property law*)

The capacity and funding to perform monitoring and evaluations of enterprise and industrial policy measures are still limited, and the statistical data remain insufficient to describe the structure and dynamics of industry.

As for **enterprise and industrial policy instruments**, no progress was made in aligning the legislation against late payments in commercial transactions with the EU *acquis*, including in the Brčko District.

As regards **sectoral policies**, the *Republika Srpska* entity adopted its tourism strategy for the period 2021-2027 in January 2022, while the strategy is still pending adoption in the Federation entity.

Chapter 25: Science and research

The EU provides significant support for research and innovation. All Member States can participate in the EU's research and innovation programmes and benefit from them, especially where there is scientific excellence and a solid investment in research and innovation.

Bosnia and Herzegovina has **some level of preparation** in the area of science and research. **Limited progress** was made, notably by developing a roadmap for research infrastructure. The country's research capacity and innovation efforts remain very limited. Overall, the research and innovation gap with the European Union is widening. The recommendations from last year were only partially implemented, therefore remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- develop a new 2023-2028 strategy and action plan for scientific development;
- develop and adopt a smart specialisation strategy;
- improve reporting on research and innovation statistics.

On **research and innovation policy**, the legislative framework regulating research and innovation development remains fragmented and still needs to be improved throughout the country. No action plan was in place from 2017 till 2023. Bosnia and Herzegovina needs to develop and adopt a new strategy and action plan for scientific development (2023-2028).

The country's estimated total allocations for research and innovation remain below 0.3% of GDP. A substantially increased budget, particularly in the area of innovation, is essential for the country's economic recovery. Further progress should be made to ensure reliable and comprehensive statistics on research and innovation, e.g. for the European Innovation Scoreboard and the European Research Area. The country's research capacity remains limited, while brain drain continues, most notably in the health, medical, and IT sectors, with no systematic measures having been introduced so far to address the issue.

The government's efforts in upgrading research and innovation policies and related activities (e.g. the strategy for the development of science and the pending adoption and implementation of the related action plan) as well as grants provided to organisations for submitting proposals under Horizon Europe are delivering some results. However, systemic collaboration and interaction need to be strengthened between 'triple helix' actors – academia, industry and governments. The development of a smart specialisation strategy is still at a very early stage. Its absence hampers research and innovation efforts.

As regards **international cooperation**, Bosnia and Herzegovina takes part in Horizon Europe as an associated country, having competitively received EUR 1.65 million in 2021. Preliminary and partial figures for 2022 show an encouraging increase: so far already EUR 2.1 million have been gained by researchers and innovators from Bosnia and Herzegovina in 2022. The selection of Sarajevo for the Horizon Europe Mission on climate-neutral and smart cities and its outreach to Mostar is encouraging.

Bosnia and Herzegovina is included in the European Innovation Scoreboard, enabling its participation in the European Institute of Innovation & Technology's Regional Innovation Scheme as of 2025; participation in the activities of the European Institute of Innovation & Technology are encouraged. In the scoreboard, Bosnia and Herzegovina was found to be an emerging innovator. Over time, its performance relative to the EU has declined, in particular in the last two years.

Chapter 26: Education and culture

The EU supports cooperation in education and culture through funding programmes and the coordination of Member State policies through the 'open method of coordination'. The EU and the Member States must also prevent discrimination and ensure quality education for children of migrant workers, including those from disadvantaged backgrounds.

Bosnia and Herzegovina is **at an early stage** of preparation in the area of education and culture. There was **no progress** in the area. A fully functional system of accreditation of higher education institutions and in particular study programmes is still lacking. Bosnia and Herzegovina needs to align legislation at all levels of government with the framework laws on education, and ensure application of the common core curriculum based on learning outcomes. Social inclusion at all stages of education needs to be ensured. Youth strategies across the country should be developed and implemented. Having only been partly addressed, the recommendations of last year's report remain relevant.

In the coming year, Bosnia and Herzegovina should in particular:

- extend and update the action plan for the national qualification framework (NQF) and establish an inter-sectoral commission for NQF;
- ensure a fully functional system of (re-)accreditation of higher education institutions and study programmes across the country;
- ensure continued participation in international assessment studies¹⁶ and the implementation of findings to improve PISA results.

In the area of **education and training**, Bosnia and Herzegovina failed to participate in 2021 PIRLS and 2022 PISA, and has not confirmed participation in 2025 PISA yet. Coordination of the processes linked with participation in international assessment studies needs to be significantly improved. No clear measures have been taken by Bosnia and Herzegovina to address the findings of 2018 PISA and 2019 TIMSS; in the absence of a countrywide approach, some cantons have started reforming their curriculum based on student learning outcomes to improve quality in line with 2018 PISA and 2019 TIMSS recommendations. Bosnia and Herzegovina has, however, decided to join the ICILS 2023, which can help the country to monitor its own national targets regarding students' digital competences and also

¹⁶ International Student Assessment – PISA, Trends in International Mathematics and Science Study – TIMSS and Progress in International Reading Literacy Study – PIRLS, International Computer and Information Literacy Study – ICILS, Teaching and Learning International Survey – TALIS.

to provide information for monitoring progress toward the UN Sustainable Development Goals.

Bosnia and Herzegovina was invited to take part in the European Education Area working groups 2021-2025. These working groups fosters collaboration among European Union Member States, as well as with candidate countries, in order to build more resilient and inclusive national education and training systems and prepare their youth for the green and digital transition.

Activities on implementation of the recommendations for action policies with the roadmap for promotion of inclusive education in Bosnia and Herzegovina should be intensified. The education of children with special needs remains a challenge, particularly in terms of ensuring the necessary infrastructure, provisions, transportation and school assistants to support both children and teachers.

Although the legal framework regulating the collection and systematisation of data for Bosnia and Herzegovina is in place, there is no mechanism to systematically measure or monitor the quality of education inputs, outputs or outcomes. An administrative database has been in operation since October 2022 to manage data needed for reporting to international institutions. However, data does not feed back into the policy-making process. The education system lacks common standards for the different levels of education, as well as for teacher training and performance evaluation. Comprehensive teacher training focusing on developing students' key competencies should be provided and a systematic approach for application of the common core curriculum based on learning outcomes should be established.

Due to demographic changes, the number of students enrolled at almost all levels of education is gradually declining. In early childhood education and care (ECEC), the enrolment rate remains very low but with a positive trend (+16%), now standing at 32%. Only 42% of three-to-five year olds are enrolled in pre-school education, and 25% of three-to-six years old Roma children. Concerning access to primary and secondary education, close to 100% of children are attending primary and 85% attending secondary education. Primary school completion rate is 92% (93% for boys and 90% for girls). Among Roma children, 69% attend primary and 23% secondary education, with a higher enrolment percentage for boys (the attendance of girls is 67% in primary and 18% in secondary education).

There has been limited effort in supporting the digital transformation of education and training, with a lack of a country-wide coordinated approach to the topic, despite the lessons of the COVID-19 pandemic. The country should continue to strengthen efforts towards effective, coherent and inclusive digital transformation of the education and training systems, including the capacity of the systems to develop digital skills.

A country-wide policy document on **vocational education and training** (VET) has been in place since 2021, based on the Riga conclusions. However, no noticeable progress followed its adoption.

There is no progress in developing a national qualification framework for Bosnia and Herzegovina. The related action plan ended in 2020 and should be extended and revised, since it was never operational and no specific commission for the national qualification framework has been established. Bosnia and Herzegovina's national qualification framework is not yet referenced to the European Qualification Framework, nor is there a mechanism for the validation of prior learning. Cooperation between the two accreditation agencies, one at state level and one in the *Republika Srpska* entity, has improved. Bosnia and Herzegovina should significantly intensify efforts to ensure a fully functional accreditation system of higher education institutions and in particular study programmes.

Bosnia and Herzegovina benefits from the international dimension of the 2021-2027 **Erasmus+** programme. In 2022, around 770 higher education staff members and 1 070 students from Bosnia and Herzegovina were selected to undertake a mobility period in EU Member States or associated third countries to the programme, while Bosnian higher education institutions are expected to host around 560 staff members and 490 students from Europe. The number of higher education capacity-building projects selected for funding increased from 8 in 2020 to 12 in 2022. In 2023, for the first time, higher education institutions from Bosnia and Herzegovina were eligible to participate in the call for proposals for the European universities initiative, with one university winning a grant as part of a successful alliance.

In the area of **culture**, Bosnia and Herzegovina is implementing measures under the UNESCO Convention on the protection and promotion of the diversity of cultural expression. The country has to ensure a permanent solution to the legal status and financing for the seven cultural institutions of significance for Bosnia and Herzegovina.

Implementation of the decisions of the Commission to Preserve National Monuments rests on the entities. The budget allocation for culture on all levels of government should be increased with longer-term, multi-annual funding decisions to provide stability for cultural creation and operation. Bosnia and Herzegovina has to establish formal partnership structures enabling transparent and organised participation in cultural policymaking.

Although there are **youth** strategies at some levels of government, Bosnia and Herzegovina should work on a country-wide youth strategy that would ensure equal treatment of young people.

Chapter 29: Customs union

All Member States are part of the EU customs union and follow the same customs rules and procedures. This requires legislative alignment as well as adequate implementing and enforcement capacity and access to the common computerised customs systems.

Bosnia and Herzegovina has **some level of preparation** in the area of customs union. Customs legislation is not fully aligned with the EU *acquis*. There was **no progress** and last year's recommendations were not implemented. Bosnia and Herzegovina should support the Indirect Taxation Authority and progressively align its systems with EU customs requirements.

In the coming year, Bosnia and Herzegovina should in particular:

- ensure the interoperability of advanced e-signatures on a country-wide basis;
- strengthen the administrative and operational capacity of the Indirect Taxation Authority;
- increase post-clearance checks based on risk analysis, expand use of simplified procedures for reliable economic operators and upgrade interconnectivity and interoperability with the EU's IT systems and requirements.

The body in charge of implementing **customs legislation** and policies is the Indirect Taxation Authority. Further alignment with the Union Customs Code is needed, notably on customs procedures and simplified procedures. The 2015 Law on customs policy, partially aligned with the EU *acquis*, started to be implemented in August 2022 following adoption of the Law on customs offences. It introduced an Authorised Economic Operators program and simplified customs procedures requiring e-signature. No company has been recognised as authorised economic operator so far. The customs tariff and valuation classifications are harmonised with the EU's Combined Nomenclature. Regarding rules of origin, the country

continues to apply the Pan-Euro Mediterranean Convention and has begun the process of adopting the transitional rules of origin in trade with the EU.

Bosnia and Herzegovina is an observer in the Common Transit Convention and intends to join it once it has met all legal and technical requirements. These include the successful implementation of the new computerised transit system (NCTS), which began operating at the national level in August 2022. It will need to upgrade its NCTS system before it can join the Convention.

Bosnia and Herzegovina should also continue aligning its provisions concerning customs enforcement of intellectual property rights. Further alignment is also needed with the *acquis* for authorised economic operators, which has to be achieved through implementation of the Central European Free Trade Agreement (CEFTA) Additional Protocol 5. Cross-border smuggling of tobacco products and other illicit activities in the border regions continue to be an important area where further improvements in cooperation and anti-fraud tools are needed. As part of the anti-fraud effort, accession to the World Health Organization's Protocol to eliminate illicit trade in tobacco products, is recommended.

The **administrative and operational capacity** of the Indirect Tax Authority should be substantially strengthened, especially in key operational posts. Bosnia and Herzegovina needs to progressively align its systems with EU customs requirements, such as the new computerised transit system and internal control standards. Its capacity to conduct a risk analysis is hampered by an inadequate IT system. As a result, customs authorities still perform 60% of checks physically.

CLUSTER 4: THE GREEN AGENDA AND SUSTAINABLE CONNECTIVITY

This cluster covers Transport (Chapter 14); Energy (Chapter 15); Trans-European networks (Chapter 21); and Environment and climate change (Chapter 27).

Bosnia and Herzegovina is at early stage of preparation in most areas related to the Green Agenda and sustainable connectivity, namely on energy, environment and climate change. Legislation related to gas, electricity, renewable energy and energy efficiency still needs to be adopted. Bosnia and Herzegovina has some level of preparation in the areas of transport and trans-European networks. Additional efforts are needed to improve road safety to reduce traffic fatalities, and to strengthen the regulatory bodies on transport, including civil aviation. Further steps are needed on connectivity reform measures and in aligning with the Trans-European Transport Network (TEN-T) and Trans-European Networks for Energy (TEN-E) Regulations. The green transition and sustainable connectivity are key to economic integration within the region and with the EU. The implementation of the economic and investment plan and the Green Agenda needs further acceleration in the upcoming period.

Chapter 14: Transport policy

The EU has common rules on technical and safety standards, security, social standards State aid and market liberalisation in road transport, railways, inland waterways, combined transport, aviation and maritime transport.

<p>Bosnia and Herzegovina has reached some level of preparation in this area, with no progress achieved. It needs to intensify its efforts to further align with and implement effectively the EU <i>acquis</i> in all areas of transport and at all levels of government. Bosnia and Herzegovina still needs to strengthen its administrative capacity, in particular concerning road safety with the establishment of a lead Road Safety Agency, as well as enforcement, inspection and investigation bodies for road transport, railways, inland waterways, combined</p>

/ intermodal transport and civil aviation. Last year's recommendations have not been addressed and remain valid.

In the coming year Bosnia and Herzegovina should in particular:

- develop enforcement capacity to reduce road traffic fatalities and make progress on establishing a national system for continuous road crash data collection;
- reinforce the independence, strengthen the capacity and ensure sufficient funding of regulatory bodies in the field of transport;
- draw up the strategic framework, adopt relevant legislation and ensure sufficient capacity and resources for implementing the intelligent transport system (ITS) on the core networks.

Regarding the **general EU transport *acquis***, Bosnia and Herzegovina is implementing its framework transport strategy for the period up to 2030. The reforms in the transport sector have been insufficient for several years and the pace of structural adjustment is too slow. The necessary investments are being delayed by failure to complete and approve technical documentation, by limited borrowing capacity and by financial constraints. In addition, the lack or change of focus on key priorities and lack of coordination and cooperation between government levels, especially where particular vested interests prevail, create further delays and overall inefficiency. Bosnia and Herzegovina should intensify efforts to deliver on the commitments contained in the Transport Community Treaty, its five actions plans and elements arising from the smart and sustainable mobility strategy for the Western Balkans. For larger transport agglomerations, sustainable urban mobility plans which respect environmental and social standards, should be developed following EU practice.

Further efforts are required to ensure full alignment with the intelligent transport systems (ITS) Directive, improve multimodality and secure the implementation of relevant national laws in the areas of road and rail. An overall strategy for ITS is yet to be adopted and appropriate resources should be allocated for its implementation.

The country is moderately prepared for **road transport**. Bosnia and Herzegovina should implement measures agreed in the TCT road safety action plan to develop climate-resilient, intelligent and resource-efficient TEN-T road networks. Implementation of road safety legislation remains a concern, as there is no visible and substantial decrease in the very high number of accidents and fatalities. Moreover, work is needed to tackle the discrepancy between the national figure and the significantly higher WHO estimate. There is still a lot to do to develop a harmonised road crash database system. The Ministry of Communications and Transport still needs to establish a lead road safety agency and a country-wide system for the continuous collection of road crash data, as a long-standing point of the TCT road safety action plan. Bosnia and Herzegovina needs to adopt, as an outstanding opening issue, a state-level law on the international transport of dangerous goods by road. It also still needs to strengthen its mechanisms for monitoring the implementation of the relevant international rules and EU legislation, including those on transportable pressurised equipment, roadside checks of vehicles and road safety. Bosnia and Herzegovina has not yet aligned its legislation with the Directive 2008/96/EC of the European Parliament and of the Council of 19 November 2008 on road infrastructure safety management. It is highly recommended that Bosnia and Herzegovina establish a licensing system for road safety inspectors and auditors as well as to adopt the rulebooks for road safety inspections and audits.

On **rail transport**, Bosnia and Herzegovina is moderately prepared, but made only limited progress in the reporting period, mainly in developing, maintaining and improving

infrastructure; technical documentation for such interventions is under preparation. However, half of the railway infrastructure remains unsafe, outdated and unreliable, and cannot enable suitable international transit on the network. The country still needs to adopt the multi-annual maintenance plan for the entire core network, as the country-wide coordination of infrastructure interventions on railways is degrading. In line with EU standards, and as required by the TCT rail action plan, Bosnia and Herzegovina should use modern ITS for the reconstruction and new construction of railway sections. EU standards are not fully and systematically implemented, since less advanced variants – even sometimes incompliant with ITS – are deemed more cost-efficient, in particular in the *Republika Srpska* entity, although design and 50% of grants for reconstruction activities are funded by IPA programmes.

Bosnia and Herzegovina still needs to fully align the law on railways with the fourth EU railway package and to open the railway market. The railway laws in both entities aiming to provide non-discriminatory access to the network are to a large extent not compliant with EU *acquis* and still need to be reviewed. Another outstanding issue is the lack of progress on alignment with the *acquis* on rail passenger rights. Equally, network statements are prepared but still not published, and the amendment of the law on railways to enable the establishment of independent bodies, namely the railway safety authority and railway accident investigation body, is still pending. There was still no progress on negotiating protocols on railway border-crossing procedures with Croatia, due to technical concerns on border and customs-related issues.

On maritime transport Bosnia and Herzegovina remains at an early stage of preparation, as this is not considered a priority, since the country has very limited access to the sea and has neither a commercial port nor a maritime fleet. Institutional set-up to enable Bosnia and Herzegovina to become a maritime shipping flag holder country would bring a strong economic contribution to the economic prosperity of the country.

Inland waterway transport is at an early stage of preparation. The institutional, legal and regulatory set-up of waterway transport in Bosnia and Herzegovina still need to be developed to ensure the safety of navigation on inland waterways and its maintenance.

Preparation on **civil aviation** is still at a standstill. Although the Air Navigation Services Agency has been operational since December 2019, the 2009 Law on civil aviation still needs to be aligned with the requirements of the European Common Aviation Area Agreement (ECAA). Bosnia and Herzegovina urgently needs to address the chronic lack of adequately trained and qualified staff and the institutional set-up within the Bosnia and Herzegovina Directorate of Civil Aviation (BHDCA), which increases the risks of safety oversight. Although the new management has been in place for more than 2 years, it has not yet addressed this issue. There is no progress in harmonising legislation with the EU Regulation on passenger rights. Bosnia and Herzegovina needs to enhance the independence of the civil aviation regulator to reverse the negative trend.

Bosnia and Herzegovina has not started to develop its policy, institutions, legal and regulatory framework on **combined / intermodal transport**. The low level of priority in this sub-sector is caused by a physical infrastructural bottleneck at the Ivan tunnel and Bradina ramp on the railway in Corridor Vc, as well as by the inertia of the relevant institutions and administration.

Bosnia and Herzegovina should increase efforts to align with and implement **EU passenger rights** legislation.

Chapter 15: Energy

EU energy policy covers energy supply, infrastructure, the internal energy market, consumers, renewable energy, energy efficiency, nuclear energy, nuclear safety, radiation protection and nuclear safeguards.

The country remains at an **early stage of preparation** in the area of energy. **Limited progress** was made with the adoption of the law on electricity, the law on energy and the law on renewable energy in the Federation entity. Bosnia and Herzegovina still needs to make significant efforts to strengthen country-wide cooperation and coordination and improve the fragmented and inconsistent legislative and regulatory framework. Last year's recommendations have not been implemented and remain valid.

- In the coming year, Bosnia and Herzegovina should in particular: adopt gas and electricity laws and bylaws, in compliance with the third energy package and the Energy Community Electricity Integration Package, at state and entity levels and ensure the full harmonisation of laws at entity level in the area of electricity and gas to prevent delays in coupling with the EU internal electricity market;
- adopt state- and improve entity-level legislation on renewable energy and energy efficiency in line with the obligations stemming from the Energy Community Treaty and the commitments from the 2020 Sofia summit declaration on the Green Agenda for the Western Balkans; and
- finalise and adopt the national energy and climate plan (NECP) 2021-2030 by the end of June 2024, in line with the Energy Community 2030 energy and climate targets, taking due account of recommendations issued by the Energy Community Secretariat.

The national energy strategy of Bosnia and Herzegovina, adopted in August 2018, is outlined in the framework energy strategy until 2035. Its implementation is ongoing. Bosnia and Herzegovina still needs to finalise and adopt the national energy and climate plan (NECP) 2021-2030, which will replace the national energy strategy and the national energy efficiency action plan. Civil society organisations are involved in the drafting process.

Measures to improve **security of supply of electricity** need to be redirected from coal to renewables. A decision for an extension of the Tuzla coal-fired power plant (Block 7) is still pending. This may increase the country's security of supply, but might also significantly prolong dependency on coal which is not in line with the country's commitments to decarbonisation. An important supplier has stepped out of the Tuzla Block 7 contract. Although the Chinese consortium proposed to replace the contractor, the Federation entity did not agree to this. A final decision will have to be taken by the Federation entity's Parliament. The State Aid Council is yet to decide on the public guarantee granted in favour of the Export-Import Bank of China for a loan for Tuzla 7.

After the Federation's entity Parliament took the decision to extend the lifetime of two units of the Kakanj and Tuzla power plants, the Energy Community Secretariat opened an infringement procedure against Bosnia and Herzegovina in October 2022.

Bosnia and Herzegovina has not yet taken any actions towards gradually phasing out coal subsidies, although the country is considering how to align with the EU Emissions Trading System (ETS) to promote decarbonization. This will be particularly challenging for a country whose energy production and industry largely depend on fossil fuels. The appointment of the management of Transco is still pending.

Bosnia and Herzegovina needs to align with and implement the risk-preparedness regulation to increase resilience in the event of another energy crisis.

Regarding **security of supply** for **natural gas**, although only 3% of the energy supply comes from gas, the country is fully dependent on one gas pipeline which supplies gas through Turkish Stream, from Russia as its single source, rendering Bosnia and Herzegovina vulnerable in case of disruption. Both the Federation entity and *Republika Srpska* entity have a long-term contract with Gazprom.

The Federation entity should accelerate the adoption of the law and permit procedures on the Southern Gas Interconnector project, one of the flagship projects of the EU's Economic and Investment Plan, that will contribute to strengthening the integration into the European gas market and increasing the security of supply. Proposals for a new Eastern Gas Interconnector, to be funded by Gazprom, would not contribute to the diversification of gas supply. Decisions on both interconnectors need to be approved by the Presidency.

The former refinery in Brod that was connected to Croatia's natural gas network in 2021 without the required state-level approval remains in breach of the legal framework.

There was still no progress in the harmonisation of legislation on compulsory oil stocks and petroleum products. The development of the necessary legislation, establishment of a body at state level on compulsory oil stocks and harmonisation of legislation at entity level are still pending.

To prevent further delays in the opening and unbundling of energy markets and comply with the third and fourth energy package, Bosnia and Herzegovina still needs to adopt outstanding gas and electricity legislation, including alignment and implementation of the newly adopted Energy Community Electricity Integration Package. Some progress was made in the Federation entity with the adoption of the Law on electricity and the Law on energy. The country needs to adopt state-level legislation on electricity to enable electricity market coupling, appointment of the nominated electricity market operator (NEMO), establishment of the power exchange, and day-ahead and intra-day markets as a precondition to further integrate with the EU internal market, including market coupling. The entity-level laws will need to be fully harmonised with this legal framework. The country still needs to adopt and enforce a new law for adequate restructuring, certification, and operation of the gas transmission system operator in accordance with the third energy package.

On retail market, the electricity markets in both entities are formally open to competition. Introduction of the virtual power plant model in April 2022 has enabled small-scale renewable energy sources to reach wholesale markets via aggregation and most renewable energy producers stepped out of the support schemes in both entities. Regulated prices and tariffs do not reflect costs, as the energy sector is subsidised by direct and indirect subsidies.

Some measures protecting energy-vulnerable groups and mitigating energy poverty remain in place, focusing solely on direct financial support and only targeting the most vulnerable groups, notably recipients of various social welfare benefits.

Gas customers in the Federation entity are still captive. In the *Republika Srpska* entity, only a small portion of the gas market is supplied under regulated tariffs. Switching rules are in place. On the wholesale market, gas prices are not regulated in the *Republika Srpska* entity. In the Federation entity, the prices are regulated by the Ministry. Third-party access is granted under regulated tariffs for the gas network in the *Republika Srpska* entity. In the Federation entity, negotiated third-party access still applies to transmission and distribution networks. The gas market remains closed without adequate regulatory oversight and lacks

transparency, particularly regarding setting prices for end consumers. For electricity, the regulatory authorities at all levels are operational, but their independence continues to be hampered by political interference.

On **hydrocarbons**, the country has yet to align the legislative framework with the EU *acquis*, including the Directive on the safety of offshore oil and gas installations.

There has been some progress on **renewable energy** as the Federation entity adopted the law on renewable energy and both entities are currently working on secondary legislation; a state-level legal framework is still lacking. Both entities need to launch renewable energy support scheme auctions. In June, the *Republika Srpska* entity signed a direct agreement with the service provider to use electronic registers for issuance, cancellation and trade of guarantees of origin; the Federation entity is expected to do the same at the end of the year.

There are no limits on the maximum power which can be integrated into transmission electricity from non-dispatchable renewable energy sources. Despite large capacity, there are only three wind parks in place and an increasing number of solar PV plants. Hydropower planning continues to be carried out without consulting all stakeholders and without respecting the Espoo Convention on transboundary environmental impact assessment. Despite existing legal obligations, environmental impact assessments are still not consistently prepared and lead to protests and challenges in court, such as on the Buk Bijela hydropower plant (*see Chapter 27 – Environment and climate change*).

Further alignment with EU standards is still required for issuing, transferring and cancelling guarantees of origins and using minimum levels of renewable energy in new buildings and existing buildings subject to major renovation.

Renewable energy producers have priority access to the grid and pay 50% of the fixed part of the connection costs. On the distribution level, producers in the *Republika Srpska* entity have to fully cover connection costs, while renewable energy producers in the Federation entity cover 50% of the calculated average value of the connection costs.

On **energy efficiency**, no progress has been made in harmonising the legislation with EU requirements.

Bosnia and Herzegovina made no further progress on **nuclear energy, nuclear safety and radiation protection**. The country has no nuclear sites on its territory, nor does it have plans to build any. The country should still consider becoming a member of the European Community Urgent Radiological Information Exchange system (ECURIE). Bosnia and Herzegovina should also increase the administrative capacity and financial resources of the State Regulatory Agency for Radiation and Nuclear Safety, to meet international commitments on data submission and improve coordination and reporting.

On **nuclear safeguards**, upon accession, the existing systems of accountancy and control of nuclear materials in Bosnia and Herzegovina would need to be adapted to accommodate for the safeguard provisions (chapter 7) of the Euratom Treaty.

Chapter 21: Trans-European Networks

The EU promotes trans-European networks (TENs) in the areas of transport, telecommunications and energy to strengthen the internal market and contribute to growth and employment.

Bosnia and Herzegovina has some level of preparation in trans-European networks. There was limited progress in the area, with the continuation of the Corridor Vc motorway
--

development. However, transport and energy infrastructures remain insufficiently developed and the implementation of connectivity reform measures remains slow. Therefore, the recommendations from previous reports remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- continue with the development of the indicative extension of the TEN-T and TEN-E core networks in line with the priorities identified in the economic and investment plan for the Western Balkans, the Green Agenda and the Transport Community five-year rolling work plan for the development of the indicative TEN-T extension in the Western Balkans;
- accelerate the implementation of connectivity reform measures and continue with the adoption of the multi-annual maintenance plans for the entire road and rail core networks;
- align the legislation with Regulation (EU) N° 347/2013 on guidelines for trans-European energy infrastructure.

On transport networks, Bosnia and Herzegovina participates in the Transport Community meetings, however, the country should increase efforts and resources to deliver on the obligations contained in the Transport Community Treaty action plans.

Bosnia and Herzegovina should accelerate the implementation of connectivity reform measures and aim to continue with the adoption of the multi-annual maintenance plans for the entire road and rail core networks. Border-crossing agreements with neighbouring countries remain a challenge; more efforts are required to strengthen mutual relations and cross-border cooperation.

In May 2023, Bosnia and Herzegovina signed a high-level agreement with the Commission to adapt the TEN-T network. Priority connectivity projects on the indicative TEN-T core network to the Western Balkans have been planned through the single project pipeline. The preparation and implementation of these projects continued during the reporting period. In relation to the Corridor Vc motorway, works on the Medakovo-Ozimice subsection started, while 90% of works were completed for the subsection Ponirak Vraca-Zenica tunnel in September 2023. Bosnia and Herzegovina and Croatia still need to agree on the category of the Svilaj border crossing. Efforts are still necessary to speed up construction, improve preparedness and close the financing gap to complete the construction of the Corridor Vc motorway in the Federation entity. As regards the two infrastructural investments located in the *Republika Srpska* entity (Corridor Vc road and rail), the Commission has taken no decision on the issue yet and will assess when the time is ripe to proceed with the signature of the contribution agreements.

Although the construction of the interstate bridge between Bosnia and Herzegovina and Croatia at Gradiška was completed in May 2022, the border crossing is expected to become operational in 2023 upon completion of the access expressway on Croatian territory. Technical documentation and tender dossiers for Route 2b of the comprehensive road network and Banja Luka-Lašva and the main design for the Route 2a core network have been finalised. Conceptual design for railway route 9a Tuzla-Zvornik and technical documentation and tender dossiers for Corridor Vc sections Sarajevo-Doboj and Visoko-Konjic have been finalised, but not endorsed yet by the final beneficiary. A serious effort is needed to accelerate progress in the rail core network where investments continue to be limited in particular due to lack of financial support through fuel levies, as it was done for roads and motorways. The navigability of the Sava River still requires further demining and rehabilitation. Work on the rehabilitation of the Brčko Port is progressing. .

On energy networks, Bosnia and Herzegovina has not made any progress in aligning with

Regulation (EU) No 347/2013 on guidelines for trans-European energy infrastructure in the reporting period, so the infringement established by the Energy Community in November 2018 has still not been rectified.

Bosnia and Herzegovina should finalise the single project pipeline to also include the energy sector; this will ensure the eligibility of the project of Energy Community interest (Trans-Balkan corridor) and the two mutual interest gas projects (North and South interconnectors with Croatia). More efforts are required to accelerate progress for the preparation and development of these projects. Tender documentation for the southern gas interconnector with Croatia (Zagvozd – Posušje – Novi Travnik with a branch to Mostar) is prepared. Bosnia and Herzegovina remains heavily dependent on carbon-intensive infrastructure and still needs to develop its regional connections to unlock the potential of the economic and investment plan and the Green Agenda for the Western Balkans.

Chapter 27: Environment and climate change

The EU promotes strong climate action, sustainable development and protection of the environment. EU rules contain provisions addressing climate change, water and air quality, waste management, nature protection, industrial pollution, chemicals, noise and civil protection.

Bosnia and Herzegovina is **in between an early stage and some level of preparation** in the area of environment and climate change. **Limited progress** was made with the adoption of a national adaptation plan and a national climate-change adaptation and low-emission development strategy. To align with the EU climate *acquis* and implement and enforce it, Bosnia and Herzegovina still needs to reaffirm its political commitment and set up the necessary administrative capacity at all levels of government. It needs to ensure an even, country-wide harmonised and consistent approach in strategic planning and alignment with the EU *acquis*, in particular in the field of air quality, industrial emissions and water and waste management. In May 2023, Bosnia and Herzegovina ratified the agreement on its membership in the Union Civil Protection Mechanism (UCPM), showing its capacity to bring together the relevant decision making structures. Bosnia and Herzegovina needs to continue working to further improve its national civil protection system and especially that international assistance is provided in a coordinated manner at national level. The recommendations from last year were not fully addressed and remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- implement the country-wide environmental approximation strategy and adopt an environmental protection strategy, and provide for a consistent and uniform application of environmental *acquis* across the country;
- urgently formalise the procedures for the appointment and functions of the national focal point for Bosnia and Herzegovina for the implementation of all environmental conventions to which Bosnia and Herzegovina is a signatory;
- continue implementing the Paris Agreement by putting in place policies and measures to deliver on its updated nationally determined contribution (NDC), implement the revised climate-change adaptation and low-emissions development strategy, adopt an integrated national energy and climate plan (NECP), and urgently prepare alignment with the EU Emissions Trading System (ETS) in line with the Energy Community requirements.

Environment

Horizontal legislation is aligned with the EU *acquis* to a limited extent. The willingness to act and capacity to ensure country-wide harmonisation with the EU *acquis* continues to be limited, leaving the environment sector unevenly regulated across the country. The environment approximation strategy still needs to be fully harmonised and implemented, requiring a single integrated action plan. Bosnia and Herzegovina still needs to enhance the legal framework, strengthen administrative capacity and monitoring systems, implement structural reforms, and improve inter-institutional coordination, in line with the Green Agenda for the Western Balkans and the 2050 climate neutrality target. Bosnia and Herzegovina still needs to adopt a country-wide environmental protection strategy and to align the provisions of Environmental Impact Assessment (EIA) and Strategic Environmental Assessment (SEA) in the legislation at all levels of government and across relevant sectors. The provisions need to be considerably strengthened and enforced, and the necessary improvements need to be made on access to information and the participation of the public in the decision-making process. Bosnia and Herzegovina needs to implement the provisions of Espoo convention concerning planned investments in the transboundary context (*see also Chapter 15 - Energy*). A strategy and functioning structure for gathering, transferring and reporting environmental data still needs to be adopted. The legal framework regulating environmental inspections and their enforcement needs to be improved in line with the EU *acquis*. Stricter control of pollutants and polluter-pays principle have to be put in place. Alignment with a number of horizontal environmental directives such as the Directive on environmental liability, the Directive on infrastructure for spatial information (INSPIRE) and the Directive on environmental crime is still pending. The long-overdue requirement for formalising the procedure for the appointment of national focal points concerning the implementation of environmental conventions to which the country is a signatory party, has yet to be met.

Alignment with the *acquis* on **air quality** did not progress. A well-functioning harmonised air monitoring network still needs to be established to be able to provide reliable data, and a programme for air-quality improvement needs to be developed. Alignment with the EU Directive on the reduction of national emissions of certain atmospheric pollutants, establishment of functional national emission inventories and reporting and full ratifications and implementation of the Air Convention and its protocols, are still pending. The country remains in serious and persistent breach of the Energy Community Treaty on alignment with the *acquis* on reducing the sulphur content of certain liquid fuels, on which penalties have been applied since January 2021. Alignment with *acquis* on volatile organic compounds (VOC) is lagging behind.

A country-wide strategy for **waste management**, with particular attention to the circular economy context, the EU plastic strategy and the Single-Use Plastics Directive still needs to be developed. To align with the landfill Directive, Bosnia and Herzegovina needs to close down or rehabilitate non-compliant landfills. Awareness-raising measures are required to reduce waste generation and promote reuse and recycling. Alignment with the *acquis* on sewage sludge, batteries, packaging, polychlorinated biphenyls / polychlorinated terphenyls and end-of-life vehicles is still required.

On **water quality**, a consistent and harmonised country-wide strategy and sustainable investment plan on water management and urban wastewater management is still missing. Specific plans for implementing EU legislation on drinking water, urban wastewater and flood risk management still need to be adopted. A countrywide roof report for Bosnia and Herzegovina on river basin management plans still needs to be adopted, as well as a revised

action plan for flood protection and river management. Flood hazards and risks are being mapped for the entire country.

There is no progress on alignment with the *acquis* on **nature protection**. The list of potential Natura 2000 sites and implementing legislation still needs to be adopted. Investments in renewable energy need to comply with all relevant EU *acquis*, including the nature *acquis* (see Chapter 15 - Energy). A system to systematically monitor biodiversity still needs to be established. While Bosnia and Herzegovina reports to the Convention on international trade in endangered species of wild fauna and flora (CITES), full implementation of the Convention and capacity building need to be strengthened. Bosnia and Herzegovina should prepare the legislation and establish the conditions for ratification and implementation of the Nagoya Protocol on access to genetic resources and fair distribution of profits generated by their use.

There is no progress on alignment with the *acquis* on **industrial pollution control and risk management**. The pollutants release and transfer register (PRTR) protocol to the Aarhus Convention still needs to be ratified. This includes the obligation to report to PRTR at country level, enabling public access to and integration of the collected data and its transmission to the EU institutions. Bosnia and Herzegovina needs to ensure the implementation of the national emissions reduction plan (NERP) and adopt technical and financial measures necessary for that purpose. Bosnia and Herzegovina still needs to further align with the directives on industrial emissions, eco-labelling and eco-management and audit schemes. It should also align with the Directive on the control of major-accident hazards involving dangerous substances (Seveso III).

On **chemicals**, the country's alignment with the EU Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) Regulation remains uneven. Alignment with the EU Regulation on classification, labelling and packaging of substances and mixtures (CLP) and appointment of the responsible bodies to formulate the necessary preventive and remedial measures are still needed. Alignment with the *acquis* on asbestos and on the protection of animals used for scientific purposes is also lagging behind. Bosnia and Herzegovina still needs to implement the Rotterdam Convention on the prior informed consent procedure for certain hazardous chemicals and pesticides in international trade, to which it is a party. There has been no progress in acceding to the Minamata Convention.

Significant further efforts are still needed to align with the *acquis* on environmental **noise**.

In recent years Bosnia and Herzegovina made significant progress in building the capacity of its **civil protection** system at local and entity levels. In May 2023, Bosnia and Herzegovina ratified the agreement on its membership in the Union Civil Protection Mechanism (UCPM). As a participating state of the UCPM, Bosnia and Herzegovina is expected to actively participate in activities under the mechanism and ensure, when necessary, that international assistance is provided in a coordinated manner at national level. A positive development of the coordination at the national level was demonstrated when Bosnia and Herzegovina offered assistance to Slovenia via the UCPM in response to floods in August 2023. The country needs to proceed with establishing Trans-European Services for Telematics between Administrations (TESTA) as a precondition to be connected to the Common Emergency Communication and Information System (CECIS), improve legislation for preparedness and response, and strengthen governance. Bosnia and Herzegovina still needs to speed up the implementation of the 2020-2025 action plan on civil protection. A comprehensive training programme for emergency response units still needs to be developed and systematic inspections ensured. Bosnia and Herzegovina still needs to make additional efforts to establish the 112 European single emergency number, also adopting the necessary legal basis.

Climate change

The level of alignment with the EU **climate acquis** remains limited. Bosnia and Herzegovina still needs to adopt a country-wide climate strategy to align with the new EU climate *acquis* as per the important modifications brought in by the Fit for 55 package, and develop a state-level framework law on climate change. In line with the Green Agenda, Bosnia and Herzegovina is urged to take the necessary steps to prepare alignment with the EU Emissions Trading System (ETS) to advance the implementation of the EU *acquis*, prioritise alignment with the new governance regulation, and adequately prepare for the EU Carbon Border Adjustment Mechanism, that enters into force in its transitional phase as of 1 October 2023. In October 2022, Bosnia and Herzegovina adopted the national adaptation plan with measures until 2030 and submitted it to the UN Framework Convention on Climate Change (UNFCCC) secretariat; it also published a national climate change adaptation and low emission development strategy consistent with the EU 2030 framework on climate and energy policies. Both will need to be implemented. Bosnia and Herzegovina needs to finalise and adopt the 2021-2030 national energy and climate plan (NECP) by the end of June 2024 (*See Chapter 15 – Energy*). The country still needs to significantly reinforce its administrative and inspection capacities in the sector and structural reforms need to be implemented to ensure meaningful implementation of the required measures.

Bosnia and Herzegovina needs to step up the implementation of its revised nationally determined contribution for 2020-2030 (NDC) submitted in 2021 to the UNFCCC. It plans to reduce greenhouse gas emissions by slightly more than one third by 2030 and almost two thirds by 2050 compared with 1990. There has been no progress in aligning with the EU monitoring and reporting regulation. There is still no national greenhouse gas emissions inventory system or accompanying state-level legal regulatory framework. No progress has been made in aligning with the directives on fuel quality, ozone depleting substances, fluorinated gases, carbon capture and storage or on other relevant legislation. Following ratification of the Kigali amendment to the Montreal Protocol on substances that deplete the ozone layer in 2021, Bosnia and Herzegovina is urgently required to freeze hydrofluorocarbon production and use in 2024, with an 80% reduction by 2045.

CLUSTER 5: RESOURCES, AGRICULTURE AND COHESION

This cluster covers: agriculture and rural development (Chapter 11); food safety, veterinary and phytosanitary policy (Chapter 12); fisheries and aquaculture (Chapter 13); regional policy & coordination of structural instruments (Chapter 22); and financial & budgetary provisions (Chapter 33).

While implementing the 2018-2021 strategic plan for rural development, Bosnia and Herzegovina must step up its efforts to adopt a post-2021 country-wide strategy for rural development and start implementing agricultural reforms in order to reduce the number of small and ineffective farms as well as fragmentation of agricultural land. The Parliament adopted a state-level Law on the organisation of the wine market in August 2023. It has yet to adopt a state-level law on organic production and harmonise across the country the legislation on quality policy. It needs to align the legislation on food safety, veterinary and phytosanitary policy and strengthen its administrative capacity; in particular, it should speed up preparations for national reference laboratories, implement an updated national salmonella control plan and maintain vaccination against rabies and brucellosis. Bosnia and Herzegovina must step up its efforts to prepare and adopt a country-wide strategy on fisheries and aquaculture and harmonise data collection. It should start preparing a country-wide regional

development strategy, improve public investment planning and develop a single project pipeline in all relevant sectors. It should take steps to ensure the management of own resources, notably by reinforcing the capacity of the Indirect Tax Authority to implement customs legislation effectively, stepping up the fight against tax and customs fraud, and adopting a master plan for the production of national accounts.

Chapter 11: Agriculture and rural development

The EU's common agricultural policy supports farmers and ensures Europe's food security. It helps tackle climate change and the sustainable management of national resources; maintains rural areas and landscapes across the EU; and keeps the rural economy alive by promoting jobs in farming, agri-food industries and associated sectors. This requires strong management and control systems. There are also common EU rules for marketing standards, quality policy and organic farming.

Bosnia and Herzegovina is at an **early stage of preparation** in the area of agriculture and rural development. There was **limited progress** in implementing last year's recommendations, with the adoption of a state-level Law on the wine market, for which the related by-laws now need to be adopted. Bosnia and Herzegovina is unevenly implementing the 2018-2021 strategic plan for rural development and has not yet made any significant steps in the adoption of a post-2021 state-level strategic plan; it still needs to adopt a state-level law on organic production and to update the legislation on quality policy, in line with the EU *acquis*. The 2022 recommendations remain broadly valid.

In the coming year, Bosnia and Herzegovina should in particular:

- complete the implementation of the 2018-2021 strategic plan for rural development, in particular by harmonising across the country and aligning with the EU *acquis* and adopt a country-wide strategy for agriculture and rural development for 2022-2027;
- adopt a state-level law on organic production and all the required by-laws for the implementation of the Law on the organisation of the wine market, in line with the EU *acquis*;
- update and adopt a state-level law on quality policy, in line with the EU *acquis*.

Concerning **horizontal issues**, the necessary administrative structures required for the common agricultural policy (CAP), including a paying agency, were not established and there was no progress in developing elements of an integrated administration and control system (IACS) or a farm accountancy data network (FADN). Bosnia and Herzegovina needs to improve sector coordination and strengthen administrative capacity at all levels of government. For the country to benefit from the instrument for pre-accession assistance for rural development (IPARD), the authorities need to set up the necessary institutional structures. Direct payments still need to be aligned with the EU *acquis*. Bosnia and Herzegovina needs to develop farm advisory services.

As regards **common market organisation (CMO)**, there was no progress in preparing and setting up the regulatory framework in line with the EU *acquis*. The Parliament adopted a state-level Law on the organisation of the wine market, for which all required by-laws now need to be adopted for it to start being applied. The setting up of a register of grapes and wine producers and of a vineyard register is still pending.

Bosnia and Herzegovina made no progress in harmonising **rural development** programmes and support measures. The relevant levels of government should address it in their policy implementation.

Reporting on the implementation of the 2018-2021 strategic plan for rural development is lacking, as the last report available is from 2018. The system of data collection and processing for planning agricultural and rural development policies and its implementation as well as monitoring and reporting needs to substantially improve. A 2022-2027 country-wide strategic plan for agriculture and rural development still needs to be adopted.

No progress was noted **on quality policy**. The legal framework still needs to be improved and harmonised with the relevant EU *acquis* and a clear distribution of competences in this area is needed.

There was no progress on **organic farming**. The state-level law still needs to be developed in line with the EU *acquis* and the regulatory framework harmonised across all levels of government. Support measures remain unevenly implemented across the country.

Chapter 12: Food safety, veterinary and phytosanitary policy

EU hygiene rules for foodstuff production ensure a high level of food safety. Animal health and welfare and the safety of food of animal origin are safeguarded together with the quality of seeds, plant protection material, the protection against harmful organisms and animal nutrition.

Bosnia and Herzegovina has **some level of preparation** in this area. **No progress** was made over the reporting period. Significant work is still necessary to align with the EU *acquis*, particularly as regards official checks, animal health and plant health. The administrative capacity of laboratories has yet to be strengthened and official checks need to be bolstered. To ensure alignment with the EU *acquis*, the country's central databases and animal registers require further improvements. The Commission's recommendations from last year were not met, therefore they remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- introduce inter-laboratory comparative test system as a regular practice, particularly between laboratories in charge of the analysis of samples for notifiable diseases, to increase checks and administrative capacity, especially of inspection services and laboratories;
- speed up preparations for national reference laboratories through further alignment with the *acquis*, and notably by increasing the accreditation of laboratory methods used in hygiene, veterinary and phytosanitary inspections, food and feedstuff analysis;
- improve the action plan for reliable certification of the necessary animal health statements contained in the certificate for the export of fresh meat to the EU market;

In the area of **general food safety, food safety rules and specific rules for feed**, no progress was made in improving the current system to fulfil the public and animal health requirements for the export of bovine, ovine and caprine meat. This means the authorities still cannot reliably certify the necessary animal health statements contained in the certificate for the export of fresh meat and meat products to the EU market. The database for animals and official checks is not fully reliable, and the surveillance programme for relevant notifiable diseases is very limited. Official laboratories lack the necessary capacity and are not accredited for methods to detect foot and mouth disease. Bosnia and Herzegovina prepared its action plan aiming to respond to the inefficiencies identified, but these have not yet been addressed.

Further work is still needed to improve the official control system in Bosnia and Herzegovina, notably for the registration of farm holdings and the deregistration of holdings

that are no longer active, plus to ensure the reliability of livestock numbers and species present on active holdings. Substantial work is also required to ensure the reliability of information in the central database for animal identification. Alignment has yet to be ensured for the surveillance of notifiable diseases, particularly when it comes to an early detection system and the awareness-raising of farmers. The inter-laboratory comparative test system in Bosnia and Herzegovina is still not set up, so not all laboratories can take part in disease validation and verification on a regular basis. The full national reference laboratories system is still not in place. To fully implement the EU *acquis* in this area, the setting up of national reference laboratories for food and feed needs to be stepped up; hygiene, veterinary and phytosanitary checks need to be improved; and the accreditation of laboratory methods used for these checks needs to be accelerated. Bosnia and Herzegovina has not yet met the criteria for the export of table eggs to the EU and its updated national salmonella control plan is not yet fully implemented. No progress was made on setting up its flock register, nor in ensuring the availability and completeness of data to ensure accurate reporting, in particular regarding prevalence and incidence.

Bosnia and Herzegovina's alignment with the EU *acquis* remains low, notably on the state-level laws on food (2004) and veterinary medicine (2002). A state-level law on official checks has not yet been prepared or adopted, and both the law on animal health and the law on animal welfare have yet to be updated. Further work is still necessary to implement effectively and harmonise the legislation at all levels of governance, particularly the hygiene package.

Bosnia and Herzegovina continued to monitor pesticide residues in and on food of plant and animal origin. The system for recognition of mineral and spring waters as well as for table waters was improved and the state register of these waters was updated.

No progress was made on **veterinary policy** and substantial work is still necessary on the control, prevention and eradication of communicable animal diseases. Significant work is required to improve monitoring and surveillance of brucellosis and rabies, which is not yet considered eradicated in Bosnia and Herzegovina as well as to improve coordination of managing the outbreak of African swine fever.

The country's system of managing animal disease notification and outbreak information is not yet aligned with the EU *acquis*; nor are the central animal identification and registration systems for sheep, goats, pigs and horses. While Bosnia and Herzegovina obtained permission to export fishery products to the EU market, there continue to be concerns about the monitoring of residues and contaminants in live animals and animal products, including inspections of veterinary medicinal products.

No progress was made concerning the **placing on the market of food, feed and animal by-products**. Bosnia and Herzegovina's food and feed control system is not yet aligned with the EU *acquis* and further structural and administrative work is still necessary at all levels of the government, particularly concerning inspection services and laboratories, for which inter-laboratory comparative tests have still not been introduced.

In the area of **phytosanitary policy**, to align with the EU *acquis*, reforms are still needed. Key state-level laws, notably the new plant health law and a state-level law on official checks, have not been adopted. While the implementation of the programme for special surveillance of quarantine pests for potatoes continued, as well as the registration of plant operators and varieties in a single phyto-registry, no progress was made on issuing plant passports and nor were the OECD seed schemes adopted. The country has not yet fulfilled the EU *acquis* requirements of setting up its laboratories as reference laboratories providing

phyto-sanitary checks. The principles of integrated pest management have yet to be implemented in a harmonised manner.

No progress was made in the area of **genetically modified organisms (GMOs)**, on which the level of alignment with the EU *acquis* remains low. Inspection services at all levels of the government are still insufficient and no progress was made in setting up the country's reference laboratory for testing, controlling and monitoring the presence of GMOs in food and feed.

Chapter 13: Fisheries and aquaculture

The common fisheries policy lays down rules on fisheries management, protects living resources of the sea and limits the environmental impact of fisheries. This includes setting catch quotas, managing fleet capacity, rules on control and inspection, rules on markets and aquaculture and support for fisheries and coastal communities. Further, it promotes a sustainable aquaculture.

Bosnia and Herzegovina is at an **early stage of preparation** in this area. There was **no progress**. The country still needs to prepare, adopt and implement a country-wide fisheries and aquaculture strategy in line with EU *acquis*. As the recommendations of 2022 were not implemented, they remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- prepare and adopt a country-wide strategy on fisheries and aquaculture in view of aligning the legislation with the EU *acquis*;
- harmonise the methodology for data collection for fish and fishery and aquaculture products across the country and establish relevant statistics.

There was no progress in developing a country-wide policy framework and legislation on inland and marine fisheries to prepare for the EU's common fishery policy (CFP). Preparation and adoption of a country-wide strategy and state-level legislation on fisheries and aquaculture should be stepped up and country-wide harmonisation ensured.

Institutional capacity and administrative structures need to be substantially strengthened. There are no specific **structural actions** in place to support small-scale and/or inland fisheries and aquaculture.

No progress was made in setting up relevant measures and strengthening administrative capacity to implement **resource and fleet management**. Bosnia and Herzegovina still needs to set up a fleet register and the system for management and control of fishing activities in line with the EU common fisheries policy. On **inspection and control**, the country still needs to improve and harmonise the data on catches and landings per type of fishery. More information is required on methodologies and planning for data collection. Bosnia and Herzegovina still lacks any structural and **State aid** measure in line with the EU *acquis*.

Concerning **market policy**, marketing standards for certain fishery and aquaculture products are in place, but there was no further progress including on the framework to recognise producer organisations in line with the EU *acquis*.

Regarding **international agreements**, Bosnia and Herzegovina continues to cooperate on fisheries with the General Fisheries Commission for the Mediterranean (GFCM), of which it is a cooperating non-contracting party and the UN's Food and Agriculture Organisation (FAO). As a party to the Malta *MedFish4Ever* Declaration, Bosnia and Herzegovina should contribute to its effective implementation.

Bosnia and Herzegovina is encouraged to promote regional cooperation with partner countries.

Chapter 22: Regional policy and coordination of structural instruments

Regional policy is the EU's main tool for reducing regional disparities and investing in sustainable and inclusive socio-economic growth. It is operating through "shared management" between the Commission and EU Member States. The implementation of cohesion policy programmes requires appropriate administrative capacity on programme and project level, the establishment of systems of sound financial management and control and also the fulfilment of other EU acquis elements such as environmental or public procurement legislation.

Bosnia and Herzegovina remains at **an early stage of preparation** in the area of regional policy and coordination of structural instruments. **No progress** was made during the reporting period. Although the IPA III Framework Partnership Agreement (FFPA) was ratified in August 2022, the obligation to appoint a National IPA Coordinator (NIPAC) for IPA III has not been met. Last year's recommendations were not implemented and remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- prepare a country-wide regional development strategy;
- improve public investment planning and update the single project pipeline in all relevant sectors, and ensure its endorsement by the National Investment Committee and its regular update;
- urgently appoint a National IPA Coordinator (NIPAC) for IPA III and reach an agreement on coordination procedures for the effective use of pre-accession funds while respecting the NIPAC functions as provided for in the IPA II Framework Agreement and IPA III Financial Framework Partnership Agreement.

On the **legislative framework**, Bosnia and Herzegovina still needs to establish a system for managing EU structural funds. It still lacks a number of country-wide strategies in fields relevant to cohesion policy. There is no sound country-wide regional development policy with accompanying institutional structure and performance monitoring framework. The NUTS II regions are only provisionally defined and accepted by the Commission until Bosnia and Herzegovina finalises and agrees the entire classification including definition of the NUTS III level. Bosnia and Herzegovina needs to improve the statistical and analytical basis (including definition of NUTS regions) to develop a sound strategic framework for cohesion policy. GDP per capita figures harmonised at NUTS II level are still to be provided. Existing budget laws allow for both flexibility and multi-annual budgeting, but the multi-annual programmes need to be included in a more comprehensive manner in the entities' budgets and more consistently across administrative levels. Legislative frameworks establishing financial control and independent internal audit structures are in place at both state and entity levels.

Concerning **the institutional framework** for IPA planning, the IPA III FFPA was ratified in August 2022. In order for IPA funding to continue, Bosnia and Herzegovina needs to urgently appoint a National IPA Coordinator (NIPAC) for IPA III, in line with the FFPA. The authorities need to agree on coordination procedures for the effective use of pre-accession funds while respecting the role of the NIPAC. The role of the NIPAC also needs to be strengthened.

Administrative capacity, including training in key institutions managing EU funds, is insufficient. The capacity for programming and managing EU pre-accession funds and introducing cohesion policy needs to be improved. To avoid an absorption shock at a later stage, Bosnia and Herzegovina needs to develop a systematic plan such as a management and control system roadmap to strengthen administrative capacity to implement EU regional policy.

Difficulties persist as a result of lack of agreement on how to reconcile the IPA legal framework with the system of coordination of European integration.

The National Investment Committee needs to revise its single project pipeline for the environment sector and finalise the one for the energy sector.

Bosnia and Herzegovina continues to gain experience in the programming and implementation of regional policy territorial cooperation through cross-border cooperation and transnational and interregional cooperation programmes. Bosnia and Herzegovina also participates in two macro-regional strategies for the Adriatic and Ionian region and for the Danube region, which promote cooperation and synergies among participating EU and non-EU countries.

Regarding **monitoring and evaluation**, the NIPAC office should urgently strengthen its capacity.

With the exception of cross-border cooperation programmes, Bosnia and Herzegovina is still lacking a **financial management, control and audit system** for EU funds. Structures and bodies defined in Annex A of the Framework Agreement under IPA II and the IPA III FFPAs still need to be established.

Chapter 33: Financial and budgetary provisions

This chapter covers the rules governing the funding of the EU budget ('own resources'). These resources mainly consist of: (i) contributions based on the gross national income of each Member State; (ii) customs duties; (iii) the non-recycled plastic resource and (iv) a resource based on value-added tax. Member States must have the appropriate administrative capacity to adequately coordinate and ensure the correct calculation, collection, payment and control of own resources.

Bosnia and Herzegovina is at an **early stage** of preparation in the area of financial and budgetary provisions. **No progress** was made on strengthening administrative capacity for coordination and management of own resources. Significant further efforts are needed to ensure sound capacity, institutional set-up and cooperation of institutions and bodies to be involved in application of the own-resources system. The recommendations from last year remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- strengthen capacity and inter-agency cooperation to combat tax and customs fraud;
- bolster the capacity of the Indirect Tax Authority (ITA) to effectively implement customs legislation;
- adopt a master plan for the production of national accounts for Bosnia and Herzegovina.

There was no progress in improving the capacity of ITA and in implementing an accounting system for customs duties to distinguish between recovered debts and outstanding debts, in line with the EU's **traditional own resources** accounting. There was no progress in aligning the VAT law with the EU *acquis*, in particular as regards special schemes and exceptions.

On **gross national income (GNI) resource**, the definitions and accounting rules of ESA 2010 are used for compilation of the GNI. There was no progress in setting up a common, coordinated and appropriate national accounts system for the whole country. This should be given high priority. A master plan for the development of national accounts still needs to be adopted to facilitate development of this system, in line with ESA 2010.

In terms of **administrative infrastructure**, there was no progress in providing sufficient human and administrative resources to ensure the full and correct application of EU rules concerning payments into the EU budget. Better coordination among administrative structures and implementing rules are needed to ensure correct forecasting, calculation, accounting, collection, payment and monitoring of own resources.

CLUSTER 6: EXTERNAL RELATIONS

This cluster covers: external relations (Chapter 30); foreign, security and defence policy (Chapter 31).

Bosnia and Herzegovina should implement the action plan for the Common Regional Market by adopting and implementing the relevant protocols to the Central European Free Trade Agreement (CEFTA). Bosnia and Herzegovina should finalise its accession to the WTO and consider establishing a development and humanitarian aid policy. The country's alignment with EU foreign policy significantly improved, notably on statements and restrictive measures following Russia's war of aggression against Ukraine, although implementation of sanctions remains a challenge. The country should appoint a 'political director' and 'European correspondent', and strengthen arms control and monitoring regimes.

Chapter 30: External relations

The EU has a common commercial policy towards third countries, based on multilateral and bilateral agreements and autonomous measures. There are also EU rules on humanitarian aid and development policy.

Bosnia and Herzegovina has reached **some level of preparation** in the area of external relations. There was **no progress**. The capacity to tackle key challenges in trade policy has yet to be strengthened. Bosnia and Herzegovina again introduced temporary export restrictions in May 2023 on certain wood products. These decisions should be revoked without delay, and Bosnia and Herzegovina should abstain from taking further unilateral trade measures without valid justification and prior consultation with the Commission in line with its obligations under the SAA. The Commission's recommendations of 2022 were not implemented and remain valid.

In the coming year, Bosnia and Herzegovina should in particular:

- finalise its accession to the World Trade Organization (WTO);
- implement the 2021-2024 Common Regional Market action plan, in particular by implementing CEFTA Additional Protocol (AP) 5 on trade facilitation and CEFTA AP 6 on trade in services, and negotiate and ensure swift adoption of CEFTA AP 7 on dispute settlement;
- start the process leading to the establishment of a development and humanitarian aid policy.

On the **common commercial policy**, no progress was made on accession to the WTO, although membership negotiations have been at a very advanced stage for some time. The Russian Federation is the only WTO member that has not completed its bilateral negotiations

with Bosnia and Herzegovina on market access for goods and services, having raised one outstanding issue on the need to amend the legislation on the quality of liquid petroleum fuels. The decision to amend this legislation has yet to be approved by the Council of Ministers.

Bosnia and Herzegovina needs to adopt CEFTA AP 5 on trade facilitation and CEFTA AP 6 on trade in services as soon as possible. In addition Bosnia and Herzegovina should negotiate and ensure swift adoption of the CEFTA AP 7 on dispute settlement and proceed with the implementation of the 2021-2024 Common Regional Market action plan.

In May 2023, Bosnia and Herzegovina introduced a further temporary export ban for certain wood products, following similar measures taken in 2022. The ban was introduced without providing sufficient justifications or notifying or consulting the Commission in advance, as required under the SAA. This decision has now lapsed but Bosnia and Herzegovina should abstain from taking further unilateral trade measures, without prior consultation with the Commission and without a valid justification, in line with its obligations under the SAA. Bosnia and Herzegovina should also take action to cease the practice by certain cantons of excluding certain imported medicines from the lists of medicines that can be prescribed and dispensed at the expense of the compulsory health insurance.

Bosnia and Herzegovina applies export controls on **dual-use goods** in accordance with its legislation. The framework legislation needs to be aligned with the latest EU *acquis*, namely Regulation (EU) 2021/821 and its annual updates as regards the list of dual-use items.

As regards **bilateral agreements with third countries**, Bosnia and Herzegovina needs to further strengthen its administrative capacity and improve cooperation and coordination between ministries and the different levels of competent authorities in order to ensure consistency of implementation and enforcement. Bosnia and Herzegovina has 36 bilateral investment treaties in force, 18 of which are with EU Member States.

There were no changes in the areas of **development policy** and **humanitarian aid**. The country is a recipient of aid programmes and has so far provided humanitarian aid only ad hoc. Bosnia and Herzegovina is encouraged to start the process of establishing a legal framework covering international cooperation and development policy as well as humanitarian aid, in accordance with EU policies and principles, and to build dedicated administrative structures.

Chapter 31: Foreign, security and defence policy

Member States must be able to conduct political dialogue under the EU foreign, security and defence policy, align with EU statements, take part in EU actions, and apply agreed sanctions and restrictive measures.

Bosnia and Herzegovina has **some level of preparation** in the area of common foreign, security and defence policy. There was **some progress**, as the country significantly improved its alignment with EU foreign policy, notably on statements and restrictive measures following Russia's war of aggression against Ukraine, upon the initiative of the Ministry of Foreign Affairs. Alignment with EU restrictive measures remains a matter of political dispute, and certain ministries have hindered their implementation. Bosnia and Herzegovina has yet to join a number of international arms control regimes as well as to strengthen the monitoring regime regarding weapons and military equipment. Bosnia and Herzegovina continued to participate in EU crisis management missions and operations under the common security and defence policy.

In the coming year, Bosnia and Herzegovina should in particular:

- achieve and maintain full alignment with EU Common Foreign and Security Policy, ensure the thorough implementation of restrictive measures stemming from EU alignment, and make further efforts to close space for foreign interference and information manipulation;
- align legislation and procedures with EU standards on marking and deactivation of small arms and light weapons, including for seized and confiscated weapons;
- appoint the ‘political director’ and ‘European correspondent’ within the Ministry for Foreign Affairs.

The **political dialogue** between the EU and Bosnia and Herzegovina on foreign and security policy issues continued, including at high level. In March 2023, Bosnia and Herzegovina participated at ministerial level at the first Schuman Security and Defence Forum and in May 2023 in the working lunch with members of the Foreign Affairs Council. In April 2023, the deputy foreign minister participated in the informal EU-Western Balkans meeting of political directors in Brussels.

The implementation of Bosnia and Herzegovina’s 2018-2023 foreign policy strategy in the reporting period was affected by frequently divergent positions among the members of the Presidency.

Bosnia and Herzegovina still needs to appoint a ‘political director’ and ‘European correspondent’ within the Ministry of Foreign Affairs. Rules and practices based on ethnic quotas in appointing the diplomatic and consular staff have a negative impact on the capacity of the ministry, adversely affecting Bosnia and Herzegovina’s foreign policy objectives.

On **common foreign and security policy (CFSP)**, Bosnia and Herzegovina has significantly improved its alignment with EU statements and relevant Council Decisions, including with restrictive measures following Russia’s unprovoked war of aggression against Ukraine. Alignment with EU sanctions remains a matter of political contestation as one member of the Presidency advocated for a neutral stance on Russia’s war of aggression against Ukraine, which resulted in significant hindrances to their implementation, including not banning flights from Russia or the broadcast of Russian state-sponsored media. In 2022, Bosnia and Herzegovina’s alignment rate with relevant High-Representative statements on behalf of the EU and with Council Decisions reached 80%. As of August 2023, Bosnia and Herzegovina’s alignment rate was of 98% as the country started to align also with EU positions on Iran and Syria. Bosnia and Herzegovina aligned with the EU position at the United Nations General Assembly (UNGA), the OSCE and the Council of Europe on Russia’s war of aggression against Ukraine, including the UNGA resolution on the principles underlying a comprehensive, just and lasting peace in Ukraine adopted in February 2023. Bosnia and Herzegovina should reach full alignment with EU foreign policy to signal its commitment to the EU path and continue to strengthen its capacity to implement and enforce the sanctions in place.

Regarding **cooperation with international organisations**, Bosnia and Herzegovina is a member of and actively participates in the work of major international organisations, including the United Nations, the Council of Europe and the OSCE. Bosnia and Herzegovina chaired the OSCE Forum for Security Co-operation from January to April 2023. Bosnia and Herzegovina has been participating in NATO’s membership action plan since 2019.

Bosnia and Herzegovina maintains a bilateral immunity agreement with the United States, granting US citizens exemptions from the jurisdiction of the International Criminal Court. In doing this, Bosnia and Herzegovina does not comply with the EU common positions on the

integrity of the Rome Statute or related EU guiding principles on bilateral immunity agreements. Alignment with the EU position is therefore needed.

Bosnia and Herzegovina supports all EU measures and instruments for **conflict prevention**.

On **non-proliferation**, Bosnia and Herzegovina has yet to join international control regimes such as the Wassenaar Arrangement, the Australia Group, the Missile Technology Control Regime and the Nuclear Suppliers Group.

On trade in conventional weapons, military equipment and dual-use items, the country's overall legal and institutional framework is broadly in line with the EU *acquis*. Further improvements are required regarding the monitoring regime of weapons and military equipment produced and traded within the country.

Bosnia and Herzegovina is party to the Chemical Weapons Convention and has legislation in place to implement it, together with a state-level coordination body.

As regards small arms and light weapons, Bosnia and Herzegovina is implementing the 2018 regional roadmap and the 2021-2024 strategy and action plan. Bosnia and Herzegovina needs to mark and register all weapons of the country's security forces into a single registry to ensure adequate traceability, develop post-manufacture marking requirements for weapons earmarked for deactivation, in line with EU standards, and improve the traceability of seized and confiscated weapons, notably by amending the Law on marking to cover these types of firearms.

In terms of **security measures**, Bosnia and Herzegovina continued to implement the agreement with the EU on security procedures for the exchange of classified information.

Regarding the **common security and defence policy** (CSDP), Bosnia and Herzegovina has established a framework with the EU for participation in crisis management missions and operations. Bosnia and Herzegovina contributes to the EU Training Mission (EUTM) in the Central African Republic. Bosnia and Herzegovina also takes part in UN missions in the Democratic Republic of the Congo and in Mali. The Armed Forces of Bosnia and Herzegovina act as a functional, professional military organisation in spite of the protracted shortage of personnel and equipment. Bosnia and Herzegovina is invited to step up participation in CSDP military missions and operations.

The demining battalion of the Armed Forces of Bosnia and Herzegovina is essential to achieve a mine-free Bosnia and Herzegovina. The civilian mine action authorities (Demining Commission and BH Mine Action Centre) need to develop and adopt the bylaws and standard operating procedures required by the new land release method.

Bosnia and Herzegovina takes part in the European Peace Facility Balkan Medical Task Force assistance measure and is a beneficiary of an assistance measure for the Armed Forces of Bosnia and Herzegovina.

Bosnia and Herzegovina does not have an overall assessment or a policy framework for addressing **hybrid threats**, and remains vulnerable to cyberattacks. In 2022, several serious cyberattacks targeted the country's institutions, including the Parliament. Banja Luka-based provider M-tel continued to carry the signal of the RT and Sputnik channels, despite Bosnia and Herzegovina's alignment with EU sanctions on Russia prohibiting the broadcast of content from these Russian state-sponsored media outlets. In line with the Declaration of the EU – Western Balkans summit (Tirana, 6 December 2022), Bosnia and Herzegovina needs to make further efforts on closing space for foreign interference and information manipulation, including disinformation, taking actions towards building societal resilience against all forms

of hybrid threats.

ANNEX I – RELATIONS BETWEEN THE EU AND BOSNIA AND HERZEGOVINA

The **Stabilisation and Association Agreement (SAA)** entered into force in June 2015. Policy dialogue in the joint bodies under the agreement restarted throughout the reporting period after political blockade in 2021-2022. Following completion of the 6th cycle of subcommittees, the SA Committee took place on 16 June and the SA Council on 19 July 2023. The country also participates in Economic and Financial Dialogue between the EU and the Western Balkans and Türkiye, where joint recommendations were adopted at ministerial level on 16 May 2023.

The SAA and its Interim Agreement, applied since 2008, have allowed progressive **trade** liberalisation and mutual duty-free access for most goods. Since 2000, Bosnia and Herzegovina has also been benefiting from autonomous trade measures. The country joined the Central European Free Trade Agreement (CEFTA) in 2007. The EU is the main trading partner of Bosnia and Herzegovina, accounting for 63% of the country's trade in goods (74% of exports and 57% of imports), for a total trade volume of EUR 15.1 billion in 2022.

Bosnia and Herzegovina had applied for EU membership in 2016, and in May 2019 the Commission adopted its **opinion (avis)** setting out **14 key priorities** in the areas of democracy/functionality, rule of law, fundamental rights, and public administration reform. Fulfilling the 14 key priorities will allow the Commission to recommend opening EU accession negotiations with Bosnia and Herzegovina. In December 2022 the European Council granted Bosnia and Herzegovina **candidate country** status, on the understanding that a number of steps are taken, as outlined in the Commission recommendation in October 2022.

Visa liberalisation for citizens of Bosnia and Herzegovina travelling to the Schengen area has been in force since December 2010. A readmission agreement has been in force since 2008. The Commission's sixth report under the visa suspension mechanism in October 2023 concluded that Bosnia and Herzegovina continues to meet the visa liberalisation benchmarks.

Bosnia and Herzegovina significantly improved alignment with EU **common foreign and security policy** positions and declarations. Bosnia and Herzegovina continued to participate in EU crisis management missions and operations under the common security and defence policy. The EU continued to deploy considerable resources in Bosnia and Herzegovina. The enhanced presence of the combined Office of the EU Special Representative and the EU Delegation in Bosnia and Herzegovina continued to be instrumental in communicating EU priorities to citizens and in implementing the objectives of the EU agenda in key areas. The **EUFOR Althea** military operation remained deployed in the country, retaining deterrence capacity to support a safe and secure environment. The UN Security Council extended EUFOR's mandate until November 2024.

The Armed Forces of Bosnia and Herzegovina benefit from EUR 20 million assistance from the **European Peace Facility (EPF)**, which enhances their capacity to participate in CSDP military missions and operations. Their demining battalion is essential for achieving a mine-free Bosnia and Herzegovina and benefits from EPF support in purchasing vehicles and metal detectors. The Armed Forces of Bosnia and Herzegovina received EPF support in chemical, biological, radiological and nuclear (CBRN) protection, and also take part in the EUR 6 million EPF Balkan Medical Task Force assistance measure.

The EU is the main provider of **financial assistance** to Bosnia and Herzegovina, notably under the **Instrument for Pre-accession Assistance (IPA)** with a total allocation of EUR 565.77 million under IPA II in 2014-2020 and EUR 188 million under IPA III 2021-23. Bosnia and Herzegovina benefits from EUR 70 million (IPA 2023) for a State and Resilience

Building Contract as part of the EUR 1 billion Energy Support Package for the Western Balkans, aimed to help to mitigate the increase of energy prices for vulnerable households and businesses in the immediate term and support energy transition and energy security in the Western Balkans. Under the EIP, Bosnia and Herzegovina benefits from a portfolio of **EUR 934 million** of ongoing/active bilateral IPA funds, mobilising additional funding of EUR 2.595 billion.

The EU provides support via IPA and the Foreign Policy Instrument to strengthen Western Balkans partners' resilience to face hybrid threats including cyber and foreign information manipulation and interference.

Bosnia and Herzegovina also benefits from investments through the **Western Balkans Investment Framework (WBIF)**. WBIF provided to Bosnia and Herzegovina since 2009 approx. EUR 717 million of grants for investment and technical assistance. The current WBIF portfolio amounts to EUR 640 million of grants leveraging investments estimated at **EUR 2 billion**.

Bosnia and Herzegovina participates in three **cross-border cooperation programmes**, as well as in transnational cooperation programmes. To facilitate the development of public procurement in the country, Bosnia and Herzegovina is participating as an observer in a pilot project under the Technical Support Instrument.

Bosnia and Herzegovina also participates union programmes, such as Horizon 2020, Creative Europe, Fiscalis 2020, Erasmus+ (international dimension), the Civil Protection Mechanism of the Union (as of 2023), and the Single Market Programme. Bosnia and Herzegovina has expressed interest or is considering joining several more programmes: Customs, Health, Justice, Citizens, Equality, Rights and Values (CERV), Employment and Social Innovation (EaSI), as well as Digital Europe programme, during or after 2023.

STATISTICAL DATA (as of 31/08/2023)
Bosnia and Herzegovina

- 4) Based on IMF balance of payments manual, sixth edition.
- 5) Based on IMF balance of payments manual, sixth edition and OECD Benchmark Definition of Foreign Direct Investment - 4th edition
- 6) End of year (31 December).
- 7) M1 money supply comprises cash outside banks and transferable deposit in domestic currency of all domestic sectors (except central government deposits).
- 8) M2 money supply is comprised of money supplies, M1 money and QM quasi money. QM money supplies covers other deposits in domestic currency, transferable and other deposits in foreign currency of all domestic sectors (except the deposits of the central government).
- 9) Central Bank of BiH produces only the following monetary aggregates: M1, QM and M2 based on IMF recommendations.
- 10) Based on IMF monetary and financial statistics manual, 2000.
- 11) In accordance with the Decision on Credit Risk Management and Determination of Expected Credit Losses, from supervisory body, since January 1, 2020, commercial banks have re-recorded some of the bank's balance sheet receivables on of balance sheet records, which caused a decrease in loan of approximately 400 millions KM in private enterprises and household sectors.
- 12) Data for monetary financial institutions.
- 13) The Central Bank of Bosnia and Herzegovina started with other financial corporation statistics from 2006.
- 14) Money market is not yet established in Bosnia and Herzegovina.
- 15) Short-term lending rates in national currency to non-financial corporations (weighted average).
- 16) Demand deposit rates in national currency of households (weighted average).
- 17) Paasche export and import unit value indices
- 18) Since January 2020, the Labour Force Survey in Bosnia and Herzegovina has been conducted continuously, throughout the year, with quarterly data release. Also, from 2020 the procedure of weight calibration according to population estimates by five-year age groups and sex is carried out.
- 19) From January 2021, the Agency for Statistics of Bosnia and Herzegovina began to apply the new, redesigned methodology of the Labour Force Survey. The redesign of the survey took place on the basis of and in accordance with the new Regulation of the European Parliament and the Council, which entered into force on 1st January 2021. With the introduction of the new, redesigned methodology of the Labour Force Survey from January 2021, the series of data published in the previous year was interrupted.
- 20) The public sector includes NACE Rev. 1.1 Sections L, M and N while the private sector includes other NACE Sections.
- 21) The public sector includes NACE Rev. 2 Sections O, P and Q while the private sector includes other NACE Sections.
- 22) Net earnings.
- 23) From 2020 onwards LFS is conducted on a quarterly basis leading to break in series compared to results from previous years. With the introduction of the new, redesigned methodology of the Labour Force Survey (Regulation (EU) 2019/1700; Implementing Regulation (EU) 2019/2240) from January 2021, the series of data published in the previous year was interrupted. This means that the data for 2020 and 2021 are also not comparable.
- 24) Data for variables TEL1200Z, TEL3100Z, TEL3200Z are estimated for 2021 based on estimated total number of population for 2020 reference year. Official estimate of total number of population for 2021 will be available by the end of October 2022. Revised data will be submitted in the 2nd wave of data collection
- 25) Data not collected on inland waterways. Road share of inland freight transport based on road and rail transport.

Annex I – Relations between the EU and Türkiye.....	131

1. INTRODUCTION

1.1 CONTEXT

Türkiye¹ remains a key partner for the European Union and a candidate country. Türkiye has been linked to the EU by an association agreement since 1964 and a Customs Union was established in 1995. The European Council granted Türkiye the status of candidate country in December 1999 and accession negotiations were opened in October 2005. Within the framework of accession negotiations, 16 chapters have been opened and one has been provisionally closed. Accession negotiations with Türkiye, however, remain at a standstill, in line with the Council Conclusions of June 2018 as reiterated by the Council Conclusions of December 2022. Türkiye continued to move away from the EU and did not reverse the negative trend in relation to reform, despite its repeated statements of commitment to EU accession. The EU's serious concerns on the continued deterioration of democratic standards, the rule of law, the independence of the judiciary and respect for fundamental rights were not addressed.

Presidential and parliamentary elections were held in Türkiye in May 2023. The ruling coalition retained its majority in the parliament and the incumbent President was re-elected. The priorities of the new government include post-earthquake relief and reconstruction, financial stability and a constitutional overhaul.

In February 2023, two powerful earthquakes and multiple aftershocks struck south-eastern Türkiye. The devastating earthquakes caused the death of tens of thousands of people and resulted in widespread destruction of public and private infrastructure, including schools and healthcare facilities. The EU's reaction was immediate and substantial emergency assistance was provided both through humanitarian funding and the EU Civil Protection Mechanism. In March 2023, the European Commission and the Swedish Presidency of the Council of the EU hosted, in coordination with the Turkish authorities, an international donors' conference to mobilise funds from the international community to support the early recovery, relief and reconstruction of the affected areas. This conference raised more than EUR 6 billion. The implementation of the assistance pledged by the European Commission has begun.

The EU has a strategic interest in a stable and secure environment in the Eastern Mediterranean and in the development of a cooperative and mutually beneficial relationship with Türkiye. The European Council in June 2022 reconfirmed its expectation that Türkiye fully respects international law, contributes to the de-escalation of tensions in the interest of regional stability in the Eastern Mediterranean and promotes good-neighbourly relations in a sustainable way. The European Council in June 2023 invited the High Representative and the Commission to submit a report to the European Council on the state of play of EU-Türkiye relations, building on the instruments and options identified by the European Council and with a view to proceeding in a strategic and forward-looking manner. The Foreign Affairs Council discussed Türkiye in July 2023.

During the reporting period, Türkiye did not engage in any unauthorised drilling activities in the Eastern Mediterranean. It continued to refuse to recognise the Republic of Cyprus and repeatedly advocated a two-state solution in Cyprus, contrary to relevant UN Security Council Resolutions.

¹ In line with the request of the Republic of Türkiye regarding the use of the country's new official name in English, this document uses the name "Türkiye" instead of "Turkey" in English. This administrative change is limited to the nomenclature used in EU documents, does not have a retroactive effect, and entails no legal consequences. This approach is without prejudice to the nomenclature used by Member States.

The 2016 EU-Turkey Statement continued to yield results and remained the key framework for cooperation on migration. Türkiye sustained its remarkable efforts to host 3.6 million refugees from Syria and other countries. The EU has mobilised close to EUR 10 billion to support refugees and host communities since 2012. The Commission continued to implement the additional package of EUR 3 billion covering 2021-2023, providing assistance in areas such as basic needs, border management, education, healthcare, protection and socio-economic support.

1.2. SUMMARY OF THE REPORT ²

There are serious deficiencies in the functioning of Türkiye's **democratic institutions**. Democratic backsliding continued during the reporting period. Structural deficiencies in the presidential system remained in place.

Presidential and parliamentary elections took place on 14 May 2023. A second round of the presidential election was held on 28 May. The elections were held under the new electoral law adopted in March 2022. The elections offered voters a choice between genuine political alternatives and voter participation remained high, but biased media coverage and the lack of a level playing field gave an unjustified advantage to the incumbent.

The constitutional architecture kept powers centralised at the level of the Presidency and does not ensure a sound and effective separation of powers between the executive, the legislature and the judiciary. The ineffective checks-and-balances mechanism means that the executive branch is democratically accountable only through elections.

Political pluralism continued to be undermined by the targeting of opposition parties and individual members of parliament. The government's pressure on mayors from opposition parties continued to weaken local democracy. Most regulatory authorities remain directly linked to the Presidency. The recommendations by the Council of Europe's Venice Commission on the presidential system remain unaddressed.

The **situation in the south-east region** remained a cause for concern, particularly after the earthquakes in February 2023. The Turkish government conducted security and military operations in Iraq and Syria. Border areas faced a security risk with terrorist attacks by the Kurdistan Workers' Party (PKK), which is listed as a terrorist group by the EU. The government has a legitimate right and a responsibility to fight terrorism, but it is essential that it does so in full compliance with the principles of the rule of law, human rights and fundamental freedoms. Anti-terror measures need to be proportionate. There was no progress in resuming a credible political peace process to resolve the Kurdish issue. Following the earthquakes, the Kurdistan Communities Union (KCK) declared a period of unilateral truce, during the run-up to the May elections, which was terminated in June. Turkish officials linked the PKK-affiliated People's Protection Units (YPG) to an attack in Istanbul in November 2022, but the PKK denied involvement. The EU unambiguously condemned the PKK's attacks and expressed solidarity with the families of the victims. Türkiye continued to carry out airstrikes against the PKK and affiliated groups in northern Syria and Iraq.

² This report covers the period from June 2022 to June 2023. It is based on input from a variety of sources, including contributions from the government of Türkiye, the EU Member States, European Parliament reports and information from various international and non-governmental organisations. It also includes the results of comparative assessments and indices produced by other stakeholders, in particular in the area of rule of law.

The report uses the following assessment scale to describe the state of play: early stage, some level of preparation, moderately prepared, good level of preparation and well advanced. To describe progress made during the reporting period, it uses the following scale: backsliding, no progress, limited progress, some progress, good progress and very good progress. Where appropriate, interim steps have also been used.

Serious backsliding regarding **civil society** issues continued. Civil society organisations faced increased pressure and shrinking space to operate , limiting their freedoms of expression, association and assembly. The implementation of the Law on preventing financing of proliferation of weapons of mass destruction placed further restrictions on civil society organisations. However, despite increasing pressure from the authorities, civil society continued to be vocal and to participate actively in civic life, including by providing support to the people affected by the February 2023 earthquakes.

Civilian oversight of the security forces was not consolidated. The executive branch maintained significant control over the security forces. The civilian component of the Supreme Military Council (YAŞ) remained unchanged. The military judicial system's authority was curbed, with civilian higher courts reviewing appeals against military court decisions. However, effective civilian oversight of the security forces remained incomplete and lacking in effective accountability mechanisms. Strengthening parliamentary oversight of security institutions is necessary.

Türkiye is in between some and moderate level of preparation in the field of **public administration reform**. It made no progress in this area over the reporting period. There is still a lack of political will to reform the public administration and public financial management. The restructuring of the executive branch and the overhaul of the public administration in line with the presidential system introduced in 2018 resulted in highly centralised policymaking system. The level of accountability of the administration remains insufficient. Its human resources management system needs to be reformed. Politicisation of the public administration has continued. The share of women in managerial posts in the civil service is still low.

Türkiye remains at an early stage of preparation in the area of **judiciary**. Serious backsliding continued and, despite several judicial reform packages in recent years, the structural deficiencies in the judicial system remained unaddressed. The continued refusal to implement certain rulings of the European Court of Human Rights (ECtHR) remains a matter of concern. There was no progress in eliminating undue influence and pressure by the executive on judges and prosecutors, which negatively affects the independence, impartiality and quality of the judiciary. Implementation of the 2021 Human Rights Action Plan (HRAP) and the 2019 Judicial Reform Strategy (JRS) continued, but the activities foreseen in these documents fell short of addressing the structural problems and issues identified in the previous reports of the European Commission. The lack of objective, merit-based, uniform and pre-established criteria for recruiting and promoting judges and prosecutors remains a source of concern.

Türkiye is at an early stage in the **fight against corruption**. There was no progress in the reporting period. Outstanding deficiencies in key areas of the fight against corruption over the last years remained unaddressed. A fully-fledged corruption prevention policy still remains to be developed, including the relevant institutions, contrary to the United Nations Convention against Corruption, to which Türkiye is party. Legislative gaps still remain in several fields of the fight against corruption. The limitations of the legal framework and the institutional architecture allowed undue influence on the investigation and prosecution phases of corruption cases. The accountability and transparency of public institutions need to be improved. The absence of an anti-corruption strategy and action plan indicates the lack of will to fight decisively against corruption. The Council of Europe's Group of States against Corruption (GRECO) recommendations remained unimplemented. Overall, corruption remains a problem.

Türkiye has some level of preparation in **the fight against organised crime** and there was some progress at operational level through participation in an increasing number of joint operations with EU Member States and neighbouring countries. Nevertheless, it is important for Türkiye to further increase its operational willingness to cooperate and exchange information with EU law enforcement partners. The legal framework for the fight against organised crime and police cooperation is only partially aligned with the EU *acquis*. The completion of an international agreement between the EU and Türkiye on the exchange of personal data between Europol and the Turkish authorities responsible for fighting serious crime and terrorism is still pending, considering also that the Turkish data protection legislation is still not aligned with the EU *acquis*. The legal framework regulating the fight against money laundering and terrorist financing needs to be improved in line with the recommendations of the Financial Action Task Force (FATF) and the Venice Commission on the Law on preventing financing of proliferation of weapons of mass destruction.

The deterioration of human and fundamental rights continued. The Turkish legal framework includes general guarantees of respect for human and fundamental rights, but the legislation and its implementation need to be brought into line with the European Convention on Human Rights (ECHR) and European Court of Human Rights (ECtHR) case law. No legislative amendments were adopted to eliminate the remaining elements of the 2016 state of emergency laws.

Türkiye's refusal to implement certain ECtHR rulings is a source of concern regarding the judiciary's adherence to international and European standards. Türkiye has not implemented the July 2022 ruling of the Grand Chamber of the European Court of Human Rights, which was issued in the framework of the infringement procedure launched by the Committee of Ministers against Türkiye, that points to a drifting away from the standards of human rights and fundamental freedoms that it has subscribed to as a member of the Council of Europe.

The implementation of the human rights action plan adopted in 2021 continued. However, it did not address critical issues. The overall human rights situation did not improve.

On freedom of expression, the serious backsliding continued. Broad restrictions on the activities of journalists, writers, lawyers, academics, human rights defenders and critical voices continued to have a negative effect on the exercise of their freedoms. The implementation of the criminal laws relating to national security and anti-terrorism continued to contravene the ECHR and to diverge from ECtHR case law.

The May 2023 election campaign witnessed restrictions on freedom of expression, both private and public media did not ensure editorial independence and impartiality in their coverage of the campaign, detracting from the ability of voters to make an informed choice.

There was no progress in the area of freedom of assembly and association, where legislation and its implementation are not in line with the Turkish Constitution, European standards or the international conventions that Türkiye is party to. There were recurrent bans, disproportionate use of force and interventions around peaceful demonstrations. Demonstrators were subject to investigations, court cases and administrative fines on charges of terrorism-related activities or of violating the Law on demonstrations and marches.

The rights of the most disadvantaged groups and people belonging to minorities need better protection. Roma³ people are still largely excluded from formal employment and their living conditions deteriorated severely. In January 2023, Türkiye adopted a new Roma strategy

³ In line with the terminology of European institutions the umbrella term 'Roma' is used here to refer to a number of different groups, without denying the specificities of these groups.

covering the period 2023-2030 and an action plan covering the period 2023-2025. The February 2023 earthquakes affected the Roma population disproportionately, and increased the difficulties they faced in the affected areas in terms of living conditions, livelihood and basic needs and health, especially for women and children. Gender-based violence, discrimination and hate speech against minorities and against lesbian, gay, bisexual, transgender, intersex and queer (LGBTIQ) persons are still a matter of serious concern.

On **migration and asylum policy**, Türkiye made some progress. The EU-Turkey Statement remained the main framework for cooperation between the EU and Türkiye. Some progress was made in further strengthening the capacity for surveillance and protection of the land borders with Iran and Iraq. The Commission expects Türkiye to uphold its commitments under the EU-Turkey statement, in line with the European Council conclusions of October 2021, including prevention of irregular migration from land and sea routes, and resuming returns. The return of irregular migrants from the Greek islands under the EU-Turkey Statement remained suspended. The full and effective implementation of the EU-Turkey readmission agreement towards all EU Member States is pending. Political and technical dialogue is ongoing on migration and security. The next EU-Türkiye high level dialogue on migration is scheduled to take place on 23 November 2023. Overall, the number of illegal border crossings between Türkiye and Greece remained significantly lower than it was prior to the adoption of the EU-Turkey Statement. In 2022, the number of irregular migrants arriving increased on most routes by comparison with 2021. In the first half of 2023, the number of irregular arrivals from Türkiye into the EU was lower than in the same period in 2022. Arrivals in Greece increased by 62%, while the sea route to Italy saw a substantial decrease (down by 52%) and the number of arrivals in Cyprus via the Green Line went down significantly by 42%. Türkiye has still not implemented the provisions relating to third-country nationals in the EU-Turkey readmission agreement, which entered into force in October 2017.

Türkiye continued to make significant efforts to host and meet the needs of one of the largest refugee communities in the world. Out of the almost EUR 10 billion in EU support to refugees allocated since 2011, some EUR 7 billion had been disbursed by September 2023. Efficient integration measures are needed to address the prolonged presence of refugees in the country. Access to public health for migrants and refugees should be improved. No outstanding benchmarks under the visa liberalisation roadmap were fulfilled. Türkiye still needs to further align its legislation with the EU *acquis* on visa policy.

Türkiye is an active and significant actor in the area of **foreign policy**, which constitutes an important element in the context of the EU-Türkiye relationship. Nevertheless, Türkiye's unilateral foreign policy remained at odds with the EU's priorities under the common foreign and security policy (CFSP). Türkiye maintained a very low alignment rate of 10% with the EU stance on foreign and security policy (as of August 2023), compared to 8% in 2022. Its rhetoric in support to terrorist group Hamas following its attacks against Israel on 7 October 2023 is in complete disagreement with the EU approach.

Following Russia's war of aggression against Ukraine, Türkiye condemned the Russian military aggression, including at the UN General Assembly, and engaged politically and diplomatically, including by facilitating the export of Ukrainian grain and the exchange of prisoners. The UN- and Türkiye-brokered Black Sea Grain Initiative was terminated by Russia in July 2023. Türkiye also sought to facilitate talks between Ukraine and Russia and to work on de-escalation and bringing about a cease-fire. Nevertheless, Türkiye refrained from aligning itself with the EU's restrictive measures against Russia. As of March 2023, Türkiye has implemented a ban on exporting to Russia sanctioned goods originating from the EU, the

United States and the United Kingdom. This ban specifically targeted goods that were in transit, stored in warehouses or located within free zones in Türkiye. However, the potential transportation of dual-use and sensitive technology goods, as well as the unrestricted movement of sanctioned goods from Türkiye to Russia still need to be addressed. Overall, Türkiye significantly intensified its trade and economic ties with Russia, and the Turkish economy became more dependent on Russia in crucial sectors, particularly in energy.

Türkiye intensified its 'regional normalisation' policy with the Arab states, with Armenia and with Israel. Following the Hamas terrorist group's attacks against Israel in October 2023, Türkiye refrained from condemning and qualifying them as terrorism and strongly criticised Israel's response. Türkiye strongly condemned the loss of civilian lives on both sides and proposed to act as a mediator between Israel and Hamas. Türkiye is currently re-evaluating its ties with Israel. On the Middle East Peace Process (MEPP), Türkiye's position aligns with the EU's position supporting the two-state solution. Türkiye's *rapprochement* with the Syrian regime, brokered by Russia, occurred in spite of the lack of a political resolution to the Syrian conflict and is at odds with the EU's policy. At the same time, Türkiye shared a common goal with the EU to achieve a stable and prosperous Syria, primarily by implementing UNSCR 2254. Türkiye has a growing presence and geopolitical ambition in the South Caucasus and Central Asia. It also continued its efforts to extend its relations with African, Latin American and Asian countries. Türkiye's pragmatic engagement on Afghanistan and its vocal position on the developments in Sudan underscored its ambition to be a key player in the context of major international crises.

Türkiye continued to seek involvement in the common security and defence policy (CSDP) and EU defence initiatives while persisting in its exclusion of a Member State from all possible cooperation with NATO. Türkiye remained actively involved in EU crisis management missions and operations within the framework of the CSDP. In March 2023, the Turkish National Assembly approved Finland's NATO accession and during the NATO summit in July 2023, the Turkish President pledged to promptly submit Sweden's accession protocol to the Turkish parliament for ratification. The president submitted the bill for ratification to the Parliament on 23 October 2023.

Regarding **good neighbourly relations and regional cooperation**, Türkiye continued to refuse to recognise the Republic of Cyprus and repeatedly advocated a two-state solution in Cyprus, contrary to relevant UN Security Council Resolutions. The EU remains fully committed to a comprehensive settlement of the Cyprus problem within the UN framework, in accordance with the relevant UNSC resolutions, in line with the principles on which the EU is founded and the *acquis*. The EU has called, most recently in the European Council conclusions of June 2023, for the speedy resumption of negotiations and expressed its readiness to play an active role in supporting all stages of the UN-led process with all appropriate means at its disposal. There were no unauthorised drilling activities by Türkiye in the Eastern Mediterranean during the reporting period.

Relations between Türkiye and Greece deteriorated until early 2023. However, following the devastating earthquakes in Türkiye in February 2023, there was a marked improvement in the relations. As of February 2023, violations of Greek airspace diminished drastically, and no flights over Greek inhabited areas were reported.

Pursuing dialogue in good faith and abstaining from unilateral actions which run counter to the EU interests and violate international law and the sovereign rights of EU Member States is an essential requirement to ensure stable and secure environment in the Eastern Mediterranean and the development of a cooperative and mutually beneficial relationship between the EU and Türkiye. Türkiye is expected to unequivocally commit itself to good

neighbourly relations, international agreements and the peaceful settlement of disputes, in accordance with the United Nations Charter, having recourse, if necessary, to the International Court of Justice.

Regarding the **economic criteria**, the Turkish economy is well advanced but made no progress over the reporting period. Serious concerns persist over the proper functioning of Türkiye's market economy. There was backsliding on important elements, such as the conduct of monetary policy and the institutional and regulatory environments over most of the reporting period. Since the May parliamentary and presidential elections, the authorities have taken some steps to revert to more stability oriented macroeconomic policies. Although economic growth remained robust in 2022, Türkiye moved further away from market-oriented policies, which weakened its economic fundamentals and increased vulnerabilities and risks. Inflation decreased somewhat but remained very high as monetary policy prioritised exceptionally low interest rates, which remain deeply negative in real terms and are sustained by a web of regulatory and prudential measures. After the presidential and parliamentary elections in spring 2023, monetary policy has started to tighten, also signalling a gradual simplification of the macroprudential framework. The current account deficit increased to 5.4% of GDP in 2022, driven by a negative terms-of-trade shock and large imports of non-monetary gold. The relatively good budget performance in recent years masks an underlying trend of growing fiscal risks. The authorities' commitment to fiscal discipline wavered, as the fiscal stance turned pro-cyclical in 2023, with earthquake-related expenditure pressure adding to pre-electoral budgetary largesse. However, the fiscal stance was tightened after the elections and a revised budget, including sizeable tax increases, was adopted in July.

The institutional and regulatory environment lacks predictability and transparency, and complicates the post-electoral economic policy normalisation. Market exit remains costly and slow. However, Türkiye has made progress in digitalising government services to businesses. Although the size of the informal economy has fallen in recent years, it still accounts for a significant share of economic activity. State intervention in price-setting mechanisms persists. The provision of State aid lacks proper implementation rules, enforcement and transparency. The banking sector remained broadly stable but is facing financial stability challenges due to the numerous overly complex and far-reaching macroprudential and regulatory measures. The labour market strengthened further, although structural challenges remain significant, in particular for youth and female employment. Regional labour market disparities declined and reached one of the lowest levels in years. The recent net minimum wage increases were pro-cyclical.

Türkiye has a good level of preparation and made limited progress in achieving the capacity to cope with competitive pressure and market forces within the EU. Despite improved vocational training, the mismatch between the education system and labour market needs remains a concern. Expenditure on research and development continued to increase, albeit at a very slow pace, and is still below the government's target. Investment was relatively subdued in 2022. There was progress in the diversification of energy supplies and the share of energy generated from renewable sources increased significantly. However, the local content requirement in the renewable energy generation sector is a discriminatory practice and a cause for concern. Trade openness increased further, but integration with the EU continued falling, although remaining high. Deviations from Türkiye's obligations under the EU-Turkey Customs Union continue to hinder bilateral trade.

Türkiye is moderately prepared in the area of **public procurement**, with significant gaps remaining to align with the EU *acquis*. There was backsliding in the reporting period as Türkiye increased the use of the negotiated procedure and of discriminatory domestic price

advantage practices, and continued to allow offsets that favour local content. Türkiye is moderately prepared on **statistics** and made some progress, with work continuing to harmonise its statistical methodology with EU standards. The Turkish Statistical Institute (TurkStat) improved its compliance with the timeframes for publishing annual national accounts and excessive deficit procedure notifications. It took further steps to improve cooperation with other main data providers. However, Türkiye needs to increase the credibility of TurkStat and public trust in official statistics. Türkiye has a good level of preparation on **financial control**. It made no progress over the reporting period. The public internal financial control policy paper was not updated. The purpose, authority and responsibility of internal audit are undermined by the lack of a legal requirement to have internal audit units in ministries.

Regarding its **ability to assume the obligations of membership**, Türkiye has pursued alignment with the EU *acquis* on a rather ad hoc basis and to a limited degree.

The **internal market cluster** is key to the good functioning of the EU-Turkey Customs Union and to integrating Türkiye into the EU's internal market. Türkiye has achieved a good level of preparation for the free movement of goods. However, technical barriers to trade and requirements discriminating against EU products remained in place. Preparations in the areas of freedom of movement for workers, the right of establishment and freedom to provide services are at an early stage, and substantial efforts are still required to align with the *acquis*. Türkiye is moderately prepared on free movement of capital, as limitations remain on foreign ownership and on capital movement. Türkiye needs to continue to address outstanding issues in its framework regulating the fight against money laundering and terrorist financing.

Türkiye is well advanced in the area of company law but needs to make further progress in aligning with the EU *acquis*. Türkiye has a good level of preparation in the area of intellectual property law, notably in terms of legislative alignment, but it needs to improve implementation and enforcement. Türkiye has some level of preparation in the area of competition policy. Backsliding was observed as serious concerns persist in relation to the legislative framework, enforcement capacity and transparency in the field of State aid. Türkiye has a good level of preparation in the area of financial services, however the banking sector faced a challenging operating environment in the reporting period. Türkiye has a good level of preparation on consumer and health protection, with limited progress made, notably on strengthening its surveillance system for health (security) services. The capacity of the healthcare system was seriously affected by the February 2023 earthquakes in south-east Türkiye.

Within the **cluster on competitiveness and inclusive growth**, Türkiye has some level of preparation in the area of digital transformation and media. Türkiye's preparations in the area of science and research are well advanced and Türkiye made good progress during the reporting period, notably as a result of joining Horizon Europe and continued efforts to raise awareness of, and capacity for the programme. Türkiye is moderately prepared on education and culture, and continued to make some progress, notably through the continued implementation of the national qualifications system and the increased participation in some EU programmes. Access to education in south-east Türkiye was significantly impacted by the February 2023 earthquakes.

On the economy-related chapters, backsliding continued on economic and monetary policy, where Türkiye has some level of preparation. The Central Bank continued to loosen its unorthodox monetary policy stance, which triggered multi-year high inflation and unhinged inflation expectations. Until the parliamentary and presidential elections in May 2023, the

Central Bank was subject to significant political pressure to keep real interest rates deeply negative. Far-reaching prudential and regulatory measures disrupted the functioning of financial markets and increased risks. After the elections, the Central Bank has started to tighten monetary policy and the new government took measures to limit the bulging fiscal deficit. Türkiye is moderately prepared and made limited progress on enterprise and industrial policy. Major challenges in relation to measures incompatible with EU industrial policy principles remain unaddressed. Türkiye has some level of preparation in the area of social policy and employment. The labour market situation improved but concerns remain over trade union rights and effective social dialogue, persistent levels of informal economic activity and the gender gap in employment. The February 2023 earthquakes had a major impact on the labour market in the affected regions.

Türkiye is moderately prepared on taxation. It made no progress during the reporting period and still needs to enable tax information exchange with all EU Member States. Türkiye maintains a good level of preparation for the customs union but made limited progress over the reporting period. However, Türkiye's deviations from its obligations under the EU-Turkey Customs Union continued, contributing to a number of trade irritants.

Regarding the **cluster on the Green Agenda and sustainable connectivity**, Türkiye is moderately prepared in transport policy. It made limited progress during the reporting period, mainly linked to the update of the nationally determined contribution under the Paris Agreement with a specific chapter on transport mitigation policies. Türkiye is moderately prepared in the area of energy, and made limited progress overall. Efforts continued on renewable energy deployment, reforms in the natural gas sector and legislative alignment on nuclear safety. Türkiye continues to be an important transit country for the EU, but remains reliant on Russia for fossil fuel imports and nuclear energy. Türkiye is well advanced on trans-European networks and made no progress. The trans-Anatolian pipeline continues to operate smoothly and transmit gas to the European section of the Southern Gas Corridor. The construction of the flagship Halkali-Kapikule railway line connecting the EU border to Istanbul continued.

Türkiye has some level of preparation in the area of environment and climate change, and made limited progress over the reporting period. On climate change, Türkiye submitted its updated nationally determined contribution under the Paris Agreement. It faces critical environmental and climate challenges, and needs more ambitious and better coordinated environment and climate policies, strategic planning, substantial investment and stronger administrative capacity.

On the **cluster covering resources, agriculture and cohesion**, Türkiye reached some level of preparation in the area of agriculture and rural development. Backsliding continued during the reporting period, as its agricultural policy keeps moving away from the main principles of the EU common agricultural policy and as Türkiye continued to restrict imports of agricultural products from the EU. Türkiye is a major exporter of food products to the EU and made limited progress in the area of food safety, veterinary and phytosanitary policy, where it reached some level of preparation. Full implementation of the EU *acquis* in this area requires significant further work. Türkiye is moderately prepared in the area of fisheries and aquaculture, and made some progress on fisheries governance, inspection and control.

Türkiye is moderately prepared in the area of regional policy and the coordination of structural instruments, and continued to make some progress in accelerating the absorption of IPA II funds and setting up the structures for IPA III funds. Türkiye has some level of preparation in the area of financial and budgetary provisions but made no progress during the reporting period.

In the **external relations cluster**, Türkiye is moderately prepared in the area of external relations and made no progress over the reporting period. Türkiye has some level of preparation in the area of foreign, security and defence policy, and made no progress overall in the reporting period. Türkiye is a significant actor in the area of foreign policy, which constitutes an important element in the context of the EU-Türkiye relationship. Stepping up efforts to ensure alignment with the EU's common foreign and security policy would be a significant signal of Türkiye's commitment to the EU in the new geopolitical context.

2. CLUSTER 1: THE FUNDAMENTALS OF THE ACCESSION PROCESS

2.1. FUNCTIONING OF DEMOCRATIC INSTITUTIONS AND PUBLIC ADMINISTRATION REFORM

Democracy

The functioning of Türkiye's democratic institutions continued to be severely hampered. The structural shortcomings of the presidential system remained. Democratic backsliding and political polarisation increased in the run-up to the presidential and parliamentary elections. Following the earthquakes, which hit 11 provinces in February 2023, a state of emergency was introduced in the affected provinces and expired in May 2023. Furthermore, even though the nationwide state of emergency was lifted in July 2018, a number of legal provisions granting extraordinary powers to government officials and maintaining a number of the emergency's restrictive elements remain in effect. Some of these provisions have been extended for another 2 years, but most of the provisions related to the 2018 state of emergency expired in July 2022.

The State of Emergency Inquiry Commission ruled on all the applications within the scope of the 2018 Law on the establishment of the Inquiry Commission on the State of Emergency Measures and completed its work in January 2023. Of the total number of applications submitted to the Inquiry Commission (127 292), the Inquiry Commission accepted 17 960 cases and rejected 109 332.

Elections

Presidential and parliamentary elections took place on 14 May 2023. A second round to determine the new President of the Republic was held on 28 May. According to the preliminary conclusions of the OSCE's Office for Democratic Institutions and Human Rights (the ODIHR), which deployed an election observation mission, voters had a choice between genuine political alternatives and voter participation was high. However, the incumbent-biased media coverage and the lack of a level playing field gave an unjustified advantage to the incumbent.

Parliamentary elections were held in Türkiye on 14 May 2023 to elect the 600 members of the Grand National Assembly. The governing Justice and Development Party (AKP) of the incumbent President, Recep Tayyip Erdoğan, led the People's Alliance, which also included the Nationalist Movement Party (MHP), the Great Union Party (BBP) and the New Welfare Party (YRP). The People's Alliance retained its majority in the parliament with 322 members of parliament. During the second round of the presidential elections on 28 May, President Erdoğan was re-elected with 52.18% of the vote (the Republic People's Party CHP opposition candidate Kemal Kılıçdaroğlu received 47.82%). The elections took place in a deeply polarised environment. The elections offered voters a choice between genuine political alternatives and voter participation remained high, however, biased media coverage and the lack of a level playing field gave an unjustified advantage to the incumbent. In the

subdued yet competitive campaign, candidates were able to campaign freely. However, harsher rhetoric, inflammatory and discriminatory language by both contestants, along with the continued intimidation and harassment of supporters of some opposition parties undermined the process. Election days were generally calm and well-administered. However, instances of deficient implementation of certain procedures, particularly during the vote count, were noted. The electoral campaign was held during the state of emergency in the 11 provinces affected by the earthquakes, where voting difficulties were widely reported. OSCE/ODIHR deployed an election observation mission (EOM) with 28 long-term and 350 short-term observers, with additional embedded observers from the Parliamentary Assembly of the Council of Europe (PACE). Local NGOs and the political parties also deployed thousands of volunteers to monitor the elections. The elections were held under the new electoral law adopted in March 2022. The new law introduced significant changes, such as a revised seat allocation system, changes to eligibility criteria for political parties and changes to the method of appointing mid-level electoral councils. It positively addressed an ODIHR recommendation to lower the parliamentary threshold from 10% to 7%. Most other ODIHR recommendations (including those related to seat distribution, voter and candidate rights, campaign financing and election dispute resolution) remain unaddressed. The Venice Commission criticised several aspects of the amended law, such as the new system for selecting the chairpersons and members of provincial and district election appeal boards with a lottery rather than taking experience into account.

Any further amendments that Türkiye makes to its electoral framework, including its legislation on political parties, need to be made in line with international standards, after thorough consultation.

The 48 mayors displaced by government-appointed trustees following the 2019 local elections in the south-east have not been reinstated and no action was taken to address the relevant Venice Commission's June 2020 opinion. This remains a source of serious concern as it undermines local democracy and denies voters their preferred representation.

Parliament

The presidential system has largely weakened the national parliament's legislative and oversight functions. The President's extensive powers allow him to take decisions across a broad spectrum of policy areas, thereby limiting the parliament's legislative function. The parliament lacks the tools needed to hold the government to account. Targeting of the political opposition continued. The closure case of the People's Democratic Party (HDP) is still ongoing.

During the reporting period, the legislative function of the parliament was curtailed by the extensive use of presidential decrees and presidential decisions. From January to December 2022, the parliament adopted 80 of the 749 proposed laws. By contrast, during the same period, 273 presidential decrees issued under the state of emergency on a variety of policy issues (including socioeconomic issues) were brought before parliamentary committees.

The parliament's legislative and agenda-setting duties remained mainly under the control of the ruling AKP-MHP alliance, which has a parliamentary majority. Opposition parties had a very limited ability to influence parliamentary debates.

The fourth GRECO evaluation report of 2022 highlighted the points that the asset declarations made by members of parliament are not verified for their accuracy, and that there are no effective sanctions for violations of rules in this area. Moreover, the content of

these declarations is not made publicly available promptly after their submission to the parliament.

Parliamentary oversight of the executive remained very weak. The parliament lacks the necessary means to hold the government accountable. Members of parliament can submit written questions to the Vice-President and ministers, but it is not foreseen by the law that they can submit formal questions to the President. Ordinary presidential decrees are not subject to parliamentary review. However, presidential decrees issued under the state of emergency must be submitted to the parliament for approval. The supervision of public expenditure by the parliament must be substantially strengthened.

Political pluralism continued to be undermined by the judiciary's targeting of opposition parties and of individual members of parliament (particularly from the People's Democratic Party (the HDP)) for alleged terrorism offenses. The system of parliamentary immunity did not provide sufficient legal protection for opposition parliamentarians to express their views within the limits of free speech. Approximately 5 000 HDP members and officials are currently imprisoned. One of the detained defendants in the Gezi trial was elected as a deputy from the Workers' Party of Türkiye (the TIP) in the May 2023 elections but was not released from prison and was therefore not allowed to be sworn in as a member of parliament. By the end of the 27th legislative term (2018-2023), the total number of members of parliament subject to the legislative immunity resolution and a request for the lifting of their immunity was 206 (180 of them belonged to the parliamentary opposition). During the reporting period, no deputies had their immunity revoked or were detained on terrorism-related charges. Two former HDP co-chairs and several former HDP legislators are still in prison despite a European Court of Human Rights ruling in their favour.

The HDP's closure case on terrorism charges, including the banning from political life of 451 HDP members, remain pending before the Constitutional Court. In April 2023, the HDP waived its right to oral defence, arguing that the case was politically motivated and that it should be postponed until after the May 2023 elections. The General Assembly of the Court recorded the party's decision and sent the file to the Rapporteur. In January 2023, the Constitutional Court suspended State funding for the HDP but reinstated it in March following an appeal. In June 2023, the Constitutional Court ruled that the Treasury aid paid to the HDP could not be legally blocked.

Despite the March 2022 lowering of the electoral threshold from 10% to 7%, **the legal framework for elections and political parties** remains problematic. Türkiye has yet to implement the outstanding recommendations of the OSCE's Office for Democratic Institutions and Human Rights and of the Council of Europe's Venice Commission. The level of participation of women in decision-making, politics and employment remained low by international standards. Following the May 2023 elections, the percentage of women in the parliament increased from 17.1% during the previous term to 20.1% (from 104 to 121 out of 600). This is the highest ever ratio of women's representation in the parliament but women are still under-represented.

Governance

The presidential system continues to be characterised by a lack of checks and balances, as well as the politicisation of the public administration. Most regulatory authorities remain directly linked to the Presidency. The recommendations by the Council of Europe's Venice Commission on the presidential system still need to be addressed. The government's pressure on mayors from opposition parties continued to weaken local democracy.

As highlighted by the Venice Commission's 2017 opinion and the European Commission's previous country reports, the presidential system still lacks the necessary checks and balances to prevent an undue concentration of power and to safeguard the independence of the judiciary. The highly centralised presidential system continues to impair the legislative branch of government, the judicial branch and the public administration.

The use of traditional **instruments of oversight of the executive by the parliament**, such as a vote of confidence and the ability to ask the executive oral questions, has not been allowed since the entry into force of the presidential system in 2018. The absence of effective checks and balances and the parliament's inability to effectively supervise the office of the President mean that the latter's political accountability is limited to election time. The public administration, courts and security forces are under the heavy influence of the executive. The Presidency exercises direct authority over all key institutions and regulatory bodies. The public sector remained politicised, especially at senior management level.

The legal framework allowed regulatory authorities to be subject to excessive political influence. The President has the authority to appoint the chiefs and board members of the vast majority of the regulatory agencies. These regulatory bodies, notably in the media sector, issued decisions that disproportionately target (including with heavy pecuniary fines) media that are critical of the government.

The **Ombudsman's** caseload continued to increase during the reporting period and a high number of cases was adjudicated. However, the Ombudsman did not address politically sensitive issues concerning human rights and fundamental freedoms.

As regards **local self-governance**, the government maintained its pressure on opposition mayors, including through administrative and judicial investigations. In December 2022, the metropolitan mayor of Istanbul was sentenced to a suspended prison sentence on charges of insulting members of the Supreme Electoral Council. The mayor is also under administrative investigation by the Ministry of Interior for allegedly 'employing terrorists' in the municipality. In June 2023, a new case was opened against the mayor for alleged involvement in rigging a public works tender in 2015. In May, during a rally in Erzurum, the mayor was among those physically attacked, with the violence being condoned rather than condemned by senior AKP officials.

In the south-east, local democracy remained severely constrained. Since the 2019 municipal elections, 48 HDP mayors have been removed from office on terrorism-related accusations. Governors continued to serve as trustees in place of the deposed mayors. Hundreds of elected municipal officials have been detained on suspicion for ties to terrorism. These actions violate citizens' right to be governed by their elected representatives.

The legal framework governing the tutelary powers of the Ministry of Interior over locally elected officials was not revised in accordance with Türkiye's commitments under the European Charter of Local Self-Government.

The municipal law provides for the engagement of local administrations with the public and with civil society. Citizens' assemblies, which seek to bring together professional and civil society organisations and other local stakeholders, remained inactive in most provinces.

Civil society

Serious backsliding regarding the civil society environment continued. Civil society faced continuous pressure from the authorities. Human rights organisations, which were closed under the state of emergency, were not offered any legal remedy in relation to confiscations. Human rights defender Osman Kavala and his co-defendants in the Gezi trial remained in

prison without parole, despite a ruling by the ECtHR.

The implementation of the Law on preventing financing of proliferation of weapons of mass destruction added further restrictions and pressure on civil society.

Despite all these negative developments, civil society continued to be vocal and to participate actively in civic life, including by providing support to the people affected by the February 2023 earthquakes. Systematic and inclusive mechanisms for the effective consultation of independent civil society organisations on new legislation and policies need to be put in place.

A free, empowered and diverse civil society is a key component of any democratic system. Civil society organisations in Türkiye continued to make crucial contributions in areas, such as education, women's rights, rights for LGBTIQ persons, rights of persons belonging to minorities, rights of persons with disabilities, freedom of religion and belief, the environment, anti-discrimination and support for refugees.

In the immediate aftermath of the February 2023 earthquakes, civil society faced pressure from the authorities when delivering aid on the ground and was prevented from reporting on the situation in the affected regions.

Human rights organisations and human rights defenders faced judicial and administrative pressure, partly due to Türkiye's broad definition of terrorism. In some cases, however, the judiciary issued positive decisions, acquitting and releasing a number of human rights defenders from prison. As regards the infringement procedure launched by the Committee of Ministers of the Council of Europe in February 2022, the ECtHR ruled in July 2022 that Türkiye had failed to fulfil its obligations under Article 46 (1) of the Convention. Türkiye's refusal to implement the ECtHR's ruling in the Kavala case contravenes its obligations as a long-standing member of the Council of Europe. The seven co-defendants of Osman Kavala in the Gezi case, who were each sentenced in April 2022 to 18 years of imprisonment, remained in prison. In the Büyükada case, the Court of Cassation annulled the terrorism-related convictions of all the defendants in October 2022, ruling that they had been made with 'inadequate investigation'. The case was referred back to the local court, which acquitted the four human rights defenders in June 2023.

Some media outlets close to the government continued to portray human rights defenders as terrorists and criminals, notably for accepting funds from international donors, including the EU. The defamatory rhetoric used by high-level public officials to comment on court proceedings of human rights defenders is a matter of serious concern and casts doubt on the integrity of judicial proceedings and on the right to a fair trial.

Women's organisations faced pressure in the form of defamation, detentions, investigations and arrests. Women activists also faced detentions and police violence while exercising their right to freedom of assembly. The closure case against the Tarlabası Community Centre in Istanbul continued. The court cases against the executives of the Rosa Women's Association based in Diyarbakır continued. Concerning the closure case against 'We Will Stop Femicides Platform' on the grounds of 'conducting activities contrary to law and morality', in September 2023, the first instance court decided to reject it.

Stigmatisation, hate speech and discriminatory discourse targeting LGBTIQ civil society organisations and persons remained very strong. Anti-LGBTIQ discourse was instrumentalised by the governing coalition during the electoral campaign. Anti-LGBTIQ rallies took place in a number of cities during the autumn of 2022, whereas pride marches were banned and heavily repressed by the police.

The legal framework regulating the work of civil society organisations lacks clarity and carries the risk of arbitrariness during implementation. It remained compulsory for all associations to register their members in the Ministry of Interior's information system. This legal obligation is not in line with the OSCE/Council of Europe guidelines on freedom of association.

The Law on preventing financing of proliferation of weapons of mass destruction continued to be used by the authorities to disproportionately target independent rights-based organisations, despite the Venice Commission's and the UN Special Rapporteurs' recommendations that the government should reconsider certain aspects of the legislation. The Law should not be used to hinder civil society's freedom of association and assembly, including their fundraising activities.

The Law on collection of aid continued to impose burdensome requirements for permits that discourage fundraising activities by civil society organisations and de facto limit civil society activities. The distribution of public funds to civil society organisations remained untransparent. Heavy taxation hampered the functioning and development of foundations and associations. The status of 'public benefit' for associations and 'tax exemption' for foundations are vaguely defined and are arbitrarily granted by the President. Foreign donors providing financial support to civil society in Türkiye were often slandered and beneficiary NGOs ran the risk of having their activities criminalised because they had received foreign funds.

In August 2022, the Ministry of Interior's Directorate General for Relations with Civil Society published the draft civil society strategy document and action plan (2023-2027) for consultation. Despite public consultations, strategy development lacked transparency and clarity.

Open and transparent participatory and consultation mechanisms are needed for cooperation between the authorities and civil society, for policymaking and for amending the legal framework. Overall, the legal, financial and administrative environment needs to be more conducive to developing civil society in Türkiye.

Civilian oversight of the security forces

In the reporting period, the executive branch continued to hold extensive authority over the security forces. The civilian component of the Supreme Military Council (YAŞ), which is responsible for setting the military agenda and making such decisions as appointments, promotions and dismissals of high-ranking military personnel, did not change. The scope of the military judicial system was curbed. Civilian higher courts continued to review appeals against the decisions of military courts. However, civilian oversight of the security forces remained incomplete due to the lack of effective accountability mechanisms. Parliamentary oversight of the security institutions needs to be strengthened. The legal framework for overseeing military expenditure was not improved.

The culture of impunity continued to prevail within the security sector, where security personnel benefited from de facto judicial and administrative protection in cases involving alleged human rights violations and the disproportionate use of force. Military personnel and high-ranking command officials still have special legal privileges when prosecuted. Moreover, the investigation of alleged offences committed by security personnel requires prior authorisation by either military or civilian superiors.

Situation in the east and south-east

The situation in the south-east remained worrying and was exacerbated by the earthquakes in February 2023, which also affected part of the region. The Turkish government continued its domestic and cross-border security and military operations in Iraq and Syria, including after the earthquakes. The security situation remained precarious in border areas with terrorist attacks led by the Kurdistan Workers' Party (PKK), which remains on the EU list of persons, groups and entities involved in acts of terrorism. The government retains a legitimate right to fight terrorism, however, related activities should be in line with the rule of law, fundamental rights and freedoms. There was no progress towards the resumption of a credible political peace process to achieve a sustainable solution to the Kurdish issue. The Kurdistan Communities Union (KCK) declared a unilateral truce in Türkiye after the earthquakes in February and extended it until the Turkish presidential and parliamentary elections in May. The truce was terminated in June 2023.

In the aftermath of the November 2022 attack in Istanbul, which left 6 dead and 81 wounded, Turkish officials rapidly arrested a Syrian national, as the alleged main perpetrator of the attack, and attributed the attack to the PKK-linked People's Protection Units (YPG), even though the PKK denied its involvement. Türkiye launched a series of airstrikes in northern Syria and Iraq against the PKK and affiliated groups.

In March 2023, the Council of Europe's Committee for the Prevention of Torture and Inhuman or Degrading Treatment or Punishment (CPT) published a report on its visit to the high-security prison on the island of Imralı, where the PKK's leader Öcalan and three other inmates are being held. The report stated that detention conditions had significantly improved for Mr Öcalan and remained satisfactory for the three other inmates. However, the CPT expressed serious concern that the prisoners' contact with the outside world had been further limited. During the reporting period, Mr Öcalan was not allowed to receive visits from his family or his lawyers.

In Diyarbakir's Sur municipality, after the state took possession of land from its owners for public use, several court cases were launched by owners challenging the assessed value of their expropriated property. The principle of participation by the local residents was ignored in the planning of the area's reconstruction. Serious violations of human rights by security forces (including alleged instances of torture, ill-treatment, arbitrary arrests and procedural rights violations) continued to be reported. There have also been reports of severe acts of violence and other abuses committed by the security forces in the aftermath of the earthquakes and during the state of emergency.

Eastern and south-eastern provincial governors often imposed blanket bans on meetings, demonstrations and events in their provinces. The longest of these has been in force in Van since 2016. The broad interpretation of terrorism, judicial and administrative pressure imposed on journalists, political opponents, bar associations and human rights defenders working on the Kurdish issue raised repeated concerns. Many associations, Kurdish-language media outlets and cultural rights institutions remained closed.

The 15 Kurdish journalists and one media worker, who were detained in Diyarbakır in June 2022, were released in July 2023 under judicial control condition and the next trial session is due in November. Over 100 people (including several journalists, lawyers, members of political parties, artists and members of civil society) were detained in April 2023 in a coordinated operation across 21 Turkish provinces on the grounds of alleged 'membership in a terrorist organisation'. Some lawyers and journalists were released, but a court case was launched against 11 Kurdish journalists. The 2021 Constitutional Court judgment annulling a provision of the emergency decree regarding the closure in 2016 of media outlets on the grounds of 'posing a threat to national security' and annulling a provision that allowed the

seizure of properties of closed media outlets was not implemented. In January 2023, the Diyarbakir Regional Court of Appeals upheld the prison sentence against journalist Abdurrahman Gök for photographing the killing by the police of university student Kemal Kurkut during the 2017 Newroz celebrations in Diyarbakır. The local court had sentenced Gök in June 2022 to more than one year in prison on the grounds of propagandising for a terrorist organisation while acquitting him of ‘being a member of an illegal organisation’.

Hate crimes and hate speech against Kurds continued. The court case in relation to the hate killing of HDP staff member Deniz Poyraz in İzmir was concluded in December 2022 and the court sentenced the perpetrator to aggravated life imprisonment (i.e. the most severe penalty under Turkish law) on the charge of ‘intentional killing’ as well as other minor offences. Several attacks against HDP buildings and election offices have been reported, including during the electoral campaign period.

In January 2023, an investigation was launched against the presidents of 12 bar associations over their joint statement against Turkish military operations in northern Syria and Iraq and calling for peace, on the grounds of ‘insulting the Turkish Nation, the State of the Republic of Türkiye and its institutions’.

The March 2023 Kurdish Newroz celebrations took place amid a heavy police presence. The Diyarbakir Bar association reported that law enforcement forces used excessive and disproportionate force during the celebrations. The police detained 350 people, most of whom were shortly released.

The Kobane trial of 108 members and executives of the HDP continued. During the April 2023 session the prosecutor of the case issued his final opinion and demanded aggravated life sentences for 36 HDP executives (including the party’s former co-chair Selahattin Demirtaş) and the re-arrest of 12 released defendants. The trial was adjourned to July 2023 and is still ongoing. There were numerous new detentions and arrests of HDP members and mayors, municipal council members and municipal executives on terrorism-related charges in the east and south-east of Türkiye. Requests by the prosecution to the parliament to remove the immunity of almost all HDP lawmakers are pending. The closure case against the HDP continued in the Constitutional Court (see above under ‘the parliament’).

Former HDP co-chair Selahattin Demirtaş remained in prison despite two final ECtHR judgments ruling in favour of his immediate release. In March 2023, the Committee of Ministers of the Council of Europe urged Türkiye to release Mr Demirtaş, in line with the ECtHR judgments. The Constitutional Court’s ruling of June 2020 on the violation of Mr Demirtaş’ right to liberty and security was not implemented. Former HDP MP and co-chair Aysel Tuğluk, who was reportedly seriously ill, was released from prison in October 2022.

In October 2022, the ECtHR, in its ruling on the case of 13 imprisoned former HDP MPs, found that several articles of the ECHR had been violated and stated that the arrests were politically motivated. In July 2022, the Constitutional Court ruled that the Turkish State had violated the rights of former HDP co-chair Figen Yüksekdağ to freedom of thought and expression by stripping her of her parliamentary immunity in 2016, and ordered the State to pay Yüksekdağ TRY 30 000 for non-pecuniary losses.

In June 2023, out of the 65 municipalities won by the HDP in the 2019 local elections, 48 remained ruled by State-appointed trustees and another 6 by AK party mayors. Since the first trustee appointment in June 2019, 83 co-mayors have been detained, 39 mayors arrested and 6 HDP co-mayors remain in prison. The March 2022 Recommendations on Türkiye of the

Congress of Local and Regional Authorities of the Council of Europe need to be implemented.

Court cases continued regarding government-funded construction projects on cultural, historical and religious heritage sites, which were damaged in the 2015 and 2016 operations. There were renewed tensions around several new mining projects, including in the Tunceli Mountains, which is part of a national park and a sacred site for Alevis.

There was no comprehensive and consistent approach in place for missing persons, the exhumation of mass graves or the independent investigation of all alleged cases of extrajudicial killing by security and law enforcement officers. Most of the investigations of cases of enforced disappearance from the 1990s have passed the 20-year statute of limitations. Out of more than 1 400 cases of missing persons since then, only 16 court cases have been launched and 14 of these ended in the acquittal of the alleged perpetrators. Concerns remained about the continued justification of extraterritorial abductions and forced returns under the pretext of combating terrorism and protecting national security. The village guard system, a paramilitary force supporting the Turkish security forces, was maintained. Some village guards were linked to widespread human rights violations and excessive use of force, particularly against the Kurdish population. The village guard system is hindering the return of displaced villagers and continues to impede progress towards a political resolution of the Kurdish issue.

Refugees and internally displaced persons

Türkiye continues to host one of the largest refugee populations in the world. In August 2023, according to official data, Türkiye was hosting 3 298 817 Syrian refugees with temporary protection status, and some 91 711 Syrians with residence status. Around 1.7 million of these were being hosted in the 11 provinces affected by the earthquakes.

According to official sources, 223 881 Syrians had been granted Turkish citizenship in December 2022. 561 758 Syrian refugees had voluntarily returned to Syria from Türkiye according to government data. In May 2023, according to the Presidency for Migration Management, in addition to the Syrian refugees, Türkiye hosted 300 720 asylum-seekers from other countries. In December 2022, 1 345 488 foreign nationals holding residence permits were present in Türkiye, including humanitarian residence permit holders. The return of irregular migrants from the Greek islands, which Türkiye unilaterally suspended on public health grounds in March 2020, has not resumed. The EU has repeatedly called on Türkiye to resume return operations in line with the commitments made under the EU-Turkey Statement. Resettlement of Syrian refugees from Türkiye to EU Member States continued in the reporting period totalling 39 648 by September 2023. Recurrent allegations of human rights violations in the field of migration, particularly in removal centres, remain a concern. Over the last year, media and civil society continued to report on policies and practices in breach of human rights standards and Turkish legislation. Türkiye needs to further align its practice in removal centres with European standards, in particular with regard to protection of human rights (including access to legal counselling and interpreters) and protection of vulnerable groups (in particular, children staying with their families) (see Chapter 24).

Public discontent with the presence of Syrian refugees increased, and became an important electoral topic and a matter of constant debate. A large majority of refugees and asylum seekers do not have effective access to the labour market, in particular to formal employment, due to low employability (lower levels of education and skills), language barriers and limited access to information and services.

Türkiye made sustained significant efforts to support refugees and ensure wider access to healthcare and schooling, although restrictions to registration hampered access to these services. By February 2023, over 846 000 refugee children had been enrolled in formal education in Türkiye, which was about 104 000 more than the previous academic year. Over 720 000 of these were of Syrian origin. However, more than 400 000 school-aged refugee children were still out of school and did not have any access to education opportunities. Refugees (mainly Syrians under temporary protection) continued to benefit from free-of-charge healthcare services provided in 190 migrant health centres funded by the EU through its Facility for Refugees in Turkey and in Turkish hospitals. The EU supported the employment of almost 4 000 healthcare workers to ensure that refugees and people under subsidiary protection have access to healthcare services. Over 7 million primary health care consultations were conducted in EU-supported primary level healthcare facilities in 2022. The capacity of mental health and psychosocial support services, reproductive health services, mobile health services and health literacy for the refugees have also improved. Furthermore, the health infrastructure was also improved by the completion of the construction of two new state hospitals in Dörtöyl Hatay and Kilis, which were fully financed by the EU and inaugurated during the reporting period.

There was no progress on the situation of **internally displaced persons** resulting from the violence in the south-east in the 1990s and in more recent years.

After the February 2023 earthquakes, which affected an estimated 15 million people in 11 provinces, there were massive population relocations, both within the provinces and away from them. An estimated 2.9 million people have moved away from the affected provinces.

Public administration reform

Türkiye is **in between some and moderate level of preparation** in the field of public administration reform. It made **no progress** over the reporting period. The country still lacks the political will to reform the public administration and public financial management. The restructuring of the executive branch and overhaul of the public administration in line with the presidential system introduced in 2017 resulted in very high levels of centralisation of the policymaking system. The level of accountability of the administration remains insufficient. Its human resources management system remains outdated and needs to be reformed. The politicisation of all branches of the administration has continued. The share of women in managerial posts in the civil service is still low. The public administration does not use evidence-based methods or participatory mechanisms in policymaking.

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

- prepare and adopt an interinstitutional public administration reform document in line with EU principles and values, and with the necessary political ownership and support;
- introduce merit-based recruitments, appointments and promotions, notably to the senior positions;
- review the policymaking process to achieve inclusive and evidence-based methods of preparing policy planning documents and legislative proposals.

Strategic framework for public administration reform

Türkiye still lacks both a comprehensive **strategy for public administration reform** and the political will to reform. In 2022, the administration produced numerous policy planning and sectoral policy documents on multiple aspects of public administration. In the absence of a comprehensive strategy, these documents lack a sound budget forecast and a coherent

approach. An administrative unit with the legal mandate to design, coordinate and monitor public administration reform and public policy documents has yet to be established. The unit would need to coordinate with the Ministry of Finance and Treasury to ensure strategic planning is consistent with fiscal planning and to efficiently tackle the issue of managerial accountability.

Policy development and coordination

Türkiye continued the strong trend to centralise policymaking under the presidential system, further preventing an inclusive, participatory and **evidence-based policymaking** process. Policy coordination, policy planning and inter-agency cooperation among government institutions needs to be improved. In the absence of well-functioning administrative controls and parliamentary scrutiny, policy planning, monitoring and reporting of government performance remains inadequate. The administration does not carry out regulatory impact assessments or **public consultations** systematically.

Public financial management

Türkiye still lacks an overarching **public financial management reform programme**. Parliamentary engagement and oversight over the budget remain weak. Numerous exceptions introduced in the public procurement Law limit the transparency of tenders and public expenditure. (*see also Chapter 5 – Public procurement*). Türkiye does not have in place an independent oversight body to ensuring fiscal discipline. Given the lack of adequate ex post monitoring and reporting, major public investment programmes lack transparency.

On external audit, the Turkish Court of Accounts (TCA) continued to carry out a range of ex post controls. The TCA's audit reports continued to provide substantive information for parliamentary oversight and public scrutiny. However, shortcomings remain in the legal framework of the Law on the Court of Accounts and in the associated process of parliamentary scrutiny. There needs to be greater parliamentary and judicial follow-up to the TCA's audit reports.

There is limited parliamentary oversight of the budget, which resulted in a low degree of **budget transparency**. The Turkish State Wealth Fund (TWF) lacks accountability and transparency. The 2022 audit report was not published on the TWF website, which contains limited information overall (*see Chapter 32 - Financial control*).

Following the February earthquakes, the parliament adopted a law creating a Disaster Reconstruction Fund, governing the allocation of resources to restore infrastructure in areas affected by various natural disasters such as earthquakes, floods, fires and landslides in regions classified as 'disaster zones'. However, the law lacked details on the decision-making process, and on the transparency rules for managing the Fund, apart from an obligation to report financial data to the public on a quarterly basis.

Public service and human resources management

The 1965 legal framework governing human resources management in the civil service is outdated. The civil service legal framework fails to ensure the political neutrality of the civil service. There is growing concern about the lack of **merit-based recruitment** and appointments in the civil service. The appointment procedure for senior civil service posts lacks competitive objective criteria, leaving appointments open to nepotism and political interference. There is a set of uniform criteria for demotion, dismissals and disciplinary measures, but there is a general lack of transparency in implementing the criteria. The civil service remuneration system is not standardised across the institutions. The ethics committees were ineffective against allegations of corruption and wrongdoings.

Accountability of the administration

Under the presidential system, accountability is centralised and held by the President. Given that internal control and audit do not function effectively, the level of accountability of agencies is weak and insufficient to protect **citizens' right to good administration**.

Citizens' right to access public information is regulated by the Law on the right to information, which does not require proactive disclosure and provides broad exemptions. A simplified online access system received millions of requests to access information. The Board of Review of Access to Information is responsible for assessing appeals filed against a refusal to provide access to public information. The backlog of cases continues to hamper citizens' rights to administrative justice and their right to seek compensation.

Strong concerns remain on the quality of the work of the Inquiry Commission on the State of Emergency Measures, even though it has completed the examination of all cases. Strong concerns remain as to whether cases were examined individually, whether the rights of defence were upheld and whether the assessment procedure was in line with international standards.

Service delivery to citizens and businesses

A thorough process is needed to **simplify administrative procedures**. However, in the continuous absence of a law on general administrative procedures, which is necessary to give citizens and businesses greater legal certainty, simplifying administrative procedures remains problematic.

The government continued to develop user-focused administration at central and local government level and expanded access to e-government services. Several public services are accessible through e-government tools. A monitoring system needs to be set up to reduce the barriers to access services for persons with disabilities.

2.2. RULE OF LAW AND FUNDAMENTAL RIGHTS

2.2.1. Chapter 23: Judiciary and fundamental rights

The EU's founding values include the rule of law and respect for human rights. An effective (independent, high-quality and efficient) judicial system and an effective fight against corruption are of paramount importance, as is respect for fundamental rights in law and in practice.

Türkiye remains at an **early stage** of applying the EU *acquis* and European standards in the area of rule of law and fundamental rights. There was **backsliding** during the reporting period.

Major issues identified in previous reports, such as the systemic lack of independence of the judiciary and the urgent need to improve the human rights situation, remain unaddressed. The 2019 judicial reform strategy (JRS) and the 2021 human rights action plan (HRAP) tackle some of the areas where reforms are needed but did not include concrete steps to remedy the most acute problems.

Functioning of the judiciary

Türkiye remains at an **early stage** in this area. Serious **backsliding** continued and despite the several judicial reform packages in recent years, the structural deficiencies in the judicial system remained unaddressed. The continued refusal to implement certain rulings of the

ECtHR remains a matter of serious concern. Undue pressure by the authorities on judges and prosecutors continued to have a negative effect on the independence and quality of the judiciary. Implementation of the 2019 JRS and the 2021 HRAP continued, but the activities foreseen in these documents fell short of addressing the structural problems and the issues identified in the previous reports of the European Commission. The lack of objective, merit-based, uniform and pre-established criteria for recruiting and promoting judges and prosecutors remains a source of concern. Several politically motivated cases against opposition politicians were initiated during the reporting period.

The Commission's recommendations from last year were not addressed. Türkiye needs to adopt and implement measures to significantly improve the overall functioning of the country's judicial system.

In the coming year, Türkiye should in particular:

- create a political and legal environment in line with European standards that allows the judiciary to carry out its duties independently and impartially; strengthen judicial responsibilities, with the executive and legislature fully respecting the separation of powers; and ensure that lower courts respect judgments by the Constitutional Court, whose decisions should abide by ECtHR jurisprudence;
- amend the structure and process of selecting the members of the Council of Judges and Prosecutors (HSK) so that the role and influence of the executive is limited; and introduce safeguards against any interference by the HSK or high-level officials in judicial proceedings;
- provide effective guarantees against transfers of judges without their consent;
- in accordance with the guarantee of judicial independence under the Constitution, limit any suspension of judges from office to cases where there are well-founded suspicions of serious misbehaviour; and take measures to remedy the damage caused by dismissals that have taken place in breach of procedural rights;
- revise the system of disciplinary proceedings so that it is based on objective criteria and without any undue influence from the executive;
- in relation to the administrative and judicial measures taken against individuals, ensure that any allegation of wrongdoing or crime is subject to due process and based on concrete evidence, and follows fully transparent procedures under the authority of an independent judiciary;
- ensure that all judicial proceedings respect fundamental rights (including procedural rights), in particular the presumption of innocence, individual criminal responsibility, legal certainty, the right to defence, the right to a fair trial, equality of arms and the right to an effective appeal.

Strategic documents

Implementation of the 2021 HRAP and the 2019-2023 JRS continued. A new (seventh) judicial reform package was adopted in April 2023. The government's implementation report for the JRS stated that, as of May 2023, 70% of the activities had been completed. However, the actions included in the HRAP do not address Türkiye's fundamental human rights shortcomings. The 7th judicial reform package failed to address many structural issues of concern related to the judicial system indicated in the previous annual reports of the European Commission. However, it did provide some positive steps regarding the increased sentences

for smuggling and the possibility of postponing the execution of a sentence for convicted women due to a child's sickness.

Management bodies

Concerns remain around the structure of the Council of Judges and Prosecutors (HSK), its lack of independence from the executive and the appointment process for its members. In accordance with the Constitution, the President appoints 4 out of 13 members and the parliament elects 7 by qualified majority. The remaining 2 seats are allocated *ex officio* to the Minister of Justice and the Deputy Minister. None of the members are elected by their peers. Due to its lack of independence, the HSK has been suspended from participating in the European Network of Councils for the Judiciary since December 2016.

The budget allocated to the HSK increased to TRY 312 551 000 in 2023 (TRY 193 657 975 in 2022).

Independence and impartiality

Although the principle of separation of powers and judicial independence is enshrined in the Constitution and other legislative provisions, there are strong concerns regarding political influence on the judiciary. The HRAP included some actions to improve the independence of the judiciary, but these actions have not been implemented.

High-level officials and representatives of the executive (including the President) continued to comment publicly on ongoing judicial cases, thus undermining judicial independence. They also publicly criticised the ECtHR and Constitutional Court case law. Lower courts at times ignored or significantly delayed implementation of decisions reached by the Constitutional Court. The non-implementation of the administrative courts' decisions by the administration also remains an issue of concern.

Individual applications to the Constitutional Court had limited effect, especially with regard to politically motivated trials.

Accountability

The obligation for judges and prosecutors to declare their assets every 5 years is still applicable. No information is available on the sanctions imposed if this procedure was not followed. A credible and functioning verification system needs to be developed, including appropriate follow-up for late or incorrect declarations of assets.

Professionalism and competence

The selection and recruitment of judges and prosecutors is conducted in a non-transparent manner. The Ministry of Justice supervised the selection boards for new judges and prosecutors, while the HSK had no role in the selection boards. The annual appraisal of judges and prosecutors was done by the HSK. There was limited progress in setting objective, merit-based, standardised and pre-established criteria for recruiting and promoting judges and prosecutors.

Quality of justice

As of September 2023, Türkiye had 16 225 full-time judges (19.13 per 100 000 inhabitants) and 7 601 full-time prosecutors (8.96 per 100 000 inhabitants). Out of 23 826 judges and prosecutors, 8 871 are women. The final budget for the entire justice system increased to TRY 51.2 billion in 2022 (while TRY 34.37 billion was initially approved) compared with almost TRY 24 billion in 2021.

Pre-service training for candidate judges and prosecutors and in-service training continued to be delivered by the Justice Academy. The Academy has scientific, administrative and financial autonomy by law, but there are still concerns related to its independence because its management is left to its president, who is appointed by the President of the Republic. The Academy's lack of independence affects its capacity to provide training programmes that meet the requirements of openness, competence and impartiality. The European Judicial Training Network (EJTN) therefore maintained the suspension of the Academy's observer status that was originally decided in 2017.

The quality of judicial decisions and indictments remains insufficient due to the lack of legal reasoning and sufficient factual evidence to lead to convictions that often relate to alleged offences supporting terrorism. The defence lawyers' access to case files for a specific catalogue of crimes is sometimes restricted until the indictment is issued. In some politically sensitive cases, the indictments took months to be finalised.

Pre-trial detention continues to be frequently imposed, despite the fact that this is a measure of last resort by European standards. Defendants were increasingly held in prisons or detention centres far from the location of the alleged crime, appearing at their hearing via an audiovisual system rather than in person. Frequent transfers of judges and prosecutors continued to impair the quality of justice, as did the appointment of newly recruited and less experienced judges and prosecutors to criminal courts.

Trial-monitoring organisations and lawyers reported that in politically sensitive cases judges frequently barred journalists and observers and sometimes even the defendants' lawyers from the courtroom. In terrorism-related cases, the practice of providing evidence extracted coercively from secret witnesses who cannot be cross-examined or from a single witness without supporting evidence remained a major concern. Frequent use of the confidentiality of decisions in political cases should be revised because it is often used to limit lawyers' access to their clients' files, thus violating the right of defence.

In October 2022, the Council of State ruled in favour of the reinstatement of 178 judges and prosecutors dismissed under the 2016 state of emergency decrees on the basis of alleged ties to the Gülen movement, arguing that the acts attributed to them were insufficient to prove their links to the movement. The Council of State also ordered the State to pay compensation and damages to the judges and prosecutors. As of March 2023, 3 683 of the dismissals had been finalised and 3 cases were ongoing. 845 dismissed/suspended judges and prosecutors had been reinstated. As of March 2023, 343 judges and prosecutors who had filed a complaint with the Council of State on the issue of their removal had been reinstated. This decision followed an ECtHR ruling that the government had violated the ECHR by detaining 167 judges and prosecutors after the attempted coup in 2016.

Efficiency

The backlog of cases remained a problem. Large parts of the judiciary continued to be under severe pressure to handle cases quickly. Delays in criminal cases, which are often postponed for months, and delays in cases where the defendants were arrested pending trial violate the defendants' rights.

Regarding the backlog of cases in the high courts, at the end of 2022, 293 207 criminal and 64 126 administrative cases for the Court of Cassation were postponed to 2023, compared with 296 907 and 76 455 respectively in 2021. 120 773 cases for the Council of State were transferred from 2022 compared with 128 961 in 2021. As regards the regional courts of appeals, in 2022, a total of 809 989 cases were transferred from 2021; the courts received 1 258 366 new cases and settled 1 146 065 cases. Individual applications to the Constitutional

Court continued to increase. In 2022, 109 779 applications were lodged and 73 036 were concluded.

Fight against corruption

Türkiye is at an **early stage** in the fight against corruption. There was **no progress** in the reporting period. Türkiye has not addressed outstanding deficiencies in key areas of the fight against corruption in recent years. It has not taken preventive action and has not set up anti-corruption bodies in line with the United Nations Convention against Corruption, to which Türkiye is party. The legal framework and institutional architecture need to be improved to limit undue political influence on the prosecution and adjudication of corruption cases. The accountability and transparency of public institutions need to be improved. The absence of an anti-corruption strategy and action plan indicated a lack of political will to fight decisively against corruption. The Council of Europe's Group of States against Corruption (GRECO) recommendations remained unimplemented. Overall, corruption remains a major issue. In the coming year, Türkiye should in particular:

- implement its international obligations in relation to the fight against corruption, in particular the United Nations Convention against Corruption and the relevant Council of Europe Conventions;
- ensure effective follow-up of the recommendations issued by GRECO, including through adopting the necessary legislation;
- elaborate an anti-corruption strategy that reflects a clear political will and vision to effectively address corruption, underpinned by a credible and realistic action plan.

Track record

The track record of investigations, prosecutions and convictions in corruption cases remained poor, particularly in relation to high-level corruption cases involving politicians and public officials. Sentences are lenient and do not have a deterrent effect. Cooperation between audit and inspection units with prosecution offices needs to be improved. Political party and election campaign financing, local administrations, land administration and management, and the construction and transportation industries (especially when implementing projects via public-private partnerships) remained particularly prone to corruption. The increasing use and wide scope of exemptions in procurement procedures undermined the integrity of public procurement. Outstanding GRECO recommendations on political party financing have not been addressed.

Institutional framework

Prevention measures

Türkiye continued to lack a permanent, functionally independent anti-corruption prevention body. The level of coordination between various preventive bodies remains inadequate. The State Supervisory Council, which is responsible for coordinating preventive anti-corruption measures, is not independent. Financial control of political parties remained ineffective. There have been no regular awareness-raising campaigns on anti-corruption.

Law enforcement

There are no specialised law enforcement authorities, prosecution services and courts specifically dedicated to the fight against corruption. The executive retained undue political influence over the judicial police. Financial investigations are not systematically started in

corruption and organised crime cases. The legal framework of anti-corruption remains weak, including for the private sector.

Legal framework

Türkiye is party to all international anti-corruption conventions, including the United Nations Convention Against Corruption. However, Türkiye needs to fully implement such provisions. The legislative amendments envisaged in previous anti-corruption strategies (i.e. the Law on general administrative procedure, the Law on public procurement, the Code of Ethics for Members of Parliament and the Law on whistle-blower protection) have not been adopted.

In November 2022, the OECD Working Group on Bribery also underlined Türkiye's continued inaction with respect to long-standing recommendations on the liability of legal persons in particular in relation to foreign bribery, as well as issues concerning whistle-blower protection and prosecutorial independence, and the lack of enforcement of its foreign bribery laws.

Türkiye failed to comply with the GRECO recommendations on judicial independence, and on transparency of the legislative process and political party financing. Legal loopholes remain in the Criminal Code's corruption-related provisions, which do not meet the standards put in place by the Criminal Law Convention on Corruption. Public procurement legislation is not in line with the EU's *acquis*. The legal privileges of public officials continued to provide legal protection for public officials and hamper anti-corruption criminal and administrative investigations. The legal framework on conflicts of interest as well as public officials' asset declarations remained inadequate. Türkiye has no legislation governing lobbying.

Strategic framework

Previous anti-corruption strategies and action plans failed to meet most of their key objectives. Outstanding anti-corruption measures for these action plans have not been followed up. There is no ongoing anti-corruption strategy and action plan, and no efforts were made to develop new ones with the involvement of relevant institutions and civil society.

Fundamental rights

Human rights continued to deteriorate and no progress was made on last year's recommendations. The Turkish legal framework includes general guarantees of respect for human and fundamental rights, but the legislation and its implementation need to be brought into line with the European Convention on Human Rights (ECHR) and the European Court of Human Rights (ECtHR) case law. No legislative amendments were adopted to eliminate the remaining elements of the 2016 state of emergency laws. The Council of Europe's Parliamentary Assembly continued to monitor Türkiye's respect for human rights, democracy and the rule of law. Türkiye's continued refusal to implement certain ECtHR rulings further increased concerns regarding the judiciary's adherence to international and European standards. The 2021 HRAP continued to be implemented but did not address critical issues or improve the overall human rights situation. Trials and convictions of journalists, writers, lawyers, academics, human rights defenders and other critical voices for alleged support for terrorism have continued.

In addition to addressing the shortcomings set out in this section, which have still not been addressed, Türkiye should in particular in the coming year:

→ align its criminal and anti-terror legislation, and its implementation of European standards, the ECHR, ECtHR case law and the Venice Commission recommendations;

- ensure that any allegations of offences are subject to due process, based on concrete evidence and fully transparent procedures carried out under the authority of an independent and impartial judiciary; and fully respect the right to a fair trial and relevant procedural rights, in particular the presumption of innocence, the principle of legal certainty, the right to defence, equality of arms and the right to an effective remedy;
- improve the legislative framework and its implementation, in order to effectively tackle all forms of violence against women, including domestic violence, psychological and physical abuse, sexual harassment, rape, so-called ‘honour’ crimes, stalking and forced marriage;
- improve the legislative framework and its implementation to effectively tackle all forms of racism and discrimination, including against LGBTIQ persons and ensure the protection of minorities.
- implement the ECtHR judgments as a matter of priority, including in the case of *Kavala v Türkiye*.

Türkiye is a party to most **international human rights instruments**, but serious human rights violations continued. The Council of State ruled in January 2023 that the President’s decision to withdraw from the Council of Europe Convention on preventing and combating violence against women and domestic violence (the Istanbul Convention) was lawful. Türkiye has not yet signed the International Convention for the Protection of all Persons from Enforced Disappearance and the Optional Protocol to the International Covenant on Economic, Social and Cultural Rights. The Parliamentary Assembly of the Council of Europe continued its full monitoring procedure.

In June 2023, there were 23 851 applications pending before the ECtHR. The ECtHR delivered judgments on 637 applications and found breaches of the European Convention on Human Rights (ECHR) in 66 out of 69 cases (against 70 violations in 2022) that mainly concerned the right to respect for private and family life, the right to a fair trial, the right to liberty and security and freedom of assembly and association. During the reporting period, there were 13 232 new applications allocated to a decision body of the ECtHR. There are currently 184 cases against Türkiye under enhanced supervision by the Committee of Ministers.

There were no developments with regard to the implementation of the ECtHR’s July 2022 Grand Chamber judgment on the *Kavala* case as part of the ongoing infringement procedure launched by the Committee of Ministers of the Council of Europe against Türkiye (see the ‘Judiciary’ section).

Regarding promotion and enforcement of human rights, the March 2021 **human rights action plan** (HRAP) continued to be implemented. The annual monitoring report, which was due in March 2023, has not been published and an evidence-based assessment of the implementation of the HRAP is missing. The HRAP does not include measures to address the main shortcomings in the human rights situation in Türkiye that were identified in previous years’ reports by the European Commission.

The Human Rights and Equality Institution of Türkiye (HREI) and the Ombudsman are the main human rights institutions. The Ombudsman processes complaints against the actions of the public administration while the HREI only accepts cases that fall outside the Ombudsman’s remit. The HREI lacks *ex officio* powers to initiate investigations and to intervene in cases with legal remedies. The number of cases treated by the two institutions increased, but concerns remain regarding the operational, structural and financial independence of both institutions and the appointment of their members. The effectiveness of

both institutions remained limited. The HREI was accredited to the Global Alliance for National Human Rights Institutions with a B status in October 2022.

In 2022, the HREI received 2 020 applications (1 185 in 2021), visited 63 institutions (including prisons) and adopted 69 reports prepared within the scope of visits. The HREI makes prison visits in its role as the National Preventive Mechanism (NPM), but does not have set and independent criteria for announced visits. In some visits, it only interacted with the administration and did not speak to the detainees. It has not visited all the prisons with the highest number of allegations of human rights violations, or did so with a significant delay. The recommendations mainly deal with minor issues and do not make concrete statements on serious human rights abuses. The HREI needs to improve its reputation regarding effectively tackling human rights issues and engaging in constructive dialogue with civil society. The HREI remained largely ineffective due to legislative and structural restrictions, including by not accepting applications filed by civil society organisations and by being overly cautious in tackling cases of torture and ill treatment. 132 of the 3 638 applications filed with the parliament's Human Rights Inquiry Committee in 2022 were not processed.

The term of office of the State of Emergency Commission expired in January 2023. The Commission found 17 960 of the 109 332 filed applications to be admissible but rejected 86% of them.

The space for civil society organisations and human rights defenders continued to be very limited due to continuous pressure through judicial and administrative investigations, threats, surveillance, arbitrary detentions and ill-treatment of human rights defenders. The chairperson of the Turkish Medical Association was arrested after calling for an investigation into allegations that the Turkish armed forces had used chemical weapons in Northern Iraq. She was later released and the case is ongoing. Similar cases, coupled with smear campaigns by some media outlets close to the government and aggressive language by high-level officials, had a chilling effect on civil society. Intimidation of, and court cases against, lawyers who provide legal assistance to members of the civil society and human rights defenders continued.

The three court cases lodged against the Human Rights Association's chairperson ended in acquittal, but appeals were made against two of them and are pending before courts of appeal. The court case continued regarding the 2015 killing of Tahir Elçi, a lawyer and the chairperson of the Diyarbakir Bar Association. Several female human rights defenders and activists were detained and faced fines for participating in demonstrations for women's rights. The GÖÇİZ-DER court case in which 23 human rights defenders are being tried for 'using EU and UN funds to conduct research and develop projects on social migration movements in line with the aims and objectives of the PKK' continued. There were concerns regarding the recurrent and disproportionate use of anti-terrorism legislation against NGOs and human rights defenders.

The retrial of the Büyükada case resulted in the acquittal of four human rights defenders, including Amnesty International Türkiye's honorary chair, who had been originally sentenced to over 6 years in prison on charges of 'membership in a terrorist organisation'.

Concerning the **right to life**, urgent measures need to be taken by the authorities to align legislation with ECtHR case-law in order to ensure that credible and effective investigations are held into reported killings by the security services. The legislation adopted in June 2016, which grants judicial privileges to the security services and increases the risk of impunity, has remained in force. In many cases, the authorities did not grant permission to prosecute civil servants, thus seriously limiting accountability and fostering a climate of impunity for the

security forces. No credible investigations were launched into some of the death cases reported in the media. No adequate investigations have been carried out regarding the alleged cases of abductions and enforced disappearances by the security services that have been reported since the 2016 attempted coup. Alleged killings by the security forces in the south-east, especially during the events in 2015, have not been investigated and prosecuted effectively. Military or police officers have been implicated in most of these cases (as also underlined by the ECtHR judgments and the reports of the UN Working Group on ‘Enforced or Involuntary Disappearances on Turkey’) and investigations have never been properly carried out. The statute of limitations remains a major concern as regards the impunity of the offenders. Most of the crimes dating from the 1990s in the south-east have ended in impunity through acquittal or due to the statute of limitations (for example, the murder of the writer Musa Anter in Diyarbakır in 1992).

According to various reports, **torture and ill-treatment** continued to occur in detention centres, prisons, informal places of detention and transportation vehicles, and on the street during demonstrations. Disproportionate use of force by security forces continued. Although tasked with the role of the National Preventive Mechanism (NPM), the HREI does not meet the key requirements under the Optional Protocol to the UN Convention against Torture and other Cruel, Inhuman or Degrading Treatment or Punishment (OPCAT) and did not effectively process cases referred to it. The authorities have not authorised the publication of the 2016, 2018, 2021 and 2022 reports by the Council of Europe’s Committee for the Prevention of Torture (CPT). There have been reports documenting several cases of violence, torture and other abuses committed by the police and gendarmerie in the regions affected by the February 2023 earthquakes as well as threats against lawyers who documented a torture case. In some limited cases, administrative actions were taken against the accused officers.

The UN Subcommittee on Prevention of Torture (SPT) visited Türkiye in September 2022 to assess how the authorities and Türkiye’s national preventive mechanism had implemented the SPT’s previous recommendations. Effective investigations into allegations of torture and ill treatment remained limited.

While the number of **prisons** continued to increase, overcrowding remains a major problem. As of April 2023, the prison population exceeded 350 000 (with a capacity of 290 000) and continued to be the largest in Europe. Incidents broke out in Hatay’s T-Type Closed Prison after the authorities denied the inmates’ requests to see their families affected by the earthquakes. Pilot projects are being implemented in several prisons to improve inmates’ contact with their families, notably via secure video teleconference systems. However, allegations of human rights violations (including arbitrary restrictions on the rights of detainees, denial of access to medical care, mistreatment, limitation of open visits and solitary confinement) continued to be reported. Education, rehabilitation and resocialisation programmes remained limited. The new S-type security prisons are assessed as increasing inmates’ isolation. Communal activities remained limited and arbitrary. Transfer to remote prisons continued, sometimes without early warning. Such transfers had a negative effect on family visits, especially for poor families and juvenile inmates.

There were allegations of discrimination by prison authorities, especially against LGBTIQ persons. There was no improvement regarding investigations into allegations of suicides, strip-searches and discriminatory behaviour by prison guards. Concerns related to the independence of the Forensic Medicine Institute persisted. Access to medical care for sick inmates continued to be uneven and at times delayed or denied, causing deaths in prison or soon after release. Following complaints about food quality and living conditions, the daily allowance for prison food was increased from TRY 20 to TRY 50 in March 2023.

The HREI, as the national preventive mechanism, is also tasked with monitoring the prison administration and observation boards, but this work has remained ineffective. The work of the boards is not transparent and not supervised by independent bodies.

On the **protection of personal data**, the 2016 Personal Data Protection Law is still not aligned with the EU *acquis*, notably with the General Data Protection Regulation (GDPR) and the Law Enforcement Directive (LED) that constitutes a potential obstacle in several policy areas, including with regard to enhanced operational cooperation with Eurojust and Europol. The scientific commission that was established in 2021 to advance *acquis* harmonisation continued its work, but progress has been slower than anticipated. The legislation needs to be improved, notably with regard to the exceptions for processing of personal data by judicial and law enforcement authorities and the independence of the Personal Data Protection Authority. The 2018 Protocol amending the Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data (Council of Europe, CETS No 223) has yet to be signed.

On **freedom of thought, conscience and religion**, freedom of worship continued to be generally respected. The lack of legal personality for the non-Muslim and Alevi communities remained a serious concern, notably in relation to the lack of legal status for the patriarchates, the chief rabbinate, synagogues, churches and Cem houses (Alevi places of worship). The Venice Commission's recommendations on the legal status of non-Muslim religious communities and the right of the Greek Orthodox Ecumenical Patriarchate in Istanbul to use the title 'Ecumenical' have yet to be implemented and have continued to be challenged.

Following the publication in June 2022 of the long-awaited Community Foundations Election Regulation, the vast majority of minority foundations completed their elections, albeit under strict control and restricted by the state electoral process, and new boards of directors have taken office. However, rules for the election of the board members in the foundations controlling community hospitals have yet to be issued. Five articles of the Election Regulation were improved in September 2022. Decisions in cases related to the property of religious communities still need to be implemented. The lack of legal provisions on conscientious objection to army service remained an issue for Jehovah's Witnesses and other citizens because refusal to serve in the military results in conviction for desertion. Several ECtHR judgments and a decision by the United Nations that found violations of the rights of Jehovah's Witnesses remained unimplemented. School textbooks need to be revised in order to remove all discriminatory elements and hate rhetoric against all religious and faith groups.

Further damage to Hagia Sophia was reported, indicating a lack of proper care of this historical monument. No steps were taken to address the UNESCO World Heritage Committee's grave concern about the potential impact of the monument's status change into a mosque on the outstanding universal value of Hagia Sophia. No steps were taken to re-open the Halki (Heybeliada) Greek Orthodox Seminary, which has been closed since 1971.

Attacks continued against Cem houses and Alevi religious leaders during the reporting period. The court case concerning the July 2022 attacks in Ankara was concluded at the first instance court in July 2023, with the main perpetrator sentenced to 3 years in prison, for damaging places of worship and for deliberate injury. A presidential decree establishing the Alexi-Bektash Culture and Cemevi Presidency was adopted in November 2022. The Decree defines the duties and powers of this new state body attached to the Presidency of the Republic. However, it does not recognise Cem Houses as places of worship. Alevi organisations held demonstrations in several cities, demanding legal rights and official recognition of Cem houses.

In March 2023, Türkiye submitted an action plan to the Council of Europe regarding the implementation of four ECtHR judgments filed by the Alevi community on compulsory religion and ethics classes and the status of Cem houses. In June 2023, the Committee of Ministers reviewed the cases. On the positive side, this review led to developments allowing the partial elimination of the imbalance in religious public services provided to the Alevi community by the State. However, no measures were taken by the authorities to address the shortcomings identified by the Court as regards the compulsory religious culture and ethics classes.

Hate speech and hate crimes against Christians, Protestants, Jews and Alevis continued (see the section on minorities below). No official data exists, but the general trend is that those most targeted and subjected to hate speech and crimes are Syrians (often refugees), Greeks, Armenians, Jews and Alevis. The Jewish community and the Chief Rabbi hold annual holocaust remembrance ceremonies in İstanbul, which are occasionally attended by authorities at local level. Protestants continued to face problems in gaining official recognition for their places of worship. Hate speech and insults against atheists and deists continued. The court case on the killing/disappearance of the Chaldean Catholic couple in Şırnak in 2020 continued.

The Diyanet (Religious Affairs Presidency) Academy that was established with the amended March 2022 law started vocational training for imams and Diyanet staff. Reports of maltreatment and sexual abuse within some Sunni sects continued. The increased work, powers and influence of the Diyanet continued in all spheres of public life.

Acts of vandalism and destruction of minority worship places and cemeteries were reported during the period and need to be investigated and prosecuted effectively. In July 2022, the Jewish cemetery in Istanbul was vandalised and 81 gravestones were damaged. In January 2023, a fire broke out at the Surp Pırgiç Armenian Church lodgings and resulted in the death of two elderly residents. The authorities condemned the incidents and investigations were launched. Regarding the fight against antisemitism, Türkiye is an observer country to the International Holocaust Remembrance Alliance and it has been taking actions to support and preserve Jewish cultural heritage.

Two non-Muslim persons were elected as members of parliament in May 2023, one Armenian and one Syriac. As the Venice Commission underlined in 2010, Türkiye should continue the reform process and introduce legislation to eliminate all obstacles preventing non-Muslim religious communities from exercising all their rights and acquiring legal personality, in accordance with European standards.

There are reports concerning the ill-treatment and detention of members of the Ahmadi Religion, currently kept in the detention centre of Edirne, for attempting to seek asylum at the border with Bulgaria. A request for interim measure with the European Court of Human Rights for their release was rejected on the grounds that national measures need to be exhausted first.

Freedom of expression

Türkiye continues to be at an early stage in this area and the serious backsliding observed in recent years continued. The implementation of the criminal laws relating to national security and anti-terrorism continued to contravene the ECHR and to diverge from ECtHR case law. Cases and convictions of journalists, human rights defenders, lawyers, writers, opposition politicians, students, artists and social media users continued. The dissemination of

opposition voices and freedom of expression were impaired by the increasing pressure and restrictive measures. Regarding the May 2023 elections, the ODIHR identified an environment with restrictions on freedom of expression, both private and public media did not ensure editorial independence and impartiality in their coverage of the campaign, thus reducing voters' ability to make an informed choice.

The recommendations from the European Commission's last five annual reports were not addressed. In the coming year, Türkiye should in particular:

- release journalists, human rights defenders, lawyers, writers and academics being held in pre-trial detention and ensure that the criminal cases against them are concluded in accordance with the criteria set by the ECHR and the ECtHR;
- ensure a safe and pluralist environment that enables the media to carry out their work independently and without fear of reprisals and dismissals. This includes ending the practice of both state and non-state agents of intimidating, interfering with, and putting pressure on the media;
- revise criminal legislation, in particular the anti-terror law, the Criminal Code, the data protection law, the internet law, the new media law in relation to the definition of 'fake news', and the Radio and Television Supreme Council (RTÜK) law, to ensure that they comply with European standards and are implemented in a proportionate manner, which does not curtail freedom of expression;
- ensure that criminal law provisions on defamation and other similar offences are not used as a means of putting pressure on critical voices.

Intimidation of journalists

Activities of journalists, writers, lawyers, academics, human rights defenders, opposition politicians and critical voices continued to be restricted through arrests, detentions, prosecutions and convictions. These practices continued to hinder the exercise of their freedoms and led to self-censorship. A few journalists covering the search and rescue efforts in the area of the earthquakes were reportedly blocked by the police on the basis of the three-month State of Emergency declared in the region. Some were taken into custody on the grounds that they had taken pictures without permission. Earthquake victims who spoke to journalists were also threatened.

Türkiye is ranked 165th out of 180 in the Reporters without Borders (RSF) 2023 annual World Press Freedom Index (down from 149th in 2022). As of June 2023, 59 journalists and media employees were in prison, either awaiting trial or serving a sentence. In 2022, at least 40 (41 in 2021) journalists were taken into custody and 28 (35 in 2021) journalists were sentenced to a total of 50.5 years in prison (92.5 in 2021). A large number of cases continued to be launched against writers and journalists. Threats and physical attacks on journalists and media organisations due to their work continued during the reporting period. At least 55 opposition journalists in Türkiye were physically assaulted by politically motivated groups. Prosecutions were initiated against over 700 people, with some 180 people being detained and more than 40 people arrested, for their social media posts on the February 2023 earthquakes.

Legislative environment

The current laws on anti-terrorism, the internet, intelligence services and the Criminal Code impede freedom of expression and run counter to European standards. Selective and arbitrary application of legislation continued to raise concerns as it infringes the basic principles of the

rule of law and right to a fair trial. Despite legislative changes introducing the need for a strong evidence base in ‘catalogue crimes’, cases relating to freedom of expression remained in the category of crimes that automatically requires ‘arrest pending trial’.

No legislative changes to the Criminal Code and the anti-terrorism law to comply with ECtHR case law took place in relation to the Council of Europe Committee of Ministers 2021 resolution on a long-standing series of freedom of expression cases against Türkiye.

The case fi to enable the concentration of resources on rescue efforts, led with the Council of State by the Union of Turkish Bar Associations against the circular issued by the President in January 2022 addressed to all print, audio and visual media, including social media and digital platforms, is ongoing. The circular’s aims include to ‘protect youth, children and family institutions from bad habits and ignorance and to protect national and moral values from alienation and degeneration’.

A new Media Law was adopted by the parliament in October 2022. It raises concerns due to its vague and ambiguous language with regard to what constitutes ‘false or misleading information’, as it allows arbitrary use of the law to stifle criticism of the government. The Law leaves the final decision as to what is ‘fake news’ to the judiciary, which does not have the tools to examine complex situations and does not provide guarantees of independence from the executive power. Equally worrying is the provision of the Law that stipulates imprisonment for the crime of disinformation. The Law also increases the punitive powers of the Press Advertisement Agency (BIK) and increases the sanctions to be imposed on internet service providers that breach provisions related to information requests from the authorities. On the positive side, the Law allows internet news sites to benefit from public advertisements and allows journalists working for internet sites to receive press cards and enjoy certain social security benefits.

The new Media Law may have serious negative consequences for freedom of expression as it may foster self-censorship and stifle public debate. Several hundred cases were launched against social media users on the basis of the Law in relation to the government’s post-earthquake response. The opposition Republican People’s Party (CHP) leader was the first high-profile public figure to be charged with ‘disinformation’ for his criticism of the government response to the earthquakes. He was also charged with ‘insulting the Turkish nation, the State of the Republic of Türkiye, and the institutions and organs of the State’. An individual application was lodged with the Constitutional Court on behalf of the first journalist convicted on charges of ‘openly disseminating information misleading the public’ in December 2022.

The Venice Commission issued an urgent opinion in October 2022 on the draft amendments to the Turkish Penal Code introducing a provision on ‘false or misleading information’. This opinion criticised the new Media Law for its lack of proportionality and the risk of increased media self-censorship and violation of the right of anonymity over the internet.

Implementation/institutions

Selective and arbitrary application of the legislation continued to raise concerns. The quality of the indictments and accusations remains low as they fail to make a direct and credible link between the alleged offence and the act. The alleged offences are often acts which constitute constitutional guarantees, such as attending press conferences or trade union activities.

Despite the 2022 final ECtHR ruling on the Vedat Şorli case, which pronounced that the article of the Turkish Penal Code providing a maximum sentence of 4 years for insulting the President is not in line with ECHR principles. This article continued to be used extensively to

prosecute persons who criticised the President.

Following the Constitutional Court judgment of July 2019 (finding that the conviction of the ‘Academics for Peace’, who had been dismissed from their positions after signing a declaration criticising the government over human rights violations in the 2015-2016 operation in the south-east, violated their freedom of expression), some courts have since ruled in their favour and opened the way for their reinstatement. As a result, a number of academics were reinstated in their university positions.

The 15 Kurdish journalists and one media worker, who were detained in Diyarbakır in June 2022, were released in July 2023 under judicial control condition. The next trial session is due in November.

11 journalists were detained in April 2023 and subsequently charged with ‘membership of a terrorist organisation’.

In January 2023, the Turkish Medical Association (TMA) Chair was sentenced to 2 years, 8 months and 15 days in prison for ‘terror propaganda’ because she had called for an investigation into the alleged use of chemical weapons by the Turkish armed forces. She was released from pre-trial detention and the case is being appealed.

The Press Advertising Agency (BIK), which is responsible for placing public advertisements in the media, replaced its General Board Decision on the Code of Press Ethics of 1994. The new Decision now includes vague wording on possible violations that may contribute to further media self-censorship. It also includes ambiguous and generic provisions such as ‘sharing information and visuals on terror organisations’ that are open to interpretation and can contribute to media censorship. The Constitutional Court ruled in August 2022 that the broad-ranging authority granted to the BIK concerning the imposition of sanctions (such as public advertisement bans and fines) and the way it was used violated the right to freedom of expression. BIK then issued a decision stating that it would not examine applications on Code of Press Ethics until the parliament amended the law. At the same time, the BIK continued to allocate public advertising in a discriminatory way that favoured pro-government media. The discriminatory application of its powers risks pushing independent media into self-censorship. Measures therefore need to be taken to ensure that the State advertising budget is fairly distributed in an impartial, accountable and transparent way.

Public Service Broadcasters

The public service broadcaster Turkish Radio and Television Corporation (TRT) is affiliated with the Presidential Communication Authority, and the Radio and Television Supreme Council (RTÜK) is affiliated with the Ministry of Culture and Tourism. No changes were made to TRT’s editorial policy, which reflects the government’s official lines. RTÜK has continued to impose fines on independent television and radio channels for their broadcasting content, on the vague grounds that the content is ‘contrary to the national and moral values of society, general morality and the principle of family protection’. Media outlets critical of the government were frequently fined by RTÜK on various grounds, ranging from displaying the imprisoned former HDP co-chair Demirtaş’ new book to ‘failing to be objective’ when reporting on the government’s response to the earthquakes. The Industry and Technology Ministry did not extend the operating license of Deutsche Welle’s (DW) Turkish office, which closed at the end of March 2023. This decision meant that DW was not able to insure its employees who can therefore only continue practising journalism as freelancers. In August 2023, upon the request of the RTÜK, a criminal judge of peace decided to block access to the Voice of America Turkish service, for providing broadcasting services over the internet without obtaining a broadcast license. The concerns relating to RTÜK’s independence and

neutrality persisted as members continue to be elected by the parliament without any consultation of civil society or professional media organisations. Currently, six members are nominees of the ruling coalition, two from the CHP party and one from the HDP party.

Economic factors

The ownership of the Turkish media outlets, which is heavily concentrated in a few large companies close to the government, undermined the independence of editorial policies as it lacked transparency. In addition, the distribution channels of printed media, which are used to allocate public advertising revenues and deliver newspapers to retail outlets, are owned by a single company close to the government. The Broadcasting Law, which does not ensure fair competition because it does not prevent monopolisation, was not amended.

Internet

The current legislation and its implementation do not guarantee an open and free internet in Türkiye. There were frequent website and social media bans for those who expressed views critical of the government. Authors of such websites faced harassment and at times prosecution. There are no official statistics on banned websites or the blockage of content, in accordance with the rulings of the criminal judges of peace. In August 2023, upon the request of the RTÜK, a criminal judge of peace decided to block access to the Voice of America Turkish service, for providing broadcasting services over the internet without obtaining a broadcast license.

By March 2023, RTÜK had issued 25 penalties based on its authority to inspect online broadcasts. In February 2023, the Information and Communication Technologies Authority (BTK) blocked access to one of Türkiye's most popular social networks, the online discussion forum Ekşi Sözlük, due to its coverage of the post-earthquake response. The authorities also reduced Twitter's bandwidth on the second day of the earthquakes. Access was reinstated the next day after severe criticism that this had put search and rescue efforts at risk. Legal action was taken against 609 persons, 150 people were detained and 29 were arrested for 'provoking the public into hatred and hostility' on social media platforms in connection with the recent earthquakes.

Professional organisations and working conditions

Journalism in Türkiye remains a precarious and risky profession, with low wages, a high risk of judicial harassment and no job security. Trade union rights are limited and labour legislation is not properly applied. According to the Journalists Union of Türkiye, only 11% of journalists are unionised. The new Media Law made the issuing of press cards and accreditations highly arbitrary, due to the composition of the Press Card Commission, in which only 1 of the 19 members comes from the journalists' union and the others have been appointed by the executive branch of the government. Investigative journalism on politically sensitive issues continued to be subject to editorial pressure, self-censorship and judicial harassment (see also Chapter 10 on digital transformation and media).

The existing legislation includes vague provisions that can be used to restrict freedom of artistic expression. A number of artistic events and performances were banned by the authorities, and artists critical of government policies were subject to intimidation and insulting remarks by pro-government figures and RTÜK officials.

There was no progress in the area of **freedom of assembly and association** where legislation and its implementation are not in line with the Turkish Constitution, European standards or

the international conventions that Türkiye is party to. Bans on peaceful gatherings were widely imposed and public events were often dispersed with a disproportionate use of force by the police. Demonstrators frequently faced investigations, court cases and administrative fines on charges of terrorism or of violating the Law on demonstrations and marches. Attacks on opposition gatherings and premises were often not investigated or prosecuted. Türkiye needs to urgently apply the ECtHR case law and to revise relevant national laws.

Protests and demonstrations for human rights, environmental rights, and political and socio-economic rights were banned and dispersed by the police on several occasions (including demonstrations by dismissed civil servants, on the occasion of the International Women's Day and by mothers of disappeared persons). Participants in public events were often detained (including with the use of force) and later released. The legislation on meetings and demonstrations allowed authorities to prohibit meetings and demonstrations on the basis of vague, discretionary and arbitrary criteria. All activities related to the "Armenian Genocide Commemoration Day" were banned in April 2023. All activities and gatherings to mark anti-homophobia and Pride Month in May and June 2023 were also banned. Some activists that participated in the June march were detained and later released.

In a positive development, the Constitutional Court ruled in September 2022 that the blanket ban on demonstrations issued by Ankara's governor between 2016 and 2018 constituted a violation of the Constitution. The Constitutional Court ruled in February 2023 that the Beyoğlu District's governor's ban on the gathering of the Saturday Mothers violated their rights. Following the Court's decision, the Saturday Mothers tried to meet in their original venue, but they were repeatedly detained and released on the same day. The court case against 46 human rights defenders and the relatives of Saturday Mothers continued.

Dozens of women and a journalist were detained for gathering to mark the International Day for the Elimination of Violence against Women in November 2022. There were reports of torture and ill-treatment by the police in Cizre. The 'November 25 Platform' lodged a criminal complaint about the police brutality on that day in İstanbul.

Regarding freedom of association, many human rights defenders were detained or arrested and NGOs, especially in the south-east, were subjected to police raids. The legal provision requiring information on the identity of members of associations by the authorities remained in place. Regarding political associations, the 8th Administrative Court of Ankara found unlawful the stance of the Ministry of Interior, which prevented the establishment of the Green Party by not providing a 'received' certificate for the application and decided to stay the execution of the process. The Court of Appeal has since removed the stay of execution decision regarding the Ministry of Interior's act, the Green Party is again prevented from being established and the case is still pending. The file for the establishment of the Humanity and Freedom Party is pending before the Constitutional Court.

The Law on the prevention of financing of the proliferation of weapons of mass destruction has continued to be implemented in a manner not compatible with international human rights standards and this is threatening freedom of association in Türkiye. The Council of Europe Venice Commission's July 2021 opinion on the law was not taken into account. Türkiye used the Financial Action Task Force (FATF) recommendations to categorise NGOs as medium to high risk for terrorism financing abuse in an arbitrary way, and to subject rights-based NGOs to frequent and burdensome audits. Many associations and foundations, especially recipients of international funds, have been subjected to repeated audits. The case against the Ministry of Interior's October 2021 circular, requiring NGOs to be audited based on a risk analysis, is ongoing. The recommendations made in the 2021 Venice Commission opinion should be implemented, including with regard to fundraising activities by NGOs.

Issues of **labour and trade union rights** are further covered in Chapter 19 on social policy and employment.

On **property rights**, the Inquiry Commission on the State of Emergency Measures, whose term ended in January 2023, did not provide an effective domestic remedy for confiscations. There are ongoing court cases against the decisions of the Inquiry Commission. The case of the Istanbul Metropolitan Municipality against the Directorate-General for Foundations (DGF) on the ownership of the Taksim Gezi Park is ongoing.

In March, the EctHR found Türkiye in violation of property rights in the case of the Chief Rabbinate of Türkiye – İzmir Jewish Synagogue Foundation and ordered a retrial of the case. In December 2022, the Constitutional Court found the transfer of the Armenian Sanasaryan Inn to the State unlawful. There will be a retrial of the case, which was launched by the Armenian Patriarchate. In January 2023, the Constitutional Court ruled that there had been a violation of the right to property regarding the Greek Bebek Aya Haralambos Church, Bebek Aya Yani Cemetery Dova Church and the Cemetery Foundation. In April 2023, the Mor Batlo Syriac Orthodox Church and the cemetery in Mardin/Turabdin were transferred to the Housing Development Administration (TOKI). Court cases regarding the 2016 expropriations in Diyarbakir Sur District are ongoing.

In the south-east, the restoration of cultural and religious heritage and urban housing construction continued. Several important cultural and religious heritage sites were damaged by the February 2023 earthquakes in the region, especially in Hatay/Antakya. Regarding the implementation of the Law on foundations for minority communities, many appeals on rejected claims for the restitution of property were ongoing either before a local court or at the EctHR. Litigation brought forward by state institutions or municipalities against returned immovable property resulted in lengthy legal proceedings and uncertain property rights. The case of the Mor Gabriel Monastery Syriac Orthodox Church Foundation's land borders continued before the Constitutional Court. Other cases in relation to the ownership of the land of the Mor Gabriel Monastery continued. Other non-Muslim community foundations also have properties that have not yet been returned. Council of Europe Resolution 1625 of 2008 regarding property rights on the islands of Gökçeada (Imbros) and Bozcaada (Tenedos) still needs to be fully implemented. There is an urgent need to revise the relevant legislation on the issue of property rights for non-Muslim minorities and other legislation covering all issues of property rights to ensure a more comprehensive framework.

Legislation on **non-discrimination** is not in line with European standards and not duly enforced in practice. There were serious concerns regarding the implementation of the April 2021 Law on security investigations and archive checks for people who are to be appointed to public posts for the first time, as this takes into consideration not only final convictions but also other factors (e.g. ongoing investigations, pending cases and even intelligence against a person). The law decree issued under the State of Emergency to allow arbitrary dismissals expired in July 2022. However, dismissals with no objective criteria of civil servants continued on the basis of the Law on civil servants. Reports on profiling and discrimination against civil servants in employment on vague legal grounds continued. Cases of discrimination and hate crimes based on ethnic, religious grounds, sexual orientation and gender identity continued to be reported. Diyarbakir football team was subjected to racist attacks in two different provinces during matches. The HREI, which is in charge of applying non-discrimination legislation, finalised the examination of 166 applications in 2022 but received 355 new applications during the year falling under the scope of the task of 'combating discrimination'. The finalised decisions are sent to the relevant public authorities, but there is no systematic follow-up of corrective actions that were taken. School textbooks

still need to be revised, especially regarding some content on minorities, secularism, religion and gender equality. The HREI and the Ombudsman did not accept applications on sexual orientation and identity. Türkiye should urgently adopt a law on combating discrimination in line with the EU *acquis* as well as the ECHR, covering discrimination on the grounds of sexual orientation. Protocol 12 of the ECHR, which provides for the general prohibition of discrimination, remained unratified and the recommendations of the Council of Europe Commission against racism and intolerance (ECRI) were not implemented. Legislation against hate crime, including hate speech, is still not in line with international standards and does not cover hate offences on the basis of sexual orientation, ethnicity, age or gender identity. No progress was made with the ratification of the Additional Protocol to the Convention on Cybercrime concerning the criminalisation of acts of a racist and xenophobic nature committed through computer systems.

In the area of **gender equality**, the backsliding on the rights of women and girls remained. Türkiye ranked 129th out of 146 countries, as measured by the World Economic Forum's Global Gender Gap Report 2023 (compared to 124th place in the 2022 Report).

Widespread promotion of stereotyped gender roles and definitions continued, including in school textbooks and in the media. Statements by the authorities targeting independent women's organisations and women activists threatened the freedom of operation of women's rights associations. State authorities increasingly came under the influence of Sunni religious sects that promote illegal practices, such as early marriage. Efforts should be increased to prevent school drop-out due to early marriage (e.g. establishing early warning systems in schools, ensuring that domestic violence is properly investigated and prosecuted, and establishing a sufficient number of shelters for vulnerable individuals).

The Council of State concluded in its final ruling that the decision to withdraw from the Council of Europe Convention on Preventing and Combating Violence against Women and Domestic Violence (also known as the Istanbul Convention) was in compliance with Turkish law. The Istanbul Convention is an important international standard, so this constitutes serious backsliding in Türkiye's progress. According to reports, 334 women were killed in 2022 (339 in 2021) and 245 more women died in suspicious circumstances. There is no comprehensive data collection system in this area. Despite the continued implementation of the Fourth National Action Plan for Combating Violence against Women (2021-2025), there are no effective policies (including deterrent sentences), implementation of legislation is weak and the quality of available support services is low. The February 2023 earthquakes worsened the already difficult situation of women and children in the region, due to the collapse of women's shelters, crowded temporary accommodation and a lack of proper preventive policies. In the earthquake areas, priority has been given to certain basic needs, but the provision of hygiene products for women, separate and protected toilets, and reproductive health facilities was neglected.

The protection of the **rights of the child** remained weak, including in the juvenile justice system and in relation to the consequences of the earthquakes. Urgent action is needed to ensure protection of children in the areas affected by the February 2023 earthquakes in order to avoid exploitation and abuse.

Several human rights violations were reported in the regions affected by the earthquakes, including against children and persons with disabilities. The Religious Affairs Presidency issued a ruling (fatwa) soon after the earthquakes, stating that there is no religious obstacle to a marriage between a person and their adopted child. This is cause for very serious concern. A coherent and effective monitoring mechanism by public institutions for children in earthquake regions, including for unaccompanied and missing children, is urgently needed.

In January 2023, a Parliamentary Commission for Investigation of Child Abuse was established at the National Grand Assembly. A national action plan needs to be put in place to combat and prevent child, early and forced marriages and to raise awareness of the harmful impacts of child marriage. Consistent efforts are needed to eradicate child labour, especially among refugees.

Türkiye is effectively pursuing a de-institutionalisation strategy. However, 60% of the children living in the childcare system are in institutional care. Adequate funding should be directed towards reinforcing community-based care and ensuring proper de-institutionalisation. Particular concern is caused by the construction of new institutions following the earthquakes and the wars in Syria and Ukraine.

Children can benefit from free legal aid for criminal disputes, but no such scheme is in place for civil cases and/or other complaint mechanisms. Concerns remained about juveniles facing arrest and detention on charges of membership of terrorist organisations. Non-custodial measures for children need to be improved. The capacity of NGOs and bar associations to intervene, monitor and lodge strategic litigation is limited, both in law and practice. There is an insufficient number and geographical coverage of specialised child courts, child assize courts and qualified staff including judges, prosecutors, lawyers and experts. Almost half of the children on trial are still being tried before non-specialised courts. There are currently 81 juvenile courts and 12 juvenile high criminal courts, in accordance with the law that requires that there is a juvenile court in every province. However, this is not enough for the needs of big cities. Child-specific services (such as child-friendly interview rooms and child monitoring centres) were reportedly interrupted in various cities. A comprehensive training programme for all professionals working with children in contact with the law, with a certification mechanism and incentives, needs to be developed.

Concerning the **rights of persons with disabilities**, a national action plan to implement the ‘2030 Barrier-Free Vision Document’ was adopted by the government in February 2023, covering actions until 2025. The action plan pursues a rights-based approach and largely reflects the EU strategy in this field. The Monitoring and Evaluation Board on Rights of Persons with Disabilities became operational in November 2022 and convenes twice a year under the coordination of the Ministry of Family and Social Services, of which it is structurally part. Türkiye has ratified the UN Convention for the Protection of the Rights of Persons with Disabilities and its Optional Protocol, but shortcomings persist in its transposition and implementation. There is insufficient data collection in the field of accessibility of services and public infrastructure. The consequences of the February 2023 earthquakes will need to be reflected in the national action plan, including to ensure that public institutions include persons with disabilities in their preparedness, evacuation and post-disaster recovery plans. This will require a number of actions, including a thorough assessment of the number of people who became disabled as a consequence of the earthquakes, along with proper rehabilitation and psychological support measures.

Türkiye continued to pursue a de-institutionalisation policy for persons with disabilities, coupled with a home-based care support programme. However, independent-living mechanisms and opportunities remained very limited. The human resources capacity of services for people with chronic mental disorders and intellectual disabilities was enhanced in 2022. Quality standards developed for community mental health centres are now in active use. However, Türkiye has no mental health legislation and no independent monitoring mechanism for mental health institutions. In school education, the proportion of students with disabilities attending inclusive classrooms reached 75%. The remaining 25% (more than 60 000 children) continued to attend special schools.

The lack of protection for the fundamental rights of **lesbian, gay, bisexual, transgender, intersex and queer (LGBTIQ) persons** continued to raise serious concerns. The lack of legal protection against hate speech and hate crimes based on sexual orientation or gender identity was further exacerbated by negative stereotyping in the media and discriminatory rhetoric from high-level officials, including the highest political level. Anti-LGBTIQ rallies were organised in various parts of the country during the reporting period and were allowed by the authorities. LGBTIQ associations were regularly targeted by pro-government media for being funded by foreign countries. Discrimination, intimidation and violence against the LGBTIQ community and especially transgender persons increased, in part due to the lack of effective criminal sanctions. Several court cases related to LGBTIQ persons who were murdered or seriously assaulted continued. Access to gender reassignment surgery and to health and social services remained cumbersome and problematic for trans persons. LGBTIQ prisoners suffered discrimination and solitary confinement. LGBTIQ activities, marches and pride parades were banned in several provinces and police intervened to disperse participants.

The appeal case against the Middle East Technical University (METU) students who took part in a pride gathering on the university campus in May 2019 continued. A new court case was launched against METU students for their participation in the pride march of 2022. The court case against the former executives of the Ankara Bar Association for criticising the Diyanet's president's homophobic speech continued. A court case against the Izmir Bar Association's former president and ten board members started in April 2023 on charges of insulting religious values, due to the statement they issued on their official website against the discriminatory Friday sermon of the president of religious affairs against private life, different life preferences and LGBTIQ individuals. The Human Rights and Equality Institution (HREI) continued to not process applications by LGBTIQ persons on the grounds that it does not consider discrimination against LGBTIQ to be within its remit, because the law establishing the HREI does not consider 'sexual orientation and gender identity-based discrimination' to be a criterion for discrimination.

On **procedural rights**, legislation and its implementation are not in line with the EU *acquis* or European standards, since basic minimum procedural rights' standards are missing. The 2023 earthquakes seriously hindered access to justice in the affected areas, especially for disadvantaged groups, women and children. In addition to the loss of life, many lawyers' offices and some bar associations' premises were destroyed by the earthquakes. The Union of Bar Associations provided support to lawyers in the affected regions but, overall, problems of access to justice remained extensive. Several complaints were launched by bar associations concerning human rights violations, property rights and other issues.

ECtHR judgments condemning Türkiye for violating the right to a fair trial and the presumption of innocence due to its failure to respect procedural rules continued to be handed down. The 2018 law issued under the state of emergency that restricted fundamental freedoms (including in the Code on Criminal Procedures and Anti-Terror Law) remained in force.

Access to legal assistance for convicted children remained limited. Lawyers (especially those providing legal assistance to human rights defenders and civil and political activists) continued to face difficulties in performing their duties. In some cases, lawyers were subjected to ill-treatment by law enforcement personnel.

Protection of victims' rights is regulated under the penal legislation. The presidential decree on Supporting the Victims of Crime has been in force since June 2020. Accordingly, there is a specialised Department of Victims' Rights under the Ministry of Justice. The 'Judicial Support and Victim Services Directorates' established in 167 courthouses provide

information, orientation and psycho-social support services to the victims of crime during judicial proceedings. Currently, there are 166 forensic interview rooms in 159 courthouses in 81 provinces, where victims can give their statements outside the courtroom with the support of experts and without having to face the alleged perpetrator. Compensation and redress for victims remained limited. Steps need to be taken to align national legislation with the EU Victims' Rights Directive and the directive relating to compensation for crime victims.

Hate speech and hate crime remained a serious issue for persons belonging to ethnic and national **minorities**. No steps were taken to revise school textbooks to remove discriminatory and derogatory references. Minorities continued to face difficulties, such as the lack of legal status for religious institutions, protection for languages, schooling support, clergy training, the economic non-viability of media in minority languages and complications in enjoying property rights for foundations. The lack of legal personality for minority communities' churches, synagogues, patriarchates, monasteries and chief rabbinate continued to create difficulties in exercising their freedom of association and religion, and impacted their property rights. Minority schools received no public funds. Regular and substantive subsidies to the newspapers run by members of the Armenian, Greek, Jewish and Syriac communities were granted by the Press Advertising Authority, in order to ensure their viability, given their limited circulation. In the court case against public officials involved in the killing of Armenian journalist Hrant Dink in 2007, the Court of Cassation in June 2023 upheld some of the convictions given by the local court and some acquittals. In April 2023, as a result of an on-going investigation, a new case was launched against some of the perpetrators of Dink's murder on charges of 'being a member of an armed organisation', 'deliberate killing' and 'attempting to remove the constitutional order'. The first hearing was held in June 2023.

The 'Armenian Genocide Commemoration Day' was banned by the Istanbul governorate and other provinces. During the reporting period, a member of the Armenian community was appointed as a sub-province governor (kaymakam) for the first time. The restoration studies continued on the Büyükada (Prinkipo Island) Greek Orphanage, a cultural heritage monument. Mechanisms should be in place to support the participation of minorities in decision-making and to ensure that they are adequately represented in the public administration and in politics (see also Chapter 23 on cultural rights).

Concerning the **Roma**, Dom and Abdal communities, Türkiye adopted in January 2023 a new Roma strategy and a related action plan covering the period until 2030. The aim is to align with the EU Roma Strategic Framework, however, a horizontal objective of fighting antigypsyism and discrimination and quantitative national targets connected to indicators and baselines that would allow measuring progress towards the EU level headline targets remains to be defined. The implementation of the strategy needs to be monitored inclusively, including with the broad participation of civil society. Ten municipalities across Türkiye voluntarily took part in an EU programme to promote participation in local governance using social mediators. Specific policy measures are needed for the inter-sectional vulnerabilities of Roma women. No official data on the situation and living conditions of Roma exists in Türkiye.

The February 2023 earthquakes increased the difficulties of the Roma population in the affected areas in terms of living conditions, livelihood, basic needs and health, especially for women and children. Dramatic increases in housing prices particularly hit Roma families, who often live in poor conditions and have limited property ownership. Lack of emergency savings and high dependence on informal jobs made Roma in earthquake-affected regions more vulnerable. The Roma were among the vulnerable groups who had more difficulties in accessing relief aid. A holistic approach is needed to address drug use disorder among the

Roma, taking particular account of social and economic factors. Roma children being more integrated into the education system would contribute to eliminate child labour and early marriage. Targeted support measures for Roma entrepreneurs and self-employed need to be introduced. The problem of incorrect diagnosis of Roma children with mental disabilities or learning difficulties should be effectively tackled. No EU-Türkiye Joint Roma Seminar was held. Concrete measures should be taken to prevent the increase of antigypsyism and to combat prejudice and discrimination against Roma. The capacity of the National Roma Contact Point to programme and mainstream funds targeting all aspects of Roma inclusion remained limited. No members of parliament in the new parliamentary term have an overt Roma identity.

On **cultural rights**, there were no legislative developments to allow public services to be provided in languages other than Turkish. Legal restrictions on mother-tongue education in primary and secondary schools remained in place. Optional courses in Kurdish and Circassian are provided in public state schools, but the requirement of a minimum of 10 students for these courses continued to be an impediment. The small number or complete lack of teachers for these courses remained another limiting factor. University programmes are available in Kurdish, Arabic, Syriac, Zaza and Circassian. Only a few political parties explicitly included mother-tongue education in their election platforms. The state-appointed trustee mayors in the south-east continued changing the original names of streets. The increased powers of the governors and arbitrary censorship continued to have a negative impact on arts and culture and a number of art and culture groups in Kurdish language were dismissed by the trustees. A dozen concerts, festivals and cultural events were banned by governorates and municipalities on the grounds of ‘security and public order’. Kurdish cultural and language institutions, media outlets and numerous art spaces remained mostly closed, as they have been since the 2016 coup attempt, which contributed to a further shrinking of their cultural rights (see also Chapter 26 – Education and culture).

2.2.2. Chapter 24: justice, freedom and security

The EU has common rules for border control, visas, residence and work permits, external migration and asylum. Schengen cooperation entails the lifting of border controls within the EU. The Member States also cooperate with Türkiye in the fight against organised crime and terrorism, and on judicial, police and customs matters, all with the support of the EU justice and home affairs agencies.

Türkiye is **moderately prepared** in the area of justice, freedom and security. **Some progress** was made in relation to the further strengthening of the surveillance and protection capacity of the land border with Iran. Türkiye has still not implemented the provisions pertaining to third-country nationals in the EU-Turkey readmission agreement, which entered into force in October 2017. Türkiye continued to make significant efforts to host and meet the needs of 3.6 million refugees. Türkiye still needs to align its legislation on data protection with European standards.

Most of last year’s recommendations still need to be addressed and remain valid. In the coming year, Türkiye should in particular:

→ fully implement the EU-Turkey Statement of March 2016 (notably the returns from the Greek islands and the prevention of irregular routes to all Member States) and implement all the provisions of the EU-Turkey readmission agreement towards all EU Member States;

- align legislation on personal data protection with European standards, which could have a positive effect for the possible conclusion of an international agreement between the EU and Türkiye on the exchange of personal data between Europol and Türkiye;
- revise legislation and practices on terrorism in line with the European Convention on Human Rights, European Court of Human Rights case law and the EU *acquis* and practices. The proportionality principle should be observed in practice;
- adopt and implement a strategy and action plan on border management with the aim of enhancing coordination between border services at national and international levels.

Fight against organised crime

Türkiye has **some level of preparation** to implement the EU *acquis* in this area. **Some progress** was made at operational level through participation in an increasing number of joint operations with EU Member States and neighbouring countries. A new strategy and new action plan against organised crime were adopted. However, Türkiye needs to improve the effectiveness of law enforcement in fighting certain forms of crime, such as money laundering and financial crimes. Coordination remains crucial for all stakeholders involved in fighting organised crime.

In the coming year, Türkiye should in particular:

- improve the legal framework and practices on counterterrorism in line with the EU *acquis*; and continue addressing the remaining recommendations in order to be delisted from the Financial Action Task Force's (FATF) 'grey list';
- conclude an international agreement with the European Union on cooperation with Eurojust;
- enhance efforts in the fight against the smuggling of migrants, including final convictions and asset confiscation;
- revise Law No 7262 in line with the recommendations of the Venice Commission;
- increase its operational willingness to cooperate and exchange information with EU law enforcement partners.

Institutional set-up and legal alignment

There are a number of **specialised departments** dealing with various forms of organised crime, under two main law enforcement agencies; namely the gendarmerie and the police under the Ministry of Interior (MoI). The Coast Guard Command also plays an important role in preventing migrant smuggling and trafficking in human beings. The Financial Crimes Investigation Board (MASAK) is the Turkish financial intelligence unit attached to the Ministry of Treasury and Finance. Cybercrime is addressed by a specialised department for combating cybercrime affiliated to the Turkish national police (the TNP) as well as the public order division of the gendarmerie at central level and the 31 provincial gendarmerie branches.

The TNP comprised a total of 339 563 officers (equivalent to 399.48 officers per 100 000 inhabitants). By comparison, the EU average is 335.3 officers per 100 000 inhabitants (Eurostat, 2019-2021). The total number of gendarmerie staff (excluding conscripts) was 196 285 (equivalent to 230.34 gendarmerie personnel per 100 000 inhabitants). The Coast Guard Command comprised of 8 343 personnel (equivalent to 9.81 personnel per 100 000 inhabitants). Between April 2022 and April 2023, 1 054 personnel were dismissed from the

gendarmerie. These figures include the personnel dismissed due to their affiliation to the Gülen movement and the Parallel State Structure (PDY).

The **legal framework** for the fight against organised crime and police cooperation is partially aligned with the EU *acquis*.

Türkiye adopted a new national strategy (2022-2027) and an action plan (2022-2024) against organised crime in December 2022. The Ministry of Interior's Department of Smuggling Intelligence, Operations and Data Collection is responsible for coordinating the implementation.

The legal framework pertaining to trafficking in human beings is largely in accordance with international conventions and the EU *acquis*. A new action plan on trafficking in human beings requested by the Council of Europe's Group of Experts on Action against Trafficking in Human Beings (GRETA) has not been adopted. Türkiye needs to fully align its definition of trafficking in human beings with the Council of Europe Convention on Action against Trafficking in Human Beings.

The completion of an international agreement between the EU and Türkiye on the exchange of personal data between Europol and the Turkish authorities with responsibility for fighting serious crime and terrorism is still pending considering also that the Turkish data protection legislation is still not aligned with the EU's *acquis*.

Türkiye is party to the Council of Europe's 'Budapest' Convention on cybercrime, but it has yet to sign its Second Additional Protocol on enhanced cooperation and disclosure of electronic evidence, which was opened for signature in May 2022.

Türkiye's Information and Communication Technologies Authority has been a member of INHOPE (International Association of Internet Hotlines) since 2011 and cooperates with other hotlines to fight against **child sexual abuse**. Article 21 (entitled 'Protection of Children') of the By-law on the provision of radio, television and on-demand media services via the internet environment requires media service providers that have been granted an online broadcasting license and online media platform operators that have been granted an authorisation certificate for the online transmission of media services to take measures to ensure parental control. It also makes these institutions responsible for taking the necessary technical measures to protect children and young audiences. In this context, examples such as PIN systems, and child profile and protective symbol systems are used by media service providers operating in Türkiye to protect children in online audiovisual media services. In January 2023, the Turkish parliament set up a research commission with the objective of preventing child abuse. The establishment of this commission was prompted by a specific case involving the forced marriage of a six-year-old girl (*see the section on fundamental rights of the child*).

MASAK is a member of the Egmont Group of Financial Intelligence Units, which facilitates cooperation and intelligence sharing between national financial intelligence units to investigate and prevent money laundering and terrorist financing.

Türkiye is party to the UN Convention against Transnational Organised Crime and the Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds of Crime and on the Financing of Terrorism (CETS No 198).

Türkiye has a witness protection system to protect witnesses from intimidation and threats. However, the scope of the Law on witness protection needs to be expanded to include all types of serious crimes and procedural rules need improvement.

Implementation and enforcement capacity

In the reporting period, operational capacity continued to be strengthened through new recruitment and training programmes.

In total, 6 145 operations were carried out by the gendarmerie and the Turkish national police (the TNP) to tackle organised crime, cybercrime, smuggling of migrants and trafficking in human beings.

Concerning firearms trafficking, 2 388 small and light weapons (SALW) were seized by the gendarmerie and 4 138 by the TNP during the reporting period. In 2022, 877 cases of firearms trafficking (Article 12 of the Turkish Criminal Code) were brought before criminal courts, resulting in the conviction of 584 persons.

Since July 2004, cooperation between Europol and Türkiye has been based on the Strategic Agreement on Cooperation. This does not include the possibility of sharing personal data, but it does facilitate cooperation in a range of areas. A Turkish liaison officer has been seconded to Europol since 2016. Türkiye is connected to and configured for the full use of the Secure Information Exchange Network Application (SIENA) with third parties and EU Member States. The EU (through Europol) and Türkiye have a joint interest in stepping up law enforcement cooperation to effectively address common challenges.

16 EU Member States have 30 liaison officers in Türkiye and Türkiye has 10 liaison officers in 7 EU Member States. A cooperation agreement with the European Union Agency for Law Enforcement Training (CEPOL) has been in place since 2010. Its revision has been pending since the end of 2022. Exchange and training programmes were carried out involving the gendarmerie and the TNP. As well as participating in the courses held by EU Member States, TNP also organises joint workshops with CEPOL.

The track record on combating money laundering and terrorist financing showed a gradual improvement. Turkish judicial statistics showed a consistent upward trend. There were 19 files, 49 separate offences and 47 convictions in 2020, while there were 26 files, 61 separate offences and 61 convictions in 2021. In 2022, 39 criminal files and 118 offences resulted in 116 convictions.

The domestic terrorist asset freeze mechanism continued to be implemented through the joint decisions issued by the Ministry of Treasury and Finance and the Ministry of Interior. In 2021, the assets of 1 145 real persons and 16 corporate identities were frozen through three interministerial decisions. In 2022, 4 interministerial decisions resulted in the assets of 64 real persons and 14 corporate identities being frozen.

The country's geographic location makes it an important player in the fight against organised crime groups, in particular drug trafficking, migrant smuggling, arms trafficking, intellectual property crime and money laundering. Türkiye is used as a financial hub between south-east Asian countries, the Gulf region and Europe for facilitating illicit money flows in exchange for irregular migrants and illicit commodities. As far as participation in the European Multi-disciplinary Platform against Criminal Threats (EMPACT) is concerned, Türkiye was in 2022 a participant in one operational action (in the operational action plan on intellectual property crime, counterfeit goods and currencies). In 2023, Türkiye is participating in 16 operational actions. Regarding cross-border cooperation, Türkiye has not participated in any EU joint investigation teams (JITs) to date.

Türkiye continues to be an important transit and destination country for **trafficking in human beings**. By the end of 2022, the number of victims identified by the Turkish authorities stood at 345 (compared to 2021 when 403 victims were identified). Sexual and

labour exploitation constitute the highest number among the purposes of trafficking. Most victims are of Syrian origin. In 2022, 115 cases of trafficking in human beings (Article 80 of the Turkish Criminal Code) were brought before Türkiye's criminal courts. 23 cases ended with convictions. 65 people accused of trafficking were convicted by the criminal courts of first instance.

There are two shelters in Ankara and Kirikkale provinces run by the Presidency for Migration Management (PMM). Their total capacity to host victims of trafficking in human beings is 42 persons. There is an urgent need to increase the capacity to host and provide services to victims of human trafficking. Additional shelters are planned for the provinces of Aydın and Kutahya. Türkiye should bolster its collaboration with civil society organisations to enhance its capacity in identifying victims and delivering essential victim support services. Specialised services should be strengthened for all victims of trafficking.

The many Syrian and other refugees, including children, are vulnerable to being exploited through forced labour. Reports of early marriages increased in the wake of the pandemic as a negative economic coping mechanism.

There are insufficient training programmes for law enforcement agencies, prosecutors and judges that focus on a victim-centred approach. Partnership with civil society should be sought in order to encourage the identification of victims of trafficking and to provide them with shelter and services. The reasons why the crime of trafficking in human beings is not prosecuted should be identified and measures should be taken to ensure that victims are allowed to appear in court via video link when the circumstances of the case and the vulnerability of the persons concerned require this.

Gun violence in Türkiye has surged in recent years, while the overwhelming majority of firearms owned by individuals are unregistered due to lax enforcement of the Law on unregistered weapons.

In 2022, 47 079 suspects were detected in 8 252 cases of cybercrime (Articles 243/1, 244, 103 and 226 of the Turkish Criminal Code), resulting in the conviction of 123 persons. In the reporting period, there was no national strategy and action plan in place against cybercrime.

The National Cyber Security Strategy and Action Plan 2020-2023 covers public administration systems, information systems belonging to critical infrastructures operated by the public and private sectors, small and medium-sized industry, and all the components of cyber space at the national level (including all private and legal persons).

Cooperation in the field of drugs

Institutional set-up and legal alignment

The High Council for the Fight against Drugs consists of 12 ministers and is responsible for coordination and monitoring at national level. The national strategy and the action plan aimed at combating illegal drugs, which have been in effect for the period of 2018-2023, are coming to an end. The secretariat for coordinating their implementation is within the Ministry of Health's Directorate-General for Public Health. All ministers involved in the implementation of the strategy and action plan are also members of the High Council. A research committee conducts research into drug addiction and a scientific committee provides recommendations for studies, training and awareness-raising activities on drug abuse. An Action Plan on the Fight Against Methamphetamine 2022-2024 has been in force since August 2022 under the coordination of the Ministry of Interior. The Ministries of Justice, Family and Social Services, Interior, Defence, Health and Trade take part in the implementation.

Türkiye is a member of the European Information Network on Drugs and Drug Addiction (Reitox).

The Turkish Monitoring Centre for Drugs and Drug Addiction (TUBİM) continues to act as the national focal point of the European Monitoring Centre for Drugs and Drug Addiction (EMCDDA) and is the national drug observatory. Türkiye has had a participation agreement in place with the EMCDDA since 2007 and is a member of the Management Board of the European Monitoring Centre for Drugs and Drug Addiction (EMCDDA). It has a monitoring role at national and international level and drafts the annual Turkish drug report. It collects data, makes risk assessments and provides recommendations with regard to the National Early Warning System on new psychoactive substances. A total of 1 006 new psychoactive substances have been included in the national legislation and 35 of these were put on the list in 2022. The instant data-flow system, which uses encryption and anonymisation of personal data for monitoring and reporting, is operational. The responsible body for controlling drug precursors is the Turkish Medicine and Medical Devices Agency of the Ministry of Health, which grants licences and permits for manufacture, possession, selling, purchase, transportation, consumption, distribution, importation, exportation and legal use including for pharmaceutical and industrial purposes.

Within the framework of the 7th Judicial Reform Package adopted in April 2023, some penalties have been increased under the Turkish Penal Code with regard to manufacturing and trading certain types of drug substances, which have a higher potential to cause addiction and serious health problems. The minimum imprisonment penalty was increased from 10 to 15 years. Some amendments were made in relation to treatment, rehabilitation and probation. Random tests may be conducted under probation, and compulsory treatment and rehabilitation can be exercised on the convict or prisoner.

Implementation and enforcement capacity

Türkiye remains a transit route for drugs between Asia and Europe, but information exchange and collaboration with EU law enforcement partners are to be enhanced, particularly for heroin. In 2022, Turkish law enforcement services conducted operations that resulted in the seizure of, inter alia, 71 967 kg of cannabis including skunk (2021: 64 125 kg), 2 276 kg of cocaine (2021: 2 841 kg), 7 957 kg of heroin (2021: 22 202 kg), 16 210 kg of methamphetamine (2021: 5 528 kg), 5 050 325 ecstasy tablets (2021: 7 618 013) and 23 945 026 captagon tablets (2021: 13 790 648).

In 2022, a total of 69 430 cases in relation to Article 188/3 of the Turkish Criminal Code involving 90 919 suspects were launched by the prosecution for illicit drug related offences. 28 181 suspects were convicted.

In the field of prevention, the Ministry of Health (MoH) operates 237 counselling centres in 81 provinces. In 2022, 30 new centres became operational. The anti-drug counselling hotline received 78 152 calls in 2022. There are 135 treatment centres for drug dependence in 81 provinces. 59 of the centres focus on inpatient treatment and 20 of those are specifically dedicated to treating children. The other 76 centres are outpatient centres and 20 of those are specifically dedicated to children. The waiting time for applicants to be admitted to the treatment centres is currently 1-3 days. Bed capacity is 1 372. Despite improvements, the rehabilitation and treatment capacity remains insufficient.

Fight against terrorism

Institutional set-up and legal alignment

Türkiye's continuing efforts to tackle terrorism reduced terrorist activity and improved the security situation. The country continued to face threats from various terrorist groups. The EU has condemned all acts of terrorist violence perpetrated in Türkiye. Türkiye has prioritised the fight against the PKK and the dismantling of the Gülen movement. The PKK remains on the EU's list of persons, groups and entities involved in acts of terrorism. Türkiye has a legitimate right to fight terrorism. However, bringing the Turkish anti-terrorism legislation in line with EU standards still remains an essential outstanding reform.

The legal framework regulating the fight against money laundering and terrorist financing should be aligned with the recommendations provided by the FATF and those outlined by the Venice Commission on the Law on preventing financing of proliferation of weapons of mass destruction.

Türkiye has been on the list of jurisdictions under increased monitoring (the 'grey list') of the Financial Action Task Force (FATF) since October 2021. Türkiye's EU candidate status and commitment to address shortcomings identified by the FATF and to align with the EU's *acquis* have prevented it from being added to the EU's high-risk third countries list. Türkiye's response to the concerns of the EU and the FATF continues to be closely monitored in the framework of the Association Agreement. Türkiye must diligently adhere to the outstanding FATF Action Plan items to secure its removal from the grey list. With regard to the outcomes of the FATF's Mutual Evaluation Report on Türkiye and the recommended actions by the FATF, Türkiye promulgated an overarching national AML/CFT strategy document in July 2021. The strategy document was revised in 2022 to comply with the outstanding recommended actions. Türkiye also updated its National Risk Assessment at the end of 2022. The country is also supported by the EU's Global Facility on Anti-Money Laundering and Countering the Financing of Terrorism project.

In 2022, Türkiye adopted regulations regarding politically exposed persons and guidance to the private sector on detecting terrorist financing. It also increased its financial intelligence agency's proactive dissemination of financial intelligence. In July 2023, the FATF concluded that Türkiye has taken positive steps towards improving its AML/CFT regime. Türkiye is now compliant with 14 recommendations, largely compliant with 25 recommendations, with only one recommendation (Recommendation 15 on new technologies) remaining as partially compliant.

The Law on the prevention of financing of proliferation of weapons of mass destruction has not been revised in line with the Venice Commission's recommendations. The Ministry of Interior and the Financial Crimes Investigation Board (MASAK) developed a risk-based methodology for the audit of the non-profit organisations (NPOs). As a result of the risk-based methodology, the Ministry of Interior's audits prioritised the humanitarian aid NPOs. More than 600 NPOs have been audited repeatedly in accordance with the provisions of law since 2021. None of the audited NPOs and their executives have been prosecuted as a result of these audits. Civil society remained concerned about potential disproportionate implementation of the law to further restrict the legitimate activities of NGOs and to put additional pressure on critical voices.

Türkiye is an active member of the Global Coalition against Daesh.

Implementation and enforcement capacity

Türkiye faces threats from various terrorist groups. Türkiye actively engaged in the regular biannual review of the EU terrorism list under Common Position 2001/931/CFSP ('CP 931'). The PKK, IBDA-C, DHKP/C and TAK remain on the EU's terrorism list. However, terrorism prosecutions often disproportionately targeted legitimate activities of political

opposition. Counterterrorism efforts need to be pursued in accordance with the rule of law and fundamental rights and freedoms.

In the reporting period, MASAK continued to strengthen its institutional capacity as well as its cooperation with law enforcement agencies and judicial authorities. MASAK has consistently built a sound track-record. The number of suspicious transaction reports submitted decreased from 504 995 in 2021 to 425 322 in 2022. Systematic inter-agency cooperation between the law enforcement agencies, prosecution and MASAK has improved. As a result of its anti-money laundering / countering the financing of terrorism (AML/CFT) analysis and inspections, MASAK forwarded criminal complaints to the prosecution for 496 persons.

Türkiye reaffirmed its commitment to freeze the assets of persons/entities designated by the United Nations Security Council Sanctions Committee. The government also continued to use the domestic assets freezing instrument as a deterrent.

Judicial cooperation in civil and criminal matters

Judicial cooperation in civil and commercial matters is regulated by the Law on international civil law and procedural law, circulars and international conventions. Türkiye is a party to most international conventions. However, it has not acceded to relevant international conventions in the area of civil justice, many of which were drawn up by the Hague Conference on Private International Law, including in particular the 1996 Convention on Jurisdiction, Applicable Law, Recognition, Enforcement and Co-operation in Respect of Parental Responsibility and Measures for the Protection of Children, the 2007 Convention on the International Recovery of Child Support and Other Forms of Family Maintenance and the 2005 Convention of Hague on Choice of Court Agreements. Türkiye has not yet ratified the European Convention on the Compensation of Victims. In 2022, within the scope of the Convention on Civil Procedure, 15 judicial legal assistance requests were made by EU Member States and 196 by Türkiye. Within the scope of the Convention on the Taking of Evidence Abroad in Civil or Commercial Matters, 77 judicial legal assistance requests were made by EU Member States and 1 937 by Türkiye.

The main legislation governing judicial cooperation in criminal matters has been in place since 2016 and Türkiye has acceded to most of the international conventions. 33 mutual legal assistance requests following the introduction of videoconferencing have been processed and 2 of these have been finalised. Under the new ‘consensual extradition’ procedure, extradition of an offender now takes 1-2 months on average, whereas the previous extradition procedure lasted around a year. As for the transfer of sentenced persons, introduction of the procedure of ‘exact execution’ paved the way for the removal of the obligation on local courts to comply with domestic legislation. In 2022, a total of seven convicts were transferred to Türkiye from EU Member States under the new procedure, while one convict was transferred from Türkiye to an EU Member State. The independence and accountability of the justice system has to be substantially strengthened for a smooth application of the principle of mutual recognition of judgments and court decisions in criminal matters.

In 2022, EU Member States accepted 18 extradition requests from Türkiye, while 29 were rejected, 19 requests became redundant and 151 are still pending. Of the 15 extradition requests from EU Member States, 3 were rejected and 12 are still pending. EU Member States did not agree to any transfer of convicts to Türkiye, but Türkiye agreed to 2 transfers to EU Member States. Five contact points have been designated by Türkiye to coordinate and follow up judicial cooperation on criminal matters with Eurojust. In 2022, Türkiye was involved in 13 Eurojust cases on terrorism, terrorism financing, cybercrime (fraud), migrant

smuggling, attempted murder, money laundering, forgery and drug smuggling (compared with 15 cases in 2021). However, negotiations for an International Agreement with the EU on cooperation with Eurojust have not started yet.

Cooperation arrangements should also be established with the European Public Prosecutor's Office (EPPO), which started operating in June 2021. In 2022, there were four EPPO cases involving Türkiye. Until August 2023, Türkiye had not formally communicated whether it would cooperate with the EPPO on the basis of the declarations made by Member States to the European Convention on Mutual Assistance in Criminal Matters, recognising the EPPO as a national competent authority for the purpose of the Convention.

Legal and irregular migration

Institutional set-up and legal alignment

The Presidency for Migration Management (PMM) is in charge of coordinating migration policy; ensuring coordination between relevant agencies and organisations; carrying out functions and actions related to foreigners' entry into, stay in and exit from Türkiye as well as their removal, international and temporary protection; and the protection of victims of trafficking in human beings. The PMM currently has 13 267 personnel.

Following the December 2019 amendment of the Law on foreigners and international protection, which introduced alternatives to detention, the implementing regulation on alternative obligations to administrative detention was adopted on 14 September 2022. The regulation breaks down the procedures applicable for the implementation of each alternative to detention. In addition to alternatives to detention based on residence and notification duty that were already implemented (before the regulation entered into force), methods such as return counselling and family-based return have been rolled out. Alternatives to detention that require an electronic infrastructure (such as voice recognition software and electronic bracelets) have yet to be put into practice. Irregular migration bureaus are set up to monitor the implementation of alternatives to detention in all the Provincial Directorates of Migration Management (PDMMs). Monitoring working groups were established in the İstanbul, Ankara, İzmir and Antalya PDMMs.

Implementation and enforcement capacity

The EU-Turkey Statement remained the main framework for cooperation between the EU and Türkiye.

The PMM suffered loss of personnel and infrastructure due to the devastating February 2023 earthquakes, which affected 11 provinces of Türkiye. The buildings of the PDMMs in Malatya, Osmaniye, Hatay, Adıyaman and Gaziantep were damaged, while a large number of personnel from other provinces have been appointed to the affected areas to provide services to foreigners. In the reporting period, PMM continued to employ a limited number of psychologists, social workers, interpreters and lawyers, some of whom are financed by the EU.

According to the International Organization for Migration (IOM), 378 migrants lost their lives in the Eastern Mediterranean in 2022 (111 in 2021). Between January and September 2023, 22 421 irregular migrants arrived in the EU from Türkiye (including Greece, Italy and Bulgaria) compared to 22 821 arrivals during the same period in 2022. The sea route to Italy saw a substantial decrease (down by 55%), while arrivals in Greece increased considerably by 123%. However, the number of arrivals in Cyprus via the Green Line went down by 42% between January and September 2023, in comparison with the same period in 2022.

The average number of daily irregular arrivals in Greece from Türkiye was 42 in 2022 (up from 20 in 2021). In 2023, by September, the average number of daily irregular arrivals in Greece from Türkiye increased to 78. Turkish irregular migrants occupied the top spot among those who arrived in Greece, followed by Syrians and Afghans. In 2022, the number of irregular arrivals in Cyprus reached 17 365 (11 600 in 2021), most of whom crossed the Green Line after arriving from Türkiye via the non-government-controlled area of Cyprus. In 2023, by September, 6 969 irregular arrivals were recorded in the government-controlled area of Cyprus.

As regards the irregular sea route from Türkiye to Italy in 2023, 4 913 irregular arrivals were recorded until September, compared to 10 805 in the same period in 2022. The total number of irregular migrants who arrived in the EU from Türkiye in 2022 stood at 33 514 (including 15 582 in Greece, 15 805 in Italy, 1 884 in Bulgaria and 173 in Romania), a substantial increase compared to 21 295 irregular arrivals in 2021 (7 410 in Greece, 12 916 in Italy, 936 in Bulgaria and none in Romania). At the same time, in 2022, the number of irregular arrivals in Cyprus via the Green Line also increased substantially to 17 365, from 10 918 in 2021.

280 206 irregular migrants were apprehended in Türkiye in 2022 (162 996 in 2021). As in past years, irregular migrants from Afghanistan, Syria and Pakistan were the most frequently apprehended nationalities. The Turkish Coast Guard (TCG) rescued 49 518 irregular migrants at sea in 2022 (23 676 in 2021).

In 2023, by August, the Turkish authorities had apprehended 102 746 irregular migrants, around 24 405 of whom were intercepted by the TCG. Nationals of Afghanistan, Syria and Palestine topped the list of nationalities. According to the government, law enforcement forces apprehended 9 149 smugglers in 2022 (an increase on the 7 942 apprehensions in 2021). As regards 2023, as of August, 3 259 migrant smugglers had been apprehended. 1 720 people and organised crime groups were convicted for migrant smuggling in 2022.

No progress was made as regards the full implementation of the EU-Turkey Readmission Agreement. Türkiye maintained its position that it would not implement the provisions concerning third-country nationals until the visa requirement for its citizens travelling to the Schengen Area is lifted.

Türkiye has unilaterally suspended the return of irregular migrants from the Greek islands on public health grounds since March 2020. The European Commission and Greece have repeatedly called on Türkiye to resume return operations in line with the commitments made under the EU-Turkey Statement. The resumption of returns to Türkiye remains key to effectively fighting irregular migration and migrant smuggling networks in the region. Between 2016 and 2020, 2 140 persons (including 412 Syrian nationals) were readmitted to Türkiye from Greece under the ‘One-for-One’ scheme. The bilateral Readmission Protocol between Greece and Türkiye remained suspended. Türkiye did not readmit third-country nationals from Bulgaria under either the bilateral border agreement or the EU-Turkey Readmission Agreement.

As regards resettlement from Türkiye to the EU under the ‘One-for-One’ scheme, 5 046 Syrian refugees were resettled in eight EU Member States in 2022. Moreover, the Resettlement Support Facility run by the European Union Agency for Asylum in Istanbul facilitated the processing of 2 585 resettlement candidates. The total number of Syrian refugees resettled from Türkiye to the EU Member States under the ‘One-for-One’ scheme reached 39 648 as of September 2023. At the same time, 561 758 Syrian refugees were voluntarily repatriated from Türkiye to Syria between 2016 and 2023 according to government data. Out of the total number, 58 758 Syrians were repatriated in 2022.

Türkiye returned effectively 124 441 irregular migrants to their home countries in 2022, an increase of more than 160% on the 2021 figure of 46 653. The total number of irregular migrants returned since 2018 reached 372 790. The total number of Afghan nationals returned from Türkiye in 2022 was 66 534, while 12 385 Pakistani nationals and 40 898 other countries' nationals had been returned to their countries as of 22 December 2022. None of these returns were carried out within the scope of the readmission agreements that are in force between Türkiye and third countries. Türkiye did not sign any new readmission agreements in the reporting period.

Türkiye continued voluntary returns of irregular migrants financed through national as well as EU funds. 737 irregular migrants were returned through the national voluntary return scheme while 2 259 were returned with the assistance of IOM and EU financing in 2022.

According to the government, 280 206 irregular migrants were prevented from entering Turkish territory in the eastern and southern provinces in 2022 by Turkish security forces.

Some of the 30 removal centres were heavily damaged by the February 2023 earthquakes and the capacity to host irregular migrants dropped from 18 000 to 15 710. The removal centre in Hatay was evacuated due to heavy damage and is no longer operational, whereas hosting of migrants in other removal centres was suspended pending reparations. The number of temporary accommodation centres managed by the PMM increased from 7 to 9, leading to an increase in capacity from around 66 000 to 77 000. Temporary accommodation centres also started hosting earthquake victims of Turkish origin along with Syrians.

Civil society, bar associations and various media reported incidents of alleged human rights violations as well as pervasive challenges relating to access to rights and services in removal centres, particularly with regard to access to information and legal aid. In 2022, more than 280 000 irregular migrants were apprehended, most of whom were subject to return procedures in removal centres. A limited number of irregular migrants (939) benefited from free legal aid in 2022 (1 059 in 2021). In addition to the free legal aid scheme, 37 876 migrants were able to have access to and meet their lawyers in removal centres.

Overall, irregular migration continued to be a polarising topic in society and was heavily used by political parties in their electoral campaigns.

1 345 488 foreigners were legal residents in Türkiye on 1 December 2022 (1 275 741 in 2021). Nationals of Iraq, Russia, and Turkmenistan were the most common holders of residence permits. The number of Russian nationals with residence permits increased from approximately 66 000 in 2021 to around 155 000 in 2023. Approximately 560 000 Ukrainians have arrived in Türkiye since the beginning of Russia's war of aggression against Ukraine in February 2022. Many had already left for a third country or voluntarily returned to Ukraine by September 2022. Around 46 000 Ukrainians were residing in Türkiye in April 2023.

The legislation on the acquisition of nationality by foreign investors remained unchanged during the reporting period. Moreover, according to Articles 35 and 36 of the Land Registry Law, natural persons who are the nationals of countries designated by the President of the Republic can acquire real estate in Türkiye. As of October 2022, the list contained 185 countries. The list is not publicly available because it is not published on the website of the General Directorate of Land Registry. Such schemes pose risks in relation to security, money laundering, tax evasion, terrorist financing, corruption and infiltration by organised crime. As a candidate country, Türkiye should refrain from any measure that could jeopardise the attainment of the EU's objectives when using its prerogatives to award nationality.

Asylum

Institutional set-up and legal alignment

The Presidency for Migration Management (PMM) is the main institution responsible for all asylum-related procedures. The status determination processes are carried out by the Provincial Directorates of Migration Management (PDMMs) as well as by the International Protection Bureaus (decision centres) in Ankara and Istanbul (established in 2018 and 2019 respectively), with a view of reducing case backlog. A new International Protection Bureau was established in Samsun in 2022. In addition to those bureaus, mobile teams were established in 2019. Decisions on refugee status determination are subject to administrative and judicial appeal procedures.

Legislation in this area is partially aligned with the EU *acquis*. The Law on foreigners and international protection maintains the reservation (geographical limitation) expressed in the New York Protocol to the 1951 Geneva Convention as a result of which the vast majority of persons seeking international protection in Türkiye cannot apply for fully-fledged refugee status but only for ‘conditional refugee’ status and subsidiary protection. Conditional refugee status limits the stay in the country ‘until the moment a recognised conditional refugee is resettled to a third country’. By law, Syrian refugees are granted a specific refugee status under the Temporary Protection Regulation. However, in February 2022, the Ministry of Interior announced that newly arriving Syrians who have not been registered will not automatically receive temporary protection status in 16 provinces. According to the announcement, residence permit applications by foreigners would not be accepted in any neighbourhood in which 25% or more of the population consisted of foreigners (this was reduced to 20% in June 2022).

Implementation and enforcement capacity

Türkiye continued to host one of the largest refugee populations in the world, with (as of 31 August 2023) 3 298 817 Syrians under temporary protection and slightly over 300 000 non-Syrians (including those who hold or who have applied for international protection status). The number of asylum seekers slightly increased over the reporting period. 33 246 international protection applications were received in 2022 (29 256 in 2021). 19 400 applications were made by Afghans, 7 131 by Ukrainians and 4 083 by Iraqis. This was a different pattern from 2021 due to the Russia’s war of aggression against Ukraine. In 2022, Türkiye granted international protection (refugee status, conditional refugee status or subsidiary protection) to 12 857 applicants, a slight decrease compared with 13 227 in 2021. The authorities rejected 12 030 applications (11 908 in 2021). In 2022, the cumulative total of pending international protection applications stood at 272 336. Despite a slight decrease on last year, this remains a significant backlog that has not been reduced over the years. There is no publicly accessible data on international protection with a breakdown by category of decisions and of pending cases at the end of the year.

As of June 2022, Türkiye officially closed registration of temporary protection applications in 16 provinces in an attempt to avoid an increase in the number of foreigners where they already exceed 20% of the total population. When asylum seekers are denied registration in a ‘closed’ province, they are most often not officially referred to another province with supporting documentation. Outside the officially ‘closed’ provinces, NGOs and lawyers repeatedly referred to the de facto closure of international protection registration in other provinces, except for highly vulnerable cases. Such barriers to registration hinder access to all other essential services and put asylum seekers in an irregular situation if they are apprehended.

Almost half of all Syrians in Türkiye are registered in four provinces – Istanbul, Gaziantep, Hatay and Şanlıurfa. The rest reside in various other provinces across Türkiye. 67 548 Syrians are hosted in seven temporary accommodation centres (50 736 in 2021). 230 998 Syrians had been granted Turkish citizenship as of April 2023.

The destructive earthquakes of 6 February 2023 affected a total of 11 provinces (Kahramanmaraş, Hatay, Gaziantep, Malatya, Kilis, Osmaniye, Diyarbakır, Adana, Adıyaman, Şanlıurfa) where most of the migrant and refugee population (in particular 1 738 035 Syrians under Temporary Protection) had been living. According to a statement by the Interior Minister, 6 969 foreigners (mostly Syrians) lost their lives because of the earthquakes. The earthquakes have led to great human mobility, including refugees and migrants, inside the country.

In ordinary circumstances, Türkiye imposes travel restrictions on refugees, prohibiting them from travelling out of the provinces in which they are registered with local authorities unless they have a permit. On 7 February 2023, the authorities lifted these restrictions for about 1.7 million refugees under temporary and international protection in the earthquake region for 90 days (with the exception that they could not travel to İstanbul). A second circular reduced this to 60 days and granted those travelling from the worst-affected five provinces (Hatay, Malatya, Kahramanmaraş, Adıyaman, and Gaziantep) unconditional access to other provinces, but made travel from the other five (Kilis, Diyarbakır, Şanlıurfa, Adana, and Osmaniye) dependent on the applicant's home being seriously damaged and the existence of medical needs that could only be met in other provinces. This circular is still in place and is extended on a regular basis excluding İstanbul. Another administrative order gave Syrians under temporary protection, registered and residing in the 11 earthquake-affected provinces, the opportunity to return to Syria temporarily. Syrians returning temporarily can stay in Syria for up to 6 months. Temporary returns to Syria started in February 2023 and by June the total number of temporary returns was 70 086 individuals. By September 62 936 individuals had returned to Türkiye. The deadline for re-entry to Türkiye was 15 September 2023, after which the temporary protection status of Syrians who had not returned to Türkiye was cancelled.

The earthquakes and their consequences resulted in increasing discomfort for a large portion of the public. In the lead-up to the general elections in May 2023, opposition politicians made speeches that further fuelled anti-refugee sentiment and called for Syrians to return to Syria.

Throughout 2022, the PMM continued the verification of data of Syrians under temporary protection, updating and completing the information gathered during their original registration. 2 071 051 Syrians' data was verified in 2022.

Additionally, in the context of the 20% rule, the PMM introduced an address-verification exercise for Syrians. As a result of this exercise, the temporary protection status of Syrians who were found to be residing in locations other than their officially registered addresses has reportedly been deactivated. The PMM invited these individuals to approach their provincial offices to declare their current residential addresses so that they could reactivate their protection status. In practice, deactivation of the status means discontinued access to services such as education and healthcare.

A key mechanism for identifying vulnerable asylum seekers is protection desks in PDMMs which interview and make referrals based on their specific needs assessment. There are protection desks in 50 provinces. In 2022, protection desks identified and processed referrals for 153 054 asylum seekers. In 2022, 181 unaccompanied children were referred to the Ministry of Family and Social Services (MoFSS) by various agencies. Unaccompanied children continue to face protection risks, particularly during initial identification and age

assessment processes, which are undertaken by different agencies (including law enforcement services). Children are referred to hospitals for bone x-rays, which give a broad two-year age range. In the absence of holistic age-assessment processes, individuals whose results indicate that they are aged 16-18 might be registered as adults. A multi-disciplinary approach to age assessment procedures, which take psychosocial aspects into consideration, is necessary in order to increase compliance with European standards.

Applicants for international protection, conditional refugee status holders and people under temporary protection, i.e. Syrians, can apply for work permits. However, a large majority of refugees and asylum seekers do not have effective access to the labour market, in particular to formal employment, due to low employability (lower levels of education and skills), language barriers and limited access to information and services. Around 400 000 refugee children in Türkiye (especially in the 15-18 age group) do not regularly attend school. According to the Ministry of National Education, 822 524 refugee students were enrolled at schools in 29 provinces in January 2023.

The EU has mobilised close to EUR 10 billion in support for refugees in Türkiye since 2011. The full operational budget of EUR 6 billion of the EU Facility for Refugees in Turkey was committed, with over EUR 5.1 billion disbursed by June 2023. The Facility mobilises both humanitarian and development assistance for refugees and host communities in Türkiye to meet basic needs, increase access to education and healthcare (including for vulnerable groups, children and women) and strengthen border protection at the eastern borders with Iran and Iraq.

A first top-up of EUR 535 million was allocated in 2020 and an additional EUR 3 billion was mobilised by the EU in June 2021 to continue support for refugees and host communities in Türkiye in 2021-2023. This funding is committed to continuing the provision of basic needs, inclusive quality education for refugees, their socio-economic empowerment in Türkiye as well as border management. Part of it (EUR 350 million) is being mobilised to support refugees and host communities in the regions affected by the February 2023 earthquake.

The PMM and the European Union Agency for Asylum (EUAA) continued their cooperation with the implementation of the 2022-2023 Cooperation Roadmap, which offers capacity-building support and peer-to-peer exchanges on best practices in the fields of asylum, reception, resettlement and organisational change.

NGOs and lawyers report concerns about the quality of decisions on asylum, their reasoned notification and challenges with the awareness of and access to legal aid for appeals.

Visa policy

Türkiye made no progress in meeting the six unfulfilled benchmarks of the visa liberalisation roadmap (on the anti-terror law, personal data protection legislation, implementation of the EU-Turkey Readmission Agreement, conclusion of an international agreement with the EU on Europol, implementation of the Group of States against Corruption (GRECO) recommendations on anti-corruption and judicial cooperation with all EU Member States).

Türkiye needs to further harmonise its visa policy with the EU's visa policy. This would include further aligning Turkish visa requirements with the EU lists of visa-free and visa-required countries; full phasing-out of the issuing of visas at borders (currently the citizens of 33 countries are eligible to obtain a visa on arrival, compared with 24 in 2021) and of electronic visas; and ensuring that the issuing of visas at its diplomatic missions is carried out in line with the conditions and procedures set out in the EU Visa Code. Türkiye continues to apply a discriminatory visa regime against nationals of Cyprus, but it has abolished the short-

stay visa requirements for the other 26 Member States.

Türkiye has introduced the biometric collection of fingerprinting for sticker visas issued by its diplomatic missions in a number of countries (primarily in Africa) with a view to increasing the authorities' capacity to tackle irregular migration. The authorities have relaxed the rules governing the entry and residence of Ukrainian nationals in Türkiye as a result of Russia's war of aggression against Ukraine.

Schengen and external borders

Institutional set-up and legal alignment

No new legislation for the sector was adopted during the reporting period. The coordination of the work of the State bodies dealing with border management matters is the responsibility of the Directorate-General for Provincial Administration in the Ministry of the Interior (MoI). The Border Management Implementation Board did not meet in the reporting period, while preparations for its 6th meeting since its establishment in 2016 have been underway for some time. Its supervising body, the Integrated Border Management Coordination Board, has not yet met. In addition, relevant interinstitutional meetings were held at technical level on specific topics.

The Ministry of the Interior created a new department in autumn 2021 for the coordination of the future work of the National Coordination and Joint Risk Analysis Centre (NACORAC). Several border management services within the Turkish administration assigned staff to NACORAC, which is located in Ankara. Given its responsibilities at Türkiye's green border, personnel from the Land Forces Command (in the Ministry of National Defence) should be assigned. The centre was formally established in 2016 and an inauguration ceremony was held in November 2022 to formalise the handover of EU-financed equipment, but it is not yet fully operational. Staff detachments from all other relevant institutions have been completed, but the staff assignment process from the Land Forces Command is still ongoing. NACORAC has started collecting data from central and local institutions, albeit at a basic level. The risk analysis process has also been initiated to a limited extent, while negotiations with all relevant institutions for enhanced data-sharing are ongoing.

Following the establishment in February 2021 of the Institute of Heads of Civil Border Administration, transfer of certain border management responsibilities from governors in 11 border regions (mostly in eastern Türkiye) to the Directorate-General for Provincial Administration has continued. Two heads were appointed at land borders during the reporting period, bringing the total number of heads appointed by the Directorate-General for Provincial Administration for border gates to eight (six at airports, including Istanbul, Ankara, Izmir and Antalya; and two at land borders). This reform seeks to streamline the coordination of border management at central level.

In terms of new coordination mechanisms at local level, 'Security Commissions' have been established (under the chairmanship of the Civil Border Administration with the participation of the representatives of the Ministry of Transport and Infrastructure, the Ministry of Trade, the Ministry of Health, the Turkish National Police and the gendarmerie) and will meet every month at civil airports, ports and border gates to develop, implement and evaluate measures with regard to security, training and inspection services.

Similar to last year's recommendations, in order to bring the country's border management system in line with the EU *acquis*, Türkiye should further improve inter-service and international cooperation, accelerate the adoption of an integrated border management (IBM) strategy and update its IBM national implementation action plan from 2006. It also needs to

take steps to enact new legislation to set up a non-military border management body in charge of all aspects of border management, including border surveillance at the green border, which is currently under the responsibility of the Turkish land forces.

Implementation and enforcement capacity

Türkiye continued to invest significant effort and financial resources in modernising border security at the land border, especially in the south and south-east of the country. After the construction of a modular security wall and a panel/barbed-wire fence, patrol roads, lighting, sensors and thermal cameras along the Syrian border, the installation of modern electro-optical communication and surveillance masts continued at the Iranian border. Communication and surveillance masts were also being erected on the western land border. The EU provides substantial support to Türkiye to modernise its border surveillance infrastructure, including at its eastern borders with Iran and Iraq.

Relations with the European Border and Coast Guard Agency (Frontex) are based on the Memorandum of Understanding of 2012 and a three-year cooperation plan covering the period 2020-2022. The authorities continued to provide monthly reports on irregular migration flows at the country's western land and sea borders. Türkiye did not engage in joint operations in the reporting period but did participate in training sessions and conferences.

Cooperation with neighbouring Greece and Bulgaria within the framework of a trilateral Police and Customs Co-operation Centre at the Bulgarian-Turkish border crossing point at Kapitan Andreevo/Kapıkule continued through data-sharing, and regular ad hoc meetings between the countries' respective authorities within the scope of existing agreements.

Türkiye continued contributing to Interpol's databases, albeit only on the basis of manual inquiries in case of need (using the 'POLNET' website of the TNP's Interpol & Europol Department). Interpol's 'Stolen and Lost Travel Documents' (SLTD) database is not integrated with Türkiye's local database and there is no access to other international police databases. Local database connections are used by authorised officers of the Turkish National Police in all 81 provinces. Certain staff members in the following services have access to the databases: the Presidency of Migration Management (PMM), the Disaster and Emergency Presidency (AFAD), the Nuclear Regulatory Authority, the Turkish Atomic Energy Authority, the Ministry of Trade (DG Customs Enforcement), the Turkish Coast Guard Command and the General Gendarmerie Command.

Türkiye has committed itself to removing all anti-personnel landmines by 31 December 2025 in order to fulfil its obligations under the Ottawa Convention (or Anti-personnel Mine Ban Treaty). This deadline has been extended several times since 2014. So far, only a relatively small stretch of the total of 2 949 km of land border has been cleared entirely. Türkiye needs to substantially increase its national investment in removing mines not only along its borders with Syria, Iraq, Iran, and Armenia, but also inside Türkiye in order to fulfil its obligations under the Ottawa Convention. The EU is currently providing significant financial support for demining.

2.3. ECONOMIC CRITERIA

<i>Table 5.1:</i>	2014-19	2020	2021	2022
Türkiye - Key economic figures	average			
GDP per capita (% of EU-27 in PPS) ¹⁾	65	61	63	69
Real GDP growth	4.3	1.8	11.4	5.6
Economic activity rate of the population aged 15+ (%) , total	52.1	49.3	51.4	53.1
<i>female</i>	32.8	30.9	32.8	35.1
<i>male</i>	72.0	68.2	70.3	71.4
Unemployment rate of the population aged 15+ (%) , total	11.1	13.2	12.0	10.4
<i>female</i>	13.8	15.0	14.7	13.4
<i>male</i>	9.9	12.3	10.7	8.9
Employment of the population aged 15+ (annual growth %)	2.3	-4.8	7.9	6.7
Nominal wages (annual growth %)	16.5	18.0	19.3	73.2
Consumer price index (annual growth %)	11.2	12.3	19.6	72.3
Exchange rate against EUR	4.2	8.0	10.4	17.4
Current account balance (% of GDP)	-2.7	-4.5	-0.9	-5.4
Net foreign direct investment, FDI (% of GDP)	1.1	0.6	0.8	0.9
General government balance (% of GDP)	-2.0	-2.9	-2.3	-1.1
General government debt (% of GDP)	29.0	39.7	41.8	31.7

In line with the conclusions of the European Council in Copenhagen in June 1993, EU accession requires the existence of a functioning market economy and the capacity to cope with competitive pressure and market forces within the Union.

2.3.1. The existence of a functioning market economy

The Turkish economy is **well advanced** but made **no progress** over the reporting period. Serious concerns persist over the continued proper functioning of Türkiye's market economy. There has been prolonged backsliding on important elements, such as the conduct of monetary policy and the institutional and regulatory environment over most of the reporting period. Since the May parliamentary and presidential elections, the authorities have taken some steps to revert to more stability-oriented macroeconomic policies.

Although economic growth remained robust in 2022, Türkiye moved further away from market-oriented policies, which weakened its economic fundamentals and increased vulnerabilities and risks. Inflation decreased somewhat but remained very high as monetary policy prioritised exceptionally low interest rates, which remain deeply negative in real terms and are sustained by a web of regulatory and prudential measures. After the presidential and parliamentary elections in spring 2023, monetary policy has started to tighten, also signalling a gradual simplification of the macroprudential framework. The current account deficit increased to 5.4% of GDP in 2022, driven by a negative terms-of-trade shock and large imports of non-monetary gold. The relatively good budget performance in recent years masks an underlying trend of growing fiscal risks. The authorities' commitment to fiscal discipline wavered, as the fiscal stance turned pro-cyclical in 2023, with earthquake-related expenditure pressure adding to pre-electoral budgetary largesse. However, the fiscal stance was tightened

after the elections and a revised budget, including sizeable tax increases, was adopted in July.

The institutional and regulatory environment lacks predictability and transparency, and complicates the post-electoral economic policy normalisation. Market exit remains costly and slow. However, Türkiye made progress in digitalising government services to businesses. Although the size of the informal economy has fallen in recent years, it still accounts for a significant share of economic activity. State intervention in price-setting mechanisms persists. The provision of State aid lacks proper implementation rules, enforcement and transparency. The banking sector remained broadly stable but is facing financial stability challenges due to the numerous overly complex and far-reaching macroprudential and regulatory measures. The labour market strengthened further, although structural challenges remain significant, in particular for youth and female employment. Regional labour market disparities declined and reached one of the lowest levels in years. The recent net minimum wage increases were pro-cyclical.

The Commission's recommendations from 2022 were not fully implemented and remain valid. In order to improve the functioning of the market economy, Türkiye should in particular:

- restore the independence of the central bank and tighten monetary policy in order to reduce inflation sustainably towards the target;
- develop a credible medium-term fiscal consolidation plan that underpins a gradual return to primary surpluses, while accommodating transparent reconstruction spending and addressing fiscal risks, including from contingent liabilities;
- further improve the business environment, including by reducing State interference in price-setting mechanisms, simplifying the macroprudential and regulatory framework, and enhancing the transparency and control of State aid.

Economic governance

Türkiye moved further away from market-oriented policies, weakening economic fundamentals and increasing risks, but has taken some steps to reverse this course since the May elections. Monetary policy prioritised maintaining deeply negative real interest rates, despite soaring inflation and tightening global financial conditions. This necessitated the adoption of far-reaching macroprudential and regulatory measures that have disrupted the functioning of the financial markets and increased vulnerabilities. However, the central bank has started to tighten monetary policy after the presidential and parliamentary elections in spring 2023, also signalling a gradual simplification of the macroprudential framework. Fiscal policy turned strongly expansionary in the first half of 2023, with earthquake-related expenditure pressure adding to pre-electoral budgetary largesse. Ad hoc policy measures have increasingly become the norm, undermining, in conjunction with high macroeconomic instability, the credibility of medium-term planning. A budget rebalancing and large tax hikes in July have sought to limit the bulging budget deficit. Subsidies and transfers to curb the effects of Russia's war of aggression against Ukraine increased significantly in 2022 but are planned to decline in 2023. Türkiye has not joined the EU restrictive measures against Russia and continued to benefit from its extensive and growing trade relations with it, particularly in energy, tourism and agriculture. The implementation of the policy guidance set out in the conclusions from the Economic and Financial Dialogue of May 2022 has been limited.

Macroeconomic stability

Türkiye's economic growth remained upbeat but unbalanced.

Real GDP grew by 5.5% in 2022, which was above the five-year average (2018-2022) of 4.5%, although, after a strong first half of the year, it decelerated in the second half. It expanded further in the first half of 2023 and growth even strengthened a bit, despite the devastating February earthquakes. Domestic demand, in particular very

strong household consumption fuelled by pre-election expenditure, remained the main driver of this. Net exports' contribution to growth turned negative in the second half of 2022, following a loss in export momentum and a pick-up in imports, which worsened further in early 2023. Inventories continued to wind down and very weak construction investment pulled down total investment growth last year. A notable expansion of technology-intensive and export-oriented sectors lifted industrial production to record high levels in 2022. The 6 February earthquakes caused a tragic loss of life and significant destruction of capital assets. High frequency indicators captured the first negative economic effects of the earthquakes already in February, with steep monthly falls in industrial production and retail sales, and declining economic confidence. However, economic activity rebounded quickly in the following months and consumer confidence increased sharply to levels not seen in 5 years, before steeply falling back in the aftermath of the elections. Due to Türkiye's relatively strong performance during the COVID-19 crisis, income convergence with the EU resumed, with per capita GDP in purchasing power standards rising to 69% of the EU average in 2022 from 59% in 2019, and above its 2015 high of 68%.

External imbalances increased and remained a major vulnerability. The current account deficit swelled to 5.4% of GDP in 2022 and increased further in the first half of 2023 to more than double its average in 2018-2022, as the negative terms-of-trade shock and large imports of non-monetary gold (a traditional safe asset in times of policy uncertainty in Türkiye) drove the trade deficit back into double digits for the first time in a decade. However, excluding gold and energy trade, the current account recorded a 5% surplus. The high external deficits remain a key macroeconomic vulnerability, aggravated by the strong reliance on short-term borrowing, a very high sovereign risk premium and the low level of foreign exchange

reserves (with a large share in non-core foreign currencies). The central bank's net foreign assets even turned negative in April as it used its reserves to defend the exchange rate before the elections. Reflecting deteriorating market perception of domestic economic policy, the five-year credit default swap has been high and very volatile. After peaking in the summer of 2022 above 900 bps (basis points), it declined to between

500 bps and 600 bps by the end of the year before spiking again following the presidential and parliamentary elections in the spring of 2023. External debt remained moderately high at

around 50% of GDP in early 2023, decreasing from the peak of 60% of GDP that it reached during the COVID-19 crisis. However, the debt stock remains sensitive to the lira's exchange rate fluctuations and its structure worsened as economic agents increased their reliance on short-term funding as a response to rising refinancing costs. Banks' increased exposure to foreign currency swaps with the central bank raises economy-wide foreign currency liquidity concerns. The external debt roll-over ratios have been stable at close to 100% for the banking sector but have rapidly come down under 100% in early 2023 (albeit from high levels) in the non-banking sector. The non-financial sector's foreign exchange deficit remained broadly unchanged at less than 10% of GDP and its short-term position remained positive – important factors attenuating external vulnerability.

Inflation remained high as, before the elections, monetary policy prioritised the maintenance of exceptionally low interest rates sustained by an expanding web of regulatory and macroprudential measures. Inflation peaked at 85.5% in October 2022. It declined steeply in the following months on the back of sizeable base effects before rebounding again since June, exceeding the 5% target by a very large margin. Before the elections, inflation targeting and the free-floating exchange rate were effectively no longer the guiding framework of monetary policy. The monetary policy transmission mechanism was broken, with limited responsiveness by key market interest rates to the central bank policy rate. Despite very high inflation and tightening global financial conditions, the central bank lowered its key policy rate in the autumn of 2021 and cut it further in several steps by a cumulative 1 050 bps to 8.5% in February 2023 (the last 50 bps cut was delivered after the earthquakes). To sustain the resulting deeply negative real-interest rate and alleviate its policy contradictions, the authorities have introduced an increasingly complex web of regulatory and macroprudential measures to reduce dollarisation, support the lira, lower inflationary pressures, ration and direct credit, and cap interest rates. This set of measures achieved some short-term results but failed to address the fundamental drivers of high inflation; namely deeply negative real interest rates, the absence of an effective policy anchor and the lack of institutional independence of the central bank and key agencies. After depreciating by 40% against the US dollar in the first three quarters of 2022, the lira remained broadly stable before resuming its depreciation trend in early March 2023, which intensified (along with exchange rate volatility) after the May elections. Starting in June and under the guidance of a new central bank governor, the central bank increased the key policy rate to 25.0% in August and signalled a gradual further tightening of monetary conditions and simplification of the existing micro- and macroprudential framework.

The authorities' commitment to fiscal discipline wavered and the fiscal stance turned pro-cyclical in early 2023, necessitating the adoption of a revised budget in July. The budget continued to outperform expectations, ending 2022 with a central government budget deficit of 0.9% of GDP – significantly below the revised budget target of 3.4% and the

previous year's deficit of 2.8% of GDP. The general government deficit fell to 1.1% of GDP, which was also far below the expected 3.2% of GDP. The initial 2023 central government budget targeted a deficit of TRY 659.4 billion (3.5% of GDP) but was based on a rather optimistic macroeconomic assumption of 5% real GDP growth and 24.9% average consumer price inflation. Total revenue was planned to increase by

36.0% and expenditure by 52.0% in comparison with the 2022 budgetary outcome. The budget introduced some new measures but failed to fully exit the 'crisis mode' of ad hoc decisions. On the revenue side, the 2% accommodation tax adopted in 2021 started to be applied at the beginning of 2023. The corporate income tax rate has been lowered as planned to 20%. Government expenditure increased strongly in early 2023 due to the elections and the earthquakes. The government budget continued underwriting costly and poorly targeted measures to support the lira and cushion the impact of high energy prices, although lower-than-expected international gas prices and financial repression measures that forced domestic banks to increase their holdings of government bonds led to some savings. Some spending measures with a large budgetary impact (including public wage and pension hikes, and the removal of the age requirement for early retirement) were finalised after budget adoption and were not fully reflected in the original budget. The fiscal stance was tightened after the elections. A revised budget was adopted in July, including multiple and sizeable tax increases (VAT, corporate income tax, special consumption tax, motor vehicle tax, etc.) and additional expenditure to cover earthquake reconstruction needs and pre-election spending measures.

The relatively good budget performance in recent years masks an underlying trend of growing fiscal risks. The government debt ratio peaked at 42.3% of GDP in early 2022 but came down to 31.2% of GDP in early 2023, helped by the strong denominator effect from the very high level of inflation. Concerted 'liratisation' efforts increased the share of new domestic borrowing in lira to 90% in 2022. Nonetheless, two thirds of the total debt stock remains denominated in foreign currencies, while the average time to maturity of the debt stock remained unchanged at 5.4 years, as external debt maturity decreased for the fifth year in a row. Some measures, such as the FX-guaranteed lira deposits, had a direct and sizeable impact on the budget and are a significant source of (contingent) budget liabilities, even after they were fully transferred to the central bank in July. Successive crises and shocks triggered the adoption of numerous ad hoc measures with budgetary effects that have strained public finance management. The multiple and sizeable tax exemptions and reductions undermine tax bases and complicate planning, while successive tax amnesties have become the rule rather than the exception, despite official policy declarations. The planned new single consolidated framework for all public-private partnerships has yet to be adopted. Even though fiscal performance has been consistently robust in recent years, there are still no national fiscal rules or independent fiscal institutions to monitor fiscal performance. The medium-term budget framework is subject to frequent changes and is not sufficiently credible and binding.

The macroeconomic policy mix remained largely focused on the pursuit of growth at the expense of rising economic vulnerability. Fiscal policy turned expansionary in early 2023, despite the very high level of inflation and large external imbalances. The maintenance of deeply negative real interest rates by the central bank and the complex web of regulatory and macroprudential measures to sustain them created major vulnerabilities, led to market fragmentation and disrupted price signals. The low level of policy credibility and institutional weaknesses (including the lack of central bank independence) undermine the effectiveness of the policy mix and hinders the post-electoral economic policy normalisation.

Functioning of product markets

Business environment

The institutional and regulatory environment is characterised by weaknesses in transparency, predictability and rule-based implementation. The government's highly interventionist pre-election policy increased uncertainty and volatility on the product and financial markets. Türkiye lacks a mechanism for systematically consulting business organisations and social partners during the preparation of new legislation. Intellectual property right enforcement continues to be very weak. According to the e-Government Benchmark report of the EU for 2022, Türkiye performed above the EU average in enabling regular areas of business operation (such as administrative and tax requirements, human resources and refund of VAT) on digital platforms, except for those that require cross-border transactions. However, Türkiye's performance is lower in online services for new business, which remain relatively cumbersome. Market exit remained costly and time-consuming due to complicated insolvency procedures. Türkiye digitalised some steps in the insolvency procedure, such as liquidation, but it still takes 1 037 days on average to complete a bankruptcy process through the judicial system. Even though alternative dispute resolution mechanisms have been promoted, commercial judicial processes are slow and a large backlog of commercial court cases remains. The number of newly established businesses increased by 27.8% in 2022, while the number of liquidated companies went up by 26.0% and the number of closed ones by 42.8%. The acquisition and management of companies under the trusteeship of the Savings Deposits Insurance Fund (SDIF) are carried out in a non-transparent manner. In June 2023, the trusteeship of the Fund was managing 620 companies based in 35 provinces across Türkiye, with a total asset value of TRY 128.9 billion and 27 213 employees.

The informal sector's share in the economy declined but remains structurally high and well above the OECD and EU averages. In 2022, the share of unregistered employment fell to 26.8% from 34.8% in 2019, while in the non-agricultural sector it was down to 16.8% from 23.3%. The government announced its new action plan for the fight against the informal economy (2023-2025) in December 2022. The plan includes 44 actions to measure the size of the informal economy; raise the level of social awareness and voluntary compliance; improve cooperation and interagency data sharing; adopt legal, administrative and technical measures; and strengthen audit capacity. However, the plan lacks performance indicators to track its implementation progress.

State influence on product markets

The State increased its intervention in the price-setting mechanism of key sectors. More than a quarter of the consumer basket is composed of goods whose prices are set or heavily influenced by public authorities. A 25% upper cap on rent increases was applied until July 2023. A month before the May elections, the Energy Market Regulatory Authority cut electricity tariffs by 15%. Households and places of worship were exempted from natural gas

payment for a month and 25 cubic meters have been provided free of charge to citizens starting in June 2023 for the following 11 months. Meanwhile, the regulators have continued carrying out intensive price audits to investigate allegations of unfair pricing and stockpiling, particularly in essential products. The VAT exemption period for new equipment and machinery deliveries to the manufacturing sector for innovation, design and R&D activities was extended until the end of 2024. Following the February 2023 earthquakes, the VAT rate applicable to prefabricated buildings and containers to be delivered to the earthquake zone was reduced from 18% to 1% until 31 December 2023.

State aid transparency and control remains weak. Legislation to implement the State aid law has not been adopted. The newly established Directorate-General for State Aid has not been assigned any enforcement power regarding the State aid law. The lack of implementing legislation and an operational institutional framework mean that this law is not enforceable. Türkiye has not formally set up a comprehensive state aid inventory or adopted an action plan to align all State aid schemes with the EU *acquis*. The current structure of State aid control is neither independent nor operational (see Chapter 8). The committed investment for the 64 supported projects reached TRY 491 billion in May 2023. As is the case for the general incentive scheme, Türkiye has not published data concerning the actual support granted to these projects. Small and medium-sized enterprises (SMEs) benefit from numerous support measures and initiatives in a fragmented way. The SME Development Organisation of Türkiye (KOSGEB) and the Ministry of Industry and Technology conducted evaluations of four more support programmes in the reporting period and published them on KOSGEB's website.

Privatisation and restructuring

The scope of privatisation remained limited. Privatisation receipts increased from USD 413 million in 2021 to USD 504 million in 2022 (less than 0.1% of GDP), with 87.5% related to the sale of real assets. The Turkish Wealth Fund (TWF) holds shares in major companies in the financial (including state-owned banks, Borsa Istanbul and consolidated public insurance companies), telecommunications, petrochemicals, real estate, mining, agriculture and transport sectors. The Law on the Istanbul Financial Centre adopted in June 2022 granted the TWF the right to conduct all business and management operations in the Istanbul Financial Centre area for 20 years, with a managing company established as a joint stock company. The involvement of the TWF through this company means that these operations will be exempted from audit by the Turkish Court of Accounts (*see Chapter 32*). In addition to the numerous immunities granted to the TWF, this law provides a series of new tax exemptions, deductions and incentives. The TWF's total assets increased to TRY 3.2 trillion (44.1% of GDP) at the end of 2021, up from TRY 2.2 trillion (43.6% of GDP) in 2020.

Functioning of the financial market

Financial stability

The banking sector has remained broadly stable but is facing financial stability challenges. The commercial banks' average regulatory capital ratio declined from its peak of 20.4% in early 2022 to 18.7% in July 2023 but stayed significantly above the required minimum. The decline was more pronounced in State-owned banks, whose capitalisation fell to 14.5% in early 2023 – a two-decade low – despite several recapitalisation rounds in previous years, before rebounding to 16.3% in July. The fall in capitalisation was the result of banks' support for the authorities' economic and development agenda, including in the aftermath of the February 2023 earthquakes. Some of the macroprudential measures to

protect capital adequacy have been modified but remain in place (e.g., allowing the use of an outdated FX rate and the suspension of mark-to-market accounting rules). Credit growth, the extremely negative real interest rates and growing collateral valuation brought the non-performing loans ratio down to a new low (falling in July 2023 to 1.6% in the banking sector as a whole and to just 1.0% in the State-owned banks) while loan-loss provisioning increased further. The share of stage 2 loans under close monitoring also declined to below 10%. Bank profitability improved but remained negative in real terms. The average return on assets was 3.7% and return on equity was 49.9% for the banking sector as a whole in 2022, but were only 2.0% and 29.9% respectively in State-owned banks. FX-guaranteed deposits were around a quarter of total deposits in mid-2023, bringing the share of lira-denominated deposits to 57.4% (still below their level a decade ago), while underlying dollarisation increased.

Access to finance

The financial sector operates in an overregulated environment. Far-reaching macroprudential and regulatory measures have disrupted the functioning of the financial markets. Reducing interest rates and keeping them down necessitated additional actions to mitigate the fundamental contradictions of such a policy in a high-inflation environment. A series of incentives and restrictions have been introduced since late 2021, covering: FX-protected lira-denominated deposits; maintenance of a certain share of lira-denominated deposits; reserve and security requirements; collateral in swap and interbank money markets; tax exemptions; FX-surrender requirements for exporters; capital adequacy ratios; risk weighting; and commercial loans. These measures rationed and directed credit, and replaced price signals with quantitative targets or directly socialised risk. As part of the economic policy changes initiated after the elections, the authorities have undertaken some limited steps to gradually simplify the macroprudential framework. After declining in 2022, total lending rebounded in early 2023 (mainly driven by SME, consumer, and credit card loans) but was, at 52.1% of GDP in June, still far below its five-year moving average. Lending to non-financial companies remained largely subdued – except for SME loans, which were supported by regulatory measures. The very high level of inflation led to banking-sector assets falling sharply from 127% of GDP in 2021 to 96% in 2022, while the share of foreign-owned banks in total banking sector assets declined from 25.9 % to 24.9%.

Functioning of the labour market

The labour market strengthened but structural challenges remain significant. Job creation was very strong in 2022 but slowed down in early 2023. In the second quarter of 2023, the seasonally adjusted labour force participation and employment rates reached 53.4% and 48.2% respectively. The labour force moved into more productive activities. There were

notable job gains in industry and construction, and particularly large job creation in services, while agriculture continued shedding labour. The shift in employment out of agriculture also caused a decline in the share of workers without social security registration to around a quarter of all employment in early 2023. The seasonally adjusted unemployment rate declined to single digits for the first time in 5 years. However, time-related

underemployment and the potential labour force increased from an already high level, indicating labour market slack that is still structurally significant (as evidenced by the 23.5% labour under-utilisation). Women's participation in the labour market continued to increase, although the gap with male participation remained very high (above 35 pps). Türkiye maintained its strong focus on supporting entrepreneurial learning and women's entrepreneurship. However, job creation lagged and the gap between the male and female employment and unemployment rates widened further. In the second quarter of 2023, the share of young people (15-24 years) not in employment, education or training (NEET) stood at 20.8%, falling across most educational levels. Regional labour market disparities declined and reached one of the lowest levels in years, with the unemployment rate across different regions ranging from 6.2% to 19.2% in 2022. Following two large increases in 2022, the net minimum wage was raised again by 54.6% in early 2023 and by 34.0% in July – pro-cyclical rises that fostered inflation and further disrupted the functioning of the labour market.

2.3.2. The capacity to cope with competitive pressure and market forces within the Union

Türkiye has a **good level of preparation** and made **limited progress** in achieving the capacity to cope with competitive pressure and market forces within the EU. Despite improved vocational training, the mismatch between the education system and labour market needs remains a concern. Expenditure on research and development has continued to increase, albeit at a very slow pace, and is still below the government's target. Investment was relatively subdued in 2022. There was progress in the diversification of energy supplies and the share of energy generated from renewable sources increased significantly. However, the local content requirement in the renewable energy generation sector is a discriminatory practice and a cause for concern. Trade openness increased further, but integration with the EU continued falling, although remaining high. Deviations from Türkiye's obligations under the EU-Turkey Customs Union continue to hinder bilateral trade.

The Commission's recommendations from 2022 were not fully implemented and remain valid. In order to improve competitiveness and support long-term growth, Türkiye should in particular:

- continue increasing enrolment in education (especially pre-education), support the school-to-work transition and the activation of young people who are not in education, employment or training (NEET) and incentivise female labour market participation;
- take further steps to diversify energy supplies and increase the share of renewables in the energy mix;
- improve SMEs' access to long-term finance.

Education and innovation

Efforts to improve human capital continued, but skills mismatch remains a key concern. Total expenditure on education was 4.8% of GDP in 2021, representing a real year-on-year decrease of 27.1%. Government spending was 3.4% of GDP in 2021, decreasing further by 0.6 pps from 2020. In the 2021-2022 school year, net enrolment rates decreased for primary education (the first 4 years) but increased for lower secondary education (the second 4 years), upper secondary (the final 4 years) and (marginally) for tertiary education. There has been a significant progress in pre-school attendance (see Chapter 26). However, Türkiye continues to score poorly in educational attainment in the Gender Gap Index calculated by the

World Economic Forum, ranking 129th of 146 countries in 2023. The share of students in vocational and technical secondary education has reversed its previous downward trend and increased by 0.6 pps to 28.0% in 2022. The share of pupils in religious education fell below 10% in upper secondary education for the first time in 8 years. It also decreased, albeit marginally to 13.4%, in lower secondary education. Türkiye has the largest skills gap for workers with tertiary education among the OECD countries. There is a persistent mismatch between the skills acquired in the education system and the requirements of the labour market, including those relevant for the digital transformation and green transition.

Investment in R&D increased further, albeit at a slow pace and lagging the EU's performance. R&D expenditure increased gradually from 0.8% of GDP in 2013 to 1.4% in 2021, but the gap with the EU average of 2.3% remains large. The government has intensified its support for business research and innovation, including through tax incentives. The private sector continues to be the main driver of R&D, with a 61.3% share of R&D expenditure. There is still significant room to enhance cooperation between research institutions and economic operators. In the Global Innovation Index 2022, Türkiye's overall score has improved so that it now ranks 37th out of 132 countries, thus entering the top 40 for the first time ever. However, according to the EU innovation scoreboard, Türkiye's innovation score declined from 49.2% in 2021 to 47.7% in 2022 and the performance gap with the EU has widened further. The number of domestic patent applications increased by 6.8% in 2022 by comparison with 2021, but Türkiye's total international patent applications declined significantly by 25.0% in the same period.

Physical capital and quality of infrastructure

Investment activity was relatively subdued in 2022. In 2022, total investment accounted for 29.2% of GDP, up by 1.0 pps from its 2021 level. Construction's share of total investment fell to a historic low level in 2022, but rebounded in the first half of 2023, with the government's social housing project and its reconstruction efforts in the aftermath of the February earthquakes. Machinery and equipment's share of investment followed the opposite pattern, falling from its 2022 peak to 44.6% in the second quarter of 2023. Total net foreign direct investment (FDI) were 0.9% of GDP in 2022, close to its 5-year average. Geopolitical uncertainties, the build-up of macroeconomic imbalances and an unpredictable business and regulatory environment remain the main obstacles to attracting foreign investment.

Diversification of energy supplies has improved and the use of renewables substantially increased. Türkiye has high ambitions to become a regional energy hub and is investing heavily in the exploration of new gas fields in the Mediterranean and the Black Sea, as well as in building new LNG terminals. However, dependence on oil and gas imports (particularly natural gas imports from Russia) remains high and energy demand is steadily growing despite energy efficiency measures. The establishment of a national emissions trading system (ETS) aligned with the EU ETS and with a sufficient level of ambition (notably in the overall cap on allowances) remains a necessary precondition for the economy's cost-effective decarbonisation. Türkiye raised the share of renewable energy in the country's installed power capacity to 54% in 2022. Private investment continued driving growth in renewable installations and the preferential feed-in-tariff was extended until 2030. In addition, the National Energy Plan (2023-2035) released in January 2023 aims at further increasing the shares of renewable energy sources and of nuclear energy in installed capacity and in primary energy consumption by 2035. The plan was prepared in line with Türkiye's 2053 Net Zero Emission Target, which implies a further increase of up to 50% of renewable energy sources in primary energy consumption, as well as a sharp decrease in the share of fossil resources from 83.3% in 2020 to 20.8% by 2053.

Competition and pricing mechanism issues persist in the energy sector. There was limited progress in liberalising energy markets, as the unbundling of the State-owned gas company BOTAŞ was once again suspended. As a result, BOTAŞ remained vertically integrated (comprising gas trade, pipeline and LNG infrastructure) and retained its dominant market position – thus hindering transparent, cost-reflective and non-discriminatory pricing. The local content requirement practices in the renewable energy generation sector are discriminatory and a cause for concern because they impair EU companies’ competitiveness in the Turkish energy market. Türkiye continues to be an important gas-transit country, ensuring the smooth operation of the Trans-Anatolian Pipeline (TANAP) which, as part of the Southern Gas Corridor (SGC), transmits natural gas from Azerbaijan to Europe by connecting to the Trans Adriatic Pipeline (TAP) (*see Chapter 15*).

The COVID-19 pandemic accelerated the economy’s digital transformation. The telecommunication sector is subject to specific taxation and various fees that were increased as part of the budget consolidation efforts in July. Although the ICT sector’s share in GDP remains low at 2.3% in 2022, the number of broadband internet subscribers reached 90.6 million in 2022, up from 88.2 million in 2021. The total number of mobile broadband users was 71.7 million at the end of 2022, representing a population penetration rate of 84% that remains significantly below the OECD average of 124.5%. Türkiye nevertheless has the lowest average download speed of fixed broadband connection in the OECD. The share of citizens using e-government rose from 58.9% in 2021 to 68.7% in 2022. Türkiye ranks 16 out of 35 countries with an overall score of 72% in e-Government maturity, which is above the EU average (68%). Digitalisation efforts in business continued, with the share of enterprises involved in e-sales increasing to 19.3% in 2021, up by 6.8 pps from 2020 level (*see Chapter 10*).

Sectoral and enterprise structure

The economy is dominated by the service sector, but its share declined. Service sector employment remained largely unchanged in the last 5 years, accounting for 56.6% of total employment in 2022. Service activities surged in 2022, led particularly by accommodation and food, transportation, and financial and insurance services. However, their share in GDP declined to a multi-year low of 56.6%, largely due to the expansion of industry. Industry accounted for 21.7% of employment in 2022, up by 0.3 pps from its 2021 level. It increased its share of GDP from the low 20s pre-COVID-19 to above 26% of GDP in 2021 and 2022. The construction sector slowed down, with its share in GDP decreasing slightly from 5.1% in 2021 to 4.9% in 2022. Similarly, the sector’s share in total employment declined to 6.0%, down by 0.1 pps from its 2021 level. By contrast, the agriculture sector’s share in GDP increased from 5.5% in 2021 to 6.5% in 2022. However, its share in total employment dropped further to 15.7% in 2022 (down by 1.5 pps from its 2021 level).

Small and medium-sized enterprises are the backbone of the economy but face multiple challenges. SMEs employ around three quarters of all workers and generate more than half of the economy’s value added. Around 56% of SMEs in the manufacturing sector operate in low technology sectors. Türkiye has continued to implement various economic support schemes targeting SMEs. Targeted credit support improved SMEs access to finance and their share in total loans increased to around 28% in the first half of 2023, up from 24% in the previous 5 years. However, long-term finance remains a key problem for SMEs and they are financed mostly through short-term loans or equity. KOSGEB provides support to companies on R&D, innovation, product development, internationalisation, entrepreneurship and investment in high technology and strategic products. The Scientific and Technological Research Council of Türkiye also implements SME support schemes.

Economic integration with the EU and price competitiveness

Economic integration with the EU declined further but remains high. Türkiye is the EU's seventh largest trading partner, representing 3.3% of the EU's total trade in goods with the world in 2022, while the EU is Türkiye's largest trading partner by far.

The EU's share of Turkish exports declined to 40.5% in 2022 – on a downward trend since 2018 – while the share of Turkish imports originating in the EU decreased strongly from 31.5% in 2021 to 25.6% in 2022 – well below its long-term average and largely due to strong price effects and increased energy imports from non-EU countries (notably Russia). The EU's share of FDI inflows into Türkiye increased markedly from 40% in 2021 to 79% in 2022. The EU's share in the overall stock of FDI rebounded to 68% in 2022 but was still below its long-term average of around 70%. Trade openness continued to increase steeply in 2022, reaching 81% of GDP (up from levels around 50% before 2017) as both exports and imports reached new highs.

In 2022, Türkiye removed some of the additional duties imposed on products of non-EU origin and in free circulation within the EU-Turkey Customs Union. However, many additional duties remain in force, in breach of the rules of the EU-Turkey Customs Union. Non-tariff barriers, such as import surveillance and excessive customs checks, continue to hinder trade flows.

2.4. PUBLIC PROCUREMENT, STATISTICS, FINANCIAL CONTROL

Chapter 5: Public procurement

EU rules ensure that the public procurement of goods and services in any Member State is transparent and open to all EU companies on the basis of non-discrimination and equal treatment.

Türkiye is **moderately prepared** in the area of public procurement, with significant gaps remaining to align with the EU *acquis*. There was **backsliding** in the reporting period as Türkiye increased the use of the negotiated procedure (lacking transparency), of discriminatory domestic price advantage practices and continued to allow offsets that favour local content.

The Commission's recommendations from last year were not implemented, and therefore remain valid. In the coming year, Türkiye should in particular:

- revise its public procurement legislation to further align it with the 2014 EU directives on public procurement, including utilities, concessions and public-private partnerships, and to increase transparency;
- reduce the excessive use of the negotiated procedure that distorts competition and limits transparency;

→ repeal exemptions that are incompatible with the EU *acquis* and refrain from the use of discriminatory domestic price advantages and offset practices.

Institutional set-up and legal alignment

In terms of the **legal framework**, Türkiye's national public procurement legislation broadly reflects the principles of the Treaty on the Functioning of the European Union. However, it includes compulsory domestic price advantages and offsets, which allow authorities to demand compensatory measures if goods are not produced domestically, which is discriminatory and contradicts the EU *acquis*.

The Public Procurement Law (PPL) is partially aligned with the EU Public Procurement Directives of 2014. A growing list of exclusions that are incompatible with the *acquis* reduces the scope of public procurement rules. In addition, many sector-specific laws limit transparency. The legislation allows the mandatory procurement of goods and services from the State Supply Office for public institutions and organisations. In practice, this mandatory centralised purchasing system enables Türkiye to expand the scope of exclusions, as State Supply Office procurements under TRY 66.2 million are exempt from the PPL. The thresholds are also higher than those used in the EU for supplies and services.

The country still lacks a unified framework for coordinating, supervising and monitoring public-private partnership operations. A more consistent legal framework for concessions and public-private partnerships is needed to increase transparency and efficiency. Türkiye does not publicly disclose information on public-private partnership contracts in a transparent manner in order to avoid allegations of political influence on public tenders. Doing so would also enable a better evaluation of contingent fiscal liabilities.

Public procurement legislation and policy papers, including Türkiye's Green Deal action plan, do not include strategies for transitioning to green procurement, which would contribute significantly to sustainable consumption and production.

Türkiye's 11th Development Plan (2019-2023) and 2023 Presidential Annual Programme aim to increase domestic production by using public procurement as tool to grant subsidies. For this purpose, it makes available a compulsory domestic price advantage of up to 15% for some 'medium and high-technology industrial products' and has put in place legislation encouraging offset practices. Based on updated statistics, a high percentage of international tenders apply the domestic price advantage, rising from 37% in 2017 to 43.5% in 2022. The overall value of these tenders increased from 44% to 52.4% of the total over the same timeframe. The domestic price advantage, distorting competition against international tenderers, was applied in 63% of supply tenders, 38% of work tenders, 74% of consultancy and 18% of service tenders, corresponding to 41%, 65%, 23% and 74% of the total value of tenders respectively.

The operational independence of the **Public Procurement Board** within the Public Procurement Authority is potentially impaired since the President of the Republic is authorised to directly appoint the chair and members without specific regard to candidates' education or sector experience.

Implementation and enforcement capacity

The size of Türkiye's public **procurement market** increased slightly from 4.1% in 2021 to 4.8% of GDP in 2022.

The level of monitoring of **contract awards and implementation** is satisfactory. The Public Procurement Authority issues statistics every six months to help measure performance and

improve the public procurement system. The capacity of contracting authorities to manage public procurement processes continued to improve. Türkiye extended the mandatory use of electronic procurement to cover 47 659 tenders (up from 30 198 in 2021).

Mechanisms are in place to identify and tackle corrupt and fraudulent practices, including rules on integrity and conflict of interest. However, the use of the negotiated procedure continued to increase significantly, reaching nearly one third of all tenders (both in value and number). Contracting authorities are allowed to exercise discretion in certain unexpected circumstances that cannot be objectively measured. This limits competition and transparency regardless of any threshold when using this procedure. In 2022, it was the case in 91.34% of the tenders (in value) where the negotiated procedure was used. Such widespread use of this practice, which limits transparency and competition, strengthened allegations of political influence on public tenders. It is important to develop instruments to evaluate contract performance and benchmark the economic performance, effectiveness, and efficiency of public procurement procedures and of contract management by an individual contracting authority or entity. A risk indicator system is needed to alert on potential integrity problems in the procurement process.

Efficient remedy system

The **right to a legal remedy**, secured in the Constitution and the Public Procurement Law, creates an institutional framework and a mechanism for handling complaints. The review and remedies system ensures that complaints and penalties are dealt with and resolved in an efficient, timely and competent manner. However, the system needs to be further aligned with the EU Remedies Directive. To that end, creating a fully independent procurement review board, separate from the Public Procurement Authority and ensuring the independence of board members, remains pending as a priority.

The implementation **capacity** of the Public Procurement Board remains stable with 341 staff. The Board received 1 773 complaints in 2022 (2.08% of contracts that allow for complaints), down from 2 343 complaints in 2021 (which corresponded to 3.25% of contracts). The appointment policy and the Board's position as part of the Public Procurement Authority remained a source of concern. A fully independent Public Procurement Board would eliminate potential conflicts of interest and increase transparency.

Chapter 18: Statistics

EU rules require Member States to produce statistics based on professional independence, impartiality, reliability, transparency, and confidentiality. Common rules are in place for the methodology, production and dissemination of statistical information.

Türkiye is **moderately prepared** on statistics and made **some progress** in the reporting period, with work continuing to harmonise its statistical methodology with EU standards. The Turkish Statistical Institute (TurkStat) improved its compliance with the timeframes for publishing annual national accounts and excessive deficit procedure notifications. It took further steps to improve cooperation with other main data providers. However, Türkiye needs to increase the credibility of TurkStat and public trust in official statistics.

The Commission's 2022 recommendations were only partially met, and therefore remain valid. In the coming year, Türkiye should in particular:

- increase the credibility of TurkStat and public trust in its macroeconomic statistics by different measures, including setting transparent, professional criteria on the appointment of the president of TurkStat and any grounds for dismissal, which cannot compromise TurkStat's professional or scientific independence;

- step up efforts to fully align national accounts with the European System of Accounts 2010 (ESA 2010) and the requirements of the ESA 2010 transmission programme;
- improve statistics on agriculture, migration and asylum, and make progress towards alignment with the new requirements in short-term business statistics.

As regards **statistical infrastructure**, Türkiye's statistics legislation is based on the European Statistics Code of Practice. TurkStat is an associated institution to the Ministry of Treasury and Finance. However, there are concerns about the credibility of TurkStat and about the declining public trust in certain macroeconomic statistics. Frequent previous changes in management have significantly undermined the institution's credibility. The principles of transparency and merit-based selection processes are important for the integrity of the institution. The institution still lacks transparent appointment and dismissal procedures, including transparent, professional criteria for the appointment of the president of TurkStat.

Preparations for the fifth strategic plan (2024-2028) are ongoing. In February 2023, TurkStat published a new regulation outlining the principles and procedures for preparing and implementing official statistics programmes. Improvements have been made to the use of public institutions' administrative records and in cooperation between TurkStat and other data providers. Registers in the statistical office are updated regularly. The main classifications are aligned with the EU *acquis*.

Regarding **macroeconomic statistics**, Türkiye improved the level of compliance of its annual national accounts in terms of timeliness, but there are still data gaps, both for annual and quarterly national accounts. Gross National Income (GNI) calculations are not yet fully in line with the ESA 2010, and its GNI inventory is not fully aligned with the latest Eurostat GNI Inventory Guide. Türkiye made some progress in the excessive deficit procedure reporting, in particular in terms of data timeliness, but further efforts are required to timely prepare and transmit complete excessive deficit procedure notifications and government finance statistics. Türkiye produces good quality statistics on international trade in goods. It continued reporting quarterly balance of payments and international investment position data. It provided monthly data for the harmonised index of consumer prices. Türkiye submits all the data required for the calculation of purchasing power parities.

Türkiye continues to extend the use of administrative data to produce **business statistics**. TurkStat works on aligning its statistical business registers with the European Business Statistics Regulation requirements. Short-term business statistics are partly aligned. Research and development statistics have achieved a high level of compliance. The annual surveys on the use of information and communication technologies meet EU standards to a large extent. Rail, maritime and regional transport statistics also have a high level of compliance. In August 2022, a data transfer agreement was signed between TurkStat and the Ministry of Transport and Infrastructure for road freight transport statistics. The country has not yet transmitted data to Eurostat on foreign affiliates statistics.

On **social statistics**, Türkiye published the results of the 2021 population and housing census in December 2022. TurkStat conducted a survey on building and dwelling characteristics to provide administrative data sources on housing characteristics for the census. It carries out the survey on income and living conditions in line with EU standards and sends data to Eurostat. Social protection statistics are highly compliant with EU standards and labour market statistics are fully aligned. TurkStat has yet to provide Eurostat with Labour Force Survey data in line with the new EU *acquis*. Türkiye regularly sends data for the labour cost index, though the data is not yet fully complete. It runs the structure of earnings survey every four years, in line with EU legislation. Statistics on education and vocational training are

available. Based solely on administrative registers, Türkiye published indicators on higher education employment for the first time in August 2022. Public health statistics are available, but further progress is needed on health expenditure, non-monetary healthcare statistics and causes of death statistics. TurkStat also provides some data on the functioning of the justice system and prison statistics. Türkiye also produces statistics on immigration and emigration, but it does not yet collect statistics on asylum in line with EU requirements.

On **agricultural statistics**, Türkiye has not carried out an agricultural census since 2001. The 2016 farm structure survey results have not yet been sent to the Eurofarm system. TurkStat and the Ministry of Agriculture and Forestry have to strengthen their efforts to improve administrative registers. Statistics for most of the crops and for most of the critical animal production, milk and dairy are available and sent to Eurostat, even though sometimes with delay. Cereals and oil seed crop balances are also transmitted to Eurostat. The economic accounts for agriculture are still not fully in line with the EU *acquis*.

Energy statistics are mostly in line with EU requirements. Monthly and annual energy statistics are sent regularly. Data on energy prices are also sent to Eurostat regularly and are of good quality. Work is ongoing on energy consumption in households. TurkStat is making progress in physical energy flow accounts. On **environmental statistics**, Türkiye produces waste and water statistics, but further progress is still needed on water resources, water abstraction and waste generation statistics. Statistics related to greenhouse gas emissions, environmental taxes, material flow accounts, air emission accounts and environmental protection expenditure accounts are available.

Chapter 32: Financial control

The EU promotes the reform of national governance systems to improve managerial accountability, sound financial management of income and expenditure, and external audit of public funds. The financial control rules further protect the EU's financial interests against fraud in the management of EU funds and the euro against counterfeiting.

Türkiye has a **good level of preparation** on financial control. It made **no progress** over the reporting period. The public internal financial control policy paper was not updated. The purpose, authority and responsibility of internal audit are undermined by the lack of a legal requirement to have internal audit units in ministries.

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

- organise a new round of public expenditures and financial accountability (PEFA) to assess the performance of the current public finance management, help prepare a comprehensive public financial management strategy and update the public internal financial control policy paper and the related action plan;
- adopt a national anti-fraud strategy;
- review the arrangements for including municipalities and state-owned enterprises in the treasury single account.

Public internal financial control

The **strategic framework** is partially in place. There has been no progress on the update of the public internal financial control policy paper since 2012. Türkiye still lacks a comprehensive strategic framework for public administration reform and for public finance management. Public finance management-related goals are contained in different planning

documents and strategies, and there is no mechanism to coordinate implementation of reforms and to ensure regular monitoring and reporting.

The Turkish administration has a uniform management structure that combines elements of **managerial accountability** and delegation with a results-oriented performance management system. The Public Financial Management and Control Law (PFMC Law) applies to all public institutions and specifies the elements of financial control. It sets out the responsibilities of the heads of public institutions, including managerial duties and delegates authority to authorising officers, with the Ministry of Finance and Treasury assigned a coordinating role. Further efforts are needed to harmonise legislation, managerial accountability, including reporting structures, delegating decision-making responsibilities and the functioning of internal control. The use of public finance management diagnostic tools such as PEFA could help identify and fill current gaps in implementing the public financial management and control Law.

The PFMC Law regulates **internal control**, which functions largely in line with international standards. Implementation of internal control systems remains undermined by capacity and ownership issues. Work needs to continue to apply risk management. The monitoring and reporting of irregularities also merits further development. Türkiye has a treasury single account, but the fact that it includes in its scope local administrations and state-owned enterprises raises concerns.

Internal audit practice is regulated in line with international standards in the PFMC Law. The internal audit manual and a code of ethics prepared by the Central Harmonisation Unit have not been updated since 2013. Türkiye has adopted implementing legislation on working procedures and principles of internal audit and took steps to increase the number of internal auditors and provide training. However, there is still no legal requirement for ministries to have an internal audit unit, only for internal auditors. In addition, there is no formal status for heads of internal audit as unit heads. There is no entity that performs the role of an audit committee and therefore auditors report directly to their deputy ministers or to a senior manager. These reporting arrangements could compromise auditor independence. There is no systematic follow-up to the implementation of internal audit recommendations. The lack of clarity in the legislation and in practice between the internal audit and inspection organisations compromises the effectiveness of the internal audit function.

Two **Central Harmonisation Units (CHU)** are tasked with setting standards, monitoring and reporting on implementing public internal financial control. The CHU for financial management and control sets standards and the methodology providing guidance, training and overall coordination to public administrations in this field. The Internal Audit Coordination Board is the CHU for internal audit, which notably monitors the internal audit systems of the public administrations, develops internal audit standards and publishes manuals. The CHU for financial management and control has prepared a draft guide on internal control quality reviews and completed pilot projects in three public administration bodies. The Internal Audit Coordination Board consists of seven members appointed by the President for four years and is now fully attached to the Ministry of Finance and Treasury. Further action is needed to ensure its independence and boost its capacity, organisational structure and resources to fulfil its mandate.

External audit

The **constitutional and legal framework** provides for the independence of the Turkish Court of Accounts (TCA). There are concerns regarding the fiscal discipline, transparency and accountability of the Türkiye Wealth Fund (TWF), chaired by the President of the Republic

and not fully subject to direct audit by the TCA. The TWF is audited by an independent audit firm and by auditors appointed by the President. Not all companies in the TWF portfolio are audited by the TCA. The 2022 audit report was not published on the TWF website. In 2022, amendments to the Law on the establishment of the Türkiye Wealth Fund Management Company (TWPMC) introduced exemptions and exceptions. These new provisions are applicable to companies, funds and their subsidiaries of which the TWF or the TWPMC is the controlling shareholder. Operations and management of the Istanbul Financial Centre will be carried out by a TWF managing company, which is not accountable to the TCA. The Disaster Reconstruction Fund, created in 2023 to manage the funds allocated to disaster recovery work, is excluded from the general budget and the TCA audit scope. The law establishing the Fund requires it to be audited in line with international auditing standards, but it does not clearly specify the procurement principles to be used for Fund expenditure.

Turkish Court of Accounts Law is in line with International Organisation of Supreme Audit Institutions (INTOSAI) standards. It provides for an almost exhaustive audit mandate and gives the TCA full discretion in discharging its responsibilities. The TCA has both audit and judicial functions. In 2022, it had 1 837 staff, including 819 auditors, down from 1 920 staff in 2021, of which 865 were auditors. The TCA is implementing its 2019-2023 strategic plan, which includes running risk-based audits and strengthening its human resources capacity. It has updated its manuals for public enterprise audit, performance audit, audit reporting and local government company audit.

The TCA has improved the **quality of audit work**. It submits four audit reports a year to the parliament in addition to a statement of general conformity. The TCA reports are only evaluated by parliament during its budget deliberations.

Regarding the **impact of audit work**, TCA reports are published online every year, with the exception of those on state-owned economic enterprises. The audited institutions should systematically and swiftly implement the TCA recommendations. A working group between the TCA and the Ministry of Treasury and Finance is operational but more parliamentary scrutiny of TCA audit findings and recommendations is needed. There is a need to separate the discussion of budget and audit issues. Setting up a working group between the TCA and the parliament solely dedicated to discussing the performance of public institutions and their spending could be instrumental in this regard.

Protection of the EU's financial interests

Although Türkiye has reached a good level of alignment with the EU *acquis*, it still needs to fully align its legislation with the EU Directive on the fight against fraud to the EU's financial interests by means of criminal law. The State Supervisory Council was designated as the **anti-fraud coordination service** (AFCOS); AFCOS is operational and held its first meeting in June 2022. There is no national anti-fraud strategy for protecting the EU's financial interests. Türkiye reported 917 cases to the Commission via the online irregularity management system from 2006 to 2022, of which 127 cases were reported in 2022. Türkiye needs to continue on the path of its improved track record of **cooperating with the European Commission** during investigations. It should keep on building its track record on reporting of irregularities along the trends of the last years.

Protection of the euro against counterfeiting

Türkiye has reached a high level of alignment with the EU *acquis* in this area. A dedicated department in the Central Bank carries out technical analysis of counterfeit money, including euro banknotes and coins. In addition, the Turkish State Mint carries out technical analyses of counterfeit coins, including euro coins. Credit institutions that do not withdraw counterfeits

from circulation are subject to financial penalties.

3. GOOD NEIGHBOURLY RELATIONS AND REGIONAL COOPERATION

Cyprus

Türkiye continued to refuse to recognise the Republic of Cyprus. Despite repeated calls by the Council of the EU and the European Commission, Türkiye has yet to fulfil its obligations as outlined in the Declaration of the European Community and its Member States of 21 September 2005 and in Council Conclusions, including those of December 2006 and December 2015. Türkiye did not fulfil its obligation to ensure the full and non-discriminatory implementation of the Additional Protocol to the Association Agreement and did not remove all obstacles to the free movement of goods, including restrictions on direct transport links with the Republic of Cyprus. Türkiye also refused to cooperate with the Republic of Cyprus on security-related issues, including terrorism. Türkiye continued to veto applications by the Republic of Cyprus to join several international organisations, including the Organisation for Economic Co-operation and Development (OECD).

There were no unauthorised drilling activities by Türkiye in the Eastern Mediterranean during the reporting period. Türkiye issued several navigational telexes (NAVTEX) for conducting seismic surveys and scientific research activities but none in areas that include parts of the Exclusive Economic Zone (EEZ) of Cyprus. The EU remains committed to defending its interests and those of its Member States as well as to upholding regional stability. In November 2022, following the third annual review of the framework for restrictive measures in response to Türkiye's unauthorised drilling activities in the Eastern Mediterranean, the European Council extended the regime for a further year until 12 November 2023. Currently, two individuals are subject to sanctions.

Türkiye's military exercises in the maritime zones of Cyprus continued. Violations by Turkish unmanned aerial vehicles in the Nicosia flight information region and the national airspace of the Republic of Cyprus also continued unabated. Türkiye continued to increase the militarisation of the occupied area by upgrading the military drone base in Lefkoniko and the naval base in Bogazi. The harassment of Cypriot fishing vessels by Türkiye also continued.

In the reporting period, Türkiye continued to criticise the decision of the UN Security Council (UNSC) to renew the mandate of the United Nations Peacekeeping Force in Cyprus (UNFICYP) without the consent of the Turkish Cypriot community. UNFICYP's mandated authority extends throughout the island of Cyprus and the restrictions on its freedom of movement can pose serious risks to the safety and security of United Nations personnel serving in peacekeeping operations. In August 2023, after unauthorised construction work was conducted by the Turkish Cypriot side within the UN buffer zone near Pyla/Pile, Türkiye rejected the UN Security Council's statement condemning the violation of the status quo, which subsequently led to escalating tensions. This escalation included the assault on UNFICYP peacekeepers by Turkish Cypriot personnel on 18 August 2023, an act strongly condemned by the EU. In October 2023, the UN brokered an understanding between both sides on the way forward regarding Pyla/Pile area, which was welcomed by Türkiye and the EU. Nevertheless, these developments continued to undermine the prospect of resuming negotiations and reaching a comprehensive settlement of the Cyprus problem.

Despite international condemnations, and the inadmissibility of the settlement of any parts of Varosha by people other than its inhabitants as stipulated in UNSC resolution 550 (1984),

Türkiye continued with its plan to open the entire fenced-off area of Varosha, creating a new fait accompli on the ground. The new restrictions imposed in 2022 on the activities of UNFICYP within the fenced-off area of Varosha remained in effect – challenging UNFICYP’s ability to execute its tasks in accordance with its mandate, and violating UNSC Resolution 789 (1992).

Türkiye repeatedly advocated for a two-state solution in Cyprus, contrary to relevant UN Security Council Resolutions. In November 2022, the so-called but not internationally recognised ‘Turkish Republic of Northern Cyprus’ was accepted as an observer in the Organization of Turkic States (OTS). This violates the principle of territorial integrity and the UN Charter. The EU recognises only the Republic of Cyprus as a subject of international law, in accordance with the relevant UN Security Council Resolutions and has stressed that any action to facilitate or assist in any way the international recognition of Turkish Cypriot secessionist entity severely damages efforts to create an environment conducive to resuming settlement talks under the auspices of the United Nations.

The EU remains fully committed to a comprehensive settlement of the Cyprus issue, within the UN framework, in accordance with the relevant UNSC resolutions and in line with the principles on which the EU is founded and its *acquis*. The EU has called, most recently in the European Council conclusions of June 2023, for the speedy resumption of negotiations and expressed its readiness to play an active role in supporting all stages of the UN-led process, with all the appropriate means at its disposal.

As emphasised in the Negotiating Framework and Council declarations, Türkiye is expected to actively support the negotiations on a fair, comprehensive and viable settlement of the Cyprus issue within the UN framework, in accordance with the relevant UN Security Council resolutions and in line with the principles on which the EU is founded and the EU *acquis*. It is important that Türkiye reaffirms its commitment to the UN-led settlement talks on Cyprus in line with the relevant UNSC resolutions, including their external aspects. No unilateral actions should be taken that could raise tensions on the island and prevent the resumption of talks. On Varosha, Türkiye must immediately reverse the unilateral actions announced on 20 July 2021 and all steps taken since October 2020 that run contrary to the relevant UNSC resolutions. The EU underlines the importance of the status of Varosha and calls for full respect of UNSC resolutions (particularly Resolutions 550, 789 and 1251).

Peaceful settlement of border disputes

Relations between Türkiye and Greece deteriorated until early 2023. Hostile rhetoric grew during this period, including threatening statements regarding the sovereignty of Greek islands. However, the February 2023 earthquakes prompted a marked improvement in relations. Greece rapidly provided humanitarian aid and support to Türkiye, which helped de-escalate tensions and rhetoric. This was followed by several high-level phone calls and meetings. The Turkish and Greek foreign ministers met in March 2023 on the margins of the International Donors’ Conference organised by the European Commission and the Swedish Presidency of the Council of the EU. The Turkish and Greek deputy foreign ministers met in Ankara in March 2023 to relaunch the fourth round of the Positive Agenda talks between the two countries. The Greek Defence Minister visited Türkiye in April 2023.

In July, the Greek Prime Minister met with the Turkish President on the sidelines of the NATO Summit in Vilnius. The meeting took place in a good atmosphere. The two leaders agreed to build on the positive momentum and activate multiple channels of communication in the coming period, including holding the next meeting of the High-Level Cooperation

Council between Greece and Türkiye in Thessaloniki. The two leaders tasked the Ministers of Foreign Affairs to guide the process and keep them informed on progress.

The possible extension of Greek territorial waters to 12 nautical miles in the Aegean Sea under Article 3 of the United Nations Convention on the Law of the Sea (UNCLOS) continued to weigh on Greece-Türkiye relations. The 1995 declaration of the Turkish Grand National Assembly that any unilateral action by Greece to extend its territorial waters would be considered a *casus belli*, still holds.

The Turkish violations of Greek airspace intensified in 2022 and in December 2022 Türkiye also threatened Greece with retaliation if the latter proceeded with any expansion of its territorial waters in the Aegean. As of February 2023, violations of Greek airspace diminished drastically, and no flights over Greek inhabited areas were reported.

As highlighted by the Council Conclusions in December 2022 and the European Council's Conclusions of June 2022 and stemming from obligations under the Negotiating Framework, Türkiye is expected to make an unequivocal commitment to good neighbourly relations, international agreements and the peaceful settlement of disputes having recourse, if necessary, to the International Court of Justice. Türkiye must avoid threats and actions that damage good neighbourly relations, normalise its relations with the Republic of Cyprus and respect the sovereignty of all EU Member States over their territorial sea and airspace as well as all their sovereign rights, including inter alia the right to explore and exploit natural resources in accordance with EU and international law, in particular the UNCLOS.

In October 2022, Türkiye and the Government of National Unity of Libya signed a memorandum of understanding (MoU) for the development of bilateral scientific, technical, technological, legal, administrative and commercial cooperation in the field of hydrocarbons on land and at sea based on the 2019 MoU on the delimitation of maritime jurisdiction areas between Türkiye and the National Unity Government of Libya. The MoU infringes on the sovereign rights of third states, does not comply with UNCLOS and cannot produce any legal consequences for third states. Actions that could undermine regional stability should be avoided.

Regional cooperation

Good neighbourly relations are an essential part of Türkiye's accession process. Bilateral relations with other enlargement countries were good overall but remained challenging with neighbouring EU Member States, particularly Greece and Cyprus. Tensions in the Aegean and Eastern Mediterranean were markedly reduced after the February 2023 earthquakes.

Türkiye's policy in the Western Balkans is generally aligned with the EU's strategic objectives of regional stability, Euro-Atlantic integration and economic development. Türkiye portrayed itself as an EU partner in the region, while leveraging its distinctive cultural and economic ties. Türkiye continued to ask for action against alleged members of the Gülen movement in the region, urging their extradition and the closure of all affiliated schools. This caused friction with some countries in the region.

Türkiye's relations with **Albania** have continued to strengthen with regular high-level contacts and the agreement by the two countries to bring their bilateral relations to the level of strategic partnership. Albania extradited, Faruk Fatih Ozer, the founder of the Turkish crypto-exchange Thodex. Türkiye reiterated its readiness to strengthen Albania's defence capacity.

Türkiye remained close to **Bosnia and Herzegovina** and President Erdoğan visited the country in September 2022. Türkiye maintained regular contacts with all members of Bosnia

and Herzegovina's tripartite Presidency, keeping a balanced approach and supporting the country's territorial integrity and stability. Türkiye supported the Office of the High Representative.

Türkiye's relations with **Serbia** are very good. The two Presidents maintained frequent contacts. President Erdoğan visited Serbia in September 2022. President Erdoğan emphasised Türkiye's readiness to support a solution between Serbia and Kosovo *. The two countries signed a number of agreements, including on the mutual abolition of tourist visas.

Türkiye maintained strong cultural and economic ties with **Kosovo** and continued to lobby for its international recognition. Prime Minister Kurti paid his first official visit to Türkiye in February 2023. Türkiye and Kosovo explored cooperation opportunities in the economic, commercial, security and defence fields.

Türkiye's relations with **Montenegro** were stable. The two countries publicly stated that they aimed at further developing their bilateral cooperation.

Türkiye and **North Macedonia** continued to engage actively in the economic, educational and cultural sectors. The two countries celebrated 30 years of diplomatic relations.

Türkiye is **Georgia's** second largest trading partner and its relations with Georgia are at a strategic partnership level. High-level contacts were regular. Türkiye strongly supported Georgia's territorial integrity and sovereignty. Türkiye also supported Georgia's NATO integration efforts.

Türkiye's relations with the **Republic of Moldova** remained stable and at the level of strategic cooperation. Türkiye continued to support Moldova's sovereignty and territorial integrity. Türkiye also welcomed the EU's decision to grant candidate status to Moldova.

Türkiye's relations with **Ukraine** are at the level of strategic partnership. Türkiye consistently supported Ukraine's territorial integrity. Türkiye rejected Russia's aggression against Ukraine, called for the rights of Crimean Tatars to be respected, provided humanitarian aid and military assistance to Ukraine and engaged politically and diplomatically, including in the facilitation of the export of Ukrainian grain and of the prisoners' exchange, aiming at facilitating talks between Ukraine and Russia and working on de-escalation and bringing about a cease-fire.

4. ABILITY TO ASSUME THE OBLIGATIONS OF MEMBERSHIP

CLUSTER 2: INTERNAL MARKET

This cluster covers: free movement of goods (Chapter 1), freedom of movement for workers (Chapter 2), right of establishment and freedom to provide services (Chapter 3), free movement of capital (Chapter 4), company law (Chapter 6), intellectual property law (Chapter 7), competition policy (Chapter 8), financial services (Chapter 9), and health and consumer protection (Chapter 28). This cluster is key to the good functioning of the EU-Turkey Customs Union and to integrating Türkiye into the EU's internal market.

Türkiye has achieved a good level of preparation for the free movement of goods. However, technical barriers to trade and requirements discriminating against EU products remained in place. Preparations in the areas of freedom of movement for workers, and the right of

* This designation is without prejudice to positions on status and is in line with UNSCR 1244/1999 and the ICJ Opinion on the Kosovo declaration of independence.

establishment and freedom to provide services are at an early stage, and substantial efforts are still required to align with the *acquis*. Türkiye is moderately prepared on free movement of capital, as limitations remain on foreign ownership and on capital movement. Türkiye needs to continue to address outstanding issues in its framework regulating the fight against money laundering and terrorist financing, while ensuring objective implementation that does not restrict the legitimate rights of NGOs.

Türkiye is well advanced in the area of company law but needs to make further progress in aligning with the EU *acquis*. Türkiye has a good level of preparation in the area of intellectual property law, notably in terms of legislative alignment, but it needs to improve implementation and enforcement. Türkiye has some level of preparation in the area of competition policy. Backsliding was observed as serious concerns persist in relation to the legislative framework, enforcement capacity and transparency in the field of State aid. Türkiye has a good level of preparation in the area of financial services, however the banking sector faced an increasingly challenging operating environment in the reporting period. Türkiye has a good level of preparation on consumer and health protection, with limited progress made, notably on strengthening its surveillance system for health (security) services. The capacity of the healthcare system was seriously affected by the February 2023 earthquakes in the affected regions.

Chapter 1: Free movement of goods

The free movement of goods ensures that many products can be traded freely across the EU based on common rules and procedures. Where products are governed by national rules, the principle of the free movement of goods prevents these from creating unjustified barriers to trade.

Türkiye has achieved a **good level of preparation** on the free movement of goods. It made **some progress** in aligning with the EU *acquis*, particularly under the 'old approach' and the 'new and global approach' to product legislation. The market access barrier on agricultural and forestry tractors was removed following alignment with the EU *acquis*. However, technical barriers to trade, unjustified checks for EU products and requirements discriminating against EU products remained, in breach of Türkiye's obligations under the Customs Union.

The Commission's recommendations from last year were only partially met, and therefore remain valid. In the coming year, Türkiye should in particular:

- eliminate the remaining non-tariff barriers to the free movement of goods that are in breach of Customs Union obligations, including the surveillance regimes for the import of certain products, export restrictions, prior registration requirements, conformity assessments and inspections, licencing surveillance and other documentation requirements for imports, and non-acceptance of EU certificates of good manufacturing practices;
- review the remaining schemes setting local content requirements or relocating production;
- increase the coverage and effectiveness of market surveillance measures and ensure timely reporting on results for public transparency.

General principles

The EU framework for the free movement of goods is largely in place in Türkiye. However, implementation issues remain, as Türkiye continues to implement a range of non-tariff barriers to the free movement of goods that are in breach of Customs Union obligations. In the reporting period it further extended the scope of the surveillance regime to cover the

import of certain products, such as photovoltaic cells. Export restrictions, prior registration requirements, risk-based import control system, conformity assessments and inspections and other documentation requirements remained in place. Türkiye still does not accept EU good manufacturing practices certificates. While Türkiye adopted several measures to adjust the localisation and prioritisation schemes for pharmaceuticals, the EU's assessment on whether Türkiye has completed the implementation of all findings in the Arbitrators' Award is still ongoing. The local content requirements in renewable energy remain in place and new local content requirements were put in place for tobacco products. These schemes create *de facto* market access barriers for EU products, which are not in line with the Customs Union. Türkiye's product safety controls on imported goods processed through its electronic TAREKS system can require the provision of additional documentation and information on products coming from the EU, contrary to the Customs Union provisions.

Non-harmonised areas

Türkiye's mutual recognition legislation in the non-harmonised areas is in line with the EU *acquis*. However, Türkiye has notified only five product legal acts in the non-harmonised areas in the reporting period. This is not sufficient, given the size of Türkiye's economy and legislative activity and close ties with the European Union's economy under the Customs Union.

Harmonised areas: quality infrastructure

Türkiye is aligned with the EU *acquis* on standards, technical regulations, conformity assessment, accreditation, metrology and market surveillance. It has also aligned with the EU *acquis* on general product safety, the European Conformity mark (CE mark), conformity assessment bodies, notified bodies and conformity assessment methods.

The national **Standards** Institute is independent, adequately resourced and financed, and able to implement European and international standards. Since 2012 it is a full member of the European Committee for Standardisation (CEN) and the European Committee for Electrotechnical Standardisation (CENELEC). By the end of the reporting period, it had adopted 24 318 national standards aligned with European standards. The rate of harmonisation with both CEN and CENELEC standards is 99.96%. Eight Turkish economic operators are full members of the European Telecommunications Standards Institute (ETSI) and one is an observer.

Türkiye has 64 **notified bodies**, five recognised third-party organisations, and two technical approval bodies in place. The Turkish **Accreditation** Agency (TÜRKAK) is a signatory of multilateral agreements as part of the European cooperation for Accreditation (EA) and takes part in the mutual recognition of data agreement of the OECD Good Laboratory Practices Working Group (OECD-GLP). The National **Metrology** Institute (TÜBİTAK-UME) is a member of the European Association of National Metrology Institutes (EURAMET). The Ministry of Industry and Technology participates in the European Legal Metrology Organisation (WELMEC). TÜBİTAK-UME chairs a Technical Committee and participates in the Committee of the European Metrology Programme for Innovation and Research at EURAMET.

Türkiye implements **market surveillance** in compliance with the EU *acquis* and submits its annual programme to the European Commission. There is a horizontal framework for market surveillance in place in line with the applicable EU *acquis*. The relevant ministries published separate market surveillance regulations governing personal protective equipment and construction products in the reporting period. According to the market surveillance report for 2022, a total of 233 644 products were checked by market surveillance authorities in 2022

representing a 11.8% increase as compared to 2021. About 10 881 products were found uncompliant or unsafe as against 12 455 products in 2021. Access to information on market surveillance activities is important for producers and consumers. The budget allocated to market surveillance increased by 51% in 2022 as compared to 2021, in a high inflation environment. Surveillance remained limited with regard to activities in e-commerce.

Harmonised area: sectoral legislation

On the ‘**new and global approach**’ to product legislation, Türkiye adopted legislation to align with the latest *acquis* on medical devices and in vitro diagnostic medical devices. It also aligned with the *acquis* on eco-design and on energy labelling of several types of heaters, computers, servers, and several types of household goods.

On the ‘**old approach**’ to product legislation, in January 2023, the new Turkish legislation on agriculture and forestry tractors entered into force, phasing out the discriminatory treatment of EU tractors in terms of engine emission requirements, thus solving the relevant market access barrier. It also adopted legislation aiming to align with the *acquis* on certain medicinal products, good distribution practices of medicinal products for human use and on vaccines and immune serums. Türkiye adopted legislation designed to align with the latest *acquis* on good clinical practice and pharmacovigilance. Türkiye aligned to a large extent its cosmetics regulatory framework with the *acquis* by adopting a new cosmetics regulation in May 2023. A new guideline on free from claims in cosmetics was published in June 2023. Türkiye does not accept EU good manufacturing practice certificates on medicines for human use, in breach of Customs Union rules. Regarding **chemicals**, Türkiye has adopted two new regulations on the export and import of hazardous chemicals and on hazardous substances in electrical and electronic equipment, aligning with the EU *acquis*. Türkiye is almost fully aligned with the European Regulation on Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), apart from on biocidal products.

On **procedural measures**, Türkiye has specific licencing and regulation systems for economic operators dealing with **drug precursors**, with a strict follow-up and monitoring system in cooperation with the police and customs. It is aligned with the EU *acquis* regarding licencing procedures for **firearms**. However, it made no progress on alignment with the *acquis* on **cultural goods**.

Chapter 2: Freedom of movement for workers

Citizens of one Member State have the right to work in another Member State and must be given the same working and social conditions as other workers.

Preparations in the area of freedom of movement for workers are at an **early stage** and **no progress** was made during the reporting period.

Türkiye made no progress on **access to the labour market** or on the **coordination of social security systems**. The number of bilateral social security agreements with EU Member States remained the same, with 15 agreements concluded. Türkiye should prepare its legislation and administrative practices in view of joining the European Labour Authority and the European Employment Services (**EURES**) network. There were no developments on future participation in the EURES network.

Chapter 3: Right of establishment and freedom to provide services

EU natural and legal persons have the right to establish themselves in any Member State and to provide cross-border services. For certain regulated professions, there are rules on mutual recognition of qualifications. EU rules on postal services focus on improving the quality of

universal service, gradual market opening to competition, and the establishment of an independent regulator.

Preparations in the area of right of establishment and freedom to provide services are at an **early stage**. There was **no progress** in the reporting period. Right of establishment continues to be restricted, service providers registered in the EU still face requirements on registration, licencing and authorisation. Postal services are not regulated in line with the *acquis*. Continuous and substantial efforts are needed on the mutual recognition of professional qualifications. Overall, substantial efforts are still required to achieve alignment in this area.

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

- align its national legislation with the Services Directive and set up a point of single contact;
- continue aligning with the EU *acquis* in the area of postal services;
- align its national legislation with the EU *acquis* on mutual recognition of professional qualifications, including the Professional Qualifications Directive and the Proportionality Test Directive.

There was no progress on the **right of establishment**, which continues to be restricted by several requirements in Türkiye.

Regarding the **freedom to provide cross-border services**, service providers registered in the EU still face requirements on registration, licencing and authorisation. The point of single contact has not yet been created.

No progress was made in the **area of postal services**. Legislation regulating postal services in accordance with the EU *acquis* has not yet been adopted. Türkiye has yet to align with the provisions of the Postal Services Directive, as a reserved area in the letter mail market is maintained for the state-owned universal service provider. The Information and Communication Technologies Authority (ICTA) monitors postal market development. National legislation still needs to be aligned with the provisions of the Regulation on cross-border parcel delivery services.

On the **mutual recognition of professional qualifications**, the Vocational Qualifications Authority continued to implement the national qualification framework. The number of occupations that require compulsory certifications has increased (204 occupations in total). The number of national occupational standards reached 901 and the number of national qualifications prepared in line with occupational standards reached 650. The Turkish Referencing Report to the European Qualifications Framework is still not updated. Some regulated professions still require reciprocal mutual recognition. Nationality and language requirements have not been removed. However, it is possible to make an online application for the recognition and equivalence of higher education qualifications. There is no specific regulation or practice governing the temporary or occasional provision of services. Continuous and significant steps are needed to align national legislation with the EU *acquis* in this area.

Chapter 4: Free movement of capital

In the EU, capital and investments must be able to move without restrictions, with common rules for cross-border payments. Banks and other economic operators apply certain rules to support the fight against money laundering and terrorist financing.

Türkiye is **moderately prepared** on free movement of capital. Overall, there was **some progress** in this area in the reporting period. Limitations on foreign ownership persist in numerous sectors. There are still restrictions on capital movements and foreign exchange-denominated transactions. Türkiye has improved its instant payment system infrastructure. The country remains on the list of jurisdictions under increased monitoring ('grey list') by the Financial Action Task Force (FATF). Though the FATF did not call for the use of increased due diligence measures in the reporting period, Türkiye needs to take more steps to implement its action plan and tackle the strategic shortcomings in its anti-money laundering and countering the financing of terrorism (AML/CFT) regime. It is important for Türkiye to ensure an objective implementation that does not instrumentalise measures to target or restrict the legitimate rights of NGOs.

The Commission's recommendations from last year were implemented to some extent. In the coming year, Türkiye should in particular:

- minimise limitations on foreign ownership and on capital movements;
- make further progress in tackling the strategic shortcomings in its AML/CFT regime, in line with the EU *acquis* and FATF recommended actions in order to be delisted from the FATF grey list;
- address the recommendations of the Venice Commission regarding the law on the prevention of financing of the proliferation of weapons of mass destruction.

Concerning **capital movements and payments**, restrictions on foreign ownership are still in place in many sectors, including broadcasting, education, transportation, financial services, the electricity market and real estate. Türkiye's legislation on real estate acquisition by foreigners remains opaque and does not apply to all EU nationals in a non-discriminatory way. On this point, Türkiye lags behind its commitments under the EU-Turkey Association Agreement. The ability for citizens of neighbouring countries in border provinces to buy real estate is still restricted for national security reasons. Türkiye maintains its restrictions on capital movements and foreign exchange-denominated transactions. Exporters are still required to sell 40% of their foreign-earned income to the Central Bank and Türkiye brought in some additional incentives to encourage exporters to convert their foreign-earned revenues into Turkish lira. Türkiye also imposes a range of informal measures on banks and operators to limit the purchase of foreign currencies.

Türkiye has made some progress in **payment systems** adding to the good level of preparation already achieved. The Central Bank has increased the scope and coverage of the Instant and Continuous Transfer of Funds (FAST) system. Banks began to provide services via the Open Banking Gateway (GEÇİT) infrastructure. Türkiye also launched FAST Merchant Payments in 2023. The first payment transactions were made on the Digital Turkish Lira Network. Meanwhile, the Central Bank published guidelines on data sharing services in payment services in December 2022. The Central Bank also launched the Security Overlay Service to facilitate the exchange of information with a view to improving the detection of illicit transactions. All Turkish banks had stopped accepting the Russian MIR payment system by October 2022.

Türkiye has made some progress in the **fight against money laundering and terrorist financing**. Türkiye has been on the Financial Action Task Force (FATF) list of jurisdictions under increased monitoring ('grey list') since October 2021, but has not been added to the EU's list of high-risk third countries. This is due to Türkiye's candidate status, high-level political commitment to the EU to tackle the outstanding shortcomings identified by the FATF and to its endeavours to reach full alignment with the EU *acquis*.

Türkiye revised its national strategy document **on anti-money laundering and countering the financing of terrorism** in 2022 to comply with FATF recommended actions. In 2022, Türkiye adopted regulations regarding politically exposed persons to comply with the FATF Standards and the EU *acquis*. Also in 2022, Türkiye issued guidance to the private sector on detecting terrorist financing and increased its financial intelligence agency's proactive dissemination of financial intelligence. In July 2023, the FATF concluded that Türkiye has taken positive steps towards improving its AML/CFT regime. Consequently, the FATF upgraded the country's ratings on five of its recommendations, including Recommendation 8 on the audit of the non-profit organisations. Türkiye remains partially compliant on one recommendation. Nevertheless, the law on the prevention of financing of the proliferation of weapons of mass destruction has not been revised in line with the Venice Commission's recommendations.

The Turkish Financial Crimes Investigation Board (MASAK) strengthened its capacity and the level of cooperation with law enforcement agencies and judicial authorities. The number of suspicious transaction reports submitted fell from 504 995 in 2021 to 425 322 in 2022. The number of money laundering prosecutions has been rising in recent years. 70 cases resulted in conviction between 2013 and 2018. Since 2018, 225 people have been convicted in money laundering cases and in 2022 alone, 4 904 people were convicted in Türkiye.

Türkiye reaffirmed its commitment to freeze the assets of people/entities designated by the United Nations Security Council Sanctions Committee. The government also continued to use the domestic assets freeze instrument effectively.

Chapter 6: Company law

The EU has common rules on the formation, registration and disclosure requirements of a company, with complementary rules for accounting and financial reporting, and statutory audit.

Türkiye is **well advanced** in the area of company law. **Some progress** was made during the reporting period, by adopting the financial reporting standards for small and micro companies. However, there was no progress on the other 2022 recommendation, which remains valid.

In the coming year, Türkiye should in particular:

- align national legislation with the *acquis* on encouraging long-term shareholder engagement;
- align national legislation with the *acquis* on cross-border conversions, mergers and divisions and on the use of digital tools and processes in company law.

On **company law**, Türkiye took limited legislative action over the reporting period. Alignment is needed on some outstanding issues in the context of cross-border mergers, domestic mergers and divisions, and takeovers. Alignment is also necessary with the 2019 *acquis* on the use of digital tools and on cross-border operations (mergers, divisions, conversions) with the rules on shareholders' rights, including on the encouragement of long-term shareholder engagement and on gender equality on boards of directors. As regards the disclosure of company documents in the business register, the country still lacks provisions requiring all limited liability companies to publish annual accounts and on the online filing of company documents. Türkiye also lacks a fully online process to register limited liability companies.

On **company reporting**, a Presidency decision on the procedures and principles for

determining the companies subject to independent audit was published in November 2022. This lowered the audit exemption thresholds. In January 2023, the Public Oversight, Accounting, and Auditing Standards Authority (POA) published the financial reporting standard for small and micro enterprises. Based on changes in the International Code of Ethics for Professional Accountants (including International Independence Standards), the POA also updated the standards in the Code of Ethics for Auditors, in March 2023. There is still a lack of clarity regarding the alignment of non-financial information and reports on payments to the government. Türkiye will need to align with the 2022 EU Directive on corporate sustainability reporting. As regards **transparency** requirements for listed companies, the Law on capital markets regulates the general responsibilities of issuers. Implementing rules are published by the Capital Markets Board with the aim of aligning with the EU *acquis* in this area. The Turkish Commercial Code was amended to increase transparency and provide the identity information of bearer shareholders.

Chapter 7: Intellectual property law

The EU has harmonised rules for the legal protection of intellectual property rights (IPR), copyright and related rights. Rules for the legal protection of IPR cover, for instance, patents and trade marks, designs, biotechnological inventions and pharmaceuticals. Rules for the legal protection of copyright and related rights cover, for instance, books, films, software and broadcasting.

Türkiye has a **good level of preparation**, notably in terms of legislative alignment. **No progress** was made during the reporting period. Some legislative discrepancies remain, as do outstanding problems regarding implementation and enforcement, notably in relation with judicial procedures. Türkiye was the second major country of provenance by number of counterfeit articles entering the EU.

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

- improve enforcement measures to efficiently fight against industrial and intellectual property rights infringements, including online sales of counterfeit and pirated goods, improve the level of specialisation in courts dealing with IPR infringements and resolve difficulties in the judicial procedures to obtain search and seizure warrants for criminal law enforcement;
- improve cooperation with IPR owners for efficient implementation and effective enforcement of the Law on industrial property, in particular in cases of accelerated and simplified destruction procedures by the judiciary and the customs authorities;
- ensure the collection and processing of accurate statistical data, especially on effective judicial enforcement of intellectual and industrial property rights, with a view to facilitating the analysis of systemic IPR shortcomings.

Regarding **copyright and related rights**, Türkiye amended one specific article of the Law on copyright and extended legal protection against circumvention of technological measures to all works, performances, phonograms, productions and broadcasts, in addition to computer programmes. The Law on copyright has yet to be fully modernised to provide sufficient protection, in line with technological developments. Systemic issues continue, particularly regarding collective rights management, the lack of autonomy and the supervision of collective rights management organisations (CMOs), as well as discrimination against foreign right holders in the management of CMOs. A number of issues remained unresolved, in particular the lack of fair distribution of private copy levies, licencing difficulties,

uncertainties in online education exceptions, public performance right problems, unauthorised use of copyrighted material via online platforms and well-known e-commerce websites. Türkiye is not yet aligned with the Directive on copyright and related rights in the Digital Single Market.

Regarding **industrial property rights**, the Turkish Patent and Trademark Office continued to strengthen its administrative capacity and digitalise services. The lack of a precise definition of bad faith applications as regards trade marks has made the invalidation procedure ineffective. The procedures to revoke, oppose and invalidate trade marks remained expensive and lengthy. There are currently no legal provisions for supplementary protection certificates.

Another area of continued concern is the absence of an effective system for protecting undisclosed test and other data generated to obtain marketing approval for pharmaceutical and agrochemical products. Even though Türkiye has in place a regulatory data protection regime since 2005, the scope is limited and excludes biologics and combination products. The length is also limited reducing the effective protection period in Türkiye. Turkish law links the length of the regulatory data protection with the duration of patent protection. Hence, once a product is considered off-patent, it automatically loses its regulatory data protection.

Concerning judicial **enforcement**, criminal courts rarely order deterrent fines for commercial scale IP infringements, even though legal provisions may provide for higher penalties. Stakeholders continue to report complaints about inefficient litigation procedures, including at courts of appeal. They report difficulties and inconsistencies in deciding preliminary injunctions and monetary compensation claims, storage and destruction problems and financial burdens related to the storage of counterfeit goods, and the overuse of expert witness statements.

Despite strong evidence provided by right holders about counterfeiting, few search and seizure warrants are granted and very few counterfeit goods are seized. Public prosecutors and judges require additional evidence, which is not reasonable to substantiate the claims of the right holders. Obtaining preliminary injunctions also remains difficult and the level of deterrence of the penalties ordered by judicial authorities is reportedly low. Enforcement authorities, in particular the police and judges, need to increase the efficiency of action against IP infringements. The number of IP courts has decreased over the past years in Türkiye, which has a negative effect on the quality and consistency of the court decisions. Action to combat counterfeiting at physical marketplaces remains insufficient. The Law on e-commerce and its implementing regulation introduced new provisions relating to the notice and takedown procedure and clarified the responsibility of e-commerce intermediary and direct service providers in complaints regarding the infringement of intellectual property rights. There has been an increase in online sales of counterfeit goods at well-known e-commerce marketplaces. In this context, and with a view to stopping IPR infringements, it will be important for Türkiye to apply notice and takedown procedures.

The number of customs applications for seizures increased from 2 431 in 2021 to 2 637 in 2022. However, Türkiye needs to improve customs enforcement to combat counterfeit goods, in particular for goods in transit and exports, which makes Türkiye the second major country of provenance by number of counterfeit articles entering the EU, according to the 2022 report on the EU enforcement of IPR. The number of articles coming from Türkiye detained at the EU borders by customs authorities has increased. Counterfeiting concerns a wide range of products from food and alcoholic beverages to vehicles, vehicles accessories and spare parts. The customs enforcement legislation is not fully aligned with the *acquis*.

There are only limited awareness campaigns from public institutions on the dangers of counterfeiting and piracy to public health, consumer safety, rule of law and labour market, and on the economic benefits of IPR-intensive sectors. Stronger political commitment is needed to enforce IPR and to stop the flow of counterfeit trade from Türkiye to the EU.

Chapter 8: Competition policy

EU rules enable free competition. They include antitrust rules against restrictive agreements between companies and the abuse of a dominant position, and also include rules on concentrations between companies which would significantly impede effective competition. EU rules also set out a system of State aid control. Governments are only allowed to grant State aid if strict conditions are met, with a view to prevent distortion competition.

Türkiye has **some level of preparation** in the area of competition policy. **Backsliding** was noted due to serious concerns in relation to the legislative framework, enforcement capacity and transparency in the field of State aid. Institutional framework and the new administrative structure clearly deviate from the EU *acquis*. By repeatedly postponing the creation of a functional enforcement structure, Türkiye's legislative framework is, *de facto*, ineffective. The lack of a transparent State aid inventory covering all aid schemes remains a source of concern.

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

- ensure the independence and functionality of the State aid institutional framework in accordance with the EU *acquis*;
- implement the State aid Law by adopting implementing legislation without further delay;
- make available a transparent and up-to-date inventory of all aid schemes.

Antitrust and mergers

The **legislative framework** is broadly aligned with the EU *acquis*. The Law on the protection of competition broadly reflects Articles 101 and 102 of the Treaty on the Functioning of the European Union (TFEU). Implementing legislation in this field is largely in place. The relevant legislation must still be aligned in order to ensure full compliance with the Vertical Block Exemption Regulation.

In terms of the **institutional framework**, the Turkish Competition Authority (TCA) is responsible for enforcing the Law on the protection of competition. Its decision-making body, the Competition Board, has seven members. Despite being affiliated with the Ministry of Trade, the TCA has administrative and financial autonomy.

The enforcement capacity of the Authority is adequate. In 2022, overall **implementation** was effective and the number of decisions in the areas of antitrust (78 compared with 74 in 2021), exemption/negative clearance decisions (19 compared with 22 in 2021) and merger/acquisition/joint venture/privatisation (245 compared with 309 in 2021) were comparable with those adopted in the previous year. The total amount of fines levied by the Authority for infringements of competition law (fines related to substance) remained at TRY1.7 billion, an average for the previous five years. The total number of ex-officio investigations and preliminary investigations increased from 15 in 2021, to 18 in 2022. In 2022, 80% of the 139 judgements concluded as a result of appeals against the Turkish Competition Authority decisions were upheld by Turkish courts.

State aid

Action taken in 2022 on the **legislative framework** amounted to a backslide. Türkiye's Law on the monitoring and supervision of State aid is broadly in line with Articles 107 and 108 TFEU. However, by repeatedly postponing the creation of a functional enforcement structure, Türkiye has rendered its legislative framework, *de facto*, ineffective.

Following the abolition of the Directorate General for State Aid (DGSA), in 2022, Türkiye established a new DGSA, under the Presidency of Strategy and Budget. However, the new DGSA does not have the same full legal mandate as its predecessor. The decree establishing the new DGSA gives a different definition of State aid than the definition given in Law on the monitoring and supervision of State aid, which was aligned with the EU *acquis*. The President postponed implementation of the law and its implementing legislation indefinitely. As a result, not only the law is not enforceable, but the **institutional framework** and the new administrative structure also clearly deviate from the EU *acquis*. Accordingly, Türkiye still needs to make substantial efforts to align its legislation with the EU *acquis*.

In 2023, the project-based investment programme – where the transfer of State resources is provided on a selective basis (i.e. only to certain undertakings) – included 64 projects with an investment amount of TRY 491 billion (incentives granted since the beginning of 2022, covering 25 projects with an investment of TRY 336 billion). The breakdown of State aid for these investments was not disclosed, contrary to the commitments made under the EU-Turkey Customs Union. The lack of a transparent State aid inventory covering all aid schemes – including the amount or budgeted amount of the State support granted – remains a source of concern.

Liberalisation

State-owned enterprises are subject to competition and State aid rules, however the overall challenges in the area of State aid also apply to state-owned enterprises.

Chapter 9: Financial services

EU rules aim to ensure fair competition among, and the stability of, financial institutions, namely banking, insurance, supplementary pensions, investment services and securities markets. They include rules on authorisation, operation and supervision of these institutions.

Türkiye has a **good level of preparation** in the area of financial services. It made **limited progress** in the reporting period by strengthening the insurance market and developing new alternative financing instruments. However, Türkiye's pre-2023 election approach to apply a set of unorthodox macroprudential and regulatory measures made the operating environment for the banking sector increasingly challenging during the reporting period. The country should make further efforts to align with the financial services *acquis*, focusing on the priorities identified based on the current state of play.

The Commission's recommendations from last year were partially implemented, and therefore remain valid. In the coming year, Türkiye should in particular:

- gradually phase out distortive macro-prudential and regulatory measures and improve the transparency of asset quality review;
- further strengthen bank governance and supervision, crisis management and the resolution framework;
- continue to support the development of Türkiye's capital markets and their supervision.

Regarding **banks and financial conglomerates**, Türkiye is in line with the Basel III framework (but not taking into account the Basel III Finalisation of 2017) according to the

Basel Committee. In October 2022, Türkiye released the 2022-2025 participation finance strategy, with the aim of building a legal, administrative and corporate infrastructure for participation finance.

Overall, the banking sector has remained resilient, with the indicators tracking asset quality improving. The share of non-performing loan ratios continued to fall, down to 1.9% in February 2023. The capital adequacy ratio of the banking sector remained above the legal thresholds, supported by the sector's strong profitability performance. Action is needed to improve the transparency and predictability of the financial sector regulatory framework, including by carefully phasing out distortive regulatory measures and conducting transparent asset quality reviews.

Türkiye made some progress on **insurance and occupational pensions**. In October 2022, the Insurance and Private Pension Regulation and Supervision Agency (SEEDK) published a new regulation laying down the procedures and principles for the collection, storage and sharing of insurance data. Under a new regulation on the state contribution to the private pension system, state contributions can be received in the following years for contributions paid above the annual limit. In November 2022, SEEDK announced its roadmap for traffic insurance aiming at overcoming structural weaknesses in the sector. It mainly plans to switch to person-based insurance and to improve the arbitration process. In June 2023, a possibility of electronic applications was introduced for insurance arbitration system through an online platform. Following the February 2023 earthquakes, SEEDK took several measures to ease the burden of insurers such as extending the maturities of all expired mandatory earthquake insurance policies or removing the penalty for delays to compulsory motor insurance.

As regards **financial market infrastructure**, the Capital Markets Board adopted some amendments to the sale methods and distribution principles applied to initial public offering of shares to protect investors' rights. It also amended the criteria for institutional investors. Portfolio management companies are now considered individual investors and no longer as institutional investors. To raise awareness of sustainability among companies trading in the Borsa Istanbul markets, Türkiye launched futures contracts based on BIST Sustainability 25 Index for trading on the derivatives market in January 2023.

Regarding **securities markets and investment services**, the Borsa Istanbul made some amendments to the regulations on precious metals in August 2022 by expanding the scope of conversion transactions to include all precious metals. As part of the efforts to develop alternative investment instruments, Turkish State mint gold certificates started trading on the commodity market segment of the Borsa Istanbul Equity Market at the end of November 2022.

On **sustainable and digital finance**, Türkiye took a number of steps to accelerate the digital transformation of the banking sector over the last few years. Amendments were made to the remote identification services of banks, mainly allowing legal entities to access these services, and facilitating the use of the system by persons with disabilities. The use of crypto currency and crypto assets directly or indirectly as an instrument of payment is still banned in Türkiye. In February 2022, Türkiye adopted guidelines on green debt instruments, sustainable debt instruments, green lease certificates and sustainable lease certificates. They are based on the Green Bond Principles of the International Capital Markets Association (ICMA) and aim to improve transparency and international comparability of green bonds, sustainable bonds, green sukuk and sustainable sukuk.

Chapter 28: Consumer and health protection

EU rules protect consumers' economic interests and in relation to product safety, dangerous imitations and liability for defective products. The EU also ensures high common standards for tobacco control, blood, tissues, cells and organs, and medicines for human and veterinary use. The EU also has rules for upholding patients' rights in cross-border healthcare and in preparing for and responding to cross-border health threats, including communicable diseases.

Türkiye has a **good level of preparation** on consumer and health protection. **Limited progress** was achieved overall over the reporting period in this chapter. Efforts were made to strengthen its surveillance system for health (security) services and to tackle serious cross-border health threats. However, implementation issues remain regarding consumer protection and enforcement, and consumers continue to face problems in exercising their rights. The capacity of the healthcare system was seriously affected by the February 2023 earthquakes in south-east Türkiye.

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

- strengthen consumer rights enforcement and further improve coordination and cooperation with the consumer movement and with enforcement bodies; increase raising awareness activities and take more measures on infringements in the digital environment and more measures to support vulnerable consumers;
- strengthen its primary healthcare services by providing sufficient resources for public health emergencies risk assessment and risk management at central and provincial levels;
- boost its workforce and administrative capacity to ensure effective multi-sectoral preparedness and response to disasters, within and across the relevant sectors.

Consumer protection

While Türkiye's national legislation remains mostly aligned with the *acquis* on consumer protection in **non-safety-related issues**, with further legislative alignment on consumer arbitration, issues remain in the application of consumer rights. Consumers face problems in exercising their right to choose, and consumer awareness and education remain insufficient. The level of cooperation and coordination between consumer organisations and enforcement bodies remains low. The national consumer information system (TÜBİS) is complex, preventing its widespread usage. Consumer NGOs lack financial and professional support and are unable to participate actively in legal and public decision-making mechanisms. Consumer arbitration committee members remain insufficiently trained and lack a common understanding of the legal issues. Of 602 613 decisions taken by consumer arbitration committees in 2022, 50% were in favour of consumers and 50% against them. Cooperation between out-of-court and court consumer systems is yet to be improved. Alignment with the representative actions Directive is at an early stage and significant work is still needed.

On **safety-related measures**, there is a low level of consumer awareness of the national unsafe products information system. Regular monitoring and more robust regulatory tools are required to combat online sales of counterfeit goods that endanger consumer and public health (*see Chapter 7- Intellectual property law*). Market surveillance of e-commerce remained limited, although the volume of online shopping has increased (*see Chapter 1-Free movement of goods*).

Public health

In the field of public health, while Türkiye was recovering from the impact of COVID-19 pandemic, two earthquakes hit the country in February 2023. The earthquakes had a direct impact on 15 million people, claiming over 50 500 lives and injuring over 120 000 people. Hospitals, family health centres and public health laboratories in the region suffered damage. The earthquakes interrupted the diagnostics chain from health facility to laboratory. Disease surveillance was set up for infections and communicable disease outbreaks, including airborne and waterborne diseases. The capacity of the health system remained insufficient to meet the healthcare needs in the earthquake-affected areas, especially the mental health needs, and psychological and nutrition needs. The COVID-19 pandemic and the February 2023 earthquakes have shown that inter-sectoral linkages and collaboration on emergency prevention, preparedness and response are vital in ensuring public health safety and wellbeing in the aftermath of disasters.

Türkiye's health system faces a growing burden from **non-communicable diseases**, including cardiovascular diseases and cancer. These illnesses have a significant impact on premature mortality. In 2022, Türkiye scaled up its cancer screening activities to 7.3 million scans across the country from 4.4 million in 2021. Of these scans, 2.8 million were for breast cancer, 2.7 million for cervical cancer, and 1.8 million were for colon cancer.

Türkiye made good progress on serious cross-border health threats including **communicable diseases**, especially in workforce development and in building institutional capacity for central and provincial public health professionals. To strengthen the capacity to detect and counter the threats posed by outbreaks of infectious diseases, Türkiye introduced a molecular laboratory-based surveillance component to its national health surveillance system. It prepared acute public health threats guidelines for biological, chemical, environmental and radio nuclear threats at central level and distributed the guidelines to the provincial authorities for implementation.

On **tobacco control**, the actions planned to meet the targets set under Türkiye's 2017-2025 non-communicable diseases action plan to reduce tobacco and salt consumption by 30% are insufficient. Tobacco is consumed by 31% of the Turkish population.

No progress was made regarding **patients' rights in cross-border healthcare**, neither on **drug abuse prevention**. On **blood, tissues, cells and organs**, Türkiye developed a patient blood management software for ensuring quality, safety and effectiveness of transfusion applications.

On **mental health**, Türkiye set up community mental health centres and provided psychological first aid for children as part of the earthquake response., Türkiye's capacity to provide mental health and psychosocial support is not sufficient to meet the needs resulting from the crisis. In earthquake-impacted regions, 20% of people are estimated to have developed a mental health disorder due to earthquake-related traumas, and 5% are experiencing severe long-term mental health problems.

On **health inequalities**, vulnerable groups namely LGBTIQ persons, people living with HIV and sex workers as well as refugees are subject to discrimination and continue to face significant challenges to access healthcare information and services.

CLUSTER 3: COMPETITIVENESS AND INCLUSIVE GROWTH

This cluster covers: digital transformation and media (Chapter 10), taxation (Chapter 16), economic and monetary policy (Chapter 17), social policy and employment (Chapter 19), industrial policy (Chapter 20), science and research (Chapter 25), education and culture (Chapter 26), and Customs Union (Chapter 29).

Türkiye has some level of preparation in the area of digital transformation and media. It continued to backslide as it did not address concerns regarding the lack of sufficient competition, lack of transparency of media funding, concentration of media ownership, political influence on editorial policies, restrictions on the freedom of expression and the lack of independence of regulatory authorities. Türkiye's preparations in the area of science and research are well advanced and Türkiye made good progress during the reporting period, notably as a result of joining Horizon Europe and continued efforts to raise awareness of and capacity for the programme. Türkiye is moderately prepared on education and culture, and continued to make some progress, notably through the continued implementation of the national qualifications system and the increased participation in some EU programmes. Access to education in south-east Türkiye was significantly impacted by the February 2023 earthquakes.

On the economy-related chapters, backsliding continued on economic and monetary policy, where Türkiye has some level of preparation. The Central Bank continued to loosen its unorthodox monetary policy stance, which triggered multi-year high inflation and unhinged inflation expectations. Until the parliamentary and presidential elections in May 2023, the Central Bank was subject to significant political pressure to keep real interest rates deeply negative. Far-reaching prudential and regulatory measures disrupted the functioning of financial markets and increased risks. After the elections, the Central Bank has started to tighten monetary policy and the new government took measures to limit the bulging fiscal deficit. Türkiye is moderately prepared and made limited progress on enterprise and industrial policy. Major challenges in relation to measures incompatible with EU industrial policy principles remain unaddressed. Türkiye has some level of preparation in the area of social policy and employment. The labour market situation improved but concerns remain over trade union rights and effective social dialogue, persistent levels of informal economic activity and the gender gap in employment. The February 2023 earthquakes had a major impact on the labour market in the affected regions.

Türkiye is moderately prepared on taxation. It made no progress during the reporting period and still needs to enable tax information exchange with all EU Member States. Türkiye maintains a good level of preparation for the customs union but made limited progress over the reporting period. Several longstanding and new trade barriers still infringe the basic provisions of the EU-Turkey Customs Union.

Chapter 10: Digital transformation and media

The EU supports the smooth functioning of the internal market for electronic communications, electronic commerce and audiovisual services. The rules protect consumers and support the universal availability of modern services.

Türkiye has **some level of preparation** in this area. **Backsliding** continued during the reporting period. Concerns persist regarding the lack of sufficient competition, the lack of transparency of media funding, the concentration of media ownership, political influence on editorial policies, restrictions on the freedom of expression, and the lack of independence of regulatory authorities.

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

- align the universal service, authorisation arrangements, market access and rights of way in electronic communications with the EU *acquis*;
- strengthen the independence of the regulatory authority and its board members and amend

the Internet Law in line with the Venice Commission's recommendations, with a view to ensuring media pluralism;

→ take steps to strengthen the public broadcaster's independence.

On **electronic communications and information technology**, Türkiye made no progress in aligning its legislation with the *acquis* on market access and universal service. Concerns remain regarding the lack of financial and administrative independence of the regulatory authorities. More transparency in spending is needed. Further regulatory and administrative steps are required to establish a competitive and consumer-friendly market in telecommunications.

Competition on the market for fixed voice communications remains limited. The market share of alternative fixed voice operators was 12.9% in the first quarter of 2023, down from 14.6% in the last quarter of 2022. The lack of sufficient competition on the broadband market remains a concern. The number of fixed broadband subscribers increased to 22.3% in March 2023, against the OECD average of 34.7%. The total number of mobile broadband users was 71 million, which corresponds to a penetration rate of 84.4% of the population at the end of 2022, against the OECD average of 128.2%. The number of LTE subscribers rose to 84 million in the first quarter of 2023 as compared to 82.9 million at the end of 2022.

There was no progress reported in the procurement of 5G. Türkiye still needs to allocate additional frequencies for the development and predictability of the sector. In 2022, 94.1% of households had access to the internet, increasing from 92% the previous year. In the last quarter of 2022, Türkiye published a new Regulation on the electronic seal. The regulation covers the procedures and principles governing electronic seal certificates and the obligations of electronic seal holders, further regulating this area. Türkiye has yet to revise its Data Protection Law to align with the *acquis*.

Regarding the recording of a new unified Cypriot plan below 700 MHz under the Geneva 06 ITU plan, Cyprus is still facing an objection from Türkiye to such recording in International Telecommunications Union (ITU). It is essential that Türkiye's objection in ITU be lifted; the television channels below the 700 MHz band, including those channels that have been agreed to be used by Turkish Cypriots, are still not registered in this ITU Plan, which deprives from the necessary regulatory protection against interferences coming from neighbouring countries, a situation where both Greek and Turkish Cypriots are affected.

The level of enforcement of consumer rights in the telecommunication sector remained very weak. The main focus of consumer complaints included the quality of internet services, subscription services for fixed lines and cable TV services.

Regarding the **information society services**, the number of services offered by the e-Government Gateway reached 7 229. The number of integrated institutions increased to 994. The number of citizens using e-government increased from 57 663 331 in 2021 to 61 743 325 in 2022, and to 63 193 741 by May 2023. In order to ensure better services to citizens and establish a governance structure to enable public administrations from all levels and sectors to co-create and coordinate the exchange of information across network and information systems, Türkiye should seek alignment with both the European Interoperability Framework and the Interoperable Europe Act.

The volume of e-commerce in Türkiye reached TRY 800.7 billion in 2022, increasing 109% compared with the previous year. Following the amendment of the e-commerce Law in July 2022, Türkiye published an implementing regulation on e-commerce service providers and e-commerce intermediary service providers. Some objectives of the revised e-commerce Law

are in line with the Digital Markets Act, such as preventing unfair competition and monopolisation.

On **audiovisual policy**, the mainstream media remains dominated by pro-government voices. According to independent reporting, the government can exert power in the management of 90% of the most-watched TV stations and newspapers. This impedes media independence, pluralism, encourages self-censorship, and limits the scope of public debate. A large share of these companies' revenue stems from state advertising and public tenders. Türkiye aimed at aligning its national legislation regarding audiovisual media services with Directive 2010/13/EU and efforts are underway to align the new rules introduced by Directive 2018/1808 into the national legislation. Yet, the legislation on the rules of radio, television and on-demand media services lacks clarity in terms of its scope, definitions, licencing criteria, and has controversial rules regarding jurisdiction and restricting access to online content.

Between mid-June 2022 and March 2023, the Radio and Television Supreme Council (RTÜK), issued 1 768 penalties to media service providers. 1 405 (nearly 80%) of these penalties were due to infringements of the Law regulating commercial communications. In the same period, Turkish courts imposed 128 broadcasting bans on broadcasters. A pending application by the Turkish Bar Association at the Council of State continues to halt and cancel the execution of a presidential decree, dated January 2022, obliging media entities and institutions to eliminate content that contravenes Turkish values and culture and to take necessary action to prevent its dissemination. The decree risks violating basic rights and freedoms and leading to self-censorship.

Chapter 16: Taxation

EU rules on taxation cover value added tax, excise duties and aspects of corporate taxation. They also cover cooperation between tax administrations, including the exchange of information to prevent tax evasion.

Türkiye is **moderately prepared** on taxation, with **no progress** made over the reporting period. In line with the tax screening process used for the purpose of drawing up the EU list of non-cooperative jurisdictions, Türkiye still needs to activate effective exchange relationships with all EU Member States to enable the automatic exchange of financial account information.

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

- put arrangements in place for the automatic exchange of tax information with EU Member States;
- align the range of excisable energy products with the EU *acquis*;
- continue to combat the informal economy and report on progress transparently through performance indicators.

In the area of **indirect taxation**, Türkiye still has a wide range of products that are subject to a 1% value added tax (VAT), in breach of the EU *acquis*. The accommodation tax, introduced in December 2019, entered into force in 2023. The VAT exemption period for deliveries of new machinery and equipment to the manufacturing industry for innovation, design and R&D activities introduced in 2018, was extended until the end of 2024. Following the February 2023 earthquakes, Türkiye declared a state of *force majeure* in the affected provinces until the end of June 2023. As a result, in addition to the delayed liabilities,

taxpayers were allowed to pay their arrears in 24 instalments. It also reduced the VAT rate applicable to prefabricated buildings and containers for delivery to the regions affected by the earthquakes from 18% to 1% until December 2023. The legislation on structure, exemptions, special schemes and the scope of reduced rates is not fully aligned with the EU *acquis*.

Although the overall level of taxation on cigarettes is close to EU levels, Türkiye's legislation on cigarette excise duties differs from the EU *acquis* in terms of specific and proportional elements of the tax. Excise duties on energy products are lower than the EU minimum rates and coal, coke and electricity are not subject to excise duties, which is not in line with the EU *acquis*. Kerosene is subject to excise duty, but it is zero rated. A 7.5% digital services tax (on digital advertising, content, and intermediary services) has been in force since March 2020.

On **direct taxation**, Türkiye issued a new amnesty on the repatriation of foreign and domestic assets in July 2022, and a new provision on tax restructuring entered into force in March 2023. This means that, since 2016, Türkiye has adopted five tax repatriations and six tax restructuring measures, extending their implementation periods repeatedly. Thus, contrary to the emphasis made in policy papers of the importance of taxpayer voluntary compliance and the priority placed on increasing the predictability of the taxation system declared, tax restructuring and cash repatriation have become established practices. Such uninterrupted periods of capital repatriations and regular tax restructuring practices undermine the effectiveness of the voluntary tax collection mechanism and distort the reliability and predictability of the taxation system.

Türkiye extended implementation of the corporate income tax exemption brought in to promote the FX-protected TRY time deposit account scheme until the end of 2023. Due to the high levels of inflation in 2022, it postponed the inflation accounting (adjustment) practice to the end of 2023. In March 2023, it brought in a one-time additional tax on corporate income taxpayers to compensate for the tax losses incurred as a result of the earthquakes.

Türkiye has exempted the minimum wage from income tax since 2022, including the tax on all wages corresponding to the minimum wage.

On **administrative cooperation and mutual assistance**, Türkiye is still listed in Annex II to the Council Conclusions on the EU list of non-cooperative jurisdictions for tax purposes for criterion 1.1 (automatic exchange of tax information on financial accounts), as it is still not fully in line with the requirements. The OECD Global Forum on Transparency and Exchange of Information for Tax Purposes (Global Forum) decision in November 2022 qualified Türkiye as 'largely compliant' on the exchange of information on request and Türkiye fulfilled the Council Conclusions on criterion 1.2, exchange of tax information on request. In February 2023, the Council concluded that Türkiye should continue the technical work and ensure that tax information is exchanged effectively with all EU Member States to meet criterion 1.1 of the EU list.

To manage its **operational capacity and computerisation**, the Turkish Revenue Administration uses an electronic document management system. The use of e-tax statements, which began in 2004, reached 99.9% of taxpayers by 2022. Türkiye is in the process of developing an integrated public finance management information system. In 2022, it unveiled a new action plan to combat the informal economy (2023-25). However, the new action plan lacks performance indicators and a publicly accessible system to track implementation.

Chapter 17: Economic and monetary policy

EU rules require the independence of central banks and prohibit them from directly financing the public sector. Member States coordinate their economic policies and are subject to fiscal, economic and financial surveillance.

Türkiye has **some level of preparation** on economic and monetary policy. There was **backsliding** during the reporting period, as the Central Bank continued to loosen its unorthodox monetary policy stance, which triggered multi-year high inflation and unhinged inflation expectations. Until the parliamentary and presidential elections in May 2023, the Central Bank was subject to significant political pressure to keep real interest rates deeply negative. Far-reaching prudential and regulatory measures disrupted the functioning of financial markets and increased risks. After the elections, the new government has started a process of policy normalisation, gradually removing some of these measures and tightening the monetary and fiscal policy stance. In 2022, Türkiye made efforts in sending fiscal notifications.

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

- restore the functional independence of the Central Bank and implement an appropriately tight monetary policy stance, reinstalling interest rates as the key monetary policy tool, with a focus on price stability and re-anchoring inflation expectations;
- continue to gradually unwind the most disruptive regulatory measures under a transparent monetary policy framework, and underpinned by consistent communication;
- further align fiscal reporting and notifications under the excessive deficit procedure (EDP), as well as government finance statistics (GFS) reporting, with ESA 2010, by gradually expanding data coverage and quality.

On **monetary policy**, over the last decade the Central Bank drifted away from the official inflation target of 5% that it set jointly with the government. Concerns over the Central Bank independence persist. The President of the Republic has extensive powers to appoint and dismiss the Central Bank Governor and Board members and has made repeated public comments about the need to lower interest rates. The monetary policy framework proved to be inefficient in anchoring inflation expectations, strengthening the lira and restoring market confidence. According to the Law on the Central Bank, monetary financing of the public sector is prohibited, and the public sector cannot have privileged access to financial institutions.

Inflation reached a peak of 85.5% on an annual basis in October 2022, before falling gradually to 38.2% in June 2023 on the back of a strong base effect. Inflation rebounded again in the following months driven by renewed depreciation of the lira and sizeable tax increases that needed to curb the mounting budget deficit. Reducing interest rates and keeping them very low was the announced policy ‘anchor’ until the summer, which required wide-ranging and disruptive macroprudential and regulatory measures to reduce its fundamental contradictions in a context of high inflation. The Central Bank kept the real interest rate deeply negative, despite soaring inflation and global tightening of financial conditions. It lowered its key policy rate by 500 basis points from 14% to 9% between August and November 2022, and by an additional 50 basis points, down to 8.5% in February 2023 in the aftermath of the February 2023 earthquakes. After the presidential and parliamentary elections in May, and under a new governor, the Central Bank has started a policy normalisation, raising its key rate to 25% in August and launching a process of a

gradual unwinding of some of the macroprudential and regulatory measures. The costs of the FX- and gold-protected time lira deposit scheme has been fully transferred to the Central Bank and are not yet publicly disclosed.

Meanwhile on **economic policy**, Türkiye consolidated the medium-term fiscal plan with the medium-term programme for 2023-2025 set out in a single document. A more credible economic plan, based on more updated assumptions and fully reflecting all fiscally relevant measures, has not been developed before September 2023. Türkiye could improve the credibility of its macroeconomic forecasts by providing alternative scenarios. Türkiye is still not aligned with the Directive on Requirements for Budgetary Frameworks and lacks numerical fiscal rules and an independent fiscal body to monitor compliance with these rules. The excessive deficit procedure (EDP) notification tables for 2021 and 2022, with the latest one received in April 2023, were largely complete. However, further progress is needed on the coverage and quality of EDP notifications and government finance statistics reporting.

Türkiye submitted its 2023-2025 **Economic Reform Programme** (ERP) on time. However, it did not consult external stakeholders on the document and did not publicly present it before adoption. Further efforts are needed to boost the institutional capacity needed to design, implement and monitor structural reforms. The ERP included measures to nurture competitiveness, tackle the green transition and strengthen digital transformation. However, the analysis of structural challenges is incomplete and some of the measures fall short of addressing the core problems in these areas. Implementation of the policy guidance set out in the conclusions of the Economic and Financial Dialogue of May 2022 has been limited, with a lower rate of implementation than in the previous year.

Chapter 19: Social policy and employment

EU rules in the social field include minimum standards for labour law, equality, health and safety at work and non-discrimination. They also promote social inclusion and social protection, and social dialogue at European level.

Türkiye has **some level of preparation** on social policy and employment. It made **no progress** over the reporting period. The labour market situation improved, but concerns remain over trade union rights and effective social dialogue, persistent levels of informal economic activity, and the gender gap in employment. The February 2023 earthquakes had a major impact on the labour market in the affected regions.

The Commission's recommendations from last year were met only to a very limited degree, and therefore remain valid. In the coming year, Türkiye should in particular:

- remove obstacles limiting the exercise of trade union rights and use social dialogue mechanisms effectively;
- tackle emerging challenges in health and safety at work, particularly in relation to fatal incidents in the construction and mining sectors, as well as plastic waste recycling;
- increase the employment rate of women by adopting effective active labour market and work-life balance policies.

Türkiye made no progress on **labour law**. A number of workers in agriculture, forestry and domestic services, as well as apprentices, remain exempt from several protective clauses of the labour law. Although unregistered employment fell to 26.8% in 2022, its high level hampers worker's access to effective minimum wage protection and other labour rights and social protection. Digital labour platforms need to be regulated to ensure that platform workers can fully exercise their right to labour law protection. Capacity-building efforts to

tackle child labour continued at national and local levels. Nevertheless, child labour practices that breach international standards persisted, affecting adolescents and migrant boys in particular. Türkiye lacks adequate data on child labour that would provide the evidence needed to tackle the root causes of the problem. Regulatory frameworks for emerging jobs, such as platform workers, need to be strengthened.

In the area of **health and safety at work**, despite some alignment there are several implementation challenges, in particular as regards to enforcement and labour inspection resources. The government continued workplace inspections and awareness-raising efforts to improve health and safety at work, in high-risk sectors in particular. Workplace inspections slightly increased to 26 434 in 2022 (up from 24 099 in 2021), conducted by the Directorate of Guidance and Inspection of the Ministry of Labour and Social Security. Yet, the number of fatal workplace incidents continued to rise. According to the latest available official data, in 2021, 1 394 people lost their lives at work, increasing from 1 240 the previous year. The informal economy remains a major risk factor as many workplace accidents took place in sectors where undeclared work is common. Asbestos, dust, and construction-specific risks for employees need to be accounted for in rubble-removal and reconstruction efforts in the earthquake-affected regions. Plastic recycling facilities in Istanbul and Adana pose long-term health threats for workers and surrounding residents. Observance to occupational safety and health standards should be supervised.

There was no progress on **social dialogue**. Türkiye does not have a functioning economic and social council, and the existing tripartite social dialogue mechanisms are very limited in scope. The unionisation rate was 14.42% for private-sector employees and 72.63% for civil servants. In the private sector, serious impediments to unionisation persist, including lengthy legal appeal procedures suspending bargaining certification of trade unions. The government continued imposing *de facto* bans on strikes in non-essential services. Adequate protection in line with International Labour Organisation conventions needs to be provided against anti-union dismissals and discrimination. Türkiye has yet to recognise the right to strike for civil servants, and collective agreements need to have wider material scope beyond social and financial rights.

On **employment policy**, the labour market situation in Türkiye has improved. The employment rate (15+) was 47.5% in 2022, compared with 45.2% the previous year. The unemployment rate (15+) fell from 12% in 2021 to 10.4% in 2022. The composite measure of labour underutilisation fell from 24.4% in 2021 to 21.3% in 2022. Despite a 2.3 percentage point increase, the labour force participation rate of women (15+) remained low at 35.1%. The youth unemployment rate (15-24) continued to fall from 22.6% in 2021 to 19.4% in 2022. Female youth unemployment fell from 28.7% to 25.2%. The rate of unemployed young people aged 15-24 neither in employment nor in education or training fell slightly from 24.7% in 2021 to 24.2% in 2022, yet it remained particularly high for women (32.3%). Adult learning (25-64) was at 5.8% in 2020.

The number of job and vocational counsellors in the Turkish Employment Agency (ISKUR) remained around the same level at 4 734, against 4 755 in 2021. The number of people registered in active labour market programmes fell significantly by 65%. At the same time, the number of vocational training courses on offer fell sharply from 5 027 to 514, and the number of on-the-job training courses from 93 840 to 40 332 in 2022. The vocational training courses previously available for vulnerable groups were discontinued in 2022. Türkiye should reverse the trend and invest in more re- and upskilling of its labour force through targeted active labour market policies. The number of people, not in employment, education or

training, under the new counselling model initiated by ISKUR, increased to 100 150 in 2022, up from 80 730 in 2021.

The informal economy continues to undermine the social security and welfare systems, and one of the most affected groups are the Roma community. Efforts to grant Syrian migrants access to the formal labour market continued. This remains low, given the large working age population of Syrian migrants.

Due to loss of life, injury, workplace damage, and internal displacements, the February 2023 earthquakes had a major impact on the labour market in the affected regions. Türkiye authorised the swift execution of payments under short-term work allowances, and people who were not entitled to this payment received wage support in cash. The government also declared an employee dismissal ban in the earthquake zone.

For the **European Social Fund**, Türkiye maintained a good level of preparation. The Ministry of Labour and Social Security continued to manage an operational programme under IPA II, covering areas of employment, education and social inclusion. (*Concerning the effectiveness of management of IPA funds, refer to Chapter 22 - Regional policy and coordination of structural instruments*).

On **social inclusion and protection**, Türkiye still lacks a dedicated poverty reduction strategy. Sustained price increases further posed the risk of poverty for the unemployed and wage labourers in precarious jobs. The poverty rate reached 14.4%, up from 13.8% in 2021. The severe-material-deprivation rate reached 28.4% in 2022 (2021: 27.2%). The child poverty rate for 2022 was particularly high at 41.6%. In 2022, social assistance payments amounted to TRY 151.9 billion, or 1.01% of GDP. Türkiye has fragmented benefits at local and national level, and it still lacks a general minimum income scheme. It has adopted a national strategy on Roma (2023-2030), including measures on employment and social protection.

Türkiye needs to step up efforts to **de-institutionalise care** and move towards community and family-based care services.

Türkiye lacks a strategy for **non-discrimination in employment and social policy**. There is still no ban under Turkish law on discrimination on the grounds of sexual orientation. The effectiveness of the Human Rights and Equality Institution and the Ombudsman in combating workplace discrimination is limited. Clear rules of conduct are needed for public-sector recruitment, as are appropriate remedies for victims of discrimination. The adopted 2023-2025 action plan on the rights of persons with disabilities includes measures on non-discrimination, such as legal sanctions and soft measures as the revision of the legal framework. When accessing employment however, legislation and practices that discriminate against persons with disabilities persist. This includes the law on judges and prosecutors that prohibits the appointment of physically disabled candidates. The principle of reasonable accommodation should be promoted among employers by providing both financial and non-financial incentives.

On **equality between women and men** in employment and social policy, the gender gap remained very high, despite improvements on the labour market. Legislative work is needed to achieve full alignment with the EU Directive on work-life balance for parents and carers. Beyond big urban centres, access to quality and affordable formal care services and early childhood education is rudimentary in Türkiye (*see Chapter 26 – Education and culture*). The barriers that women still face in accessing employment include the lack of childcare facilities, gender bias in caring responsibilities, and discriminatory stereotypes. Further action is needed to prevent harassment and violence at work, including data collection and awareness raising.

The share of women in decision-making positions remained very limited (*see Chapter 23 - Judiciary and fundamental rights*). Despite the increase from 17.3% in 2022, following the 2023 elections, the representation of women in parliament remains low at 20.1%; 600 members of parliament comprise of 481 men and 121 women.

Chapter 20: Enterprise and industrial policy

EU industrial policy strengthens competitiveness, facilitates structural change and encourages a business-friendly environment that stimulates small and medium-sized enterprises (SMEs).

Türkiye is **moderately prepared** on enterprise and industrial policy. It made **limited progress** over the reporting period with phasing out of discriminatory treatment of certain EU products. However, concerns persist that the public procurement practices are incompatible with EU industrial policy principles. There are also concerns over the lack of transparency in State aid for large investments, the large informal economy, the long-term financing needs of small and medium-sized enterprises (SMEs), and the insufficient legal framework for microfinance.

The Commission's recommendations from last year were only partially implemented, and therefore remain valid. In the coming year, Türkiye should in particular:

- remove schemes, such as local content requirements and public procurement price premiums that are incompatible with industrial policy principles and substitute them with measures that encourage innovation effectively;
- publish the results of implementation of the industry strategy from 2019 to 2021 as well as the amounts distributed under the industry support programme;
- continue conducting assessments on the impact of the SME support framework and identify any gaps and overlaps.

On **enterprise and industrial policy principles**, Türkiye maintained the scope of the 15% domestic price advantage in public procurement and made it compulsory for medium and high-tech industrial products. In 2022, the percentage of international tenders using the domestic price advantage increased to 43% (*see Chapter 5 – Public procurement*). Türkiye adopted a national technology entrepreneurship strategy (2022-2025) in October 2022, aiming to stimulate competitive technology entrepreneurship and to strengthen the ecosystem. A policy tool under the strategy allows the use of public procurement to develop techno-entrepreneurship, including models enabling direct procurement. While Türkiye adopted several measures to adjust the localisation and prioritisation schemes for pharmaceuticals, the EU's assessment on whether Türkiye has completed the implementation of all findings in the Arbitrators' Award is ongoing. In January 2023, the new Turkish legislation entered into force, phasing out the discriminatory treatment of EU agricultural and forestry tractors in terms of engine emission requirements.

Türkiye has yet to publish the results of performance indicators tracking the industrial strategy adopted in 2019. In December 2022, Türkiye adopted a new action plan and strategy to combat the informal economy (2023-2025). As in previous versions, this new strategy lacks performance indicators. In July 2022, Türkiye established a Coordination Board on Sustainable Development to monitor and coordinate the work on aligning with the UN sustainable development goals. Türkiye continued to successfully implement the Small Business Act framework.

On **enterprise and industrial policy instruments**, Turkish legislation is still not fully

harmonised with the Late Payment Directive. Türkiye continued to implement various schemes supporting companies, particularly small and medium-sized. It granted incentives, subsidies, and amnesties on public liabilities to companies in earthquake-affected regions. However, support for innovation eco-systems is fragmented across numerous programmes. Smart specialisation strategies were formulated in some regions, but limited information is available on how these strategies will be implemented.

The SME support administration (KOSGEB) continued to run a range of technical assistance and financing schemes. In total, nine evaluation reports are publicly available on KOSGEB's website. As of March 2023, 98 technology development zones were in place; 82 were operational. 1 627 patents were obtained from 51 085 completed projects in these zones (compared with 1 511 patents obtained from 47 456 completed projects in 2021).

On policy instrument, Türkiye signed the Single Market Programme Association Agreement in March 2023, and completed the national ratification procedures necessary for the entry into force. Türkiye is participating in the SME pillar of this programme. There were no **sectoral policy** changes adopted. Türkiye's 11th development plan, along with the complementary industry and technology strategy, focus on technological transformation of manufacturing at all levels, and follow a sectoral prioritisation approach. Under the technology-focused industrial movement programme and under the project-based investment support programme, Türkiye intends to support investments in strategically chosen sectors such as machinery, computers, electronics, optics, electrical hardware, pharmaceuticals, chemistry, and transport vehicles. In 2023, a total of 64 projects received support with an investment of TRY 491 billion under the project-based investment support programme (*see Chapter 8 – Competition policy*). The breakdown of State aid for these investments was not disclosed, contrary to the commitments made under the EU-Turkey Customs Union. For the last three tenders, the overall financial amounts were not disclosed on the relevant Ministry's website.

Chapter 25: Science and research

The EU provides significant support for research and innovation. All Member States can benefit from the EU's research and innovation programmes and benefit from them, especially where there is scientific excellence and solid investment in research and innovation.

Overall, Türkiye's preparation in the area of science and research is **well advanced**. It made **good progress** during the reporting period, notably linked to Türkiye's participation in Horizon Europe and continued action to raise awareness of and capacity for the programme. There is good, active and expanding cooperation between the EU and Türkiye on research and innovation.

In the coming year, Türkiye should in particular:

- continue its efforts to align its national research area (TARAL) with the new European Research Area;
- step up efforts to increase innovation to remedy the continued fall down the rankings in the European Innovation Scoreboard.

On **research and innovation policy**, in March 2023, the Turkish Statistical Institute revised the calculation method for R&D expenditure and provided updated data in line with the Frascati Manual guidance: the share of R&D expenditure in GDP rose slightly to 1.4% in 2021 from 1.37% in 2020. The total number of full-time equivalent R&D personnel increased by 11%, from 199 371 in 2020 to 221 811 in 2021, but the share of female personnel in research remained at 32%. Türkiye came closer to the commitment made in its industry and

technology strategy to increase national R&D expenditure and personnel to 1.8% and to 300 000 respectively by 2023. However, a wide gap remains between R&D expenditure in Türkiye and the EU-27 average (2.26% in 2021).

According to the 2023 European Innovation Scoreboard, Türkiye remains an Emerging Innovator, performing at 47.6% of the EU average. Türkiye's performance is below average of the Emerging Innovators (54.0%) and the performance it achieved in 2022 (47.7%). The gap between Türkiye's performance and the EU average is widening. According to the Scoreboard, Türkiye has strengths in knowledge-intensive services, as well as in government support for R&D conducted by businesses. However, Türkiye does not yet provide data on some relevant indicators, such as "Venture capital expenditures" and "Air emissions by fine particulate matter". Providing the full set of indicators might help raise Türkiye's overall performance in the European Innovation Scoreboard.

On the policy side, Türkiye updated the study entitled Priority Research, Development and Innovation (RDI) Areas for 2022 and 2023. With a focus on green and digital technologies, in line with EU priorities, the updated study has three main pillars: RDI topics in priority and key technologies, RDI topics for compliance with the EU Green Deal and adaptation to climate change, and strategic and needs-oriented RDI topics.

Support measures focus both on developing the innovation ecosystem and on building the innovation capacity of enterprises. However, support continues to focus on regions with more mature innovation systems, which widens the gap between urban hubs and less developed regions in Türkiye.

Türkiye's action plan to boost the national research and innovation capacity and awareness on **Horizon Europe** contributes to the positive trend of Türkiye's performance in the programme. Türkiye has improved its performance in recent years, practically doubling the average yearly amounts at the end of Horizon 2020 and doubling again over the first years of Horizon Europe. Cooperation on the EU Missions is promising, particularly in the context of climate-neutral and smart cities' mission. Istanbul and Izmir were selected among 100 cities interested in becoming climate neutral by 2030.

Türkiye is in the process of implementing the 2019 national European Research Area (ERA) roadmap, which needs to be updated. Türkiye has yet to actively engage in a set of European Research Area priorities. Türkiye's participation in the activities of the European Institute of Innovation and Technology (EIT) is satisfactory.

There is good and active cooperation between the EU and Türkiye on research and innovation. A High-Level Dialogue on Science, Technology and Innovation took place in autumn 2022. It underlined the shared ambition to design and deploy cutting-edge technologies and to transform the research and innovation outputs into green and sustainable industrial products.

Chapter 26: Education and culture

The EU supports cooperation in education and culture through funding programmes and the coordination of Member State policy through the 'open method of coordination'. The EU and the Member States must also prevent discrimination and ensure quality education for children of migrant workers, including those from disadvantaged backgrounds.

Türkiye is **moderately** prepared on education and culture. There was **some progress** in the reporting period, notably through the continued implementation of the national qualifications system and the increased participation in some EU programmes. On cultural policy, Türkiye took some steps to implement the UNESCO Convention on the Protection and Promotion of

the Diversity of Cultural Expressions. Türkiye does not have a national youth strategy nor an officially recognised national youth council. The February 2023 earthquake seriously disrupted the education system in the affected areas.

The Commission's recommendations from last year were only partially met, and therefore remain valid. In the coming year, Türkiye should in particular:

- further improve inclusive education, with a particular focus on girls and children from disadvantaged groups and closely monitor and continue work to reduce the proportion of school dropouts;
- ensure the good functioning of the Turkish Qualifications Framework and Turkish Higher Education Quality Council;
- take further steps to implement the 2005 UNESCO Convention on the Protection and Promotion of the Diversity of Cultural Expressions.

On education, access to early childhood education (ECE) in Türkiye varies by age group and region. The net enrolment rate for preschool education (age 5) increased from 56.89% in 2020-2021 to 81.63% in 2022, and the combined enrolment rate for children aged 3-5 increased from 28.35% to 44.05%. In 2019-2020, before the COVID-19 pandemic, the rate for preschool education (age 5) was 71.22%, and the combined rate for children aged 3-5 was 41.78%. The need to expand flexible and community-based ECE models, set targets and strategies to include vulnerable children, and guarantee effective and free access to and the quality of ECE services remains a valid recommendation for Türkiye.

The net enrolment rate in primary school fell slightly from 93.23% in 2021 to 93.16% in 2022, and increased slightly in lower secondary school from 88.85% to 89.84%. In secondary education, the net enrolment rate continued to increase from 87.93% to 89.67%. A slight increase in the enrolment rates of higher education was registered from 44.41% in 2021 to 44.66% in 2022.

Although Türkiye increased the duration of compulsory education for children to 12 years in 2012, the level of non-attendance at the upper secondary level (grades 9-12) remains significant, though varying from province to province.

Regarding students in special education, the enrolment rate increased from 425 816 in 2021 to 472 686 in 2022. Given public investments in recent years, a large majority of children with special needs (75%) receive inclusive education in mainstream classrooms. However, nearly 50 000 children with special needs still study in separate classrooms, and more than 50 000 are in separate schools. Reliable data is needed on the educational achievements of boys and girls with disabilities as well as on school attendance rates.

The February 2023 earthquakes seriously disrupted the education system in the affected areas. Türkiye has made large investments to improve its digital learning platform called Education Information Network, to reduce the impact of emergencies (e.g. pandemic, earthquake, refugee crisis) on children's learning and to increase preparedness for future shocks.

Türkiye remains advanced in its implementation of the Bologna process, though notable disparities remain in the quality of Türkiye's 208 higher education institutions. In March 2023, the European Quality Assurance Register for Higher Education (EQAR) approved the Turkish Higher Education Quality Council's registration based on compliance with the Standards and Guidelines for Quality Assurance in the European Higher Education Area (ESG). Türkiye is also actively participating in 7 European Education Area (EEA) working

groups, which foster European collaboration on education and prepare youth for the green and digital transitions.

On **technical and vocational education and training (TVET)**, Türkiye continues to implement the National Vocational Qualifications System (NVQS) by the Vocational Qualifications Authority (VQA). As of June 2023, the number of national occupational standards published in the Official Gazette reached 901 (893 in June 2022), and the number of qualifications approved was 648 (up from 586 in June 2022). During the reporting period, the number of authorised certification bodies in Türkiye increased to 277 from 272, and the number of VQA vocational qualification certificates issued for individuals through exams and skills tests run by the certification bodies increased to 2 507 663 from 2 253 424.

Although the Turkish Qualifications Framework (TQF) is operational in Türkiye, the vocational training provided by vocational education and training institutions remains incompatible with the needs of national qualification (NQ) candidates. This is due to candidates falling short of demonstrating full competence, seeking to obtain a higher qualification, or moving horizontally/vertically between qualifications in the related occupation. To improve the functioning of the TQF, in addition to the existing vocational education and training institutions, continuous education centres of universities should prepare modular vocational training courses for specific occupation levels that are in line with the expected NQ learning outcomes and in cooperation with the authorised certification bodies.

Since 30% of the minimum wage payment to students of the vocational training centres was introduced in December 2021, the number of students in centres has increased from 159 000 in 2021 to 1 200 000 in 2022. Despite considerable progress in this area, the credibility of the NVQS remains a serious challenge in VET implementation in Türkiye. It is essential to closely align the quality and validity of vocational education and training provided by companies with the requirements of the associated national qualifications and with the occupational standards on which they are based. The accreditation of national qualifications education and training providers and the programmes they deliver is crucial to the successful functioning of the NVQS and TQF in Türkiye.

On **education, training and youth**, Türkiye continues to participate in EU programmes. For Erasmus+ and the European Solidarity Corps, the number of contracted projects increased from 918 in 2021 to 1075 in 2022, with an overall budget of EUR 225 million. The number of participants who carried out a mobility activity (from and to Türkiye) within both programmes, exceeds 239 000. Regarding the European Solidarity Corps programme, the number of awarded applications remained constant at 184 in both 2021 and 2022, with a total budget of over EUR 5 million.

On **culture**, the freedom of cultural expression is still restricted in Türkiye. The authorities continue to censor, confiscate, restrict distribution, or reclaim funding for books and films based on allegations of ‘harmful and obscene contents’, ‘terror propaganda’, or ‘scenario change’. The ban on live music at night, imposed during the COVID-19 pandemic, remains in place. Music events and festivals are cancelled at the discretion of governors, district governors, or mayors, citing security and public morality concerns (*see also political criteria*). The February 2023 earthquakes caused damage to Türkiye's cultural heritage in the affected regions. The Ministry of Culture and Tourism reported that more than 8 500 registered cultural assets in 10 provinces have been affected by the disaster. Action plans to salvage cultural assets were prepared. The restoration and conservation of damaged cultural properties has commenced.

To implement the UNESCO Convention on the Protection and Promotion of the Diversity of Cultural Expressions, Türkiye's cultural industries platform is operational. The platform, set up by the Ministry of Culture and Tourism, is a forum to share opinions, statistics and data, where civil society organisations, public or private-sector entities, can inform users about events or activities planned in support of cultural industries. The Cultural Industries Support and Incentives Guide was updated in 2023, listing support and incentive mechanisms of public institutions for cultural and creativity-intensive industries.

Türkiye's participation in the EU's Creative Europe programme is not yet finalised. Türkiye is seeking to re-join parts of the programme, having left it in 2017.

Regarding **youth**, Türkiye still lacks a national youth strategy and an officially recognised national youth council. The number of youth centres increased from 388 in 2021 to 451 (June 2023) located in 81 provinces of Türkiye. More than 850 000 higher education students, including foreign students, are living in 800 student dormitories located all over the country. 1.5 million higher education students, including students receiving education abroad, receive an education credit or a state scholarship.

There are 64 **sports** federations in Türkiye. The revenue of sports federations flows from participation shares, registration fees, sponsorship, advertisement, donations and similar incomes.

Chapter 29: Customs Union

All Member States are part of the EU customs union and follow the same customs rules and procedures. This requires legislative alignment as well as adequate implementation and enforcement capacity, and access to the common computerised customs systems.

Türkiye maintains a **good level of preparation** for the Customs Union. It made **limited progress** in the reporting period.

Several longstanding and new trade barriers still infringe the basic provisions of the EU-Turkey Customs Union. Duty relief, free zones and surveillance measures are not fully aligned with the EU *acquis*, again in clear contradiction with Türkiye's obligations under the Customs Union.

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

- step up efforts to fully align new legislation with the EU Customs Code;
- bring risk-based controls and simplified procedures in line with the EU *acquis*;
- fully eliminate import and export restrictions as well as additional duties on goods in free circulation in the EU-Turkey Customs Union.

Türkiye made limited progress on **customs legislation**. Türkiye lifted some additional duties applied on imports of a long list of products originating in third countries, which are in free circulation in the EU or imported from third countries. However, the scope was not significantly narrowed as new additional duties were introduced in parallel.

Turkish customs authorities started to systematically request subsequent verifications of movement certificates and certificates of origin documents for textiles and materials used in the production of textiles and to require financial guarantees to release the goods in certain cases pending the result of the post-verification.

Türkiye's implementation of value-based import surveillance measures and the lack of a legal remedy to recover overpaid amounts are neither aligned with the EU *acquis* nor compatible with transparent, objective and verifiable customs valuation procedures. Turkish authorities are continuing to implement export tax measures on hides, skins and wet-blue leathers and an export licencing regime on copper scrap. New export registrations were put in place on a number of products, in particular feldspar and clays and were often applied in an opaque and discretionary manner.

Turkish Customs Law needs to be fully harmonised with the EU Customs Code, including implementation of risk-based controls and simplified procedures to facilitate legitimate trade while ensuring security and safety. The designation of specialised customs offices is not compatible with the provisions of the Customs Union. Rules on free zones and duty relief are yet to be aligned with the EU *acquis*.

On **administrative and operational capacity**, efforts continued to strengthen customs enforcement capacity for border controls. Yet, more work is needed to align the Law on the customs enforcement of intellectual property rights and in particular on export and in-transit operations. Risk-based controls to enforce safety and security measures need to be improved and brought in line with Customs Union provisions. Türkiye implements the computerised transit system as part of its membership in the Convention on a Common Transit Procedure. However, it has not yet put in place tariff IT systems. It needs to implement the IT strategy in line with business initiatives and update the documented customs business processes in line with the legal basis.

CLUSTER 4: THE GREEN AGENDA AND SUSTAINABLE CONNECTIVITY

This cluster covers: transport policy (Chapter 14), energy (Chapter 15), trans-European networks (Chapter 21) and environment and climate change (Chapter 27).

Türkiye is moderately prepared in transport policy. It made limited progress during the reporting period, mainly linked to the update of the nationally determined contribution under the Paris Agreement with a specific chapter on transport mitigation policies. Türkiye is moderately prepared in the area of energy, and made limited progress overall. It increased its energy dependence on Russia. Progress continued on renewable energy deployment, reforms in the natural gas sector and legislative alignment on nuclear safety. Türkiye is well advanced on trans-European networks and made no progress. The trans-Anatolian pipeline continues to operate smoothly and transmit gas to the European section of the Southern Gas Corridor. The construction of the flagship Halkali-Kapıkule railway line connecting the EU border to Istanbul continued.

Türkiye has some level of preparation in the area of environment and climate change and made limited progress over the reporting period. Türkiye submitted its updated nationally determined contribution under the Paris Agreement. It faces critical environmental and climate challenges, and needs more ambitious and better coordinated environment and climate policies, strategic planning, substantial investment and stronger administrative capacity.

Chapter 14: Transport policy

The EU has common rules for technical and safety standards, security, social standards, State aid and market liberalisation in road transport, railways, inland waterways, combined transport, aviation and maritime transport.

Türkiye is **moderately prepared** in transport policy. It made **limited progress** in the reporting period. Türkiye published its first updated Nationally Determined Contribution (NDC), under the Paris Agreement with a specific chapter on transport mitigation policies. The number of cities implementing sustainable urban mobility plans (SUMP) increased. The new railway framework law has not yet been adopted and the reform of the incumbent railway operator has not progressed.

The Commission's recommendations from last year were only partially met, and therefore remain valid. In the coming year, Türkiye should in particular:

- consider charting project-led pathways to achieve its net-zero targets for the decarbonisation of the transport sector;
- prioritise disaster resilience of urban mobility in Turkish cities and include disaster aspects as a part of the evolving SUMP;
- improve policy dialogue and increase institutional coordination between local and central authorities on sustainable urban mobility.

Regarding **general transport**, Türkiye published its first updated nationally determined contribution (NDC), under the Paris Agreement with a specific chapter on transport mitigation policies. The number of cities implementing sustainable urban mobility plans (SUMP) increased. The preparation of Türkiye's online electronic legislation inventory tool, which will digitally track Türkiye's transport legislation in English to create a continuous monitoring system with the EU *acquis*, reached its final stage. Regarding sustainable urban mobility, policy guidance and better institutional coordination between local and central bodies still need to be improved.

On **road transport**, the legal framework has a good level of alignment with the EU *acquis*. Limited progress was made during the reporting period. Türksat, the communications satellite operator of Türkiye, advanced work to create a user portal to provide access to best practices on the intelligent transport services, which is compatible with the EU. The Director General for Communications was appointed as the national access point for Intelligent Transport Systems (ITS) issues. Institutional capacity remains insufficient to meet Türkiye's national ITS targets. No progress was made on the smart tachographs transition for road transport. The implementing legislation on the transport of dangerous goods by road entered into force in June 2022. In the area of road safety, the number of road fatalities remains well above the EU average and continuous efforts are needed in the implementation of the road safety strategy.

Türkiye is moderately prepared in the field of **rail transport** and made no further progress during the reporting period. The comprehensive railway framework Law was not adopted and Türkiye is not aligned with the EU's fourth railway package. A draft law aiming to align with the Directive on Railway Interoperability reached its final stage of preparation. The independence of the National Safety Authority, currently assigned to the DG for Railway Transport Services, has yet to be achieved. The subsidies to the incumbent railway operator and the financial independence of transport operator from the infrastructure manager remain major issues.

Türkiye achieved a good level of preparation in aligning with the EU *acquis* in the field of **maritime transport**. Some progress was made during the reporting period. Türkiye issued a new regulation to support the shifting of freight from road to maritime services. According to a new regulation adopted in August 2022, Türkiye will provide USD 2 per nautical mile to roll-on/roll-off operators to open new ro-ro lines. To this end, a new line was opened from Izmir to Sète. Türkiye's efforts on maritime decarbonisation and green shipping continued

through the renewal of the maritime fleet with energy-efficient and more environmentally friendly ships. The switch to alternative fuels like green hydrogen and green methanol is planned under the scope of government incentives. A national legislation implementing the EU Port Services Regulation is yet to be developed.

Türkiye's legislation on **inland waterways** is not yet aligned with the EU *acquis*. Türkiye has limited inland waterways and it has not signed the main international agreements on this issue.

Türkiye is moderately prepared in the field of **aviation**. It made some progress during the reporting period. Discussions started on the renewal of the working arrangements between Türkiye and the European Union Aviation Safety Agency. The regulations on training organisations, continuous air worthiness management and maintenance personnel licencing were updated to further align with the EU *acquis*. Türkiye adopted the regulation on CORSIA requirements for carbon off-setting and implementation. The regulation on accreditation of institutions carrying out monitoring, reporting and verification services entered into force.

The lack of adequate communication between air traffic control centres in Türkiye and Cyprus continued to compromise air safety in the Nicosia flight information region, requiring an operational solution. Türkiye continues to refuse to accept the principle of EU carrier designation in its air services agreements with Member States, which is a cornerstone of the EU internal market in aviation.

There was limited progress on **combined transport**. The by-law on combined freight transport was published in May 2022.

Regarding **EU passenger rights**, further efforts are needed to align in all modes of transport.

As long as restrictions remain in place on vessels and aircrafts registered in Cyprus, related to Cyprus, or whose last port of call was Cyprus, Türkiye will not be in a position to fully implement the EU *acquis* relating to this chapter.

Chapter 15: Energy

EU energy policy covers energy supply, infrastructure, the internal energy market, consumers, renewable energy, energy efficiency, nuclear energy, nuclear safety, radiation protection and nuclear safeguards.

Türkiye is **moderately prepared** in the area of energy. **Limited progress** was achieved during the reporting period. Overall, energy dependency on Russia has increased; Türkiye reduced gas imports from Russia but it increased imports in oil and coal and inaugurated a new nuclear power plant built and operated by Russia. While the rollout of renewable energy continued at good pace, local content requirement practices in the sector remained in place. Türkiye made some legislative changes related to the natural gas market, but the reformative effect of these changes is contradictory. Türkiye made efforts in the legislative alignment of nuclear safety regulations.

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

- deepen natural gas market reform by setting up a legally binding plan and a timetable for unbundling activities and by updating the natural gas market Law to ensure it is compatible with the EU's third energy package;
- complete the legislative alignment on nuclear safety and stress tests on the Akkuyu nuclear power plant;

→ discontinue local content requirement practices in the renewable energy sector, as such practices contradict WTO and EU-Turkey Customs Union rules.

On **security of supply**, Türkiye remains an important transit country, ensuring the smooth operation of the Trans-Anatolian Pipeline (TANAP), which transmits Azeri natural gas to Europe by connecting to the Trans-Adriatic Pipeline. Natural gas also continued to flow to Europe, which also includes Russian gas via the TurkStream pipeline. Türkiye actively expanded its import capacity for liquefied natural gas (LNG) as well as its gas storage capacity. The country now has five LNG import facilities, three of which are floating storage regasification units. The latest new facility started operations in early 2023. The largest gas storage facility at Tuz Gölü has a capacity of 5.4 bcm and the second gas storage facility at Silivri has a capacity of 4.6 bcm since December 2022.

Although significant amounts of natural gas have been discovered in the Black Sea by the Turkish Petroleum Corporation (TPAO), Türkiye remains dependent on energy imports. Russia provides more than one third of the country's natural gas imports and a quarter of the country's oil imports and is building, operating and owns the first nuclear power plant in Türkiye, launched in April 2023. Faced with rising energy prices, Türkiye took measures to satisfy consumer demand while providing support to cushion high energy prices. Türkiye continued to invest in becoming a natural gas hub thanks to the country's existing infrastructure of pipelines, LNG terminals, gas storage facilities, gas exchange and a balancing system.

On the **internal energy market**, Türkiye made only limited progress on the natural gas market reforms. It suspended yet again the unbundling of the state-owned gas company BOTAŞ and has not set a date to achieve it. Amendments to the Natural Gas Market Law, adopted in April 2023, lifted the restrictions on long-term gas imports, simplified the export scheme and abolished the strict limitations and time-based obligations aimed to reduce the market share of BOTAŞ. The entry of new long-term importers and exporters to the gas market depends on the Ministry of Energy. The Energy Market Regulatory Authority (EMRA) was authorised to draft regulations for determining quantities, terms, and procedures for spot pipe gas imports in line with the opinion of the Ministry of Energy. The new law also changed the approach to transmission tariffs and paved the way for setting exclusive tariffs for gas exports that will be based on a separate methodology. These changes will not help transparent, cost-reflective and non-discriminatory pricing.

Türkiye has modernised its wholesale electricity market and it follows developed market practices. The eligibility limit in the electricity market was reduced to 1 000 kWh by an EMRA Board decision in December 2022. Türkiye brought in the concept of 'aggregator' as a separate market operation in the electricity market by amending the Law on the electricity market of December 2022. The implementing regulation for licencing was amended in November 2022 but additional work is needed to address the missing issues.

On **hydrocarbons**, Türkiye is at an advanced stage of alignment with the EU *acquis*. However, alignment with the Directive on the safety of offshore oil and gas operations remains insufficient, also regarding the transit of hydrocarbons. Amid growing concerns about energy price inflation, Türkiye has accelerated action to produce gas domestically from its recently discovered Sakarya field in the Black Sea, with an estimated potential of 710 billion cubic meters.

On **renewable energy**, Türkiye announced ambitious goals when it published its latest national energy plan (2023-2035) in January 2023. The plan envisages maximising solar and wind energy to achieve the country's greenhouse gas emission targets. The declared goal is to

increase the share of renewable energy in primary energy consumption from 16.7% currently to 23.7% in 2035, and the share of nuclear energy from zero to 5.9% in 2035. With the integration of intermittent renewable resources, the need for flexibility in the system will increase.

At the beginning of 2023, Türkiye published a new hydrogen technologies strategy and roadmap strategic document, highlighting that green hydrogen will be an important element for the country to achieve its net-zero emission targets. The local content requirement practices in Türkiye continue to raise concerns as they contradict WTO and the EU-Turkey Customs Union rules and undermine the competitiveness of the EU and other international companies on the Turkish energy market.

As regards **energy efficiency**, in the context of Türkiye's 2053 climate targets, energy efficiency and renewable energy standards in buildings are being tightened, electrical vehicles are promoted and the use of different modes of transport is prioritised. In the buildings and transport sectors, Türkiye plans to achieve an energy savings potential of 50% to reach its climate targets.

On **nuclear energy, nuclear safety and radiation protection**, Türkiye's latest national energy plan estimated that the total installed nuclear power capacity in the system will reach 7.2 GW by 2035. The first reactor in the Akkuyu power plant (built with a 99.2% investment by Russia's Rosatom) became operational in April 2023. Türkiye continued work to build 11 more large-scale reactors across the country.

Following Türkiye's voluntary commitment to conduct stress tests on the Akkuyu power plant using the EU model, an agreement between the Commission and the Turkish nuclear regulatory authority has been reached to move from the previously envisaged two-phase approach to a more streamlined single-phase approach. In July 2022, Türkiye ratified the Joint Convention on the safety of Spent Fuel Management and on the Safety of Radioactive Waste Management.

Chapter 21: Trans-European networks

The EU promotes trans-European networks (TENs) in the areas of transport, telecommunications and energy to strengthen the internal market and contribute to growth and employment.

Türkiye is **well advanced** on trans-European networks. It made **no progress** during the reporting period. Concerning energy networks, smooth operation of the Trans-Anatolian Pipeline (TANAP) continues to transmit gas to the European section of the Southern Gas Corridor. On transport networks, construction of the flagship Halkali-Kapikule railway line connecting the EU border to Istanbul continued, despite significant difficulties.

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

- establish a transparent, cost-reflective and non-discriminatory gas transit regime in line with the EU *acquis*;
- take concrete steps to prepare the Yavuz Sultan Selim bridge railway connections;
- accelerate action to align with key pieces of the EU *acquis* to facilitate alignment in the TEN-T networks.

Concerning **the transport networks**, Türkiye continued to progress in the construction of the new Halkali-Kapikule high speed railway line connecting the Asian part of Türkiye and

Europe. The progress rate on the main line reached 64%. The contracts under the Ispartakule-Cerkezkoy (Stage II) and Ispartakule-Halkali (Stage III) sections were signed, but implementation remains at a very early stage.

There has been no progress on the preparatory work for the railway connection between the new railway line and the Yavuz Sultan Selim bridge to allow rail traffic towards the Asian side of the straits. Due to high congestion, services and infrastructure at the border crossing points between the EU and Türkiye should be strengthened in view of the expected increase over the long term in transport flows.

Türkiye made no progress on **energy networks**. The operation of the TANAP transmitting gas to the European section of the Southern Gas Corridor continues. Türkiye is actively expanding its import capacity for liquefied natural gas as well as its gas storage capacity. In October 2022, Türkiye and Russia agreed to explore the scope for Türkiye to become a major gas hub, by expanding the current TurkStream pipeline and creating a gas distribution centre on the borders to Greece and Bulgaria. In January 2023, an agreement of cooperation for 13 years was signed between Türkiye's National Petroleum Corporation BOTAŞ and Bulgargaz, for a volume of up to 1.5 billion cubic meters per year. The first transit via Marmara Ereğlisi LNG Terminal took place in April 2023. Regarding gas networks and transmission system operator cooperation, BOTAŞ applied for observer membership at the European Network of Gas Transmission System Operators (ENTSO-G). The state-owned BOTAŞ remains vertically integrated and dominates the market with its trading and grid operator functions, which stifles market competition. Amendments to the natural gas market Law adopted in April 2023 changed the gas import and export rationale of Türkiye (*see Chapter 15 – Energy*). BOTAŞ completed the Saros Floating Storage Regasification Unit (FRSU) Terminal in February 2023, as a result of which Türkiye now has five LNG import facilities.

Concerning electricity networks, Türkiye renewed the Turkish Electricity Transmission System Operator's observer membership of the European Network of Transmission System Operators for Electricity (ENTSO-E) as of January 2023 for a 3-year duration. The safe integration of increased amounts of intermittent renewable energy remains a major challenge in modernising the electricity network.

Chapter 27: Environment and climate change

The EU promotes strong climate action, sustainable development and protection of the environment. EU rules contain provisions addressing climate change, water and air quality, waste management, nature protection, industrial pollution, chemicals, noise and civil protection.

Türkiye has **some level of preparation** and made **limited progress** over the reporting period in this area. On climate change, Türkiye submitted its updated Nationally Determined Contribution (NDC) under the Paris Agreement with a slightly increased, albeit still critically insufficient, mitigation goal. It still lacks a long-term strategy for decarbonisation substantiating its net-zero-emission goal. The main strategic documents on climate policy still have a time horizon to 2023 and need to be thoroughly updated. Enforcement and implementation remain weak. Türkiye has yet to set and then implement more ambitious and better coordinated environment and climate policies. The level of strategic planning, including quantified objectives and milestones, substantial investment and stronger administrative capacity, which are key prerequisites to increase preparedness, remains low.

The Commission's recommendations from last year were only partially met, therefore remain valid. In the coming year, Türkiye should in particular:

- ensure that environmental standards are met when building back better in the earthquake-affected areas, notably through full implementation of the Environmental Impact Assessment Directive and other horizontal environmental legislation, and ensure that protection from exposure to asbestos in these areas is duly implemented;
- complete alignment with the directives on industrial pollution, water and waste as well as on nature protection and air quality;
- complete its alignment with the EU *acquis* on climate action, notably but not limited to emission trading, and finalise the pending contributions required under the Paris Agreement on climate change.

Environment

Türkiye has achieved some level of preparation in the area of **horizontal legislation**, but no progress was made over the reporting period. Turkish legislation is aligned with the Strategic Environmental Assessment Directive and mostly aligned with the Environmental Impact Assessment (EIA) Directive. However, Türkiye is still not party to the Espoo Convention and thus, non-alignment with EIA procedures in transboundary contexts persists. Moreover, Türkiye is not yet party to the Aarhus Convention on access to information, public participation in decision-making and access to justice in environmental matters. The level of alignment on Environmental Liability Directive remains limited. The National Environment Agency, set up in 2020, became operational in 2022.

On **air quality**, Türkiye has yet to adopt national legislation in line with EU directives on ambient air quality and national emission ceilings. It reports on severe air pollution in some cities on an annual basis. It has a national strategy for air quality monitoring and all eight planned regional networks are established and operational with 360 monitoring stations.

The legal framework on **waste management** is partially aligned with the EU *acquis*. Türkiye continued to implement the legislation on zero waste adopted in 2019. In 2023, Türkiye's recycling rate increased to 27%. Preparations continued for the introduction of the Deposit Management System, designed to recycle disposable beverage packages. On medical waste treatment, alignment and capacity building for sorting and recycling continued. The level of implementation of waste management plans at local and regional level is insufficient. Türkiye has not adopted legislation on ship recycling to mirror the requirements of the EU Ship Recycling Regulation and concerns persist regarding safety, sound waste management and environmental hazards in some of these facilities. Two Turkish shipyards were removed from the EU list of ship recycling facilities, but three more Turkish shipyards were added to it. On textiles, the Turkish apparel sector published in January 2023 a sustainability strategy and action plan to transform the sector by aligning it with the EU *acquis*. The February 2023 earthquakes had a major impact on the waste management systems of affected municipalities, impacting the existing infrastructure and equipment. In addition, the management of construction debris remains a major environmental problem in terms of polluting the ecosystems into which the debris is dumped, including due to the release of asbestos.

In the area of **water quality**, the legislative alignment is advanced, but the level of implementation and enforcement remain low. Türkiye has started preparing river basin management plans in line with the Water Framework Directive and has already adopted 8 out of 25 basins plans. Preparations of all 25 flood risk management plans are close to completion, but the preparation of drought management plans and groundwater management plans is at an early stage. Türkiye has not yet aligned its provisions with the revised EU Directive on drinking water and transboundary consultations on water issues have not advanced. Wastewater treatment capacity has increased as a result of continuous investments

and with the construction of 1 176 wastewater treatment plants (WWTPs) in the country, reaching a coverage of 89% of the municipal population. Türkiye aimed to reach 100% by the end of 2023, but the February 2023 earthquakes, which damaged much urban infrastructure in the affected area, including drinking water, sewerage networks and stormwater collection systems and the WWTPs, hampers the progress on this. The preliminary estimated cost of the damage is USD 3 billion. Alignment with the EU marine strategy remains pending.

Türkiye has some level of preparation on **nature protection**. Türkiye committed to setting national targets to implement the Kunming-Montreal Global Biodiversity Framework, adopted at the 15th Conference of Parties to the UN Convention on Biological Diversity (COP15), in December 2022. However, nature protection remains a challenge in Türkiye. It made no progress on adopting the framework legislation, the national biodiversity strategy or an action plan. Planning and construction in wetlands, forests and natural sites are still not in line with the EU *acquis*. In December 2022, Türkiye amended the mining regulation to allow mining in agricultural areas, protected areas, national parks and coastal areas, which caused concern among NGOs and the general public.

In **industrial pollution and risk management**, alignment with the EU *acquis* is at an early stage. Türkiye ratified the Minamata Convention on mercury management in October 2022 and committed to phasing out existing mercury mines and the use of mercury in product and processes. Türkiye made no progress on aligning the Industrial Emissions Directive, the eco-management and audit scheme or the Directive on the limitation of emissions of volatile organic compounds.

On **chemicals**, Türkiye has achieved an advanced level of legislative alignment overall, but the level of implementation and enforcement remains weak. Türkiye is almost fully aligned with the European Regulation on Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH). The transitional period of enforcement finishes at the end of 2023.

Alignment with legislation on **noise** is well advanced but the level of implementation and enforcement remains weak. The noise legislation was amended to extend its scope in 2022.

On **civil protection**, Türkiye is a participating state of the Union Civil Protection Mechanism (UCPM). In the wake of the February 2023 earthquakes, Türkiye activated the Mechanism. Subsequently, all member and participating states offered major collaborative support via the Emergency Response Coordination Centre (ERCC) of the European Commission. Türkiye has not yet installed the Secure Trans-European Services for Telematics between Administrators system to be able to connect through the Common Emergency Communication and Information System (CECIS) with the ERCC.

Climate change

Türkiye has achieved some level of preparation in this area and made limited progress over the reporting period. It is in the process of revising the current climate change strategy and action plan (2011-2023) and has adopted an implementing legislation on fluorinated greenhouse gases (F-gases). Türkiye submitted an updated nationally determined contribution (NDC) to the UN Framework Convention on Climate Change (UNFCCC) in April 2023. The overall objective is slightly higher than in the previous NDC and it contains an economy-wide goal. However, the emission reduction target remains critically insufficient, as it means that emissions could rise by over 30% by 2030. This is neither in line with the EU's collective objective to cut emissions by at least 55% by 2030 compared with 1990, nor with the latest Intergovernmental Panel on Climate Change report. It remains crucial to step up the level of ambition in line with science. It is also necessary to adopt a long-term strategy on decarbonisation that reconciles the new NDC and Türkiye's objective to reach net-zero

emissions by 2053. Türkiye has not published a national adaptation plan nor an adaptation communication under the Paris Agreement.

Regarding its other commitments under the UNFCCC, Türkiye submitted the latest national inventory on greenhouse gases in April 2023. It has yet to adopt a climate law and provisions for the establishment of a domestic emission trading system. Similarly, on climate adaptation, Türkiye has yet to adopt a new national adaptation strategy beyond 2023. Türkiye still does not fully implement the Fuel Quality Directive, nor does it align with EU emissions standards for new light and heavy-duty vehicles. Türkiye needs to draw up an alignment plan for the Carbon Capture and Storage Directive and for the certain pieces of legislation under the Fit for 55 package adopted during the reporting period.

CLUSTER 5: RESOURCES, AGRICULTURE AND COHESION

This cluster covers: agriculture and rural development (Chapter 11), food safety, veterinary and phytosanitary policy (Chapter 12), fisheries and aquaculture (Chapter 13), regional policy and coordination of structural instruments (Chapter 22), and financial and budgetary provisions (Chapter 33).

Türkiye reached some level of preparation in the area of agriculture and rural development. Backsliding continued during the reporting period, as its agricultural policy keeps moving away from the main principles of the EU common agricultural policy and as Türkiye continued to restrict imports of agricultural products from the EU. Türkiye is a major exporter of food products to the EU, and made limited progress in the area of food safety, veterinary and phytosanitary policy, where it reached some level of preparation. Full implementation of the EU *acquis* in this area requires significant further work. Türkiye is moderately prepared in the area of fisheries and aquaculture, and made some progress on fisheries governance, inspection and control.

Türkiye is moderately prepared in the area of regional policy and the coordination of structural instruments, and continued to make some progress in accelerating the absorption of IPA II funds and setting up the structures for IPA III funds. Türkiye has some level of preparation in the area of financial and budgetary provisions but made no progress during the reporting period.

Chapter 11: Agriculture and rural development

The EU's common agricultural policy supports farmers and ensures Europe's food security. It helps tackle climate change and the sustainable management of national resources; maintains rural areas and landscapes across the EU; and keeps the rural economy alive by promoting jobs in farming, agri-food industries and associated sectors. This requires strong management and control systems. There are also common EU rules for marketing standards, quality policy and organic farming.

Türkiye achieved **some level of preparation** on agriculture and rural development. **Backsliding** continued, however, as Türkiye's agricultural support policy moved away from the principles under the EU common agricultural policy and the country still continues to restrict imports of agricultural products from the EU. It still lacks a strategy for producing agricultural statistics and has not yet implemented a functioning integrated administration and control system (IACS).

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

→ adopt and start implementing a strategy for producing agricultural statistics and

implement IACS;

→ develop and start implementing a strategy to align its agricultural support policy with the EU *acquis*;

→ ensure the smooth implementation of the EU instrument for pre-accession assistance for rural development (IPARD III), including the entrustment of new measures and smooth extension of IPARD III to the whole country.

On **horizontal issues**, Türkiye took no significant steps to advance on sustainable agriculture under the Turkish Green Deal action plan. Türkiye continued to move away from the principles governing agricultural direct support under the EU's common agricultural policy. In particular, it increased support coupled to production and continued to shift to a region- or basin-based management model. Türkiye has not started implementing the integrated administration and control system (IACS). It revised the province-based application of the farm accountancy data network (FADN) and, as of 2022, procedures are carried out country-wide based on NUTS-1 level, consisting of 12 regions. It has not yet completed the agricultural census and adoption of the strategy for agricultural statistics remains pending. Further alignment requires agriculture support measures to be brought in line with EU policies.

Limited progress has been observed on **common market organisation**, mainly in terms of implementation of the related strategy. Türkiye has yet to fully implement its obligations under the trade agreement with the EU for agricultural products by opening quotas for beef and live animals on a lasting basis. Türkiye needs to implement a transparent system to manage import quotas.

On **rural development**, Türkiye has adopted a sectoral agreement underpinning the EU instrument for pre-accession assistance for rural development (IPARD III). Meanwhile, implementation of the IPARD II continued steadily, although it has been affected by the consequences of the earthquakes.

On **quality policy**, Türkiye continued to implement legislation on the protection of geographical indications, which is largely aligned with the EU *acquis*.

On **organic farming**, further alignment with the EU *acquis* is needed. There is potential to further develop the sector and to use the support opportunities available under the IPARD III programme.

Chapter 12: Food safety, veterinary and phytosanitary policy

EU hygiene rules for foodstuff production ensure a high level of food safety. Animal health and welfare and the safety of food of animal origin are safeguarded together with the quality of seeds, plant protection material, the protection against harmful organisms and animal nutrition.

Türkiye has **some level of preparation** in the area of food safety, veterinary and phytosanitary policy. Overall, it achieved **limited progress** in this area over the reporting period, particularly on animal identification and registration. On food safety, it has yet to upgrade food establishments to meet EU standards. Full implementation of the EU *acquis* in this area requires significant further work.

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

→ upgrade food establishments to meet EU standards, notably for raw milk;

- meet EU maximum limits for pesticide residues, and effectively address recurrent shortcomings;
- make further progress in addressing zoonoses.

Türkiye made limited progress in implementing the *acquis* on **general food safety**. The number of notifications to the rapid alert system for food and feed on pesticide residues in fruits and vegetables imported from Türkiye into the EU remained high, a trend observed since 2020.

Türkiye continued its work to fully align its **veterinary policy** with the EU *acquis*. On animal diseases, Türkiye increased cooperation with neighbouring countries in controlling infectious and transboundary diseases in the veterinary field by running vaccination campaigns and increased the work on animal identification and registration. Further structural and administrative work is still necessary to fully implement the *acquis* on animal welfare. Türkiye made limited progress on controlling zoonoses.

Türkiye continued to run training, inspection and monitoring programmes on the **placing of food, feed and animal by-products on the market**, which resulted in better administrative capacity for official controls. It made no progress on developing the national plan for upgrading agri-food establishments. Significant work is still needed to apply new rules on registering and approving food establishments. Substantial work is also required on animal by-products, notably to prepare a strategy on raw milk and on the entry into force of general rules to be implemented by raw milk producers. It has yet to adopt specifications of raw milk and rules on the use of milk that does not meet the somatic cell criteria. Türkiye's provisions on funding inspections are not yet aligned with the EU system.

Türkiye made progress on the alignment of its **food safety rules** with the EU *acquis* on issues such as labelling. However, progress on **specific rules for feed** and on **phytosanitary policy** remained limited. Interinstitutional collaboration on food safety, veterinary and phytosanitary policies is too low to properly integrate the EU's One Health Approach into its policies. Türkiye has yet to align its legislation on novel food and on **genetically modified organisms**.

Chapter 13: Fisheries and aquaculture

The common fisheries policy lays down rules on fisheries management, protects living resources of the sea and limits the environmental impact of fisheries. This includes setting catch quotas, managing fleet capacity, rules on markets and aquaculture and support for fisheries and coastal communities. Further, it promotes a sustainable aquaculture.

Türkiye is **moderately prepared** in this area. It made **some progress** on fisheries governance, on inspections and control, namely by improving and extending the scope of legislation and strengthening institutional capacity and infrastructure.

The Commission's recommendations from last year were partially met, and therefore remain valid. In the coming year, Türkiye should in particular:

- step up efforts to align fisheries management with EU law, including data collection and data sharing for scientific stock assessments;
- step up efforts to align its market policy with EU rules, in particular on the criteria governing the recognition and roles of professional organisations;
- improve fisheries control and inspection at sea in view of improving compliance at both the Mediterranean and Black Seas, and of effectively fighting illegal, unreported and unregulated fishing activities (IUU), including catch documentation schemes.

Türkiye made some progress on **resources and fleet management**. It amended its commercial fisheries regulation to further protect aquatic biodiversity. It closed the anchovy fishing season in the Marmara Sea earlier to protect and ensure sustainable fishing of the stocks. It improved the institutional capacity and infrastructure for data collection and stock assessment. The information systems established to manage fisheries and fishing fleet became functional and contributed to monitoring, control and surveillance. The country needs to reduce the by-catch of sensitive species, in line with the General Fisheries Commission for the Mediterranean's (GFCM) recommendations and promote the use of selective gear. A Fisheries and Aquaculture Scientific and Technical Advisory Council was established in August 2022, with a first meeting in December, to provide scientific opinion for fisheries and aquaculture management. Türkiye ran support programmes for the exploitation of pufferfish, an invasive species, to protect marine biodiversity.

The amended Fisheries Law also provided for some **structural action**, such as a stronger conservation regime. Structural measures are in place to support traditional coastal fisheries.

On **inspections and control**, Türkiye continued to make progress on legislative alignment and on implementing the recommendations for control measures by the International Commission for the Conservation of Atlantic Tunas (ICCAT) and the GFCM. In line with ICCAT rules, Türkiye has implemented the circular that regulates Bluefin tuna (BFT) fisheries and has identified the BFT fishing vessels for the 2023-2025 period. The number of inspections increased, and 169 fisheries vessels were confiscated in 2022 due to IUU fishing. New technologies such as drones are used in fisheries inspections.

On **market policy**, Türkiye developed IT tools for the collection of data from producer organisations and for disseminating market intelligence. These tools were set up to support the development and control of professional organisations in line with EU market policy. Türkiye provides **State aid** for aquaculture and to improve data quality on marine and inland artisanal fishing vessels for sustainable management of fisheries.

Regarding **international agreements**, Türkiye continued cooperating with the EU in regional and international platforms. As the EU implements the provisions of the United Nations Convention on the Law of the Sea, including in the common fisheries policy, Türkiye's ratification of the Convention would improve cooperation with the EU on fisheries and maritime policy. Türkiye participated with an active and supportive stance in the works of the GFCM.

Chapter 22: Regional policy and the coordination of structural instruments

Regional policy is the EU's main tool for reducing regional disparities and investing in sustainable and inclusive socio-economic growth. It is operating through "shared management" between the Commission and EU Member States. The implementation of cohesion policy programmes requires appropriate administrative capacity on programme and project level, the establishment of systems of sound financial management and control and also the fulfilment of other EU acquis elements such as environmental or public procurement legislation.

Türkiye is **moderately prepared** on regional policy and on coordinating structural instruments. Overall, it made **some progress** in accelerating the absorption of IPA II funds and setting up the structure for IPA III funds.

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

→ address structural weaknesses in implementing regional policy;

- accelerate implementation of ongoing operations under IPA II to deliver high quality results by the set deadlines and avoid de-commitments;
- ensure the proper functioning of local democracy.

Regarding the **legislative framework**, Türkiye made no progress in the reporting period. It has yet to set up mechanisms for evidence-based policymaking, policy and programme evaluations, and impact assessments.

A general framework is needed to put in place appropriate statistical tools to monitor and evaluate performance of the National Strategy for Regional Development (NSRD) and Regional Development Agencies (RDAs). The limited impact of implementing the NSRD on national policymaking persists, and regional level considerations continue to be inadequately reflected at central level. Türkiye has put in place key tools for implementation, namely the growth poles support programme, social development support programme, producing cities programme, institutional transformation and sustainability support programme, the working and producing youth programme, Regional Development Fund, and the RDAs project support, but the tools' functionality can be improved. Türkiye started preparations on the twelfth development plan (2024-2028).

Concerns remain regarding state overregulation and interventionism in the planning decisions taken by local authorities, as well as the lack of consultations with local authorities. The financial autonomy of local authorities remains restricted by their limited capacity to calculate the rate of local taxes, and the fact that a large proportion of local revenue (more than half) still comes from the State budget.

Türkiye has achieved no progress to remedy the situation faced by locally elected representatives. The government continues to open criminal investigations against mayors on the grounds of a broad definition of 'terrorism' in Türkiye's anti-terror legislation. It suspends the representatives targeted and replaces them with unelected officials, a practice that seriously undermines the democratic choice of Turkish citizens and impedes the proper functioning of local democracy in Türkiye.

On the **institutional framework**, the functioning of the Indirect Management by Beneficiary Countries (IMBC) authorities remains monitored by the National IPA Coordinator office (NIPAC) in coordination with the National Authorising Officer (NAO) and with regular oversight by the Presidential Office. The Financial Cooperation Committee, gathering all IMBC authorities, met on a regular basis. There is a continuous need to strengthen the role of the NIPAC to coordinate effectively amongst ministries, to prioritise interventions under IPA III, and monitor their impact. Türkiye made good progress regarding the institutional set-up and the system for managing IPA funds in IMBC, which still needs some adaptation to the IPA III requirements and alignment with the Financial Framework Partnership Agreement between Türkiye and the Commission.

Türkiye made some progress in **administrative capacity of the IPA structures**. Implementation of the action plan drawn up by the NIPAC and NAO continued to deliver some results. However, the capacity of IMBC structures require strengthening to ensure efficient and timely contracting and implementation of IPA programmes, improved capacities for programming, monitoring and evaluation activities, as well as strengthened Audit Authority. There is no clear staff retention policy and strategy. The action taken to re-focus the IMBC on specific sectors together with the political instability have not aided staff motivation in some structures. Most Operating Structures have reduced their ex-ante control rejection rates to below 10%.

Türkiye made some progress on **programming**, in line with the coordination framework set up under IPA III. The NIPAC coordinates the programming process, ensuring overall monitoring and evaluation of the implementation. For this purpose, the NIPAC coordinates the work to implement the evaluation plans, which are presented to the Commission annually. However, as there is no clear EU alignment strategy, the programming lacks a national anchor strategy.

On **monitoring and evaluation**, all but one Operating Structures (the Ministry of Transport) have set up and operationalised their monitoring systems, including Management Information Systems (MISs). The main weaknesses are observed in the systems operated by the NIPAC and the NAO. To overcome these weaknesses, work is ongoing to revise the existing MIS used by the NIPAC, namely NIPAC online. The process aims to ensure the system meets the requirements for IPA III procedures. A specific electronic system to manage the follow-up and implementation of Results Oriented Monitoring (ROM) and procedures is also fully functional.

Concerning **financial management, control and audit**, the Operating Structures have built capacity for programming, implementation and absorption. Over-programming has become an issue in the context of very low de-commitment rates. Management and control systems have improved, including controls on tender files. Türkiye has made progress on the rate of ex-ante tender approvals and on the number of monitoring activities. It has also improved the approach taken to project management. The principle of single audit is duly reflected in the work of the Audit Authority for audits and supervision of the NAO. A monitoring framework protocol was developed by NIPAC-NAO in the IPA I period, and since then the NAO supervises execution of the protocol. The Audit Authority drafts audit strategies and specific manuals and submits them to the Commission for review. In addition, there is a general circular issued by the President and specific provisions for EU project audits, as set out in the regulation of the Audit Authority (*see Chapter 32 – Financial control*).

Chapter 33: Financial and budgetary provisions

This chapter covers the rules governing the funding of the EU budget ('own resources'). These resources mainly consist of: (i) contributions based on the gross national income of each Member State; (ii) customs duties; (iii) the non-recycled plastic resource and (iv) a resource based on value added tax. Member States must have the appropriate administrative capacity to adequately coordinate and ensure the correct calculation, collection, payment and control of own resources.

Türkiye has **some level of preparation** in the area of financial and budgetary provisions. It made **no progress** over the reporting period. The country needs to set up solid coordination structures, build administrative capacity and adopt implementing rules for the correct application of the own resources system.

The Commission's recommendation from last year was not met, and therefore remains valid. In the coming year, Türkiye should in particular:

→ further align the gross national income inventory with Eurostat's GNI Inventory Guide.

Türkiye has already put in place the basic principles and institutions in the underlying policy areas linked to the application of the own resources system (*see Chapters 16 - Taxation, 18 - Statistics, 29 - Customs union and 32 - Financial control*). The Customs Union with the EU on processed agricultural goods and industrial goods (with the exception of coal and steel products) continues to ensure considerable alignment of Türkiye's customs legislation with

the *acquis* on customs. Türkiye has yet to adopt a draft customs law aligned with the Union Customs Code. This will facilitate preparation in **traditional own resources** (mainly customs duties).

For the **value added tax-based resource**, systems are not yet in place to correctly calculate the VAT base and the weighted average rate. VAT and customs duties fraud remains an issue as does the size of the informal economy. Legislation on structure, exemptions, special schemes and the scope of reduced rates is not fully aligned with the EU *acquis*.

Concerning the **gross national income-based resource**, Türkiye has undertaken efforts to bring its national accounts and GNI calculations fully in line with the European system of accounts (ESA 2010). It also needs to improve the exhaustiveness of the estimates to ensure that they take account of the non-observed economy. The GNI inventory is not fully aligned with Eurostat's Inventory Guide and the transmission of data does not always occur in a timely manner.

In terms of the **administrative infrastructure**, Türkiye needs to set up a fully operational coordination structure, with sufficient administrative capacity and the implementing rules needed to ensure that it can correctly calculate, forecast, account for, collect, pay, monitor and report own resources to the EU in line with the EU *acquis*.

CLUSTER 6: EXTERNAL RELATIONS

There are two chapters in this cluster: external relations (Chapter 30), and foreign, security and defence policy (Chapter 31). Türkiye is moderately prepared in the area of external relations and made no progress over the reporting period. Large deviation from the Common Customs Tariff was still in place. Divergence from the EU Generalised Scheme of Preferences persisted, in violation of the EU-Turkey Customs Union. Türkiye's official development assistance was largely directed towards humanitarian support for the Syria-related activities on Türkiye's own territory.

Türkiye has some level of preparation in the area of foreign, security and defence policy, and made no progress overall in the reporting period. Türkiye's unilateral foreign policy remained at odds with the EU priorities under the common foreign and security policy.

Chapter 30: External relations

The EU has a common trade and commercial policy towards third countries, based on multilateral and bilateral agreements, and autonomous measures. There are also EU rules on humanitarian aid and development policy.

Türkiye is **moderately prepared** on external relations. It made **no progress** over the reporting period. Türkiye removed some additional customs duties but also introduced other duties, thus resulting in a very limited re-alignment. Türkiye is still not in line with the Common Customs Tariff as a wide scope of additional customs duties remained in place, as were a number of trade agreements with the third countries where the EU has no such agreements. The divergence from the EU Generalised Scheme of Preferences persisted, in breach of the EU-Turkey Customs Union. Türkiye's official development assistance was 0.79%, above the 0.7% target enshrined in Sustainable Development Goal 17. A large share of its official development assistance comprised humanitarian support for projects related to Syria but carried out in Türkiye.

The Commission's recommendations from last year were not met, and therefore remain valid. In the coming year, Türkiye should in particular:

- re-align the customs tariff completely with the Common Customs Tariff;
- complete the alignment with the EU's Generalised Scheme of Preferences and dual-use export control regime.

Türkiye made no progress on the **common commercial policy**. It lifted some of the additional duties but it brought in other duties. It has yet to tackle a major deviation from the Common Customs Tariff, which has fundamentally distorted the once good level of alignment with the EU common commercial policy, by eliminating the remaining additional duties. Türkiye also needs to align fully with the EU's Generalised Scheme of Preferences in terms of countries and products. Türkiye did not initiate any new safeguard investigations but it continues to run review investigation of two safeguard measures to extend them. The initiation of anti-circumvention investigations based on weak evidence is a cause of concern. There is a need for closer coordination between the EU and Türkiye within the World Trade Organisation, in particular on the Doha Development Agenda, in the OECD and in the G-20.

The 1998 Agreement on agricultural products, and the 1996 Agreement on coal and steel products covered by the European Coal and Steel Community need to be aligned with current rules of the Pan-euro-Mediterranean (PEM) Convention on rules of origin. Discussions between EU and Türkiye continue on the (revised) PEM Convention transitional rules of origin aiming for a complete agreement, including issues of full cumulation and duty drawback.

Türkiye has 82 bilateral investment treaties in force, 23 of which are with EU Member States. On export controls of **dual-use goods**, Türkiye did not align with the EU position on certain multilateral export control arrangements, such as the Wassenaar Arrangement on Export Controls for Conventional Arms and Dual-Use Goods and Technologies, and the Missile Technology Control Regime. Türkiye's non-alignment with EU restrictive measures against Russia and its intensified trade and economic ties with Russia increase the potential transportation of dual-use goods. Türkiye has an export credit agency and is a Participant in the Arrangement on Officially Supported Export Credits since 2019.

Regarding **bilateral agreements with third countries**, Türkiye continued to implement its free trade agreement with Malaysia and Venezuela, diverging from the common commercial policy under the EU-Turkey Customs Union as the EU has no such agreements with those countries. Moreover, a free trade agreement that Türkiye signed with the United Arab Emirates entered into force. In addition, Türkiye signed preferential trade agreements with Uzbekistan and Pakistan and implemented the agreement with Pakistan. Türkiye continued to implement the agreement with Azerbaijan and extended its current scope to include some additional agricultural and industrial products.

As for **development policy** and **humanitarian aid**, Türkiye granted official development assistance in 2022 of EUR 7 billion, which is equivalent to 0.79% of its gross national income (GNI). It increased in real terms in volume compared with previous years and remained above the 0.7% target enshrined in the Sustainable Development Goal 17. The assistance was largely directed towards humanitarian support for projects related to Syria but carried out in Türkiye.

Chapter 31: Foreign, security and defence policy

Member States must be able to conduct political dialogue under EU foreign, security and defence policy, align with EU statements, take part in EU actions, and apply agreed sanctions and restrictive measures.

Türkiye has **some level of preparation** in the area of foreign, security and defence policy, and made **no progress** overall in the reporting period. Türkiye is an active and significant actor in the area of foreign policy, which constitutes an important element in the context of the EU-Türkiye relationship. However, Türkiye's unilateral foreign policy remained at odds with the EU's priorities under the common foreign and security policy (CFSP).

Following Russia's war of aggression against Ukraine, Türkiye condemned the Russian military aggression, and engaged politically and diplomatically, including in the facilitation of the export of Ukrainian grain and the prisoners' exchange. Türkiye worked towards facilitating talks between Ukraine and Russia and on de-escalation and bringing about a cease-fire. Nevertheless, Türkiye refrained from aligning with EU restrictive measures against Russia, and has significantly intensified trade and economic ties with Russia in several sectors (energy, tourism, transport, etc).

Türkiye also intensified its "regional normalisation" policy with the Arab states, with Armenia, and Israel. Its rhetoric in support to terrorist group Hamas following its attacks against Israel on 7 October 2023 is in complete disagreement with the EU approach. The *rapprochement* with the Syrian regime, facilitated by Russia, in the absence of a political solution to the Syrian conflict, is at odds with the EU's policy. Türkiye has a growing presence and geopolitical ambition in the South Caucasus and Central Asia, and continued the efforts to extend relations with African, Latin American and Asian countries. Türkiye's pragmatic engagement on Afghanistan, and vocal position on the developments in Sudan, underscored its ambition to be a key player in the context of major international crises.

The Commission's recommendations from last year were only partially met, and therefore remain valid. In the coming year, Türkiye should in particular:

- take decisive steps to significantly improve alignment with High Representative statements on behalf of the EU and relevant Council decisions on CFSP;
- step up cooperation on preventing and detecting circumvention of restrictive measures, in particular regarding advanced technology items that can be diverted for military purposes;
- further enhance the political dialogue on foreign and security policy with the EU and seek collaboration on convergent interests while working on reducing divergences.

The **political dialogue** between the EU and Türkiye on foreign and security policy issues continued, through contacts at senior officials' level. There were regular contacts between the High Representative/Vice-President of the European Commission and the Minister of Foreign Affairs of Türkiye, who also met on the sidelines of the UN General Assembly in New York in September 2023. In June 2023, the President of the European Commission and the President of the European Council held a telephone call with the President of Türkiye, and both Presidents met with the Turkish President in the margins of the NATO summit in Vilnius in July 2023. The President of the European Council also met the Turkish President on the margins of the G20 meeting in September 2023. Türkiye attended the Brussels VII Syria Conference organised in June 2023 by the EU.

The institutional framework enabling Türkiye's participation in **the EU common foreign and security policy** (CFSP) and, respectively, **the common security and defence policy** (CSDP) remained in place, at both the Ministry of Foreign Affairs and the Ministry of Defence, but Türkiye maintained a very low alignment rate of 10% with relevant High Representative statements on behalf of the EU and relevant Council decisions (as of August 2023), compared to 8% in 2022.

As a general policy, Türkiye consistently refrained from aligning with EU **restrictive measures** against Russia and maintained its position of not supporting sanctions adopted outside the UN framework. Türkiye continued to operate flights to Russia. The EU's International Special Envoy for the implementation of EU sanctions visited Türkiye in March and July 2023 to underline the importance of taking concrete steps and cooperating to fight against the circumvention of EU restrictive measures against Russia in a joint and systemic manner. While Turkish customs authorities highlighted the good technical cooperation with EU Member States on a case-by-case basis, Türkiye should continue to find ways to prevent the re-export of sensitive items that can be used for military purposes by Russia.

As regards the **non-proliferation** of weapons of mass destruction, Türkiye is a party to most international treaties and conventions and participates in export control regimes and other politically binding arrangements, complying with its legally-binding obligations and political commitments. However, it continued to prevent the participation of the Republic of Cyprus in the Conference on Disarmament, its membership in the Wassenaar Arrangement and in the Zangger Committee. While Türkiye aligns with a number of EU positions in multilateral non-proliferation and disarmament fora, its alignment record has further worsened since February 2022. It is still to ratify the Arms Trade Treaty.

Türkiye continued to seek involvement in CSDP and EU defence initiatives, whilst at the same time continuing to exclude a Member State from all possible cooperation with NATO. Türkiye's narrow interpretation of the EU-NATO cooperation framework continued to pose an obstacle to building a genuine organisation-to-organisation relationship, in particular by limiting the exchange of information and blocking the inclusive participation of all Member States in joint activities of the two organisations. After protracted negotiations, Türkiye's National Assembly ratified Finland's NATO accession bid in March 2023. On the sidelines of the NATO summit in Vilnius in July 2023, the Turkish President committed to forward the accession protocol for Sweden to the Turkish parliament as soon as possible. The president submitted the bill for ratification to the Parliament on 23 October 2023.

Türkiye actively **engaged with international organisations**, while continuing to obstruct the accession of EU Member States. At the UN General Assembly, in September 2022, Türkiye reiterated its support for the reform of the UN Security Council, making a plea for multilateralism. Türkiye participated in the G20 Bali Summit in November 2022 and the 29th OSCE Ministerial Council in December 2022. Türkiye attended the 4th Summit of the Council of Europe in May 2023, but it did not join the 37 Member States + Canada, Japan, the US and the EU that created a register of damage for Ukraine as a first step towards an international compensation mechanism for the victims of the Russian aggression. In September 2022, Türkiye was invited as a guest to the 22nd Summit of the Shanghai Cooperation Organisation (SCO) and reiterated its wish to become a full member. In February 2023, Türkiye attended the G20 meeting in New Delhi and hosted the 23rd meeting of the foreign ministers of MIKTA (Mexico, Indonesia, Republic of Korea, Türkiye, and Australia) on the sidelines of G20. In many international organisations, Türkiye continued to oppose the participation of international and European Non-Governmental Organisations, accusing them, without providing evidence, of supporting terrorist organisations. Türkiye is not a State Party to The Rome Statute of the International Criminal Court.

In terms of **security measures**, in the reporting period there was no Security of Information Agreement (SIA) for the exchanges of EU classified information (EUCI) with Türkiye. Since 2006, a framework participation agreement allows Türkiye's participation, including reception of EUCI, in the context of CSDP missions.

In the framework of the **EU crisis management missions and operations under the CSDP**,

Türkiye continued to participate in Operation EUFOR ALTHEA as the biggest non-EU troop contributor.

Regarding **hybrid threats**, in the context of international conflicts and crises, foreign information manipulation and interference (FIMI) activities, including the circulation of false information and propaganda on social and mainstream media, was observed in Türkiye's information environment. Türkiye did not restrict the operations of Russian state-controlled media outlets in the context of Russia's war of aggression against Ukraine.

Türkiye continued to progressively expand its global diplomatic network and pursued the development of intense relations and strategic partnerships with countries worldwide, while enhancing regional normalisation efforts.

In 2022, Türkiye recognised **Russia's war of aggression against Ukraine** as a state of war and rejected the Russian military aggression. During the reporting period, Türkiye maintained a position it describes as a 'balanced' one between the warring parties. Turkish high officials have had regular contacts with both Russian and Ukrainian counterparts. The UN- and Türkiye-brokered Black Sea Grain Initiative was terminated by Russia in July. Türkiye continued to refrain from aligning with the EU packages of restrictive measures against Russia. As of March 2023, Türkiye implemented a ban on exporting sanctioned goods, originating from the EU, the United States, and the United Kingdom, to Russia. This ban specifically targeted goods that were in transit, stored in warehouses, or located within free zones in Türkiye. However, the potential transportation of dual-use and sensitive technology goods, as well as the unrestricted movement of sanctioned goods from Türkiye to Russia still need to be addressed. Türkiye also significantly increased its trade and economic relations with Russia. Frequent high-level Turkish-Russian contacts took place in the run-up to the opening of the Akkuyu nuclear facility, financed and operated by Russia's Rosatom, attended online by the Russian President.

Türkiye, a NATO ally, remained both an important and a challenging partner for the **United States**. Türkiye and the US engaged on regional issues, including Ukraine, Afghanistan, humanitarian access to Syria, and counter-terrorism activities. Key points of friction included the Russian made S-400 air defence missile system owned by Türkiye, the participation of Türkiye in the F-35 programme, Turkish criticism of US support for the YPG forces in northern Syria, tensions in the Eastern Mediterranean and the Aegean Sea, and the respect of human rights in Türkiye. A number of high-level meetings took place between the two countries including a meeting of the two Presidents in the margins of the G20 summit in November 2022 and at the NATO summit in July 2023, and two meetings of the US-Türkiye Strategic Mechanism. Türkiye and **Canada**, as NATO allies, maintain open channels of communication at high level, reiterating and reaffirming their commitment for strong bilateral cooperation. Canada acted quickly to mobilise support following the earthquakes.

Türkiye's efforts for *rapprochement* in the Gulf region continued and intensified in the reporting period. Türkiye and the **United Arab Emirates (UAE)** held high level meetings and signed a Comprehensive Economic Partnership Agreement in March 2023. In July 2023, during the Turkish President's visit to the UAE, 13 agreements on investments estimated to be worth USD 50.7 billion were signed. Relations with **Bahrain** remained stable, while ties with **Saudi Arabia** continued to strengthen. In March 2023, the two countries signed an agreement, for a USD 5 billion swap deposit to the Turkish Central Bank. Additionally, in July 2023 they sealed a substantial defence export deal, involving the sale of Turkish drones to Saudi Arabia. Türkiye and **Oman** held in November 2022 the Joint Economic Commission and signed a cooperation agreement to boost bilateral trade and investments. Türkiye enhanced its relations with **Kuwait** in the defence industry sector, signing a contract for the

purchase of Turkish-made Bayraktar drones in January 2023. Türkiye and **Qatar** continued their cooperation in various fields and maintained close coordination on regional and international issues. **Turkish-Egyptian** normalisation efforts picked up pace in the first half of 2023, and both countries agreed to exchange ambassadors. After an initial encounter at Presidential level in 2022, contacts continued at the level of Ministers of Foreign Affairs and culminated in the meeting between the Presidents on the sidelines of the G20 meeting in September 2023.

Türkiye's relations with **Israel** were re-launched in 2022. In August 2022, the two countries decided to restore full diplomatic relations, including the exchange of ambassadors, and, in September 2022, the Turkish President held talks with the Israeli Prime Minister. Despite the *rapprochement*, Türkiye continues to criticise Israel's actions in the occupied Palestinian territory, in particular related to the respect of the *status quo* of the Holy sites in Jerusalem. Following the Hamas terrorist group's attacks against Israel in October 2023, Türkiye refrained from condemning and qualifying them as terrorism and strongly criticised Israel's response. Türkiye strongly condemned the loss of civilian lives in both sides and proposed to act as mediator between Israel and Hamas. Türkiye is currently re-evaluating its ties with Israel. On the **Middle East Peace Process** (MEPP), Türkiye's position aligns with the EU's position supporting the two-state solution.

Türkiye remained critically important actor in the **Syrian** crisis and shares with the EU the objective of achieving a stable and prosperous Syria, in the first place through the implementation of UNSCR 2254. While in the past Turkish approach was more similar to the EU's position, that of exercising and maintaining pressure on Damascus, since December 2022 Türkiye has become involved in a series of meetings, encouraged and facilitated by Russia, with the Syrian regime. These culminated in a quadripartite meeting of the Ministers of Foreign Affairs of Russia, Türkiye, Iran and the Syrian regime in Moscow in May 2023. Türkiye still maintains a military presence in parts of northern Syria and resumed significant military cross-border operations into northern Syria in November 2022. Following the February earthquakes, two additional crossing points on the Turkish border temporarily opened to allow humanitarian aid into the quake-stricken northwest of Syria.

Regarding relations with **Libya**, Türkiye advocated for an agreement in the framework of the Libyan-led and Libyan-owned political process and supported the efforts of the new UNSG Special Representative to hold national elections in 2023. Based on the 2019 Turkish-Libyan maritime delimitation agreement, in October 2022, Türkiye signed a Memorandum of Understanding with the Libyan Government of National Unity to develop bilateral scientific, technical, technological, legal, administrative, and commercial cooperation in the field of hydrocarbons on land and at sea. The EU considers the Turkish-Libyan maritime agreement an infringement upon the sovereign rights of third states, non-compliant with the Law of the Sea and having no legal consequences for third states. Ankara continued to claim that the UN embargo provisions, the articles on the withdrawal of all mercenaries, foreign fighters and foreign forces from the Libyan territory, and the suspension of military training in the cease-fire agreement had no bearing on the legitimate government. Türkiye's lack of cooperation continued to hamper the EU's efforts to implement the UN embargo effectively. In March 2023, Türkiye, as a flag state, withheld its consent to Operation IRINI's request to inspect a vessel, the tenth such incident since Operation IRINI started.

Türkiye continued its anti-terrorism operations against PKK groups and affiliates in **Iraq** and in the semiautonomous Kurdistan Region of Iraq. The last operation, launched in November 2022, was strongly condemned by the Iraqi government. In August 2023, on a visit to Iraq, the Turkish Foreign Minister asked Iraq to designate PKK as a terrorist organisation. Türkiye

maintained a high-level dialogue with **Iran** although some tensions were noticeable in the contexts of the Syrian and north-Iraqi theatres.

Türkiye-**Armenia** normalisation process continued with regular contacts between the two special envoys, although Türkiye links progress with developments in Armenia-Azerbaijan relations. The Turkish and Armenian leaders met for the first time in October 2022, in the margins of the European Political Community summit and in June 2023 the Armenian Prime Minister participated in the inauguration ceremony of the Turkish President. After three decades, in February 2023, the Türkiye-Armenia border reopened temporarily to facilitate the passage of Armenian humanitarian aid transports to the quake-struck Turkish region, followed by a visit of the Armenian Foreign Minister to Türkiye. Direct cargo flights between the two countries started in January 2023 but were interrupted a few months later. As regards the conflict between Armenia and Azerbaijan, while voicing support to the peace negotiations, Türkiye expressed full support to the military actions undertaken by **Azerbaijan** both in September 2022 and in September 2023. Türkiye continued maintaining a very close relationship with Azerbaijan, ensuring a strong collaboration and continuous consultation on the normalisation process with Armenia. The two countries had regular high-level visits and consultations, and held joint military exercises. Türkiye extended by one year the deployment of a small military contingent to Azerbaijan, in the framework of the joint Russian-Turkish monitoring centre established in Aghdman after the November 2020 Tripartite Statement signed by Azerbaijan, Armenia and Russia to monitor the ceasefire in the Nagorno-Karabakh conflict zone. Türkiye supports the construction of a transport corridor to Azerbaijan via Armenia and emphasises energy and trade cooperation, vocally supporting prospects for connectivity as means to ensure peace and prosperity of the region. Türkiye, Azerbaijan and Georgia also cooperate through a trilateral platform, the last edition of which was held in February 2023 in the format of Defence Ministers.

In **Central Asia**, EU and Türkiye policies converged to some extent. Türkiye attached great importance to connectivity and maintained close relations with the countries in the region. Türkiye and **Kazakhstan** further developed their cooperation in the defence industry sector. Türkiye and **Turkmenistan** focused on the possible transportation of Turkmen gas to Western markets. At the invitation of **Uzbekistan**, Türkiye participated as a guest in the Council of Heads of State of the Shanghai Cooperation Organisation regional security group summit in September 2022. The Turkish President attended the 9th Summit of the **Organisation of the Turkic States** (OTS) in Samarkand in November 2022, and held an Extraordinary Summit of the Heads of State of OTS in Ankara in March 2023.

Türkiye's relations with **Pakistan** remained strong, with regular high-level exchanges. In August 2022, Türkiye and Pakistan signed a preferential trade agreement offering each other concessions on tariff lines. Türkiye increasingly became an important source of military equipment, notably for the Pakistani marine. Türkiye maintained a pragmatic approach on **Afghanistan**, holding regular talks with the Taliban *de facto* authorities, hosting Afghan political opponents without facilitating the formation of a joint opposition or armed resistance, and increasing trade. Türkiye continued sending humanitarian aid to Afghanistan and kept operating the Maarif schools.

Türkiye systematically focused on development opportunities in **Asia** through its Asia Anew Initiative and becoming the axis connecting Asia to Europe. Türkiye is part of the multilateral Middle Corridor Initiative, which aims to develop connections with China via Türkiye, the Caucasus and Central Asia, in synergy with the Chinese Belt and Road Initiative. On the sidelines of the Shanghai Cooperation Organisation regional security group Summit in September 2022, the Turkish President met with his Chinese counterpart and agreed to

elevate their strategic cooperation to a higher level. Türkiye continued to strengthen its trade ties with **China**, its second biggest trading partner. Türkiye continued to voice its views regarding the treatment of the Uyghurs, a Turkic ethnic group in China, but in a less visible manner than before. Türkiye and **Indonesia** agreed to further enhance their bilateral relations and announced the formation of a High-Level Strategic Cooperation Council during the visit of the Turkish President in the margins of the G-20 Summit in November 2022. The Turkish President and the Prime Minister of **India** met in September 2022 and September 2023 and discussed ways to deepen the bilateral cooperation.

Türkiye maintained its diplomatic engagement with countries of **Latin America**, aiming to expand and strengthen the political relations. Türkiye pursued its active policies in Africa, maintaining strong ties in particular with **Somalia** in the **Horn of Africa**. Türkiye maintained a balanced position between the warring parties in the **Sudanese** conflict.

ANNEX I – RELATIONS BETWEEN THE EU AND TÜRKİYE

Within the framework of accession negotiations, 16 chapters have been opened so far and one of these was provisionally closed. In December 2022, the Council of the European Union reiterated its position of June 2018 that Türkiye continues to move further away from the European Union and that accession negotiations with the country are therefore at a standstill and no further chapters can be considered for opening or closing.

The European Council has repeated that the EU has a strategic interest in a stable and secure environment in the Eastern Mediterranean and in the development of a cooperative and mutually beneficial relationship with Türkiye. The EU is ready to engage with Türkiye in a phased, proportionate and reversible manner to enhance cooperation in a number of areas of common interest, subject to the established conditionalities set out in European Council conclusions. In case of renewed unilateral actions or provocations in breach of international law, the EU will use all the instruments and the options at its disposal, including in accordance with Article 29 TEU and Article 215 TFEU, in order to defend its interests and those of its Member States. The European Council in June 2022 also recalled that it expects Türkiye to fully respect international law, to de-escalate tensions in the interest of regional stability in the Eastern Mediterranean, and to promote good-neighbourly relations in a sustainable way. With its June 2023 conclusions, the European Council reconfirmed its commitment to a comprehensive settlement of the Cyprus problem, within the UN framework, in accordance with the relevant UNSC resolutions and in line with the principles on which the EU is founded and the *acquis*. It also called for the speedy resumption of negotiations and stated that the EU is ready to play an active role in supporting all stages of the UN-led process, with all appropriate means at its disposal. The European Council in June 2023 invited the High Representative and the Commission to submit a report to the European Council on the state of play of EU-Türkiye relations, building on the instruments and options identified by the European Council and with a view to proceeding in a strategic and forward-looking manner.

The Council adopted conclusions in July 2019, as a response to Türkiye's unauthorised drilling activities in the Eastern Mediterranean. In November 2022, following the third annual review of the framework for restrictive measures in response to Türkiye's unauthorised drilling activities in the Eastern Mediterranean, the European Council extended the regime for a further year, until 12 November 2023. Currently, two individuals are subject to sanctions.

Reforms and developments in Türkiye continued to be monitored by the bodies set up under the Association Agreement, with subcommittees kept being held throughout the reporting period. High-level engagement continued in areas of joint interest in the second half of 2022.

Türkiye is the EU's seventh largest trading partner, while the EU is Türkiye's largest, representing more than one third of Turkish **trade** and its main source of investment. Türkiye's exports to the EU amounted to EUR 98.68 billion in 2022 and imports from the EU amounted to EUR 99.65 billion.

In May 2023, Türkiye participated in the annual **economic policy dialogue** between the representatives of the EU Member States, the Western Balkans and Türkiye, the European Commission and the European Central Bank, as well as representatives of the central banks of the Western Balkans and Türkiye. The dialogue aims to prepare the future participation in the European Semester of the Western Balkans and Türkiye. The EU and Türkiye also continue to coordinate in the framework of the G-20.

Regarding the **Customs Union**, the Commission recommended opening negotiations with Türkiye on the modernisation of the Customs Union in December 2016. In March 2021, the EU Leaders invited the Commission to intensify talks with Türkiye to address current difficulties in the implementation of the Customs Union, ensuring its effective application to all Member States, and invited in parallel the Council to work on a mandate for the modernisation of the Customs Union. Such a mandate may be adopted by the Council subject to additional guidance by the European Council. The Commission continued intensified engagement with Türkiye to discuss issues hampering the smooth functioning of the Customs Union. The European Commission and Türkiye continue their engagement on the EU Green Deal.

In the area of **visa, migration and asylum**, the implementation of the March 2016 EU-Turkey Statement has continued to deliver concrete results in reducing irregular and dangerous crossings on the Eastern Mediterranean route to Europe and in saving lives at sea. Türkiye sustained its considerable efforts to provide significant support to 3.6 million refugees, of which 3.3 million Syrians (as of September 2023). In the context of the EU-Türkiye visa liberalisation dialogue, no outstanding visa liberalisation benchmarks were fulfilled. An international agreement on the exchange of personal data between Europol and the Turkish authorities competent for fighting serious crime and terrorism is yet to be concluded. The Council of December 2022 recalled that the full and effective implementation of the EU-Turkey Readmission Agreement and cooperation in the area of justice and home affairs with all EU Member States remain essential.

Türkiye and the EU continued to have fruitful cooperation for supporting refugees in Türkiye. Out of the almost EUR 10 billion in EU support to refugees allocated since 2011, EUR 6 billion were provided under the Facility for Refugees in Turkey. The full operational budget of the Facility was contracted by the end of 2020. Facility funding continued to support projects focused on humanitarian assistance, education, migration management, health, municipal infrastructure, and socio-economic support. Over 2 million refugees, including those most vulnerable, continue to receive basic needs support and close to 774 390 refugee children are enrolled in school with Facility and post-Facility support. Other achievements of the Facility include the construction of 160 new schools (out of a target of 348) and delivering over 30.3 million primary health care consultations. After bridge funding of EUR 535 million in 2020, the Commission continued implementation of an additional package of EUR 3 billion covering the 2021-2023 period requested by the Council. This additional funding continues providing support, in particular in key areas such as basic needs, health care and education, border management, and protection and socio-economic support. Overall, some EUR 7 billion has been disbursed by September 2023.

Regarding **bilateral financial assistance**, projects under the **Instrument for Pre-accession Assistance (IPA)** for Türkiye continued to be implemented, in compliance with the political guidance of the EU Budgetary Authority. Financial assistance under the IPA III focuses on priorities linked to the fundamental pillars of the enlargement strategy and sectors of common strategic interest, mainly related to the green, connectivity and digitalisation agendas, as well as on building more resilient and more sustainable economies and societies.

Following the February 2023 earthquakes, the Commission rapidly deployed humanitarian and relief support to Türkiye. It also hosted, together with the Swedish Presidency of the Council of the EU, an International Donors' Conference for the people in Türkiye and Syria on 20 March, where it pledged EUR 1 billion for the people in Türkiye. Beyond immediate relief and humanitarian assistance, the EU will also provide longer term reconstruction assistance. Assistance will be mobilised for the benefit of the population in Türkiye affected

by the earthquakes, including refugees and their host communities, covering the areas of health, education, socioeconomic support, job creation and recovery of municipal infrastructure, notably water and sanitation.

Türkiye has expressed interest to participate in a number of **EU programmes** in the period 2021-2027 and has signed association agreements for its participation in Erasmus+, Horizon Europe, the European Solidarity Corps programme, the Customs programme, the Single Market Programme (small and medium size enterprises (SME) component) and the Digital Europe Programme. Negotiations on association agreements for the participation in other programmes continue. Türkiye participates in the European Environmental Agency, the European Monitoring Centre for Drugs and Drug Addiction and the Union Civil Protection Mechanism. The Turkey Investment Platform (TIP) under the European Fund for Sustainable Development Plus Instrument (EFSD+) will enable stronger EU support to investments through guarantee programmes in the three overarching policy priorities, namely the Green Deal, global gateways as well as jobs and growth. To facilitate progress on sustainable development in the country, Türkiye is participating as an observer in a pilot project under the Technical Support Instrument.

ANNEX I – RELATIONS BETWEEN THE EU AND KOSOVO.....	124

1. INTRODUCTION

1.1. CONTEXT

The EU-Kosovo Stabilisation and Association Agreement has been in force since April 2016. Kosovo adopted a revised 2023-2027 national programme for EU integration. Kosovo submitted an application for EU membership in December 2022. The authorities remain committed to Kosovo's European path.

The Commission's proposal to lift the visa requirements for Kosovo citizens was agreed by the Council and the European Parliament, with adoption of the relevant regulation taking place on 9 March 2023 in the Council and on 18 April 2023 in the European Parliament. Visa liberalisation for Kosovo citizens is scheduled to enter into force on 1 January 2024.

The EU-facilitated Dialogue on normalisation of relations between Kosovo and Serbia continued in the reporting period with regular meetings on the level of Chief Negotiators and Leaders. After months of intense negotiations and with the support of key partners, the Parties reached an Agreement on the Path to Normalisation in Brussels on 27 February 2023, and agreed on its Implementation Annex in Ohrid, North Macedonia, on 18 March 2023. Both Kosovo and Serbia are yet to start implementation of their respective obligations stemming from the Agreement, which are binding for the Parties and part of their European paths.

Kosovo has continued to condemn Russia's war of aggression against Ukraine and to support Ukraine's independence, sovereignty and territorial integrity. The government has continued to adopt packages of restrictive measures against Russia and Belarus, mirroring those imposed by the EU and the US.

1.2. SUMMARY OF THE REPORT¹

The government led by *Vetëvendosje* still holds a solid majority in the Assembly and continued to push ahead with its ambitious EU reform agenda.

However, the continued lack of cross-party cooperation and disagreements within the majority proved to be a challenge to reforms. Additionally, *Srpska Lista* members of the Assembly boycotted the Assembly's work. Nevertheless, the reporting period witnessed important legislative achievements, including electoral reform.

Overall, Kosovo has remained engaged in the EU-facilitated Dialogue on the **normalisation of relations with Serbia**, but it needs to demonstrate more serious commitment, invest more efforts and make compromises to take the process of normalisation of relations with Serbia forward. Kosovo needs to uphold its Dialogue commitments and commit to the full implementation of all past Dialogue agreements and the Agreement on the Path to Normalisation and its Implementation Annex. Kosovo and Serbia are expected to engage more constructively to enable negotiations on the comprehensive legally binding normalisation Agreement to start and show flexibility in order to make rapid and concrete progress. Normalisation of relations is an essential condition on the European path of both Parties and

¹ This report covers the period from June 2022 to June 2023. It is based on input from a variety of sources, including contributions from the government of Kosovo, the EU Member States, European Parliament reports and information from various international and non-governmental organisations. It also includes the results of comparative assessments and indices produced by other stakeholders, in particular in the area of rule of law. The report uses the following assessment scale to describe the state of play: early stage, some level of preparation, moderately prepared, good level of preparation and well advanced. To describe progress made during the reporting period, it uses the following scale: backsliding, no progress, limited progress, some progress, good progress and very good progress. Where appropriate, interim steps have also been used.

both risk losing important opportunities in the absence of progress.

The situation in the north of Kosovo has been affected by several crises of varying intensity on a number of issues, with a violent attack against Kosovo Police on 24 September 2023, constituting the gravest escalation in recent years. Huge quantities of small arms and light weapons (SALW) were found in the context of this attack². The EU expects the perpetrators to be apprehended and swiftly brought to justice and Serbia to fully cooperate and take all the necessary steps in this regard. Other crises during the reporting period were triggered by issues over the freedom of movement, in particular licence plates, following the Kosovo government's decision on 29 June 2022 to enforce the re-registration of all vehicles with Kosovo-issued licence plates. This led to the tensions in July 2022 and continued through the erection of roadblocks and the collective resignation of Kosovo Serbs from Kosovo institutions in November 2022. Following the withdrawal of Kosovo Serbs from Kosovo institutions, local by-elections were organised in the four municipalities in the north of Kosovo. Scheduled initially for December 2022 and then postponed to 23 April 2023, the mayoral and municipal by-elections were held in line with the legal framework of Kosovo and efforts were made for them to take place in a smooth and orderly manner. However, despite the milestone Agreement on the path to normalisation reached in Brussels on 27 February and its Implementation Annex agreed in Ohrid, North Macedonia, on 18 March 2023, and despite Kosovo extending the deadline for the registration of candidatures for the local by-elections, not all parties and communities made use of their democratic right to participate and vote. The very low turnout (3.47% of voters), following the boycott by the Kosovo Serb community, showed that these elections do not offer a long-term political solution for these municipalities. It remains imperative to restore a situation where Kosovo Serbs participate actively in local governance, policing and the judiciary in the north of Kosovo. Early local elections need to be held as soon as possible in all four municipalities, organised in a fully inclusive manner, and with the unconditional participation of Kosovo Serbs.

Due to the lack of decisive steps to de-escalate, and in line with the 3 June statement, the EU is implementing a number of measures vis-à-vis Kosovo, which also impact financial support. These measures are temporary and fully reversible, depending on the steps taken to de-escalate the tensions in the north of Kosovo. Kosovo has taken steps in the right direction, but more remains to be done.

On **public administration reform**, as last year's recommendations have not been sufficiently implemented. New legislation on public officials and salaries was approved by the Assembly using fast-track procedures. The law on salaries is currently under review by the Constitutional Court. The amended Law on public officials risks creating and exacerbating existing gaps in administrative capacities.

Kosovo is still at an early stage in developing a well-functioning **judicial system**. There was limited progress during the reporting period. The need remains to strengthen existing tools safeguarding the integrity, accountability, independence and efficiency of the justice system. The Minister of Justice and the heads of the main justice system institutions signed a Joint Commitment Statement and Action Plan on justice reforms. Quick follow-up is needed to achieve tangible results.

Kosovo is in between an early stage and some level of preparation in the **fight against corruption**. Limited progress was made during the reporting period, and corruption remains an issue of concern. While last year the Assembly adopted significant anti-corruption

² The EU and Western Balkan partners agreed in May 2023 to prolong beyond 2024 the Roadmap for a comprehensive small arms and light weapons control in the Western Balkans.

legislation and the legal framework on criminal confiscation is advanced, a lot remains to be done to implement the anti-corruption legislation. Despite improvement in the performance of the Agency for Prevention of Corruption, the anti-corruption preventive tools laid down in the legislation are not yet fully used. Kosovo should step up efforts to have more proactive investigations, final court decisions and final confiscation of assets.

Kosovo is at an early stage in the fight against **organised crime**. Limited progress was made on the investigation and prosecution of organised crime cases. Kosovo adopted a new police organisational structure and upgraded intelligence and analysis capacities. Law enforcement operations against organised crime continued. Despite this, the powerful tools envisaged by the Criminal Code and the Law on extended powers of confiscation are yet to be fully utilised. Fighting organised crime in the north of Kosovo continues to be challenging.

Kosovo remained active in the fight against terrorism and the fight against and prevention of violent extremism. The legal framework on anti-terrorism is partly aligned with the EU *acquis* and international standards. The Law on combating money laundering and the financing of terrorism is yet to be amended. The authorities need to be more effective in their efforts to combat money laundering.

The legal framework broadly guarantees the protection of human and **fundamental rights** in line with European standards. While the capacity to monitor implementation of policies and legislation has improved, further efforts are required to effectively enforce fundamental rights. More human and financial resources should be allocated to relevant institutions. Efforts continued to improve gender equality but Kosovo needs to further strengthen implementation of legislation.

Kosovo has a well-established legal framework for the protection of non-majority community rights. However, further action is needed on long-standing issues such as lack of equal access to education and employment, lack of language compliance, and low representation in public institutions, including for the Roma and Ashkali communities³.

Kosovo has some level of preparation as regards **freedom of expression**. Limited progress was made in addressing the recommendations of the previous report. Concerns remain regarding physical attacks and threats, public smear campaigns and hate speech. The lack of freedom of expression in the north of Kosovo is particularly concerning.

The Kosovo authorities continued to make progress in managing **migration** and have engaged with the EU on the implementation of the EU Action Plan on Western Balkans presented in December 2022 by the Commission. Accommodation capacity was increased. Steps should be undertaken to further align legislation, including the Law on foreigners, with the EU *acquis* and international standards.

As regards the **economic criteria**, Kosovo has made some progress and is between an early stage and some level of preparation of developing a functioning market economy. Kosovo's economic rebound moderated significantly in 2022. This was mainly due to decreasing investment and slowing household consumption growth on the back of high inflation, especially after the start of Russia's war of aggression against Ukraine. Despite the resilience the economy has demonstrated during the recent crises, the private sector continues to be hindered by long-standing structural challenges such as a widespread informal economy, a high prevalence of corruption and the overall weak rule of law. High revenue growth due to rising prices and increasing numbers of people in formal work, and a significant under-execution of

³ In line with the terminology of European institutions the umbrella term 'Roma' is used here to refer to a number of different groups, without denying the specificities of these groups.

public capital spending led to an almost balanced budget in 2022, while the public debt ratio also fell. Inflation surged to double digits due to rising energy, food and transport prices, leading to an increase in the current account deficit. The financial sector remained well capitalised and stable and bank lending continued to expand.

Kosovo has made limited progress and is at an early stage in terms of its capacity to cope with competitive pressure and market forces in the EU. The education system does not sufficiently teach the necessary key skills and is not adequately aligned with labour market needs. Kosovo made efforts in improving road infrastructure and increasing investment in renewables, but the coal-based, outdated and unreliable energy supply remains a concern. Kosovo made some progress on the digitalisation of the economy.

Limited progress was made during the reporting period in the areas of public procurement and financial control. On statistics, there was some progress.

As regards **good neighbourly relations and regional cooperation**, Kosovo continued to participate in most regional forums. Kosovo maintained overall good relations with Albania, Montenegro and North Macedonia. There has been no change in Kosovo's formal relations with Bosnia and Herzegovina, as the country does not recognise Kosovo's independence. Georgia, Moldova and Ukraine have no formal relations with Kosovo, as they do not recognise Kosovo's independence.

On alignment with European standards, Kosovo made some progress in **cluster 2, internal market** with regards to free movement of goods, freedom to provide services, free movement of capitals and intellectual property law. It made limited progress in the area of freedom of movement for workers, company law, competition policy, financial services and consumer and health protection.

In **cluster 3, competitiveness and inclusive growth**, Kosovo made some progress in most areas (customs, taxation, social policy and employment, education and culture), except for digital transformation and media where progress was limited.

In policy areas related to **cluster 4, the Green Agenda and sustainable connectivity**, Kosovo made some progress in the energy sector (including by adopting an energy strategy for 2022-2031). On transport, environment and climate change, it made only limited progress.

In **cluster 5, resources and agriculture**, Kosovo made limited progress on agriculture and some progress on food safety, veterinary and phytosanitary policy. On fisheries, it made no progress.

Concerning **external relations**, limited progress was made during the reporting period. Kosovo made progress with implementing the Common Regional Market action plan, notably by ratifying the three 'Berlin process agreements' on free movement and mutual recognition of qualifications. However, the government continues to block decision-making mechanisms within CEFTA due to disagreements over Kosovo's representation. Kosovo has not yet ratified the CEFTA additional protocols on trade facilitation and trade in services. Additionally, by imposing a 'temporary operational security measure' in June 2023 blocking the entry into Kosovo of Serbian goods and postal parcels, Kosovo appears not to be in compliance with its commitments under CEFTA. The measure also goes against the spirit of the Stabilisation and Association Agreement.

Overall, Kosovo needs to improve its administrative capacity and coordination across all sectors to achieve effective implementation of the EU *acquis*.

2. THE FUNDAMENTALS OF THE ACCESSION PROCESS

2.1. FUNCTIONING OF DEMOCRATIC INSTITUTIONS AND PUBLIC ADMINISTRATION REFORM

2.1.1 Democracy

The government led by *Vetëvendosje* continued to hold a solid majority in the Assembly and to push ahead with its ambitious EU reform agenda.

Kosovo's overall political stability provided the government with an opportunity to implement EU-related reforms and to adopt overdue legislation. However, the continued lack of cross-party cooperation and disagreements within the majority proved a challenge to reforms. Despite this, the reporting period witnessed important legislative achievements. The majority agreed with the opposition to establish two *ad hoc* committees in the Assembly, including on electoral reform. Some 104 pieces of legislation had been adopted as of June 2023; many of these advanced EU integration priorities.

Opposition parties supported key EU-related laws on some occasions. However, deep disagreements between majority and opposition remain. The Assembly often failed to vote on legislative proposals due to a lack of decision-making quorum, despite the government holding a majority in the Assembly. The Assembly's committee meetings, presidency sessions and plenaries continued to suffer from frequent boycotts and lack of quorum.

Female participation at all levels of local governance and decision-making in institutions and political parties has improved, yet remains low. Kosovo should further implement the Law on Gender Equality, which calls for gender parity in public life.

Elections

Kosovo made important progress with electoral reform, as it adopted the Law on financing of political parties and the Law on general elections. The new legal framework addresses long-standing recommendations of successive EU Election Observation Missions. A new law on the Independent Media Commission still needs to be adopted. The Central Election Commission (CEC) needs to implement the new legal framework well in advance of the next general election. The CEC needs more financial and human resources to be able to carry on the additional tasks deriving from new legal framework.

Following the withdrawal of Kosovo Serbs from Kosovo institutions in November 2022, local by-elections were organised in the four municipalities in the north of Kosovo. Scheduled initially for December 2022 and then postponed to 23 April 2023, these mayoral and municipal by-elections were held in line with the legal framework of Kosovo and efforts were made for them to take place in a smooth and orderly manner. However, due to the very low turnout (3.47% of voters), in particular by Kosovo Serb citizens, these elections do not offer a long-term political solution for these municipalities. Early local elections need to be held as soon as possible in all four municipalities, organised in a fully inclusive manner, and with the unconditional participation of Kosovo Serbs.

Kosovo made important progress on addressing long-standing recommendations of successive EU Election Observation Missions (EU EOMs). The Assembly's *ad hoc* committee on electoral reform was established on 1 July 2022 and successfully completed its work on 5 April 2023. The Committee, chaired by the biggest opposition party (PDK), in cooperation with the CEC and other stakeholders, addressed most of the EU EOMs' recommendations and managed to present a consensual Law on general elections. It provides an adequate basis for the conduct of democratic elections, in line with international and regional standards. It introduces important improvements in several parts of the process, including in relation to suffrage rights,

voters' lists, registration of political parties, independence of the CEC, campaign regulations, polling and counting, electoral dispute resolution system and provides additional budget for political parties that exceed the 30% of women quota.

In parallel, the CEC updated electoral rules. However, these will need to be aligned further with the new Law on general elections. In August 2022, the Assembly adopted the new Law on political party financing, which established a new Office for Registration, Certification and Financial Control of Political Entities. In December 2022, the CEC recruited its director within the legal timelines laid down in the new law.

Following the mass resignation of Kosovo Serbs from Kosovo institutions in November 2022, local by-elections were organised in the four municipalities in the north. On 10 November 2022, the President of Kosovo set 18 December as the date for extraordinary mayoral elections in North Mitrovica, Zvecan, Leposavic and Zubin Potok, and 25 December 2022 as the date for by-elections for the Municipal Assemblies of Zvecan and Leposavic. As in December, the security situation in the north of Kosovo deteriorated and groups of Kosovo Serbs blocked CEC staff from entering the two Municipal Election Committee offices. As a result, the President postponed the elections until 23 April 2023, a decision welcomed by the EU as it advanced efforts to promote a more secure situation in the north of Kosovo.

The elections were held on 23 April in line with the legal framework of Kosovo and efforts had been made for them to take place in a smooth and orderly manner. However, despite the agreement on the Implementation Annex of the Agreement on the Path to Normalisation reached in Ohrid on 18 March 2023, and Kosovo extending the deadline for the registration of candidatures for the local by-elections, not all parties and communities made use of their democratic right to participate and only 3.47% of voters cast their ballot. Kosovo Serb political parties did not participate and *Srpska Lista* called for voters not to turn up, with the result that the Kosovo Serb community largely boycotted the elections. Out of the 45 095 voters, only 1 567 cast their ballot. While Kosovo's legislation does not stipulate a threshold for voter participation, the very low turnout, in particular among Kosovo Serbs, clearly indicates that the elections do not offer a long-term political solution for these municipalities. Early local elections need to be held as soon as possible in all four municipalities, organised in a fully inclusive manner, and with the unconditional participation of Kosovo Serbs.

Parliament

During the reporting period, the Assembly's work continued to be hampered by the lack of a decision-making quorum and limited efforts to build cross-party consensus. The Assembly was not able to adopt laws and to make necessary appointments to public bodies for long periods of time. The boycott by *Srpska Lista* MPs made adopting laws in the category of vital legislation impossible. The lack of political consensus for some of the key reforms and legislative processes continued. The Assembly needs to introduce measures and/or penalties to ensure it can perform its role. To that end, it would also need to improve its internal management, adopt an annual work plan, and introduce an electronic voting system and electronic presence recording system. In addition to its legislative function, the Assembly needs to strengthen its oversight function. On 8 June 2023, the Assembly adopted the new Law on general elections. It also achieved cross-party consensus with the swift adoption of the three Berlin Process agreements on freedom of movement. The Assembly continued using fast-track/accelerated procedures for the adoption of key legislation. The number of women MPs remains the same, although for the first time women lead more than half of the Assembly committees.

Discussions between the ruling majority and opposition in the Assembly were polarised and at

times tense. Some MPs used inflammatory language against political opponents, including stereotyping and non-sensitive gender language.

The Assembly did not reach consensus on many issues, including on energy policy, salary increases in the public sector, strikes in the education sector, security strategy and economic policy. While the Assembly remains the main forum for political dialogue between political parties and non-majority representatives, limited efforts are made to build consensus on issues of general interest. The political debate should be directed towards substantial discussions that lead to consensual and sustainable results. The lack of decision-making quorum, despite the government having a majority in the Assembly, led to a backlog of items on the agenda and parliamentary sessions dragging on for months, causing delays in adopting EU-related reforms and in making appointments. Absenteeism, late arrival and early departure from plenary sessions and committee meetings have become common practice. The new Rules of Procedure lack measures to impose, financial (or other) penalties for unjustified absence from parliamentary proceedings.

On 7 November 2022, 10 *Srpska Lista* MPs resigned from the Assembly as part of the collective withdrawal of Kosovo Serbs from Kosovo institutions. On 17 November, candidates next in line took over their mandate. Nine new *Srpska Lista* MPs, one member of the Kosovo Serb opposition Civic Initiative 'Freedom, Justice, Survival' (SPO) and two Gorani and Roma MPs attended the plenary session of 6 April 2023 in order to secure the continuation of their mandates, only to continue their boycott of plenary sessions afterwards. The lack of discipline and a loose interpretation of parliamentary responsibilities have become a growing obstacle to the functioning of the Assembly and its bodies.

During the reporting period, the Assembly adopted 104 laws, out of which 25 ratifications of international agreements. Out of the 104 adopted laws, 21 were adopted using a fast-track procedure. This included essential laws such as the Law on the 2023 budget, the Law on public officials and the Law on salaries. There were no efforts to build consensus on key pieces of legislation, and opposition parties have referred a number of them to the Constitutional Court. On 23 February 2023, the Assembly promptly adopted three international agreements reached in the Berlin Process. These enable free movement with identity cards and recognition of higher education qualifications and professional qualifications in the Western Balkans.

The Assembly did not manage to make timely appointments in most of the key independent bodies. As a result, there are several vacant posts in various institutions, and the Assembly has continued to postpone voting on appointments.

The Assembly needs to strengthen its oversight function of the executive and of independent institutions. The new Rules of Procedure include advanced reporting procedures for handling annual reports of independent institutions, but this has not resulted in the timely review of these reports. Most of the 2021 annual reports of the independent institutions were reviewed in the first months of the 2023 spring session and often without substantial debate.

The Assembly made limited efforts to address the lack of qualified staff, in particular regarding specialised legal and gender issues. It remains dependent on external experts and international donor support.

Governance

Kosovo made progress in implementing EU-related reforms: Kosovo adopted the National Programme for EU integration and continued to implement the European Reform Agenda (ERA) II action plan. In December 2022, Kosovo submitted an application for EU membership. To pursue EU-related reforms in a more efficient and sustainable way, it is essential that the

government ensures cross-party support, increases coordination across departments, and decentralises decision-making to line ministries to implement policies under their responsibility.

On 31 March 2023, the government approved the revised 2023-2027 **National Programme for EU Integration**, further endorsed by the Assembly on 15 June 2023. Kosovo continued to implement the ERA II Action Plan.

Although the interinstitutional **coordination** structures for European integration are in place, weak administrative capacity affected the EU reform agenda and integration activities. The number of key positions in the public sector functioning with staff in an acting capacity is concerning. The other challenge is the lack of a permanent inter-ministerial coordination body at expert level. This results in limited political ownership of the EU agenda in line ministries and a lack of prioritisation and sequencing of reforms. More efforts are needed to increase trust and to strengthen coordination between the political and technical levels.

As regards **local government**, disparities remain between municipalities in their performance and service delivery. With the increase of the overall budget for 2023, the general grant for municipalities expanded by 15% (EUR 100 million). However, municipalities led by mayors from opposition parties have raised concerns that the line ministries' capital investment funds are not always allocated according to objective criteria. In July 2022, the Assembly adopted the Law on the Municipal Performance Management System, an important instrument to promote competitiveness among the municipalities in delivering quality services and to incentivise transparency. Effective oversight of municipal legislative bodies over the municipal executive bodies remains a challenge. Communication and cooperation between the government and the municipalities needs improvement. On audit practices, progress was made towards more effective oversight and transparent governance. Municipalities do not sufficiently use the existing inter-municipal cooperation mechanisms.

Women's representation in senior government positions increased but remains unequal. They remain under-represented in local decision-making bodies. Affirmative measures are needed to ensure equal representation of women and men in the local executive. Three political parties (*Vetëvendosje*, PDK and LDK) have undertaken measures to increase women's participation in their parties.

Civil society

In general, civil society operates in an enabling environment. Civil society continues to actively participate in public consultations and contributes to policy-making and monitoring processes. Efforts by public authorities to involve the public in decision-making processes are welcomed and should be further increased. The government should ensure that each public consultation process fulfills the minimum standards, principles and procedures set by the relevant regulation. Efforts to increase the transparency and accountability of public funding to civil society organisations should be sustained.

An empowered civil society is a key component of any democratic system and continues to be recognised as such by public institutions. Civil society remains an important partner in the framework of Kosovo's preparation for EU accession, as it contributes to the design, implementation and monitoring of EU-related reforms, and participates in the Stabilisation and Association policy dialogue platforms. Its role in promoting social change, building trust and promoting multistakeholder cooperation is widely recognised. Civil society also plays a critical role in advocating for the rights of persons with disabilities, gender equality, and the rights of persons belonging to non-majority communities.

The Council for Government-Civil Society Cooperation has not met since 2022 (when it endorsed its new Rules of Procedure). Besides some progress on the public consultation process, there were no significant developments on implementing the 2019-2023 strategy for cooperation with civil society.

The government has made some efforts to involve civil society in decision-making. In 2022, the online platform for public consultations was upgraded with features facilitating the participation of persons with disabilities. Most legislative acts approved by the government were submitted to public consultation. Civil society organisations (CSOs), interested parties and the public engaged almost four times more often in public consultations at the central level than in 2021. At the same time, the implementation of some standards, principles and procedures specified in the Minimum Standards for Public Consultation continued to lag behind. Public consultations are generally carried out at central level, in writing and electronically through the online platform. It is recommended to increase the use of other forms of public consultation. Local administrations do not use those mechanisms sufficiently.

The implementation of the Regulation on public funding for NGOs is gradually improving. Despite being included in the legislative agenda of 2022, the amendments to the Regulation were not initiated. The online platform was upgraded with data visualisation based on providers, beneficiaries and territory of implementation, and is now linked with the Platform of Donors' Support to Civil Society. Kosovo would benefit from increased transparency and accountability on public funding for NGOs. More efforts are needed to update the CSO registry and to ensure that Kosovo's electronic system of non-governmental organisations is fully reliable.

In 2022, the government initiated the sectoral terrorist financing risk assessment process on non-profit organisations, involving civil society. This work should feed into the review of the Law on the prevention of money laundering and terrorist financing. The aim is to remove unnecessary reporting burdens on CSOs, alleviate excessive control measures on low-risk CSOs, lift limitations on cash donations, and remove barriers to access banking or financial services. The tax regime for CSOs is considered to partially meet relevant standards according to the EU's Technical Assistance to Civil Society Organisations (TACSO) 2021 baseline assessment.

The environment for volunteering needs to be improved, including by putting in place an appropriate legislative framework, aligned with international standards and by allocating financial and human resources for youth volunteering programmes.

2.1.2 Public administration reform

Kosovo has **some level of preparation** and made **no progress** with regard to public administration reform during the reporting period. Oversight of the implementation of the legislative framework for public administration reform (PAR) across line ministries is still ineffective. This is despite the adoption of a new strategic framework for both PAR and public finance management. New legislation on public officials and salaries was approved by the Assembly using fast track procedures. Both laws were sent for review to the Constitutional Court which ruled some articles of the Law on Public Officials unconstitutional. The amended Law on Public Officials risks creating and exacerbating existing gaps in administrative capacities. Some progress was made with harmonising sectoral laws with the Law on general administrative procedures and in digitalising public services. However, the overall pace of public administration reforms remained insufficient to deliver tangible results in the reporting period.

As last year's recommendations have not been sufficiently implemented, they remain broadly valid. In the coming year, Kosovo should:

- improve the functioning and accountability of the public administration, including through rationalising agencies and introducing performance management in agencies; to that end, strengthen administrative capacities, fill open vacancies regularly and in line with the principle of merit-based recruitments, and amend the new Law on public officials in line with the principles of a modern public administration;
- ensure efficient functioning of the new remuneration system by implementing the Law on organisation and functioning of the state administration and independent agencies and to finalise the processes of: (i) regulating the internal organisations of public bodies, (ii) job classification; and (iii) systematising positions at central level according to job descriptions;
- improve legal certainty, reduce the administrative burdens and increase the number of e-services in the public administration for businesses and the public.

Strategic framework for public administration reform

During the past year, Kosovo consolidated the strategic framework for PAR by adopting a new PAR strategy (2022-2027) and an action plan for its implementation. The Ministerial Council on PAR, which is the main oversight and coordination mechanism on public administration reform at political level, generally meets only once a year to approve the annual reports under the PAR strategic framework. This mechanism is ineffective in ensuring coordination among key bodies to steer the PAR process. The Ministry of Internal Affairs (MIA) leads reforms at the technical level. However, both the MIA and line ministries have limited capacities to effectively supervise, analyse data in an evidence-based manner, and manage the reform processes. The 2022 monitoring report on PAR implementation was adopted. The internet-based platform for monitoring PAR has been built and tested but is not yet functioning efficiently.

Policy development and coordination

On the **policy-making system**, the government adopted the national development strategy and -plan 2023-2029 (NDS/NDP), which sets both long-term and short-term priorities, covering activities on a three-year rolling basis. There are no clear links between the NDP/NDS and the sector strategies and their respective action plans, or with the medium-term expenditure framework. The Strategic Planning Office (SPO) is responsible for planning, monitoring, and reporting on the strategies as well as *ex ante* impact assessment. The SPO's capacities need to be further strengthened.

Kosovo has made limited progress on **gender-mainstreaming, as well as on inclusive and evidence-based policy development**. The government's Rules of Procedures are still under consultation. Procedures on regulatory impact assessments are in place; however, implementation remains weak. Public institutions should foster inclusive participation. Despite the fact that almost all primary draft laws and policy documents are regularly published on the government web portal, public consultations and public inclusion in reform agendas remains limited and should be improved. The involvement of civil society, stakeholders and the public in the government's policy and legislative development processes remains limited.

Public financial management

A new public finance management (PFM) strategy (2022-2026) was adopted in December 2022. The 2022 monitoring report on PFM was adopted in July 2023. The concept document of the new law on PFM and accountability has been approved and legislative preparatory work is ongoing. The new law should foresee a better linkage between the policy planning and budgeting process in the annual and medium-term. A first step was the integration of medium-

term policy priorities in the medium-term expenditure framework adopted in April 2023. In general, Kosovo's budget classification system for public finances remains consistent with international standards.

Fiscal risks contained in contingent liabilities, at both central and local levels, are still a weakness, and these risks are not identified in a systematic way. Kosovo needs to advance its planning and spending of capital expenditure by improving execution of multi-year **public investments through** a transparent appraisal of costs and benefits as a basis for investment decisions. Better linkage between the public investment programme and the Kosovo Financial Management Information System should be ensured, as well as further strengthening of the credibility and accuracy of medium-term budget revenue and expenditure plans. Budget systems should include objectives towards gender equality and gender-disaggregated data indicators with specific targets.

On **public procurement**, contract management and commitment controls remain weak. The government's electronic procurement platform is still not connected to the financial management information system in the Treasury. On **budget transparency**, citizen-friendly budgets and budget implementation reports are regularly published (*See chapters on public procurement, taxation, customs and financial control*).

The public service and human-resource management

The Law on public officials from 2020 provides for **merit-based recruitment, promotion and dismissal**, but has not been effectively implemented. In particular, a centralised system for merit-based recruitment for the professional category is lacking. In addition, the public sector has not managed to fill open vacancies effectively or in a timely manner, resulting in major weaknesses in administrative capacity. Extensive use of acting positions in the civil service, especially at senior managerial levels, as well as ineffective external recruitment procedures for senior management have instead undermined the quality of management in the institutions. The Law on public officials was amended at the end of 2022, introducing substantive systemic changes. The revised law was consequently suspended pending review by the Constitutional Court which found some of the provisions unconstitutional. There are other amendments, which, if implemented, would risk further weakening the administrative capacities of the civil service. Particularly the proposed introduction of fixed-term mandates at all managerial levels potentially puts the stability and professionalisation of the civil service at risk.

Women remain under-represented at senior level positions in the civil. Measures need to be adopted to increase the number of women in senior positions in line with the Law on gender equality.

The capacity of the MIA to manage the implementation of a **human-resources-management policy** throughout the public administration has not increased. The Department for the Management of Public Officials (DMPO), together with the human-resources-management units of institutions, should: (i) improve their coordination; (ii) provide regular training; (iii) promote the transfer knowledge; and (iv) disseminate/promote methodological tools. The data collection system through the internal human resource management (HRM) information system covers modules on civil servants categories, recruitment, remuneration, and promotion. However, this tool is not effectively used by the civil service to monitor HRM performance and the system needs further update and improvement. Transparency on HRM needs to be improved, although the public can have some information through a dedicated website for applications and appointments. Advancement in finalising the regulations on internal organisations for state institutions - including ministries- and alignment with the Law on

organisation and functioning of state administration and independent agencies (LOFSAIA) has been slow. This has further weakened human resource management and planning.

The Independent Oversight Board for the Civil Service is effectively exercising its mandate on ruling on appeals and monitoring the implementation of the legislation regarding the civil service. The planned amendments to the law governing the board curtail some of the Board's powers to review and decide on appeals and do not ensure compliance with all rules and principles governing the civil service.

A new Law on salaries helped to lay down a clearer and more transparent **remuneration framework** for all public employees. However, the Law is currently under review by the Constitutional Court. Some salary levels are not based on a thorough assessment of the job requirements due to delays in finalising the job classification and streamlining positions according to job categories. As a result, without the right conditions on human resource management, the new law, even if implemented, risks not to ensure a fair remuneration system.

There is no systematic approach to the **professional development** of civil servants. Training at both central and local levels largely depends on donor support. Despite practical guidelines for appraising the performance of civil servants and training delivered to DMPO and HRM units, the system for managing performance remains ineffective. A mandatory training programme stipulated by the Law on public officials for all civil servants was developed in 2022, but has still not been implemented.

Integrity in the public service remains a challenge. Some institutions still lack integrity plans, and the implementation of these plans is ineffective. The Law on conflict of interest and the Law on protection of whistle-blowers should be applied in a coherent and efficient manner throughout the public administration.

Accountability of the administration

Implementation of the LOFSAIA remains slow, with the MIA's capacity to lead and steer the implementation process still ineffective. There are no clear lines of managerial accountability and no clear delegation of powers between ministries and sub-ordinated bodies. As a result, there are many executive agencies subordinated to the Assembly or to line ministries but with no clear reporting procedures in place. The Law on rationalisation and establishment of accountability lines of independent agencies (first wave) and the Law on rationalisation and establishment of accountability lines of executive agencies (second wave) were adopted. In addition, the government has adopted a methodology for rationalising agencies, which should support the accountability and supervision of bodies subordinated to the executive. The system for managing the performance of agencies is not in place due to delayed finalisation of the organisational set-up of line ministries.

Recommendations from oversight mechanisms are still poorly implemented. The availability and provision of information and documents from public institutions remains a challenge. At present the system for gaining access to this information and these documents does not work well.

The legislative framework regulating access to administrative justice is being reviewed in line with international practices, and access to justice continued to be inefficient due to delays in processing cases by the basic court and the appeal court in Pristina. Fragmented legislation affects the liability of public authorities in cases of wrongdoing and **the right to seek compensation**.

Delivering services to businesses and the public

The programme to prevent and reduce administrative burden (2022-2027) is being implemented. A list of public services at central and local level has been drawn up together with analyses of how these services are to be digitalised. There has been some progress with the Assembly adopting an omnibus law covering the harmonisation of sector-specific laws with the Law on general administrative procedures. In addition, the government approved an action plan to further harmonise and align sector-specific laws with the Law on General Administrative Procedure.

The government's e-Kosovo portal further improved the online delivery of services to the public while including more services in the e-catalogue. However, data quality and reliability on this portal remains a challenge. The management of the technical structures for e-government is still dependent on donor support. In order to simplify and digitalise public services, efficient e-government processes and systems must be set up to ensure consistency in the design and maintenance of digital solutions, and to ensure the interoperability, safety and security of these solutions. The draft e-government strategy is not adopted yet. As the reforms in this area are general and touch on all areas of public administration, there is a need set up an inter-institutional coordination mechanism under the leadership of the Office of the Prime Minister.

2.2. RULE OF LAW AND FUNDAMENTAL RIGHTS

2.2.1. Chapter 23: Judiciary and fundamental rights

The EU's founding values include the rule of law and respect for human rights. An effective (independent, high-quality and efficient) judicial system and an effective fight against corruption are of paramount importance, as is the respect for fundamental rights in law and in practice.

Kosovo is **in between an early stage and some level of preparation** to apply the EU *acquis* and European standards on the judiciary and fundamental rights. **Limited progress** was made in this area. Some improvements were observed on the functioning of the judiciary, as well as on investigation and prosecution in organised crime and high-level corruption cases. Further efforts must be made to reinforce freedom of expression.

Functioning of the judiciary

Kosovo is **at an early stage** in developing a well-functioning judicial system. During the reporting period, Kosovo made **limited progress**, despite an increase in the ratio of productive court hearings, a faster pace in scheduling court hearings, and improvements in recruitment of judges and prosecutors. The human resources situation and the organisation of the administration across the judiciary remains affected by inefficiencies. The National Centralised Criminal Records System was established and has been accessible online since December 2022, enabling the public to obtain certificates of criminal records online. The government decision lowering the salaries of judges and prosecutors and the subsequent Law on salaries raised concerns with regards to the independence of the judiciary. In March 2023, the Minister of Justice and the heads of the main justice system institutions signed a joint commitment statement on justice reforms, reflecting the most important reform issues that need to be tackled. Swift follow-up is needed to achieve tangible results. In September 2022, the government handed over the file related to integrity checks of judges and prosecutors to the Assembly, which established an *ad hoc* committee to finalise the constitutional amendments and the relevant legislation towards integrity checks of senior positions within the justice system, in line with the Venice Commission Opinion of June 2022. Kosovo should ensure that the Venice Commission is re-consulted throughout the process of finalising the draft constitutional amendments and relevant legislation related to justice reform. It is crucial that

the justice reform focuses on strengthening the existing tools to safeguard the integrity, accountability, independence and efficiency of the justice system, in line with the recommendations of the Venice Commission Opinion and relevant European standards. Kosovo should ensure that the guidance of the Venice Commission on the amendments to the Law on the Kosovo Prosecutorial Council is duly incorporated in the new law. Efforts should continue to fully use the Case Information Management System, further promote the alternative dispute resolution tools, and ensure reliable statistical data. The Commission's recommendations from last year were only partially met and therefore remain valid. In the coming year, Kosovo should in particular:

- take immediate action to implement the obligations deriving from the joint commitment statement signed by the heads of justice system institutions, with specific focus on improving the integrity, accountability and efficiency of the judiciary;
- step up efforts to reduce the backlog of cases, based on a clear action plan with audits and internal control supported by a digitalisation strategy. To that end, Kosovo should reform the court and prosecution administration, and strengthen management functions in the judiciary and prosecution to ensure efficient use of resources;
- improve the capacity of judges and prosecutors to handle cases of gender-based violence in accordance with laws, the 2022-2026 strategy against domestic violence and violence against women and the new State Protocol for the treatment of sexual violence cases.

Strategic documents

The rule of law strategy and action plan continue to be implemented at a slow pace. Nevertheless, the April 2023 annual implementation report highlighted a number of positive developments, including: the establishment of the Commercial Court; an increase in the recruitment of judges and prosecutors; the advancement of the Case Management Information System in accordance with European Commission for the Efficiency of Justice (CEPEJ) requirements; the automatic assignment of cases to judges; and the strengthening of free legal aid. In terms of risks, the report mentions the lack of prioritisation of the implementation of activities, and a lack of capacities, budget and interinstitutional cooperation.

The Kosovo Prosecutorial Council (KPC) and Kosovo Judicial Council (KJC) regularly update their **strategic plans**, setting objectives for the judicial and prosecutorial systems respectively. Both Councils adopted annual action plans. During the previous reporting period, the KJC adopted a strategic plan for the efficient solving of cases of corruption and organised crime, a communication strategy for 2022-2024, and the strategic plan for access to justice for 2022-2025. It also established a committee aimed at overseeing implementation of its strategy on corruption cases. The KPC adopted the 2022-2024 strategic plan of the prosecutorial system. The prosecutorial system requires urgent reform of its administration and management structure. Kosovo should step up its efforts to ensure proper donor coordination regarding support for the judicial and prosecutorial systems.

In March 2023, a joint commitment statement and an action plan on justice reforms was signed by the Minister of Justice, the KJC, the KPC, the Supreme Court and the acting Chief State Prosecutor. The action plan provides for a series of assessments and legislative revisions to improve the systems of performance evaluation, disciplinary sanctions, recruitments and appointments, integrity checks, status, professional development, and asset declarations. Working groups have been established to cover each of these areas.

Management bodies

The KJC and KPC are the main bodies responsible for ensuring the independence and impartiality

of the judiciary and for managing the judicial system and careers of judges and prosecutors. Their composition and appointment procedures are broadly in line with European standards.

On 23 June 2022, the Assembly adopted amendments to the Law on the Kosovo Prosecutorial Council, aiming to reduce corporatism by, for example, changing the composition of the Council itself. The Venice Commission issued two opinions on the drafts, which the Assembly addressed before adopting the amendments to the draft. A number of MPs submitted the adopted amendments to the Constitutional Court for review in July 2022. On 24 March 2023, the Constitutional Court announced a judgment declaring the amending law invalid in its entirety. The Court found that the law infringed the KPC's constitutional independence on several accounts, as well as the principles of separation of powers and control and balance among constitutional bodies. Following the judgment, the law is under revision. Kosovo should ensure that the guidance of the Venice Commission on the amendments to the KPC Law is duly incorporated.

The appointment of the Chief State Prosecutor has been pending since April 2022 and is overdue. The EU and other international actors, as well as civil society, publicly expressed disappointment over the lack of fairness, transparency and merit principles in the selection process. The lengthy proceedings have caused a state of uncertainty, which detracts from the functioning of the institutions. The Assembly must increase efforts to ensure timely appointment of Council members, as there are persistent delays. The Councils should make use of available statistics for policy analysis and development.

The mass resignations of Kosovo Serb officials from public institutions in November 2022 included the resignations of Kosovo Serb judges, prosecutors and administrative staff working in the north of Kosovo. The KJC and KPC decided to postpone any decision on such resignations, pending other developments. At the same time, both Councils arranged to ensure that cases are processed, especially those requiring urgent action. Kosovo must consistently ensure that judicial proceedings are accessible in all official languages, as required in the Constitution. Additional court translators have been recruited, and the KJC is in the process of developing a platform to centralise translations in courts. However, more efforts are necessary to address the shortage of qualified translators, also with an aim to reducing the backlog of cases. Access to judgments and decisions rendered by the Serbian courts in Kosovo between 1999 and up until the integration of Serbian judges in October 2017 remains challenging.

Independence and impartiality

The Constitution and the applicable legal framework outline the principles of **independence and impartiality**. Consistent efforts are necessary to ensure respect of these principles in practice, and to effectively shield the judicial system from undue pressure and interference. The Councils should ensure prompt reaction in all cases of alleged undue interference. The government decision of November 2022 reducing the salaries of judges and prosecutors and the Law on salaries, with a similar effect, raised concerns about the judiciary's independence.

The regulatory framework provides for the **random allocation of most cases** through a case management information system, except for the cases of the newly established Commercial Court, which are not yet included. In practice, improvement has been noted. However, a number of cases remain manually assigned, creating concerns. This happens especially when a judge is unavailable or when there is a change of court jurisdiction. Court presidents need to follow the rule that any deviation from the random allocation of cases needs to be explicitly justified and transparently documented. The timely handling of several high-profile and sensitive cases remains a challenge. This is due to recourse to long adjournments, inadequate mechanisms to avoid excessive duration of cases, lack of effective remedy when trials' duration goes beyond a reasonable time, and insufficient management of cases.

During the reporting period, three prosecutors and one judge requested close protection from the police. Following the risk assessment, only one prosecutor was granted protection.

Accountability

While **codes of ethics** for judges, prosecutors and attorneys are in place, authorities must continuously ensure their effective implementation. Professional ethics is part of the initial training programme for judges, prosecutors and support staff.

The KJC established an Advisory Committee on Judicial Ethics and adopted a regulation on disciplinary proceedings against KJC Members. Both Councils continue to conduct **disciplinary procedures** against judges and prosecutors. The Councils should ensure strict and efficient proceedings in full compliance with the applicable legislation and the necessary procedural safeguards. While efforts are being undertaken, more is needed to ensure consistent and effective application of disciplinary proceedings against judges and prosecutors. For example, the KPC and KJC's communication strategy on proceedings should be further improved, training should be reinforced and the Law on disciplinary liabilities should be amended, to enable further specialisation of the investigation bodies. During the reporting period, the KJC established an electronic database to register all complaints and requests for initiation of disciplinary investigations as required by law.

By law, judges and prosecutors are obliged to **declare their assets** and gifts received, and to report any possible **conflict of interest** to the Agency for Prevention of Corruption. In 2022, all judges and prosecutors submitted the annual asset declarations on time (*see fight against corruption*).

Following the Venice Commission's June 2022 Opinion on the Concept Document on Development of the vetting process within the justice system of Kosovo, in September 2022 the government handed over to the Assembly responsibility for leading the process and the related file. The file contains, among others, draft constitutional amendments and a draft law on integrity checks. In December 2022, the Assembly established an ad hoc committee which finalised the constitutional amendments. Representatives of *Srpska Lista* do not take part in this committee, as they continue to boycott the Assembly's work. In March, the Speaker of the Assembly submitted the constitutional amendments to the Constitutional Court for review. Kosovo should fully align with the Venice Commission recommendations, including on the need to explore further alternative measures instead of a large-scale vetting. These should include, through legislative changes, the establishment of 'verification units' within the Councils, making more active use of judges' and prosecutors' asset declarations, ensuring that proper checks are made and that irregularities in asset declarations eventually trigger meaningful disciplinary actions. Integrity checks for high-level judicial institutions (in particular the Councils) could also be established. These are examples of possible measures that could effectively strengthen independence and accountability of the judicial system through targeted legislative changes. Kosovo should continue the dialogue on the next stages of the envisaged justice reform, both with the Venice Commission (including re-consulting on any constitutional and legislative changes regarding integrity checks), and with the European Commission. Consultations with all relevant internal stakeholders should also continue. Finally, any reform aimed at improving the quality and independence of the system should include mitigating measures to prevent any deterioration of efficiency across the judicial system.

Professionalism and competence

The Councils independently organise **recruitment procedures for judges and prosecutors**, based on merit-based criteria. Successful candidates are appointed by the President of the Republic for an initial three-year term, based on the proposals of the Councils. During the reporting period, the KJC initiated the recruitment process for 84 judges, including 12 positions for the Kosovo Serb

community. The President decreed 77 judges, out of which 3 are Kosovo Serb and 2 are Bosnian. Out of the reserved positions for the Serbian community, 5 positions remain unfilled. In June 2023, the President appointed the President of the Supreme Court. The KJC recruited a significant number of legal associates to support the work in the Basic Courts and certified 1 401 judicial experts. Any initiative in this regard should be properly coordinated among the relevant institutions. During the reporting period, the KPC initiated 2 recruitment processes for new prosecutors, which resulted in 29 candidates being appointed by the President. The general process of appointment and reappointment of judges and prosecutors after their initial term of office should fully respect the constitutional principles of the independent functioning of the judiciary and prosecution system.

The Councils are required to carry out **performance evaluations** of prosecutors and judges with a permanent mandate every 3 years. Both Councils have made efforts to regulate the performance evaluation process over the years. Despite this, issues remain, including the need to improve the regulatory framework's implementation and to increase managerial accountability. Further actions are needed to address poor performance by judges and prosecutors. Both Councils must ensure rightful and objective performance evaluations based on clear criteria.

A number of cases of femicide raised questions about the role of judges and prosecutors in the handling of cases of **domestic violence and gender-based violence**. As accusations of failing to protect victims and of justice actors' lack of accountability were widespread, the Ministry of Justice proposed changes to the Criminal Code and Criminal Procedure Code. These changes, however, need to ensure proper safeguards for those suspected or convicted of committing domestic violence and gender-based violence offences. The handling, prosecution and adjudication of cases is still inappropriate. Specialised prosecutors and judges have been appointed, but human resource shortages slow prioritisation. The duration of cases from when they are committed to when a verdict is reached is still long. In addition, victims are often not represented. Judges and prosecutors need further training to understand their role and assume responsibilities. In a landmark decision, in March 2023 the Constitutional Court confirmed the failure of state institutions to protect a victim of domestic violence.

Quality of justice

The Academy of Justice is responsible for delivering initial and in-service **training** for all legal professionals. The Academy's budget is insufficient, which affects the quality of human resources management and the quality of training. The total budget allocated to training initiatives at the Academy in 2022 amounted to EUR 687 156 (the budget per inhabitant was EUR 0.39, increasing from EUR 0.30 in 2020). The law on the Academy was amended in 2022, addressing the issue of independence and supervision of the Academy. Further in-service training is needed on ethics and integrity and professional skills, in particular in management, ICT/administration and the analysis of jurisprudence/case-law. Oversight and reporting lines of the Academy should be strengthened in line with European best practices.

Overall, the level of **professionalism and competence**, especially of prosecutors, continued to be a matter of concern, despite efforts to increase the available training.

On **jurisprudence**, Kosovo made further progress on the legal obligation for all courts to publish their judgments on an accessible and searchable web portal within 60 days. While there have been improvements in the publication of judgments, timely and consistent publication will need improved audit and internal control. In addition, although the Albanian-language versions are published, not all courts respect the requirement of the Law on languages to publish them in both official languages. The KJC has approved the publication of decisions of court presidents regarding complaints against judges by members of the public, as well as publication of the regular

reports on the work of judges. The prosecution offices publish relevant information on indictments on the website of the State Prosecutor within 24 hours. The Academy of Justice maintains a database of legislation, commentaries and other legal material accessible to all judges and prosecutors.

In 2022, Kosovo had 443 full-time judge positions (155 women and 288 men), 24.4 per 100 000 inhabitants and 198 full-time prosecutor positions (82 women and 116 men), 10.9 per 100 000 inhabitants. According to the European Commission for the Efficiency of Justice (CEPEJ), the European averages are 22.2 judges and 11.8 prosecutors per 100 000 inhabitants. Kosovo still has a low percentage of **female** judges and prosecutors in comparison with most other European countries. The Commercial Court, functional as of August 2022, has now 18 appointed judges, as planned in total. In July 2022, 6 754 cases were transferred to the chambers of first instance of the Commercial Court and 1 342 cases to the chamber of second instance.

The number of **professional associates** in all Kosovo courts increased significantly in 2022, including a high number of female associates. The number of legal and administrative staff directly assisting judges and prosecutors remains a challenge in terms of efficiency and quality of staff and of human resources management. Human resources planning and management need to focus on the quality of legal and administrative staff rather than sheer numbers. A number of vacancies remain unfulfilled, as the Assembly did not approve the full request of the judiciary's budget for 2023.

The **budget approved for the judiciary** for 2022 was about EUR 48.9 million (an increase of 15.6% from 2021), equivalent to EUR 27 per inhabitant. An additional EUR 17.9 million were allocated to the probation and correctional services.

For **e-justice tools**, the Court Management Information System (CMIS) is implemented in almost all courts, including the Supreme Court, resulting in improved efficiency, accountability and transparency. In the recently established Commercial Court it is not yet in place⁴. Some courts still apply a manual registry of cases, although only for internal purposes and not as a parallel case registration system. Manual registration books are no longer allocated and will eventually be eliminated. The CMIS is planned to remain in a transition phase until May 2025, the ultimate aim being to ensure the system's optimal usage in all courts and prosecution offices. The KJC is in the process of developing an electronic file system for judges.

For the prosecution, implementing the CMIS remains a challenge. While formally all Basic Prosecution Offices are using the system, certain cases are still handled manually. Based on a decision of March 2023, the KPC introduced a new ICT/administration methodology to eliminate the manual handling of cases. Consistent use of the system should be encouraged by the management to ensure that the system is applied systematically and that the data entered is accurate. This is of particular importance in ensuring the reliability of the statistical data obtained automatically on the performance of the judiciary and prosecution (in line with CEPEJ recommendations and methodology). Administrative staff need further training to ensure consistent use and accuracy of data.

As a positive step, the National Centralised Criminal Records System (NCCR) was established and is accessible online since December 2022, enabling the public to apply and obtain certificates of criminal records online. However, the KJC and the courts need to ensure the system's sustainability, including the verification of data entered into the CMIS, so that only verified and

⁴ The CMIS is in use in the three tiers of the court system (Basic Court, Appellate Court and Supreme Court). One of the system's main features is the automatic assignment of cases to judges, based on predefined criteria approved by the Kosovo Judicial Council on 29 January 2020. The KJC amended criteria and introduced new ones, which have applied since 15 February 2023.

complete data about convictions is transferred to the NCCR. Once data quality is improved, the two IT systems will become interoperable. While the Law on NCCR is still with the Assembly, NCCR operates based on a regulation deriving from the Law on the Kosovo Judicial Council. There is a tracking mechanism for high-level corruption and organised crime cases, which currently includes 88 cases. (*See section on the fight against corruption*)

The **mediation system** is implemented by the KJC and KPC and has been operational since 2008. There is still a need for a monitoring and evaluation system to assess the overall impact of mediation services, the allocation and acceptance procedures, and the impact on the reduction of pending and backlog of cases. Both Councils have adopted internal regulations and protocols to support the mediation system, but they struggle with proper budget allocation. In 2022, the Basic Courts referred 5 887 cases to mediation and solved 2 426 cases, slightly lower than in 2021 (3 119 cases referred to mediation and 2 472 cases solved).

In 2022, the State Prosecutor and the prosecution offices solved 1 769 cases using alternative procedures, a decrease compared to 2021 (2 153). The number of licensed mediators remained the same, at 190 (67 women, 123 men), of whom 14 were from the Serb-majority municipalities. The mediation system needs strengthening; this can be achieved through full implementation of the Law on mediation and through the allocation of a sufficient budget. The Ministry of Justice has adopted two administrative instructions to improve the liberal professions system and increase the overall efficiency of the judicial system. The KJC published a protocol for referring appropriate civil cases to mediation.

Efficiency

The efficiency of the judicial system slightly improved. In 2022, the courts of first instance for civil/commercial, administrative and criminal cases received 63 229 new cases and the clearance rate was 76.06% (up from 70% in 2021). During 2022, the Supreme Court received 1 425 new cases, while the court solved 1 630 cases or 114% (99% in 2021). During 2022, the Court of Appeals received 13 075 new cases and solved 11 588 cases or 88% (71% in 2021). Out of 220 cases filed at the Constitutional Court in 2022 and 145 cases carried over from the last 2 years, the Court ruled in 184 cases. More challenging are the number of old cases (pending for over three years). At the beginning of 2022, there were 49 110 such cases, while at the end of 2022 the number stood at 58 240. As for the number of civil, commercial, administrative and other pending cases (first instance), during 2022, 144 014 cases, or 8 cases per 100 inhabitants, remained unresolved (up from 7 per 100 inhabitants in 2021). For the number of civil, commercial, administrative and other pending cases in appeal per 100 inhabitants, there were 15 050 cases during 2022, or 0.8 cases per 100 inhabitants (similar as in 2021).

In April 2023, the KJC approved a regulation for the work standards of judges, with the aim of increasing efficiency. The capacity of the judiciary and prosecution to handle cases in a timely manner remains limited, particularly in high-level corruption cases, with numerous defendants and complex evidence. Court adjournments could be avoided if the trial panels were more assertive in using the tools to sanction defendants and other parties for unjustified absences from hearings. There is, however, a continued increase in the percentage of productive court hearings (hearings held as scheduled and where progress is made towards adjudication) and an increased pace in the scheduling of court hearings.

The time taken for judgments (i.e. the average time from filing a court case to receiving a judgment) remains a cause for concern as this overall takes far too long. In 2022, the disposition time was 1 396 days for civil cases in first/second instance, and 953 days for administrative cases in first/second instance (in 2021 the figures were 1 339 and 426 days respectively). The average time for solving criminal cases in the General Department was 673 days, while for the Penal Crime

Department the average time was 740 days. For the Special Department the figure was 1 037 days.

These delays in proceedings, in combination with a preference for detention over alternative measures, have led again to cases of overly **long pre-trial detention**. During the reporting period, the Ombudsperson continued to receive complaints against courts and prosecutors over allegations of unjustifiable delays in judicial proceedings. The authorities need to consider introducing an effective judicial legal remedy to address such delays, including compensation. The authorities also need to ensure proper managerial follow-up on the deadlines, including reacting to delays with proper and timely managerial action.

To further improve the quality and efficiency of the judicial system, judges, prosecutors and support staff should make full use of the CMIS and related training. In addition, monitoring and evaluation of courts' activities and giving judicial systems adequate funding and qualified human resources need to be a priority. The revised Criminal Procedure Code, which entered into force in February 2023, addresses shortcomings in criminal proceedings that detracted from the functioning of the justice system. The Code allows online court hearings under exceptional/objective circumstances (epidemics and natural disasters) and codifies the practice allowing parties to agree on considering previous testimonies as read in the records. The **sentencing policy** on organised crime and corruption continued to be erratic. Courts are still not systematically implementing the Supreme Court's 2018 sentencing guidelines, even though the Court established a committee to monitor its implementation.

The KJC designed and developed advanced statistical reports using the CMIS. These reports include CEPEJ indicators for measuring and evaluating judges and court performance. They provide a wide range of data, including the number of pending cases, age of pending cases, number of resolved cases, length of procedures and number of sessions held per solved cases. Continuous efforts are needed to produce and analyse reliable **statistical systems** and to use the findings for management and policy-making purposes.

Domestic handling of war crime cases

The government has put forward measures to strengthen domestic institutional mechanisms dealing with war crimes. The amendments to the new Criminal Procedure Code on the applicable procedure of trial *in absentia* for war crimes are in line with Venice Commission recommendations.

Kosovo continued to implement its war crime strategy, although with limited results given the lack of resources and lack of effective international and regional cooperation. In 2022, the Kosovo Police arrested 5 individuals suspected of war crimes and initiated 19 new investigations. The number of war crime-related cases adjudicated during 2022 was 15. Out of these cases, most judgments were later either sent back for retrial or significantly modified in appeal. Significant obstacles remain in the proper adjudication of war crime cases. More broadly, concerns remain about the willingness to hold former Kosovo Liberation Army members accountable in war crimes cases.

During the reporting period, the Kosovo Police arrested five individuals suspected of war crimes. The relevant court issued a decision ordering detention on remand for all five suspects. The Special Prosecution Office of Kosovo (SPRK) started investigations against 62 people, expanded investigations against 39 and re-started investigations against 71. Seven cases were solved. Also, the SPRK indicted four individuals on war crime charges, while three were convicted based on indictments filed before 2022.

Despite the increase in assigned prosecutors (from three to four), the War Crimes Department of the Special Prosecution Office continues to struggle in processing the workload. There are over

1 000 war crimes cases pending, mainly inherited from the European Union Rule of Law Mission in Kosovo (EULEX) in 2018. There is a need for continuous training and support staff, in particular on cooperation between police and the prosecution. Mutual legal assistance between Kosovo and Serbia in war crimes cases remains difficult. Cooperation with the UN International Residual Mechanism for Criminal Tribunals in The Hague is good.

The Kosovo Specialist Chambers and Specialist Prosecutor's Office continued to investigate and prosecute violations of international law. During the reporting period, pre-trial preparations in two cases were completed and trial proceedings started, including the case against the then President of Kosovo and another case involving a former Kosovo Liberation Army member. In one other case, the Chambers found a former member guilty of torture, arbitrary detention and murder and sentenced him to 26 years of imprisonment. The verdict was appealed. It is essential that Kosovo institutions provide full cooperation with the Specialist Prosecutor's Office and Specialist Chambers, enabling them to fulfil their mandate in full independence, without any outside interference. Kosovo has put in place a fund that dispenses legal aid to the accused at the Kosovo Specialist Chambers, as well as financial support to their families, without any proof of financial needs. However, no financial support has so far been made available for victims who have been found by the Kosovo Specialist Chambers to have suffered as a result of war crimes and crimes against humanity. The Kosovo Specialist Chambers has issued a first reparation order to victims. It is therefore not clear how the victims will be compensated in the absence of funds from the accused or a fund by Kosovo for this purpose. It is key that Kosovo addresses this inequality of treatment.

The Government Commission on Recognition and Verification of the Status of Survivors of Sexual Violence during the Conflict continued its work. Since the beginning of the process in February 2018, this Commission has received 1 939 applications. Of these, 1 473 applicants had their status recognised (1 402 women and 71 men), while 283 requests were rejected (247 women and 36 men). During the reporting period, the Commission received 249 applications: 356 applicants had their status recognised (332 women and 24 men) while 50 applications were rejected (43 women and seven men). As of February 2023, the Commission could not accept new applications due to the deadline set by the law. Although the government approved the request to extend the deadline and the respective draft, as of March 2023 this is still pending approval by the Assembly. The draft law approved by the Kosovo government makes provision for extending the Commission's mandate by another 3 years despite appeals by civil society calling for an indefinite mandate. The law's timeframe still excludes those who suffered conflict-related sexual violence after 20 June 1999. The government assigned 14 April as a memorial day for survivors of sexual violence during the war as an acknowledgment of their pain and suffering.

The unresolved fate of **missing persons** who disappeared during the conflicts of the 1990s remains a key issue to be solved in the Western Balkans. The Kosovo authorities conducted 16 exhumations and officially identified 6 people in 2022. As of April 2023, there were still 1 621 missing persons as a result of the conflict.

The adoption of the **transitional justice strategy** is still pending. The Assembly adopted the law to establish an Institute for crimes committed during the war in Kosovo. This initiative has replaced the initiative on a truth and reconciliation commission. The Government Commission on Missing Persons within the Office of the Prime Minister took over the leading role in the working group to amend the Law on missing persons. Civil society remains actively engaged in truth-seeking, reconciliation and memorialisation initiatives.

In the context of the EU-facilitated Dialogue, the Parties agreed on and endorsed a joint Declaration on Missing Persons at a High-level Dialogue meeting in Brussels on 2 May 2023, committing to improving Kosovo and Serbia's joint efforts towards resolving the outstanding cases

of missing persons from the Kosovo conflict. Work is ongoing to establish the Joint Commission that will monitor the implementation of this Declaration. During the reporting period, a number of **field operations and exhumations** were carried out in Kosovo. Four of them included the participation of forensic experts from Serbia, which is a positive development. There has been no session of the ICRC-led Belgrade-Pristina Working Group on Missing Persons since April 2021, as the Kosovo delegation refuses to hold meetings until the Serbia delegation changed its head. Nonetheless, lower levels of the mechanism (sub-working group on forensic issues analytical team and one meeting on unidentified bodies) have continued to work on specific cases and sites. Both the Kosovo and Serbia delegations have shown interest in resuming excavations at the Stavalj mine complex in summer 2023. From June 2022 until March 2023, the combined efforts of EULEX and local forensic experts resulted in 34 field operations and 12 exhumations. Some 12 sets of remains were recovered, representing a minimum of 12 individuals. Eight individuals were identified, of which three were on the list of missing persons. A total of 21 individuals were handed over to the families and 74 DNA samples were sent for analysis.

Fight against corruption

Kosovo is **in between an early stage and some level of preparation** in fighting against corruption. During the reporting period, Kosovo made **limited progress**. Kosovo adopted a new regulatory framework on auditing political parties and campaign financing. A lot remains to be done to implement the recently adopted anti-corruption legislation, including the Law on the Agency for Prevention of Corruption, the Law on asset declaration and legislation on political parties and campaign financing. The legal framework on criminal confiscation is fairly advanced, including the Law on extended powers of confiscation. However, the law remains largely unimplemented and the value of finally confiscated assets remains low. The Law on the State Bureau for Verification and Confiscation of Unjustified Assets, which aims to introduce a system of non-conviction-based confiscation, is pending before the Constitutional Court. Sustained efforts are needed to have more proactive investigations, final court decisions and final confiscation of assets. Accessory punishments prohibiting the exercise of public functions or other professions, in particular for those convicted of corruption-related offences, are not sufficiently enforced. Despite improvement in the performance of the Agency for Prevention of Corruption, the anti-corruption preventive tools laid down in the legislation are not yet fully implemented, in particular the adoption of integrity plans in public institutions, legislation ‘proofing’, risk assessments, and the practical use of whistle-blower procedures in the public and private sectors. Overall, corruption remains an issue of serious concern. There is a need for a robust criminal justice response to high-level corruption cases. In this regard, the removal of the Head of the Kosovo Police Special Investigative Unit is a cause for concern, sending a negative signal about Kosovo’s commitment to fight corruption. The Commission’s recommendations from last year were only partially met, and therefore remain valid. In the coming year, Kosovo should in particular:

- further strengthen the capacity of the Agency for the Prevention of Corruption in terms of staff and expertise, to ensure it can effectively carry out its mandate; relevant institutions should adopt and implement integrity plans and whistle-blower internal procedures (including in the private sector);
- further strengthen the efficiency of the criminal confiscation regime; promote systematic use of extended and ‘regular’ confiscation by criminal prosecution and police; increase the level of specialisation/expertise in seizure and confiscation of assets; establish a confiscation fund;
- further strengthen law enforcement and prosecution as well as multidisciplinary cooperation and a target-based approach to ensure proactive investigations, and effectively

combat high-level corruption cases; systematically conduct financial investigations during the criminal investigations; ensure the security of judges and prosecutors.

Track record

Kosovo continued to make efforts on its track record of **investigations, prosecutions and convictions** in the fight against corruption. However, more political will and resources are necessary, in particular to tackle high-level corruption. These efforts should continue, and the Commission will continue to monitor development. By the end of the reporting period, the track record mechanism for visa liberalisation, established in 2015 to monitor and coordinate **high-level corruption and organised crime cases**, included 88 cases in total. By that time, there had been 75 indictments: 33 organised crime cases (involving 320 individuals) and 42 corruption cases (involving 310 individuals). Of these, 22 cases ended in convictions/partial acquittals, leading to the conviction of 22 individuals for corruption-related offences and 66 for organised crime-related offences. At present, the track record mechanism includes only the cases selected in the context of visa liberalisation benchmarks. However, in the future it is expected that the track record will cover all high-level cases relating to organised crime and corruption.

During 2022, the Agency for Prevention of Corruption handled some 619 cases under preliminary investigation for suspicion of corruption-related offences. Of these, 267 reports were submitted to prosecution and police to initiate criminal proceedings, including 4 cases delegated to other institutions (Police Inspectorate, Medical Inspectorate and Education Inspectorate). In addition, 6 cases were transferred to competent administrative bodies with a request to initiate disciplinary proceedings. 267 cases were terminated, and 65 cases are ongoing.

In 2022, 4 687 of the 4 748 officials (98.72%) obliged to submit regular annual **declarations of assets** did so on time, while 61 (or 1.28%) officials did not meet the deadline (51 officials declared after the deadline, and 11 did not declare at all). The Agency for Prevention of Corruption performed a full assets control procedure for 973 officials. The checks were mainly done through random selection, but for 41 officials based on the Agency's own information or reports by members of the public. As a result of the full control of assets, around 180 officials are being investigated for having made a false declaration or for failure to declare assets. 178 cases were referred to prosecution and police for further investigation. There were 38 court decisions in 2022, of which 37 convictions and a single acquittal. Shortcomings persist in the system for declaring and assessing the origin of property belonging to senior public officials. The Agency's staffing, IT resources and training capacities should be increased. An electronic declaration system came into operation, simplifying the declaration and submission process and increasing transparency and accuracy in monitoring and verification. Cooperation and exchange of data should be strengthened with the police, the Tax administration, the Financial Intelligence Unit, the cadastral registry and municipal authorities.

In 2022, the Agency handled 233 cases of suspicion of **conflicts of interest**. The number of requests of institutions submitted to the Agency for advice and opinion on conflicts of interest doubled from the previous year. The Agency provided advice and opinions in 129 cases. Conflict of interest was avoided in 49 cases, while 34 cases resulted in non-existence of conflict, a single case was forwarded to the competent court, and 4 cases were referred for preliminary investigation.

In 2022, the Agency handled 218 cases related to the monitoring and prevention of corruption in public procurement activities. These resulted in 211 opinions being issued, out of which 162 opinions were respected and 49 were not. Some 33 cases were submitted for preliminary

investigation, and 7 cases terminated.

Despite a fairly advanced legal framework being in place, criminal **asset confiscation** remains low. Even though the 2019 Law on extended powers of confiscation is in force, it is not being consistently applied. Local coordinators for confiscation matters were appointed in the prosecution offices. Confiscation, as a means of targeting the economic interests of criminal organisations, remains underutilised by prosecutors, who remain the weakest link in this regard. The confiscation of criminal assets should become a strategic priority in the fight against organised crime, terrorism and high-level corruption in the country.

In 2022, the value of assets frozen, sequestered and confiscated amounted to about EUR 21.4 million (EUR 14 million in 2021) while the value of final confiscated property was around EUR 670 000 (EUR 770 000 in 2021). The Agency for the Management of Sequestered and Confiscated Assets (handling more than EUR 1.5 million in various assets in 2022) continues to struggle to manage the assets in its portfolio. This is partially due to the courts not allowing the anticipated sale of assets pending proceedings and partially due to the Agency's set-up. The value of assets sold in 2022 was about EUR 36 000, which is less than in 2021 (about EUR 52 000). The government approved the concept document on the establishment of a confiscation fund, which would allocate confiscated funds in part to law enforcement, prosecution and courts, and in part to social projects.

Kosovo adopted a new regulatory framework on **auditing political parties and campaign financing**. The aim of the framework is to ensure complete reporting, timely disclosure, meaningful oversight and accountability for irregularities. The power to conduct the auditing was shifted from the Assembly to the newly established Office for Registration, Certification and Financial Control of Political Entities under the Central Election Commission (CEC). This Office has operational independence in performing monitoring and financial control of political entities. It has powers to receive financial annual reports and campaign funding reports, to hire external auditors to conduct the auditing, and to issue annual reports which form the basis for Parliament's allocation of public funds to political entities. During the reporting period, the Chairman of the CEC appointed the Director of the Office. In recent years, the Assembly has not regularly conducted audits, and the CEC applied selective sanctions, which resulted in incomplete oversight of campaign finance. There is limited awareness and compliance with campaign finance rules. Most political entities did not establish internal financial control rules, and numerous sources of income and expenditures remain unreported.

Institutional framework

Interinstitutional coordination and cooperation between preventive anti-corruption institutions and law enforcement entities are key to implementing anti-corruption legislation.

Prevention measures

The competences of the **Agency for Prevention of Corruption** include the verification and control of asset declarations and gifts, dealing with whistle-blowing and the prevention of conflicts of interest. A law reorganising the competences of the former Anti-Corruption Agency was adopted in July 2022 with a view to strengthening its mandate. Specifically, the Agency has powers to implement tools such as corruption proofing, corruption risk assessment and integrity plans in public institutions, which should be adopted without delay. The Agency also has powers to initiate administrative investigations and impose sanctions. Its performance overall reflected progress as it became more operational and conducted an increased number of inspections. The Agency also launched an awareness-raising campaign on its mandate and competences. However, it is essential to strengthen its staffing capacity and expertise, and to increase its budget in order to fully and effectively fulfil its mandate and fulfil its new powers,

including checking asset declarations and implementing the new anti-corruption prevention tools.

There is a continuous need to promote the drafting and adoption of **integrity plans in the public service** as a tool for preventing corruption and ensuring discipline, including at municipal level. Under the new law on the Agency, central administration bodies, independent agencies and municipal authorities are required to adopt integrity plans and appoint the official responsible for managing the integrity plan's preparation and implementation. This should be implemented without delay.

Law enforcement

Kosovo has functional **specialised institutions** to fight corruption, including the National Coordinator for Combating Economic Crimes within the prosecution system, the Corruption and Financial Crime Department in the Special Prosecution Office and the relevant police directorate. Law enforcement authorities would benefit from additional resources to improve their operational capacity to conduct complex investigations. Cooperation between police and prosecution must be strengthened to ensure proactive investigations and to implement a joint target-based approach to combating high-level corruption cases. Financial investigations need to be launched systematically and in parallel to the main investigation. The use of special investigative measures, when applicable, should be strengthened. Measures and mechanisms to ensure the protection of judges and prosecutors from interference and pressure should be effectively implemented.

There are concerns that the accessory punishment of prohibition from exercising public functions or other professions (as provided for in the Criminal Code and the Law on execution of criminal sanctions) is not being applied, in particular for those convicted of corruption-related offences. There are inconsistencies and a lack of standardised practice in enforcement, and staff (administrative staff, judges or prosecutors) lack willingness or understanding of the concept of accessory punishments and of their responsibilities when applying such punishments.

The Kosovo Police's Special Investigation Unit, the successor of the Special Anti-Corruption Task Force abolished in 2020, continued to operate with the same chain of command and under a temporary legal mandate. The government needs to ensure its sound legal and organisational structure and that it cooperates effectively with the Prosecution Service. The ongoing reform of the police's organisational structure should ensure that the Special Investigation Unit maintains sufficient investigation capacity to efficiently fulfil its functions. The Head of the Unit was removed from this position in order to be appointed to another post this year. This change is a cause for concern. It is essential that the integrity of ongoing investigations is preserved and that the Kosovo Police's investigative capacities on anti-corruption are independent and impartial.

Following the restructuring of the Special Prosecution Office in 2020, its capacity increased with the recruitment of prosecutors, professional associates and translators. It is essential to increase the level of specialisation and expertise on prosecuting high-level corruption and financial crimes. In 2022, the total number of indictments was 236 (147 in 2021), while the total number of sentencing decisions was 29 (122 in 2021). A new law on the Special Prosecution Office is pending before Parliament. The law clarifies the scope of jurisdiction between the Special Prosecution and the Basic Prosecution on the adjudication of the investigations and prosecution.

The special departments in the Basic Court of Pristina and the Court of Appeals, which handle all cases of the Special Prosecution Office, solved 85 cases in 2022 (42 cases by the Basic Court

and 43 by the Court of Appeals) and an additional 45 cases in 2023 (25 cases by the Basic Court and 20 cases by the Court of Appeals).

Legal framework

Owing to status-related issues, Kosovo is not party to international anti-corruption conventions such as the UN Convention against Corruption and the Council of Europe's Criminal Law Convention on Corruption. Nevertheless, Kosovo's legislation is generally aligned with these instruments and in line with relevant European standards.

In July 2022, Kosovo adopted new **anti-corruption legislation**: the new Criminal Procedure Code, the Law on the Agency for Prevention of Corruption and the Law on asset declaration. The new law on the Criminal Procedure Code aims at strengthening criminal proceedings. The anti-corruption legal framework introduces, among other novelties, the suspension of officials from duty as a preventive measure in case of obstruction of proceedings. The new Law on the Agency for Prevention of Corruption strengthens the Agency's mandate on the prevention of corruption and in the implementation of the Asset Declaration Law, the Protection of Whistle-blowers Law and the Prevention of Conflicts of Interest Law. The Agency has been given new tools to prevent corruption; these include corruption proofing, corruption risk assessments and monitoring of integrity plans in the institutions. The new Law on asset declaration adds new categories of public officials obliged to declare assets. It also includes more complete asset information and data to be declared by officials, increases the number of officials under the Agency's full control and introduces an online system for asset declarations. Effective implementation remains largely pending.

The legal framework on criminal **confiscation** remains fairly advanced. The Law on the State Bureau for Verification and Confiscation of Unjustified Assets, which aims to introduce a system of non-conviction-based confiscation, is pending before the Constitutional Court. Such an advanced system requires clear safeguards against possible misuse and abuse and should respect the principles enshrined in the Constitution and fundamental rights. Moreover, such a system should not replace or undermine the application of the existing legal framework on criminal confiscation, including the Law on extended powers of confiscation.

The legal framework on **money laundering** is still not sufficiently implemented. Although the law does not require proof of a predicate offence to retain a conviction, many prosecutors and judges continue to consider a predicate offence an essential part of money laundering offences. As a result, many stand-alone money laundering cases are dismissed either by the prosecution or by the court. The legislation on prevention of money laundering and combating terrorist financing needs to be fully harmonised with the 4th and 5th EU Directives and recommendations of the Financial Action Task Force (*See also Chapter 4 on the free movement of capital and the section on organised crime*).

The legal framework on the prevention of **conflicts of interest** is in place since 2018 but still needs to be fully implemented. The Agency for the Prevention of Corruption continues to try to identify officials holding multiple positions in breach of the law. Kosovo has no specific legislation on lobbying.

The Law on the **protection of whistle-blowers** aims to align the national framework with the EU legislation. Implementing legislation determining the procedure for receiving and handling whistle-blowing cases is in place. Strengthened whistle-blowing mechanisms and protection requirements still need to be implemented in the public and private sectors.

The Assembly adopted amendments to the **legal framework on political parties and election campaign financing** in line with the Venice Commission Opinion. These need to be

implemented promptly to ensure more accountable, transparent and enforceable party and campaign financing. One remaining element missing in the law is the requirement for interim reporting of the income and expenditure of contestants during the campaign period.

Strategic framework

The rule of law strategy and action plan include specific measures to improve the institutional framework against corruption, as well as the assets declaration system and regulations on accepting gifts. Since 2018, Kosovo has no anti-corruption strategy in force. The government established a working group to draft a strategy and action plan against corruption. The Judicial Council adopted a 2022-2025 strategic plan for the efficient resolution of cases of corruption and organised crime.

Fundamental rights

In general, the legal framework guarantees the protection of fundamental rights and is in line with European standards. During the reporting period, Kosovo adopted the Law on the Kosovo Property Comparison Verification Agency and set up a protocol for the treatment of sexual violence cases. The capacity of the authorities to monitor implementation of fundamental rights policies and legislation has improved and the rate of implementation of the Ombudsperson's recommendations increased. The Parliament adopted the Law on prevention and protection from domestic violence, violence against women and gender-based violence. Despite these positive developments, additional efforts are needed to enforce fundamental rights effectively. The government's capacity to streamline and oversee fundamental rights issues requires further improvements, including in coordinating mechanisms to protect human rights, gender equality and non-majority communities, at both central and local levels. Fundamental rights issues need to feature higher on the political agenda and consequently more human and financial resources should be allocated to relevant institutions. Kosovo must continue its efforts to ensure equal access of persons with disabilities to institutions, quality services, employment and education. More efforts should be made to implement the process of verification of university diplomas from the University in Mitrovica North and extend this process to high school diplomas, to ensure language compliance in both official languages and to ensure that the representation quota for all non-majority communities is respected in public institutions. There was no progress on implementing the Constitutional Court decision on the Dečani Monastery.

The Commission's recommendations from last year were only partially met and therefore remain valid. In the coming year, Kosovo should in particular:

- reinforce the protection of women's civil and fundamental rights by adopting the Civil Code, by implementing the Law on prevention and protection from domestic violence, and by strengthening the implementation of the Law on gender equality and the strategy on gender-based violence;
- strengthen the protection of the rights of the child by adopting all the sub-legal acts of the Law on child protection as a matter of urgency and reinforcing capacities to implement the law;
- improve implementation of legislation on the rights of non-majority communities, adopt the strategy for protection and promotion of the rights of communities, adopt the law on cultural heritage and the law on religious freedom, re-establish relations with the Serbian Orthodox Church and implement the Constitutional Court decision on the Dečani Monastery.

International human rights instruments form an integral part of Kosovo's legal framework and are directly applicable, as provided for in the Constitution. Kosovo continued to align its

legislation with these instruments and maintained its practice of ad hoc reporting. Implementing human rights legislation and overseeing and coordinating existing human rights mechanisms remain a challenge. In general, human rights issues still do not feature high enough on the government's political agenda.

The 2021-2025 programme for the protection and promotion of human rights and fundamental freedoms and its action plan are the main human rights instruments. The two main mechanisms responsible for monitoring the implementation of the programme are: (i) the Inter-Institutional Coordination Group on Human Rights led by the Deputy Prime Minister for Minority Issues and Human Rights; and (ii) the Office for Good Governance within the Office of the Prime Minister (OGG/OPM). In March 2023, the OGG/OPM issued several monitoring reports, including on the implementation of the human rights programme. Some progress in implementation was noted, with activities without progress predominantly relating to health, well-being and environmental protection. Furthermore, a human rights indicators framework was developed for the first time for each mandatory right laid down in the Constitution and in legally binding international acts.

The government's Inter-institutional Coordination Group on Human Rights held its constitutive meeting in June 2022 but met only once more in June 2023. The aims of the DPM for Minority Issues and Human Rights, the Assembly's Committee on Human Rights and the Council for Democracy and Human Rights under the Presidency, are to effectively implement and streamline human rights policies and legislation. In practice, there seems to be insufficient synergy between them. The OGG/OPM was active in trying to fulfil its broad mandate, but continuously lacks appropriate human, financial and administrative resources, while its performance remains reliant on donor support. The Assembly needs to take a more proactive role in overseeing the implementation of human rights legislation.

The Ombudsperson Institution continues to play a significant role in the **promotion and protection of human rights**. During the reporting period, an electronic system for monitoring implementation of its recommendations was established, as well as a joint team for their coordination and monitoring. The latter includes the OGG/OPM, the Ombudsperson Institution and the Gender Equality Agency. After a lengthy delay, the process to select the fifth deputy Ombudsperson from the non-majority communities was finalised in June. The Parliament also finally approved the Ombudsperson's 2021 annual report in January 2023. More systematic tabling of review of the annual reports and selection of deputies in the Assembly are needed to avoid such delays. Although the institution has progressively expanded its responsibilities, it was not provided with matching financial and human resources. Nevertheless, the Ombudsperson still enjoys broad public trust. In 2022, the Ombudsperson received 1 595 complaints, of which 672 were opened for investigation, a level comparable to the previous year. The institution issued 646 recommendations. The total rate of implementation stands at 23%, while 46% of recommendations issued in 2021 had been implemented as of the end of 2022. This denotes increased responsiveness on the part of Kosovo's institutions, which needs to be further strengthened. The institution has taken a proactive approach to addressing complaints from residents of the north of Kosovo regarding the expropriation of privately owned land.

The Kosovo authorities continue to show commitment to preventing **torture and ill-treatment**. The National Preventive Mechanism (NPM) operates under the umbrella of the Ombudsperson Institution. In 2022, the National Preventive Mechanism conducted 62 unannounced visits in places of detention, including psychiatric and social care institutions (the same number as in 2021) and published 8 reports. Overall, it addressed 38 recommendations to the authorities (against 11 in 2021); 10 were already fully or partially implemented. The

NPM enjoyed very good cooperation with the institutions visited but reported one case where it was denied access. No case of torture or mistreatment of prisoners was reported during the reporting period. There were reports of alleged ill-treatment during the arrest of four Kosovo Serbs in relation to their alleged involvement in the violent events of 29 May in Zvečan/Zvečan. The Police Inspectorate registered 14 cases of suspected ill-treatment by police officers (11 the previous year); all cases were referred to the prosecution. One police officer was arrested and suspended. The Ombudsperson received 6 complaints against officers of the Kosovo Police over excessive use of force; which led to the opening of 3 investigations.

While the **prison system** broadly complies with the UN Standard Minimum Rules for the Treatment of Prisoners and with the European Prison Rules, some challenges remain. Further efforts are needed to safeguard the rights of prisoners, especially among women and girls and non-majority groups. The Law on the Correctional Service and the Law on the execution of criminal sanctions were adopted in July 2022. Under the latter, the official for prisoners' rights within the Ministry of Justice's Office for Human Rights is tasked with monitoring their protection. A number of regulations are yet to be adopted to ensure implementation of these laws. The Institute for the Treatment of Persons (prisoners) with Special Needs was established on the premises of the Dubravë/Dubrava correctional centre. Several management posts in the Correction Service remained vacant or with an acting manager, hampering the functioning of this service. A total of 3 163 alternative measures to detention were imposed during the reporting period, about half of which for juveniles. No overcrowding of existing facilities was reported by the NPM. Efforts to improve drug treatment programmes and prison medical facilities are ongoing. The agreement for transferring prisoners from Denmark to Kosovo is pending ratification by the Assembly of Kosovo.

On **personal data protection**, the laws in force are broadly in line with the EU General Data Protection Regulation and the Law Enforcement Directive. The Information and Privacy Agency oversees the implementation of the Law on personal data protection and the Law on access to public documents. The Agency has shown itself to be independent and continued to improve its capacity. It further strengthened the legal framework by adopting regulations and guidelines on the organisation, systematisation and operational procedure for controllers and inspections. Although restrained by limited budget and human resources, the Agency is processing complaints on access to public documents and on data protection in an independent and efficient manner. During the reporting period, the Agency conducted 44 inspections on its own initiative and 51 inspections based on complaints, and issued 66 decisions on violations of the Law on personal data protection, maintaining similar standards as the previous year. It issued 8 fines. Challenges remain concerning the implementation of the Agency's decisions by public and private institutions. On **access to information**, legislation is broadly in line with EU standards. The Agency needs to step up its capacity to monitor transparency levels among public institutions. In 2022, the Agency reported that public institutions received a total of 4 481 requests for access to public documents (7 561 in 2021). Among them, 154 were rejected (95 in 2021).

On **freedom of thought, conscience and religion**, there are legal provisions, mainly in the Constitution and the Law on freedom of religion, intended to promote religious tolerance and provide for the separation of religious communities from public authorities. A new draft law on religious freedom underwent consultation and was reviewed by the Venice Commission. It is expected to address one important gap by enabling registration of religious communities as legal entities. However, while the government adopted the draft law in January 2023, it remains pending before Parliament. Relations between the government and the Serbian Orthodox Church remained poor. This year marked the seventh anniversary of the Constitutional Court

decision confirming the ownership rights of the Visoki Dečani Monastery of the Serbian Orthodox Church over a portion of land surrounding the monastery. The decision has still not been implemented and this should be done without further delay.

The Kosovo Assembly approved a working definition of antisemitism as defined by the International Holocaust Remembrance Alliance. The Jewish community does not have a synagogue. However, the construction of a Jewish Cultural Centre in Prizren began in 2022 with the support of the government. Efforts need to be made to promote Holocaust remembrance, education and research.

Freedom of expression

The media environment in Kosovo remains lively and pluralistic, and the legal framework is mostly in line with European standards. In this area, Kosovo has **some level of preparation**. **Limited progress** was made in addressing the recommendations of the previous report. Concerns remain regarding physical attacks and threats, public smear campaigns and hate speech directed against journalists. Not all threats against journalists and media are reported to the authorities, although 2022 noted a slight increase in number of reported cases. Particularly concerning is freedom of expression in the north of Kosovo, including with regard to self-censorship and the security of journalists and media professionals. There was no progress on amending the Law on the radio and television of Kosovo or on amending the Law on the Independent Media Commission to align it with the EU's Audiovisual Media Services Directive. This process needs to be transparent and inclusive, with involvement of media actors and civil society. The lack of financial self-sustainability leaves the media vulnerable to political and business interests. This is further amplified by the lack of information and data on the final beneficiary of media ownership – provisions on this are still not enshrined in law. The decision to withdraw the business licence of a major private broadcaster has raised serious concerns. The Commission's recommendations from last year were not met and therefore remain valid. In the coming year, Kosovo should in particular:

- improve the institutional cooperation and response of key institutions to attacks against journalists and other forms of undue pressure, including by enhancing the prosecutorial, judicial and law enforcement authorities' capacity to handle cases concerning the right to freedom of expression and information;
- review the Law on radio and television to ensure sustainable funding preserving its independence; review the Law on the Independent Media Commission to update its powers, including regarding audiovisual media, in line with the Audiovisual Media Services Directive;
- increase the availability of data on the audiovisual market, especially on media ownership.

Intimidation of journalists

In 2022, the Association of Journalists in Kosovo (AJK) reported 33 cases of intimidation, threats and attacks against journalists and other media professionals, an increase on the 29 cases reported in 2021. Out of these, 19 cases were classified as threats and harassment against physical persons (journalists), eight were physical attacks, and six were attacks against media, media organisations and/or journalist associations. More than half of the cases of attacks against journalists targeted women journalists. During the reporting period, the Directorate for the Investigation of Serious Crimes registered 32 cases of physical attacks against journalists,

qualifying 12 cases as intimidation, seven cases as assault, one as bodily injury, and one as arson. The Kosovo Prosecutorial Council's statistics show that 14 cases of incitement of attacks and threats against journalists are ongoing, with nine cases solved. In several instances, public officials, including high-level officials, made derogatory statements and smears and used intimidating language against journalists.

With the setting up of roadblocks and increased political tension in the north of Kosovo, a series of attacks targeting Albanian-language media professionals and journalists occurred. The AJK and journalist associations condemned the attacks and called on the Kosovo Police, KFOR and EULEX to provide security for journalists and media professionals. They also called for swift and thorough investigations. During May and June 2023, an unprecedented number of attacks against journalists and media professionals were recorded. The AJK recorded over 30 attacks, including physical assault, damage to equipment and vehicles.

During the reporting period, AJK reported one case of strategic litigation against public participation lawsuits (SLAPP) filed by a public figure against journalists. Handling of cases remains slow, and lenient sentences have been handed down in cases adjudicated. The AJK advocates for the crime case database to include reference to the profession of victims so that cases against journalists can be identified. Kosovo prosecutorial and judicial authorities undertook measures to address crimes against journalists by appointing specialised prosecutors and judges. They have set the collection of statistics and the prioritisation of these cases as an objective in the 2022-2024 strategic plan for the prosecutorial system.

Legislative environment

Kosovo's legal framework guarantees freedom of the media and freedom of expression. In general, relevant laws are in line with international standards. Kosovo ranked 61st in the 2022 World Press Freedom Index, 17 places higher than in the previous year.

No steps were taken towards adopting the draft law on the public broadcaster/ Radio Television of Kosovo (RTK) proposed in 2018. Similarly, the draft law on the Independent Media Commission, harmonised with the 2018 EU Audiovisual and Media Services Directive, is still pending before the Assembly. The Law on protection of journalists' sources is yet to be aligned with European standards. The Law on the protection of whistle-blowers aims to align with EU *acquis*, but whistle-blowing mechanisms and protection requirements still need to be strengthened and effectively implemented.

Despite improvements in the implementation of laws relevant to access to public documents, journalists still encounter some obstacles, in particular due to delays or denials of access by public institutions, including the government. Lack of language compliance by public institutions in their communication with the local media continues to be concerning, mainly for Serbian-language media. Some local media occasionally report that certain political parties and public institutions engage in discriminatory selection when inviting media to their official events. Public institutions do not consistently provide relevant and complete information in official languages. Violations of the law on official languages were noted in several other instances, such as a public media outlet's failure to air the press conference of government members in the Serbian language. The Assembly has continued to fail to provide translation into Serbian during plenary sessions.

Implementation of legislation/institutions

Implementation of existing legislation remains insufficient. During the reporting period, the Independent Media Commission (IMC) was largely dysfunctional due to the lack of quorum, including in the Media Appeals Board. The IMC Board has not been functional since March

2021, as the mandate of one of the members expired and the Assembly failed to appoint a new member until May 2023. The Press Council is effective in implementing the Press Code for online media.

Public service broadcaster

The Radio Television of Kosovo (RTK) Board is not involved in the legislative revision process for the draft law on RTK. The RTK's budget allocation remained below the legally specified amount in the Law on budget appropriations, prompting RTK to assess possibilities for participatory financing and a reorganisation of its internal structure. Civil society and opposition political parties criticised the appointment of the RTK Director of Albanian-language channels due to alleged ties with the ruling party. Additionally, the artistic community and civil society saw the signing of a contract between RTK and the Ministry of Culture, Youth and Sport as unfavourable to RTK's editorial independence.

Economic factors

The media sector in Kosovo suffers from a lack of transparency in ownership and financing and a lack of financial self-sustainability, making it vulnerable to political influence and financial pressure. The public broadcaster is financed through the public budget, while private media rely on advertising as their primary means of revenue. Government advertising on private media is no longer permitted. Media registered as NGOs continued to receive support from donors. The non-majority media in Kosovo rely on short-term projects and donor support. Lack of data on the advertising market and media ownership structures, especially for online media, remains a concern. There is lack of transparency on media market share, with some mainstream media publishing individual viewership surveys with significant discrepancies in the respective results. In June, the Kosovo Business Registration Agency suspended the business licence of Klan Kosovo, one of the main private media outlets. Such action may have a negative impact on the state of freedom of the media in Kosovo.

Internet

There is no restrictive legislation on the functioning of the media online or on freedom of expression online, and no restriction was noted during the reporting period. Kosovo should consider developing a strategy for a better internet for children, including facilitating the detection of and response to online child sexual abuse. Slight progress is noted with the approval of the Administrative Instruction that lays down measures to protect children from pornographic content and other inappropriate content. Online threats and sexual harassment against women and girls are widespread, with no prevention or redress mechanisms.

Professional organisations and working conditions

Journalists in private media continue to work on short-term contracts, or without contracts, unlike public service media journalists, who enjoy longer contracts. The lack of professional security and the relatively uncertain employment and economic situation of journalists creates conditions for abuse and restrictions. According to the AJK, although there is no indication of discriminatory contracts or salaries against women, those working in the private sector still face obstacles to enjoying their rights, including to maternity leave. Further, fewer women have access to managerial positions than men. There is no trade union representative body for journalists in the private sector, while the public broadcaster is the only media that has a trade union.

The AJK is a non-governmental organisation with the mission of promoting, encouraging and improving quality and open journalism in Kosovo, as well as improving the position of journalists in general in Kosovo society. The association contributed to the Journalists-in-

Residence in Kosovo programme, under which Kosovo offered a safe space for 20 Ukrainian journalists, most of them women. In December 2022, the programme was expanded following the government-approved decision to also host journalists from Afghanistan. Currently Kosovo is hosting 14 Ukrainian and six Afghani journalists.

Freedom of artistic expression

The freedom of artistic creativity is guaranteed by the Constitution. No limitation on any form of artistic expression was reported during the reporting period.

(See also Chapter 10 on digital transformation and media)

Freedom of assembly and association is guaranteed by the Constitution and generally respected. During the reporting period, the Law on public gathering entered into force, aiming to guarantee the right to organise and participate in public events. No case of inadequate use of force has been reported by the Police Inspectorate. Police officers received training on policing during gatherings and use of force. The LGBTIQ Pride Parade was held in June 2022 in Pristina with no recorded incidents.

Issues of **labour and trade union rights** are further covered in *Chapter 19 on social rights and employment*.

On **property rights**, in December 2022 the Assembly adopted amendments to the Law on the Kosovo Property Comparison and Verification Agency. The authorities should ensure swift implementation. Due to some shortcomings in the Kosovo property sector, including ambiguity in legislation and the inconsistent enforcement of rights, the implementation of judicial decisions (including by the Constitutional Court) remains an issue. This is the case in particular in conflict-related property cases. Prolonged court proceedings in civil cases, especially property related, remain an issue of concern.

Ownership of property by women increased. The affirmative measure that assists implementation of property legislation favouring women was extended by another year; this measure has led to an increase in the registration of women as property owners, from 1 505 registered properties in 2021 to 6 951 in 2022. Only 19.2% of properties are registered in the name of two spouses.

In 2022, institutions continued to take measures to protect the property rights of communities in vulnerable situations, displaced persons and women. The Property Comparison and Verification Agency performed 25 evictions, out of a total of 27 eviction requests. The legal remedy to demolish illegal structures was not used as there were no requests from interested parties. Out of 33 cases in mediation during 2022, 10 were completed successfully in the first quarter of 2023. In June 2023, the Agency's Director and Deputy Director were appointed by the Kosovo Assembly. Concerns remain about fraudulent property transactions and illegal transfers of ownership of properties, mainly belonging to displaced persons.

There was limited progress on the issue of more than 350 052 buildings constructed without a permit. The regularisation of large-scale informal settlements whose residents mainly belong to marginalised vulnerable communities continues to be hampered by lack of political will to address the issue. The government approved six expropriation decisions in Kosovo's northern municipalities. Kosovo Serbs raised concerns about how the expropriation procedures were conducted and their compliance with the requirements of the applicable Law on expropriation of immovable property. It is essential that the government make efforts to ensure that

expropriation activities comply with the law, that due process is followed, and that the property rights of concerned owners and interest holders are fully respected.

The Law on **protection from discrimination** is broadly in line with European and international standards but its implementation remains limited, including due to a lack of institutional capacity. This affected rights related to employment, education, access to social services and freedom of movement, among others. The uneven application of legislation on official languages continues to result in unequal access to public services, justice and employment. The Ombudsperson Institution is the equality body responsible for promoting, monitoring and supporting equal treatment without discrimination. During the reporting period, it received 164 individual complaints of alleged discrimination; 101 cases were referred for investigation. In February 2023, the Office of Legal Affairs, together with the Office of Good Governance, initiated an *ex post* evaluation of the Law on protection from discrimination. The aim is to identify institutional, legal and functional gaps related to its implementation. Additionally, the Office of Legal Affairs launched the National Platform for Protection against Discrimination for the Roma, Ashkali and Egyptian Communities, aiming to facilitate the reporting of discrimination cases. In its first year 23 cases were reported.

The collection of judicial statistics on discrimination cases is a challenge due to inappropriate identification and categorisation. During the reporting period, courts reached a verdict in several discrimination cases, including cases of discrimination based on gender and on disability. It is essential to further build legal professionals' capacities to litigate and adjudicate cases of discrimination. Implementation of the policy against sexual harassment in public administration is facing challenges due to lack of awareness among officials and the absence of complaint mechanisms. On hate crime, while the Kosovo Prosecutorial Council maintains a tracking mechanism, data collection remains insufficient. Hate speech against those in vulnerable situations, including the LGBTIQ and non-majority communities, persists, especially on social media.

With regard to cases of discrimination, hate crime or hate speech targeting persons belonging to non-majority communities, the Kosovo Police reported 12 potential inter-ethnic cases falling within the reporting period. In October 2022, a former government minister was sentenced to one year in prison for inciting ethnic hatred, discord or intolerance.

Legislation and institutional mechanisms on **gender equality** are broadly in line with international and European standards. Despite efforts to strengthen the application of these mechanisms, women continue to face discrimination in the public administration (*see public administration section*), the labour market (*see functioning of the economy*), access to finance, ownership of property (*see property section*) and treatment by the justice system (*see justice/rule of law section*).

Kosovo institutions made some efforts to place gender equality higher on their political agenda. The President organised the first Women Peace and Security Forum and set up a gender equality working group under the Council for Democracy and Human Rights to analyse the harmonisation of laws with the Law on gender equality. The government measures to improve women's economic empowerment have increased the number of women who have opened bank accounts to receive child allowances.

The Agency for Gender Equality continues to play a central role in advancing gender equality. It published the first monitoring report for the 2020-2021 action plan on gender equality with a long delay. Coordination with gender equality officers in the ministries and municipalities has improved, although their roles and responsibilities are yet to be harmonised. Capacity building on gender equality should be extended to ensure that all civil servants fulfil their

responsibilities in this regard, specifically those in managerial positions. Civil society continued to play a critical role in advancing gender equality. It contributes to the improvement of legislation, monitors policy implementation, provides services, assists victims of violence and raises awareness, reflecting the need for the authorities to further step up their engagement in these areas.

Domestic violence continues to be the most prominent form of gender-based violence in Kosovo. A police directorate for the prevention and investigation of domestic violence was established. Implementation remains insufficient despite institutional efforts, and despite the legal and institutional framework in this area being largely in line with European and international standards. Kosovo needs to prioritise implementing the Law on prevention and protection from domestic violence, violence against women and gender-based violence, including by adopting the relevant bylaws. There was limited progress on preventing and combating domestic violence, protecting and reintegrating victims and the rehabilitation of perpetrators. Reporting of domestic violence has increased, although cases are still not handled adequately (*see judiciary*). The total number of reported cases during the reporting period continued increasing (2 710 in 2022, against 2 456 in 2021). Prominent cases of rape and femicides caused public outrage.

Other forms of violence against women continued. Women in public life, including MPs, continue to be judged and stereotyped. Sexual harassment, body shaming and other verbal attacks continue, but reactions from public officials, institutions, civil society and women rights' organisations continue contributing to making sexism less acceptable. Implementation of the government's December 2020 policy against sexual harassment in public administration remains a challenge, with limited knowledge of the policy within the institutions.

The Ministry of Justice continued its efforts to give visibility to the phenomenon and to tackle institutional and legal shortcomings. The latest government action includes the proposal to amend the criminal legislation to protect victims and increase penalties for perpetrators. The position of Coordinator for Domestic Violence remains vacant since September 2022. This appointment is essential for overseeing and monitoring the 2022 strategy and action plan against domestic violence and violence against women. In December 2022, the Ministry of Justice adopted the State Protocol for handling cases of gender-based violence, which defines responsibilities for each institution. This should be swiftly implemented.

In 2023, the government increased the funds allocated to shelters for victims of domestic violence and trafficking in human beings and delivered the funds on time. Nevertheless, financial support is still inadequate. A multi-annual budget line under the Kosovo budget and funding commitments by municipalities are needed. The functioning of the municipal coordination mechanisms for domestic violence is still uneven.

On the **rights of the child**, Kosovo's legal framework is largely in line with international standards, but implementation remains limited. The Inter-ministerial Committee for Children's Rights provides advice and coordinates state policies to guarantee the rights and protection of children in all areas. The implementation of the Law on child protection is delayed. Out of the 17 pieces of implementing legislation planned, only 6 were published in the Official Gazette. As per the administrative instructions deriving from the law, the Council for Children's Rights was established, making it the highest professional mechanism at central level coordinating work on implementing the law. Child rights teams have been established in 14 municipalities. The systematic collection of reliable and comparable data disaggregated by age and sex will contribute to the development of evidence-based policy priorities and ensure effective protection of children.

The Ombudsperson Institution continued to strengthen its child protection department; to that end it finalised a programme on reporting, protecting and monitoring children's rights. During the reporting period, the Ombudsperson received 80 complaints, out of which 20 were assessed as inadmissible and 60 complaints were referred for investigation. The following legislation should be adopted: (i) the Civil Code, which includes among its aims the regulation of legal concepts and the clarification of provisions on the treatment of children in highly vulnerable situations; and (ii) the draft law on local government finances, which has a specific grant for social services that will allow for better implementation of the Law on child protection.

Children with disabilities lack proper access to education. In a significant effort to address this challenge, 100 assistants for children with special needs in regular schools and three sign language interpreters were hired during the reporting period. Eighty directors of vocational secondary schools, 25 teachers of vocational schools, and 18 teachers of primary and lower secondary schools were trained on inclusive education. Authorities should also make more efforts to reach out to children with disabilities that remain outside the education system and scale up community-based social and health services for children with disabilities, including by increasing financial support.

No steps were taken to adopt the Civil Code, which would enable support to persons in foster care up to 26 years of age, instead of 18. There remains a lack of quality services and dedicated programmes for the prevention and reintegration of children with drug problems. Official data is incomplete. Services for treatment of children using drugs in the public health system are non-existent. The new Law on early childhood education remains pending. Over the years, the authorities have failed to address problems related to street children, including child begging. Child, early and forced marriages remain an issue, particularly among Roma and Ashkali communities. While the Law on child protection aims to prevent physical violence against children, it remains a concern in society. Furthermore, there are no foster families established to provide care for children in conflict with the law, despite legal provisions in place to address this. A comprehensive strategy for child protection is necessary to accelerate de-institutionalisation and the transition towards quality, family- and community-based care services, including with an adequate focus on preparing children to leave care. While the Law on child protection aims to prevent physical violence against children, this remains a concern in society.

Persons with disabilities lack access to healthcare, rehabilitation, social services, education and assistive equipment and physical infrastructure. There remains a clear gap in harmonising legislation and policies with the relevant UN Conventions and the EU *acquis* on the rights of persons with disabilities. The Administrative Instruction for access by persons with disabilities is in force but not being applied. Direct discrimination against persons with disabilities was confirmed through a court judgment. Five persons with disabilities filed lawsuits against various institutions in Kosovo based on the Law on protection from discrimination. In 2022, the Pristina Basic Court decision confirmed discrimination in one case. Overall, health services for persons with disabilities need to improve, including for women and girls with disabilities. The employment of persons with disabilities remains a great challenge. Implementation of the Law on the status and rights of persons with disabilities is a challenge, while the new draft law remains pending. Civil society has expressed concerns about the medical evaluation commission for the status and rights of paraplegic and tetraplegic persons. The government declared 2022 as the year of persons with disabilities. In this context, it launched several initiatives to increase accessibility to central and local institutions and to legal and administrative documents. The government also issued a report on the progress of the action plan for the rights of persons with disabilities. In December 2022, the government asked the

Assembly to incorporate the Convention on the Rights of Persons with Disabilities into the directly applicable human rights instrument of the Constitution.

On the **rights of lesbian, gay, bisexual, transgender, intersex and queer (LGBTIQ)** persons, the Constitution protects against discrimination based on sexual orientation or gender. No significant change can be reported regarding public awareness and acceptance of LGBTIQ persons. The draft Civil Code, which includes provisions for civil partnerships for same-sex partners, has still not been approved by the Assembly. There remain concerns that discussions surrounding same-sex unions instigate homophobic language by public figures, political figures and media outlets. The 2019-May 2022 working plan of the Advisory and Coordinating Group for Community Rights LGBTI has expired. Civil society reports a lack of improvement in attitudes towards LGBTIQ persons. Dedicated social services are exclusively offered by NGOs, which report an increased suicide rate among LGBTIQ persons and an increase in domestic violence cases. There was no progress on the planned building of a shelter for LGBTIQ victims of domestic violence or family rejection in the municipality of Pristina. As for legal gender recognition, the process of amending the Law on civil status remains pending. Further training for law enforcement agents is needed, especially on transgender rights, qualification of hate crimes and secondary victimisation.

The **procedural rights** of persons suspected of crime and rights of victims of crime are stipulated in the Constitution and the law. Amendments to the Criminal Procedure Code entered into force in February 2023, addressing shortcomings in criminal procedure. The reforms include a stricter test for the Court of Appeals in returning cases for retrial; permission for trials *in absentia* in relation to all types of criminal offences; and expansion of the *ex officio* appointment system. The effect of these reforms will depend on their interpretation and implementation. Some of the remaining issues of concern are delayed and excessively prolonged court proceedings jeopardising the right to a fair trial, including for cases of domestic and gender-based violence; lack of professional interpreters/translators and low-quality standards of interpretation; excessive use of pre-trial detention and insufficient consideration of other measures for securing the presence of defendants. On victims' rights, there remains insufficient provision of legal information to victims of crimes on their rights and on professional assistance and representation during criminal proceedings. Despite the extension of free legal aid to all women victims of gender-based violence, very few are represented in court proceedings. The level of legal aid (for both victims and suspects/accused), although improved, remains inadequate due to conflicting legislation, lack of public awareness and different systems for providing free legal aid. The budget allocated for legal aid in 2022 was EUR 1 877 134, up 9.4% on the previous year. However, the budget implemented in 2022 was EUR 1 692 393, similar to 2021 (EUR 1 686 056). The lack of a system of quality assurance of free legal aid remains an issue. Out of 1 595 complaints received by the Ombudsperson in 2022, 472 concerned the right to a fair trial within a reasonable time. Protection and assistance officers need to provide a better- quality service to victims. The number of requests for a compensation programme for victims of crime was the same as in 2021. In 2022, the total number of requests for compensation was 53, with one carried over from 2021. The Committee for Crime Victims Compensation approved 27 of these requests, for a total value of EUR 99 106. A positive development to be highlighted is the increase of the 2023 budget to EUR 148 000, up from EUR 78 000 in 2022.

Kosovo has a well-established legal framework for the protection of **non-majority community rights** at the central and local level. The Communities Consultative Council in the President's Office, the Office of the Language Commissioner and the Adviser on Communities to the Prime Minister continued their work to address their most urgent concerns. These include

equal access to education, employment, lack of language compliance, their representation in local and central level institutions, the promotion of cultural identity and access to social welfare. As of November 2022, the Communities Consultative Council has new members appointed for the next two-year term: the government appointed three members to the Council, which is a positive step. During the reporting period, representatives from the central institutions conducted a series of visits to non-majority communities, focusing on outreach to civil society and the business sector. At the same time, challenges remain over institutional coordination between different levels of government and the lasting underfunding of mechanisms to protect the rights of communities. Initiatives aimed at addressing concrete problems lack political commitment and are mostly donor-driven. Furthermore, security concerns, unequal access to education, employment and social welfare, access to illegally occupied property and non-compliance with the Law on languages remain widely unaddressed. Further efforts are needed to ensure inclusiveness for all communities residing in Kosovo.

The 2023-2027 strategy for the protection and promotion of the rights of communities and their members is pending. Furthermore, the appointment of a new Kosovo Serb Minister for Communities and Return on 1 December 2022 raised questions regarding its compliance with the Constitution. If the appointee is not an elected member of the Assembly, the Constitution requires formal endorsement by a majority of Kosovo Serb MPs.

Steps have been taken to appoint a new director of the Office for Community Affairs within the Office of the Prime Minister; despite this, the post has been vacant since February 2021. For the first time since 2019, in May the government reconvened the Technical Working Group for the implementation of the recommendations of the Council of Europe's Framework Convention on National Minorities.

Kosovo institutions still lack the capacity to ensure adequate implementation of the Law on the use of languages. The lack of translation of official websites of central and local level institutions in both official languages hinders equal access to information. Inconsistency between Albanian and Serbian translations of legislation and the limited number of translators, including in courts, limits equal access to justice for members of non-majority communities. The working group, composed of representatives of the Office of the Prime Minister as well as international partners, was put in place to lead the preparatory work to set up a unit for translation, harmonisation and linguistic control. As of the end of May 2023, the working group had held three meetings.

The Balkan Studies programme of the Philology Faculty of the University of Pristina is the only educational programme offered by the Kosovo educational system in both official languages. The programme lacks concrete support and promotion from the Kosovo institutions to address its rather low enrolment rates (below 15 students).

Discontinuation in 2021 of the work of the Commission verifying university diplomas obtained from the (Serbia-run) University in Mitrovica North continued to affect graduates from this university and hinder their access to employment. Additionally, the lack of recognition of high school diplomas obtained from the Serbia-run educational system, combined with limited access to employment and a poor economic situation, exacerbates the migration of young people from non-majority communities out of Kosovo. In February 2023, the government of Kosovo issued a decision to re-establish the Commission, which by mid-May held eight procedural meetings. By 21 June, the Ministry of Education, Science, Technology and Innovation had received 44 applications, out of which none had been verified yet.

Inter-ethnic and potentially ethnically motivated security incidents continue to negatively impact the perception of security and safety among non-majority communities. Although the

number of potentially ethnically motivated incidents affecting non-majority communities in 2022 continued its long-term downward trend, the perception of security among some non-majority communities has deteriorated, especially in the Kosovo Serb community.

Overall, relations between the government and the **Kosovo Serb community** have deteriorated significantly. Following a series of crises, Kosovo Serbs resigned from their positions in Kosovo institutions in November 2022 and subsequently many of them signed employment contracts with the Serbian government. Kosovo and Serbia should prioritise enabling the expedient return of Kosovo Serbs to institutions in Kosovo. Furthermore Kosovo should engage additional efforts to build trust with this community. Expropriations of privately-owned land in the north of Kosovo and the increased presence of special police units in the north have created widespread discontent among the local Kosovo Serb population, negatively affected the confidence of the Kosovo Serb population in Kosovo institutions and negatively affected the Dialogue.

In 2022, the voluntary return and reintegration of **refugees and displaced persons** continued to witness a decreasing trend. According to the United Nations High Commissioner for Refugees, 204 individuals returned, compared to 368 in 2021. Some progress was achieved, with the Ministry for Communities and Return finalising and putting into operation a returns case management system consisting of a returns database and an appeals commission.

In 2022, Kosovo adopted the 2022-2026 strategy for the advancement of the rights of the **Roma and Ashkali** communities and the 2022-2024 action plan. The Municipal Assembly in Prizren unanimously voted in favour of granting the Romani language the status of language in official use at municipal level, meaning that Romani is a language in official use at municipal level in two municipalities in Kosovo. Furthermore, the Office for Good Governance within the Office of the Prime Minister, in cooperation with the Social Justice for Roma, Ashkali and Egyptian project, launched the National Platform for Protection against Discrimination for the Roma, Ashkali and Egyptian Communities, which members of this community can use to denounce acts of discrimination. However, the Anti-discrimination law remains largely ineffective in combating anti-gypsyism. The housing situation remains a challenge due to poor living conditions and lack of property documents. Municipalities in Kosovo have made progress in including settlements whose residents mainly belong to marginalised communities in their urban development plans. However, more political will is required to increase the level of investment and infrastructure building in these settlements. Further efforts are needed to transform undeclared work among Roma to implement the Poznan Declaration's objective on employment. The government created an inter-institutional team to promote the employment of Roma, Ashkali and Egyptians, led by the Office of Good Governance.

On **cultural rights**, there have been no developments concerning the adoption of the new Law on cultural heritage. Relations between the government and the Serbian Orthodox Church witnessed a further souring following the incident on 26 December 2022 when the Patriarch was denied entry to Kosovo. The mutual distrust and compounding factors due to political tensions between Kosovo and Serbia have not provided an enabling environment for the Implementation and Monitoring Council to resume its work, which has been suspended since November 2021. Furthermore, there has been no implementation of the 'arrangement' previously agreed in order to find a solution to the roadworks in the special protective zone of the Visoki Dečani Monastery. Efforts towards reconvening the Implementation and Monitoring Council should be taken as a matter of priority. Kosovo should complete legislation in the field of cultural heritage by finalising and adopting the relevant Law on cultural heritage.

2.2.2 Chapter 24: Justice, freedom and security

Kosovo is **in between an early stage and some level of preparation** in this area. **Limited progress** was made. Previous improvements in the legislation on the fight against organised crime have not yet delivered tangible results. Sustained efforts are needed to ensure more proactive investigations, final court decisions and the final confiscation of assets. Kosovo advanced in the area of counter-terrorism and prevention of violent extremism with progress in the implementation of the bilateral arrangement on counter terrorism with the European Commission. Progress was also made on migration management as accommodation capacity for migrants increased. Kosovo has spare capacity to accommodate a migration influx of up to 2 000 people. With regards to its asylum policy, Kosovo should ensure that refugees are included in social protection schemes. Kosovo should roll out an information campaign on rights and obligations linked to the visa free travel status, to prevent possible misuse. In the area of drugs, Kosovo is yet to adopt a new drug strategy and action plan, to take the necessary steps to ensure the operational capacity of its National drug observatory and to establish an early warning system. As last year's recommendations are only partly implemented, they remain valid. In the coming year, Kosovo should in particular:

- continue to reinforce the capacity of the Special Prosecution Office and further improve the investigation and prosecution of high-profile organised crime cases;
- establish a National Centre for Countering Terrorism and Violent Extremism, or reinforce the Office of the National Coordinator for CT/CVE with adequate financial and human resources and ensure the regular practice of conducting joint threat assessments;
- implement the EU Action Plan on the Western Balkans by: further improving migration governance, coordination and monitoring of policies; reinforcing capacities for data collection and analysis; further strengthening the asylum system; amending the Law on foreigners in line with EU standards.

Fight against organised crime

Kosovo is at **an early stage** in the fight against organised crime, and made **limited progress** in investigating and prosecuting organised crime cases. Kosovo should make better use of the existing powerful tools envisaged by the Criminal Code and the Law on extended powers of confiscation. Law enforcement operations against organised crime continued; nevertheless, efforts to map and target organised criminal structures should be further intensified. Sustained efforts are needed to ensure proactive investigations, final court decisions and the final confiscation of assets. The operational independence of law enforcement agencies must be ensured. Fighting organised crime in the north of Kosovo continues to be challenging, including because of the resignation of Kosovo Serb officials from public institutions in 2022. In addressing this, the authorities must continue to strictly uphold all relevant rule of law standards.

Kosovo has partly implemented the 2022 recommendations, mostly regarding training and awareness raising on new legislation. It adopted a new police organisational structure and upgraded intelligence and analysis capacity. Cooperation with Europol and Eurojust further advanced. The new Law on implementation of targeted international financial sanctions should be an effective tool in combating organised crime. In addition to recommendations on confiscation of criminal assets (see section on fight against corruption), in the coming year, Kosovo should:

- effectively implement the new police organisational structure, and continue implementing intelligence-led and community policing approaches as core police business models;
- proactively and jointly target and map organised criminal groups and continue to systematically conduct financial investigations at all stages of the criminal investigations

into all serious, organised crime and corruption cases and initiate stand-alone investigations for money laundering;

→ enhance efforts to prevent and combat criminal networks involved in migrant smuggling and trafficking in human beings, as well as on the identification and referral of victims to assistance services; ensure financial sustainability of shelters and assistance for victims of trafficking.

Institutional set-up and legal alignment

The Kosovo Police has 437 police officers per 100 000 inhabitants, compared with an EU average of 335.3 per 100 000 inhabitants (Eurostat, 2019-2021); 85% of officers are men and 15% are women. A total of 446 cadets, including 53 women, graduated from the Kosovo Academy for Public Safety. During the reporting period, 578 Kosovo Serb officers from the north of Kosovo resigned from the Kosovo Police following the decision of Kosovo Serb political representatives to abandon Kosovo institutions in four northern municipalities. This created a security vacuum and conditions favourable for organised crime in the north of Kosovo. To address the situation, the Kosovo Police temporarily relocated Kosovo Albanian officers from South Mitrovica to occupy vacant positions. In addition, the Kosovo Police launched two separate calls to recruit non-majority officers at the North Mitrovica Regional Police Directorate. In the first recruitment process, out of 145 (116 males and 29 females) received applications, 73 (57 male and 16 female) non-majority candidates were enrolled, including 43 Kosovo Serbs (36 male and 7 female). In the second recruitment process, which closed on 30 May 2023, out of 205 applications received (167 males and 38 females), 87 (69 males and 18 females) were from Kosovo Serbs. The police's composition needs to reflect the four municipalities' ethnic composition. The resignation of several newly deployed police cadets from non-majority communities following intimidation is of concern.

The Special Prosecution Office, the Special Department of the Basic Court and the Court of Appeals in Pristina are the key institutions involved in the fight against organised crime. Some 15 additional support staff were hired in the Special Prosecution Office in 2022. The increase in staff has thus far not had a significant impact on the investigation and prosecution of high-profile organised crime cases.

In March 2023, the Prime Minister appointed the new General Director of the Kosovo Police, following a transparent and competitive recruitment process. In the same month, the Minister for Internal Affairs and the General Director of the Kosovo Police approved a new organisational structure for the police and established a working group to oversee implementation of the new structure. In order to appoint qualified officers, the process needs to be transparent, impartial and meritocratic, and requires commitment from the police's management. The new police structure is organised around three main pillars: operations, investigations and border police, and promotes two key concepts: community policing and intelligence-led policing. The police's Investigation Department, responsible for preventing, detecting and investigating organised crime and corruption-related offences, has also been restructured. The Intelligence and Analysis Directorate has become a stand-alone department, with separate offices. In addition, the Crime Investigation Division includes directorates for cybercrime and war crimes.

Working groups continued monitoring the implementation of police strategic documents, including the 2021-2025 strategic development plan, the integrated intelligence-led policing approach, the community policing strategy and the action plan 2021-2025. In July 2023, the second Strategic Level Tasking and Coordination Group drafted new priorities based on an annual strategic crime assessment report. The Ministry of Internal Affairs should take into account the findings of the police risk assessment analysis of the government buildings and accordingly

refrain from utilising police officers for tasks that are not core police service tasks.

The Kosovo Border Police, Kosovo Customs administration, Financial Intelligence Unit and Tax administration remain responsible for monitoring and controlling the internal and cross-border/boundary flow of goods, materials and capital that might be involved in any form of organised crime. The Kosovo Customs administration and the Financial Intelligence Unit continued to perform well. The Asset Recovery Office (the 'Unit for Asset Investigations' under the new police organisational structure), which remains operational, continued to receive limited requests for asset recovery. The authorities should support and accelerate the transfer of the Asset Recovery Office to the State Prosecution Office, and assign dedicated staff from the Prosecution Service, the police, the Financial Intelligence Unit and the Customs and Tax administrations. The Police Information System is advanced and linked to other law enforcement databases. Implementing legislation regulates access levels to the Police Information System and ensures full harmonisation between the various databases.

The process of internal reorganisation of the Civil Registration Agency continued to stall during the reporting period. There were delays in the revision of the Law of the Civil Registration Agency, which remains pending. The Agency functions without a strategic plan to guide its vision for development and modernisation, or to align with the public administration reform process. For over 2 years now, an acting General Director leads the Civil Registration Agency. The National Audit Office found that the Civil Registration Agency has still not put in place an IT governance risk and compliance framework to ensure continuity in the operation of its information systems. Current systems do not sufficiently guarantee data confidentiality, integrity and availability. Due to supply chain issues, for over 4 months in the second half of 2022 personal documents/passports could be issued only in emergency cases. Urgent steps need to be taken to ensure continuous provision of essential services to citizens.

The **main strategic framework**, the rule of law sector strategy, consists of the Kosovo Judicial Council's strategic plan for the efficient solving of cases of corruption and organised crime, and other relevant strategies on arms control, the informal economy, money laundering and terrorist financing, counterterrorism, trafficking in human beings, and cybersecurity. All relevant institutions must cooperate to implement these strategic documents effectively. The 2018-2022 strategies and action plans against narcotics and organised crime in Kosovo have expired. The authorities should assess the implementation of the previous expired strategies and adopt strategic documents and their respective action plans for the following period. In addition to the annual strategic crime assessment report, Kosovo police prepares a serious and organised crime assessment report every 3 years.

The **legal framework** on the fight against organised crime is broadly aligned with the EU *acquis*. For status-related reasons, Kosovo is not party to international conventions on the fight against organised crime, such as the UN Convention on Transnational and Organised Crime (the Palermo convention), but still applies these international principles in its **criminal legislation**.

The Law on **money laundering and terrorism financing** should be amended to bring it fully in line with the 4th and 5th EU Directives on anti-money laundering and countering financing of terrorism and with evolving international standards. The government should review the legislation to ensure its full compliance with these directives and the Financial Action Task Force (FATF) recommendations. The Assembly adopted the Law on implementation of targeted international financial sanctions. Kosovo made progress in strengthening its asset recovery regime, having adopted a concept document on establishing a confiscation fund. In 2022, the Assembly adopted the Law on the State Bureau for Verification and Confiscation of Unjustified Assets, introducing the concept of illicit enrichment into the domestic legal system and providing the basis for establishing the Bureau for Verification and Confiscation of Assets. The opposition Democratic

Party of Kosovo (PDK) filed an action for Constitutional Court constitutional review of the law. To increase the transparency of legal persons and arrangements, the government adopted a concept document on the beneficial ownership register, addressing shortcomings identified by the 2018 Council of Europe anti-money laundering and countering the financing of terrorism (AML/CFT) assessment and paving the way for legislative changes.

On the implementation of the Law on interception of electronic communications, upgraded interception capacities and the procurement of technical equipment resulted in the decentralisation of monitoring centres to other regional police directorates. Legislation on **cybercrime** is generally in line with the EU *acquis*. The Kosovo Police upgraded its cybercrime unit to a cybercrime directorate and will allow to increase the number of cybercrime investigators in accordance with its newly adopted organisational structure. Legislation on **trafficking in human beings** is broadly aligned with the relevant EU *acquis*, but implementation remains limited. In May 2023, the Ministry of Internal Affairs adopted the Administrative Instruction on the Database for Victims of Human Trafficking. The new Criminal Procedure Code, which entered into force in February 2023, further aligned Kosovo legislation with the relevant EU *acquis* on the procedural aspects of trafficking offences. The 2022-2026 strategy and action plan against trafficking in human beings is being smoothly implemented. In November 2022, the Ministry of Justice adopted the State Protocol for handling cases of **sexual violence**, setting out the responsibilities of each relevant institution.

Implementation and enforcement capacity

The Kosovo authorities continue to report on the total number of indictments and convictions for the charge of ‘organised crime’ as defined in the UN Convention on Transnational and Organised Crime. During 2022, 25 new cases were initiated (19 cases in 2021), and 16 individuals were convicted.

For the visa liberalisation-related **track record** in the fight against high-level corruption and organised crime, see the section on the fight against corruption.

As for **organised crime-related cases and serious crime cases** currently not included in the aforementioned track record, during 2022, 50 cases were initiated regarding trafficking in human beings involving 70 persons (70 in 2021), and prosecution presented indictments against 42 individuals (45 indictments were presented in 2021). In 2022, 14 people were convicted (3 in 2021). In addition, in 2021, 3 people were indicted (23 in 2020) for illicit trafficking of firearms; there were no court decisions (3 people convicted in 2021). For money laundering, 2 people were indicted in 2022 (9 in 2021) and 3 were convicted (1 in 2021). Police and prosecution should continue to actively use all powers at their disposal to target criminal networks and their economic support base. Sentencing policy remains erratic (see the section on the judiciary). The low number of confiscated criminal assets is still a key concern (see the section on the fight against corruption). The institutions involved in the fight against organised crime need to set up and use multidisciplinary joint investigation teams, wherever possible.

The Kosovo Police has basic capacity and capability to combat organised crime. However, organised crime investigations remain vulnerable to corruption and undue interference. This issue should be tackled with more corruption prevention measures such as robust integrity and ethics training, as well as disciplinary and criminal investigations. The changes in the organisational structure of the Kosovo Police aim to enforce the police’s integrity plans by introducing a new Integrity Section under the new Deputy Director General. The Ministry of Internal Affairs, as envisaged by the Law on the Police Inspectorate, should adopt a plan to implement Police Inspectorate recommendations. So far this has still not been done. During 2022, the Police Inspectorate investigated 257 officers which resulted in the suspension of 164 police officers; the

filling of the resulting vacancies is slow. The trend of successful **police operations targeting organised crime** continued during the reporting period, also involving international and cross-border cooperation. In 2022, the police dismantled 34 organised crime groups (49 in 2021), a decrease of 30% on 2021. The main reasons for the decrease are twofold: increased operational reassignment of police in the north, especially during the second part of 2022, and the focus of investigations on more complex cases. Operations against organised crime groups resulted in a number of arrests and the preliminary confiscation of assets, which need to be followed up by prosecution and the judiciary. The fight against organised criminal structures should be intensified. Investigations should be more proactive and criminal groups should be adequately mapped. The police should target criminal groups and structures as opposed to single types of crime. The new police organisational structure is an improvement in this regard.

The Kosovo Police Special Investigation Unit continued to play an essential role in the investigation of high-profile corruption cases. In 2022, the Special Investigation Unit handled 98 corruption cases, 46 of which were high-profile. Prosecution received 6 criminal reports. Four indictments were filed, and 13 cases were closed. The government should ensure that the police's Special Investigation Unit, the successor of the abolished Anti-Corruption Task Force, has a sound legal and organisational structure (see section on the fight against corruption).

Kosovo made some steps to improve implementation of the **intelligence-led policing and community policing** approaches. In the new organisational structure, the Kosovo Police has strengthened its intelligence structures, both at central and regional levels. To that end, it upgraded the Intelligence and Analysis Directorate into a stand-alone police department and added a new division for community policing. During 2022, the Directorate for Intelligence and Analysis received 11 250 information reports (37.55% increase on 2021) and distributed 3 965 intelligence reports (27.16% increase on 2021). Dedicated community officers within sectors have been integrated into the organisational structure. Outreach activities are planned to build trust with communities. During 2022, the police carried out a pilot project entitled 'Get to know your police', which will be implemented throughout Kosovo. However, the implementation of intelligence-led policing remains overall weak as structures and systems are not yet fully in place. Under the new police organisational structure, the police should take the following actions: further establish intelligence structures at regional and central levels; continue the recruitment and training of dedicated analysts; and fully operationalise the strategic tasking coordinating group at the top management level and the tactical tasking coordinating group at the regional level. There is a need for more specialised and on-the-job training for all institutions involved in fighting the more complex organised crime cases. The police and Special Prosecution Office should cooperate closely to develop strategies to better conduct investigations and have a clear division of responsibilities. The police should establish a verification office for special investigative measures to review investigators' requests for special measures from the prosecution. This would enable a joint target-based approach to improve the proactive detection of illicit and ill-gained wealth.

There is well-established cooperation with Interpol and Europol. Kosovo regularly exchanges information with Interpol via the United Nations Interim Administration Mission in Kosovo (UNMIK). In March 2023, cooperation between Europol and Kosovo Police improved further with the deployment of a Kosovo Liaison Officer at Europol's headquarters in The Hague. The Secure Information Exchange Network Application (SIENA) is operational. The Kosovo Police cooperates well with police services in EU Member States, including through joint investigation teams and exchanges of information on civil and criminal cases. During the reporting period, as part of its international cooperation, the Kosovo Police recorded 19 investigations and 2 joint operations. The police has signed 103 international police cooperation agreements, including with

11 EU Member States, five EU agencies and other countries and international organisations. The Kosovo Police mutually exchanges liaison officers with seven partner countries. Since December 2020, Kosovo and Eurojust have cooperation in place through the appointment of the two contact points. Kosovo has joined the Eurojust WB CRIM JUST project to enhance the level of interaction and integration between the EU and the Western Balkans in the criminal justice field.

The Kosovo Police is working to improve the handling of cases of **domestic violence and other forms of gender-based violence**. It has updated the standard operating procedure on addressing domestic violence cases and improved police officers' capacities to handle cases, produce risk assessments and set up victim-friendly interview rooms. However, the handling of cases is still deficient. The failure to protect victims, including the dismissal of reports, disclosure of identity, inadequate interviewing and non-enforced protection orders was reported in some severe cases of rape and killing by intimate partners. More needs to be done to ensure that Kosovo police officers understand their role in cases of domestic violence. in accordance with existing laws, strategies and the new State Protocol for the handling of cases of gender-based violence.

Effective implementation of **witness protection mechanisms** continues to face challenges, as few potential witnesses have sufficient trust in Kosovo institutions' ability to keep them safe. The Kosovo Police participate in Europol's platform for witness protection. Prosecutors and judges need training on how to protect witnesses effectively.

The fight against **money laundering and terrorist financing** is not producing the expected results. In 2022, there was one final conviction for money laundering. More efforts are needed to achieve a substantial level of proactive investigations, final court decisions and final confiscation of assets. The capacities of the police and prosecution should be strengthened. Money laundering and terrorist financing are often not prosecuted as a stand-alone crime. There is a pressing need to foster prosecutors' and judges' enhanced understanding of the concept of money laundering and terrorist financing and to increase their specialisation in this field. Financial investigations are still not systematically launched in cases of organised crime and corruption and are not used in the context of a broader approach to fighting organised crime and high-level corruption. Recent or ongoing sectoral risk assessments enable the competent authorities to develop their understanding of the high-risk areas in several sectors, including real estate, non-profit organisations, construction and games of chance. The level of understanding of different types of financial institutions and designated non-financial businesses and professions in this area varies significantly. Reaching a substantial level of effectiveness will require targeted training and outreach. In 2022, the Financial Intelligence Unit received 947 suspicious transaction reports (up 3% on 2021). In total, EUR 2 077 995 of assets were confiscated. Overall, although the efficacy of financial investigations has improved at the police level, they are still not systematically conducted in parallel with criminal investigations/proceedings. Inter-agency cooperation and coordination needs to improve significantly. The adoption of police standard operating procedure to centralise all aspects of financial investigations in line with Financial Action Task Force (FATF) recommendations is yet to produce concrete results.

Despite progress, the involvement of organised and armed groups in **arms trafficking** remains a serious concern. Kosovo is implementing its strategy in this area and the Law on the legalisation and surrender of weapons, ammunition and explosive devices. During 2022, the Kosovo Police seized 1 473 firearms (1 280 in 2021) and 29 903 pieces of ammunition of various calibres (42 031 in 2021). The authorities should accelerate efforts towards drafting amendments to the key laws, by-laws and strategy on firearms, ammunition and explosives, with a view to achieving harmonisation with the main EU firearms directives and regulations. Kosovo's firearms focal point continues to function as good practice in the region, and its ballistics laboratory is well equipped. Kosovo continues to have the highest level of harmonisation in the region with the

provisions of the UN Firearms Protocol.

Kosovo remains a country of origin, transit and destination for victims of **trafficking in human beings**, notably for sexual exploitation. During 2022, the Kosovo Police identified 22 victims of trafficking, out of which 21 were girls and women and one man, with 14 victims under the age of 18 and 8 over the age of 18. Victims were offered protection and support services by relevant police units, licensed NGOs and social protection services. The authorities have taken coordinated efforts to prevent and raise awareness on this issue. Actions include enhancing the identification procedure, starting from victim identification to long-term reintegration, and increasing efficiency in prosecuting those leading the trafficking in human beings. However, there is still much room for development to gain a better understanding of the scope of and conditions under which trafficking in human beings is taking place, including how it inter-relates with labour exploitation. A strong focus is needed on data collection and monitoring of workplaces, especially in the private sector. In addition, more work is needed to strengthen institutional capacity to enforce existing legislation (including prosecution), structures and mechanisms to counter trafficking in human beings.

Cigarette and tobacco smuggling is of growing concern. Kosovo is a key transit country for the smuggling of counterfeit cigarettes and for legally produced tobacco products shipped illicitly via neighbouring countries in the Western Balkans.

During 2022, there were 54 cases (37 in 2021) of **cybercrime**. An indictment was filed against one person but there was no final judgment, and one investigation was terminated. The Kosovo Police Sector for the Investigation of Cybercrime initiated 8 cases over child abuse in pornography, and 8 criminal charges were filed against 8 people. Kosovo needs to address several issues, such as the limited availability of cybercrime training for newly appointed judges and prosecutors and those handling electronic evidence.

Under the 2017 working arrangement with the EU Agency for Law Enforcement Training (CEPOL), Kosovo plays an active role in a number of the Agency's activities. Kosovo has full access to the CEPOL exchange programme and its electronic learning system. It is recommended that the authorities of Kosovo, with the assistance of CEPOL, design, prepare and organise targeted training to address counter terrorism from the protection, prevention and responding angles, as a priority training topic.

Kosovo participates in the European Multidisciplinary Platform Against Criminal Threats (EMPACT). In 2022, Kosovo participated in 22 operational actions in 3 of the 15 EMPACT operational action plans, in the first half of 2023, Kosovo has participated in 9 operational actions. In 2022, Kosovo appointed a National EMPACT Coordinator, the Police Director for International Cooperation, and continued to participate in EMPACT Joint Action Days. It also continued to cooperate with EU police services through the European Network of Fugitive Active Search Teams, in which it has observer status.

Cooperation in the field of drugs

Institutional set-up and legal alignment

A national strategy on drugs spanning the period 2018-2022 has expired and so far no new strategy or action plan has been adopted. The legislative framework to combat illicit handling of and trafficking in narcotic drugs is based on the 2007 Law on narcotic drugs, psychotropic substances and precursors and on the Criminal Code. A more comprehensive revised draft law aligned with the most recent EU legislation is yet to be adopted.

A coordination mechanism is in place to prevent and combat drug trafficking and the illicit use of

precursors. While a National Drug Observatory has been in place since August 2018, it has been without a head since December 2018. With only one full-time staff member, the Observatory lacks the necessary human resources to fulfil its role and remains ineffective. In March 2023, the Ministry of Internal Affairs adopted the new Regulation on the internal organisation and systematisation of jobs, which makes provision for a Drug Observatory within the Secretariat of Strategies. The early warning system on new psychoactive substances is not yet established. The Ministry approved an internal regulation on the organisation of the National Drug Observatory and the early warning system, which ensures adequate human and financial support, but additional staff are yet to be recruited. Despite general progress on data collection, difficulties remain regarding the sustainable and routine collection of drug-related data. In the absence of a functional health information system, establishing a drug treatment register is not a priority.

Implementation and enforcement capacity

Kosovo continues to be both a storage and transit country for narcotic drugs and their derivatives. Drug seizures continued to increase: around 662 kg of marijuana, 246 kg of heroin, 4 kg of cocaine and 24 500 cannabis plants were seized in 2022. During 2022, the Kosovo Police registered 808 new drug-related cases (726 in 2021), arrested 1 039 suspects, and filed 532 criminal charges against 791 suspects. Out of all the cases, 271 were charged for drug trafficking, 505 for illegal possession of drugs, and 32 for cultivation. Provisions are in place for the secure storage of seized drugs awaiting destruction.

Organised crime groups continue to play a dominant role in large-scale drug trafficking and subsequent distribution to the EU. The Western Balkan drug trafficking routes constitute a major challenge. Kosovo law enforcement agencies continue to engage in successful drug targeting operations, in cooperation with EU Member States. Industrial-scale indoor and outdoor cannabis cultivation facilities have been identified in several countries in the region, including in Kosovo. During the reporting period, several successful operations against drug cultivation laboratories were carried out, including in northern Kosovo. Law enforcement agencies and prosecution need to further increase their understanding of the drug market through analytical work. Inter-agency cooperation and exchange of information in the fight against drug trafficking in the chain of justice sector should further improve. The Prosecution Service continues to be understaffed and insufficiently trained to deal efficiently with drug-related offences. Increased cooperation, coordination and exchange of information among law enforcement agencies in the Western Balkan region is paramount and should improve. Kosovo has a 24-hour drug abuse hotline and offers addiction treatment and methadone therapy. Cooperation with the European Monitoring Centre for Drugs and Drug Addiction remains satisfactory.

Fight against terrorism

Institutional set-up and legal alignment

A range of **institutions** remains active in combating terrorism and violent extremism, and in dealing with reintegration of returning foreign terrorist fighters and their families. The Minister for Internal Affairs acts as the National Coordinator for the Prevention of Violent Extremism and the Fight against Terrorism. This position is intended to improve interinstitutional coordination, monitor and report on the implementation of policies, activities and other actions, and serve as a point of contact. However, given the nature of the Minister's other tasks, the focus on this issue is limited.

Kosovo's **legal framework** on anti-terrorism is partly aligned with the EU *acquis* and international instruments. The Law on combating money laundering and the financing of terrorism needs to be amended to be fully in line with EU and international standards (see section

on the fight against organised crime and on the free movement of capital). Kosovo adopted the important Law on implementation of targeted international financial sanctions. Legislation on critical infrastructure protection remains in place; the adoption of implementing legislation is pending, there is also need for appropriate capacity to implement the legislation.

Kosovo has a strategy and action plan against terrorism (2018-2023) in line with the EU's counterterrorism strategy. A strategy and action plan against violent extremism (2015-2020) expired at the end of 2020 and the National Coordinator decided to merge the two strategies into one. The new 2023-2028 national strategy and action plan on the prevention and countering of terrorism were adopted in June 2023. The EU supported Kosovo in the revision process through the Radicalisation Awareness Network Policy Support. The Joint Threat Assessment Centre, including a threat-level grading system, is yet to be established. In the second half of 2022, Kosovo Police and the Kosovo Intelligence Agency produced the second joint threat assessment analysis as part of the situation analysis for the new strategy on the prevention and countering of terrorism. There is a need to improve donor coordination and to establish a more structured mechanism. The Kosovo authorities continue to implement the bilateral Implementing Arrangement with the EU for the Joint Action Plan on Counter-Terrorism for the Western Balkans. Kosovo submitted its fifth implementation report in February 2023.

Implementation and enforcement capacity

Kosovo continued to fight the threat of terrorism. In 2022, 7 indictments were filed and 6 people were convicted. Investigations were completed in 12 cases against 43 suspects. Greater consistency in sentencing practices for offences related to terrorism and violent extremism is necessary. The functioning of the Special Department in the Basic Court of Pristina and the Court of Appeals has contributed to effective handling of terrorism cases. At present, 19 inmates for terrorism-related crimes are in prisons in Kosovo, with 5 inmates sentenced, 5 in detention at the high-security prison and 9 sentenced at the Dubravë/Dubrava correctional centre. During 2022, 11 people were released, of which 4 on parole, 3 on early release and 3 after having served their sentences. Between January and June 2023, 5 prisoners sentenced for terrorism-related crimes were released. Sentences for terrorism crimes for foreign terrorist fighters have been relatively lenient (average sentence 3.6 years). The Ministry of Internal Affairs took measures related to conditional release to ensure that the conditional release panel pays more attention to security aspects when dealing with inmates leaving prison with higher level of radicalisation. So far, there have been a few cases of recidivism among those convicted of terrorist-related offences.

Despite significant efforts, some challenges remain in the countering of terrorism and the prevention and countering of **violent extremism and radicalisation**. The increase in violent incidents of domestic religious extremism and the impact of other forms of extremism is concerning. Militant Salafist ideology, growing ethnonational and far-right movements in the region⁵, including Kosovo, remain a threat. False bomb threats against public institutions emerged during the reporting period, including at the airport. Despite the efforts of the Kosovo authorities to improve the situation, there are a number of push and pull factors for radicalisation, including poverty, the perception of corruption, lack of institutional capacity, and the political situation. The Kosovo authorities need to balance efforts to prevent and counter violent extremism in all its forms with rehabilitation and reintegration measures. It is important to continuously revise the existing strategies, action plans and reintegration and rehabilitation programmes.

Kosovo authorities have taken a leading role in the **rehabilitation and reintegration** of

returnees from foreign conflicts; to that end, they repatriated a large number of Kosovans and provided them with psychosocial support and economic reintegration initiatives. Since the start of the civil war in Syria in 2012, 257 Kosovans have returned (133 men, 39 women, 85 children), 106 have died, and 83 allegedly remain in the Middle East (35 men, 8 women, 40 children). After the return operation in May 2022, there has been no further developments to repatriate the remaining individuals from the region. The Reintegration Division of the Ministry of Internal Affairs needs appropriate financial and human resources. The authorities need to continue to de-securitise the rehabilitation and reintegration process and prevention of violent extremism work, while ensuring risk mitigation. In terms of planning and implementation of rehabilitation and reintegration processes, Kosovo should establish multidisciplinary mechanisms at local level. There is a need to focus more on education, training and preparedness of local practitioners dealing with returnees. The National Coordinator for the Prevention of Violent Extremism and the Fight against Terrorism should play an enhanced role in overseeing the rehabilitation and reintegration process, including by linking up with municipalities. During the reporting period, the Ministry of Internal Affairs piloted multidisciplinary mechanisms in the municipality of Hani I Elezit handling cases of returned foreign terrorist fighters, their families and other individuals at risk of radicalisation. These mechanisms should be further strengthened. Civil society plays an important role in rehabilitation and reintegration efforts in local communities. The Law on the Kosovo Correctional Service formally established an Intelligence Unit and Unit for Extremism Management within the Correctional Service, thus contributing to improved coordination when dealing with extremist and terrorist inmates. However, de-radicalisation and disengagement programmes within the correctional system need to be significantly intensified. Authorities need to intensify specific training, including for the Kosovo Probation Service, which must develop programmes for convicted terrorist who are released after serving their sentence.

The Kosovo authorities should improve their capacity to address terrorist content online, including increasing their efforts to refer terrorist content to internet providers, as well as enhancing efforts to empower civil society to develop effective counter-narratives.

Judicial cooperation in civil and criminal matters

For status-related reasons, Kosovo is not party to most multilateral treaties governing mutual judicial cooperation but unilaterally applies internationally recognised treaty standards. Cooperation between Kosovo and Eurojust further advanced. During the reporting period, Kosovo did not apply to become party to any multilateral treaty or organisation in the field of judicial cooperation. Two new bilateral treaties on judicial cooperation in civil matters entered into force and Kosovo has taken steps to conclude additional bilateral treaties.

The legal framework for judicial cooperation in civil matters is consolidated and fully aligned with the EU *acquis*. Cooperation with countries with which Kosovo does not have bilateral agreements is based on the principle of reciprocity and comity. During the reporting period, Kosovo addressed 269 requests on civil matters to EU Member States and received 344 responses. It received 372 requests from EU Member States and provided 382 responses.

Kosovo's international legal cooperation in criminal matters is based on the Law on legal cooperation in criminal matters and on 40 bilateral treaties. During the reporting period, Kosovo issued 142 requests in criminal matters and received 178 responses. Over the same period, it received 365 requests and provided 325 responses. In addition, 11 people were extradited from the EU Member States to Kosovo, and 7 people from Kosovo to EU Member States.

In 2022, the Kosovo authorities did not undertake any action to cooperate with the European Public Prosecutor's Office.

The 2015 procedures on mutual legal assistance agreed between Belgrade and Pristina form the basis for judicial cooperation between their judicial authorities. Most countries that do not recognise Kosovo have voluntarily accepted the facilitating role of the EU Special Representative (EUSR) in the transmission of judicial requests (including those concerning extradition). However, the lack of cooperation by some non-recognising states has resulted in cases of impunity. Since the end of August 2022, Kosovo has not received any request for mutual legal assistance or related responses from Serbia.

Legal and irregular migration

Kosovo has mobilised additional resources to adjust the existing contingency plan to manage mixed migration flows. Stranded migrants outside reception centres faced particular challenges, as they remain unregistered.

Kosovo has engaged with the EU on the implementation of the EU Action Plan on Migration presented by the Commission in December 2022. Delivery should continue on all the strands of the Action Plan.

Kosovo participates in the regional Anti-Smuggling Operational Partnership with the Western Balkans launched in the EU-Western Balkans Justice and Home Affairs Ministerial meeting on 3 November 2022 to support law enforcement and judicial cooperation against criminal smuggling networks, and to increase border management capacities.

Institutional set-up and legal alignment

The **institutions** dealing with migration in the Ministry of Internal Affairs and the Border Police remain effective. The capacity of the Department for Citizenship, Asylum and Migration in the Ministry of Internal Affairs should be increased. Currently, the Department employs 34 staff members, while the organisational chart makes provision for a staff of 52. One of the deputy ministers is the National Anti-Trafficking Coordinator and National Migration Coordinator. The authorities should reflect on creating a permanent position to bring more stability to this role.

In September 2022, the government restructured the Government Authority on Migration. The Multistakeholder Forum remains an important platform where all relevant stakeholders cooperate on migration-related issues.

The **legal framework** is largely in line with the EU *acquis*. Steps should be undertaken to further align legislation, including the Law on foreigners, with the EU *acquis* and international standards. It is recommended that Kosovo align legislation with Directive 2008/115/EC (the Return Directive), include a humanitarian protection category, and extend the voluntary return period.

Kosovo has **readmission agreements** with 24 countries, including 20 EU Member States and members of the Schengen area. During the reporting period, Kosovo did not sign any new readmission agreements. There is no readmission agreement with the EU as a whole. During 2022, the government approved initiatives to conclude new readmission agreements with 14 countries: Latvia, Lithuania, Portugal, Poland, Ireland, the United Kingdom, Pakistan, Côte d'Ivoire, the United States, Jordan, Egypt, Libya, Chad and Australia.

The 2021-2025 **migration strategy** and action plan reflect the priorities in the government programme for the same period. The strategy and action plan take into account obligations deriving from the Stabilisation and Association Agreement as well as European and global initiatives such as the EU Pact on Migration and Asylum and the Global Compact on Safe, Regular and Orderly Migration. The strategy meets all requirements, including on defining

baselines, clear budgeting and setting target values. Issues related to the **diaspora** are not included in the migration strategy; instead, it will form a part of the future diaspora strategy. This is a first step towards developing a comprehensive strategy covering all relevant policy areas, coordination and implementation. The Department of Citizenship, Asylum and Migration prepared the first six-month report on the implementation of the migration strategy.

Implementation and enforcement capacity

In 2022, the number of registered migrants decreased from 1 487 to 957. There were 469 non-registered migrants in the period January-December 2022. Most migrants are single men, with a limited number of single women, families and children.

During the first half of 2023, 308 new migrant arrivals were registered in Kosovo: 222 of them applied for 15 days of international protection and have been accommodated in the temporary reception centre in Vranidoll, while 86 applied for asylum and have been accommodated in the asylum centre in Magure. 134 evacuees from Afghanistan are still present in the US facility in Kosovo. There are 71 unregistered migrants inside Kosovo residing outside regular reception centres.

The International Organization for Migration (IOM)'s displacement tracking matrix remains an important mechanism to monitor movements in and out of Kosovo, and as such helps the authorities to develop evidence-based policies and provide migrants with adequate protection services. Kosovo has limited capacity to manage labour mobility to and from Kosovo. There is a need to establish and ensure access to safe and regular migration pathways, and to work with skills mobility partnerships. This would also foster an environment conducive for circular migration.

Migrants who enter Kosovo can either apply for asylum or make use of 15 days to decide whether to apply for asylum or leave. After 15 days, if they did not apply for asylum and leave, or apply for voluntary return assistance, they may be subjected to forced return. As no alternatives to detention are in place, they may be subject to detention.

The authorities expanded accommodation capacities, which are currently sufficient. There are three reception centres, with a current capacity of up to 600 (Magure, 100 people; Vranidoll, 200 people; Belvedere Camp, 300 people, which can be expanded up to 2 200). The refurbished temporary reception centre in Vranidoll, which can host up to 70 people, opened in June 2022. The average stay of a migrant in the Magure asylum centre is 20 days, 6 days at the Vranidoll temporary reception centre for migrants, and 90-120 days at the Vranidoll detention centre for foreigners.

While fundamental rights are generally upheld, services provided at the centres should improve, including medical assistance, psychological support and interpretation services. Measures should be taken to increase safety for asylum seekers in facilities, in particular to prevent gender-based violence. Providing proper care and security for the most vulnerable groups of migrants remains a challenge. Kosovo needs to further increase and strengthen authorities' capacities to evidence irregular migration and offer protective quality services. In 2022, the government adopted the guidelines on the prevention, risk management and response to gender-based violence in the context of mixed migration.

In 2022, 20 migrants were detained in the detention centre for foreigners. Detention should only be applied as a last resort, in line with the EU *acquis*. Establishing sustainable alternatives to detention for irregular migrants remains a priority. The IOM, funded by the EU, provided essential support to migrants at the detention centre for foreigners. Conditions need to improve to align with international and human rights standards. In the first 5 months of 2023 9

foreigners present in Kosovo were returned to their place of origin under the readmission agreements, one third each by force, voluntarily or through IOM voluntary channels respectively.

Despite the government's efforts, transnational smuggling networks continued to facilitate secondary movements of irregular migrants from entry points along the Western Balkan route. During the reporting period, the Kosovo Border Police intercepted 869 migrants entering in an irregular manner. They also initiated 24 cases of migrant smuggling (compared to 27 in the previous reporting period) involving 44 people (57 in the previous reporting period). 26 indictments and 13 guilty verdicts were issued. During the first half of 2023, 4 individuals were arrested for involvement in migrant smuggling.

Gaps remain in enforcement of the laws, mostly due to a lack of coordination between government agencies. The Border Police's capacity in the area of protection-sensitive migration needs to be further strengthened. Qualified interpreters are needed to service the asylum and detention centres and the Border Police. The lack of biometric equipment and interoperability of data affects the efficiency of initial registration and further processing. Overall, there is a need for better interinstitutional coordination, including with municipalities. Further efforts are needed to put in place a gender-responsive system.

Kosovo has strengthened its inter- and intra-institutional systems for migration management, including on migration statistics. This should allow comparative and regional analyses of migration trends. The Migration, Asylum, Refugees Regional Initiative (MARRI) established a Permanent Working Group on Migration Statistics to collect, process and disseminate migration data through the regional platform for migration data exchange in the region.

According to Eurostat, the number of Kosovo citizens refused entry at the external borders of the EU was 1 795 in 2022 (1 650 in 2021), and those found to be illegally present was 3 960 in 2022 (3 545 in 2021). The number of Kosovo citizens ordered to leave the EU increased slightly from 3 740 in 2021 to 3 930 in 2022. 1 380 returned to a third country in 2022.

The readmission agreements with EU Member States and Schengen associated countries are being implemented satisfactorily. The total number of readmitted persons in 2022 was 613, out of which 536 were by force (87%), 13 voluntarily (2%) and 64 through IOM voluntary channels (10%), marking a decrease compared with 2021. The majority of those readmitted are in the age groups 35-64 (266 or 43.4%) and 18-34 (242 or 39.5%). Among those readmitted by force in 2022, 470 (87.6%) were male, while 66 (12.3%) were female. According to data from the IOM, out of the voluntarily readmitted persons in 2022, 41 (64%) were male and 23 (36%) were female. For 2023, by May a total of 209 persons had been readmitted to Kosovo, 174 (83.25%) by force, 15 (7.18%) voluntarily and 20 (9.57%) voluntarily through IOM channels.

The return rate of Kosovo citizens ordered to leave EU territory was 58% in 2018, 41% in 2019, 29% in 2020 and 39% in 2021. While statistics show a drop in the return rate between 2018 and 2020, EU Member States have confirmed that the Kosovo authorities continue to cooperate well on readmission. The number of Kosovans ordered to leave the EU increased from 3 740 in 2021 to 3 930 in 2022, according to Eurostat. 1 380 returned after the order to leave in 2022 (35.1%).

The number of asylum applications made by Kosovo citizens in both EU and Schengen associated countries has fallen steadily, from the peak of 73 210 in 2015 to 1 515 in 2020 and 1 600 in 2021, rising to 2 445 in 2022. The overall number of Kosovo citizens readmitted dropped from 18 789 in 2015 to 625 (512 forced and 113 voluntary) in 2020, and 849 (710 forced and 139 voluntary) in 2021.

Overall, there is a need for better interinstitutional coordination, including with municipalities, as well as improved systemic monitoring and evaluation. A referral mechanism was established and functions through the reception centre for repatriated persons. A manual identifying and advancing the referral of vulnerable cases and training on needs assessment were provided to central and local reintegration officials.

In August 2021, Kosovo began temporarily hosting US-linked and NATO-related evacuees/refugees from Afghanistan, based on the Kosovo government's decision to grant them temporary protection for one year. They are hosted in two open facilities in Kosovo on the understanding they will be further resettled in the United States under a specific visa regime or in NATO Member States committing to taking them in. Since January 2023, 158 departures have been registered and 134 people are present in Bondsteel Camp.

Asylum

Institutional set-up and legal alignment

In March 2022, the EU Agency for Asylum (EUAA) and Kosovo adopted and started to implement a bilateral roadmap for cooperation (2022-2024).

Kosovo's legal and institutional framework on asylum is mostly in line with the EU *acquis*. The Kosovo legal framework provides for access to the territory and respects the principle of non-refoulement. Refugees should be included in social protection schemes. Certain sectors of the system require further strengthening in line with the Roadmap agreed with the EUAA.

The establishment of a fully effective and protection-sensitive entry system requires clear legal provisions. These should include identification, screening and referrals of people seeking international protection and those with specific needs. The new Law on foreigners is an opportunity to provide clear definitions; it should also lay down provisions on facilitated integration.

Implementation and enforcement capacity

Kosovo continues to be a transit route for most people arriving in mixed movements. Limited capacity in terms of biometric devices and lack of data interoperability affect the efficiency of the registration and further processing of asylum claims. To comply with its mandate, the Border Police needs adequate equipment and more expertise.

The Ministry of Internal Affairs Asylum Division / Department for Citizenship Asylum and Migration consists of 3 officials who handle asylum cases. Authorities should consider accelerating the process of hiring new staff.

In 2022, Kosovo recorded 550 asylum applications, a trend similar to 2021 (578). By May 2023, 73 asylum claims had been registered. During 2022, Kosovo granted protection to 25 people. By May 2023, protection had been granted to 13 people.

Most asylum requests are suspended, as applicants disappear without completing the procedure (52 out of 73 as of May 2023). Cases of gender-based violence remained institutionally unattended due to the lack of appropriate response systems. The current practice of issuing a "Certificate for accommodation at the Temporary Reception Center for Migrants" allowing for accommodation rights for 15 days, without granting any legal status during this period is not in line with the EU *acquis* in the field.

The **integration system** is at an early stage of development. Kosovo made some progress to increase staffing and build capacity through training and new procedural guidance. On child protection, it remains crucial to strengthen procedures concerning unaccompanied minors, including age determination, legal guardianship and communication.

The Ministry of Internal Affairs has contracted companies to provide translation services; in addition, the United Nations High Commissioner for Refugees provides translation support. Under the Migration, Asylum, Refugees regional initiative, the Department of Citizenship, Asylum and Migration benefits from the exchange of translators of rare languages among the MARRI member states. Investment in further strengthening the quality of refugee status determination is required to ensure that asylum officials are able to carry out quality assessment of asylum claims. In August 2022, the Ministry of Internal Affairs concluded a memorandum of understanding with the Free Legal Aid Agency on the provision of free legal aid to foreigners.

In August 2022, the temporary reception centre for migrants, which also hosts asylum seekers, improved its reception conditions in terms of accommodation capacities. The right to be accommodated at the centre and access to services are granted for 15 days, which can be extended at the authorities' discretion. In addition, asylum seeker registration is still conducted outside the centre without proper profiling and referrals.

The budget for the integration of refugees in Kosovo is planned under the annual budget law for the Ministry of Internal Affairs' Department for Reintegration of Repatriated Persons and Integration of Foreigners. In 2023, the budget is EUR 1 381 395.

In October 2022, Kosovo approved the guidelines for foreigners' access to vocational training and employment. The authorities continue to provide effective support to those granted international protection by offering rent for accommodation, language courses and integration courses for 2 years. This period may be extended on a case-by-case basis.

Since August 2021, Kosovo began temporarily hosting US-linked and NATO-related evacuees/refugees from Afghanistan, based on the Kosovo government's decision to grant them temporary protection for one year. They are hosted in two open facilities in Kosovo on the understanding they will be further resettled in the United States under a specific visa regime or in NATO Member States committing to taking them in. Since January 2023, 158 departures have been registered and 134 evacuees/refugees are still present in Bondsteel Camp.

The authorities have confirmed their readiness to host up to 5 000 Ukrainian citizens, providing temporary residence for humanitarian reasons. Kosovo also hosts 14 Ukrainian journalists with temporary status, including accommodation and employment with the Association of Journalists. Six Ukrainian nationals were granted subsidiary protection.

Visa policy

Kosovo has yet to fully align its legislation with EU visa policy. Kosovo grants visa-free travel to travellers of 110 countries with ordinary passports for 90 days within a six-month period, including 22 countries that do not have a visa-free regime with the Schengen area. Passport holders of 89 countries need to obtain a visa prior to entering, 4 of which enjoy visa-free travel to the Schengen area. The visa-issuing authorities have the capacity to digitally collect biometric identifiers from visa applicants, although the equipment needs upgrading. All granted visas and rejections are registered in the visa information system. 16 Kosovo consulates around the world can issue visas.

Kosovo continues to fulfil the visa liberalisation roadmap benchmarks. On 18 April 2023, the European Parliament endorsed the agreement with the Council on a Commission proposal enabling Kosovo passport holders to travel to the EU without a visa. Based on this, as of 1 January 2024, passport holders from Kosovo will be able to travel to the EU without a visa for up to 90 days in any 180-day period. During the process, Kosovo authorities demonstrated commitment to addressing all questions raised by the EU.

Kosovo should roll-out an information campaign on rights and obligations linked to the visa free travel status to prevent possible misuse.

Schengen and external borders

Institutional set-up and legal alignment

The National Centre for Border Management is an important tool to effectively manage the security of Kosovo's borders. The Centre hosts an operational and coordination room. The latter monitors all activities at the border and common crossing points through closed-circuit television, coordinates the real-time exchange of information between the border authorities at all levels, and handles calls from the public. The Centre has a Joint Intelligence, Risk and Threat Analysis Unit, which collects, analyses and disseminates information from and to the border authorities. Since 1 June 2022, the Centre is also hosting the Passenger Information Unit, which scans advance passenger information and passenger name records. Standard operational procedures need to be further developed.

The legislative framework for managing Kosovo's borders is mostly in line with the EU *acquis* and international standards. The Law on state border control and surveillance and the Law on cooperation between authorities involved in integrated border management are the main regulations in this field. Kosovo has a 2020-2025 integrated border management (IBM) strategy and 2020-2023 action plan in place; these were reviewed in February 2023. The relevant executive board reviews implementation on a quarterly basis.

Implementation and enforcement capacity

The Kosovo Police Border Department is able to conduct its daily tasks and obligations despite the current operational situation, especially in the northern parts of Kosovo, and the constantly changing human resources challenges due to the resignation of Kosovo Serb officers. Operational tasks have been facilitated by internal transfers and other compensatory measures. Staffing numbers in all Border Police units in the north of Kosovo do not reflect the composition of the local population, in accordance with Brussels Agreement. Responsibilities for border security tasks are divided between three regional border directorates (West, East and North) and the Pristina airport police. All regional directorates have quick reaction units responsible for supporting border surveillance stations. The Kosovo Border Police does not have special units or capacities, even though quick reaction teams are well trained and equipped to address challenging situations in the border area. Based on risk analysis, the Border Police established four additional bases in the north of Kosovo.

The Border Police's performance and its knowledge of border procedures have improved. Statistics indicate increasing effectiveness in several areas of cross-border crime. As an example, in 2022 Kosovo arrested 61 people engaged in the trafficking of human beings in 37 cases and disbanded 4 organised groups. Development of infrastructure, equipment and tactical methods, especially at the green border areas, would enhance the whole border security system's capacity and bring it closer to EU standards. The Kosovo Police Information System is linked to all border crossing points. The infrastructure at border crossing points has improved and the border management system continues to operate satisfactorily. However, some of the facilities need renovation. The lack of direct online access to some international databases is a hindrance to effective crime prevention work.

The Ministry of Internal Affairs of Kosovo's working arrangement with the European Border and Coast Guard Agency (Frontex) enables close cooperation on irregular migration, cross-border crimes, border security and overall border management. Cooperation between Kosovo and Frontex is good and improving. Frontex is deploying officers to several border crossing

points in Kosovo, based on mutually agreed operational plans (e.g. project coordination points). The Agency provides other border management-related support, such as guidance to establish a national coordination centre, in accordance with the EU *acquis*. Kosovo participates in the Western Balkan risk analysis network (WB RAN) and in several other regional exercises organised by Frontex.

Cooperation with all neighbours is good, except with Serbia. The Border Police has appointed focal points in charge of international cooperation. Joint patrolling agreements with Albania, North Macedonia and Montenegro are in force, and joint activities are conducted regularly. Based on police cooperation agreements in force, there are joint police cooperation centres with Albania and North Macedonia. Kosovo participates in the trilateral (Kosovo, Albania, Montenegro) Joint Police Cooperation Centre based in Plav, Montenegro.

The Interim Common Crossing-Points (CCPs) between Kosovo and Serbia continue to be operational. Only two of the six permanent CCPs have been established (Merdare and Mutivodë/Mutivode). Serbia still has not established permanent CCPs to be hosted by their side (Jarinje/Rudnica, Končulj/Dheu i Bardhë and Depce/Muçibabë), which led to a suspension of EU funds for this project in July 2018. In addition, Serbia needs to engage constructively to enable the construction of the third CCP hosted by Kosovo in the north of Kosovo at Tabavijs/Bërnjak-Tabalije/Brnjak. Additional efforts are required from Serbia to close illegal roads and bypasses to ensure exclusive use of official crossing points for goods and persons entering into or leaving Kosovo.

In 2022, two specific corruption-related operations took place, resulting in the investigation of 70 people on suspicions of bribery. According to the Kosovo Police Inspectorate, these operations had a preventive affect. Such preventive actions, in cooperation with IBM authorities, in connection with possible corruption cases, continue to take place.

Kosovo made progress on implementing the revised 2020-2025 National Centre for Border Management development plan. However, there is still need for better strategic assessment and analyses of border-related risks, and for better cooperation with other border authorities. The effectiveness of such cooperation is affected by the lack of connection, for status-related issues, to important international networks such as Interpol's I-24/7.

Counterfeiting of the euro (criminal law aspects)

The 2019 Kosovo Criminal Code is broadly in line with the EU *acquis* on the suppression of counterfeit currency. Kosovo has competent authorities and procedures in place to deal with counterfeit money. However, the Criminal Code would need to be further aligned with the EU Directive on the Protection of the Euro and Other Currencies against Counterfeiting.

The Forensics Agency within the Ministry of Internal Affairs carries out technical analysis of counterfeit money (including euro banknotes and coins), in line with international standards. The Agency has concluded an agreement with the European Commission on exchange, assistance and training for the protection of the euro against counterfeiting (the Pericles 2020 programme).

Between June and December 2022, the police initiated 433 cases for a total value of EUR 54 333, and 10 people were detained. Between January and March 2023, the police initiated 275 cases valued at EUR 44 731. Two individuals were detained.

(See Chapter 32 on financial control).

2.3. ECONOMIC DEVELOPMENT AND COMPETITIVENESS

<i>Table 7.1:</i>	2014-19	2020	2021	2022
Kosovo - Key economic figures	average			
GDP per capita (% of EU-27 in PPS)	24	25	27	27
Real GDP growth	4.6	-5.3	10.7	3.5
Economic activity rate of the population aged 15-64 (%) , total	40.4	38.3	39.3	38.6
<i>female</i>	19.6	20.8	22.0	22.0
<i>male</i>	60.9	56.0	56.6	55.5
Unemployment rate of the population aged 15-64 (%) , total	30.3	25.9	20.7	12.6
<i>female</i>	30.6	32.3	25.0	16.5
<i>male</i>	24.4	23.5	19.0	11.0
Employment of the population aged 15-64 (annual growth %)	1.4	-4.4	10.4	5.4

Consumer price index (annual growth %)	0.9	0.2	3.3	11.6
Exchange rate against EUR*	1.0	1.0	1.0	1.0
Current account balance (% of GDP)	-7.1	-7.0	-8.7	-10.5
Net foreign direct investment, FDI (% of GDP)	3.2	4.2	4.0	6.7
General government balance (% of GDP)	-2.0	-7.6	-1.2	-0.5
General government debt (% of GDP)	14.9	22.4	21.5	19.9

* The euro is used as a de facto domestic currency

Source: Kosovo statistics, World Bank and IMF

In line with the conclusions of the European Council in Copenhagen in June 1993, EU accession requires the existence of a functioning market economy and the capacity to cope with competitive pressure and market forces within the Union.

2.3.1. The existence of a functioning market economy

Kosovo is **between an early stage and some level of preparation** and has made **some progress** in developing a functioning market economy.

Kosovo's economic rebound moderated significantly in 2022 as investment contracted and household consumption growth slowed owing to high inflation, which surged to double-digits in the wake of rising energy, food and transport prices. Russia's war of aggression against Ukraine had mainly indirect effects, through higher import prices and uncertainty. Supported by high revenue growth and a significant under-execution of public capital spending, the headline budget was close to balance in 2022 and the public debt ratio fell. However, the investor base for government debt remains narrow. Social benefits remain poorly targeted. The Assembly passed the new law on the minimum wage, which decoupled the level of war veterans' pensions from the minimum wage. The financial performance of publicly owned enterprises represents a fiscal risk. The current account deficit rose significantly on the back of strong increases in energy import prices. The financial sector remained well capitalised and stable, and bank lending continued to expand in nominal terms. However, sustained supervisory vigilance is required in the context of slowing economic growth, tightening financial conditions and the rapid rise in mortgage lending to households. The economy remained resilient during recent crises, but the private sector continues to be hindered by long-standing structural challenges such as a widespread informal economy, a high prevalence of corruption and the overall weak rule of law. The business environment improved somewhat. Labour market formalisation continued, but

labour market participation and employment rates, especially among woman and young people, remain very low, while unemployment remains high.

Last year's recommendations were partly addressed and remain mostly valid. In order to improve the functioning of the market economy, Kosovo should in particular:

- continue to mitigate the impact of the energy crisis by well-targeted and temporary support measures if needed, while complying with the fiscal rule's deficit ceiling of 2% of GDP;
- ensure compliance with the legal ceiling on war veteran pensions and with the wage bill rule, and undertake a review of tax expenditure, quantifying the size of the revenue forgone from all exemptions, preferential rates and special regimes;
- improve the quality of public spending by reforming the social security system and addressing weaknesses in public investment management;
- implement relevant business environment measures, in particular on the fight against the informal economy and the simplification and digitisation of licences and permits.

Economic governance

Kosovo's economic policies focused on providing policy support to cushion the impact of higher energy prices and on re-establishing fiscal buffers. In 2022, the government allocated and implemented around EUR 316 million (3.5% of GDP) in temporary support to vulnerable households and firms, and wage and pension bonuses and subsidies to the energy and agricultural sectors. The 2023 budget includes an allocation for contingencies of 3.5% of GDP, of which 2.7% of GDP is a blanket allocation, which undermines fiscal transparency. There was limited progress in improving the planning, selection and management of public investment, and the public capital budget was significantly under-executed. The government took fiscally prudent decisions by rejecting a proposal to withdraw more funds from the Kosovo Pension Savings Trust (KPST). The Assembly passed the new law on the minimum wage, which decoupled the level of war veterans' pensions from the minimum wage. The new Law on public-sector salaries, combined with a suitable value of the wage coefficient set by the government, ensures that the public wage bill does not exceed its legal ceiling. On 25 May, the IMF Executive Board approved a 24-month precautionary Stand-By-Arrangement in the amount of EUR 100 million for Kosovo and a EUR 78 million support from the IMF's newly established Resilience and Sustainability Facility, to be used for investments in renewable energy and energy efficiency.

The policy guidance jointly agreed at the May 2022 Economic and Financial Dialogue between the EU and the Western Balkans and Türkiye has been partially implemented. Tax revenue grew strongly on the back of high inflation and a reduction in the informal economy, but there was little progress on reviewing tax exemptions. The financial oversight of publicly owned enterprises (POEs) has improved but work to set up a fiscal oversight body has not advanced. For 2023-2025, Kosovo's Economic Reform Programme (ERP) aims to maintain stable public finances and comply with fiscal rules, while supporting the economic recovery mainly through higher capital spending.

Macroeconomic stability

Kosovo's economic rebound moderated significantly in 2022 due to the fallout from Russia's war of aggression against Ukraine. Real GDP growth eased markedly from 10.7% in 2021 to 3.5% in 2022, which is below the pre-pandemic (2015-2019) average rate of GDP growth of about 5%. The key factors behind the economic slowdown were a decline in gross fixed capital formation and a deceleration in private consumption

growth. The slower growth in private consumption was due to high inflation and the resulting fall in real disposable income as well as a moderate drop in net inflows of remittances as a share of GDP. Still, household consumption remained one of the main drivers of growth on the back of government support measures and higher bank lending. Moreover, a strong increase in exports of goods and services, together with a sharp slowdown in real imports growth, resulted in a positive contribution of net exports to GDP growth. Economic growth accelerated slightly to 3.9% year-on-year in the first quarter of 2023, up from 3.6% in the previous 3 months. Despite some gradual improvement, the lack of economic diversification, high import dependency and an unreliable energy supply render Kosovo vulnerable to adverse external shocks. Kosovo's per capita GDP remains the lowest in the Western Balkan region, standing at 27% of the EU average in 2022. Income inequality is high due to a large informal sector and high inactivity rates, especially among women.

The negative terms-of-trade shock led to a substantial deterioration in the current account balance. The current account deficit widened significantly to 10.5% of GDP in 2022, up from 8.7% in 2021. A key factor was the energy-balance-induced surge in the merchandise trade deficit, which outpaced the continued rebound of services exports, resulting in an increase in the overall trade deficit to 32.5% of GDP, up from 31.8% a year before. Affected by the economic slowdown in the EU, remittances decreased to 13.7% of GDP in 2022, down from 14.5% in 2021, while the primary income surplus fell to 1% of GDP, down from 1.9% a year earlier. Further unofficial services exports and remittances were reflected by large errors and omissions in the balance of payments (equivalent to 2.7% of GDP) in 2022. The four-quarter moving average current account deficit narrowed to 9.2% of GDP in the first quarter of 2023.

Net foreign direct investment (FDI) inflows increased strongly to 6.7% of GDP in 2022, covering around two thirds of the current account deficit. The key drivers for the 88% year-on-year increase were continued investment by the diaspora in the real estate sector, as well as higher inflows in mining and quarrying, financial and insurance activities, and manufacturing. In 2021, Kosovo issued its first diaspora bonds totalling EUR 10.4 million, most of them 5-year bonds, in an effort to tap additional sources of financing. Otherwise, Kosovo remains absent from international debt markets. The four-quarter moving average of net FDI inflows increased slightly to 7% of GDP in the first quarter of 2023, while official reserve assets amounted to 2.3 months of imports of goods and services.

After peaking in 2022, annual inflation started to gradually decline since the last quarter of that year. Annual average consumer price inflation accelerated significantly to 11.6% in 2022, up from 3.3% in 2021. The main drivers were rising energy, food and transport prices. However, in the last months of the year inflation started to moderate, reaching an average of 10.1% year-on-year in the first quarter of 2023 and decreasing further to 2.4% in July on the back of gradually decelerating global commodity prices. Most energy prices are regulated in Kosovo. Following a request by KEDS, Kosovo's energy distribution company, in early December 2022, the Energy Regulatory Office increased electricity tariffs by 15.4% for all consumer categories in late March 2023. The government continued subsidising tariffs for households and businesses consuming up to 800 Kwh.

Fiscal consolidation continued in 2022 with a further reduction of the headline deficit on the back of high revenue growth and underexecution of the capital investment programme.

The headline budget deficit fell to 0.5% of GDP in 2022 (from 1.2% of GDP in 2021), which corresponds to a surplus of 0.2% of GDP under the fiscal rule's definition⁶. Government deposits fell slightly to 3.5% of GDP, down from nearly 4% in 2021. The fall in the government deficit resulted primarily from a higher-than-projected increase in budgetary revenue, which rose by nearly 14% year-on-year, on the back of high inflation and

some formalisation gains. Tax revenue increased by 14.3%, with direct and indirect tax income growing healthily by 21% and 12% respectively in 2022. Public expenditure grew by 10.5% year-on-year. The largest increase took place in the category of transfers and subsidies (26.3% year-on-year), mainly driven by energy subsidies. The execution of overall current expenditure was roughly in line with the revised budget plan. Wages and allowances recorded an annual decrease of 2.2%, while spending on goods and services rose by 9.4%. Capital spending practically stagnated compared to 2021, and only reached around 60% of the revised budget allocation, affected by weak public investment management capacity and higher input prices, which have led to a surge in project costs.

On the back of the improved budget balance and high nominal GDP growth in 2022, the public debt-to-GDP ratio declined, but the domestic investor base for government debt remains narrow. The public debt ratio fell to a revised 19.9% at the end of 2022 and further to 17.3% in June 2023. These figures do not include the liability for the State from COVID-19-related tax-free withdrawals of 10% of pension savings from the Kosovo Pension Savings Trust, which the government promised to reimburse from 2023⁷. Domestic debt, which is held by a narrow investor base, increased only by 0.5% in nominal terms in 2022. In March 2023, the share of domestic debt held by the KPST rose to 49%, up from 44% in 2021, while the Central Bank of Kosovo and commercial banks hold a further 20% and 24% of domestic debt respectively. In the absence of a sovereign credit rating and very limited access to international

⁶ The fiscal rule places a cap on the fiscal deficit of 2% of forecast GDP, excluding capital projects financed by privatisation proceeds and donors ('investment clause'). This exemption for donor-financed investments can be invoked until 2025, provided the public debt ratio remains below 30% of GDP. A further rule stipulates that the increase in the public wage bill cannot exceed nominal GDP growth. Government deposits used as fiscal buffers are legally required to stay at 4.5% of GDP as long as the government uses privatisation proceeds. The debt rule provides that public and publicly guaranteed debt cannot exceed 40% of GDP.

⁷ The IMF estimates the liability to the Kosovo Pension Savings Trust at 1.8% of 2020 GDP.

bond markets, foreign financing has been provided by international donors. Foreign debt rose by 11.2% in 2022. This includes loans from the World Bank (EUR 60.1 million), the European Investment Bank (EUR 23.8 million), the European Bank for Reconstruction and Development (EUR 14.5 million) and the Council of Europe Bank (EUR 10.8 million). The new Law on public debt and state guarantees, aligning the legal framework with EU standards and international practices, was adopted at the end of 2022, and the secondary legislation will be reviewed and approved by the end of 2023. Under this new law, the definition of public debt will also include debt issued on behalf of municipalities. The law regulates municipality borrowing (including the power to borrow), reporting requirements and debt limits.

Progress with public investment management and addressing fiscal risks has been mixed.

Budgeted public capital spending is expected to increase by 3.6% of GDP compared to the 2022 outturn, despite weak planning and implementation capacities and recurring under-execution of the capital budget in the previous years. Some steps were taken to unlock project implementation, including through paid land expropriations and making the Procurement Review Body board operational again in the second quarter of 2022. Furthermore, the Law on public works support, adopted at the end of 2022, compensates contractors up until mid-2023 for higher project costs resulting from very high inflation. The implementation of the Law on salaries of public officials is expected to increase the wage bill by 11.1% in 2023. This is lower than the nominal GDP growth in 2021, meaning that the wage bill rule is being respected. The issue of recurring spending overrun on war veteran pensions has not been resolved due to the absence of a reclassification of beneficiaries. The 2023 budget again includes a large blanket allocation, which undermines fiscal transparency and budget planning unless it is justified as part of a concrete risk assessment framework. The fiscal risk analysis of the main central publicly owned enterprises in the medium-term expenditure framework (MTEF), annual budget and the ERP has been expanded beyond the POEs overseen by the Ministry of Economy. However, the analysis is limited to high-risk POEs, excluding other companies. Implementation of the Energy Roadmap reached on 21 June 2022 between Kosovo and Serbia in the EU-facilitated dialogue to address electricity billing issues in four municipalities in the north of Kosovo is yet to move forward. Fiscal risks related to billing and payment of invoices remain. In 2022, the financial obligations of KOSTT, the Kosovo transmission operator, for the losses caused by the energy consumed (but not paid for) in that part of Kosovo reached EUR 63 million.

After 2 years of substantial fiscal consolidation, the planned strong fiscal impulse in 2023 is appropriate.

In 2022, the government adopted temporary support packages that helped to mitigate the impact of the energy crisis, including energy subsidies and transfers to vulnerable households and firms. However, the measures could have been better targeted and more transparent. Budget revenue relies on a narrow tax base, mainly from indirect taxes, weakened by numerous tax exemptions, preferential tax rates and special regimes, while public spending is burdened by category-based specific transfers, leaving little space for means-tested benefits and employment policies. The 2023 budget provides for a strong fiscal stimulus, which is largely appropriate after 2 years of substantial fiscal consolidation. This would mainly be implemented through an increase in public spending on wages and investment. However, there is a risk of the latter facing constraints due to weak public investment management.

Functioning of product markets

Business environment

The gap between newly registered and terminated firms has widened over the last 5 years.

The difference between new (11 049) and terminated firms (1 775) widened to 9 274 in 2022, up from 8 066 in 2018, mainly due to a higher number of newly registered companies.

Some progress was made in improving the business environment. In July 2022, the government approved the concept document for the Register of Beneficial Owners. The Commercial Court became fully operational in August 2022, which is expected to increase the efficiency of the judicial system in settling commercial disputes, but the court still faces a large backlog of cases. In September 2022, the government adopted an improved programme to reduce and prevent the administrative burden on citizens and businesses. The e-Kosova platform has increased the number of services available through the platform from 21 in 2021 to 140 in 2023. In October 2022, the government approved the concept document for business organisations and the secondary legislation on the Business Registration Agency. In November 2022, an assessment of the agency's database compatibility with the requirements of the Business Register Interconnection System (BRIS) was finalised. The Kosovo Investment and Enterprise Support Agency (KIESA), whose task is to support foreign and domestic businesses including SMEs, promote exports and attract foreign direct investment, lacks capacity and resources to execute its broad mandate, while its restructuring and reform are long overdue. For this reason, in January the government approved the Law on sustainable investments, which is awaiting the Assembly's approval. Its purpose is to regulate the protection, promotion and encouragement of sustainable investments. The law also envisages to replace the KIESA by a new agency, which would facilitate foreign investment and report directly to the prime minister's office.

Despite some progress in reducing the informal economy, it still accounts for more than 30% of GDP. Formalisation efforts by the government, Kosovo's Agency of Statistics, and the Customs administration have borne fruit, contributing around 35% of the cumulative change in tax revenues in 2020-2022⁸. The government subsidies for registered employees to mitigate the negative impact of the COVID-19 pandemic on households and firms helped shift more employees from the informal to the formal sector. Increased labour demand at the time of the economic rebound contributed to an increased number of formal employees. During the reporting period, the Secretariat of the Government Working Group for the implementation of the 2019-2023 National Strategy for the Prevention and Combating of Informal Economy, Money Laundering, Terrorist Financing and Financial Crimes, published a report covering the first half of 2022, which showed that only 50% of the planned actions were implemented. A second action plan covering the period 2022-2023 was adopted in 2022, while the Secretariat has started drafting the new national strategy for 2024-2028. To tackle corruption, a set of new anti-corruption laws was adopted in 2022. These aim at strengthening criminal proceedings, the anti-corruption agency, and asset declaration. According to Transparency International's corruption perceptions index, Kosovo improved its index score in 2022, ranking 84 out of 180 countries, 3 positions higher than in 2021.

State influence on product markets

The State aid policy framework is at an early stage of development. The current framework lacks a coherent approach to State aid or a comprehensive strategy and cost-benefit evaluations for aid and subsidies granted. In the reporting period, the State Aid Department developed an online monitoring system for State aid. Training of the competent staff on recording and monitoring State aid in the system is in progress. The State Aid Commission has still not been appointed by the Assembly and remains without a decision-making quorum. In 2022, in the context of higher energy and crop prices amid Russia's war of aggression against Ukraine, about 1% of GDP was allocated for subsidies to firms operating in the agricultural and energy sectors.

⁸ IMF Country Report No. 23/55, January 2023.

Privatisation and restructuring

Kosovo took further steps to set up a sovereign fund. In June 2022, the government adopted a concept document on the sovereign fund, and a public consultation was launched in March 2023 on the draft law on its establishment. The sovereign fund is expected to take over socially owned enterprises⁹ and assets managed by the Privatisation Agency of Kosovo (PAK), as well as some publicly owned enterprises managed by the Ministry of Economy after these improve their financial performance. However, setting up the fund will not be sufficient to address the long-standing issues of poor financial performance and management, which reflect weaknesses in corporate governance and oversight of publicly owned enterprises. In June 2023, the government approved the draft law on the sovereign fund, which will be discussed in the Assembly. During the reporting period, the PAK initiated liquidation procedures for 3 socially owned enterprises. In total, 582 socially owned enterprises are under liquidation procedures. The process of dismissing and appointing new board members of publicly owned enterprises continued, with more women being appointed.

Functioning of the financial market

Financial stability

The financial sector showed resilience amid continued challenges. The predominantly foreign-owned banking sector accounts for 68.4% of financial system assets, followed by pension funds, micro-financial institutions and insurance companies, with 24.5%, 4.1% and 2.7% respectively. The banking sector's profitability improved in nominal terms, with the average return-on-equity ratio rising to 20.6% in 2022, up from 17.6% in 2021, and increasing further to 21.1% in July. At the end of 2022, the non-performing loans ratio stood at a historically low 2% and remained unchanged at end-March 2023, partially supported by the denominator effect of high nominal credit growth. The banking sector has to be closely monitored due to non-negligible risks from a weaker economic outlook, higher commodity prices and lower-than-projected remittances. Furthermore, as new mortgage lending to households has been growing relatively strongly, it appears appropriate to strengthen surveillance of the housing market. The ratio of banks' regulatory capital to risk-weighted assets stood at 14% in 2022 and increased to 15.3% in July, comfortably exceeding the regulatory minimum of 12%. Banks continued to be financed by deposits, predominantly from households. The loan-to-deposit ratio increased to 78.3% in 2022, up from 76.5% in 2021, and rose further to 81.1% in March. In 2022, the net profit of micro-financial institutions increased to EUR 17.2 million, up from 14.1 in 2021. The insurance sector's net profit fell by 44% on an annual basis, reflecting the increase in operating expenses, namely the cost of purchasing goods and services, administrative expenses and claims incurred.

Access to finance

Lending to the private sector continued to expand in 2022. Driven by both business and household lending, bank loan growth accelerated to an average of 17.4% in 2022 up from 11.2% in the previous year, before slowing to 15% year-on-year in the first quarter of 2023. The average interest rate on loans increased to 6.3% in 2022, up from 5.8% in 2021, and remained at 6.3% in March, reflecting tighter financing conditions in the euro area. Deposits' average growth eased to 10.8% in 2022, down from 13.8% a year earlier, before picking up to 16.3% year-on-year in the first quarter of 2023. New loans issued to businesses with a focus on investment grew by 9.6% in 2022. Despite some new initiatives undertaken by the Kosovo Credit Guarantee Fund, the lack of easily accessible and affordable credit continues to be a

⁹ The ownership of socially owned enterprises was considered as shared social property in the former Yugoslavia.

barrier to SME growth. This is partly due to the existing disparity between the market value of collaterals and their legally assigned value taken into account by banks. The capital market remains at an early stage of development. Microfinance has gained momentum in recent years¹⁰, but shortcomings in the legal framework regulating micro-financial institutions hinder the industry's long-term growth and sustainability.

Functioning of the labour market

Despite some progress, the labour market continues to suffer from very low participation, high unemployment and large gender gaps.

Labour Force Survey results continue to be published with large delays. The latest available data refer to the last quarter of 2022. In line with the continued rebound of economic activity, the employment rate increased to 34%, up from 31.7% in the last quarter of 2021. Meanwhile, the unemployment rate declined markedly from 19% to 11.8%, while the labour force participation rate decreased from 39.2% to

38.5% in the same period. The wide gap between male and female employment rates (50.8% and 17.1% respectively) persisted. In the last 3 months of 2022, the share of young people (aged 15-24) not in employment, education or training decreased somewhat to 33.7%, down from 34.8% in the same period a year before. To improve the situation, the government adopted a multiannual youth guarantee implementation plan, and there are ongoing reforms to public employment services. Tax administration data suggest that official employment in the private and public sector increased by 4.9% in 2022. In December 2022, the number of registered job seekers decreased by 1.5% compared to the same period a year before.

Despite some recent formalisation gains, an overall poorly targeted system of social assistance creates disincentives to joining formal employment. In 2022, spending on transfers and subsidies reached nearly 12% of GDP, of which expenditure on poverty-targeting social assistance was less than 0.5%. Category-based social transfers, such as the war veteran pension scheme, undermine the soundness and fairness of the social benefit system. The lack of social and other benefits in formal employment – given the lack of structures to provide

¹⁰ Despite the expansion of the microfinance sector, the interest rate on loans was around 18%, which is nearly three higher than the rate on bank loans.

them – discourages many informal employers and employees from formalising working arrangements. According to estimates, 40% of the workforce is not declared or is under-declared. Relatively high public-sector wages and remittances increase reservation wages, restricting labour supply, while the lack of jobs fuels the emigration of young people. Increasing private-sector productivity would improve export competitiveness, increase job opportunities and allow for higher wages. The lack of childcare and elderly care facilities hinders female employment.

2.3.2. The capacity to cope with competitive pressure and market forces within the Union

Kosovo is at an **early stage** and has made **limited progress** in terms of its capacity to cope with competitive pressure and market forces in the EU. The education system does not sufficiently teach the necessary key skills and is not adequately aligned with labour market needs. Limited progress was made in improving transport infrastructure. The energy sector remains a major bottleneck for Kosovo’s economic development, and the ongoing energy crisis underlined the urgency of ensuring a reliable and clean energy supply and diversifying energy sources. Kosovo made some progress on digitalising the economy. Structural changes are advancing slowly, as the economy remains highly reliant on small and micro firms, which cannot compete internationally. At the same time, the export structure has somewhat diversified, although it is still dominated by base metals. Trade openness increased as both exports and imports grew robustly. The recommendations from 2022 were not fully implemented and remain mostly valid.

In order to improve competitiveness and sustain long-term growth, Kosovo should in particular:

- improve the quality of education at all levels, and align education, particularly higher education programmes and vocational education and training, with labour market needs by closely cooperating with the business community;
- strengthen energy security and increase energy efficiency incentives in the residential and private sectors and increase the share of renewables in power generation in a cost-efficient way;
- advance tailored financial and non-financial support for SMEs to improve their competitiveness and export capacity.

Education and innovation

Little progress has been achieved on reforming the education system and aligning it with labour market needs. Public spending on education amounted to 4.1% of GDP in 2021 (down from 4.6% in 2020 and 4.3% in 2019), which is broadly in line with the EU average. However, in terms of outcomes, Kosovo performs worse. The enrolment rate of children in early childhood education stands at 6.7%, the lowest in the region, while for primary and secondary education the combined enrolment rate of 88.1% is very similar to those of regional peers. To address an insufficient participation in early childhood education, the government has approved the draft Law on early childhood education, which is with the Assembly for adoption. The absence of quality learning materials (including a lack of digital resources) in schools and the lack of teachers’ initial training and continuous professional development have a negative impact on the quality of education. Learning materials were adapted in the light of the Programme for International Student Assessment (PISA) 2022¹¹ test, after Kosovo registered its lowest-ever ranking in 2018. Kosovo students’ scores were lower than the OECD average in reading by the equivalent of 5 years of schooling, and in mathematics by a little over 4 years. The education system is not geared to developing the necessary key skills and is not adequately

¹¹ PISA 2022 test results will be published in December 2023.

aligned with labour market needs. The 2022-2026 education strategy, adopted in October 2022, aims to raise the quality of pre-university education and, in particular, to harmonise education and professional training. It also fully recognises the need to develop a real-time information system and forecasting on labour market needs, as well as a standardised methodology for labour market research. This commitment has yet to be translated into action. In September 2022, the Kosovo Accreditation Agency (KAA) was granted the status of affiliated member of the European Association for Quality Assurance in Higher Education (ENQA). The agency is currently in the process of applying for membership in the ENQA and the European Quality Assurance Register. Kosovo adopted the Law on KAA, which aims to increase the agency's operational independence and transparency of management appointments.

Kosovo's performance lags behind in research and innovation. This is true for policy governance, the public research system, public-private linkages, innovation in firms and human resources for innovation; overall Kosovo has one of the lowest scores in the Western Balkan region¹². Budget allocation for research and development, at 0.1% of GDP, is far below the 0.7% of GDP required by law (compared to an average of 2.2% in the EU), in particular for business innovation. There is chronic fragmentation in implementing innovation policy and no overall coordination among line ministries and the SME support agency, KIESA. In 2022, the Kosovo National Science Council managed successfully to develop the National Science Programme as the main strategic document on science and research. Kosovo has successfully completed negotiation with the EU to become a fully associated member of the Horizon Europe programme, although there is a need to improve performance in accessing grants.

Physical capital and quality of infrastructure

Foreign direct investment (FDI) has not led to an increase in domestic productivity. Kosovo has primarily attracted investment in areas with limited scope for productivity spillovers, such as construction and real estate, which represent 80% of FDI¹³. In 2022, 67% and 7% of all FDI inflows were directed to real estate and financial and insurance activities respectively. Additionally, FDI is limited to a handful of countries, namely states where a sizeable, well-established Kosovo diaspora exists. Export-oriented FDI has been very scarce, and overall figures are relatively low, passing the EUR 300 million figure only once in the past 7 years.

Kosovo made limited progress in improving road and railway infrastructure, delaying the implementation of major projects. The government submitted a loan request to the EBRD and EIB for Route 7 *Peace Highway*. The rehabilitation works for Railway Route 10 continued at a slow pace, with the first segment expected to be completed in the first quarter of 2024. The works on the second segment started at the end of 2022, while the related signalling and telecom works have yet to start. The transport system still faces several challenges in terms of safety, inadequate maintenance, and weak administrative capacity of regulatory institutions.

An unreliable and undiversified energy supply and an extremely fragile energy sector remain major bottlenecks for Kosovo's economic development. The reliability of energy supply is still below the average for Europe and Central Asia. Despite some improvements, Kosovo ranks 90th in the world for ease of getting electricity¹⁴. The lack of energy security gives rise to significant costs for business and represents one of the biggest obstacles to attracting high-quality foreign direct investment. Energy demand and consumption continue to

¹² OECD (2021), *Competitiveness in Southeast Europe – a policy outlook 2021*.

¹³ IMF (2023), *Republic of Kosovo, Selected Issues Paper*.

¹⁴ World Bank (2020b), *Doing Business 2020: Comparing Business Regulation in 190 economies*.

grow quickly, and have doubled since 2000. Kosovo also suffers from high technical and commercial losses in the distribution and transmission grids due to poor infrastructure (around 20%).

Kosovo's electricity generation relies heavily on coal-fired plants. More than 90% of electricity is produced by two outdated, unreliable and highly polluting lignite power plants, which the government plans to refurbish. Renewable energy sources account for just over 5% of electricity supply. The roll-out of renewables is expected to accelerate through the newly adopted 2022-2031 national energy strategy and the law on renewable energies due to be adopted by the Assembly in Q3-2023. The draft law provides for a competitive bidding process to support renewable energy projects, replacing the previous system of feed-in tariffs. In May 2023, Kosovo launched a pilot auction for 100 MW of solar power. There has been an increase in renewable energy investments, and several projects to develop significant wind and solar energy sources are already planned. (*See also Chapter 15 – Energy*).

The digital transformation of the economy is gradually advancing, but the digitalisation of public services is still at an early stage. 100% of households nationwide now have access to fixed broadband electronic communications infrastructure. Fixed access internet penetration is estimated to be 125% of households, compared to 89% in the EU, and mobile telephony penetration is around 95% of the population. Kosovo has a small but rapidly growing ICT sector, particularly in the export of software development, smart phone application development and web design. More needs to be done to train skilled workers in this sector, where demand for employees outstrips supply. Since 1 July 2021, Kosovo has constructively engaged in high-level regional dialogue on digital transformation and the implementation of the Regional Roaming Agreement. Despite some improvements in implementing e-commerce programmes, there seems to be little progress in increasing the adoption of e-commerce practices among SMEs. The Digital Agenda strategy covering the period up to 2030 has been submitted for public consultation. The policy document is expected to provide a comprehensive framework for digital transformation, including 5G technologies and the digital transformation of businesses and public services.

Sectoral and enterprise structure

The services sector continues to dominate the economy in terms of GDP and employment.

The sectoral structure of gross value added (GVA) shows a steady increase in the share of wholesale and retail trade to nearly 14% in 2022, up from 12.5% in 2018. This has been followed by slight growth in the share held by agriculture (7.4% in 2022, up from 6.5% in 2018). At the same time, the share of real estate activities in GVA fell by 1.2 pps to 5.9% compared to 2018, followed by shrinking contributions from public administration and education. Despite its slight decline compared to 2018, the services sector continued to dominate economic activity in 2022, providing around 45% of GVA. The contribution of construction remained virtually unchanged at around 8% compared to 5 years before, while employment in the sector fell to 11% in 2022, down from 11.9% in 2018. For the same period, the proportion of employees in the services sector increased slightly from 70% to 73%.

Kosovo's private sector is dominated by very small firms with difficult access to finance.

Although SMEs represent over 99% of registered enterprises, almost all of them are micro firms employing 1-9 employees, while the proportion of larger companies (10-249 employees) is less than 1%. SMEs and family-run businesses account for 80.4% (2020) of employment in non-financial businesses (significantly above the EU average of 65.2%) and generate 81% of the country's total value added. Access to finance remains an obstacle to growth due to banks' stringent loan requirements, affecting mostly smaller enterprises. Within almost 7 years, the Kosovo Credit Guarantee Fund (KCGF) portfolio has reached the cumulative value of

approved loans of around EUR 550 million, while the value guaranteed by the Fund has reached EUR 290 million, distributed in almost 13,000 loans.

Economic integration with the EU and price competitiveness

Over the last 5 years the EU remained Kosovo's largest trading partner, while the share of CEFTA countries declined. In 2022, the EU accounted for 42.4% of Kosovo's total imports of goods, marginally lower than in 2018, while the CEFTA partners' share fell by around 8 pps to 17.7%. On the other hand, the proportion of goods imported from Türkiye increased to nearly 15%, up 5 pps on 2018. The EU's share in Kosovo's merchandise exports increased to 33.9% in 2022, up from 27.5% in 2018, while the proportion of CEFTA countries decreased to 36.2% from 47.2%. Among CEFTA partners, North Macedonia and Albania are the main destinations for Kosovo's exports of goods. The share of base metals¹⁵ in goods exports fell to 23.1% in 2022, down from 34.1% in 2018, but they still account for the largest part of merchandise exports. The proportion of various manufactured articles increased significantly to around 20% in 2022, up from 4% in 2018.

Trade openness improved significantly in 2022, in line with the robust performance of trade in goods and services. Overall, trade openness (i.e. the total value of exports and imports) increased to 109.2% of GDP in 2022, up from 98.6% in 2021 and 86.3% in 2018. The improvement took place for both merchandise and services trade. The increase in goods exports (21.8%) in 2022 was mainly driven by mineral products as well as plastic, rubber and their manufactured articles. Services exports continued to grow robustly, by 31.3% in nominal terms, mainly driven by diaspora tourism from Western Europe. In addition to travel services, which currently account for the largest share of service exports (74.4%), there were positive developments in exports of telecommunications and computer and information services. Imports of goods rose quickly (20.4%) mainly due to higher energy imports.

The EU Member States remain the main investors in Kosovo. Net FDI inflows surged by

¹⁵ This is partly because Ferronikeli (Kosovo's largest exporter) halted production in the last quarter of 2021 on the back of higher energy prices.

88% in 2022, mainly on the back of significant diaspora investment in real estate, followed by financial and insurance activities. Heavy concentration in these sectors (around 75% of FDI inflows) contributes little to improving export capacity. The EU's share in Kosovo's net FDI stock reached 40.5% in 2022, up from 32.1% in 2018. The shares of Germany and Switzerland (two countries with large diasporas from Kosovo), increased to 17.5% and 16.4% respectively in 2022, up from 11.8% and 11.4% in 2018.

2.4. PUBLIC PROCUREMENT, STATISTICS, FINANCIAL CONTROL

Chapter 5: Public procurement

EU rules ensure that the public procurement of goods, services and works in any Member State is transparent and open to all EU companies on the basis of non-discrimination and equal treatment.

Kosovo is **in between some and moderate level of preparation** in the area of public procurement. It made **limited progress** in this area. Public procurement remains prone to irregularities and vulnerable to corruption during both the procurement process itself and in the subsequent implementation of the contract. No progress was made in adopting a new public procurement law. Since last year's recommendations were not implemented, they remain valid.

In the coming year Kosovo should in particular:

- adopt a new law on public procurement and a new law on concessions in line with the EU *acquis*; prepare the corresponding implementing legislation and ensure their proper implementation;
- increase the capacity of – and cooperation between – all public-procurement institutions and contracting authorities;
- ensure that the Procurement Review Body is fully operational and remains functionally independent; it should also strengthen the Body's capacity and ensure that its review process is timely, effective and transparent.

Institutional set-up and legal alignment

The **legal framework** on public procurement is partially aligned with the EU's 2014 public-procurement *acquis*. A new public procurement law is still awaiting adoption by the government for over two years. The authorities have not yet started to draft the implementing legislation. A new law on public private partnerships is also awaiting governmental approval.

Strategic priorities in the area of public procurement, including activities in this area, are now part of the new 2022-2026 public finance management strategy and its 2022-2024 action plan, both of which were approved at the end of December 2022.

The Central Procurement Agency, under the Ministry of Finance, Labour and Transfers, carries out centralised purchases on behalf of the central government. The Public Procurement Regulatory Commission is responsible for the overall coordination and supervision of the public procurement system. The Procurement Review Body examines all allegations of breaches of public procurement law and reviews bidders' complaints. The Body's functional independence should be reflected in the new law. It is also important to ensure better cooperation among these and other institutions, such as the Kosovo National Audit Office and

the Kosovo Competition Authority. Cooperation in this area would help to detect any bid-rigging and reduce risks through careful planning and design of the tenders.

Implementation and enforcement capacity

Kosovo's **public-procurement market** was estimated as being worth 6.5% of GDP in 2022, compared with 5.6% of GDP in 2021. By June 2023, the country's e-procurement system had registered approximately 14 400 businesses and around 16 300 active users. In 2022, 10 290 public contracts were signed, compared with 9 892 in 2021. In terms of value, contracts worth EUR 559 million were signed in 2022, compared with contracts worth close to EUR 430 million in 2021. A significant amount of public procurement activities (21.80%) were carried out via negotiated procedure without formal procurement and bidding process. The value of contracts signed under negotiated procedure without being published represents EUR 78.56 million or 14.05%.

On the **monitoring of contract awards and implementation**, in 2022, 78.2% of contracts were awarded through open procedure and 94.34% of public contracts were awarded according to a lowest-price criterion, with only 5.66% (or EUR 31.6 million worth) using the best-price-quality ratio. The use of best-price-quality ratios should be further encouraged in line with the EU directives on public procurement. Interoperability has still not been ensured between the e-procurement system and other relevant government IT systems to increase transparency (such as with the Kosovo Financial Management and Information System) to track payments.

The **capacity of the contracting authorities to manage public-procurement processes** varies. Improvements are needed in market research, in the tender evaluation process as well as in the implementation and the monitoring of contracts. Further improvements are needed in the drafting of technical specifications to better support the quality, efficiency and transparency of procurement. There is a risk of mismanagement and corruption due to limited enforcement, insufficient managerial accountability, insufficient quality control and limited contract management capacity. The Public Procurement Regulatory Commission organised trainings to improve the capacities of contracting authorities to use the best-price quality ratio as award criterion. Furthermore, it held seminars on the use of the modules on contract management and on the performance evaluation of contractors. The e-procurement system needs to be updated to ensure full functionality.

Centralised procurement is mandatory for agencies with fewer than 50 employees and for 14 listed categories of goods and services. The Central Procurement Agency continues to be understaffed. Kosovo should improve its planning of procurement, and reduce the use of negotiated procurement procedures. To mitigate the risks of misuse and fraud, it is important to ensure full transparency, ensure robust reasoning to explain the award decision and maintain audit trails.

The Procurement Review Body would benefit from more qualified staff, particularly with respect to review and legal experts, to ensure timely and quality decisions on complaints.

There were no developments in the area of **integrity and the fight against conflicts of interest**. Kosovo has a code of ethics for public procurement, but it does not monitor compliance with this code. Specialised professional and ethics training should be delivered to all contracting authorities. Further efforts are underway to both the procurement systems and audit oversight of local governments. More and more municipalities are now publishing their procurement contracts.

Efficient remedy system

Kosovo's legislation on the **right to legal remedy** is broadly in line with the EU *acquis*. Appeals to contest procurement awards can be lodged through the e-procurement platform. Following the resignation of one board member, the Procurement Review Body board is once again incomplete, although it continues to operate. Kosovo needs to ensure that the Procurement Review Body becomes fully operational and remains functionally independent. The Body's capacity needs to be strengthened and its review process managed in a timely, effective and transparent manner. A total of 820 appeals were lodged and the board handled 732 cases in 2022 and 88 cases in 2023.

Chapter 18: Statistics

EU rules require Member States to produce statistics based on professional independence, impartiality, reliability, transparency, and confidentiality. Common rules are in place for the methodology, production and dissemination of statistical information.

Kosovo **has some level of preparation** in the area of statistics. **Some progress** was made in the reporting period, notably in improving: the data-collection methodology; data transmission to Eurostat; and implementation of the Eurostat peer-review recommendations. Communication between the different statistical institutions has improved, but coordination at the technical level and the use of available administrative data are insufficient. Kosovo has also improved the frequency of its statistical outputs. Some statistics on energy, social statistics and short-term statistics in the services sector are now being sent to Eurostat on a monthly basis, whereas they used to be sent on a quarterly basis. The delayed population and housing census is now planned to take place between 1 November and 31 December.

Last year's recommendations were partially met and remain valid. In the coming year, Kosovo should in particular:

- finalise preparations for the population and housing census and its implementation by ensuring operational details and full coverage of the territory;
- increase the number of statistical products and send these products more frequently to Eurostat;
- fill existing vacancies and increase the capacities of the Kosovo Agency of Statistics.

On **statistical infrastructure**, the legal framework is broadly in line with the European Statistics Code of Practice. However, the implementation of this framework needs to be strengthened. To that end, Kosovo should: (i) preserve a leading role for the Kosovo Agency of Statistics (KAS); (ii) improve statistical governance and coordination between the main statistical institutions; (iii) and ensure better access to administrative data sources. The KAS should continue to implement Eurostat's peer-review recommendations, particularly in relation to increasing the Agency's cost-effectiveness, strengthening quality management, and strengthening relations with data users. KAS should also fill vacant positions. The efficiency of internal systems, processes and delegated management remains a challenge. Data transmission to Eurostat continues to improve. Despite improvements to its web-based dissemination of statistics, the Agency should seek to strengthen its relations with data users and academia. Kosovo continues to use the European classification of economic activities (NACE Rev.2). The existing registers (agriculture, business and households) are updated regularly, but the population register needs to be improved. KAS has improved access for the public to some existing administrative data, such as data from the Civil Registry Agency, and the Food and Veterinary Agency. In March 2023, the Agency signed a memorandum of understanding with the Czech Statistical Office setting a framework for cooperation and procedures for the exchange of information and expertise in the field of official statistics. The

Agency does not systematically compile gender-disaggregated data. Kosovo still does not yet have a Gender Equality Index.

On **macroeconomic statistics**, Kosovo has made some slight improvements, and further alignment with the European System of Accounts (ESA) 2010 is ongoing. Although the Agency compiles annual and quarterly national accounts, methodological inconsistencies in these accounts need to be addressed. The reporting period has seen some improvements: (i) the experimental compilation of GDP by income approach (for 2011-2019); (ii) the compilation of Non-Financial Sector Accounts (2015-2021) to be transmitted to Eurostat in September 2023; and (iii) Supply and Use Tables (2013-2016) expected to be sent to Eurostat in October 2023.

Quarterly sector accounts and regional accounts are not regularly compiled. The number of ESA 2010 transmission tables sent to Eurostat has increased and improved. As regards government finance statistics (GFS) and excessive deficit procedure (EDP), further methodological work is expected to fully adhere to ESA 2010. Kosovo should continue efforts to improve the coverage and timeliness of the EDP tables as well as to start completing the questionnaire relating to the EDP tables. After the tables for quarterly financial account for general government and quarterly debt for general government were transmitted to Eurostat for the first time in 2023, Kosovo now provides the currently full set of required GFS tables. However, efforts are still needed to improve various qualitative aspects of the tables.

Monthly statistics for international trade in goods are submitted to Eurostat. Balance of payments data are compiled by the Central Bank and are broadly in line with the EU *acquis*; annual and quarterly data on the balance of payments are submitted to Eurostat. KAS publishes quarterly government finance statistics. The Harmonised Index of Consumer Prices is regularly published on the KAS webpage and transmitted to Eurostat. There has been no progress in broadening the work by adding data on Purchasing Power Parities (PPP).

Structural **business statistics** and some short-term statistics are partially in line with the EU *acquis*. However, the availability of both these types of statistics is limited and they lack distinction between public and private investments or by sectors. Only one set of short-term statistics (on building permits) has been sent to Eurostat. Industry statistics are produced broadly in line with the relevant EU regulation. Short-term service-sector statistics are produced quarterly. Construction-sector statistics are largely not available; only the construction cost index is produced on a quarterly basis. Industry statistics on manufactured goods (PRODCOM survey) for the year 2021 were published in December 2022. Foreign affiliates statistics are not available. Tourism statistics and transport statistics are not aligned with the EU *acquis*, while statistics on development and innovation are not produced on a regular basis. The statistics on information and communication technologies (ICT) for households started in 2018, and are now published regularly (the results for 2022 were published in October 2022). The 2021 ICT statistics for enterprises were published in November 2022.

In the area of **social statistics**, only demographic statistics are broadly in line with the EU *acquis*. The preparations for the forthcoming population census are ongoing: in July 2022, the Assembly adopted the Law on population and the housing census. In August 2023, the government decided that the census will take place from 1 November to 31 December 2023, and allocated EUR 10 million for this.. Statistics on income and living conditions (regular EU-SILC survey) are produced annually. The last set of SILC statistics for Kosovo was for the year 2020 and was published in December 2022. Social-protection and labour-market statistics are only partially produced. Kosovo carries out an annual and quarterly labour-force survey and the timeliness of publication of the results of this survey has improved. Kosovo still does not produced statistics on the labour cost index, the structure of earnings data, and job vacancies.

Education statistics for 2022/2023 are aligned with the international education classification standards (ISCED 2011) Public health and crime statistics are not yet in line with EU standards.

For **agricultural statistics**, KAS publishes data on annual agricultural crops, livestock production, and orchards statistics. The agricultural holding survey is regularly produced and aligned with *acquis* standards. The next farm-structure survey is not planned until 2025. Agricultural price indices and economic accounts for agriculture are produced on a regular basis. Supply balance sheets and the agriculture labour index are not yet produced on regular basis. Agriculture statistics are sent to Eurostat through the EU IT system for statistics, the Electronic Data Files Administration and Management Information System (EDAMIS).

Energy and environment statistics are partially in line with the *acquis*. During the reporting period, KAS reduced the timeframe for publishing energy balance results (publishing on a monthly rather than quarterly basis since mid-2022). Thus, it increased the number of statistical products sent to Eurostat. In April 2023, the share of renewable energy sources in the overall electricity consumption stood at 17.32%. Energy-consumption statistics are collected for the residential, services and transport sectors, but the results are not published regularly. The lack of energy-efficiency indicators is an obstacle to reporting on energy savings. Waste and water statistics are produced regularly. Statistics on greenhouse-gas emissions are not published regularly. Other environmental statistics, such as air-emissions accounts, environmental taxes, environmental-protection expenditure. and material flow balances, are not yet produced.

Chapter 32: Financial control

The EU promotes the reform of national governance systems to improve managerial accountability, sound financial management of income and expenditure, and external audits of public funds. The financial control rules further protect the EU's financial interests against fraud in the management of EU funds and protect the euro against counterfeiting.

There is **some level of preparation** in this area. Kosovo made **limited progress** during the reporting period by adopting the new 2022-2026 PFM strategy and its action plan. The implementation of both needs to speed up. Kosovo needs to further harmonise its public internal financial control (PIFC) legislation with EU best practices. Additionally, implementation of managerial accountability, including delegation of decision-making responsibilities; (ii) addressing effective internal control measures; and (iii) systematic follow-up of internal and external audit recommendations remain key priorities. The parliamentary oversight of management of public funds is not efficient. Because the recommendations from the previous year were not fully implemented, Kosovo should in the coming year:

- implement efficiently the new 2022-2026 PFM strategy, and its actions relevant to PIFC and external audit;
- develop and adopt the new Law on public financial management and accountability based on best EU practices and harmonise this new Law with PIFC law;
- improve the managerial accountability of budget users at both central and local level;
- improve cooperation between the Kosovo National Audit Office (KNAO) and Parliament by: (i) improving parliamentary scrutiny of budget implementation; and (ii) continuously and efficiently implementing and following-up on the KNAO audit recommendations.

Public internal financial control

Kosovo has made some progress in improving its **strategic framework for PIFC**, as it adopted the new 2022-2026 PFM strategy and its action plan. Kosovo needs to make further efforts to ensure inter-institutional coordination and to improve its framework for monitoring and

reporting. Making improvements to this framework will lead to a more consistent and coherent approach in implementing the internal control standards. The work on the development of the new law on PFM and accountability has started. This new law should be harmonised with the PIFC legislation.

The efficient implementation of **managerial accountability** remains a challenge for budget users at both central and local level. Kosovo needs to ensure the consistent application of international internal audit standards and better delegate management powers in public entities. The process to rationalise government agencies is moving slowly, and is insufficient to bring about any improvements. The implementation of the Regulation on financial management and control remains inefficient, and the lines of delegation and accountability are not yet embedded in the administrative culture of the budget users. The Law on the organisation and functioning of the administration and independent agencies, which sets out the lines of accountability between first-level spending units and subordinate bodies, is not applied in a consistent manner (*See section on PAR*).

The legal framework on **internal control** is largely harmonised with the international standards, but is not being sufficiently implemented. Financial management and control and budget supervision should both be improved, following best EU practices. In 2022, the process of development and adoption of risk-management registers continued at central and local-government level. However, the incorporation of these measures into financial control and management processes remains insufficient.

On **internal audit practices**, further efforts are needed to efficiently implement internal audit standards in the public sector. Most internal audit units lack experienced and skilled staff. Internal audit committees are not efficient nor properly functioning and it is recommended that their role and legal basis be reconsidered. Further efforts are needed in building up the skills of budget users so they can use internal audit methodological tools in a consistent and coherent way. The implementation of internal audit recommendations is limited in practice. The quality-assurance methodology is not yet systematically implemented. The Administrative Instruction on the training programme and certification of internal auditors in the public sector has been updated, but not yet adopted. There are therefore delays to the start of the national programme for certification of internal auditors in the public sector. Further efforts are needed to provide continuous training to internal auditors, at both central and local level.

The **Central Harmonisation Unit** provides methodological guidance and coordinates the development in the public sector of internal audit and financial management and control. However, its capacities remain insufficient, especially in monitoring and reporting on the functioning of the overall system for internal control. The government adopted the 2022 PIFC annual report, but its structure and scope could be further improved and its recommendations could be more systematically implemented.

There is no legal basis in the PIFC law with regard to anti-corruption and there is no mechanism in place to monitor the number of cases investigated, prosecuted and subject to court resolutions as a result of internal audits or inspections.

External audit

The Law on the Auditor General and the **National Audit Office** of Kosovo (KNAO) is largely harmonised with the standards set by the International Organisation of Supreme Audit Institutions. Nevertheless, further review of the legal framework is needed to improve the external audit function in the public sector for example to increase the KNAO's financial and operational independence and to remove its obligation to conduct annual financial audits of all organisations that receive a budget from the state. These legal changes are of crucial importance

for improving the capacities and the quality and impact of the KNAO's audit work. KNAO has the **institutional capacity** to carry out its tasks, with 164 employees of which 82% are audit staff, and 18% are employees providing other professional support services. Kosovo continued to implement the 2022-2025 strategic development plan.

In 2022, some progress was noted as the annual audit plan was fully met, with 133 audits carried out, including 3 compliance audits and 15 performance audits. On the **impact of the audit work**, auditees do not effectively implement the KNAO's recommendations. Out of 606 audit recommendations provided by the KNAO in 2020, 50% were fully implemented, 5% were partially implemented, and 45% were not implemented. Although cooperation between the KNAO and Parliament has improved, parliamentary scrutiny of the preparation and implementation of the budget preparation should be improved. In 2022, the Commission for the Supervision of Public Finances reviewed 23 reports, two less than during the previous reporting period. The transparency and accountability of the management of public funds must be ensured through efficient monitoring mechanisms by the executive and the Parliament, including through follow-up on the KNAO's audit recommendations.

Protection of the EU's financial interests

On **alignment with the acquis**, national legislation is not yet harmonised with the Convention on the protection of the EU's financial interests, and this harmonisation will require amendments to the Criminal Law. Kosovo has also not yet set up an **anti-fraud coordination service** (AFCOS) and a national anti-fraud strategy for protecting the EU's financial interests has not yet been developed. Since the Kosovo authorities do not directly manage the EU funds, irregularities are not reported to the Commission through the Irregularity Management System. While there is not yet a solid track-record on cooperation with the Commission during investigations, Kosovo Police ensures cooperation on an ad-hoc basis.

Protection of the euro against counterfeiting

On **alignment with the acquis**, there is to some extent harmonisation with the EU regulations on the system for the fight against counterfeiting of the euro. The Criminal Code considers the counterfeiting of currency a criminal act and the Law on the Central Bank regulates the fight against counterfeiting. Kosovo has a Regulation for cash operation that obliges financial institutions to treat and withdraw from circulation all euro banknotes and coins suspected as counterfeit, and to submit them to the police. The Agency for Forensics is responsible for the technical analysis of suspected counterfeit banknotes and coins. It has concluded an agreement with the European Commission on coins, but not yet on banknotes with the European Central Bank. In 2022, out of 2 162 suspected banknotes assessed by the agency 718 were confirmed as counterfeit, and out of 12 028 coins, 10 979 were confirmed as counterfeit. There is no shared electronic system for the exchange, processing, analysis and reporting of cases with the Central Bank and the agency. Kosovo needs to build capacities of key institutions to use methodological tools and exchange data with national and international authorities. All relevant institutions for fighting counterfeit currency participate in EU's Pericles IV programme.

3. GOOD NEIGHBOURLY RELATIONS AND REGIONAL COOPERATION

Good neighbourly relations and regional cooperation form an essential part of Kosovo's European integration process. They contribute to stability, reconciliation and a climate conducive to addressing open bilateral issues and the legacies of the past.

Kosovo maintained its engagement in a number of regional cooperation initiatives, such as the Central European Free Trade Agreement (CEFTA), the Energy Community, the Transport

Community, the South-East European Cooperation Process (SEECP) and the Regional Cooperation Council (RCC)¹⁶.

The **EU-Western Balkans Summit** in December 2022 took place for the first time in the region, in Tirana. The summit focused on support to the region in the fields of energy and migration, as well as on youth cooperation, roaming, green lanes and overall progress on implementing the Economic and Investment Plan.

On the **Common Regional Market**, a political breakthrough was achieved at the Berlin Process Summit in Berlin in November 2022, where leaders adopted the three mobility agreements on higher education qualifications, on professional qualifications and on free movement with identity cards. Kosovo has ratified all three mobility agreements and deposited the related notification instruments. A number of important decisions agreed at the technical level within CEFTA remain blocked.

Kosovo generally maintains good bilateral relations with other enlargement countries and neighbouring EU Member States.

Kosovo's bilateral relations with **Albania** remain good overall. In July 2022, Albanian President Meta chose Kosovo as the destination of his last official visit before completing his term as president. In August 2022, President Begaj paid his first official visit to Kosovo, and Kosovo President Osmani hosted President Begaj in Pristina again in February 2023. The assemblies of Albania and Kosovo held their first joint meeting in November 2022.

There has been no change in Kosovo's formal relations with **Bosnia and Herzegovina**, which does not recognise Kosovo's independence. The two maintain a strict visa regime. Bilateral meetings took place occasionally on the margins of regional and multilateral summits. An initiative to simplify the visa procedure for all citizens of Kosovo is still pending.

Kosovo maintained close relations with **Montenegro**. Throughout the reporting period, several meetings took place at the level of prime ministers and foreign ministers on the margins of international and regional events. Bilateral relations were improved by the official visit of Kosovo's President to Montenegro in February 2023, and the visit of Montenegro's Prime Minister to Kosovo in April 2023.

Kosovo continued to enjoy overall good relations with **North Macedonia**, with Kosovo President Osmani paying an official visit in April 2023. Other contacts between political leaders took place on the margins of international and regional events.

Kosovo continued to maintain good relations with **Türkiye**, including in the political, economic and cultural sectors. Kosovo PM Kurti visited Türkiye in February 2023. Kosovo provided 36 Kosovo Security Force troops to an international humanitarian operation in response to the devastating earthquake on 6 February 2023.

Georgia, the **Republic of Moldova** and **Ukraine** have no formal relations with Kosovo, as they do not recognise Kosovo's independence. The Moldovan Parliament, however, ahead of the European Political Community Summit on 1 June 2023, amended the law on visitors from third countries allowing Kosovo representatives to obtain visas for participation in international meetings held in Moldova.

¹⁶ Kosovo is a member of CEFTA. Kosovo has free trade agreements (FTAs) with Albania, North Macedonia, Croatia, Bosnia-Herzegovina and Türkiye. Kosovo has several Generalized System of Preferences (GSP) programmes with the US, Japan and Norway.

4. NORMALISATION OF RELATIONS BETWEEN KOSOVO AND SERBIA

The EU-facilitated Dialogue on normalisation of relations between Kosovo and Serbia continued in the reporting period with regular meetings at the level of Leaders and Chief Negotiators. After months of intense negotiations and with the support of key partners, the Parties reached an Agreement on the Path to Normalisation in Brussels on 27 February 2023, and agreed on its Implementation Annex in Ohrid, North Macedonia, on 18 March 2023. As part of the Agreement, the Parties took note that the Agreement and the Implementation Annex will become integral parts of the respective EU accession processes of Kosovo and Serbia.¹⁷

Both Kosovo and Serbia are yet to start implementation of their respective obligations stemming from the Agreement, which are valid and binding for the Parties and part of their European paths. The Parties are urged to start engaging more constructively and start implementation without further delay or precondition. This includes the establishment of the Association/Community of Serb Majority Municipalities (A/CSM). Kosovo is expected to start the process leading to the establishment of the A/CSM based on the European proposal presented to the Parties on 21 October 2023 and Serbia is expected to support this process and start delivering on their key obligations from the Agreement in parallel. Formalities, including related to adoption, should not stand in the way of making progress in implementation. The Parties also have an obligation to fully implement all past Dialogue Agreements. The constructiveness of the Parties will be assessed based on their implementation performance. The European Council on 26 October 2023 regretted the lack of implementation by both Parties of the Agreement on the path to normalisation and its Implementation Annex as well as other agreements reached in the EU facilitated dialogue, led by the High Representative and supported by the EU Special Representative. Normalisation of relations is an essential condition on the European path of both Parties and both risk losing important opportunities in the absence of progress.¹⁸

Despite the conclusion of the Agreement on the Path to Normalisation, the Dialogue has been hampered throughout the reporting period by a number of negative developments and crises in the north of Kosovo triggered by actions of one or both Parties. Kosovo has executed a number of such actions in the north of Kosovo, including the increased presence of Kosovo's special police and expropriation of land, which have created widespread discontent among the local Kosovo Serb population and negatively affected the Dialogue. The mass resignation of Kosovo Serbs from Kosovo institutions – police, judiciary and administration – in November 2022, roadblocks in the north of Kosovo in reaction to arrests of Kosovo Serbs in December 2022, as well as the boycott of early local by-elections in April 2023 by Kosovo Serbs further damaged the Dialogue and exacerbated the negative atmosphere around it. As a result of the Kosovo

¹⁷ Implementation Annex to the Agreement on the Path to Normalisation of Relations between Kosovo and Serbia: This Annex constitutes an integral part of the Agreement. Kosovo and Serbia fully commit to honour all Articles of the Agreement and this Annex, and implement all their respective obligations stemming from the Agreement and this Annex expeditiously and in good faith.

The Parties take note that the Agreement and the Implementation Annex will become integral parts of the respective EU accession processes of Kosovo and Serbia. The Parties note that immediately after the adoption of the Agreement and this Annex, the EU Facilitator will start the process to amend the Chapter 35 benchmarks for Serbia to reflect Serbia's new obligations stemming from the Agreement and this Annex. The agenda of Kosovo's Special Group on Normalisation will equally reflect Kosovo's new obligations stemming from the Agreement and this Annex.

The Parties agree to endorse the Declaration on Missing Persons, as negotiated under the EU-facilitated Dialogue, as a matter of urgency.

To implement Article 7, Kosovo launches immediately negotiations within the EU-facilitated Dialogue on establishing specific arrangements and guarantees to ensure an appropriate level of self-management for the Serbian community in Kosovo, in compliance with relevant previous Dialogue agreements as determined by the EU Facilitator.

The Parties agree to set up a Joint Monitoring Committee, chaired by the EU, within 30 days. The implementation of all provisions shall be ensured and supervised by the Joint Monitoring Committee.

To implement Article 9, the EU will organise a donor conference within 150 days to set up an investment and financial aid package for Kosovo and Serbia. No disbursement will happen before the EU determines that all provisions of the Agreement have been fully implemented.

Kosovo and Serbia agree that all Articles will be implemented independently of each other.

The order of the paragraphs of this Annex is without prejudice to the order of their implementation.

Kosovo and Serbia agree not to block implementation of any of the Articles.

All discussions related to implementation of the Agreement will take place under the EU-facilitated Dialogue.

Kosovo and Serbia recognise that any failure to honour their obligations from the Agreement, this Annex or the past Dialogue Agreements may have direct negative consequences for their respective EU accession processes and the financial aid they receive from the EU.

¹⁸ <https://www.consilium.europa.eu/media/67627/20241027-european-council-conclusions.pdf>

Serbs leaving all Kosovo institutions in November 2022, by-elections took place in the four Kosovo Serb majority municipalities in the north of Kosovo on 23 April 2023. While the elections were held in line with the legal framework of Kosovo, not all parties and communities made use of their democratic right to participate and vote in the elections, resulting in a record low turnout, which does not offer a long-term political solution for these municipalities.

While there had been no progress in the implementation of the Energy Roadmap adopted in June 2022, the tentative agreement in August 2023 between the commercial companies KEDS and Elektrosever on the scope of functions potentially marks a significant step forward in the implementation of the Roadmap. The Parties are now expected to quickly enable the signing of the outstanding commercial and technical agreements between the two companies to ensure that people living in the four Kosovo Serb-majority municipalities in the north start paying for the electricity they consume.

During the reporting period, the Parties agreed on and endorsed the political declaration on Missing Persons in May 2023. The Parties are encouraged to start implementation of the declaration immediately and, as the first step, agree to the Terms of Reference for the Joint Commission that is to be established as per the declaration.

When it comes to the state of play on implementation of past Dialogue agreements:

- The withdrawal of Kosovo Serbs from Kosovo institutions in November 2022 and the boycott of local elections in the north of Kosovo in April 2023 violate Serbia's Dialogue obligations and they constitute severe backsliding in Serbia's compliance to the April 2013 "First agreement of principles governing the normalisation of relations" and direct violation of the Justice Agreement of 2015. Serbia is urged to encourage Kosovo Serbs to return to the institutions immediately and Kosovo to enable this return to happen. Since November 2022, neither Party has taken any steps in this regard. The recruitment of new Kosovo Serb police cadets undertaken by the Kosovo Police while welcomed, did not follow the procedures in line with Dialogue agreements.
- There has still been no further progress on the implementation of the August 2015 Agreement. While the EU welcomes the presentation of a first draft Statute of the A/CSM to the High-level Dialogue in May 2023, the draft presented is not in line with the relevant Dialogue Agreements. A European proposal for the establishment of the A/CSM in Kosovo was presented to the Parties on 21 October 2023. Formalities, including related to adoption should not stand in the way of making progress in implementation. Kosovo and Serbia are now urged to engage constructively on the establishment of the A/CSM with no further delay, conditions or obstructions. This obligation forms a part of the implementation of the Agreement on the Path to Normalisation of Relations, which the Parties are expected to advance on, without delay or precondition, as recalled by the European Council in October 2023. The issue of Serbia-run structures needs to be addressed in this same context.
- The works on the Mitrovica Bridge have long been completed and Serbia is expected to engage constructively to allow the bridge to be opened to vehicle traffic without obstruction. Any decision on opening of the Bridge has to be agreed and coordinated in the Dialogue.
- As regards the technical Dialogue agreements (2011-2012), some are not or only partially being implemented. Until sustainable solutions are found, both Parties need to remain committed to the continued implementation of the agreement on representation and participation of Kosovo in regional forums and not block the work of regional forums over bilateral disputes. The implementation of the cadastre and acceptance of university diplomas agreements is still pending due to non-implementation by Serbia. Serbia also has

yet to address the issue of re-located Serbian administrative customs structures with Kosovo denomination that operate from within Serbia, and to cease the issuance of documentation or affixing of stamps with denomination that contravenes the related agreement.

- On IBM, the Interim Common Crossing-Points (CCPs) between Kosovo and Serbia continue to be operational. Only two of the six permanent CCPs have been established (Merdare and Mutivodë/Mutivode). Serbia still has not established permanent CCPs to be hosted by their side (Jarinje/Rudnica, Končulj/Dheu i Bardhë and Depce/Muçibabë), which led to a suspension of EU funds for this project in July 2018. In addition, Serbia needs to engage constructively to enable the construction of the third CCP hosted by Kosovo in the north of Kosovo at Tabavije/Bërnjak-Tabaliqe/Brnjak. Additional efforts are required from Serbia to close illegal roads and bypasses to ensure exclusive use of official crossing points for goods and persons entering into or leaving Kosovo. Serbia also must allow resumption of the joint technical IBM meetings at all levels.
- On Freedom of Movement, after months of tensions, Kosovo and Serbia agreed in November 2022 that Serbia will stop issuing new licence plates with Kosovo cities' denominations, and that Kosovo will suspend any further actions related to re-registration of vehicles. The full implementation of the Freedom of Movement agreements is still pending. This also requires the Parties to find a permanent solution to the issue of licence plates in compliance with the relevant Dialogue agreements. Lack of such solution has continued to cause tensions in the north of Kosovo during the reporting period.
- Both Parties need to fully respect the Telecoms Agreement and not put its hitherto successful implementation at risk. Kosovo needs to ensure that MTS d.o.o has a business licence for the functions that have been agreed as part of the Agreement to enable the company to continue providing mobile and landline telephony services. MTS d.o.o needs to engage constructively and in line with the Kosovo law to enable this to happen.
- The processing of Mutual legal assistance requests has been stopped by Serbia. Serbia needs to resume the processing immediately, in line with the relevant Dialogue Agreement.
- Both Parties need to respect the Arrangements for Official Visits more consistently. Kosovo needs to allow the visits of the Serbian Chief Negotiator and other Serbian government officials when they are announced and conducted in line with the Arrangements, which has not always been the case during the reporting period.

Overall, Kosovo has remained engaged in the Dialogue, but it needs to demonstrate more serious commitment, invest more efforts and make compromises to take the normalisation process forward. Kosovo needs to uphold its Dialogue commitments and commit to the full implementation of all past Dialogue agreements and the Agreement on the Path to Normalisation of Relations. Moving forward, Kosovo also needs to make further substantial efforts to avoid actions that undermine stability and rhetoric that is not conducive to dialogue. Kosovo also needs to create a conducive environment for the conclusion of the legally-binding normalisation Agreement with Serbia. Kosovo is expected to engage more constructively to enable negotiations on the comprehensive legally-binding normalisation Agreement to start and show flexibility in order to make rapid and concrete progress. Reaching such an Agreement is urgent and crucial so that Kosovo and Serbia can advance on their respective European paths. An important requirement for negotiations on the comprehensive legally-binding Agreement is for the Parties to implement the Agreement on the Path to Normalisation swiftly and efficiently and without any conditions or obstructions.

The reporting period was marked by multiple crises and violent incidents in the north of Kosovo. The most serious crisis during the reporting period occurred on 24 September 2023, when Kosovo Police was attacked by heavily armed individuals, who were surprised in the midst of a major weapons' smuggling operation, leaving one police officer dead and three wounded. During the operation the attackers had taken several pilgrims hostage while barricading themselves in the Serbian Orthodox Monastery of Banjska/Banjskë, which they left behind when fleeing. During the ongoing investigation into the events, large amounts of military-grade weapons were seized. In the following days the Deputy Leader of Srpska Lista through his lawyer, announced that he prepared and coordinated the attack. He was questioned by Serbian authorities, shortly detained and released with his passport confiscated. In the days following the attack Serbia increased its military presence in the vicinity of Kosovo, which was subsequently reduced. The perpetrators of the attack need to be apprehended and swiftly brought to justice and Serbia is expected to fully cooperate and take all the necessary steps in this regard. The attack should not serve as an excuse for either side to divert attention from the EU-facilitated Dialogue. Kosovo and Serbia must pursue sustained de-escalation efforts, as well as ensure the holding of new elections in the north of Kosovo as soon as possible, with the active participation of Kosovo Serbs.

Prior to it, another serious escalation took place in May 2023 when the newly elected Kosovo Albanian mayors were installed in the municipal buildings in the north of Kosovo, against the clear recommendation of the international community, which triggered protests by Kosovo Serbs. Some turned violent and led to unacceptable and unprovoked attacks against citizens, KFOR soldiers, law enforcement and representatives of media, which are yet to be condemned and acted upon by Serbia. Several arrests of Kosovo Serbs by Kosovo Police in relation to their alleged involvement in the violence of 29 May in Zvečan/Zvečan, which did not systematically and fully adhere to the legal requirements, are of concern.

To find a way out of the cycle of crises, the Parties are expected to meet the requests of EU, as per the statements by the High Representative on behalf of the EU from 3 June 2023¹⁹ and 19 September²⁰ related to de-escalation on the situation on the ground, enabling new early elections with unconditional participation of Kosovo Serbs and return to the Dialogue and implementation of all Agreements. The European Council expressed on 26 October 2023 that failure to de-escalate the tensions will have consequences²¹.

5. EUROPEAN STANDARDS

CLUSTER 2: INTERNAL MARKET

This cluster covers: the free movement of goods (Chapter 1); freedom of movement for workers (Chapter 2); right of establishment and freedom to provide services (Chapter 3); free movement of capital (Chapter 4); company law (Chapter 6); intellectual property law (Chapter 7); competition policy (Chapter 8); financial services (Chapter 9), and consumer and health protection (Chapter 28).

¹⁹ <https://www.consilium.europa.eu/en/press/press-releases/2023/06/03/statement-by-the-high-representative-on-behalf-of-the-eu-on-kosovo-and-latest-developments/>

²⁰ <https://www.consilium.europa.eu/en/press/press-releases/2023/09/19/belgrade-pristina-dialogue-statement-by-the-high-representative-on-behalf-of-the-european-union-on-expectations-from-serbia-and-kosovo/>

²¹ <https://www.consilium.europa.eu/media/67627/20241027-european-council-conclusions.pdf>

This cluster is key for Kosovo's preparations for the requirements of the EU's internal market and is of high relevance for accelerated integration and growth, including the development of the Common Regional Market. Kosovo has some level of preparation in most of the areas of the internal market, namely in the areas of the free movement of workers, company law and competition. It is in between some and moderate level of preparation in the area of free movement of goods. Kosovo is moderately prepared in the right of establishment and freedom to provide services, free movement of capital, intellectual property law and financial services. It is at an early stage of preparation on consumer policy and health protection. During the reporting period, Kosovo made some progress in all areas, except on the free movement of workers, company law, competition policy, financial services and consumer policy and health protection, where only limited progress was made.

Chapter 1: Free movement of goods

The free movement of goods ensures that many products can be traded freely across the EU based on common rules and procedures. Where products are governed by national rules, the principle of the free movement of goods prevents these creating unjustified barriers to trade.

Kosovo is **in between some and moderate level of preparation** in the area of the free movement of goods. **Some progress** was made with the adoption of the Law on general product safety and by further aligning Kosovo's legislation with the EU *acquis* on market surveillance and on mutual recognition. Further alignment with the EU *acquis* is needed in this area and Kosovo must increase staff numbers and improve staff skills in the area of quality infrastructure (especially conformity assessment and market surveillance).

As some recommendations of last year remain valid, Kosovo should, in particular:

- increase the enforcement capacity on conformity assessment and market surveillance bodies;
- start implementing the new Law on general product safety and Law on inspections and adopt relevant secondary legislation;
- start implementing requirements of the European Regulation on the registration, evaluation, authorisation and restriction of chemicals (REACH).

General principles

Kosovo has started drafting a legal framework for the **production, distribution and marketing of industrial products**. It adopted the Law on general product safety, which harmonises rules in the area of market surveillance. It has also adopted the Law on general inspections. However, this only partly aligns Kosovo with the relevant EU *acquis*, and the relevant implementing legislation still needs to be adopted.

Non-harmonised area

Kosovo has started screening its legislation to comply with requirements to eliminate barriers to trade and to ensure alignment with the obligations under **Articles 34-36** of the Treaty on the Functioning of the European Union (TFEU). Kosovo is working to further align legislation on the mutual recognition of goods. There is a specific Contact Point for Notification in place that monitors ministries and other bodies on their obligation to notify. Kosovo still requires products to be labelled with the flag of their country of origin, which is not in line with the EU *acquis*.

Harmonised area: quality infrastructure

The Kosovo **Standardisation** Agency is still not a member of any of the European or international standardisation organisations. Its application for affiliate membership with the European Committee for Standardisation (CEN) and the European Committee for Electro-technical Standardisation (CENELEC) is still pending. The Kosovo government's standard management information system is an online platform partly compatible with that of CEN/CENELEC and other international standardisation bodies. This system needs to be developed to be compatible with the CEN/CENELEC system and allow Kosovo to adopt new standards more quickly, making it user-friendly for businesses.

The **Accreditation** Directorate of Kosovo (DAK) needs to adopt implementing legislation to help it to be more effective in its work. The Directorate completed accreditation for 9 testing laboratories and 9 inspection bodies during the reporting period. At present, there are 53 accredited conformity-assessment bodies in Kosovo (34 test laboratories and 19 inspection bodies). There is still a need to improve the technical capacity and skills-testing ability of these accredited conformity assessment bodies.

The Kosovo **Metrology** Agency helps ensure further EU *acquis* alignment and to implement and develop quality-management systems and standards for calibration laboratories. Kosovo is currently pursuing associated membership of the European Association of National Metrology Institutes (EURAMET).

On **market surveillance**, the Market Inspectorate's responsibilities have increased since inspection rules were harmonised in 2022. The reorganisation of the Inspectorate and set-up of an e-inspection system is still ongoing. Kosovo also started preparing a new Law on market surveillance and compliance of products that harmonises with the most recent EU *acquis* by adopting an action plan. The new Law on general product safety has been adopted in April 2023 and is being implemented, taking into account the technical requirements for products and conformity assessment.

During the reporting period, the Market Inspectorate conducted 2 830 product safety inspections, imposed 311 fines, processed 195 cases, and confiscated 5 705 pieces of harmful goods.

Harmonised area: sectoral legislation

On the '**new and global approach**' to product legislation, Kosovo adopted legislation designed to be aligned with the EU *acquis* on aerosol dispensers, pressure equipment, gas appliances, personal protective equipment and construction products. Further alignment is needed on the other new legislative framework legislation.

In the area of '**old approach**' product legislation, Kosovo needs to start implementing its Law on chemicals designed to align with EU Regulation on registration, evaluation, authorisation and restriction of chemicals (REACH) and the EU Regulation on classification, labelling and packaging (CLP). Further alignment is necessary on fertilisers and detergents. Kosovo is not aligned with the EU *acquis* on motor vehicles, two or three wheeled vehicles, tractors (agricultural, forestry) or non-road mobile machinery emissions.

Kosovo made no progress on **procedural measures** during the reporting period. Kosovo's legislation remains partly aligned with the EU *acquis* in the areas of firearms, textile labelling, the pricing of medical products, **cultural** objects unlawfully removed from an EU Member State and defence products.

Inspectorates responsible for market surveillance and product safety are prone to corruption. Their competences should be clearly identified and should not overlap. Staffing should be sufficient in terms of number and quality.

Chapter 2: Freedom of movement for workers

Citizens of one EU Member State have the right to work in another Member State and must be given the same working and social conditions as other workers.

Kosovo has **some level of preparation** in the field of free movement for workers and made **limited progress** during the reporting period, notably on social security coordination. Kosovo is in ongoing negotiations on bilateral agreements on social security with Slovenia and started negotiations with Croatia in 2022.

In the coming year, Kosovo should in particular:

- continue negotiating and concluding new bilateral agreements on social security, notably with EU Member States;
- start work to prepare for joining the European Network of Employment Services (EURES) upon accession.

On the **free movement of workers**, EU nationals and their family members are not eligible to work in Kosovo without a work permit. During the reporting period, Kosovo's Employment Agency issued 202 short-term work permits (in 2021, 209), of which 114 were for EU nationals (in 2021, 157).

On **social security coordination**, Kosovo has already in place bilateral social security agreements with Belgium and the Netherlands, as well as with Switzerland and Albania. These agreements ensure that periods of work in Kosovo by nationals of these countries (or periods of work in these countries by citizens of Kosovo) will be taken into account for entitlement to social-security benefits. Negotiations for a similar agreement are ongoing with Slovenia. In 2022, Kosovo started negotiations on a similar deal with Croatia.

There is no legislation in force to preserve the supplementary pension rights of mobile workers who have worked in other countries or EU Member States.

Chapter 3: Right of establishment and freedom to provide services

EU natural and legal persons have the right to establish themselves in any Member State and to provide cross-border services. For certain regulated professions, there are rules on mutual recognition of qualifications. EU rules on postal services focus on improving the quality of universal service, gradual market opening to competition, and the establishment of an independent regulator.

Kosovo remains **moderately prepared** in this area and made **some progress**. Kosovo started implementing its five-year action plan to make its sectoral laws compliant with the EU Services Directive. The Point of Single contact is not fully functional. Kosovo's postal market has already been opened to competition in 2022 and the legal framework is being aligned with the EU postal *acquis*. More efforts are needed to align Kosovo with the EU *acquis* on recognition of professional qualifications.

As most of last report's recommendations have not been addressed, in the coming year Kosovo should:

- remove the identified barriers to the right of establishment and freedom to provide services and implement the action plan to make sectoral laws compliant with the EU Services Directive;

- complete Kosovo's alignment with the EU postal *acquis* as regards the Regulation on cross-border parcel delivery services and strengthen institutional capacity to monitor and ensure compliance with the new rules in the postal market;
- align with the EU *acquis* on mutual recognition of professional qualifications, including with the Directive on recognition of professional qualifications and with the Directive on a proportionality test before adoption of a new regulation of profession.

On the **right of establishment and freedom to provide services**, Kosovo is partially aligned with the EU *acquis* on services. During the reporting period, the authorities set up a working group to monitor and coordinate the implementation of the five-year action plan to make sectoral legislation compliant with the EU *acquis* on services. The working group adopted monitoring guidelines, discussed progress, and organised capacity building to assess the compliance of its government bodies with the Law on Services. A tracking mechanism is needed to monitor the progress in this area. To ensure that its rules are harmonised with the standards set out in the EU's Services Directive, Kosovo should increase inter-institutional coordination between the legal departments of line ministries, agencies and other public and professional bodies. If foreign companies wish to provide services in Kosovo, they are currently obliged to establish an office. This impedes their freedom to provide services. To remedy this and other problems in this sector, the authorities have conducted an analysis of three service areas: legal, health and ICT to identify potential barriers to the freedom to provide services.

Kosovo's Point of Single Contact is responsible for licensing auditors and audit companies and has now started to expand its role to licensing surveyors and accountants. The number of professions registered via the Point of Single Contact should increase in the coming years and the associated online platform needs to be transformed into a user-service delivery point, including for company registration. Although businesses and the public can already access the Point of Single Contact platform online, they receive only general information on starting a business, with no interoperability options and therefore no real utility for the end user.

In the area of **postal services**, Kosovo made good progress on the regulatory alignment with the Postal Services Directive, as the reserved area to the universal service provider was abolished in 2022. Bylaws on implementing accounting separation and net cost calculation of the universal service were adopted, in line with the Postal Services Directive. There is one universal service provider and 26 other postal operators active in the postal market. The national regulatory authority is legally separated and operationally independent from postal operators, but has limited resources and needs strengthening to monitor and ensure compliance with the new rules in the postal market. Kosovo still needs to align its legislation with the Regulation on cross-border parcel delivery services.

The Law on **regulated professions** broadly lays down the requirements, conditions, and criteria for the exercise of a regulated profession. The Division for Regulated Professions within the Ministry of Education needs to be strengthened and fully staffed to become operational. Kosovo needs to start identifying all regulated professions in the country and draw up a detailed list of regulated professions.

Chapter 4: Free movement of capital

In the EU, capital and investments must be able to move without restrictions, with common rules for cross-border payments. Banks and other economic operators apply certain rules to support the fight against money laundering and terrorist financing.

Kosovo is **moderately prepared** in the area of free movement of capital. During the reporting period, Kosovo made **some progress** by adopting the Law on implementation of targeted international financial sanctions and the Law on the state bureau for verification and confiscation of unjustified assets. Some of the recommendations from the previous report remain to be addressed.

In the coming year, Kosovo should, in particular:

- increase efforts to further align its legal framework with the EU Payment Services Directive 2;
- increase efforts to fight economic and financial crime, and align the Law on the prevention of money laundering and terrorist financing with the EU *acquis*;
- strengthen inter-institutional cooperation in the fight against economic and financial crime and strengthen the effectiveness of confiscations of assets and proceeds of crime.

The Central Bank of Kosovo has licensed one electronic money institution. However, the execution of payments is predominantly carried out in cash, and money transfers are largely limited to traditional financial institutions. More work could be done in this area to reduce transaction costs and facilitate unbanked and underserved customers.

On **payment systems**, Kosovo needs to further align its legislation with the EU Payment Services Directive 2. The country's current framework on e-commerce suffers from regulatory shortcomings, such as a weak system for electronic payments. This work of aligning with the EU Payment Services Directive 2 should be backed by introducing and encouraging new electronic payment methods through innovative solutions that are more efficient and less costly. Kosovo is not a member of the International Telecommunication Union, and this could hinder the development of international payment systems in the country.

The law on the prevention of **money laundering and combating terrorism financing** (AML/CFT) needs to be further aligned with the fourth and fifth Anti Money Laundering Directives. In 2022, the Assembly adopted the Law on implementation of targeted international financial sanctions, which addresses shortcomings identified by the 2018 Council of Europe Assessment Report on Anti-Money Laundering and Countering Terrorist Financing. The Law sets out measures to be taken and also identifies the competent authorities and procedures for proposal, approval, supervision and implementation on targeted international financial sanctions. These sanctions relate to the prevention and combating of terrorism; terrorist financing; and the proliferation of weapons of mass destruction. The Law on the State Bureau for verification and confiscation of unjustified assets, currently in the Constitutional Court, introduces penalties for illicit enrichment in the domestic legal system and provides for civil confiscation of certain assets without prior convictions. In view of increasing the transparency of legal persons and arrangements, in July 2022 the government adopted a concept document on regulating the beneficial ownership register and upgraded guidance is adopted by Kosovo's Financial Intelligence Unit (FIU) on AML/CFT obligations of legal professionals.

The number of suspicious transaction reports in Kosovo increased to 947 in 2022, up 3% from 2021. Although Kosovo has made some progress in the fight against financial crime, there is still a need to strengthen inter-institutional cooperation in the fight against economic and financial crime (*See also Chapter 24 - Justice, freedom and security*).

Chapter 6: Company law

The EU has common rules on the formation, registration and disclosure requirements of a company, with complementary rules for accounting and financial reporting, and statutory

audit.

Kosovo has **some level of preparation** in the field of company law. Kosovo made **limited progress** in further aligning with the EU *acquis* on company law and is preparing a new law on business organisations to align more broadly with the EU *acquis*. Since the 2022 recommendations were only partially addressed, they remain largely valid.

In the coming year, Kosovo should in particular:

- adopt the draft law on business organisations to further align with the EU *acquis* on company law including with the most recent EU *acquis* (the encouragement of long-term shareholder engagement, the Directive on the use of digital tools and processes in company and the Directive on company cross-border operations);
- further align with the EU *acquis* on company reporting and strengthen both the institutional audit-oversight structures and the professional independence/objectivity of auditors and audit firms as well as their sufficient and sustainable funding.

On **company law and corporate governance**, Kosovo is preparing a new draft law on business organisations. This aims to further align the country's legal framework with the EU company law *acquis*, particularly on minimum capital requirement, shareholders' rights (including the encouragement of long-term shareholder engagement), company takeovers, aspects of disclosure of information about companies and their branches, Directive on the use of digital tools and Directive on cross-border operations (mergers, divisions, conversions), and Directive on gender equality on boards of directors. The Kosovo Corporate Governance Code adopted in June 2021 reflects international standards set out in the OECD Principles on Corporate Governance.

Kosovo completed an assessment of the technical infrastructure required to ensure the interoperability of the Kosovo Business Registration Agency with the EU Business Register Interconnection System (BRIS) and now needs to ensure that the conditions for this connection are met. Insufficient coordination and data sharing between the Kosovo Business Registration Agency and the Kosovo Council for Financial Reporting still affects the timely reporting and publication of accounting documents. The Agency does not publish information on companies in some legal situations (e.g. under insolvency proceedings) and there is still no legal obligation to publish accounting documents in the business register.

On **company reporting**, the Law on accounting, financial reporting and audit is only partially aligned with the EU *acquis*. Kosovo will need to align with the most recent EU rules covering corporate sustainability reporting. The law requires **statutory audits** to be carried out following relevant international standards on auditing. Large companies must submit and publish their audited financial statements with the Kosovo Council for Financial Reporting (KCFR), and non-compliance risks legal sanction. All submitted financial statements are published on the Council's website. Kosovo still needs to secure sufficient sustainable funding for the Public Audit Oversight Board which was appointed by the KCFR as its executive branch responsible for overseeing this sector. This has prevented it from fully exercising its supervisory powers and enforcement functions.

Chapter 7: Intellectual property law

The EU has harmonised rules for the legal protection of intellectual property rights (IPR), copyright and related rights. Rules for the legal protection of IPR cover, for instance, patents and trade marks, designs, biotechnological inventions and pharmaceuticals. Rules for the legal protection of copyright and related rights cover, for instance, books, films, software and broadcasting

Kosovo is **moderately prepared** on intellectual property rights. **Some progress** was made to align the domestic legal framework with the EU *acquis*. The new laws on: patents, trade marks, industrial design, topographies of semiconductor products and trade secrets entered into force. The government adopted the new Law on copyright and related rights (and relevant legislation regarding a collective rights management system in the fields of copyright for literary and visual works). This new law also aims to align with the Directive on certain online transmission of broadcasting organisations and retransmissions of television and radio programmes to cover online transmissions as well as with the Directive on copyright and related rights in the Single Market. Kosovo also took steps to better enforce intellectual and industrial property rights by establishing the Commercial Court that is mandated to solve cases and disputes in this field. Last year's recommendations were partially implemented.

In the coming year, Kosovo should in particular:

- establish a functioning collective management system by strengthening the existing collective management organisations in the fields of music and audio-visual and by facilitating the creation of collective management organisation in the fields of literary and visual works;
- adopt implementing legislation as a result of the approval of industrial property laws (patents, trade marks, industrial design, topographies of semiconductor products and trade secrets).

Kosovo has made some progress in terms of legislative alignment, so it can start to guarantee some level of protection of intellectual, industrial, and commercial property rights equivalent to that applied in the EU and in line with the SAA.

In the area of **copyright and related rights**, the draft law on Copyright and Related Rights, which aims to align Kosovo's legislation with the Directives on collective management of copyright and related rights and on copyright and related rights in the Digital Single Market has been adopted. Kosovo has not yet established a functioning collective management system in the fields of literary and artistic works.

The main body responsible is the Office for Copyright and Related Rights (OCRR). It remains at a low level of administrative capacity, with only three officials. Kosovo's national strategy to strengthen the copyright system (2019-2023) contained plans to create two divisions within the Copyright Office, one for the promotion and education and one for the collective management and supervision of copyright. Neither of these bodies have been set up yet to support the enforcement of current rules and ensure the remuneration of right holders.

On **industrial property rights**, Kosovo's Industrial Property Agency needs restructuring and additional staff. Kosovo had legislation in place since 2022 on 'topographies' of semi-conductors, patents, designs, trade secrets and trade marks. During the reporting period, Kosovo also adopted relevant implementing legislation for the registration of patents, trade marks and industrial designs. In particular, in July 2022, Kosovo adopted the Law on trade marks and seven administrative instructions. Kosovo has not yet adopted a strategy on industrial property for 2022-2026.

The State Intellectual Property Council and the Task Force against Piracy are responsible for the **enforcement** of intellectual property rights in Kosovo. In this area, Kosovo needs to improve the capacity and coordination between policy-making institutions and law-enforcement institutions to effectively enforce intellectual property rights. Lengthy procedures for the treatment of applications and the lack of enforcement of decisions taken, are a major constraint to effectively implement the IPR legal framework.

In 2022, the Task Force confiscated around 800 pieces of pirated materials. At the initiative of the Market Inspectorate, 3 760 goods were confiscated. Also about 1 000 copies of materials that violated copyrights were seized, representing a 233% increase compared with the previous year. A total of 4 062 textiles pieces and 63 machine tools were prevented from entering the market, as they did not have any commercial name and were evaluated as potentially intended and falsifiable for the internal market. The Industrial Property Agency issued 7 269 official documents that include decisions on registration of rights, invitations to make payments and other notices for applicants to complete their IPR applications.

In 2022, Kosovo Custom's IPR Unit initiated 612 investigation cases, seizing 968 980 pieces of fake goods for a total value of EUR 10.6 million, which represents an increase on last year.

Kosovo established the Commercial Court specialised in commercial matters and the court is mandated to solve cases and disputes in the field of industrial property rights and copyright.

Chapter 8: Competition policy

EU rules protect free competition. These include antitrust rules against restrictive agreements between companies and abuse of dominant position, and also include rules on concentrations between companies which would significantly impede effective competition. EU rules also set out a system of State aid control. Governments are only allowed to grant State aid if restrictive conditions are met, with a view to preventing distortion of competition.

Kosovo **has some level of preparation** in competition policy and made **limited progress** in this chapter. It revised the legal framework on antitrust and mergers but made no progress on State aid. State aid control and enforcement is non-existent and put on hold as cases are neither handled nor enforced without the State Aid Commission's approval, whose mandate expired in March 2022. The urgent establishment of a functional State Aid Commission should be prioritised. Further efforts are needed to align and enforce legislation in both the antitrust and mergers and State aid areas. As recommendations from the previous report remain largely valid, Kosovo should:

- urgently fulfil SAA obligations, including by establishing a functional State Aid Commission;
- further align the legislative framework on anti-trust, mergers and State aid and ensure its enforcement;
- ensure the functional capacity and operational independence of the competition and State aid authorities; increase cooperation and coordination between all stakeholders, including ministries, regulators and the judiciary.

Antitrust and mergers

The **legislative framework** on antitrust and mergers is partly in line with the EU *acquis*. In 2022, Kosovo adopted the new Law on protection of competition; however, further amendments including to articles four and six are needed to ensure its alignment with the EU *acquis*. Implementing legislation needs to be aligned with the new law and with the EU *acquis*, as the present version is no longer valid and applicable.

On the **institutional framework**, the Kosovo Competition Authority (KCA) is responsible for implementing the legal framework and the Kosovo Competition Commission (KCC) acts as the decision-making body. The KCC became functional again upon appointment in June 2022. The cooperation between the KCA and other sector regulators was strengthened, and a Memorandum of Understanding was signed with the Public Procurement Regulatory Commission and the Procurement Review Body.

In its **capacity to enforce competition**, the KCA acts as an independent agency accountable to the Assembly of Kosovo, adopts enforcement decisions and is composed of 18 members. The KCC is also appointed by the Assembly, acts as a collegial body that manages the work of the KCA, is composed of five members with two positions vacant.

On **implementation**, in 2022, the KCA issued 10 decisions in the sectors of software development, insurance, medical services, telecommunication and financial markets. The KCA launched four market studies, including on the markets for wheat, flour, gas, cooking oil, gasoline, sugar, oil, transport products, cement and pellets.

Kosovo made no progress in enforcing competition rules by imposing fines or remedies following decisions taken by the KCA. Case numbers remain low and to date, the KCA has not carried out any dawn raids nor has the leniency programme been used. Disruptions to the KCC's functioning have led to a high number of unresolved cases.

Training for Kosovo judges and prosecutors on essential aspects of competition law continued in 2022. Raising awareness among judges on the enforcement of competition law remains key, to avoid contradictory judgements by different court instances.

State aid

The **legislative framework** on State aid is broadly aligned with the EU *acquis*. However, no progress was made during the reporting period to amend it further. The draft Regulations on horizontal aid, including block exemptions and regional aid, although prepared, are yet to be adopted. Similarly, the draft Law on State aid although prepared in draft has not been adopted either.

On the **institutional framework**, the State Aid Department, as part of the Ministry of Finance, is responsible for assessing proposals for State aid, drafting assessment reports for the State Aid Commission (SAC), and updating the State aid inventory. The SAC acts as a decision-making body and is composed of five members.

On **enforcement capacity**, no progress can be reported as the mandate of the State Aid Commission expired in March 2022 and no new Commission has been established by the government, putting all control on State aid on hold.

On **implementation**, the SAD began assessment of nine State support measures in 2022, of which only one was notified by the provider. As there is no State Aid Commission in place, no decisions were adopted in 2022. No annual report for the approval of State aid was submitted.

Liberalisation

Public undertakings in Kosovo are subject to the Law on competition and the Law on State aid. Kosovo has monopolies of a commercial nature within the meaning of Article 37 TFEU. There needs to be raised awareness to apply State aid rules to the activities of central institutions and publicly owned enterprises.

Chapter 9: Financial services

EU rules aim to ensure fair competition among, and the stability of, financial institutions, namely banking, insurance, supplementary pensions, investment services and securities markets. They include rules on authorisation, operation and supervision of these institutions.

Kosovo is **moderately prepared** in the area of financial services. It made **limited progress** in implementing last year's recommendations due in large part to a lack of capacity. All past recommendations not fully implemented remain valid. The country should make further efforts to align with the financial services *acquis*, focusing on the priorities identified.

In the coming year, Kosovo should in particular:

- strengthen the governance framework of the Central Bank by appointing the two deputy-Governors of the Bank;
- step-up its efforts to implement Solvency II measures and continue with enhanced supervisory role on the insurance sector;
- further advance in aligning with the revised versions of Capital Requirements Directive and Capital Requirements Regulation (CRR/CRD), Bank Recovery and Resolution Directive (BRRD) and Deposit Guarantee Scheme Directive (DGSD).

On **banks and financial conglomerates**, the Central Bank continued to align its legal framework with Basel III requirements on capital and risk management. It has approved regulations in relation to liquidity coverage ratio, and bank liquidity risk assessment. Despite global economic challenges, the financial sector remains resilient due to the high capitalisation levels of the predominantly foreign-owned banking sector. Overall, banks' capitalisation ratio remained stable and well above the required minimum capital adequacy ratio of 12%. Although credit risk remains contained, focus should be paid to evaluating risks from the rapid credit expansion in the household segment in particular mortgage lending.

In relation to governance issues, during the reporting period the Central Bank of Kosovo faced challenges in performing its tasks and responsibilities. . The position of Governor of the Central Bank was left vacant for a number of months before being filled in July. Two positions of Deputy Governors remain vacant. Principles of transparency and merit-based selection should be upheld. Any political influence on the appointments within the Bank undermines the confidence of the public in this service. Kosovo has not yet established an independent recovery and resolution authority. The Central Bank is working on updating regulations to harmonise them with the Bank Recovery and Resolution Directive (BRRD) I and II, with which Kosovo has not fully aligned. Amendments to the Law on banks, to assign the function of the recovery and resolution to the Central Bank, must ensure that the authority has functional independence. The Kosovo Deposit Insurance Fund (DIFK) has set up the working group to amend the Law on deposit guarantee. Amendments should seek to approximate the Deposit Guarantee Scheme Directive. The Central Bank must ensure that consumers are protected to prevent unfair banking practices.

Regarding **Insurance and Occupational Pensions**, Kosovo continued to implement Solvency I measures and started gradual implementation of Solvency II. There are improvements to be noted with regard to capital and liquidity adequacy levels of the insurance sector and the increased supervisory role of the Central Bank in the insurance industry. Despite the opinion presented by the Kosovo Competition Authority, the prices on the compulsory motor liability insurance market remain fixed, as the Motor Third Party Liabilities price liberalisation process has yet to start and the new risk-based model for adjusting car insurance tariffs has not been introduced.

Despite some progress on the **uninsured and unregistered vehicles**, Kosovo continues to remain outside the green card system. As a result, insurance is required for foreign-registered vehicles entering Kosovo and vehicles with Kosovo plates leaving Kosovo. This continues to represent a financial burden.

During the reporting period, the Governing Board of the Kosovo Pension Savings Trust (KPST) was non-functional for five months, as the mandate of the members of the Board expired in February 2023, until new appointment of members was made in July 2023.

Securities markets and investment services remain at the early stages of development, as most activity centres on the market for government bonds, auctioned by the Central Bank. The Regulation on the repurchase of securities with the Central Bank enables securities trading between commercial banks on the secondary market. It aims to help eligible banks to manage their liquidity efficiently in the short term. In the reporting period, there were no developments as regards funds and asset management.

On **digital and sustainable finance**, Kosovo should conduct further work to incorporate sustainable considerations both in banking and non-banking strategic policies and objectives, and to implement a regulatory financial framework supporting private investments towards sustainable/green activities. The Kosovo Credit Guarantee Fund (KCGF) can guarantee up to 80% of loan portfolios of financial institutions to MSMEs in areas such as energy efficiency and sustainable agriculture. The KCGF has issued up to EUR 303 million in guarantees as of July 2023.

Chapter 28: Consumer and health protection

EU rules protect consumers' economic interests and in relation to product safety, dangerous imitations and liability for defective products. The EU also ensures high common standards for tobacco control, blood, tissues, cells and organs, and medicines for human and veterinary use. The EU also has rules for upholding patients' rights in cross-border healthcare and in preparing for and responding to cross-border health threats, including communicable diseases.

Kosovo is at an **early stage of preparation** in this area. There was **limited progress** overall via the adoption of the Law on general product safety, however the law on consumer protection has not yet been adopted. Kosovo achieved compliance with the EU Digital COVID Certificate. As last year's recommendations were not fully addressed, they remain largely valid.

In the coming year, Kosovo should:

- adopt the law on consumer protection;
- increase human and financial resources and systems necessary to implement health sector reforms, especially by implementing the electronic public health information system, and improve access and health outcomes for those in the most vulnerable situations;
- ensure rigorous implementation of tobacco control, in line with the relevant EU *acquis* and international obligations.

Consumer protection

Kosovo's **legislative framework** is partly aligned with the EU *acquis*. In October 2022, the government approved the draft law on Consumer Protection, which amends the existing consumer law to the latest changes to EU consumer legislation introduced by Directive (EU) 2019/2161. However, final adoption is still pending. Enforcement of consumer rights protection remains limited. An integrated platform to harmonise the complaints process remains to be created. The Central Bank has a division that handles most consumer complaints on financial services, in 2022 they have dealt with 644 complaints, lower compared with 2021.

Regarding **product safety**, Kosovo adopted a new Law on general product safety designed to be fully aligned with the EU *acquis*. During the reporting period, the Market Inspectorate conducted 2 830 product safety inspections, imposed 311 fines, processed 195 cases, and confiscated 5 705 pieces of harmful goods.

As regards **non-safety issues**, the law on consumer protection addresses consumers' economic interests. The weakness of consumer rights organisations remains a challenge.

Public Health

On **public health** policy, the quality of healthcare remains of concern. The draft law on health and draft law on health insurance, which aim to steer health sector reforms, have not been amended. The new 2023-2030 Health Sector Strategy has been drafted, and is yet to be approved. Health expenditure amounts to around 3% of the GDP, which is second lowest in the region and more than three times lower than the EU average of around 11%. Kosovo allocated a record high level of health sector budget in 2023 (around EUR 300 million), an increase of around 15.6% compared to 2022. Health financing is predominantly based on historical expenditure and there are no performance-based indicators. Institutional accountability of public health providers' remains low. There are no incentives to improve productivity, efficiency and quality in the sector. Despite a relatively strong network of primary healthcare facilities that provide services free of charge, the out-of-pocket expenses remain very high. Kosovo has an **e-health** information system, based on the European core health indicators, that enables virtual communication between users/patients and general practitioners, provides counselling services, and captures data on patient admissions, discharges and transfers. However, it is not used by all health institutions and further functionalities (covering pathology, radiology, blood transfusion, vaccination and other interventions) remain to be added.

Life expectancy in Kosovo at birth remains the lowest in the region; **non-communicable diseases** are the leading cause of death, especially cardiovascular diseases and cancer. Some 33% causes of death are incorrectly reported or are not diagnosed. Health promotion and prevention programmes for non-communicable diseases is weak; screening for chronic conditions (such as diabetes and hypertension) is not systematically performed. There has been no progress with the implementation of the health promotion action plan, or the strategic plans on mother and child healthcare. Child mortality remains a serious issue, 16 children out of 1 000 live births die before they are five, three times higher than the EU average. In 2022, the government made efforts to improve maternal and child health. It expanded home visiting programmes to all municipalities and allocated additional resources to this (EUR 3.4 million). Although most indicators in the public health information system are aligned with the European Core Indicators, it is only partly functional. Its utility for policy development, research and decision-making is therefore limited.

On **mental health**, several clinical guidelines were approved. Mental health services continue to be integrated services. The 2013 Law on **tobacco control** is not being comprehensively enforced and implemented, though there was a notable increase in inspections on smoking in public places in Pristina during Q2 of 2023.

The legislation on **blood, tissues, cells and organs** is partly aligned with the EU *acquis*. Full alignment with the EU *acquis* remains a challenge, Kosovo continues to lack necessary administrative, infrastructure, financial and human resources capacities in this field.

On **serious communicable diseases** and serious **cross-border threats to health**, Kosovo made some progress in strengthening its capacities for surveillance and reporting data to the World Health Organization. The Assembly adopted the law on communicable diseases in line with ECDC recommendations and the EU *acquis* in August 2023. Routine immunisation is improving, however, coverage rates are still lower than pre-COVID-19 levels and currently stand between 87-89%.

During the reporting period, health authorities in Kosovo continued to manage the **COVID-19** pandemic, and made further progress on surveillance, case investigation, contact tracing and case management. In July 2022, Kosovo achieved compliance with the EU Digital COVID

Certificate. The number of positive cases progressively declined, following the increase during Q2 and Q3 2022. The rate of vaccination significantly declined during the reporting period. New cold-chain facilities and equipment to ensure proper storage of vaccines were finalised.

Legislation on **patients' rights in cross-border healthcare** is partially aligned with the EU *acquis*. For specialised health services that are not available in Kosovo, patients can benefit from the health insurance fund for health services abroad. However, the Fund is currently serving only as a payment agent, instead of developing standardised approval and monitoring processes. It does not engage in any contract negotiation with hospitals abroad. Such passive position has generated significant financial risk to the health insurance fund.

Kosovo has a **cancer screening** programme. However, despite some progress, cancer screening is not performed systematically. Main cancer diagnostic and treatment services are provided at the tertiary healthcare level at one clinical centre.

Kosovo has not made any progress in adopting the nutrition action plan on **nutrition and physical activity**. Legislation on **medicines for human use and medicines for veterinary use** remain partially aligned with the EU *acquis*. The list of essential medicines, for which the costs are covered by the government, has still not been updated. The level of the coverage of costs for medicinal products from the essential list remains around 70%, and above 90% for consumables in primary healthcare.

Health inequalities remain a serious issue. The continuous postponement of the introduction of universal health insurance scheme and out-of-pocket payments remain very high. This influences the access to essential health services for those in vulnerable situations, such as those living in poverty, in rural areas and persons belonging to Roma, Ashkali and Egyptian communities. It is estimated that almost a third of Kosovo population has only limited access to health care services. The rate of routine immunisation of Roma, Ashkali and Egyptian children in Kosovo are only half that of other children.

CLUSTER 3: COMPETITIVENESS AND INCLUSIVE GROWTH

This cluster covers: digital transformation and media (Chapter 10); taxation (Chapter 16); economic and monetary policy (Chapter 17); social policy and employment (Chapter 19); industrial policy (Chapter 20), science and research (Chapter 25); education and culture (Chapter 26); and the customs union (Chapter 29).

Kosovo is moderately prepared in the area of customs, as well as on enterprise and industrial policy. It has some level of preparation in the area of taxation, digital transformation and media, as well as education and culture, and is at an early stage of preparation in the areas of social policy and employment, and science and research. During the reporting period, some progress was achieved in most areas of this cluster, but only limited progress on digital transformation and media.

Chapter 10: Digital transformation and media

The EU supports the smooth functioning of the internal market for electronic communications, electronic commerce and audiovisual services. The rules protect consumers and support the universal availability of modern services.

Kosovo has some level of preparation in the area of digital transformation and media. Kosovo made **limited progress by** further aligning its legislative framework with the EU *acquis*, particularly with the adoption of the cybersecurity law. However, further alignment and implementation are still needed in the area of audiovisual policy. Kosovo engaged constructively in high-level regional dialogue on digital transformation and on the

implementation of the Regional Roaming Agreement. In September 2022, Kosovo hosted the Western Balkans Digital Summit in Pristina. A sustainable solution for the funding of the public broadcaster and ensuring its editorial independence still needs to be found. The government adopted the Digital Agenda 2030. The budgetary resources for cybersecurity remain insufficient.

Last report's recommendations were mostly not addressed and remain valid. In the coming year, Kosovo should in particular:

- conclude the alignment of Kosovo's legislation with the European Electronic Communications Code, the EU Network and Information Security Directive (NIS 2) and the EU's Toolbox for 5G cybersecurity; revise the Law on the Independent Media Commission, in line with the Audio-visual Media Services Directive;
- ensure that telecoms and media regulators are given adequate resources to fulfil their mandates independently, and develop a solution for the sustainable funding of the public service broadcaster;
- implement number portability to ensure effective use of numbering resources and foster competition.

In the area of **electronic communications and information and communication technologies (ICT)**, according to the Kosovo Agency for Statistics, in 2022, 97.9% of households had access to the Internet (compared to 96.1% in 2021). Kosovo's broadband coverage is now 100%. In 2022, the share of individuals purchasing or ordering goods and services online (within the last three months) was 51%, compared to 23.1% in 2021. Kosovo's legislative framework on broadband cost reduction is aligned with the EU *acquis* and implementation is advancing, with the completion of the broadband atlas and the single information point. Further efforts are needed to align it with the European Electronic Communications Code to ensure freedom to provide electronic communications networks and services. Kosovo still needs to complete the drafting process of the Concept Document for the Electronic Communications Code.

The Regulatory Authority of Electronic and Postal Communication approved the Frequency Release Plan, including all frequency bands with important economic value. In autumn of 2022, Kosovo initiated pilot 5G access. The Regulatory Authority completed the process of assignment of 800MHz and 3.5GHz bands to enable the deployment of 5G technology. Kosovo adopted the regulation for number portability for public electronic communications services subscribers. The existing resources of the Electronic and Postal Communications Regulatory Authority remain limited and not proportionate to their responsibilities.

Alignment with the Digital Services Acts and Digital Markets Act needs to be stepped up, to provide predictability for the business community.

Kosovo made some progress in the area of **digital transformation**, as it adopted the 2030 Digital Agenda. The Law on cybersecurity, which is partially aligned with the NIS Directive, has been adopted on 2 February 2023. The strategy and action plan related to the Law on cybersecurity still need to be adopted. Kosovo developed basic capabilities in cybersecurity; it needs to step up efforts to ensure proper operational mechanisms, technical capacities and human resources to operate in the cyberspace context effectively. The e-government portal is operational: the platform offers over 150 fully digitalised services. Kosovo needs to make further efforts to finalise and adopt the e-Government Strategy. Kosovo still needs to align with the EU *acquis* on open data and the re-use of public sector information. Kosovo should also align with the European Interoperability Framework and the Interoperable Europe Act.

On **audiovisual policy**, the long-awaited amendment of the Law on Independent Media

Commission (IMC) has been further delayed. This process should be conducted in an inclusive and transparent manner, with meaningful consultation with key stakeholders. The IMC failed to make any progress on the digital switchover to align with EU standards. Currently, the IMC still lacks adequate human and financial resources to exercise its powers independently. It should also ensure it is transparent and inclusive in its decision-making, including through more consistent public consultation. Due to the lack of information on media ownership and the distribution of advertising funds, the IMC does not impose effective sanctions on broadcasters, and no significant enforcement interventions were undertaken. The current Law of the IMC provides sufficient regulatory, enforcement, and monitoring powers to ensure pluralism and competitiveness in the market. The amendment, currently underway, should further align the Law with the Audiovisual Media Services Directive to extend its powers to online audio-visual media.

A review of the current Law on radio television of Kosovo (RTK) launched in 2019 has stalled. The draft law includes a funding model for RTK, whose editorial independence is weak, as it still relies on direct government funding, with the Assembly determining its budget annually. The appointment of the new Director General through an open, merit-based process is a positive development. The Board should ensure that independent and professional individuals without links to political parties are appointed to managerial positions.

Chapter 16: Taxation

EU rules on taxation cover value-added tax, excise duties and aspects of corporate taxation. They also cover cooperation between tax administrations, including the exchange of information to prevent tax evasion.

Kosovo **has some level of preparation** in the area of taxation. It made **some progress** with implementation of risk-based tax inspections on some high-risk sectors and service digitalisation. Increased compliance and formalisation measures have led to increased tax revenues.

The recommendations in the previous report have not been fully addressed. In the coming year, Kosovo should in particular:

- pursue further alignment of tax legislation including the personal income tax (PIT), and value added tax (VAT) with the EU *acquis*;
- ensure more systematic implementation of risk-based tax audits and finalise the new strategy for combating the informal economy, money laundering, financing of terrorism and financial crime (2023-2026);
- increase cooperation with law enforcement and judicial institutions to ensure timely adjudication of tax evasion and fraud cases, with emphasis on high-risk sectors.

Good progress was made during the period with regard to **tax collection, enforcement and compliance**. Between June 2022 and April 2023, the Tax Administration of Kosovo (TAK) collected revenues of 728.7 million EUR, 16.7% higher than the same period in the previous year. During the reporting period TAK also stepped-up activities to combat the informal economy, increasing the number of compliance visits, audits and investigations of suspected cases of fiscal evasion. These activities resulted in additional revenue of EUR 181.5 million for the period June 2022 – May 2023, 17% higher than the same period in the previous year.

Regarding **indirect taxation**, the VAT system is broadly aligned with the EU *acquis*. Kosovo applies a standard 18% rate and a reduced 8% rate. The Law on VAT still needs to be further harmonised with the EU *acquis*. The legal framework and procedures on e-commerce taxation

need to be established. On **direct taxation**, Kosovo made no progress in amending the Law on personal income tax, or to remove contradictory provisions and further align it with EU *acquis*.

On **administrative cooperation and mutual assistance**, Kosovo has not been able to join the inclusive framework of the OECD Base Erosion and Profit Shifting (BEPS) due to status issues. Kosovo has double taxation treaties in application with 11 EU member states (Austria, Croatia, Luxembourg, Hungary, Latvia, Malta, Slovenia, Germany, Finland and Belgium, and Ireland).

On **operational capacity and digitalisation**, the Tax Administration made progress with regard to service quality, in particular with the use of e-services. This is also reflected in the 2022 Tax Administration Diagnostic Assessment Tool (TADAT assessment). In terms of streamlining and improving its service delivery, the Tax Administration needs to further strengthen professional capacities, especially on the tax inspection/audit, and improve the effectiveness of tax audit functions. The Tax Administration is implementing its 2022-2026 Strategy. It plans to increase revenue collection; strengthen voluntary compliance; strengthen approach and expertise in managing large taxpayers; build modern IT systems and tools; and strengthen the inspection programme. There is a significant setback regarding the development of the new IT system for tax administration. The tax Administration intensified its actions on risk-based approach regarding tax compliance. Despite higher revenues registered from tax audit processes, Kosovo needs to strengthen enforcement of a risk-based approach. Data quality and exchange of data across different agencies for the administration of taxes remain a challenge.

Chapter 17: Economic and monetary policy

EU rules require the independence of central banks and prohibit them from directly financing the public sector. Member States coordinate their economic policies and are subject to fiscal, economic and financial surveillance.

Kosovo is **moderately prepared** in the area of economic and monetary policy. **Some progress** was made with data collection and transmission to Eurostat; however, further efforts are needed to address the methodological inconsistencies on national accounts. The Central Bank has faced challenges in performing its tasks and responsibilities. After a vacancy of a few months, in July 2023 the Assembly elected a new governor. The Assembly also adopted a Law on minimum wages, decoupling war veterans' pensions, in an effort to ensure compliance with the legal ceiling applicable for spending on war veteran pensions.

The 2022 recommendations were not fully addressed and therefore remain valid. Kosovo should in particular:

- strengthen the Central Bank's governance by completing the procedure for the selection of its Deputy Governors;
- increase reporting capacities for governmental financial statistics according to the ESA 2010 and ensure regular monitoring of standards;
- improve the quality of macroeconomic forecasting in the budgetary process.

Kosovo does not have an independent **monetary policy** and does not have standard monetary policy tools at its disposal, as it uses the euro as a legal tender, leaving fiscal policy as the main macroeconomic policy instrument. Kosovo's use of the euro is fully distinct from membership of the euro area.

The Central Bank of Kosovo (CBK) is the sole authority responsible to promote and maintain the stability of the financial system in Kosovo and to contribute to maintain price stability. The Law on the Central Bank and the constitution establish its functional and institutional

independence, prohibits its decision-making bodies to give and receive instructions from government authorities. The Law also prohibits monetary financing of the public sector and ensures that the latter does not have privileged access to financial institutions.

The Central Bank of Kosovo is facing challenges in performing its tasks and responsibilities. The mandate of the Governor ended in March 2023, and the position was vacant until the Assembly appointed a new governor in July. Even though new staff were recruited, the Central Bank needs to ensure that its core functions, including banking supervision and maintaining financial stability, are adequately staffed. The Bank still needs to implement reforms with regard to its corporate governance structure in order to improve its accountability.

On **economic policy**, Kosovo needs to further align with the requirements of the EU Directive on budgetary frameworks. In July, the Assembly adopted a Law on minimum wages, decoupling the level of war veterans' pensions from the minimum wage in an effort to ensure compliance with existing legal spending limits. Although fiscal rules are well established in the legislation, further efforts are required to ensure their full compliance.

During the reporting period, **operational capacities** of the Ministry of Finance improved. In particular, macro-fiscal modelling, planning and forecasting, as well as assessment of the fiscal impact of the government's new policy and legislative initiatives has improved. Kosovo is at the early stages of introducing programme-based budgeting. Some steps have been taken to better link the medium-term policy with budgetary planning process. Nonetheless, strong political will and inter-institutional cooperation are necessary to transform the budget into a policy-planning tool and strengthen the medium-term budgetary framework.

During the reporting period progress was made in the timeliness and completeness of **annual national accounts data** produced, according to the European System of Accounts (ESA) 2010 methodology. Some progress was made also in government deficit and debt statistics, but further work is expected to fully adhere to the ESA 2010 methodology. Kosovo should make efforts to improve the coverage and timeliness of the Excessive Deficit Procedure (EDP) notification tables and to start completing the questionnaire relating to the EDP tables. After the tables for quarterly financial accounts for general government were transmitted to Eurostat for the first time in 2023, Kosovo now provides the currently full set of required Government Finance Statistics (GFS) tables. However, efforts are still needed to improve various qualitative aspects of the tables.

The 2023-2025 **Economic Reform Programme (ERP)** was submitted on time. There is a significant degree of uncertainty surrounding the macroeconomic and fiscal framework presented in the ERP. The ERP projects a robust acceleration of economic activity in 2023-2025, which is above the historical trend. An expected strong rebound in public investment is seen as a key growth driver, but in order to realise this ambition, obstacles to public investment execution need to be effectively addressed. There are additional sizeable downside risks to this outlook notably linked to higher-than-expected energy and food prices following Russia's war of aggression against Ukraine and the induced energy crisis. The 2022 policy guidance has been implemented only partially. The structural reforms presented in the ERP reflect the government's plan to address obstacles to competitiveness and inclusive growth in the medium-term. However, implementation of the structural measures has often been delayed and improvements have not materialized. Similarly, additional efforts are necessary to improve macro-fiscal projections underpinning the budget and the linkage between the macro-fiscal framework and the planning of structural reforms.

Chapter 19: Social policy and employment

EU rules in the social field include minimum standards for labour law, equality, health and safety at work and non-discrimination. They also promote social inclusion and social protection, and social dialogue at European level.

Kosovo is at an **early stage of preparation** in this area. **Some progress** was made during the reporting period, in particular on the preparations for the implementation of the Youth Guarantee, in securing funds for social services and intensifying inspections in work sectors with higher risk. However, the rate of fatal occupational accidents remains high.

Last year's recommendations were only partially implemented and remain valid. In the coming period, Kosovo should in particular:

- continue implementing the Youth Guarantee Implementation Plan to prepare for the piloting of the scheme; adopt the amendments to the Law on Labour to align with recent EU *acquis*, particularly in relation to non-discrimination in employment and parental leave;
- continue intensifying inspections in work sectors with higher risk, and enforce rules on health and safety at work to ensure a decrease in workplace accidents;
- pursue thorough reforms in the area of the social assistance schemes to ensure better targeting and impact, and improve access to social services, in particular for children.

Kosovo has postponed amendments to the legislation on **labour** and on **health and safety at work**, which are necessary to further align with the EU *acquis*, including with the EU Directive on work life balance. The 2014 Law on health insurance, providing for the right and obligation to have mandatory *basic package* health insurance for all citizens, has not been implemented. The Labour Inspectorate has intensified inspections, but with limited impact on prevention of accidents. During 2022, there were 349 workplace accidents, of which 15 resulted in fatalities. The Labour Inspectorate is increasing: in 2022, 12 new inspectors were recruited. The Tax Administration Inspectorate took actions to formalise jobs, and together with Labour Inspectorate and International Labour Organization, launched a campaign to promote labour rights.

On **social dialogue**, tripartite and bipartite dialogue remain limited. During 2022, the Social Economic Council mandated its Commission to negotiate the new General Collective Agreement. The social partners have approved the work plan for 2022 and 2023. On 14 June 2022, the Assembly approved in the first reading an increase in the minimum wage at EUR 264 (from EUR 170) per month, but the final adoption is pending. The capacity of social partners remains limited.

On **employment policy**, Kosovo has continued drafting a new employment and labour market strategy 2023-2028, a new employment policy 2022-2024, and a concept document regulating the field of employment. The last sectoral strategy (2018-2020), albeit with modest targets, had a very low implementation rate.

The overall activity rate stood at 38.6% in 2022, a slight decrease compared to 39.3% in 2021. **Unemployment** rates in 2022 were 12.6% (20.7% in 2021). The rates are higher among women, 16.5% (25% in 2021), than among men, 11% (19% in 2021). The indicators that still give rise to most concerns are the high inactivity rate, 61.4% (60.8% in 2021) and youth unemployment 21.4% (38% in 2021). Unemployment is even higher (over 90%) in the Roma and Ashkali communities. Members of these communities usually work in the informal sector, holding insecure, low-skilled and low-status jobs.

Youth unemployment remains high (21.4% in 2021), particularly among women (27%). Demographic pressures, joblessness growth pattern, a propensity towards emigration and poor education are key factors in the precarious position of young people. A recent mapping shows that since 2018 there have been remarkable shifts in the categories of young people not in employment, education or training. The rates for those with primary education had levelled at below 30%, the rates of secondary educated youth increased, at a moderate pace, to just over 40%, while the rates for university educated young people increased from around 30% to over 50%. Kosovo has continued the preparations for the implementation the **Youth Guarantee**, in line with the implementation plan adopted in November 2022. As of 2023, authorities are working to ensure conditions for piloting the Youth Guarantee in two municipalities, and in amending relevant legislation, restructuring the key delivery mechanisms (public employment services), and fast-tracking some long-due reforms in vocational education training.

Kosovo is restructuring the **Employment Agency** so as to deliver on the Youth Guarantee implementation plan. Management and operational procedures, and data management are still weak. The labour market information system to support evidence-based policy making and planning is outdated and lacks operational capacity in critical areas. The lack of human resources in public employment services is the greatest concern.

There were no developments on the preparation of the **European Social Fund**. (*See Chapter 22 - Regional policy and coordination of structural instruments*). On **social inclusion and protection**, Kosovo's spending on social assistance scheme amounts to 6% of GDP, but less than 0.5% of GDP is allocated to the most deprived as most of the amount is spent on war veterans' pensions. On 4 April 2023, the Assembly has ratified an agreement with the World Bank to conduct thorough reforms in the social assistance system. Kosovo made no progress to provide funding allocation for social services. The draft law on local government finances is not part of the 2023 legislative plan raising concerns as to the sustainability of financing for social services. For 2023 the government fund dedicated for licensed NGOs to provide social services increased by 50% (from EUR 1 million to 1.5 million); this does not address fully the funding situation for the provision of quality social services at the local level. Municipalities should make effort to improve service planning and delivery, data collection and integrated care. Care for the elderly remains a serious issue. Around 18% of Kosovo's population lives below the poverty line (EUR 45 per month, with 5.1% percent of the population living below the extreme poverty line). Children from poor households, and those with special needs, lack equal access to vital and quality health and education services. Children represent half of those benefiting from social assistance, but less than 10% of them are with special needs. Children with disabilities lack adequate health and rehabilitation services, social services and assistive equipment from state institutions. Most of them lack proper access to education facilities. Around 9% of children are involved in work, of whom 5.6% working under hazardous conditions, an issue being particularly evident among the Roma and Ashkali communities.

Kosovo has to intensify efforts to address **discrimination against women in employment and social policy**, particularly during hiring procedures, promotion and pay. The unequal share of responsibilities present in the maternity, paternity and parental leave between women and men hinders women's employment. Women face discrimination also when they are pregnant or wish to have children; therefore, it is important to treat the termination of a probationary period due to pregnancy as direct discrimination. Trainings are needed for both labour inspectors and judges to better address the issue of gender-based discrimination. In 2022, the employment rate for the population aged 15-64 was 18.4% for women and 49.4% for men, resulting in a very high gender employment gap of 31 percentage points. Limited access to childcare and flexible working arrangements, as well as regulations that discourage the recruitment of women are

important barriers. Other challenges faced by women, especially in rural areas, are the lack of care for the elderly, discrimination in the access to property, and gender-based violence.

Chapter 20: Enterprise and industrial policy

EU industrial policy strengthens competitiveness, facilitates structural change and encourages a business-friendly environment that stimulates small and medium-sized enterprises (SMEs).

Kosovo is **moderately prepared** in the area of enterprise and industrial policy. It made **good progress**, as the government approved the Strategy for industrial development and business support 2030, the first of its kind. The Assembly passed the Law on sustainable investment and the Law on technological and industrial parks in first reading. The laws provide for the establishment of two new agencies dedicated to investment and export promotion and business support and entrepreneurship. The operational performance of the existing Kosovo Investment and Enterprise Support Agency (KIESA) also improved during the period. .

Last year's recommendations were only partially implemented and remain largely valid. In the coming period, Kosovo should in particular:

- Implement the strategy for industrial development and business, and the sustainable economic growth pillar of the national development strategy 2021-2030;
- improve the capacities of the Ministry of Industry, Entrepreneurship and Trade (MIET);
- complete the restructuring of the Kosovo Investment and Enterprise Support Agency (KIESA) into separate investment promotion and SME support agencies, as well as ensure both are sufficiently resourced.

As regards **enterprise and industrial policy**, the Ministry of Industry Entrepreneurship and Trade (MIET) prepared an ambitious strategy for industry development and business support 2030. It aims to improve the business environment in Kosovo, promote industrial development, address the trade deficit, create jobs, as well as to ensure both resource efficiency and a more circular economy. The Ministry prepared a comprehensive analysis of the main subsectors in the manufacturing sector to use for refining its policies and actions. In view of the expansion of solar energy in the carbon emissions policy, incentives for the use of renewable energy sources in industry are planned; their approval is expected in 2023.

The Assembly has adopted in first reading two laws to promote investment and encourage private sector development: a Law on Technological and Industrial Parks and a Law on Sustainable Investment. The latter anticipates restructuring of the Kosovo Investment and Enterprise Support Agency (KIESA) into an Agency for Support to the Enterprises within the MIET, and of the Agency for Investment and Export (AIE) under the remit of the Prime Minister's Office. With clear delineation of responsibilities, the two agencies could be more efficient in providing support to active companies and attracting new investors. KIESA has long struggled with limited capacities to implement its broad mandate. Despite this, KIESA has strongly improved its performance in 2022, increasing foreign direct investments (FDI) by 43.6% over the period January to September 2022 and increasing participation of Kosovo firms in international trade fairs.

A concept document for public enterprises adopted in 2023 envisages the revision of the Law on public enterprises and implementing legislation. The Ministry of Economy has initiated policy changes covering publicly owned enterprises to align with the new legislation on Sovereign Fund. In June 2023, the government adopted the Law on the Sovereign Fund.

In the area of **policy instruments**, the KIESA organised a high number of activities despite capacity deficiencies. The Agency had difficulties fulfilling its objectives, in particular enabling the implementation of before- and after-care services and programmes and promoting links between multinational enterprises and SMEs.

Kosovo has no streamlined process to handle investors' **grievances and retain investments**. Having such a process would implement the principles of the systemic investment response mechanism, as proposed by the World Bank. The fragmented and inefficient flow of information between state institutions remains a challenge, it in turn presents obstacles for SMEs to access the available business support services and obtain permits and licenses. When applying for government support, SMEs are required to submit excessive paperwork and information, which extends the application time.

The Law establishing the legal framework for a Commercial Court was passed in February 2022 and the court became fully operational and began hearing cases in August 2022. Although since 2022 the legislation on foreign investment includes equal treatment of national and foreign nationals and companies, foreign nationals and companies still encounter challenges in practice, for instance when registering property rights.

Kosovo has significantly increased the number of services available on its e-government platform and has begun preparations to simplify and digitalise permits and licenses on the e-government platform. Business licensing procedures are clear and centralized. Kosovo continues reforms to reduce the administrative burden on businesses. Self-employed workers face a low tax burden and the incorporated SMEs benefit from corporate income tax incentives. The tax administration simplification and the development of digital services have decreased tax compliance costs for SMEs.

The lack of easily accessible and affordable credit serves is a substantial barrier to the growth of SMEs. In addition, SMEs and corporations suffer from a low capacity to prepare bankable projects due to informality in accounting practices, weak corporate governance, and management quality, in addition to integrity issues. By 2022, the Kosovo Credit Guarantee Fund (KCGF) expanded; it now enables loans worth EUR 270 million to 8 871 micro-small and medium-sized enterprises (MSMEs) in the sectors of production, services agriculture, and trade, including start-up firms and female owned businesses. On 11 May 2023, Kosovo signed the Association Agreement for the participation in the EU "Single Market Programme" (SMP).

Chapter 25: Science and research

The EU provides significant support for research and innovation. All Member States can participate in the EU's research and innovation programmes and benefit from them, especially where there is scientific excellence and solid investment in research and innovation.

Kosovo is at an **early stage of preparation** in the area of science and research. **Some progress** was made during the reporting period: Kosovo substantially improved its performance in the EU's framework programme on research and innovation.

Since the recommendations of the previous report were not fully addressed, Kosovo should in particular:

- fully implement the national science programme, including prioritise and promote scientific research and innovation, ensure higher spending on research and innovation, and seek to stimulate investment from the private sector by completing a smart specialisation strategy;
- continue efforts to increase participation in the Horizon Europe programme;

→ use the newly established current research information system to provide reliable data on numbers of researchers, on percentage of GDP spent on research and innovation, and on performance related to the European Research Area priorities.

Despite some progress on **research and innovation** policy, Kosovo lacks a strategic approach to develop, prioritise and promote research activities. There has been some progress in this respect since the National Science Council developed the national science programme as the main strategic document on science and research. It identifies priority fields for the economic and social development for the next six-year period. In addition, it includes new funding models and the creation of a fund for innovations.

The **smart specialisation strategy** should be completed as a priority. The current research information system has been developed and should be put into use. It systematically collects research, science and innovation data, that should be used to support evidence-based decision making. The bundling of competencies for science, education, technology, and innovation in a single ministry is a welcome development. This should foster the coordination and administrative capacities to plan, implement, monitor, and evaluate research and innovation policies.

The research and innovation sector is severely underfunded, with public research spending amounting to only 0.1% of GDP despite a 0.7% of GDP target mandated by law. The financing of scientific research through the allocation of the budget for higher education institutions is unclear since the budget for scientific research and innovation is not separated from the budget for universities. The quality of programmes preparing postgraduates for research careers remains unsatisfactory. Funding of innovation support measures is urgently needed to support the economic recovery. Kosovo is encouraged to take up the opportunities made available by the European Institute of Innovation and Technology.

Kosovo was for the first time fully associated to **Horizon Europe** in 2021. After a slow start, preliminary figures for 2022 show a substantial performance increase from the research and innovation community with five projects receiving a total EU funding of EUR 0.8 million.

Chapter 26: Education and culture

The EU supports cooperation in education and culture through funding programmes and the coordination of Member State policy through the ‘open method of coordination’. The EU and the Member States must also prevent discrimination and ensure quality education for children of migrant workers, including those from disadvantaged backgrounds.

Kosovo has **some level of preparation** in the field of education and culture. During the reporting period there has been **some progress**, notably with the Kosovo Accreditation Agency becoming an affiliated member of the European Association for Quality Assurance in Higher Education and the European Quality Assurance Register for Higher Education, and with the adoption of the Law on the Kosovo Accreditation Agency and the Law on early childhood education. However, the quality of education still needs improvement in terms of teachers’ qualifications and training and learning outcomes. The Assembly should adopt key legislation on higher education.

As last year’s recommendations were only partially implemented, Kosovo should in particular:

→ develop a roadmap for the implementation of key reforms of the education system, including the recommendations under the ETF Rapid Education Diagnosis;

- finalise the implementation of the new curricular framework for basic education, complete the revision of the existing textbooks and provide sustainable training to teachers; systematically apply quality assurance mechanisms at all education levels;
- enhance the VET governance and increase the quality of vocational education and training for professions in demand in view of the Youth Guarantee.

Kosovo's public spending on education in 2022 stood at 4.1% of GDP (13.3% of the total budget). Although the amount as a percentage of GDP is comparable to EU countries, *per capita spending* is considerably lower. Thus, Kosovo should increase the funds for students *per capita* and for investment in quality education. The funding formula used to allocate pre-university budget to each municipality is under revision, as the current one is not sufficiently accurate. During 2022, almost two thirds of schools in rural areas (63%) operated in multiple shifts. In consequence, pupils receive an insufficient number of teaching hours.

In recent years, Kosovo has made considerable progress in **increasing access to pre-primary and primary education**. It should nevertheless do more to equitably increase coverage of pre-school and secondary education. In the 2021/2022 school year, 224 429 pupils attended primary and lower secondary education: a decline of 18% compared to the 273 649 pupils in 2014/2015. On average, (gross) enrolment rates in primary and secondary education are very similar to those in the region, and relatively high: 88.1% of children attend pre-primary education but for no more than 2 to 2.5 hours/ day in public institutions. In private institutions, the duration is 7 to 8 hours/ day. In 2020/2021, the inclusion rate in primary education was 101.2%. Participation of children in pre-school education and care remains low, at 6.7%, well below the average in the region and the OECD average (over 36%). Only 46.2% of pre-school children are girls, while the number of Roma, Ashkali and Egyptian children included in the early childhood education system is low. The new Law on pre-school education was adopted by the Assembly on 10 July 2023; the primary curriculum for Early Childhood Education is being developed. Higher education gross enrolment rate continues decreasing and is currently at 49.4%, almost 30% lower than five years ago, but low graduation rates remain of concern.

Kosovo adopted a new education strategy 2022-2026, which includes plans for digitalisation of schools, focusing on digital learning, platforms, content, teachers upskilling and support, connectivity, devices, and institutional support. For the successful implementation, the Ministry of Education, Science and Technology (MESTI) needs to ensure the necessary human and financial resources. The restructuring of the MESTI is still pending. The restructuring of the MESTI is still pending.

The **quality of education** remains poor, as evidenced by the last two OECD Programme for International Student Assessment (PISA) evaluations, with Kosovo ranking respectively second and third from bottom. Kosovo participated in the 2019 Trends in International Mathematics and Science Study (TIMSS), in the 2021 Progress in International Reading Literacy Study (PIRLS) and PISA 2022. In TIMSS 2019, Kosovo was among the ten poorest performers. However, Kosovo has joined the ICILS 2023 (International Computer and Information Literacy Study) which can help monitor targets regarding students' digital competences and also monitor progress toward the UN Sustainable Development Goals.

Kosovo is participating in the European Education Area working groups 2021-2025. These working groups fosters collaboration among European Union Member States, as well as with candidate countries, in order to build more resilient and inclusive national education and training systems and prepare their youth for the green and digital transition.

Reforms are still lagging behind due to the lack of suitable textbooks, teaching materials and

sustainable professional development schemes for teachers. Another issue is the mismatch between education outcome and skill requirements. The law on the education inspectorate is not properly enforced due to the insufficient number of inspectors.

Higher education institutions (HEIs) should invest more in the implementation of their strategic documents and action plans. Academic integrity remains an issue. The Ministry adopted a decision on the compatibility of scientific works and publications of the academic staff with ethics in research, obliging programme holders to upload their research in indexed platforms ahead of accreditation of their programmes. It also has developed the new Kosovo Research Information System (KRIS) platform that requires the registration of all researchers. During the reporting period, MESTI developed a roadmap on the performance-based funding of the public HEIs. All public HEIs have fully aligned with the accreditation standards. Apart from the University of Pristina, all public universities depend financially on the state budget. Kosovo should adopt the new law on higher education that would strengthen the autonomy and academic integrity of higher education institutions, governance matters and improve quality assurance. The limited involvement of the students in the decision-making processes at the university level remains an issue. The newly adopted Kosovo education strategy 2022-2026 is expected to address the above-mentioned issues. In 2022, the Kosovo Accreditation Agency (KAA) became an affiliated member of the European Association for Quality Assurance in Higher Education and the European Quality Assurance Register for Higher Education. Kosovo adopted the Law on the Accreditation Agency which aims at increasing its operational independence and transparency of appointments of the KAA management.

Over half of upper secondary schools students enrol in **vocational education and training** (VET). The statistics for the 2022/2023 academic year show that out of 67 373 students enrolled in upper secondary education, 35 568 students are enrolled in vocational education schools, compared to 31 805 students enrolled in gymnasiums. VET profiles offered by vocational schools are not based on occupational standards and are often not well aligned with the labour market demands. Funding for vocational education has not increased over the last few years. Only 9.6% of the total education budget is allocated to VET.

Work-based learning, integrated in the current VET curriculum, is not systematically delivered. The currently used subject-based curricula are not geared towards developing vocational skills. Schools generally lack the conditions, teacher skills, equipment, materials and structured cooperation with businesses to develop learners' practical skills. During the reporting period, Kosovo adopted the Youth Guarantee implementation plan, making the introduction of the necessary reforms in VET even more urgent. It includes both preventative measures to make education and VET more relevant and measures to expand offers for young people that are not in employment education or training (NEET).

Kosovo needs to **increase the access of students with disabilities to education**. It is estimated that 38 000 children with disabilities do not attend school. Key problems include the lack of suitable definitions of various forms of disability, barrier-free access to schools and adequate support, and the low number of suitably qualified teachers and assistants. Despite the positive development with the decision of the government to increase the number of assistants for children with special needs to 100 per year, at least until 2024, the quality of education for children with disabilities is low. The dropout rate remains higher among Roma and Ashkali children though statistics are unreliable. During the reporting period, trainings were organised on inclusive education, human and minority rights and on Kosovo respective policies and legal framework for 25 municipal officers (14 women and 11 men) from 22 municipalities.

With the cooperation of the Kosovo government, the European Training Foundation carried out an evidence-based rapid education diagnosis of the entire education system addressing

three main thematic areas: inequality, financing and governance. The analysis aimed to identify key issues and actions to improve the quality and delivery of education services overall. The Foundation drew up a set of recommendations for the Kosovo authorities to consider. These recommendations include: (i) setting up adequate monitoring and evaluation mechanisms; (ii) improving cross-ministerial cooperation; (iii) boosting institutional capacity, particularly for financial management; and (iv) setting priorities in the Education Strategy.

Kosovo benefits from the international dimension of the 2021-2027 **Erasmus+** programme. In 2022, around 480 higher education staff members and 650 students from Kosovo were selected to undertake a mobility period in EU Member States and associated third countries to the programme, while Kosovo's higher education institutions are expected to host 375 staff members and 225 students from Europe.

On culture, Kosovo should maintain efforts to meet the standards of the 2005 UNESCO Convention on the Protection and Promotion of the Diversity of Cultural Expressions. There has been no progress on drafting the law on cultural heritage, reflecting its commitments under Annex V of the Ahtisaari Plan. The Implementation and Monitoring Council needs to resume meetings and identify joint solutions to be reached between Kosovo and the Serbian Orthodox Church.

The Ministry of **Culture**, Youth and Sport (MCYS) has the responsibility to prepare and implement public policies, drafts legal acts, and adopts implementing legislation in the field of culture, youth, sports, copyright and related rights. MCYS is at an early stage to develop a culture strategy. MCYS needs to increase its efforts to improve the status of the artistic community, governance and budget issues of public cultural institutions. During reporting period, the Ministry allocated EUR 500 000 for construction of the Jewish Cultural Centre that will serve to organise exhibitions on the history of the Jewish community. MCYS can increase its commitment towards further development of technical capacities in the specific cultural heritage skills by ensuring further education of the students in this area and providing professional training.

Kosovo currently participates in the Creative Europe programme. More efforts are needed to increase the number of culture beneficiaries in Culture strand calls with European partners. Kosovo still has to increase efforts to align on the short term its legislation with EU Audiovisual Media Services Directive, in order to participate as well in MEDIA strand.

Chapter 29: Customs Union

All Member States are part of the EU customs union and follow the same customs rules and procedures. This requires legislative alignment as well as adequate implementing and enforcement capacity and access to common computerised customs systems.

Kosovo is **moderately prepared** in the area of customs. During the reporting period, it made **some progress** as it reduced fees charged to exporters/importers at inland customs terminals, opened a customs office at the Port of Durrës (Albania) increased the number of authorised economic operators and enforced customs measures, for example for the protection of intellectual property rights (IPRs). Kosovo Customs has continued the fight against narcotics and other smuggling activities. As not all the recommendations from the previous report have been addressed, in the coming year Kosovo should in particular:

→ continue to align with the Union Customs Code and the excise *acquis*, including approving a new Customs and Excise Code;

- Kosovo Customs should strengthen its administrative and professional capacity, and to that end, ensure merit-based and transparent selection processes, transfers and promotions;
- abolish all fees charged to exporters/importers at both public and private inland customs terminals.

In the area of **customs legislation**, the newly drafted Customs and Excise Code, which is aligned with that of the Union Customs Code, is still to be adopted by the government.

Due to recognition issues, there was no progress on Kosovo's application to become an observer under the Common Transit Convention. Regarding the rules of origin, Kosovo continues to apply the Pan-Euro Mediterranean (PEM) Convention. The Kosovo Customs continues to systematically exchange data on the cross-border movement of goods among Western Balkan economies. Kosovo is participating in 'Customs', the EU programme for cooperation in the field of customs.

The **legislation** on customs measures governing IPR and export controls for cultural goods is aligned with the EU *acquis*.

Kosovo Customs continued to make good progress on **trade facilitation**. Kosovo Customs has granted an additional five certificates for Authorized Economic Operators, bringing the total number to ten Authorized Economic Operators.

There is some progress with regard to reducing fees for exporters/importers at inland **customs terminals**. Import fees have been entirely abolished at the Peja customs terminal, while the Trepca terminal applies a reduced fee. All other customs terminals apply a full fee.

Kosovo Customs should still strengthen its **administrative and operational capacity**, by ensuring merit-based and transparent transfers, promotions and selection processes. In this regard, it should update its secondary legislation job descriptions. Kosovo Customs should continue to implement its medium-term strategic plan (2019-2023).

During the reporting period, Kosovo Customs jointly with Kosovo Police detected and seized substantial amounts of narcotics valued at several million euro. Kosovo Customs conducted 42 field inspections. Kosovo Customs, other law enforcement authorities and line institutions, cooperate well to fight against the informal economy and customs fraud.

Kosovo Customs initiated three cases involving four customs officers suspected of corruption of which 12 officers have been dismissed, and one arrested. The legal framework for investigation of asset declarations checks filled by customs officials is still not developed.

CLUSTER 4: THE GREEN AGENDA AND SUSTAINABLE CONNECTIVITY

This cluster covers: transport (Chapter 14); energy (Chapter 15); trans-European networks (Chapter 21); and environment and climate change (Chapter 27).

Kosovo is at an early stage or has some level of preparation in areas related to the Green Agenda and sustainable connectivity. Kosovo continues to actively participate in the Transport Community and Energy Community meetings. During the reporting period, some progress was made in the energy sector. Kosovo adopted an ambitious energy strategy, which includes an increased share in renewable energy sources, and launched the first solar auction Kosovo remains heavily reliant on coal. Limited progress was made in the transport sector with the adoption of the multimodal transport strategy, whereas limited progress was made in the areas of environment and climate change.

Kosovo needs to significantly increase its ambition and administrative capacities to properly implement EU standards on transport, energy and environment. Strategies, action plans and legislation in these sectors need to be more consistent and in line with the principles and objectives of the Green Agenda for the Western Balkans and the Economic and Investment Plan.

Chapter 14: Transport policy

The EU has common rules for technical and safety standards, security, social standards, Stateaid and market liberalisation in road transport, railways, inland waterways, combined transport, aviation and maritime transport.

Kosovo is in an **early stage of preparation** in this area. It made **limited progress**, notably with the adoption of the multimodal transport strategy.

As most of the last year's recommendations have not been addressed, they remain valid; Kosovo should:

- invest in road maintenance and inspections, organise prevention campaigns and establish a systematic monitoring mechanism for the collection of crash data and continue the alignment with the EU rail market *acquis*, and in particular, the Law on safety and interoperability;
- adopt and roll out the action plan 2023-2025 of the multimodal transport strategy; align Kosovo's aviation regulation with the European Common Aviation Area Agreement;
- adopt the intelligent transport system (ITS) strategy and its action plan; ensure sufficient capacity and resources for its implementation; continue efforts to harmonise with the EU passenger rights *acquis* across all modes of transport.

On transport matters, Kosovo proactively participated in Transport Community activities. In January 2023, the government approved the Multimodal Transport Strategy; the adoption of the action plan is still pending. Further efforts are needed to align and implement the EU *acquis* in all areas of the sector, with a focus on safety and incorporating elements of the Smart and Sustainable Mobility Strategy. Kosovo needs to take concrete measures to speed up the implementation to meet the deadlines set in the five Transport Community Action Plans (rail, road, road safety, waterborne transport and multimodality). Kosovo made limited progress on the implementation of Annex 1 of the Transport Community Treaty. The operational and administrative capacities of the enforcement bodies remain insufficient. Kosovo needs to upgrade the existing capacities to improve coordination to ensure proper, timely and professional implementation of all infrastructure projects. Kosovo should begin to enhance transport climate resilience and the use of alternative fuels, in line with the Green Agenda and the Smart Sustainable Mobility Strategy for the Western Balkans. For larger transport agglomerations, sustainable urban mobility plans which respect environmental and social standards should be developed following EU practice.

On road transport, Kosovo should make further efforts to align with the EU *acquis*. For the first time, Kosovo has allocated a budget for 2022-2024 to set up the Road Asset Management System. Kosovo should implement the recommendations on establishing a Road Safety Agency, including developing the national system for continuous road crash data collection. The current road crash data collection system is not compliant with Common Accident Data Set (CADaS) and the improvement of the system is not yet foreseen. Kosovo should continue raising awareness to achieve better results in line with the United Nations (UN) and EU's goal to halve the number of road deaths and injuries by 2030. Kosovo should also still implement

the report recommendations of Technical Assistance to Connectivity project in the Western Balkans - CONNECTA - to improve the quality of the road network and implement actions as set out in the road safety Transport Community Treaty regional action plan. The draft bylaw on aligning the Directive 2008/69/EC on road infrastructure safety management and the bylaw on periodic technical inspections on roads should be finalised without any further delays. Establishing a system/model to increase the capacity of road safety inspectors and auditors should be a priority.

Kosovo has made some progress on the implementation of **rail transport *acquis***, with the partial implementation of the Transport Community action plan on rail. The market for rail transport services is open and functional. However, the railway legislation still needs to be fully aligned with the market and technical pillars of the fourth Railway Package. Kosovo drafted a multiannual maintenance contract; final approval is pending. Although the 2021 agreement on joint rail border crossing is in place for more than 2 years, the joint rail station with North Macedonia is not yet operational. Kosovo should still ensure the outstanding finalisation of the 2020-2024 financial agreement between the infrastructure manager, Infrakos, and the relevant authorities.

On **air transport**, Kosovo is part of the European Common Aviation Area (ECAA)) and is also covered by the single European sky arrangements. The sector continues to face a number of challenges arising from Kosovo's non-membership in several international civil aviation organisations. KFOR/NATO still manages and coordinates upper Kosovo airspace. The institutional shortcomings of the Air Navigation Service Agency and the Civil Aviation Authority, as well as the lack of revenue from upper airspace management, remain an issue. The ongoing staff-management issues in the Civil Aviation Authority remain unsolved and may have a negative impact on the functioning of the Authority. Its upcoming reorganisation and administrative reforms should reflect public administration reform principles, as well as the aviation sector's specific circumstances and requirements. More efforts are needed to continue the alignment with the remaining ECAA first-phase items. Kosovo made some progress with the second phase of ECAA requirements, on aviation safety matters.

On **combined transport**, the approval of the Multimodal Transport Strategy sets out the objective for a well-functioning transport infrastructure which is integrated into TEN-T network and enables the provision of multimodal transport services. However, the 3-year implementation program of the Strategy is yet to be adopted.

Kosovo should increase its efforts to implement **EU passenger rights *acquis*** in all mode of transport. While it has made limited progress in implementing certain aspects of the EU Regulation on rail passenger rights, further efforts are required to achieve comprehensive compliance.

Chapter 15: Energy

EU energy policy covers energy supply, infrastructure, the internal energy market, consumers, renewable energy, energy efficiency, nuclear energy and safety, and radiation protection.

Kosovo has **some level of preparation** in the area of energy. Kosovo has made **some progress**, notably with the adoption of an ambitious new Energy Strategy in March 2023, the launch of the first solar auction in May 2023, and with further investments in the energy efficiency of public and residential buildings in line with the Energy Support Package action plan. Kosovo remains heavily reliant on coal, which in addition to being a dominant source of greenhouse gases, causes serious health and environmental hazards. The targets set in the new Energy Strategy and in the National Energy and Climate Plan (NECP) will need to be aligned with the

2030 Energy Community energy and climate targets. This plan (NECP) needs to be adopted by the end of June 2024, in line with the Energy Community 2030 energy and climate targets, taking due account of recommendations issued by the Energy Community Secretariat. Kosovo needs to align its legislation with the Energy Community Electricity Integration Package. Implementation and enforcement of legislation on energy efficiency need to be enhanced. Kosovo has to fulfil its obligations under the connection agreement with ENTSO-E without delay.

Since the recommendations from the previous report were only partially addressed, in the coming year, Kosovo should in particular:

- continue the environmental upgrade of the Kosovo B thermal power plant and the works for decommissioning of the non-working parts of Kosovo A thermal power plant;
- continue the rollout of the energy efficiency fund and implement support to residential buildings and small and medium-sized enterprises; and
- adopt the Law on renewable energy sources and sign a direct agreement with the service provider to use the national electronic register for the issuance, cancellation, and trade of guarantees of origin.

Kosovo made some progress on **the security of supply**. Electricity market integration with Albania advanced with the launch of the Albanian Power Exchange (ALPEX) and the successful inauguration of the day-ahead market in Albania. ALPEX obtained a license to operate the day-ahead market in Kosovo, and the launch was expected by September 2023. Market coupling between Albania and Kosovo is envisaged to take place in parallel with the launch of the day-ahead market in Kosovo. Kosovo still made no progress in restructuring the existing Bulk Supply Agreement between Kosovo Electricity Supply Company (KESCO) and the Kosovo Electricity Corporation (KEK). The phase out of the bulk supply agreement would contribute to unlocking competition and liquidity in the market for the benefit of Kosovo's energy consumers.

Kosovo Transmission Operator (KOSTT) continued withdrawing electricity from the European network to balance demand in an unauthorised manner. KOSTT lacks the financial resources required to cover for the losses to which unpaid electricity bills in the north of Kosovo contribute. Electricity supplies for the North of Kosovo are provided through deviations that breach the Connection Agreement with ENTSO-E. KOSTT should address the problem of frequency deviations in the control area of Kosovo as a matter of urgency, as the transmission system operator TSO is responsible for fulfilling the obligations under the Connection Agreement with ENTSO-E.

Although Elektrosever received a supply license in June 2022, following the adoption of the Energy Roadmap as part of the EU-facilitated Dialogue, the conclusion of a commercial contract between the distribution company KEDS and Elektrosever remains pending. Following the separation of the Kosovo transmission system operator KOSTT from the Serbia control block, the Serbian electricity transmission system operator EMS did not determine net transmission capacities and capacity allocation at the interconnection with Kosovo.

In March 2023, Kosovo adopted an ambitious **Energy Strategy** setting a clear vision for decarbonisation and foreseeing a substantial increase of renewable energy sources in the electricity mix and approved its implementation program in September. Kosovo needs to ensure a time-efficient and dynamic implementation of various energy strategy components and reach ambitious targets. Kosovo is dependent on outdated, unreliable, and highly polluting lignite-fired thermal power plants, which are greenhouse gas emission sources and cause

serious health and environmental hazards. Kosovo should work on decommissioning the non-working parts of Kosovo A thermal power plant. In 2024, it is expected that Kosovo starts the works to enhance the environmental performance of the Kosovo B thermal power plant and to bring dust and nitrogen oxide emission levels in line with the EU standards. Kosovo is already in breach of the Energy Community requirements for reducing greenhouse gas emissions; the legal framework also needs to be aligned with the EU Directives on large combustion plants and industrial emissions.

Kosovo's new energy strategy does not envisage the development of **gas infrastructure**. The feasibility study for the Kosovo-North Macedonia pipeline and the gas master plan have been completed but there is no investment decision on gas infrastructure.

Concerning the **internal energy market**, there is no progress with the further opening of the retail market. In practice, all customers except those on high voltage continued to be supplied at a regulated price. To ensure compliance with the Third Energy Package and the latest Electricity Integration Package requirements of the Energy Community, Kosovo's Energy Regulatory Office (ERO) still needs to implement the liberalisation of the retail electricity market in Kosovo. On 30 March 2023, the Board of ERO approved the maximum allowed revenues for regulated operators and increased the new electricity tariffs for all consumer categories by 15.4%. The government is defining energy-poor consumers according to the World Bank recommendations, so not only social assistance beneficiaries will benefit but also other consumers in vulnerable situations; the latter will also benefit from the EU's Energy Support Package. Kosovo submitted its draft National Energy and Climate Plan to the Energy Community Secretariat on 10 July 2022. The final plan is to be adopted by end of June 2024.

On renewable sources, by the end of 2022, Kosovo registered 276.2 MW of renewable electricity generation, 128 MW of small hydropower, 137 MW of wind, 10 MW of solar and 1.2 MW of biomass. Kosovo needs to mobilize new investments in renewable energy sources to achieve the targets of the Energy Strategy and the Green Agenda for the Western Balkans. Kosovo also needs to make more efforts to adopt the legal framework on Renewables. In May 2023, Kosovo launched the auction for the first solar energy park of 100 MW. Permitting procedures need to be simplified and streamlined to enable faster deployment of renewables. Kosovo should sign a direct agreement with the service provider to use the national electronic register for the issuance, cancellation, and trade of guarantees of origin, as provided in the regional project for guarantees of origin implemented in the Energy Community and in line with EU standards.

The biomass/woodchips supply chain, critical for the operation of the installed heating and cogeneration plant in Gjakova/Đakovica, is not yet established. To ensure the supply chain for woodchips, Kosovo needs an improved forest management plan and dedicated subsidy for sanitation of the forestry. Due to concerns over their environmental impact, the development of small hydropower plants continued to face strong public resistance. In line with the *acquis* on concessions and the environment, developing new hydropower plants should always be accompanied with proper environmental and social impact assessments. Kosovo's new energy strategy does not foresee the development of new hydro power capacities.

Good progress can be noted on the implementation of the **energy efficiency** fund. Kosovo has put in place the operational procedures for subsidising energy efficiency measures in the residential sector, including social housing. The financial model for investments in the residential sector on a revolving basis is under development. To increase the energy efficiency as foreseen in the Energy Strategy, Kosovo needs to mobilise more financing and to strengthen the institutions' capacity to implement and monitor the savings. The Law on energy efficiency and the Law on energy performance of the buildings have to be aligned with the new directives

as required by the Energy Community Treaty. Kosovo needs to immediately implement the energy performance certification of the buildings and adopt both the Building Renovation Strategy and the Plan for nearly zero energy buildings.

The capacities of the **Nuclear Safety and Radiation Protection** Agency remain weak, Kosovo has still not found a solution for the treatment and interim storage of radioactive waste in accordance with EU standards.

Chapter 21: Trans-European Networks

The EU promotes trans-European networks (TENs) in the areas of transport, telecommunications and energy to strengthen the internal market and contribute to growth and employment.

In the area of trans-European networks (TENs), Kosovo has **some level of preparation**. Kosovo made **limited progress** in developing transport and energy networks, with the implementation of the Transport Community action plans on road, road safety, rail, and transport facilitation, and the operationalisation of a common power exchange with Albania.

As recommendations from the previous year were only partially addressed, in the coming year, Kosovo should:

- implement the pending connectivity projects and strengthen institutional and administrative capacities for the implementation of strategic infrastructure projects;
- improve the capacity of the regulatory authority of electronic and postal communications to enforce telecommunications market regulations.

Progress on the trans-European **Transport** Network (TEN-T) is limited due to the lack of inter-institutional capacities to implement infrastructure projects. All transport infrastructure investments need to be based on realistic cost/benefit analyses, and comply with EU standards on public procurement, state aid and environmental impact assessments. A revision of the indicative TEN-T core and comprehensive network took place. A relevant high-level agreement on indicative maps for TEN-T in the Western Balkans was signed in July 2023. The amended maps for the new European Western Balkans corridor will be part of the revised TEN-T Regulation, which is currently under negotiation between the EU co-legislators.

In 2022, the government submitted the loan request to EBRD and EIB for the segment of the “Peace Highway” (part of Route 7). However, negotiations have not yet been concluded. The railway works on the Orient/East-Med Corridor (rail route 10) connecting Fushë Kosovë/Kosovo Polje and Mitrovicë/Mitrovica to North Macedonia continued at a slow pace. The works on the second segment are progressing, while the tendering for the related signalling and telecom is delayed. Kosovo and Albania will conduct a feasibility study for a railway connection between Durres and Pristina.

Kosovo achieved some progress on rail market opening. Obstacles remain, such as the mutual recognition of operating train driver licenses, institutional framework, and recognition of safety certificates and vehicle authorisations. Kosovo needs to further revise the railway law and to finalise the new rail safety and interoperability law by incorporating the market and technical pillars deriving from the fourth railway package.

On **energy networks**, the Feasibility Study for Kosovo-North Macedonia gas/hydrogen pipeline and the Gas Master Plan for Kosovo are completed. The government does not foresee to develop gas infrastructure in Kosovo. In the new Energy Strategy, the government plans to consider joint investments in natural gas power plants with Albania, North Macedonia, and

Greece. Progress was made towards advancing electricity market integration with Albania. The Albanian Power Exchange (ALPEX), including Kosovo, was launched in April 2023.

On **telecommunications networks**, the institutional capacity of the electronic and postal communications regulatory authority still needs to be reinforced.

Chapter 27: Environment and climate change

The EU promotes strong climate action, sustainable development and protection of the environment. EU rules contain provisions addressing climate change, water and air quality, waste management, nature protection, industrial pollution, chemicals, noise and civil protection.

In the area of environmental protection and climate change, Kosovo is at an **early stage of preparation**. During the reporting period, Kosovo made **limited progress** with the adoption, in March 2023, of the Law on Integrated Prevention and Control of Pollution. Kosovo needs to increase its political commitment and administrative capacity to address the issues related to environmental degradation and climate change as well as to improve the implementation and enforcement of its legislation. These efforts should be aligned with the goals of the Green Agenda for the Western Balkans. The recommendations from the previous report have not been implemented.

In the coming year, Kosovo should, in particular:

- increase the waste collection coverage, apply widely reduction, separation, recycling and reuse of waste; address effectively the issue of illegal dumpsites; introduce circular economy measures to reduce waste, develop and approve inter-municipal integrated waste management plans; and establish the extended producers responsibility system; □ intensify the work for reduction of industrial pollution through the implementation and enforcement of the law on integrated pollution prevention and control;
- harmonise with and start implementing legal provisions on environmental liability, damage and crime; implement the polluter pays principle and raise public awareness on environmental protection;
- implement the climate change strategy and the action plan on climate change; prepare a roadmap for alignment with the Green Agenda for the Western Balkans and the *acquis* on climate; adopt the national energy and climate plan, in line with the Energy Community requirements, and finalise the drafting the long-term de-carbonisation strategy, and prepare for alignment with the EU Emissions Trading System (ETS).

Environment

As regards **horizontal** issues, Kosovo needs to take ownership and all the necessary measures in the environmental sector and to that end, increase the capacities of the environmental authorities at the central and local level, implement structural reforms and ensure inter-institutional cooperation. Further efforts are needed to revise and adopt strategies, action plans, and relevant legislation to ensure coherence with the objectives of the Green Agenda. The adoption of the Strategy for Environmental Protection and Sustainable Development 2022-2030 is still delayed. There are challenges to implement the strategic framework due to the lack of sufficient funding, low administrative and technical capacities, and heavy reliance on donor support. Kosovo needs to align its environmental protection with the environmental liability Directive. Kosovo adopted the legislation on inspections, but inspection capacities and implementation needs to improve. Kosovo recently adopted the Environmental and Social

Impact Assessment Law; however, it needs to amend the Law on Strategic Impact Assessment. Kosovo needs to meaningfully consult civil society in this policy area, as well as to raise the public and its institutions' awareness of the importance of environmental protection.

Air quality, notably pollution, continues to be a major health threat. Although detailed identification of sources of air pollution has been completed, Kosovo needs to implement adequate measures to remedy and curb air pollution. Kosovo does not comply with the emission ceilings established under its national Emissions reduction plan, the adoption of which is delayed. Kosovo needs to start the preparation of the implementation of the new National Emissions Ceiling Directive. Measures for banning the use of coal for heating need to be effectively enforced. Kosovo introduced subsidies for investments in more efficient and less polluting sources for the first time. The air quality plans for zones where pollutant levels exceed limit values need to be adopted. The real time monitoring, identification of air pollution sources and air quality reporting have slightly improved.

There is some progress in aligning the **waste management** legislation with the EU *acquis*, but the unsustainability of the system still needs to be addressed. While the legal framework is partially aligned with the EU *acquis*, it needs to include the extended producer responsibility and the polluter pays principle. In August 2022, Kosovo adopted the Law on Waste, aligning with the Waste Framework Directive. The implementation and enforcement of waste management legislation is lagging behind, with the only noticeable progress being on management of organic waste with 18 of 38 municipalities having initiated home-composting systems and some municipalities having implemented pilot measures for the separation of fractionous collection waste and the reduction of organic waste. Most of the waste still ends up in landfills, which are not properly managed or categorised as illegal dumpsites. However, the number of illegal dumpsites has steadily decreased (from 1489 in 2020, 1 189 in 2021 to 763 in 2022). Kosovo needs to increase capacities and set realistic recycling targets to implement its integrated waste management and circular economy. In March 2023, the Ministry of Environment, Spatial Planning, and Infrastructure launched the Circular Economy Roadmap; however, the overall grasp of the concept is still at an early stage. The capacity of the central and local institutions, including inspections, to fulfil their responsibilities needs to be strengthened. The coal ash deposit lake operated by the Kosovo Electricity Company and the Mirash landfill in Obiliq/Obilić remain open, despite their negative environmental impact. The government selected locations for the new landfill for Pristina regional waste management and hazardous waste storage; yet, it needs to conduct the environmental and social impact assessments procedures.

Kosovo made limited progress to align the **water** legislation with the EU *acquis*. The monitoring mechanism of the 2017-2036 Water Strategy and the implementation of the Law on Waters need further improvement. Kosovo needs to urgently set up the monitoring systems with data available to the public. Water protection zones still need to be enhanced. The river basin district authorities need to become operational as a matter of urgency. The management plan for the White Drin basin has to be adopted, and the preparation of the other river basin management plans should accelerate. Any small hydroelectric power plants need to be built in full respect of the environmental legislation and undergo appropriate environmental assessments. Flood risk and hazard maps preparation progressed well. Untreated sewage and discharge remain the primary sources of water pollution, particularly in rivers. The planning and construction of wastewater treatment plants in bigger cities are progressing, but identifying agglomerations and sensitive areas in line with the Urban Waste Water Treatment Directive remains weak. Reduction of water losses and traffic collection should intensify.

Kosovo made no progress on **nature protection**. The Strategy for Environment and

Sustainable Development 2022-2031 has not yet been adopted. Detailed regulatory plans for the two national parks have been re-drafted into partial plans covering smaller areas. The 2016-2020 action plan for biodiversity needs to be fully implemented. The designated areas continue to be polluted and poorly maintained, and illegal activities such as construction, hunting, and logging still, need to be addressed. Effective measures are necessary to ensure the protection of critically endangered species. Although Kosovo has taken steps to start inventories of natural habitats and species, the designation of potential Natura 2000 sites is at a very early stage. Kosovo made some progress on forestry, mainly in planning and management, as it adopted relevant secondary legislation. The forest Strategy and the forestry Law are yet to be adopted. Deforestation and illegal logging remain matters of serious concern.

Kosovo made limited progress in aligning with the *acquis* on **industrial pollution** and risk management. In March 2023, the Assembly adopted the Law on Integrated Prevention and Control of Pollution. Progress in implementation the legislation on pollution prevention and control and polluter accountability is very slow. Hazardous mine waste, industrial discharge into rivers, and industrial dumpsites continue to pose serious threats to soil, water, and health. Significant efforts are needed to align with the EU *acquis* and to implement it, particularly concerning the Industrial Emissions Directive and Seveso III. This process requires a strengthened capacity to enforce the legislation on the central and local levels. In addition, public awareness campaigns, training of the affected industry, and issuing integrated permits for reducing harmful industrial emissions are necessary.

There was no progress on **chemicals**; here, alignment with the EU *acquis* and implementation of legislation remains at a low level. Kosovo is not a party to the Rotterdam Convention. It still needs to implement the regulatory framework on the export and import of hazardous chemicals. Kosovo made some progress in providing information to stakeholders; yet, more efforts are needed to develop a centre for the control of chemical poisoning.

There was no progress in **noise** regulation in the reporting period.

Kosovo is not part of the Union **Civil Protection Mechanism** but can benefit from certain Union Civil Protection Mechanism activities available to the beneficiaries of the Instrument for Pre-Accession Assistance (IPA) and benefits from regional civil protection programmes under the same Instrument. Kosovo is encouraged to participate in the Mechanism activities, such as training, exchange of experts, prevention and preparedness projects, exercises, peer reviews, and advisory missions. In improving its disaster management capacities, Kosovo should develop legislation, governance, and financial framework related to preparedness, develop a comprehensive investment plan for preparedness and response, improve coordination among responsible authorities in large-scale disasters, and strengthen governance and procedures related to developing national risk assessment. The coordination between the central level and local level should improve. Kosovo made no progress regarding disaster risk needs assessment; it did not develop a recovery strategy or prepare disaster response plans. Kosovo should start the process of installing the Trans European Services for Telematics between Administrations (TESTA) as a prerequisite for installing the Common Emergency Communication and Information system (CECIS).

Climate change

Implementing the 2019-2028 climate change strategy and the action plan for 2021-2023 is very limited. Kosovo has still not adopted the law on climate change. The national energy and climate plan, needs to be adopted at the end of June 2024 (*See Chapter 15 – Energy*). The government should start drafting a Decarbonisation Strategy, including actions related to

energy, agriculture, forestry, and overall economic development. The re-established National Climate Change Council took concrete measures to mainstream climate action and raise public awareness. The greenhouse gas emissions inventory reporting for 2020 is not yet available. The strategic and legislative framework needs to be aligned with the EU strategic goals stemming from the Green Agenda for the Western Balkans. Kosovo needs to get prepared for alignment with the climate acquis as per the important modifications brought in by the Fit for 55 package. Kosovo needs to take the necessary steps for the establishment of a mechanism on carbon pricing, aligned with the EU ETS, to advance the implementation of the EU acquis and adequately prepare for the EU Carbon Border Adjustment Mechanism, that enters into force in its transitional phase as of 1 October 2023. Administrative and inspection capacities in the sector need to be significantly strengthened and structural reforms need to be implemented. Awareness raising need to be enhanced. Kosovo is not a UN member, and *de facto* not a signatory to the UN Framework Convention on Climate Change; therefore, it does not have a nationally determined contribution under the 2015 Paris Agreement. Full implementation of its climate change strategy should serve as a guide to achieving the Agreement's objectives.

CLUSTER 5: RESOURCES, AGRICULTURE AND COHESION

This cluster covers: agriculture and rural development (Chapter 11); food safety, veterinary and phytosanitary policy (Chapter 12); fisheries and aquaculture (Chapter 13); regional policy and coordination of structural instruments (Chapter 22); and financial and budgetary provisions (Chapter 33).

The system for the implementation of the agricultural and rural development policy is being developed. Kosovo has some level of preparation in this area. In March 2023, the Assembly adopted the Law on agriculture and rural development as well as the Law on forestry. Legislation on genetically modified organisms and plants protection needs to be aligned with the EU *acquis*. On chapter 12, Kosovo made limited progress. Kosovo developed surveillance and eradication programmes for animal diseases, as well as prepared secondary legislation; yet, more progress is needed. Kosovo should adopt the agriculture and rural development programme 2022-2027 and the Law on agriculture land. Administrative capacity of the ministry and agencies need to be strengthened significantly with adequate human and financial resources. A policy dialogue with the EU on the strategic orientation of Kosovo's agriculture need to be launched as soon as possible. The measures encouraging land consolidation are insufficient. Kosovo needs to make more efforts to implement the relevant *acquis* on fisheries and aquaculture.

Chapter 11: Agriculture and rural development

The EU's common agricultural policy supports farmers and ensures Europe's food security. It helps tackle climate change and the sustainable management of national resources; maintains rural areas and landscapes across the EU; and keeps the rural economy alive by promoting jobs in farming, agri-food industries and associated sectors. This requires strong management and control systems. There are also common EU rules for marketing standards, quality policy and organic farming.

Kosovo has **some level of preparation** on agriculture and rural development. There was **limited progress** with the adoption of the Law on agriculture and rural development, while the agriculture and rural development programme 2022-2027 remains to be adopted. The Law on Forestry was also adopted.

Some of the Commission's recommendations from last year were not fully implemented and , therefore remain valid. In the coming year, Kosovo should in particular:

- perform a qualitative assessment of the direct payments and rural development programmes provided under the financial framework 2014-2020; adopt the Law on agricultural land and the programme for agricultural and rural development 2022-2027;
- take urgent and effective measures to stop the loss of agricultural land and implement the legislation on spatial planning;
- take effective action towards developing its organic farming and quality policy sectors.

On **horizontal issues**, in 2022, the budget for direct payments and rural development increased to EUR 58.1 million, 59% higher than in 2021. In 2022, the agriculture and rural development programme prioritized investments in rural diversification; it also provided support to agricultural primary production and to the processing and trading of agricultural products. Support measures need to be brought in line with the EU *acquis*.

Kosovo is still in the process of establishing agricultural system which include the integrated administration and control system (IACS), a farm accountancy data network (FADN) and agricultural market information system.

A law on the **common market organisation (CMO)** remains to be adopted.

On **rural development**, a Law on Agriculture and Rural Development was adopted in March 2023. However, the agriculture and rural development programme 2022- 2027 is yet to be adopted.

On **quality policy**, Kosovo recorded some progress with the first registration of a geographical indication.

Organic farming certification and control operations are carried out by four international organisations.

An action plan for protection of agricultural land, involving the Ministry of Agriculture and Rural Development, the Ministry of Environment, Spatial Planning and Infrastructure and local authorities, to address the steady loss and degradation of farmland has not yet been adopted.

Chapter 12: Food safety, veterinary and phytosanitary policy

EU hygiene rules for food production ensure a high level of food safety. Animal health and welfare and the safety of food of animal origin are safeguarded together with the quality of seeds, plant protection material, the protection against harmful organisms and animal nutrition.

Kosovo is **in between some and moderate level of preparation** in the area of food safety, veterinary and phytosanitary policy. During the reporting period, Kosovo made **limited progress**, as it prepared and adopted the necessary secondary legislation as well as developed surveillance and eradication programmes concerning animal diseases and control programmes concerning stray dogs. The food control and traceability management system as well as the laboratory information management system for the food safety and veterinary laboratories were put in place .

The Commission's recommendations from last year were only partially met and therefore remain valid. In the coming year, Kosovo should in particular:

- timely secure the means and resources required for effectively operating the food control and traceability management system and the laboratory information management system developed with EU support as they are instrumental in securing compliance of the foodstuff produced or marketed by Kosovo with food safety, animal health, animal welfare, and plant

health standards, a prerequisite for a competitive agri-food sector;

- take a decision on a model for operating the rendering plant and animal by-product collection system and start operation of the rendering plant;
- strengthen surveillance and control of the animal diseases through improved implementation of disease control and surveillance programmes, including by taking over the responsibility of financing fully oral rabies vaccination campaigns to be carried out from autumn 2023 onwards.

Kosovo further progressed in the field of food control and traceability as well as the laboratory information management system managed by the Food and Veterinary Agency. Furthermore, it prepared a gap analysis regarding the legislation covering the areas of animal health, animal welfare, food safety and phytosanitary, as well as the strategy and action plan for drafting the missing legislation. Notwithstanding the transfer of 75 inspectors from municipalities, the financial and human resources of Kosovo's Food and Veterinary Agency remains insufficient to fully implement the EU *acquis* in this area. While food and veterinary laboratory continued testing and participated in proficiency testing with EU reference laboratories, there is still no progress in obtaining international accreditation.

Limited progress was made on the **veterinary policy**. Kosovo developed surveillance and eradication programs for animal diseases and in October 2022 approved the Stray Dog Control Programme and Action Plan. The Food and Veterinary Agency has still not developed or begun implementing a comprehensive disease monitoring and control system, in line with EU legislation and World Organisation for Animal Health requirements.

The long-term planning and implementation of programmes to **eradicate endemic diseases** in Kosovo still requires improvement. The same applies to animal health controls at farm level, the transport of animals, and livestock markets. The lack of necessary resources, both human and financial, as well as the lack of in-service training and education programmes hampered the adequate implementation of programmes in these areas.

No progress was made regarding **animal health**. While the multi-annual animal disease control and surveillance programme still needs to be adopted and implemented, Kosovo continued rabies eradication vaccination campaigns. Taking full ownership of these campaigns from autumn 2023, and continue with the vaccination campaigns twice a year, is still necessary to be in line with the obligations stemming from the EU *acquis*.

Kosovo made no progress on the system for collection and disposal of **animal by-products**. This is not yet functional despite the existence of a new and equipped rendering plant. Kosovo still has not decided on the operating model and procedures for the rendering plant and the collection system, as well as on the timeline for its operationalisation.

Some progress was made on **animal identification and registration**, through a microchipping campaign for dogs with owners. The under-reporting of animal movements remains a challenge. The Food and Veterinary Agency has yet to adopt measures to enforce the relevant regulation at the level of livestock markets, slaughterhouses and transport. Kosovo made no progress in identifying basic **cross-compliance measures** in the areas of food safety, animal health and welfare.

On the placing of food, feed and animal by-products on the market, some progress was made during the reporting period. Moreover, the National Residue Monitoring Plan (NRMP) for the year 2022 was completed and submitted to the Commission for evaluation and the comments/corrections were addressed accordingly.

Kosovo made some progress on **phytosanitary policy**. Standard operating procedures and the necessary accompanying documentation required for the monitoring of 18 high priority pests (quarantine organisms) were prepared. Alignment is yet to be ensured for novel food and for **genetically modified organisms**.

Chapter 13: Fisheries and aquaculture

The common fisheries policy lays down rules on fisheries management, protects living resources of the sea and limits the environmental impact of fisheries. This includes setting catch quotas, managing fleet capacity, rules on control and inspection, rules on markets and aquaculture, and support for fisheries and coastal communities. Further, it promotes a sustainable aquaculture.

Kosovo remains at an **early stage** of preparation in this chapter and it made **no progress** in this area. As none of the recommendations of the previous reports were implemented, in the coming year Kosovo should:

- adopt a multi-annual strategy dedicated to aquaculture;
- further align market policy with the *acquis*;
- establish an inventory of fish species.

Kosovo does not have a coastline, it has inland fishing and aquaculture, therefore the *acquis* on catch quotas, inspection and control is only partially applicable. The fisheries *acquis* also covers inland fisheries and aquaculture operations.

The adoption of a multi-annual strategy dedicated to aquaculture and legislation on aquaculture with the *acquis* is pending.

Kosovo should focus on establishing a **market policy** and data collection in line with the EU *acquis* as well as an inventory of fish species. It should also significantly reinforce administrative capacity for policy management, inspection and control.

Chapter 22: Regional policy and coordination of structural instruments

*Regional policy is the EU's main tool for reducing regional disparities and investing in sustainable and inclusive socio-economic growth. It is operating through "shared management" between the Commission and EU Member States. The implementation of cohesion policy programmes requires appropriate administrative capacity on programme and project level, the establishment of systems of sound financial management and control and also the fulfilment of other EU *acquis* elements such as environmental or public procurement legislation.*

Kosovo remains at **early stage of preparation** regarding regional policy and coordination of structural instruments. During the reporting period, Kosovo made **some progress** in this area, when it adopted the Law on Balanced Regional Development.

In the coming year, Kosovo should:

- adopt the Regional Development Action Plan 2023-2025;
- improve the administrative and technical capacity across the IPA operating structures;
- further develop activities stemming from the law as a step towards the principles of the EU regional and cohesion policy; ensure the implementation of the legal and strategic framework for regional development, upgrade the local and regional program, project planning and implementation capacity.

Kosovo has made some progress to align its existing strategic and **legislative framework** on the public financial management and control framework with the EU *acquis*. The legal basis, namely the Law on Balanced Regional Development, adopted in July 2023, and the Action Plan for the implementation of the Strategy on Regional Development 2020-2030, adopted in June 2023, improve regional development policy.

The Agency of Statistics in cooperation with EUROSTAT has not yet harmonised statistical regions with economic ones. The budget for regional development in 2022 amounts to EUR 4.2 million.

The **institutional framework** for the management of EU funds is not yet in place. At the same time, structures for the management of national regional development programs and projects are functional. Regarding **administrative capacities**, significant efforts are required to allocate more human resources and to increase their capacities, particularly on planning and management of EU funds. Concerning the **financial management, control and audit**, Ministries established functional internal services. The national audit authority performs central financial management and audit.

Programming is focused on national regional development projects and future IPA assistance. Currently, there are no IPA financed projects on regional development. In the area of **monitoring and evaluation**, regular activities continued in the field of regional development programs and projects.

During the reporting period, Kosovo implemented **cross-border cooperation programs** with Albania, North Macedonia and Montenegro. Regarding trans-national cooperation programs, Due to status issues, Kosovo does not participate in transnational and interregional cooperation programmes that cover the Western Balkans.

CLUSTER 6: EXTERNAL RELATIONS

In the area of trade, Kosovo is at an early stage of preparation. Limited progress was made during the reporting period. Improvement was achieved in reducing Kosovo's trade deficit, however Kosovo has not yet adopted a comprehensive trade policy, nor ratified the CEFTA Additional Protocols on trade facilitation and trade in services.

Chapter 30: External relations

The EU has a common commercial policy towards third countries, based on multilateral and bilateral agreements and autonomous measures. There are also EU rules in the field of humanitarian aid and development policy.

Kosovo is at an **early stage of preparation** in the area of external relations. **Limited progress** was made during the reporting period. Kosovo has made progress in implementation of Common Regional Market action plan, notably by ratifying the three "Berlin process agreements" on free movement and mutual recognition of qualifications. Kosovo should abstain from taking further unilateral trade measures without justification and prior consultation with the Commission, in line with its SAA commitments. Disagreements relating to the representation of Kosovo have led the government to block decision-making mechanisms in CEFTA. Kosovo has yet to establish a humanitarian and development policy.

As not all recommendations from the previous report were implemented, part of the recommendations remain valid. In the coming year, Kosovo should, in particular:

- implement commitments under the Common Regional Market Action Plan 2021-2024; ratify and implement CEFTA Additional Protocol 5 on trade facilitation and Additional Protocol 6 on trade in services; and finalise the negotiations on, and adopt, the Additional Protocol 7 on dispute settlement;
- approve the Regulation on the establishment of the Trade Facilitation Enquiry Point;
- start the process to establish a development and humanitarian aid policy.

On the **common commercial policy**, Kosovo has not yet adopted a comprehensive trade policy or ratify the CEFTA Additional Protocols on trade facilitation and trade in services.

On 8 November 2022, the Assembly adopted the Law on temporary measures of basic products in special cases of market destabilisation, which provided the government with the authority to impose trade restrictions, price controls and rationing measures in cases of emergency. The implementation of this new law is suspended as opposition parties referred it to the Constitutional Court, on grounds that it is a breach of constitutional provisions on free market. The Court has yet to make a decision.

The government supports the Common Regional Market (CRM) as a basis for a regional free trade agreement. Kosovo continues to make progress in implementing technical measures of the CRM action plan 2021-2024, notably regarding the green lanes. During the reporting period, Kosovo has adopted three important laws on the CRM: on ratification of the Agreement on the recognition of professional qualifications for medical doctors, dentists and architects; on ratification of the Western Balkans Agreement on the recognition of higher education qualifications; and on ratification of the Agreement on freedom of movement with identity cards in the Western Balkans.

However, disagreements relating to the representation and denomination of Kosovo in CEFTA are hampering progress in other areas, notably the free movement of workers. These disagreements have also led the government to block decision-making mechanisms in CEFTA, with the adoption of the budget and the appointment of a new director still pending due to this lack of consensus. Kosovo, along with all participants in the CRM, should play a constructive role and deliver on joint commitments set out in the action plan. In June 2023, Kosovo's Ministry for Internal Affairs (MoI) issued a *"temporary operational security measure"* blocking the entry into Kosovo of Serbian goods and postal parcels. This measure appears not to be in line with Kosovo's commitments under CEFTA and goes against the spirit of the Stabilisation and Association Agreement. This measure was imposed by Kosovo following the arrest of three Kosovo Police officers by the Serbian authorities in mid-June. The officers were eventually released at the end of June.

There is a need to enhance the capacity of the trade department. The needs are both in the number of staff and in increasing their capacities to deal with the complex tasks. Delays in access to the Kosovo Customs trade databases and to the statistics by the Kosovo Agency of Statistics negatively affected the efficiency of the trade department.

Kosovo's law on **dual-use goods** remains aligned with EU regulations. Kosovo updated its list of dual-use goods in line with the delegated Regulation of the EU Commission 2023/66 of 21 October 2022.

As regards **bilateral agreements with third countries** on economic/trade/technical cooperation, Kosovo has a number of Free-Trade Agreements (FTAs) with enlargement and third countries. Kosovo has reached a trade partnership and cooperation agreement with the United Kingdom, and a first meeting of the Partnership Council took place in December 2022.

In June 2022, EFTA states and Kosovo officially launched free trade negotiations. Between August and December 2022, there were two rounds of negotiations, with good progress made in all areas.

There were few developments in the areas of **development policy and humanitarian aid**. As Kosovo is a recipient of aid programmes, it does not provide humanitarian aid to third countries in a systematic manner. It has no development aid agency. Kosovo is encouraged to start the process of establishing a legal framework covering international cooperation and development policy as well as humanitarian aid, in accordance with EU policies and principles, and to build dedicated administrative structures. In the context of Russia's war of aggression against Ukraine, Kosovo pledged to host up to 5,000 refugees and 20 journalists from Ukraine. Kosovo also pledged assistance to Türkiye and Syria after the earthquake in February 2023.

ANNEX I – RELATIONS BETWEEN THE EU AND KOSOVO

The EU-Kosovo **Stabilisation and Association Agreement (SAA)** entered into force in April 2016. This comprehensive agreement provides a framework for political dialogue and covers cooperation in variety of sectors. Since 2016, five Stabilisation and Association Council meetings and seven cycles of subcommittee meetings took place. Kosovo participates in the ministerial dialogue between the economic and finance ministers of the EU, and the candidate countries and potential candidates, aiming to help the latter to gradually meet the economic accession criteria and be better prepared for economic reforms, competitiveness and job creation.

On 31 March 2023, the government approved the National Programme for European Integration 2023-2027, subsequently endorsed by the Assembly on 15 June 2023. To further guide the implementation of reforms under the SAA, in November 2016, the Commission and Kosovo adopted the **European Reform Agenda (ERA)**. It outlines priority actions in the fields of good governance, rule of law, competitiveness, investment, sustainable development, employment, education and health. In 2021, Kosovo adopted the second phase of the ERA (ERA II) through a dedicated action plan. Kosovo should have implemented the priorities identified of ERA II within a two-year period, until mid-2023.

The government submitted its application for EU membership on 15 December 2022.

Regarding **visa liberalisation** for Kosovo, the relevant Regulation was adopted on 9 March by the Council and on 18 April 2023 by the European Parliament. The Regulation allows Kosovo biometric passport holders to travel to the EU without a visa for a period of 90 days within any 180-day period, starting on 1 January 2024.

The bilateral EU support for Kosovo under the **Instrument for Pre-accession Assistance II (IPA II)** in 2014-2020 amounted to EUR 562 million, and included, among others, budget support operations on public administration reform, public financial management and on socio-economic recovery.

The EU's COVID related assistance to Kosovo amounted to EUR 68 million. As part of the wider COVID-19 response, the EU made available a Macro Financial Assistance scheme of EUR 100 million in highly favourable loans in order to underpin the local economy.

The IPA III Regulation for the 2021-2027 financial period²² continues to provide financial support to the region and will also finance the Economic Investment Plan (EIP) for the Western Balkans. The IPA 2021, 2022 and 2023 annual programmes include an EU contribution amounting to around EUR 201 million. Under the EIP, Kosovo benefits from EUR 312 million, generating mobilised investments of EUR 940 million.

At the EU-WB Summit in Tirana in December 2022, the Commission put forward an **Energy Support Package** of EUR 1 billion for the Western Balkans to address immediate, short-term, and medium-term needs in the region in the context of the energy crisis and of Russian war of aggression against Ukraine. Kosovo will benefit with EUR 75 million in IPA 2023 funding under this package.

Kosovo continues to benefit from support under the IPA multi-country and regional programmes. Additionally, Kosovo participates in three **cross-border cooperation programmes**, and benefits, with IPA support, from participation in some EU programmes. Since 2018, Kosovo joined the following **EU programmes**: Erasmus+, Single Market

²² Official Journal L 330, 20.9.2021

Programme, Citizens, Equality, Rights and Values Programme, Creative Europe, Customs, Fiscalis and Horizon Europe. To facilitate progress on permitting procedures, Kosovo is participating as observer in a pilot project under the Technical Support Instrument.

Kosovo and **Europol** have enhanced their cooperation. Following the signing of the framework Working Arrangement in July 2020, there are three additional agreements/protocols: the Memorandum of Understanding on Secure Communication Line through SIENA, the Arrangement on secondment of Liaison Officers, and the Arrangement on the exchange and protection of classified information. The SIENA connection is fully operational. As of 15 March 2023, Kosovo Police has the first liaison officer to Europol in the Hague.

Since 2008, the **European Rule of Law Mission in Kosovo (EULEX)** has been assisting Kosovo authorities in establishing sustainable and independent rule of law institutions. Under its current mandate extended until 14 June 2025, the Mission continues to undertake monitoring activities and has limited executive functions.

Frontex is deploying its officers to several border-crossing points in Kosovo based on mutually agreed operational plans. Additionally, the agency provides with other border management related support e.g. guidance in the process to establish a National Coordination Centre (NCC).

To date, according to the government, Kosovo has been recognised by 117 countries, including 22 EU Member States.

Following Russia's war of aggression against Ukraine, Kosovo has continued to adopt packages of sanctions against Russia and Belarus by replicating the ones imposed by the EU and the US. Among the measures taken was a suspension of broadcasting activities of Russian media channels in Kosovo and introducing a visa requirement for Russian citizens. As regards Kosovo support to Ukraine, the government allocated EUR 100 000 in humanitarian aid and dedicated funds to shelter 20 journalists from Ukraine. The Assembly passed a resolution expressing a willingness to receive up to 5 000 Ukrainian refugees.

In relation to the escalation in the north of Kosovo in May 2023, the EU urged both Kosovo and Serbia to immediately and unconditionally take measures to de-escalate the situation and to return to the process of normalisation of relations. Due to lack of decisive steps to de-escalate by Kosovo, and in line with the 3 June Statement, the EU decided to take a number of measures.

The work of the Stabilisation and Association Agreement bodies has been put on hold. Programming of funds for Kosovo under the IPA 2024 programming exercise has so far been put on hold. The proposals submitted by Kosovo under the Western Balkans Investment Framework (WBIF) were not submitted for consideration by the WBIF Board. As regards ongoing support, procurement procedures and signing of new contracts were suspended. Kosovo was also not invited to high-level events and bilateral visits were suspended, other than those focused on addressing the crisis in the north of Kosovo and those related to Western Balkans regional integration.

These measures are temporary and reversible depending on the credible, decisive and timely steps taken by Kosovo authorities to de-escalate the situation, return to the Dialogue and implement the commitments made in this context.

STATISTICAL DATA (as of 31/08/2023)

ANNEX I – RELATIONS BETWEEN THE EU AND SERBIA.....	151

1. INTRODUCTION

1.1 CONTEXT

Since the opening of Serbia's accession negotiations in January 2014, 22 out of 35 chapters have been opened, including all chapters in cluster 1 on the fundamentals and all chapters in cluster 4 on the Green agenda and sustainable connectivity. Two chapters have provisionally been closed. In June 2021, Serbia accepted the revised enlargement methodology. The overall pace of negotiations will continue to depend, in particular, on the pace of rule of law reforms and on the normalisation of Serbia's relations with Kosovo*.

Serbia continued to implement the Stabilisation and Association Agreement (SAA) between Serbia and the EU.

The Serbian government has continued to declare EU membership its strategic goal. The previous government acted in a caretaker capacity with limited powers between February 2022 and late October 2022 when the new government was formed. This had an impact on the pace of reforms in 2022, which picked up again in 2023. Political developments following the two tragic mass shootings in early May 2023, which resulted in 19 dead, including nine schoolchildren, the ensuing protests, and speculations about snap parliamentary elections led to a shift in the reform priorities.

The EU-facilitated Dialogue on normalisation of relations between Kosovo and Serbia continued in the reporting period with regular meetings on the level of Chief Negotiators and Leaders. After months of intense negotiations and with the support of key partners, the Parties reached an Agreement on the Path to Normalisation in Brussels on 27 February 2023, and agreed on its Implementation Annex in Ohrid, North Macedonia, on 18 March 2023. Both Kosovo and Serbia are yet to start implementation of their respective obligations stemming from the Agreement, which are valid and binding for the Parties and part of their European paths.

The Commission's recommendations from its 2021 and 2022 reports, that Serbia has fulfilled the opening benchmarks for cluster 3 (competitiveness and inclusive growth) and that this cluster is technically ready for opening, remain valid.

Following Russia's war of aggression against Ukraine, Serbia aligned with some EU positions in international forums (including in the UN General Assembly). However, it has continued not to align with any restrictive measures against the Russian Federation and has not aligned with the majority of High Representative statements on this matter. It maintained high-level relations with the Russian Federation, raising questions about Serbia's strategic direction. Under the EU-Serbia negotiating framework, Serbia is expected to progressively align its policies towards third countries with the policies and positions adopted by the EU, including restrictive measures.

It remains important that effective policy planning and coordination is in place, along with sufficient human and financial resources for EU accession across all institutions involved, so that Serbia can work towards meeting its objectives for EU accession negotiations. In line with the EU accession objective, and as a matter of priority, the Serbian authorities need to take responsibility for proactive and objective communication on the EU, which is by far Serbia's main political and economic partner.

* This designation is without prejudice to positions on status, and is in line with UNSCR 1244/1999 and the ICJ Opinion on the Kosovo declaration of independence.

1.2 SUMMARY OF THE REPORT¹

As regards the **political criteria**, the Parliament constituted in August 2022 includes the opposition parties that boycotted the 2020 elections. However, political polarisation remained in evidence and has further deepened following the tragic mass shootings in early May. A number of peaceful mass citizens' protests - Serbia against violence - have taken place – with support from several opposition parties.

No elections took place during the reporting period. Serbia still needs to address a number of long-standing recommendations by the Office for Democratic Institutions and Human Rights at the Organisation for Security and Cooperation in Europe (OSCE/ODIHR) and Council of Europe bodies concerning the electoral framework.

Debates in Parliament were marked by tensions between the ruling majority coalition and the opposition. The Parliament has no annual work plan and most of its sessions were called with the minimum advance notice of 24 hours, which should only be used in exceptional circumstances. The code of conduct was not systematically applied and the frequent use of inflammatory language was not penalised. Sanctions and fines were only issued to opposition MPs. Parliamentary Rules of Procedure need to be modernised, and the code of conduct applied to address offences by Members of Parliament. All but two political groups engaged constructively with the European Parliament in the follow-up to the *Inter-Party Dialogue* and its transition into a new *Parliamentary Dialogue Process*.

Further efforts are needed to ensure systematic and genuine cooperation between the government and **civil society**. An enabling environment for establishing, running and financing civil society organisations still needs to be created on the ground, as verbal attacks and smear campaigns against such organisations continued, including by high-level officials.

Serbia is moderately prepared as regards **public administration reform**. Overall, limited progress was made in this area, notably through the continued development of e-services, implementation of the e-government policy, and further roll-out of training courses for civil servants. On human resources management, more than half of senior manager positions are filled on an acting basis. As regards policy development and coordination, no mechanism is yet in place to verify that the Public Policy Secretariat's comments have been incorporated into the final draft versions of laws and policy documents submitted for government approval. On public financial management, action is still needed to fully implement the recommendation for a single mechanism for prioritising all investments regardless of type and source of financing.

Serbia has some level of preparation when it comes to its **judicial system**. Overall, some progress was made during the reporting period. Serbia took an important step towards strengthening the independence and accountability of the judiciary with the timely adoption of most of the implementing legislation giving practical effect to the 2022 constitutional amendments, while two of the implementing laws still need to be adopted: the Law on Judicial Academy and the Law on Seats and Territorial Jurisdiction of Courts. The Venice Commission issued three opinions that overall assessed positively the adopted implementing legislation and recognised the transparency and inclusiveness of the process. Most of its recommendations

¹This report covers the period from June 2022 to June 2023. It is based on input from a variety of sources, including contributions from the government of Serbia, the EU Member States, European Parliament reports and information from various international and non-governmental organisations. It also includes the results of comparative assessments and indices produced by other stakeholders, in particular in the area of rule of law.

The report uses the following assessment scale to describe the state of play: early stage, some level of preparation, moderately prepared, good level of preparation and well advanced. To describe progress made during the reporting period, it uses the following scale has been used: backsliding, no progress, limited progress, some progress, good progress and very good progress. Where appropriate, interim steps have also been used.

were addressed. Relevant by-laws will need to be adopted by May 2024. The High Judicial Council (HJC) and High Prosecutorial Council (HPC) were established on 8 May, following the election of the lay members, which gave practical effect to the implementing legislation.

Serbia has some level of preparation in the **fight against corruption**. Overall, limited progress was made during the reporting period, including on last year's recommendations. Steps have been taken that aimed at further implementing the recommendations of the Council of Europe's Group of States against Corruption (GRECO) in the area of prevention of corruption. There was a slight increase in the number of new investigations and final convictions in high-level corruption cases, but the number of new indictments fell. There were no cases of final confiscation of assets, for which a track record is required. Serbia still needs to adopt a national anti-corruption strategy and the accompanying action plan. Serbia presented to the European Commission a draft strategy for the period 2021-2028 accompanied by a first action plan for the period 2023-2024. A majority of anti-corruption related interim benchmarks for Chapter 23 and a majority of GRECO recommendations from the 4th and 5th rounds of evaluation have been included in the documents. However, there is still a need to ensure the inclusion of remaining Chapter 23 interim benchmarks and outstanding GRECO recommendations and to create the necessary conditions for implementation. Serbia should establish an effective coordination mechanism to operationalise prevention and repression policy goals and thoroughly address corruption. Those sectors most vulnerable to corruption require dedicated action. Overall, corruption is prevalent in many areas and remains an issue of concern. There is a need for strong political will to effectively address corruption issues, and a robust criminal justice response to high-level corruption.

In the **fight against organised crime**, Serbia has some level of preparation. Limited progress was made in addressing last year's recommendations, in particular on detection and prevention of migrant smuggling and trafficking in human beings. A slight increase in financial investigations and confiscation of assets can also be noted in 2022. The number of new investigations and indictments increased; first instance and final convictions (in particular money laundering) decreased. Extended confiscation is not systematically applied. Proactive criminal investigations and the systematic tracking of money flows, especially in cases of inexplicable wealth, are still not common practice. However, the understanding and the investigation approach has improved and police, prosecutors and criminal judges are aware of the importance of consistently applying a 'follow the money to find the crime' approach and using circumstantial evidence. Serbia is late in conducting an analysis of the roles and practices of security services and of the National Security Council in carrying out criminal investigations relating to serious and organised crime, although preparatory works have started. There is well-established cooperation with CEPOL, Eurojust, Europol and INTERPOL, notably on weapons trafficking, drugs trafficking, and the fight against high-profile organised crime groups. Serbia needs to further increase the technical, financial and human resources capacity of the Prosecutor's Office for Organised Crime to perform its duties in an independent manner (including premises to accommodate new staff). Serbia should adapt its approach from one based on individual cases to a strategy against criminal organisations, and from focusing on cases of low or medium importance to high-profile cases, with the aim to dismantle big and international organisations and seizing assets.

Serbia's legislative and institutional framework for upholding **fundamental rights** is broadly in place. The Ombudsman was re-elected in April 2023, without cross-party support. The Ombudsman's Office has yet to be provided with additional resources to cover its new powers laid down in the Ombudsman Law of 2021. The recruitment of additional staff for the Commissioner for Information of Public Importance and Personal Data Protection is

significantly delayed. The procedure for executing the decisions of the European Court of Human Rights, including the role of Serbia's Government Agent before the Court, needs to be further regulated. Implementation of the new strategies and action plans on gender equality, anti-discrimination and Roma² inclusion started, although monitoring bodies were not in place for most of the reporting period due to elections and formation of the new government. Action plans and related funding as regards violence against women and deinstitutionalisation are significantly delayed. New national minority councils were constituted following the elections held in November 2022. Serbia continued drafting and conducting consultations on a new '*action plan for the realisation of the rights of national minorities*'.

Regarding **freedom of expression**, limited progress was made in the reporting period. The police and the prosecution services reacted swiftly to several cases of attacks and threats, working with the standing working group on the safety of journalists. However, cases of threats, intimidation, hate speech and violence against journalists remain a concern, as is the increase of strategic lawsuits against public participation (SLAPP), notably launched by members of national and local authorities, that may produce a chilling effect including self-censorship. Recurrent statements by high-level officials on the daily and investigative work of journalists provide for a challenging environment for the exercise of freedom of expression. The possibility of journalists to report on ongoing criminal proceedings is excessively limited in the legal framework.

Serbia continued implementing the action plan of the media strategy. After increasing delays, several processes were relaunched after the formation of the new government in October 2022. Consultations resumed in November 2022 on amending the Law on public information and media. Following public consultations, consultations with media associations and hurried consultations with the European Commission amendments were adopted to the laws on public information and media and on electronic media before the dissolution of parliament in October 2023. Overall, the new laws will strengthen the independence of the regulatory body for electronic media (REM). They also codify the role of the Press Council and render the process of public co-funding more transparent and accessible. In the context of elections, the ban on media coverage of officials who are also candidates taking part in official gatherings organised for the opening of infrastructure or other facilities was extended to 30 days, which is an improvement of the current situation. However, the legislative process was not finalised fully in line with the EU *acquis* and European standards. The ownership of media by state-owned enterprises was prominent in deliberations. An important step was taken with respect to the application of criteria aligned with the EU *acquis* to the assessment of state aid, while it should be clarified that antitrust and merger control rules apply to the media sector and safeguards to protect media pluralism and editorial independence remain to be improved. The implementation of such safeguards needs to be closely monitored in practice. In August 2022, REM published a call for the allocation of a fifth media service licence with national frequency, which has still not been awarded, without credible justification. Political and economic influence on the media remains a source of concern. Serbia needs to take urgent action to counter anti-EU narratives propagated by numerous media outlets, and to counter foreign information manipulation and interference, most notably in the context of Russia's war of aggression against Ukraine.

On the **economic criteria**, Serbia is at a good level of preparation and has made some progress in developing a functioning market economy. After a strong rebound in 2021 from the

² In line with the terminology of European institutions the umbrella term 'Roma' is used here to refer to a number of different groups, without denying the specificities of these groups.

contraction induced by COVID-19, the Serbian economy decelerated substantially in 2022, impacted by the economic fallout from Russia's war of aggression against Ukraine, in particular as regards rising inflation via soaring energy and food prices. Consumer price inflation surged in 2022 and continued to rise in early 2023, which led the central bank to steadily tighten its policy stance. Progress has also been made as regards the adoption of new fiscal rules. Banking sector stability was maintained and lending growth decelerated substantially. High inflation helped improve the budget balance in 2022, despite substantial capital transfers to state-owned energy utilities and further ad hoc support measures. Major structural reforms of public administration and of the governance of state-owned enterprises continued to advance slowly. The state retains a strong footprint in the economy; the private sector is underdeveloped and hampered by weaknesses in the rule of law, in particular corruption and judicial inefficiency, and in the enforcement of fair competition.

Serbia is moderately prepared and has made some progress in **coping with competitive pressure and market forces within the EU**. The structure of the economy improved further and economic integration with the EU remained high. However, the quality and relevance of education and training still does not fully meet labour market needs. Public investment remained at a high level with the aim to address serious infrastructure gaps after years of underinvestment. Small and medium-sized enterprises still face a number of challenges, including an uneven playing field as compared with large companies and foreign investors.

On **good neighbourly relations and regional cooperation**, Serbia remained committed overall to maintaining good bilateral relations with other candidate countries, potential candidates and neighbouring EU Member States. Relations with Croatia improved. Relations with Hungary have further intensified. In general, Serbia actively participates in regional cooperation.

Overall, Serbia has remained engaged in the EU-facilitated Dialogue on the **normalisation of relations with Kosovo**, but it needs to demonstrate more serious commitment, invest more efforts and make compromises to take the process of normalisation of relations with Kosovo forward. Serbia needs to uphold its Dialogue commitments and commit to the full implementation of all past Dialogue agreements and the Agreement on the Path to Normalisation and its Implementation Annex. Serbia and Kosovo are expected to engage more constructively to enable negotiations on the comprehensive legally binding normalisation Agreement to start and show flexibility in order to make rapid and concrete progress. Normalisation of relations is an essential condition on the European path of both Parties and both risk losing important opportunities in the absence of progress.

The relationship with Kosovo has been affected by several crises of varying intensity on a number of issues, with a violent attack in the north of Kosovo against Kosovo Police on 24 September 2023, constituting the gravest escalation in recent years. Huge quantities of small arms and light weapons (SALW) were found in the context of this attack³. The EU expects the perpetrators to be apprehended and swiftly brought to justice and Serbia to fully cooperate and take all the necessary steps in this regard. Other crises during the reporting period were triggered by issues over the freedom of movement, in particular licence plates, following the Kosovo government's decision on 29 June 2022 to enforce the re-registration of all vehicles with Kosovo-issued licence plates. This led to the tensions in July 2022 and continued through the erection of roadblocks and the collective resignation of Kosovo Serbs from Kosovo institutions in November 2022. Following the withdrawal of Kosovo Serbs from Kosovo

³ The EU and Western Balkan partners agreed in May 2023 to prolong beyond 2024 the Roadmap for a comprehensive small arms and light weapons control in the Western Balkans.

institutions, local by-elections were organised in the four municipalities in the north of Kosovo. Scheduled initially for December 2022 and then postponed to 23 April 2023, the mayoral and municipal by-elections were held in line with the legal framework of Kosovo and efforts were made for them to take place in a smooth and orderly manner. However, despite the milestone Agreement on the path to normalisation reached in Brussels on 27 February and its Implementation Annex agreed in Ohrid, North Macedonia, on 18 March 2023, and despite Kosovo extending the deadline for the registration of candidatures for the local by-elections, not all parties and communities made use of their democratic right to participate and vote. The very low turnout (3.47% of voters), following the boycott by the Kosovo Serb community, showed that these elections do not offer a long-term political solution for these municipalities. The violence perpetrated against KFOR troops during protests against these mayors' taking office in the municipalities has to be fully investigated by Serbia. It remains imperative to restore a situation where Kosovo Serbs participate actively in local governance, policing and the judiciary in the north of Kosovo. Early local elections need to be held as soon as possible in all four municipalities, organised in a fully inclusive manner, and with the unconditional participation of Kosovo Serbs.

Regarding Serbia's **ability to assume the obligations of EU membership**, the country continued the work on alignment with the EU *acquis* in several areas.

The **internal market** cluster is key for Serbia's preparations for the requirements of the EU internal market and is of high relevance for early integration and the development of the Common Regional Market. Progress was limited in most areas within the cluster. No progress was registered in the area of free movement of capital.

The **competitiveness and inclusive growth** cluster has significant links to Serbia's Economic Reform Programme and is technically ready to be opened. Serbia continued to make progress in all areas under this cluster, particularly through further legislative alignment with the EU *acquis* as well as with a new law on the management of state-owned enterprises.

The **Green agenda and sustainable connectivity** cluster is at the heart of the Green Agenda for the Western Balkans⁴ and closely linked to Serbia's Economic Reform Programme and the Commission's Economic and Investment Plan⁵. Some progress was achieved in particular on Trans-European networks, where Serbia advanced on upgrading its infrastructure, with works progressing on the Serbia-Bulgaria gas interconnector, and on climate change, with the adoption of the Low Carbon Development Strategy 2023-2030.

The cluster on **resources, agriculture and cohesion** comprises policies linked to EU structural funds and to developing capacity to assume the responsibilities of a future Member State. It also comprises some of the key policy areas crucial for ensuring sustainable food systems and helping rural communities to develop and diversify economically. Limited progress was achieved in some areas, such as on classification of food establishments and establishments handling animal by-products, and the recruitment of additional staff in the Plant Health Directorate; financial and budgetary provisions as regards the underlying policy areas affecting the correct functioning of the own resources system; and the institutional framework for cohesion policy.

On the **external relations** cluster, Serbia is yet to finalise its accession to the World Trade Organisation which is one of the opening benchmarks for Chapter 30. Serbia should also abstain from introducing unilateral trade-restrictive measures without prior consultation of the Commission, in line with its obligations under the Stabilisation and Association Agreement.

⁴SWD(2020) 223 final.

⁵COM(2020) 641 final.

Serbia continued not to align with EU restrictive measures against Russia and the majority of declarations by the High Representative on behalf of the EU on this matter. Serbia's alignment rate with relevant High Representative statements on behalf of the EU and Council Decisions was at 46% in 2022 and 51 % in August 2023; some actions and statements by Serbia went against EU foreign policy positions. Serbia is expected to improve, as a matter of priority, its alignment with the EU Common Foreign and Security Policy, including with EU restrictive measures, and refrain from actions that go against EU positions on foreign policy.

On **migration**, Serbia contributed to the management of the mixed migration flows towards the EU and cooperated with the EU, EU Member States and its neighbours to implement the EU Action Plan on the Western Balkans presented by the Commission in December 2022. Additional progress along all the pillars of the Action Plan is expected. Efforts continued, with EU support, to host and accommodate substantial numbers of third-country nationals. Serbia extended for one more year, until March 2024, temporary protection to Ukrainian nationals having fled Russia's war of aggression against Ukraine. Serbia continued to implement the EU-Serbia readmission agreement and to carry out border control and surveillance. Implementation of the new integrated border management strategy for 2022-2027, with its 2022-2024 action plan, is delayed. Access to and provision of information regarding the asylum procedure has yet to be improved, in particular at the airports in Nis and Kragujevac. Serbia made substantial progress to align with EU visa policy by reinstating visa requirements for six third countries. Serbia needs to further align with EU visa policy as set out in the Commission's sixth report under the visa suspension mechanism of October 2023⁶. Following the concerns raised by the EU the Government has withdrawn the proposed amendments to the Law on citizenship, which would have provided the possibility to apply for Serbian citizenship after only a short period of residence and work.

⁶ COM(2023) 730 final.

2. CLUSTER 1: THE FUNDAMENTALS OF THE ACCESSION PROCESS

2.1 FUNCTIONING OF DEMOCRATIC INSTITUTIONS AND PUBLIC ADMINISTRATION REFORM

2.1.1 Democracy

The proper functioning of Serbia's democratic processes is a central pillar of Serbia's EU accession process. The Parliament elected in April 2022 includes the opposition parties that boycotted the elections in 2020. However, political polarisation remained in evidence, both in and beyond the Parliament, and was illustrated by frequently harsh and intolerant language used in debates and in the media. The period following the tragic mass shootings in May 2023 saw a further deepening of this polarisation. A number of peaceful mass protests by citizens - Serbia against violence – have taken place since May with support from several opposition parties. Freedom of assembly was guaranteed and protests took place mostly unhindered. However, the protests were sometimes accompanied by verbal attacks on participants by politicians and parts of the media, which also consistently downplayed the size of protests. There were also instances of criminal sanctions issued against participants. In May 2023, the Minister of Education resigned over the school shooting. At the end of a plenary debate on opposition's motion seeking institutional/political and media accountability for mass shootings that lasted between mid-May and mid-July 2023, an inquiry committee was established to look into the background of the shootings and the circumstances that had led to them, but its work was suspended after only two sessions.

Elections

While Serbia's electoral framework has improved, the key aspects of the electoral process require further reform implementation. It is crucial that all outstanding and recent recommendations by the Office for Democratic Institutions and Human Rights at the Organisation for Security and Cooperation in Europe (OSCE/ODIHR) and Council of Europe bodies are fully implemented, in a transparent and inclusive process and well ahead of the next elections.

No elections were held in the reporting period. In August 2022, OSCE/ODIHR issued its final report on the 2022 presidential and national polls, and a follow-up visit was organised in October 2022, to discuss with Serbian authorities the implementation of ODIHR recommendations. In December 2022, a joint Venice Commission and OSCE/ODIHR opinion on the constitutional and legal framework governing the functioning of democratic institutions in Serbia, focusing on electoral law and electoral administration, was published. It was prepared at the request of the Council of Europe Parliamentary Assembly Committee on the Honouring of Obligations and Commitments by Member States of the Council of Europe (Monitoring Committee). The opinion listed recommendations on issues such as electoral administration, media, transparency of election communication campaign financing and prevention of misuse of office and state resources, internal political party democracy, and dispute resolution. The opinion also recommended an interpretation of the Constitution that would limit recourse to early elections, specifically that the President only dissolves the Parliament on the basis of a well elaborated proposal and preferably only when necessary due to the parliamentary situation.

In March 2023, the government reinstated its ad hoc working group for cooperation with OSCE/ODIHR, which has resumed its cooperation with OSCE/ODIHR. While there is an improvement in implementing OSCE/ODIHR recommendations, Serbia still needs to address a number of long-standing recommendations by OSCE/ODIHR, including those pertaining to key aspects of the electoral process, such as access to media, campaign finance, and measures to tackle pressure on voters. It is crucial that all outstanding and recent recommendations by

OSCE/ODIHR and Council of Europe bodies are fully implemented, in a transparent and inclusive process and well ahead of the next elections. Expert civil society organisations should be involved and consulted.

As a follow-up to OSCE/ODIHR recommendations, training has been provided for employees in local self-government units that are responsible for updating and maintaining the single voter register. A manual on the implementation of the register was published and distributed to civil servants across local self-government units. Inter-service cooperation between state institutions was established to fully digitalise voters' access to the register. The Law on electronic media adopted in October 2023 extended the ban on media coverage of officials who are also candidates taking part in official gatherings organised for the opening of infrastructure or other facilities from 10 to 30 days, which is an improvement of the current situation.

Parliament

The Parliament's composition is more pluralistic than the previous legislature and includes the opposition parties that boycotted the elections in 2020. Debates were marked by tensions between the ruling coalition and the opposition. The Parliament has no annual work plan and almost all its sessions were called with the minimum advance notice of 24 hours, which should only be used in exceptional circumstances. The first session of the regular spring sitting, which according to the Constitution starts at the beginning of March, was held only on 19 April 2023. There was no follow-up to a citizens' initiative, nor to an opposition motion for interpellation. Oversight of the executive was weak. All but two political groups engaged constructively with the European Parliament in the follow-up to the *Inter-Party Dialogue* and its transformation into a new *Parliamentary Dialogue Process*. The code of conduct was not systematically applied and there was frequent use of inflammatory language, which went unaddressed. Parliamentary Rules of Procedure need to be modernised, and the code of conduct applied to penalise offences by parliamentarians.

The opposition and majority are taking active part in the work of the Parliament. However, plenary and committee sessions are marked by tensions, offensive language and occasional incidents. These largely lacked an impartial response by the Speaker who regularly engaged in antagonistic exchanges with the opposition. Two special sessions on Kosovo were held, with the participation of the President, and saw threats of violence including against the President. The Rules of Procedure were not systematically applied. Penalties and fines were only issued to opposition MPs. The code of conduct was not applied, despite one motion, upon which the relevant Committee did not act within the deadline.

The Parliament has no annual work plan and the agenda is driven by the executive. Nearly all adopted laws and proposed bills were tabled by the government, and almost all plenary sessions were called within the minimum advance notice of 24 hours, which should only be used in exceptional circumstances, thus limiting the possibility for MPs to propose changes to the agenda or table proposals. In May 2023, for the first time, a session was called upon the initiative of the opposition, which proposed items to discuss institutional and media accountability in the context of mass shootings and these were put on the agenda. There was a slight increase in the use of the urgent procedure – from 9% in the previous reporting period to 12%, covering 12 out of 95 laws adopted from October 2022 to June 2023. The practice of amalgamating large numbers of often unrelated items has continued. Neither the 2023 budget nor the 2023 revised budget were tabled as a separate agenda item. The minimum deadline of 15 days between sending the revised 2023 budget to Parliament and tabling it for plenary debate and adoption was not respected and no discussion on it took place prior to the vote. There has been no follow-up to a citizens' legislative initiative, with 38 000 signatures, on banning lithium mining, despite this being a legal obligation.

Seven public hearings were held: two in 2022 and five until August 2023. Committees continued regular quarterly hearings of ministries, but the work of some committees, which are chaired by the opposition, saw obstruction by ruling parties. Oversight of the executive is weak. The session with questions to the Prime Minister and the government, which should take place monthly, was held for the first time since November 2021 only in April 2023, followed by another two in May and June 2023. An opposition motion for interpellation of the Minister of Finance was not taken forward by the relevant bodies.

The annual reports of independent regulatory bodies were debated in the plenary in February 2023 and conclusions were adopted. However, the plenary took place almost one year after the submission of the reports in March 2022. Parliament needs to more systematically follow up on the implementation of recommendations made by the independent bodies. The mandate of the Ombudsman expired in July 2022 and the procedure for appointing a new one was initiated in February 2023. According to the law, the procedure for appointing a new Ombudsman should have been initiated no later than 180 days before the said expiry. The Ombudsman was re-elected in April 2023, without cross-party support (*See also Chapter 23 on fundamental rights*).

In November 2022, the European Commission's annual report on Serbia was debated in a constructive manner in the Committee for European Integration and the conclusions of the Committee were approved in plenary in April 2023. In March 2023 and August 2023, the European Integration Committee debated periodic six-month reports on the EU accession process submitted by the government. The Parliament continued its cooperation with the National Convention on the European Union composed of civil society organisations.

The Parliament engaged with the European Parliament in the follow-up to the Inter-Party Dialogue and its transformation into a new *Parliamentary Dialogue Process*.

The rules of procedure still need to be modernised in line with European standards and best practice. The effectiveness, autonomy and transparency of the Parliament, and the role of the parliamentary opposition, need to be strengthened to ensure the exercise of necessary checks and balances. In June 2023, a tampered redacted transcript of a plenary session was published on the Parliament's website.

Women make up 35% of MPs (88 out of 250) and three of the seven Deputy Speakers are women. Two Deputy Speakers belong to national minorities.

Governance

The Serbian government, appointed in October 2022, continued to declare EU membership its strategic goal. In line with the EU accession objective, the Serbian authorities need to strengthen emphasis on consistent, proactive and objective communication about the EU, which is by far Serbia's main political and economic partner and donor. Transparency and public consultation need to improve.

The new government was appointed and sworn in on 26 October 2022, within the constitutional deadline, albeit almost 7 months after election day. The governing coalition is composed of six political parties/coalitions, including three parties representing national minorities. The Cabinet consists of 29 members, of whom 10 are women, including the Prime Minister. Representatives of national minorities hold ministerial posts, including for Human and Minority Rights and Social Dialogue, and for the first time a representative of the Croat national community was assigned a ministerial portfolio. The Prime Minister singled out EU accession as the strategic priority of the government. After the mass shootings in early May, the Minister of Education resigned and a new candidate was confirmed by Parliament in July 2023. In July

2023, upon the Prime Minister's proposal, Parliament dismissed the Minister of Economy in connection with his position in favour of sanctions against the Russian Federation and his views about the mass protests by citizens against violence. A new Minister of Economy was confirmed in September 2023.

The government held more regular contacts and consultations with non-governmental organisations under the National Convention on the European Union (NCEU); the Prime Minister took part in the Convention plenary meeting in December 2022.

The autonomy of independent bodies needs to be fully exercised, their role acknowledged and respected by the authorities, and their recommendations followed up thoroughly and in a timely manner.

In March 2023, Serbia adopted and published monitoring reports on its 2022-2025 national plan for the adoption of the EU *acquis* (NPAA) covering the period July-December 2022. In 2022, only 26% of planned NPAA actions were implemented. A total of 35% of actions were implemented when taking into account activities carried out earlier than planned, indicating that planning needs to be further improved.

As regards administrative capacities, the technical secretariat of the National Coordinator for the instrument for pre-accession assistance (IPA) in the Ministry of European Integration now has a department that will serve as a managing authority for annual action plans under Indirect Management with Beneficiary Country (IMBC, IPA 2021 and 2022 programmes). However, the capacities of the secretariat for management of the annual action plans needs to be increased. A staff retention policy remains to be adopted across the public administration, including for structures involved in the management of IPA funds.

As regards **local self-government**, the Law on Vojvodina's financing resources is still not adopted, despite being provided for under the Constitution. Local administrative capacity is still weak and significant disparities between municipalities persist. Responsibilities are borne at local level without proper analysis of the required capacity and human/financial resources. Following the adoption of the first programme for reform of the local government system (2021-2025) in 2021, the implementation rate in 2022 showed rather slow progress (46% at the level of results and 45% at the level of activities). The Commission for Financing Local Self-Governments, re-established in 2021, did not ensure regular meetings and regular consideration of the methodology and criteria for transferring additional budgetary funds, i.e. earmarked funds, from the central level to the local level.

Civilian oversight of the security services

The parliamentary committee for the oversight of security services remains responsible for civilian oversight of the security sector. The Committee reviewed regular periodic reports by the civilian and two military security agencies and the activity reports of the General Inspector of the Ministry of Defence. In December 2022, the Committee visited civilian and military agencies. In April 2023, the Committee adopted a schedule of inspection visits, to be conducted in the course of 2023. The Committee rebutted speculation about the presence in Serbia of the Russian mercenary group Wagner and the recruitment of military officers, active or retired. A law on access to state security files still needs to be adopted.

Civil society

The legal framework for cooperation between the government and civil society organisations (CSOs) is broadly in place; further efforts are needed to ensure systematic, genuine and

meaningful cooperation. An enabling environment for establishing, running and financing CSOs needs to be strengthened. Verbal attacks and smear campaigns against CSOs continued, including by high-level officials. There was a significant increase in strategic lawsuits against public participation (SLAPP), notably launched by members of national and local authorities, against human rights defenders.

Serbia started implementing the 2022-2030 Strategy and action plan for creating a stimulating environment for the development of civil society, but measurable progress has yet to be demonstrated. A council for cooperation and development of civil society was established, as foreseen in the action plan, in September 2023.

An empowered civil society is a crucial component of any democratic system and should be recognised and treated as such by state institutions.

CSOs and human rights defenders continued to raise awareness about civil and political rights. This took place in a polarised environment. Verbal attacks and smear campaigns against several CSOs and their financing continued, including by high-level officials. Despite the fact that verbal attacks were also made in the Parliament, the administrative committee in charge of the application of the code of conduct of the Parliament did not find any violation. Organisations and individuals that criticised the authorities were put under pressure, in particular those participating in protests against the glorification of war criminals, in support of environmental protection, and in the ‘Serbia against violence’ protests (*See also Chapter 23 on freedom of assembly*). There was a significant and worrying increase in strategic lawsuits against public participation (SLAPP), notably launched by members of national and local authorities, against human rights defenders.

Serbia started implementing the 2022-2030 Strategy and action plan for creating a stimulating environment for the development of civil society, but measurable progress has yet to be demonstrated. A council for cooperation and development of civil society was established, as foreseen in the action plan, in September 2023. The action plan also targeted the adoption of a Law on volunteering by the 1st quarter of 2023 but it is yet to be adopted.

In terms of public funding of civil society, the transparency and fairness of award procedures need to be significantly improved. Some of the key challenges acknowledged in the aforementioned strategy include the lack of consultations with CSOs when planning priority activities, discretionary decisions of managers in funding procedures, the lack of transparent criteria for approving financial and non-financial support to CSOs or for selecting independent experts in evaluation commissions, and insufficient transparency of public authorities in the reporting of spent funds on an annual basis. Overall, the strategy states that the 2018 Regulation on funds for programme promotion leaves room for further regulatory improvement but that the key issue is its inadequate and uneven application.

The National Convention on the European Union continued to monitor and assess the progress of accession negotiations, and met several times with government officials, including the Prime Minister. The legal framework for cooperation between the government and CSOs is broadly in place; its implementation still needs to be improved and systematised. There is still no central body in charge of the quality control of public consultations, including of the e-consultations platform established in December 2021. The reporting period saw increased consultation of civil society; however, despite the legal obligation to provide information on the results of public consultations, reports are not systematically published, nor are explanations systematically provided on the acceptance or not of comments received. CSOs continue to report that the time given for public consultations is not sufficient, and that their comments on draft laws of public interest are not taken into account.

2.1.2. Public administration reform

Serbia is **moderately prepared** as regards the reform of its public administration (PAR). Overall, there was **limited progress** in this area, notably through the continued development of e-services, implementation of the e-government policy, and further roll-out of training courses for civil servants. The Commission recommendations from last year are still to be implemented. On human resources management, more than half of senior manager positions are filled on an acting basis. As regards policy development and coordination, no mechanism is yet in place to verify that the Public Policy Secretariat's comments have been incorporated into the final draft versions of laws and policy documents submitted for government approval. On public financial management (PFM), action is still needed to fully implement the recommendation for a single mechanism for prioritising all investments regardless of type and source of financing. There is an urgent need to address these shortcomings.

In the coming year, Serbia should in particular:

- reduce the excessive number of acting positions, and allocate sufficient resources for effective, merit-based recruitment processes;
- strengthen the mechanism for systematically integrating the opinion of the Public Policy Secretariat in draft laws and policy documents, in line with the Law on the planning system;
- put in place a unified, comprehensive and transparent system for capital investment planning and management.

Strategic framework for public administration reform

There was no consolidated PAR implementation report published for 2022. Implementation varied between the different PAR sub-areas: 78% of achieved measures for the PAR action plan covering human resources management, accountability and public services, 64% for the PFM programme, and 46% for the local self-government programme. No implementation report on the public policy management and regulatory reform programme was published by the legal deadline. Four new positions were created in the Department for Local Self-Government, Sector for Registers and Local Government of the Ministry of Public Administration; the capacities on these matters need to be strengthened further. The authorities continued to involve civil society organisations in monitoring implementation of the strategy. **Political support** for public administration reform is limited. The PAR Council did not meet in 2022. The 2021 PAR implementation report was approved by the PAR Council only in January 2023. Financial sustainability is still an issue of concern due to reliance on donor funding.

Policy development and coordination

Institutions remain in place for a central government **policymaking system**, including for the EU integration process. The Law on the planning system sets clear rules for developing, monitoring and reporting on sector strategies. It is not yet applied systematically. In 2022, there was slow progress in optimising the sectoral planning areas, as only three out of the planned six were optimised. No notable progress was made in ensuring that comments by the Public Policy Secretariat are incorporated and that final draft versions of laws and policy documents are compliant with the legislation. The number of policy documents entered into the unified information system is gradually increasing, but the number of implementation reports deriving from it is still limited. Three years on, the legal requirement to have midterm plans adopted by all institutions as of January 2020 is still not met; only 22 of 40 public bodies have adopted and published their midterm plans for 2022-2024. No government annual work plan was prepared

in 2022. The annual work plan for 2023 was adopted in May 2023. Better synchronisation is needed between the national plan for the adoption of the EU *acquis* (NPAA) and other government strategic documents. In the government annual work programme, a high proportion of planned commitments continue to be carried forward to the following year as they have not been implemented. In 2022, only 26% of planned NPAA actions were implemented. A total of 35% of NPAA actions were implemented when taking into account activities carried out earlier than planned.

The capacity for **inclusive and evidence-based policy and legislative development**, including when aligning with the EU *acquis*, needs further strengthening. Administrative data collection and its systematic use for policy and law-making remains to be further improved across the administration. The Public Policy Secretariat's acceptance of 'partial compliance' with the methodology on impact assessments continues to limit both the degree of alignment with legal requirements and improvement in the overall quality of impact assessments. Better coordination between the Ministry of Finance and the Public Policy Secretariat is still needed to ensure that there are no discrepancies between financial impact assessments and financial information in the regulatory impact assessments. Regarding inter-ministerial consultations, there are still no high-level mechanisms for resolving possible conflicts between services before they reach the government.

While **public consultations** were conducted for all draft policy planning documents in 2022, this was the case for only 29% of draft laws and 30% of draft regulations. There is still no central body in charge of the quality control of public consultations, including on the e-consultations platform, established in December 2021. Despite the legal obligation to provide information on the results of public consultations, reports are not systematically published, nor are explanations systematically provided on the acceptance or not of comments received (*See Civil society*).

Regarding **public scrutiny of government work**, reports were published on implementation of the PAR strategy and PFM reform programme, on the action plan for implementation of the government programme, and on the NPAA. However, the annual government work plan for 2022 and its implementation report were not published. Reports on other sectoral strategies were not published. Overall, in 2022, only eight implementation reports (11%) out of the 75 policy planning documents were published. Agendas, minutes and conclusions of government sessions are still not publicly available.

Public financial management

The 2021-2025 PFM reform programme was largely implemented in line with its 2022 action plan. To preserve fiscal sustainability, and in line with government plans to prioritise capital projects, and pension and salary policies, fiscal rules were redefined by amendments to the Law on the budget system. The capital budget level was kept at a satisfactory level, but a unified, comprehensive, effective and transparent system for planning and management of capital investments needs to be put in place. Serbia needs to apply the legal framework and methodology regarding capital projects management, and public procurement procedures, to all capital investments regardless of the type of investment or source of financing. It must also ensure that effective procedures are in place to guarantee that the planning, appraisal and implementation of capital projects is integrated into the budget process. The December 2022 amendments to the Decree on capital projects management focused on green investments. The public investment management information system (PIMIS), which aims at improving the monitoring of capital projects, was launched in June 2023. In September 2023, the government adopted a new Decree on capital projects, which makes some steps in the direction of a single and clear overall view of the current and planned investment in Serbia, notably with the

provisions dedicated to PIMIS. However, the Decree falls short of developing a genuine single pipeline for public investment management and foresees important exemptions. Furthermore, the government's investment planning and management capacity needs to be improved. This includes the capacity for public assets management and for assessing possible fiscal risks for investment projects funded by loans from third countries. The Capital Investment Commission was re-established in 2023.

The link between the government programme and the sector strategies and operational plans of budget beneficiaries remains weak. The improved legislative framework for public procurement and internal control needs to be implemented in practice and the managerial accountability roadmap needs to be adopted. The State Audit Institution continued to increase both the coverage and quality of its audits of public funds and its relations with stakeholders.

Analytical units in all ministries and government agencies need to be established without delay in order to foster the effective consolidation of strategic, operational and financial management functions, as planned in Serbia's strategic documents. Areas that would merit further improvements include the accounting and reporting framework, arrears, commitment controls, extra-budgetary operations and performance management.

Serbia did not progress in improving **budget transparency**. No transparency roadmap, pre-budget statement or mid-year report has been produced or published. The Ministry of Finance does not publish the budget execution profile at the beginning of the year, preventing analysis of deviations from targets. Some additional policy and fiscal risk information could be included in the executive's budget proposal. Public participation in the budget process and budget oversight by the legislature needs to be improved. The November 2022 amending budget was adopted under urgent procedure, without justification. The 2023 budget was adopted in line with the budget calendar but with very limited qualitative assessment and debate among stakeholders. In particular, the parliamentary debate on the draft budget was called under an urgent procedure, negatively affecting the quality of the debate. In addition, the September 2023 amending budget was adopted under urgent procedure and did not comply with the minimum deadline between sending the bill to the Parliament and tabling it for plenary debate and adoption.

Public service and human resources management

The civil service legislation provides for **merit-based recruitment and dismissal procedures** but leaves too much discretion to the heads of institutions in setting up selection committees. Mandatory competition procedures for recruiting temporary staff in cases of increased workload was further postponed from 2023 to 2025. The possibility to convert certain categories of temporary contracts into permanent civil service contracts needs to be considered carefully to avoid possible abuse. Grades received by civil servants under the performance appraisal system remain inflated. The proportion of disciplinary decisions annulled by courts decreased but remains high (42% in 2022; 50% in 2021). The gender structure within the overall public administration is balanced, including for top managerial positions (49% women; 51% men).

The legislation on senior civil service positions provides for a merit-based recruitment procedure, but the continuous lack of transparency and compliance with it remain issues of serious concern. The legal provision allowing for appointments to acting positions for 6 months (with a maximum extension of 3 months) remains used well beyond those limits. As of June 2023, 55% of filled senior positions were held on an acting basis (51% in May 2022). Despite amendments to the Law on civil servants restricting appointments to existing civil servants as

of July 2019, close to 70% of all acting posts are held by non-civil servants. The limited capacity of the High Civil Service Council remains a concern given the large number of competitions to be organised to replace all current acting managers at a reasonable speed. Clear political will, sufficient resources and effective monitoring by the responsible institutions remain essential to address this issue as a matter of urgency. Although a special working group was previously established to look into possible solutions, and its membership was widened, there are no concrete results yet. Overall, established practices continue to lack transparency. In particular, appointment decisions for management positions can still be overturned by a government personnel committee after the selection process has been finalised at the institutional level.

As regards the competency-based **human resources management** system, the success rate of tested competencies amounts to 34%, which means that they play a more efficient filtering role than in the past in the overall process. The Human Resources Management Service adopted an action plan for strengthening the capacities of human resources units and took measures to coordinate and harmonise the work of human resources units in the line institutions through regular meetings of the network of human resources units and the developed IT platform for information exchange. The actual impact remains to be assessed. The Service introduced annual reporting to government on recruitments. Reliable statistics on all human resources management functions are not yet available as the setting up of a new human resources management information system remains delayed. No progress was made regarding **remuneration** of civil servants because implementation of the 2016 Law on the public sector salary system, which introduces the principle of equal pay for equal work for all public sector employees, was postponed to 2025. Restrictions in recruitment are still in place under the Law on the budget system.

With regard to **professional development**, the National Academy for Public Administration accelerated the organisation of training for all public officials, including at the local self-government level. The Academy further developed online training courses, which contributed to increased training coverage. Implementation of a comprehensive professional development programme for senior civil servants is ongoing.

Almost all (99%) institutions that had the obligation to adopt **integrity plans** did so. Further efforts are needed to ensure that existing integrity plans for the judiciary and public administration are fully implemented. The integrity of the civil service is still undermined by the excessive number of acting senior manager posts. By March 2023, 48 out of 174 local self-governments had adopted the new code of ethics for local officials developed by the Standing Conference of Towns and Municipalities.

Accountability of administration

The public administration structure remains to be streamlined. The **lines of accountability** between agencies and their parent institutions are blurred, contributing to overlapping functions, fragmentation, and unclear reporting lines. Despite the existence of the Law on public agencies, the status of almost all agencies remains regulated by a special law. Responsibilities are delegated in a uniform manner to all local self-governments regardless of their size and capacity to assume them. Political commitment to managerial accountability, performance management and systematic delegation of responsibilities is not yet in place. Around 40% of institutions reported to have established analytical units since the adoption in March 2021 of a Decree on organisation and systematisation of work posts. Analytical units need to be promptly set up with appropriately trained staff. Institutions retain a predominantly bureaucratic and process-oriented approach to planning, budgeting and reporting on their activities (*See Chapter 32 – Financial control*).

As regards **citizens' right to good administration**, according to the Ombudsman's 2022 report, the largest number of citizens' complaints relates to violation of economic, civic and social rights, as well as the principle of good administration, specifically the right to efficient administration and the right to receive a decision within the legal time frame. Administrative silence, whereby public authorities fail to properly act on citizens' information requests, remained a major issue. (*See Chapter 23 – Fight against corruption*).

On **citizens' right to administrative justice**, review of Administrative Court judgments is possible only in a limited number of cases and only through extraordinary legal remedies. The establishment of two instances in the administrative justice network, planned for the first quarter of 2023 in the Chapter 23 action plan, was further delayed. In 2022, the Administrative Court received 63 302 new cases and resolved 25 178 of these (39.77% clearance rate). Some 103 198 cases were pending at the end of 2022. The average duration of court proceedings was 1 496 days. The number of judges increased from 46 to 52, but their work was negatively affected by the increased inflow of cases, including a high number (over 60%) of abuse of procedural rights cases filed by lawyers for the purpose of obtaining court expenses, which contributed significantly to the increased backlog. No interim measures were taken to address the challenges of the extensive court jurisdiction and the lack of specialisation among judges, which negatively affected the quality of work in 2022. The Court continued to improve transparency by uploading 213 651 integral and 25 703 anonymised judgments into the case law database of the Supreme Court of Cassation. **Citizens' right to seek compensation** is regulated but there is still no statistical data to monitor its implementation.

Service delivery to citizens and businesses

Creating a more **user-oriented administration** remains a government priority. The Office for IT and eGovernment and the Prime Minister's Delivery Unit, together with the recently established Ministry of Information and Telecommunications, continued to lead in this area. The e-government development programme and action plan for 2023-2025 were adopted in April 2023. Progress in key enablers, such as the cloud-based e-signature and user-friendly payment services, contributed to further development of e-services. The number of databases connected to the Government Service Bus - an information system linking major databases - has increased. Digital signatures are being used but by a limited number of people. The number of municipal one-stop shops increased. However, a regulation governing the setting up of one-stop shops has yet to be adopted. A central monitoring of performance and quality standards for services is still needed. Further developments in the digital transformation of the administration are hampered by the fragmentation of responsibilities and mandates between different institutions and the lack of a dedicated coordination system.

The legal framework for **simplification of administrative procedures** is in place. However, regulatory uncertainty for individuals and businesses remains due to delays in aligning sector-based legislation with the Law on general administrative procedures. The capacity of the Ministry of Public Administration and Local Self-Government to efficiently oversee the implementation of this Law is still limited and there is no record of legislation pending alignment. Through implementation of the 'e-paper' programme since 2019, the Public Policy Secretariat simplified 386 administrative procedures for businesses and digitised 64 procedures. The registry of administrative procedures has been further developed, but it is not yet known to the majority of businesses and citizens.

2.2. RULE OF LAW AND FUNDAMENTAL RIGHTS

2.2.1. Chapter 23: Judiciary and fundamental rights

The EU's founding values include the rule of law and respect for human rights. An effective (independent, high-quality and efficient) judicial system and an effective fight against corruption are of paramount importance, as is respect of fundamental rights in law and in practice.

Serbia has **some level of preparation** and has made **limited progress** in applying the EU *acquis* and European standards in this area, most notably with implementation of the judicial reform. Despite ongoing work, Serbia remains to finalise and adopt an anti-corruption strategy fully in line with EU recommendations. On media freedom, limited progress was made on the recommendations of last year, which still remain valid.

The Coordination Body for overseeing the implementation of the action plan for Chapter 23 reports quarterly and every 6 months, including regular quarterly alerts under the early-warning mechanism. The mechanism for cooperation with civil society has improved. The Ministry of Justice has organised several round-table discussions bringing together civil society organisations.

Functioning of the judiciary

Serbia has **some level of preparation** in the area of the judiciary. **Some progress** was made on last year's recommendations. On 9 February 2023, Serbia took an important step to ensure independence and accountability of the judiciary with the timely adoption of five laws implementing the 2022 constitutional amendments, while two of the implementing laws still need to be adopted: the Law on Judicial Academy and the Law on Seats and Territorial Jurisdiction of Courts. The Venice Commission issued three opinions that overall assessed positively the legislation and recognised the transparency and inclusiveness of the process. Most of its recommendations were addressed. Relevant by-laws will need to be adopted by May 2024. The High Judicial Council (HJC) and High Prosecutorial Council (HPC) were established on 8 May, following the election of the lay members, which gave practical effect to the implementing legislation.

Serbia needs to ensure that the human resources strategy and the related action plan are implemented within the scheduled timelines.

Challenges and delays in implementation persist regarding the impartiality, accountability, efficiency and professionalism of the judiciary, access to justice, and high-quality training. The current system of recruitment, transfer and promotion of judges and prosecutors has not been revised yet to ensure that careers are fully based on merit. While the new judicial laws lay down more precise disciplinary rules, there is a need to improve the capacity of the disciplinary bodies. Regarding undue pressure on the judiciary the situation remains a concern. A number of steps have been taken to reduce the space for political influence on the judiciary. However, it is not yet possible to observe a consistent reduction of undue influence on judges and prosecutors in practice. Serbia still has not shown a genuine commitment to investigating and adjudicating war crimes cases. Serbia continues to challenge publicly the judgments of the International Criminal Tribunal for the former Yugoslavia (ICTY), including at the highest levels. A number of Serbian political parties, politicians and media outlets continued to provide support to, and public space for, convicted war criminals.

In the coming year, Serbia needs in particular to:

- adopt the Laws on Judicial Academy and on Seats and Territorial Jurisdiction of Courts and carry out the necessary appointments of judges and prosecutors in line with the newly adopted legal framework;

- ensure that the High Judicial and Prosecutorial Councils, the Government and the Parliament effectively and proactively defend judicial independence and prosecutorial autonomy in cases of external undue influence, including in cases of undue public comments by members of Government or Parliament on ongoing investigations or court proceedings which are in contradiction with their code of conduct;
- operationalise the uniform and centralised case management systems to improve the efficiency of the justice system and fully implement the human resources strategy.

Strategic documents

The revised **action plan for Chapter 23**, adopted in June 2020, and the 2020-2025 **judicial development strategy**, adopted in March 2022, are the main strategic documents. The government is still delayed in carrying out a comprehensive impact analysis of the country's reforms on the basis of the 2014 World Bank functional review, including addressing its recommendations, as well as recommendations from previous World Bank functional reviews and the latest World Bank functional analysis of the prosecution services, finalised in August 2022. They remain to be addressed.

The implementation of the **human resources strategy** (HR strategy) started by launching a series of normative gap analyses, pending finalisation. Full implementation is expected to improve performance across the justice sector. The new monitoring and reporting mechanism, set out in the Chapter 23 action plan, should provide a qualitative analysis of achievements against clear impact indicators, including on human and financial resources, as well as early-warning and corrective measures. Special efforts should be placed on staff retention and capacity building across the implementing institutions. Sustained efforts are needed to make the information and communications technology (ICT) system work in an effective and efficient manner, closely linked with the human resources strategy and the judicial reform. The Ministry of Justice developed a mechanism for cooperation with civil society.

Management bodies

A division of budget functions was established, by judicial laws, between the Minister of Justice, the HJC, the HPC and the Supreme Public Prosecutor. In line with the 2022 constitutional amendments, the implementing laws provide that the two councils independently manage the funds in their budget. Consultations are planned with the Ministry of Finance to harmonise their positions. In addition, implementation of the human resources strategy is expected to improve the overall management of the system, taking into account the predicted judiciary workload, and both the number and complexity of cases, as determined by a case-weighting procedure.

The HJC adopted a new strategy and improved the use of the information and financial reporting system for more accurate, reliable and efficient data collection and processing. The HPC took steps towards introducing the necessary ICT tools to ensure random allocation of cases and introducing the case-weighting formula. Measures were also taken to improve the transparency of work by the Councils, through publication on their websites of their reports. The new judicial laws will further strengthen the role of the Councils, in line with constitutional amendments and Venice Commission recommendations. The need to improve the analytical and statistical capacity of both Councils in line with the human resources strategy for the judiciary has still not been addressed.

Independence and impartiality

The new constitutional and legal framework strengthens the guarantees against attempts to exercise undue political influence over the judiciary, notably by shifting the competence to

appoint judges and prosecutors from the Assembly to the Judicial and Prosecutorial Councils. Following the promulgation of the constitutional amendments in February 2022, aimed at strengthening judicial independence and accountability, the relevant implementing legislation giving effect to the amendments was adopted on time in February 2023. The draft laws on judges, high judicial council, organisation of courts, public prosecutors' office, and high prosecutorial council were shared in September 2022 with the Venice Commission. The latter adopted a series of relevant opinions that were duly considered by Serbian authorities to revise the draft legislation. Broad public consultations were held between September 2022 and January 2023. Serbian authorities worked constructively with the European Commission and the Venice Commission. The Venice Commission commended the Serbian authorities for *'the considerable effort they invested in the preparation of the legislative package implementing the constitutional amendments, which was well-structured, clearly written and covered all essential points'*. The Venice Commission also commended Serbia *'for the inclusiveness of the process of preparation of the legislative package'*.

The Venice Commission further underlined that *'the overall positive assessment of the revised draft Laws and the general recommendation remains valid.'* On the other hand, the Commission also stressed *'that a successful judicial reform ... need[s] to be accompanied by non-legislative measures including a change of the current legal culture.'* Following these opinions, further amendments were made during the parliamentary discussions. On 13 March 2023, the Venice Commission published an information document as a follow-up to its opinions assessing that *'the overall direction of the amendments corresponds to the recommendations of the Venice Commission.'*

Notwithstanding this positive development in the legal framework, pressure on the judiciary and the prosecution services still remains high. Government officials, including some at the highest level, and Members of Parliament continue to **comment publicly on ongoing investigations or court proceedings**, as well as on the work of individual prosecutors and judges. Such comments are in contradiction with the code of conduct of members of the government and the Parliament, but the enforcement and penalisation policy did not improve. Information leaked on ongoing investigations or cases was published by a number of media outlets, interfering with the investigations and processing of cases, thus creating undue pressure on individual members of the judiciary or the prosecution service.

In principle, the current rules of procedure of the HJC and the HPC lay the foundation for a more effective reaction and protection mechanism for judges and prosecutors in cases of undue influence. The HJC has appointed one member to act as confidential counsellor upon report of cases of undue influence while one HPC member has been elected as Commissioner for Autonomy. However, despite these steps taken, it is not yet possible to observe in practice a significant reduction of undue influence on judges and prosecutors. In 2022, the HJC received seven requests for protection of undue influence. It took a decision in four cases. In the first quarter of 2023, the HPC and the Commissioner for Independence received 19 new cases. In two cases a decision was taken and no ground was found for undue inappropriate influence. The 17 remaining cases are still ongoing. Up to 31 December 2022, seven judges requested from the HJC protection from undue influence. In two cases, the requests were withdrawn for referral. In five cases, the requests were rejected as inadmissible. In the first quarter of 2023, in four cases, the judges reported undue influence on their work. The cases are still ongoing before the HJC member, a judge who was elected in May 2023 to work on protection of his peers from undue influence. More transparency in the work on undue influence is needed, including the publication of guidance and anonymised decisions. This creates a certain vulnerability for political influence, notably with the lack of effective safeguards. Overall, both

Councils should react more strongly and engage in broader public outreach to overcome limited media coverage, notably through statements, press conferences, and targeted messages to the authorities or institutions concerned. This would send a clear message on the need to eliminate undue influence on judges and prosecutors and help reverse a persisting negative perception as to their independence and autonomy in practice.

The transfer of two deputy public prosecutors from the Special Department for Suppressing Corruption of the Higher Public Prosecution to the General Crime Department in Belgrade, which took place without proper justification, was contested by the prosecutors themselves and led to widespread criticism. The disciplinary charges, filed by the two (deputy) prosecutors against their superior who transferred them without justification were dismissed in June by the HPC disciplinary prosecutor as according to the legislation of that time there was no rule asking for proper written justifications in such instances. The deputy prosecutors had been working on a corruption case and a money laundering case related to the state-owned Electric Power Company of Serbia (EPS). The transfer was made in the middle of the investigation and after the arrest of suspects. Even if the HPC Commissioner for Independence assessed that the transfer was conducted in accordance with the law, it noted that the transfer should not have taken place during the proceedings of such a high-profile case. The new legislation implementing the 2022 constitutional amendments has now introduced safeguards in relation to mandatory instructions and the reallocation of work within the Public Prosecutor's Office.

Accountability

Following the constitutional changes, the new judicial laws lay down more precise disciplinary rules for judges and prosecutors, including the necessary procedural safeguards, especially for violations of adopted standards of professional ethics. There is a need to improve the capacity of the disciplinary bodies.

In June 2022, the HJC adopted a new rulebook on the work of its Ethical Board. Both Councils continued to promote respect for professional ethical standards and confidential counselling.

A precondition for the implementing legislation to be applicable was the establishment of the High Judicial Council and the High Prosecutorial Council, for which the four lay members of each Council needed to be elected by the Parliament. The election procedure started on 19 April 2023 when only one lay member received the necessary votes of the Parliament. Therefore, the five-member anti-deadlock commission (Parliament Speaker, President of the Constitutional Court, President of the Supreme Court, Supreme Public Prosecutor and the Ombudsman) was activated to elect the remaining seven lay members (three for the HJC and four for the HPC) on 8 May 2023. Before the voting, the five-member commission held public interviews with the candidates. Candidates were shortlisted by the Parliamentary Committee on Judiciary following a public competition and confirmation of at least 10 years of experience in a legal profession.

In 2022, the disciplinary prosecutor worked on 89 cases, which contributed to the reduction of the backlog of cases. Out of the total number of cases, disciplinary complaints were filed against 96 public prosecutors and against 20 other people. In the reporting period, disciplinary charges were filed against 14 public prosecutors and 82 deputy public prosecutors. Disciplinary reports are primarily submitted by citizens and their attorneys. The disciplinary prosecutor dismissed as unfounded disciplinary charges filed against a total of 83 public prosecutors. 18 cases were resolved by other means, for instance by joining the case or through an official note on the reason for archiving. In the reported period, one disciplinary report was assessed as well founded, which allowed for the initiation of proceedings before the Disciplinary Commission of the SPC.

In 2022, the HJC's acted as final instance in six cases upon appeals against the decisions of the Disciplinary Commission. In one case, the HJC started the procedure for dismissal of one judge over a serious disciplinary violation, ordered salary reduction of 20% and 30 % for two judges, public warnings for two judges and rejected one proposal for disciplinary proceedings. In 2022, the Disciplinary Prosecutor of the HJC, acting in first instance, received 312 disciplinary reports and worked on 579 cases (together with 267 unsolved reports from 2021). He solved 434 cases, submitted 18 proposals to the Disciplinary Commission for further processing, 145 reports are pending at the end of 2022. In the reporting period, the Disciplinary Commission, as the second instance, took decisions in 14 cases submitted by the disciplinary prosecutor. In nine cases, the Commission established disciplinary violations and issued various disciplinary sanctions, among them seven public warnings, one salary reduction, one ban on career advancement. The Commission rejected three cases, the disciplinary prosecutor withdrew the charges in one case and one case is pending appeal at the end of 2022. Majority of disciplinary reports were filed by private individuals and lawyers who complained over prolonged litigations and misdemeanour proceedings in first instance courts, mostly within the Belgrade Appellate Court jurisdiction. In 2023, the HPC disciplinary prosecutor had 46 disciplinary complaints against 43 persons, of which 27 were dismissed and 18 were resolved through other means. Disciplinary reports were mostly submitted by citizens. In the reporting period, one disciplinary report was assessed as founded, which allowed for the initiation of proceeding before the Disciplinary Commission of the HPC.

In 2022, 20 court presidents and 149 judges were appointed to courts at all levels (259 in 2020 and 2021) and in 2023, the HJC appointed 37 judges. At the end of 2022, out of 3 073 judicial positions, 137 were vacant (110 judges have retired and 19 judges left on own request while 2 503 judges effectively worked (2 508 in 2022), amounting to 39.71 judges per 100 000 inhabitants (39, 4 in 2022). The number of acting court presidents was reduced from 24 in October 2022 to six in February 2023. By the end of 2023, most of the present court presidents will end their mandate, the HJC is preparing the new competition. As of 31 December 2022, there were 711 deputy public prosecutors actively working and 103 vacant positions in appellate, higher and primary prosecution offices (out of 814 available). In June 2023, there were 747 holders of public prosecutors function (chief public prosecutors and public prosecutors), which is 10.99 per 100.000 inhabitants. In 2022, there were 50 public prosecutors in full mandate, 26 deputy public prosecutors in acting positions and 15 deputy prosecutors in the caretaker capacity for prosecution offices. In 2022, the SPC published a competition for 62 deputy prosecutors, out of which 27 were elected. On 19 June 2023, the HPC elected 46 prosecutors. More than 20 appeals against the selection decisions were filed with the Constitutional Court. One of the arguments was the lack of participation of prominent lawyers in preparing the candidates' list.

According to the European Commission for the Efficiency of Justice (CEPEJ), the European averages are 22.2 judges/11.8 prosecutors per 100 000 inhabitants.

Professionalism and competence

The HJC and HPC continued to publish information on their websites about the evaluation process. Transparency needs to be improved by sharing more information and improving communication with the public. In 2022, HJC published 116 statements on its activities and held 18 regular and 9 remote sessions; adopted minutes were posted on the website. In 2022, the HJC was an observer in the European Network of Councils for the Judiciary (ENCJ) and took part in a judicial career attractiveness programme. The HJC's strategic goal is to standardise information on the website and to establish spokesperson services for all courts. In 2022, the HPC held 2 regular and 26 extraordinary remote sessions. The current system for

recruiting, transferring and promoting judges and prosecutors will need to be revised in line with the new judicial legislation. It will be essential to establish merit-based judicial careers, with a clear performance evaluation mechanism and criteria. In the course of 2022, the evaluation procedure was initiated for 701 judges (259 judges under regular and 442 judges under extraordinary evaluation). The decisions for 374 judges are expected. In 2022, SPC evaluated 28 candidates and in June published a competition for 50 prosecutor positions, for which decisions are pending.

The eligibility criteria for the judicial profession remain to be defined in line with the newly adopted laws on judges and prosecutors and the new Law on the judicial academy, to cover all presently eligible categories (in 2022, HJC elected 92 judges from the ranks of court assistants, 9 judicial academy graduates and 3 from other professions). In line with the Venice Commission's recommendation, the Academy should be effectively '*protected from possible undue influence*'. The independence and professionalism of the Academy remain essential to it becoming the sole entry point to the judicial profession. Guidelines for amending the Law on the judicial academy are in preparation, with participation of the HJC and SPC members to define the training needs and criteria for the selection and engagement of mentors and lecturers.

In line with the Law on planning, the Ministry of Justice should step up implementation of the new reform strategy to improve performance appraisal, and budgetary planning and execution, and to increase support to qualifications and skills through training, based on recommendations from the World Bank's functional reviews (finalised in November 2022 for the court system and in August 2022 for the prosecution service).

Quality of justice

The Judicial Academy, responsible for initial and continuous judicial training, kept implementing its multiannual work programme for 2020-2025. From January until June 2023, 76 educational events (in-person and online) were held and the new platform (PARS LMS) for a better management and monitoring of the implementation of training programmes was established. Working under supervision of the Ministry of Justice, the Academy conducts annual analysis of the training needs in order to better define the topics. As of June 2023, 79 people were employed (43 permanent and 36 temporary positions). Trainings continued, among others, with the Council of Europe on undue influence on the judiciary. The Academy's capacity and internal expertise for delivering sufficient initial and continuous training should be further improved, in particular for training on EU law. Steps were taken to improve transparency of the mentor selection process and should be followed for the initial testing process. The total budget for training initiatives at the Judicial Academy in 2022 amounted to EUR 4 246 580. The Academy continues to be an observer in the European Judicial Training Network (EJTN) and should better benefit from its expertise.

On **case law harmonisation**, following the Supreme Court of Cassation (SCC) instruction of October 2022, the database with court jurisprudence was expanded with inputs from the SCC, four appellate courts, commercial and misdemeanour appellate courts and the administrative court. At the end of 2022, there were 353 670 integral decisions and 47 033 anonymised decisions in the database. The connection was made to prosecutor databases and to European Court of Human Rights (ECHR) databases. There were two joint sessions of civil departments of the appellate-level courts in 2022, in June and December, in accordance with the Agreement of Presidents of Appeal Courts. The Supreme Court also prepared two bulletins with the legal opinions on disputed legal issues ahead of the annual conference of judges held in May 2023. There is a need to redefine the role of the SCC in effectively orienting jurisprudence in line with the judicial laws adopted for implementing constitutional amendments, especially concerning repetitive cases.

Serbia still lacks a comprehensive **court case (and document) management system** that interlinks cases across Serbian courts and prosecutor offices. The work on a case management system for courts officially started in September 2021 and is planned to be finalised in 2024. The case management system for prosecutor offices is planned to be finalised by mid-2024. The case management system for prisons administration is operational as of December 2021. Further work is still required to ensure that all systems can operate smoothly. Legislative changes are needed, along with adequate staffing, financial resources and upgraded communication infrastructure.

By the end of 2022, the **notary system** had 226 offices, 455 notary trainees, over 700 notarial interns and assistants and over 700 administrative staff. Public notaries are yet to be appointed for the areas of three basic courts. In 2022, public notaries processed over 200 000 real estate transactions, 485 000 inheritance cases and 350 000 certifications of documents with a small number of appeals and reversals. Analysis is underway to prepare amendments to the Law on notaries and the set of accompanying laws. The notary chamber continued its efforts for better services, improvements to the electronic documentation system, standardisation of practice, and training.

In the area of **alternative dispute resolution**, including mediation, amendments to the legal framework are still pending, following prior analysis from 2020. As of 31 December 2022, 1 677 mediators were registered in the Ministry of Justice: 656 are from Belgrade, 112 from Nis, 140 from Novi Sad and 53 from Kragujevac (183 of them are lawyers, 15 judges, one is an enforcement officer, 739 are law graduates and 1 is an ombudsman). By 31 December 2022, 29 organisations have received permits to conduct training for mediators, but so far only 22 organisations have conducted training, with a total of 6 544 participants.

In 2022, 1 529 mediation agreements were concluded and 1 291 cases were successfully finalised (mainly in civil, commercial and family law areas). Most cases were resolved in the territory of the Belgrade Court of Appeals (61%), in Novi Sad (19%) and in Kragujevac and Nis (10%). In addition, 1 179 individual and 35 collective labour disputes were initiated before the arbitration; 565 and 19 were resolved respectively. The number of mediations compared with the number of pending civil court proceedings remains below 1%.

Efficiency

The court and prosecution network consists of 159 courts and 90 prosecutor offices (general and specific jurisdictions), operating in four instances (basic, higher, appellate and supreme), adding to the complexity in terms of financing, procurement and court payments for the services. Problems of unequal workload among judges and prosecutors negatively affected performance and access to justice for the public. An analysis of the effects of the Law on the protection of the right to a trial within reasonable time was prepared (with the Council of Europe). Legislative changes are pending. The proposal for amendments to the Law on the protection of the right to a trial within reasonable time are pending for adoption in Parliament.

In 2022, all courts received 1 808 813 new cases (compared with 2 402 486 in 2021), the highest number being in basic and misdemeanour courts. In 2022, all courts have resolved 2 132 305 cases, compared with 2 415 672 in 2021.

At the end of 2022, the number of pending cases fell; there were 1 174 642 cases compared with 1 498 237 in 2021. The average duration of court proceedings in 2022 was 201 days compared with 226 days in 2021, and the average clearance rate of 117,88%, was higher than in 2021 (100.55%) but with significant differences between courts (130.58% for basic courts, 26.89% for misdemeanour courts, 55.35% for SCC and only 39.63% for the administrative court).

Serbia already has numerous vacant posts in the judiciary, and many more senior judges will retire soon. This problem is exacerbated by a lack of interest in a judicial career among law school graduates. Attracting young judges and prosecutors to the system may require allocating sufficient budgetary means to the judiciary to solve the problem of relatively modest salaries. Another general problem, which cannot be solved by legislative amendments alone, is the strictly hierarchical organisation of the judiciary with a strong notion of supervision over the work of the lower courts. The new legislation has tried to address some of these problems. The division of budgetary functions was increased between the relevant ministry and high councils; the change of titles was not only cosmetic but reflected a consolidation of functions. However, the cumulative effect of all those mechanisms could affect the attractiveness of the judicial professions for young lawyers.

In 2022, there were a total of 10 098 positions for court staff (9 064 filled) and 1 546 were engaged on temporary basis, compared to 9 882 positions for court staff (8 763 filled) and 1 751 on temporary basis in 2021, who were engaged due to increased workload. The number of state employees i.e. staff whose work is not linked to processing of cases, slightly increased in 2022 (2 961, of which 2 709 were filled) compared with 2 831 in 2021 (2 938 in 2020). This remains high compared with the total number of staff, as against the European average (CEPEJ report).

Implementation of the unified **backlog reduction** programme for 2021-2025 continued under the supervision of the SCC, with declining trends in the overall number of pending backlog cases, including enforcement cases. Some measures were proposed to streamline future work on old cases. In 2022, the number of resolved backlog cases was 288 654, compared with 375 859 in 2021. The majority of resolved backlog cases were trial cases (250 185 in 2022 compared with 118 823 in 2021). At the end of 2022, there were 130 260 pending backlog cases, with a higher number of resolved civil cases before basic courts (36 859 compared with 32 923 in 2021). The percentage of backlog cases in the total workload of courts is 3.94%. Looking at individual types of courts, the number of pending cases in 2022 fell in basic courts, misdemeanour courts, commercial courts, appellate courts, commercial appellate courts and misdemeanour appellate courts; on the other hand, the number of pending cases increased in higher courts, administrative courts and the Supreme Court of Cassation. The number of old cases increased in the administrative court (6 333 in 2022 compared with 4 368 in 2021). Most of them are cases of 3-5 years old (6 190).

A high number of cases (29 672) is pending before the **Constitutional Court**, 99.13% of which are constitutional appeals and only 227 related to normative control. In 2022, the Constitutional Court worked on 16 249 cases (18 198 in 2021): 16 075 were constitutional appeals and 116 cases of normative control. The Constitutional Court resolved 14 203 cases, of which 13 969 constitutional appeals and 175 normative control cases. Working with 13 of the 15 judges, the Constitutional Court took 939 decisions on merit (6.72% of resolved cases), a fall compared with 2022 (1 147 or 11.5%), and rejected appeals in 7 617 cases (54.52% of resolved cases). The Constitutional Court is taking steps to improve visibility and transparency of its work and to enable easier access to the court practice database of both domestic and European Court of Human Rights judgments. No steps were taken to reform the Constitutional Court in particular in regard to the introduction of a qualified majority with a deadlock mechanism for the election of some of the judges of this court by Parliament, as underlined by the Venice Commission.

Significant **differences in workload** remain between courts across the country, with the Belgrade courts of first instance bearing the highest workload overall. There was no progress in amending the legal framework on local jurisdiction to address this problem. In January 2022, the Ministry of Justice introduced a case-weighting formula in all basic, higher and commercial

courts. Lengthy proceedings and the slow pace of processing indemnity claims continue to hamper, efficiency, quality and access to justice. There is a need to improve implementation of the 2019 Law on free legal aid. (*See procedural rights*)

As to **enforcement cases**, the transfer of additional types of enforcement cases from courts to 231 public enforcement officers and 37 deputy officers continued in 2022 (415 718 general cases and 1 435 commercial cases were transferred). The e-auction platform is in use to increase access to information and improve transparency. The number of sales of movable and real estate property increased. In 2022, courts received 236 004 new enforcement cases (255 792 in 2021) and solved 274 913 cases (514 833 in 2021). There was a fall in the number of pending backlog enforcement cases, which affect the efficiency of the courts, with 27 701 pending at the end of 2022 compared with 66 610 in 2021. Average length of proceedings was 36.78 days and 69.44 days for enforcement based on authentic document. Implementing the new human resources strategy for the judiciary should provide courts with the additional human resources that are required for better protection of individual debtors and stronger court control over enforcement.

Domestic processing of war crimes

Cooperation between the International Residual Mechanism for Criminal Tribunals (IRMCT) prosecution office and the Serbian War Crimes Prosecutor's Office has continued. Arrest warrants issued by the International Criminal Tribunal for the former Yugoslavia and the IRMCT on contempt of court charges have still not been executed. In May 2023, the appeals chamber of the IRMCT handed down the judgment in the Stanišić and Simatović case against two former senior officials of the Serbian State Security Service within the Ministry of Interior. The defendants were convicted for involvement in crimes across Bosnia and Herzegovina and in one town in Croatia as members of a joint criminal enterprise to ethnically cleanse non-Serbs from the areas during the 1990s wars in the Balkans. Besides overturning the acquittals of involvement in the criminal enterprise, the appeals chamber raised the sentences from 12 to 15 years. This is the last IRMCT case on the former Yugoslavia.

Regarding **judicial cooperation** issues, bilateral agreements exist between the Prosecutor's Office of Serbia and its counterparts in Bosnia and Herzegovina, Croatia and Montenegro, including on the exchange of evidence related to war crimes. Serbia has yet to enforce the judgment of Bosnia and Herzegovina in the case of General Djukić, who resides in Serbia. In November 2022, the Office of the War Crimes Prosecutor (OWCP) and the Prosecutor's Office of Bosnia and Herzegovina signed an agreement on cooperation in the area of support for witnesses, aggrieved parties and victims in criminal proceedings.

No progress in cooperation between Serbia and Croatia was noted in the reporting period.

Following the October 2021 government adoption of the second national strategy for the prosecution of war crimes for 2021-2026, three monitoring reports have been published. In December 2022, the OWCP adopted a Prosecutorial Strategy for the Investigation and Prosecution of War Crimes for the period 2023-2026 and an accompanying action plan. Relevant international organisations and civil society organisations were not consulted during the drafting process. Contrary to what was envisaged in the first national strategy, the OWCP has yet to define the selection criteria for war crimes cases and to create a list of priority and high-profile war crimes cases, consistent with the obligation that all priority and high-profile cases be duly prosecuted. In view of the end of the mandate of the current War Crimes Prosecutor in May 2023, the appointment procedure for the next mandate was launched in November 2022, but has not been completed yet.

A number of Serbian political parties and figures, including at ministerial level, continued to provide support to, and public space for, convicted war criminals. Convicted war criminals continue to spread hate speech in the public space. Certain politicians continue to deny the Srebrenica genocide without repercussions.

The War Crimes Prosecutor's Office filed 10 new indictments against 14 individuals in 2022, of which four were transferred from Bosnia and Herzegovina. The indictments involved five defendants who held high-ranking positions at the time of the alleged offences affecting hundreds of victims.

In March 2022, the OWCP filed an indictment against four high-ranking Croatian air force officers in the 'Petrovačka Cesta' case for war crimes against civilians allegedly committed during the operation 'Storm' in August 1995. The OWCP charged the suspects with ordering a missile attack on a convoy of Serb refugees on the Petrovačka cesta road, outside of Bosanski Petrovac, Bosnia and Herzegovina. As per the OWCP's allegations, the missiles fired by the combat aircraft killed 13 civilians, including six children, and wounded 24. Since all the defendants were unavailable to the Serbian authorities, the OWCP filed a motion to the High Court to initiate a trial *in absentia* against the defendants. In August 2022, the indictment was confirmed. The defence lodged appeals against the ruling on the confirmation of the indictment. In its August 2022 ruling, the Court of Appeals rejected the appeals lodged by the defence. To date, the High Court has not decided on the motion. The High Court postponed the start of the main hearing, scheduled for December 2022, finding that there was insufficient evidence as to whether the defendants had received the summons or not. In the first half of 2023, no hearing has been scheduled for the case.

In 2023, proceedings *in absentia* are underway in the 'Zagreb' case.

As of 31 March 2023, trial proceedings were ongoing in 23 war crimes cases before the Higher Court (19 cases) and the Court of Appeals in Belgrade (4 cases) against 44 defendants.

The trial of Milenko Živanovic, the former General and Commander of the army of Republika Srpska at the time of the alleged offence, is ongoing.

As of 31 December 2022, trial proceedings were ongoing in three cases of sexual violence committed during the 1992 conflict in Bosnia and Herzegovina: the Rogatica case, the Kalinovik case and the Bratunac II case. All of those cases relate to the rape of Bosniak women. In addition, during the reporting period, the OWCP raised one indictment related to the rape of a Bosniak woman in May 1992 in Bosnia and Herzegovina in the Gorazde II case; the first hearing took place in April 2023.

Two final judgments against three defendants were rendered in 2022. The Court of Appeals found three defendants guilty, sentencing them to 15, 7, and 4 years and 6 months respectively, in prison.

Serbia's judiciary has failed to include financial compensation to war crimes victims in any criminal proceedings. Its track record of compensation to war crimes victims in civil proceedings is weak.

Serbia's pace of processing war crimes cases has significantly deteriorated in recent years. A genuine commitment to address cases, including those of high-ranking suspects, should be assured. Serbia has a case backlog of over 1 700 pre-investigative cases.

According to the relevant data of the International Committee of the Red Cross (ICRC), as at July 2023, 9 781 people were still missing as a result of conflicts in the region. Of these, 6 237 cases are related to the conflict in Bosnia and Herzegovina, 1 926 to the conflict in Croatia and

1 618 to the conflict in Kosovo. In 2022, 106 cases were resolved, of which 67 concerned the conflict in Bosnia and Herzegovina, 37 the conflict in Croatia and two the conflict in Kosovo. From January to July 2023, 16 cases related to Croatia, 37 related to Bosnia and Herzegovina and two cases related to Kosovo were resolved. Throughout 2022, Serbia participated in the work of the Missing Persons Group under the framework plan, including the preparation and launch of the regional database of active missing persons cases from conflicts on the territory of the former Yugoslavia. The government Commission on Missing Persons also engaged in activities with the ICRC and the International Commission on Missing Persons (ICMP) to promote bilateral cooperation with Croatia, Bosnia and Herzegovina, and Montenegro in the resolution of missing person cases. Work was done among other issues on cases of common interest at the Lešće cemetery in Belgrade. On 29 November 2022, the missing persons domestic institutions from Serbia, Bosnia and Herzegovina and Montenegro met in Belgrade to discuss the framework for cooperation. Rules of procedures for bilateral cooperation with Montenegro were formally signed by the two Missing Persons Commissions on 9 June 2023. A meeting was organised in Zagreb on 30 January 2023 between the Missing Persons Commissions of the governments of Serbia and Croatia, also attended by the Serbian War Crimes Prosecutor, illustrating recent efforts to increase bilateral cooperation, without however leading to concrete follow-up. The Serbia Missing Persons Commission also joined a trilateral meeting with Bosnia and Herzegovina, hosted by its Croatian counterpart on 28 March 2023, which included a field visit.

In September 2022, Serbia's Missing Persons Commission signed a memorandum of understanding with the ICRC on the transfer and use of information and documents related to active cases of missing persons obtained from relevant archives for the purpose of supporting the search process. The Missing Persons Commission also actively participated in ICRC initiatives in support of families of missing persons.

The Serbian delegation to the ICRC-chaired working group on missing persons remained engaged in 2022 and 2023, including in assessing all locations indicated by the Kosovo delegation as potential gravesites in Serbia and participating in the assessments of four locations in Kosovo. There has been no session of the ICRC-led Belgrade-Pristina Working Group on Missing Persons since April 2021, as the Kosovo delegation refuses to hold meetings until the Serbia delegation changed its head. Nonetheless, lower levels of the mechanism (sub-working group on forensic issues analytical team and one meeting on unidentified bodies) continued to work on concrete cases and sites. Both the Kosovo and Serbia delegations have shown interest in resuming excavations at the Stavalj mine complex in summer 2023. From June 2022 until March 2023, the combined efforts of EULEX and local forensic experts resulted in 34 field operations and 12 exhumations. Some 12 sets of remains were recovered, representing a minimum of 12 individuals. Eight individuals were identified, of which three were on the list of missing persons. A total of 21 individuals were handed over to the families and 74 DNA samples were sent for analysis. The Serbian delegation to the working group remained committed to assessing several locations on the territory of Serbia indicated by their Kosovo counterpart as potential gravesites of victims from the conflict in Kosovo. In the context of the EU-facilitated Dialogue, the Parties agreed on and endorsed a joint declaration on Missing Persons at a High-level Dialogue meeting in Brussels on 2 May 2023, committing to improving Kosovo and Serbia's joint efforts towards resolving the outstanding cases of Missing Persons from the Kosovo conflict. Work is ongoing to establish the Joint Commission that will monitor the implementation of this Declaration.

Fight against corruption

Serbia has **some level of preparation** in the fight against corruption. Overall, **limited progress** has been made during the reporting period on last year's recommendations. Regarding the recommendations by the Group of States against Corruption (GRECO), Serbia took steps to meet the remaining five recommendations of the fourth evaluation round on the prevention of corruption in respect of Members of Parliament, judges and prosecutors, and reported on it to GRECO in March 2023. Serbia still needs to adopt a national anti-corruption strategy accompanied by an action plan. Serbia presented to the European Commission a draft strategy for the period 2021-2028 accompanied by a first action plan for the period 2023-2024. A majority of anti-corruption related interim benchmarks for Chapter 23 and a majority of GRECO recommendations from the 4th and 5th rounds of evaluation have been included in the documents. However, there is still a need to ensure the inclusion of remaining Chapter 23 interim benchmarks and outstanding GRECO recommendations and to create the necessary conditions for implementation. Serbia should establish an effective coordination mechanism to operationalise prevention and repression policy goals and thoroughly address corruption. In 2022, there was a slight increase in the number of final convictions for high-level corruption cases compared with 2021. The number of new investigations increased but the number of new indictments decreased. There were no cases of final confiscation of assets. Overall, corruption is prevalent in many areas and remains an issue of concern. There is a need for strong political will to effectively address corruption issues, as well as a robust criminal justice response to high-level corruption.

In the coming year, Serbia should in particular:

- further improve its track record on investigations, prosecutions and final court decisions in high-level corruption cases, in particular the seizure and confiscation of criminal assets;
- address all GRECO recommendations, in particular from the fifth evaluation round;
- adopt a new anti-corruption strategy, addressing in particular all relevant interim benchmarks and GRECO recommendations, and start implementing it. The strategy must be underpinned by a credible and realistic action plan, and establish an effective coordination mechanism.

Regional cooperation initiatives and events, including EU-funded programmes, support good neighbourly relations and reconciliation. Serbia has been invited by the European Commission to participate in the IPA 2019 multi-country rule of law programme aimed at 'supporting a more effective administration of justice in corruption and organised crime cases in the Western Balkans through trial monitoring'. This is implemented by the OSCE and all other Western Balkan partners already participate. Serbia should join this programme. This would send a positive signal concerning its commitment to the rule of law.

Track record

As regards the track record on **high-level corruption**, the number of final convictions in 2022 went slightly up compared with 2021. Based on indictments from the Prosecutor's Office for Organised Crime, the courts rendered first instance judgments against 26 individuals in 2022 (compared with 22 individuals in 2020 and only 10 in 2021). There were final convictions against 21 individuals (compared with 11 individuals in 2020 and 19 in 2021). The Prosecutor's Office for Organised Crime ordered investigations against 34 individuals (22 in 2022), but issued a lower number of indictments - only 12 - compared with previous years (22 in 2021, 19 in 2020, 20 in 2019, 41 in 2018 and 50 in 2017). As in the past 2 years, no case resulted in a final confiscation of assets (there were three such cases in 2019). Serbia still needs to show a convincing track record of confiscating assets in corruption cases.

In 2022, the special departments for combating corruption in the offices of higher prosecutors received a lower number of criminal complaints than in previous years (2 651, compared with 3 035 in 2021 and 2 936 in 2020). They ordered 179 investigations (270 in 2021) and initiated parallel financial investigations against 34 individuals (compared with 67 in 2021 and 23 in 2020). A total of 403 indictments were issued (540 in 2021, 470 in 2020). The courts rendered judgments against 221 individuals at the first instance based on indictments from these departments (271 in 2021, 230 in 2020). There were final convictions against 212 individuals (255 in 2021, 195 in 2020).

In 2022, in light of the gradual transfer of cases from the prosecutions of general jurisdiction to the special departments, there were no orders to investigate corruption and economic crime offences (29 in 2021, 22 in 2020), and the prosecution of general jurisdiction filed fewer indictments than in 2021 (19 indictments in 2022 in comparison with 63 in 2021 and 136 in 2020). The courts convicted 83 individuals at first instance (132 in 2021), and 28 individuals at final instance (80 in 2021). There was no case with final confiscation of assets (compared with one in 2021 and three in 2020).

The Agency for prevention of corruption initiated 483 procedures to determine violations of the Law on prevention of corruption (2021: 656). During 2022, in 309 procedures conducted by the Agency, it was determined that there were violations of the Law on prevention of corruption pertaining to conflicts of interest (347 in 2021). In 2022, misdemeanour courts issued first instance decisions on the responsibility of public officials in 20 cases (2021: 11).

In 2022, the Agency submitted 201 requests for initiation of misdemeanour proceedings relating to a failure to promptly submit asset declarations, which is far higher than in previous years (2021: 134; 2020: 29). Based on the Agency's work in previous years, a much larger number of final decisions were issued by misdemeanour courts: 161 in 2022 (52 in 2021). The Agency filed six criminal charges in 2022 (2021: seven) due to reasonable suspicion that a public official had not reported assets or had given false information about assets with the intent to conceal the facts. Based on the Agency's previous work, one conviction was rendered (2021: three).

In 2022, the Agency monitored the election campaign expenses for the presidential, parliamentary and local elections. It engaged 124 monitors for this purpose. Preliminary electoral campaign expense reports were submitted by 81.75% of the entities participating in the electoral campaigns that had this obligation. Final reports were submitted by 88.1% of the obliged entities. The Agency published its reports on the inspection of the financing of electoral expenses of political entities.

Regarding the financing of political activities, the Agency initiated 44 procedures in 2022 based on the suspicion of violation of the provisions of the law, of which 25 were related to the electoral campaign. It issued 28 warning measures, of which 11 related to the electoral campaign, and submitted 168 requests to initiate misdemeanour proceedings for violations of the Law on the financing of political activities (2021: 209). In 2022, the Agency issued 11 decisions related to electoral campaigns, based on suspicion of violation of the law, and submitted one report to the prosecution on suspicion of a criminal offence. Based on final judgments, 41 decisions were made on the loss of the right to obtain funds from public sources intended for financing regular work in the following year (13 in 2021; 9 in 2020).

Regarding **access to information**, in 2022, there was a 43.8% increase in the number of reports to the Commissioner for violation of the right to access information of public importance (9 219, compared with 5 181 in 2021). There was a 34.4% increase in reports to the Commissioner for information of public importance from national-level institutions, and 21.6%

from local-level institutions. The Commissioner adopted 547 decisions based on individual complaints (1 052 in 2021) and requested public institutions to provide such information. The institutions did not react in 148 cases, which means that the rate of execution of the Commissioner's decisions was 72.9% (75% in 2021). The Commissioner established that 42.9% of the cases of complaints from the public – most of them concerning 'administrative silence' – were well-founded, meaning that the information requested by citizens should have been provided by the authorities as per the Law on access to information of public importance. In 50.8% (27.8% in 2021) of well-founded cases, the authorities reported that they acted upon the Commissioner's request to provide the information to the complainants even before a decision was made on the appeal. The Commissioner continued to request the administrative enforcement of decisions for all requests that were submitted up until the entry into force of the amendments to the Law on access to information of public importance (16 February 2022). As in the previous years, the administrative enforcement of these decisions was not ensured. In 2022, the Commissioner submitted eight requests for initiating proceedings for misdemeanours as provided for by the law. As in previous years, the administrative inspection did not submit any request to the misdemeanour courts to initiate proceedings for non-execution of the Commissioner's decisions. Following a reversal of the Administrative Court's position in June 2022, a large number of cases of reimbursement of legal costs concerning requests for access to information of public importance has impacted the workload and resources of the Commissioner, as also assessed in his 2022 annual report. Any solution to this issue should not unduly restrict the effective exercise of the right to access information.

In 2022, courts in Serbia received 69 (2021: 99) new cases based on the Law on whistle-blower protection. A total of 71 cases related to the protection of whistle-blowers were resolved (2021: 106). Despite the urgency of these cases, 39 cases remained pending at the end of 2022 where the proceedings had not been completed even after 3 years. Some whistle-blower reports have still not been investigated in accordance with the Law. In order to strengthen trust in the institutions, Serbia needs to step up its protection of whistle-blowers and investigate allegations in high-level corruption cases.

Serbia needs to ensure that exemptions from the Law on public procurement are in line with the EU *acquis* and the Stabilisation and Association Agreement, including notably in the context of intergovernmental agreements. Intergovernmental agreements are not always in line with the principles of equal treatment, non-discrimination and transparency or competition rules (*see Chapter 5 – Public procurement*). The public procurement portal enables users to monitor all ongoing public procurement procedures. The number of requests for initiating misdemeanour procedures submitted by the Public Procurement Office (PPO) to the relevant courts increased significantly from 143 in 2021 to 429 in 2022, based on PPO findings in the process of monitoring the implementation of public procurement legislation.

Institutional framework

Prevention measures

As regards GRECO recommendations, following up on the March 2022 compliance report on Serbia's fourth evaluation round concerning Members of Parliament, judges and prosecutors, GRECO requested Serbia to report by March 2023 on progress for the five remaining recommendations. Serbia submitted this report on time.

Serbia should implement all recommendations issued by GRECO as part of the fifth evaluation round, which targets preventing corruption and promoting integrity in central government (top executive functions) and law enforcement agencies. The March 2022 GRECO report called for further measures to prevent corruption in Serbia in respect of those with top executive

functions, including the President, ministers, assistant ministers, state secretaries, heads of cabinet and political advisers, as well as members of the Serbian Police. In view of the findings of the report, GRECO issued 24 recommendations and invited the Serbian authorities to submit by 30 September 2023 a report on the measures taken to implement the recommendations. The measures will be assessed by GRECO through its compliance procedure.

The new director for the Agency for the Prevention of Corruption was elected by the Parliament in February 2023. In August 2023, the Agency for the Prevention of Corruption had 91 staff members out of a planned 163 (same as in 2021). The Agency's Council, which decides on appeals against first instance decisions by the Agency, among other things, held 12 sessions, and took 49 first-instance decisions upon appeals. In February 2023, the Parliament discussed and formally accepted the Agency's report for 2021, and in March 2023, the Agency submitted the 2022 report to Parliament for adoption, along with the report on implementation of the action plan for the Chapter 23 sub-chapter on the fight against corruption. Discussions on these reports have yet to take place within the relevant parliamentary committees. There is a need for strong political will to implement the Agency's mandate in full and to gain increased public trust in the institutions preventing corruption. There is a further need to increase the resources of the Agency to implement effectively the recommendations of GRECO's fifth evaluation round.

Regarding sectors particularly vulnerable to corruption, the operational plan for the prevention of corruption in areas of special risk, adopted in September 2021, expired at the end of 2022. According to the April 2023 final report on the monitoring of its implementation, prepared by the Agency, only three measures out of 15 have been completely implemented. Serbia still needs to fully implement all the measures stipulated by that plan in the areas of public procurement, police, customs, local self-government and privatisation processes. It also needs to fully implement the specific operational plans for prevention of corruption in the areas of tax administration, education and health. This includes the need for the adoption of amendments to health sector legislation in accordance with the analysis of risks to corruption in the Law on medicines and medical devices. In March 2023, the Agency provided training on the implementation of a methodology for corruption risk assessment for the members of working groups for the development of the new national anti-corruption strategy and its 2023-2028 Action Plan.

In July 2023, the Parliament enacted the Law repealing the Law on special procedures for linear infrastructure projects from 2020, which provided for the exemption of linear infrastructure projects of 'special importance for the Republic of Serbia' from the application of the Law on public procurement.

From 2017, when the obligation began, until the end of 2022, only 26 out of 145 local self-governments adopted a local action plan and established a body to monitor it, in line with the Anti-Corruption Agency model. Overall, there were no tangible improvements in relation to anti-corruption efforts at local level. This calls into question the local action plans as a solution to the prevention of corruption at local level in Serbia.

The Anti-Corruption Council, in its advisory role to the government, remained active in exposing and analysing cases of systemic corruption. It remains of serious concern that the authorities have still not established a more constructive relationship with the Council. In addition, the Council is still not systematically consulted on draft legislation. The government failed to set up a procedure to consult the Council, although this had been planned since 2016. The Council issued informative reports on the lack of transparency of the ownership of agricultural land and on the construction of a gondola from Kalemegdan to Usce park in Belgrade. No steps have been taken to additionally strengthen the Anti-Corruption Council's

budgetary resources and staff capacity. Serbia should implement the GRECO recommendation about the Council from the fifth evaluation round.

Law enforcement

Following an assessment of needs, the special departments for combating corruption in the offices of Higher Prosecutors in Kraljevo, Niš, Novi Sad and Belgrade have increased their staffing and now have 61 assigned deputy public prosecutors (58 in 2021; 44 in 2020; 45 in 2019). The offices should have one financial forensic expert in each of the four special departments, but the positions remain vacant.

The Prosecutor's Office for Organised Crime, which has jurisdiction over high-level corruption cases, remains understaffed (see Chapter 24 – Justice, freedom and security). It has yet to finalise activities for implementing the Rulebook on internal organisation and systematisation of work positions, establishing new organisational units, and increasing the number of employees. The Higher Court in Belgrade dealing with corruption also remains understaffed. Furthermore, as provided for in the Prosecutor's Office for Organised Crime, two financial forensic experts are employed.

In 2022, three task forces were investigating corruption offences, while in the first half of 2023, two new task forces were established (five in 2021).

The Law on the organisation and jurisdiction of state authorities in suppression of organised crime, terrorism and corruption is in force. However, it does not regulate in sufficient detail the role and mandate of the Prosecutor's Office for Organised Crime as the coordinator in relation to the special departments of offices of higher public prosecutors for suppression of corruption. Serbia should take further steps to ensure effective coordination.

Greater transparency is needed in the anti-corruption work of the prosecution service and courts, and the Public Prosecutor's Office should step up its monitoring of the reasons for the dismissal of criminal charges or lengthy investigation of corruption offences.

The State Audit Institution continued to audit statements from beneficiaries of public funds. By checking arrangements for ensuring the proper functioning of internal auditing, it found that out of a total of 90 auditees required to establish internal audit procedures, 48 auditees (53.33%) had not done so, similar to the previous year (45.36% in 2021).

Legal framework

Serbia is a party to all international anti-corruption conventions. The legal framework for the fight against corruption is broadly in place.

In February 2022, Serbia adopted the Law on the **financing of political activities**. While the Law has been aligned with a number of OSCE/ODIHR recommendations, Serbia needs to further align the law with the remaining OSCE/ODIHR and GRECO recommendations, in line with the August 2022 Final Report of the Election Observation Mission. This includes explicit regulation of third-party campaigning, and provisions on effective, proportionate and dissuasive penalties for violation and inadequate reporting. The criminal code needs to be brought in line with the Law on financing of political activities. Serbia should continue to take further measures to ensure that citizens are able to recognise paid political advertisements or communications and the related costs. Amendments were also made to the Law on prevention of corruption aiming at alignment with the new Law on financing of political activities. The Law on prevention of corruption now further specifies which public officials are excluded from the duty of unambiguous separation between their public function and representing a political entity while acting in public. This obligation no longer applies to directly elected officials such

as members of the National Assembly, members of provincial parliaments and members of local assemblies.

The GRECO report on the fifth round of evaluation took note of the November 2021 amendments to the **Law on access to information of public importance**, and recommended that requests for information lodged with the government or presidential administration not receiving a positive response should also be subject to appeal before the Commissioner for Information of Public Importance and Personal Data Protection. Furthermore, Serbia needs to continue to monitor their implementation to ensure that the previously identified issues are effectively addressed, including that of ‘administrative silence’ to citizens’ requests and the lack of enforcement of decisions of the Commissioner for information of public importance.

The legal framework on **whistle-blower protection** is yet to be aligned with EU *acquis*.

With respect to **transparency and integrity within the public administration**, there has been no sizeable reduction in the excessive number of acting senior manager posts but an increase, as of June 2023, to 55% of filled positions occupied by people in an acting capacity, compared with 51% in May 2022. In addition, non-civil servants continued to be appointed on an acting basis after the legal deadline of July 2019, in breach of the Law on civil servants. The similar issue of acting directors in state-owned enterprises – 22 out of 34 – has yet to be addressed.

There is no evidence of what the impact has been of the Law on the origin of assets, adopted in 2020 and amended in 2021, on the effectiveness of the check of assets of natural persons against declared income. An assessment of the impact of this law is needed, and its implementation needs to be non-discriminatory and not vulnerable to corruption.

Strategic framework

Serbia has no **anti-corruption strategy** in force. There is a clear need for an anti-corruption strategy encompassing prevention and repression of corruption, accompanied by a credible action plan in addition to the relevant section in the Chapter 23 action plan. Serbia presented to the European Commission a draft strategy for the period 2021-2028 accompanied by a first action plan for the period 2023-2024. A majority of anti-corruption related interim benchmarks for Chapter 23 and a majority of GRECO recommendations from the 4th and 5th rounds of evaluation have been included in the documents. However, there is still a need to ensure the inclusion of remaining Chapter 23 interim benchmarks and outstanding GRECO recommendations. There is a need to further clarify the context of cooperation, coordination and communication of the two bodies that will monitor implementation (the Working Body of the Government and the Agency for the Prevention of Corruption) as well as how implementing authorities will report to them. All activities under the action plan should be costed and budgeted for.

An ex-ante analysis based on risk assessments for sectors most vulnerable to corruption was completed in June 2023, with the aim to inform the draft strategy.

The Agency for Prevention of Corruption submitted the report on implementation of the anti-corruption part of the action plan for Chapter 23, and submitted it to Parliament in March 2023. According to this report, in 2022 Serbia completed 61% of actions (2021: 60%), which either had to be completed in 2022 or were ongoing actions.

Fundamental rights

Serbia’s legislative and institutional framework for upholding fundamental rights is broadly in place. This framework needs to be consistently and efficiently implemented. The Ombudsman was re-elected in April 2023, without cross-party support. The Ombudsman’s Office has yet to
--

be provided with additional resources to cover the new powers introduced by the Ombudsman Law of 2021. The recruitment of additional staff for the Commissioner for Information of Public Importance and Personal Data Protection is significantly delayed. The procedure for executing the decisions of the European Court of Human Rights, including the role of Serbia's Government Agent before the Court, needs to be further regulated.

Implementation started of the new strategies and action plans on gender equality, anti-discrimination and Roma inclusion, although monitoring bodies were not in place for most of the reporting period due to elections and formation of the new government. Action plans and related funding due in July 2021 as regards violence against women, and April 2022 as regards deinstitutionalisation, are now significantly delayed. More efforts are needed to comply with the Law on the planning system, which requires that action plans be adopted within 3 months of the adoption of related strategies, and that reports are published annually on the implementation of strategies: no such reports were published for the year 2022. New national minority councils were constituted following the elections held in November 2022. Serbia continued drafting and conducting consultations on a new '*action plan for the realisation of the rights of national minorities*'.

Most of last year's recommendations have not yet been implemented and remain valid. In the coming year, Serbia needs to:

- strengthen human rights institutions by allocating the necessary financial and human resources and by putting in place procedures to ensure compliance with measures, including interim measures, of the European Court of Human Rights;
- implement and report in good time on the strategies on anti-discrimination that includes the rights of LGBTIQ persons, gender equality, violence against women, and deinstitutionalisation; actively counter hate-motivated crimes and establish a track record of investigation and convictions;
- demonstrate, through better data collection, tangible improvements across the country in the effective exercise of the rights of individuals belonging to national minorities, including reference to the targets set by the Poznan Declaration on Roma inclusion and by the future new action plan relating to national minorities.

Serbia has ratified the main **international human rights instruments**. Serbia's Council for monitoring the implementation of the recommendations of the UN Human Rights Mechanisms includes civil society organisations and was extended to the Chamber of Commerce and the Standing Conference on Towns and Municipalities.

In June 2023, there were 1 818 applications pending before the **European Court of Human Rights** (ECtHR). The ECtHR delivered judgments on 31 applications and found breaches of the European Convention on Human Rights in eight out of nine cases (against nine in 2022), relating mainly to the right to respect for private and family life, to the right to a fair trial and the general prohibition of discrimination. In the reporting period, there were 2 112 new applications allocated to a decision body. Currently, there are 59 cases under enhanced supervision by the Committee of Ministers of the Council of Europe. The procedure for executing the decisions of the ECtHR, including the role of Serbia's Government Agent before the Court, needs to be further regulated. The Law on the State Attorney's Office only broadly defines the Government Agent but it does not refer to the execution of judgments of the Court; only secondary legislation does this. The Government Agent before the Court needs to be given a coordination role and the authority to fulfil it. Work is ongoing to implement the mechanism providing individual redress to parents in cases similar to that of *Zorica Jovanović v Serbia*. A

key feature of this case is the continued failure by the Serbian authorities to provide the applicant with any information about the real fate of her missing baby who had been in the care of a state-run hospital. In 2021 and 2022, the National DNA Registry of the National Centre for Criminal Forensics of the Criminal Police Directorate received 34 requests for determining parenthood. When the status of the missing newborn could not be determined, courts awarded damages of the maximum amount prescribed by law. Since the Court's first judgment in 2008 on the *Kačapor group* case, a systemic solution needs to be found to the delayed enforcement of domestic decisions against socially/state-owned companies; this case is about companies in the former socialist regime of Yugoslavia.

As regards the **promotion and enforcement of human rights**, the mandate of the Ombudsman expired in July 2022 and the procedure for appointing a new one was initiated in February 2023. Under the law, the procedure for appointing a new Ombudsman should have been initiated no later than 180 days before the said expiry. The incumbent Ombudsman was re-elected in April 2023, without cross-party support. The law requires only an absolute majority for the election, deviating from the Venice Principles which set out that the Ombudsman should preferably be elected by an appropriate qualified majority. In addition, the Venice Principles recommend that the Ombudsman cannot be reappointed. While the new Law does prescribe that the Ombudsman cannot be reappointed, another provision in the Law gave to the Ombudsman who had been appointed under the previous laws the possibility to be reappointed, which did in fact happen. Parliament held a plenary discussion on the Ombudsman's annual report for 2021, issued in March 2022, only in February 2023. Citizens submitted 3 530 complaints to the Ombudsman in 2022, down from 4 501 in 2021. The number of recommendations from the Ombudsman to the authorities also fell to 904 (1 050 in 2021). According to the Ombudsman's 2022 report, the percentage of its recommendations followed up by the authorities increased to 92% (2021: 78%). However, it is not sufficiently clear how the Ombudsman verifies that a recommendation has been followed up appropriately. The Ombudsman needs to publicly address all violations of human rights and to improve his cooperation with civil society, in particular in his capacity as National Preventive Mechanism against Torture. A new rulebook on internal organisation and systematisation of posts was not yet adopted. The Ombudsman's Office has yet to be provided with additional resources to recruit staff and cover the new powers introduced by the new Ombudsman Law of 2021. As of May 2023, it was employing 74 staff, fewer than the target of 106 included in the Chapter 23 action plan. Staff turnover in the Office continues to hamper its efficiency. Appropriate premises are also still lacking.

In order for Serbia to fully benefit from its observer status in the **European Union Agency for Fundamental Rights**, it needs - as already required in the Law on the planning system - to develop a comprehensive monitoring and data collection system to assess the level of implementation of human rights legislation, policies, and strategies.

In the field of **prevention of torture and ill-treatment**, the Ombudsman, in the role of National Preventive Mechanism against Torture, continued with visits to relevant sites. Training sessions on the methodology for investigating cases of torture also continued. The European Committee for the Prevention of Torture and Inhuman or Degrading Treatment or Punishment (CPT) paid an ad hoc visit to Serbia in March 2023. The focus was on the treatment of individuals deprived of their liberty by the police, as the follow-up of recommendations contained in reports on CPT visits in 2017 and 2021 was not sufficient. A large number of CPT recommendations from previous reports have yet to be addressed. This concerns in particular the recommendation to eradicate police ill-treatment and effectively investigate such cases. The monitoring of police interviewing standards and procedures is needed to facilitate the

investigation of any allegations of ill-treatment. This would require an accurate recording of police interviews to be conducted with electronic audio and video recording equipment. The treatment of individuals held in remand detention is also of particular concern. Action is required to guarantee the right of access to a lawyer without undue delay after deprivation of liberty. The execution of the January 2021 judgment of the European Court of Human Rights in the case *Zličić v Serbia* - concerning inhuman and degrading treatment while in police custody and failure to conduct an effective investigation - is pending and under enhanced supervision of Committee of Ministers along with other similar cases. Serbia has still not revised the criminal code amendments of 2019 which introduced life imprisonment without the possibility of conditional release for a number of crimes; the criminal code therefore remains contrary to the European Convention on Human Rights and to the case law of the European Court of Human Rights. The CPT had raised concern about this issue in its report of March 2022. Following the Ombudsman's findings on the lawfulness of the work of the Ministry of the Interior during the July 2020 citizens' protests related to the COVID-19 pandemic, all criminal charges against police officers addressed thus far have been dismissed and a disciplinary measure (fine) was imposed on one officer (*see also the section on freedom of assembly*).

Concerning the **prison system**, the renovation programme continued in several prisons. The Training Centre for Prison Staff focuses on prison guards rather than on all prison staff and is reliant on external entities for sporadic training for other prison professions. Offender treatment programmes were rolled out in all prisons and covered a variety of issues, e.g. drug and alcohol addictions, aggression, and general cognitive-behavioural skills. Resocialisation programmes have been introduced in the pre-release phase of a custodial sentence but require additional support. Staff numbers and competencies need to increase to ensure that the Prison Service can systematically offer such programmes in all relevant institutions. In January 2022, the prison population stood at 10 557 for a total capacity of 11 957 places, i.e. an occupancy rate of 94.7%, although instances of local overcrowding remain. Overcrowding and overall conditions at the Belgrade Special Prison Hospital are still of concern. In December 2022, Serbia adopted the 2022-2027 strategy for the further development of the system of enforcement of criminal penalties and the accompanying action plan. The majority of executed alternative penalties comprise house arrests, and the use of community penalties remains low. The probation, social and employment services have insufficient resources to satisfactorily address post-penal care.

The Law on **personal data protection** is mostly aligned with the EU Regulation on general data protection (GDPR) and the Directive on law enforcement. However, the law is insufficient with regards to penalties and difficult to implement in practice. This is because it does not further elaborate on the principles provided by the GDPR, and the provisions regulating processing of personal data by law enforcement authorities are scattered across a number of articles in the law. In addition, the process of harmonising the provisions of all other laws relating to the processing of personal data with the personal data protection law, which was due by the end of 2020, is significantly delayed. The number of designated data protection officers within public entities remained low, with 616 new officers in 2022 (amounting to a total of 4 378 out of over 12 000). Court enforcement of this law, following complaints on personal data violations including data leaks to the media, remains limited. The Office of the Commissioner for Information of Public Importance and Personal Data Protection worked with 105 staff members in 2022, against the target of 129 in the Chapter 23 action plan. The recruitment of additional staff in the Office of the Commissioner is significantly delayed. In December 2022, a first regional office of the Commissioner was opened in Novi Sad. Following the Commissioner's previous negative opinions on the Ministry of the Interior's impact assessment on street video-surveillance, the Ministry stated that it had put processing

of biometric personal data on hold until a legal basis was developed. The Ministry started drafting a new law on internal affairs to regulate these matters, and several other topics. In December 2022, the draft law was withdrawn from the adoption procedure for the second time and consultations with civil society were relaunched and are ongoing. The proportionality and necessity of the proposed system of video surveillance in public spaces and processing of personal data by facial recognition software still needs to be assessed. The Law on personal data protection will need to be revised before a special regime for processing personal data by the police, together with amendments to the criminal procedure code, can be adopted.

Freedom of thought, conscience and religion is constitutionally guaranteed and generally respected. However, the lack of transparency and consistency in the process for registering religious communities remains one of the main obstacles preventing some religious groups from exercising their rights. The Law on churches and religious communities needs to be aligned with the recommendations of the Council of Europe's Advisory Committee for the Framework Convention on National Minorities.

Regarding the **fight against antisemitism**, the Jewish community is small (around 3000 Jews) but vibrant. Serbia is a member of the International Holocaust Remembrance Alliance since 2011. Serbia made concrete steps to ensure Holocaust education and remembrance but further work is needed. Implementation of the Law on the restitution of heirless Jewish property, and the return of properties to churches and religious communities, has continued.

Freedom of expression

Serbia has **some level of preparation** concerning freedom of expression. Overall, **limited progress** was made on the recommendations from last year, which therefore remain valid. The police and the prosecution service reacted swiftly to several cases of attacks and threats, working with the standing working group on the safety of journalists. However, cases of threats, intimidation, hate speech and violence against journalists remain a concern, as is the increase in strategic lawsuits against public participation (SLAPP), notably launched by members of national and local authorities, that may produce a chilling effect including self-censorship. There are recurrent statements by high-level officials on the daily and investigative work of journalists. The possibility of journalists to report on ongoing criminal proceedings is excessively limited in the legal framework. The overall environment for the exercise of freedom of expression without hindrance still needs to be further strengthened in practice. Serbia continued implementing the media strategy action plan. Several processes were relaunched after the formation of the new government in October 2022, after increasing delays. Consultations resumed in November 2022 on amending the Law on public information and media. Following public consultations, consultations with media associations and hurried consultations with the European Commission amendments were adopted to the laws on public information and media and on electronic media in October 2023 before the dissolution of parliament. Overall, the new laws will strengthen the independence of the regulatory body for electronic media (REM). They also codify the role of the Press Council and render the process of public co-funding more transparent and accessible. In the context of elections, the ban on media coverage of officials who are also candidates taking part in official gatherings organised for the opening of infrastructure or other facilities was extended to 30 days, which is an improvement of the current situation. However, the legislative process was not finalised fully in line with the EU *acquis* and European standards. The ownership of media by state-owned enterprises was prominent in deliberations. An important step was taken with respect to the application of criteria aligned with the EU *acquis* to the assessment of state aid, while it should

be clarified that antitrust and merger control rules apply to the media sector and safeguards to protect media pluralism and editorial independence remain to be improved. The implementation of such safeguards will need to be closely monitored in practice. In August 2022, REM published a call for the allocation of a fifth media service licence with national frequency, which has still not been awarded, without credible justification.

Political and economic influence on the media remains a source of concern. Serbia needs to take urgent action to counter anti-EU narratives propagated by numerous media outlets, and to counter foreign information manipulation and interference, most obviously in the context of Russia's war of aggression against Ukraine.

In addressing the persisting shortcomings, Serbia should implement its media strategy and action plan without further delay, in a transparent, efficient and inclusive manner, respecting the letter and spirit of the objectives of that strategy, and focusing as a matter of priority on implementing last year's recommendations:

- strengthening the security and safety of journalists and notably ensuring that: (i) high-level officials refrain from labelling or making verbal attacks on journalists; and (ii) any threats and cases of physical and verbal violence are swiftly followed up and, as appropriate, publicly condemned, investigated or prosecuted;
- strengthening media pluralism, including through implementing measures in line with the media strategy relating to REM's functioning, mandate and independence, and to the public broadcasters;
- ensuring transparent and equitable co-funding for media content serving the public interest, and full transparency in media ownership and advertising.

Intimidation of journalists

Cases of threats, intimidation and violence against journalists remain a source of concern, especially at local level. Verbal attacks and smear campaigns against journalists continued, including verbal violence against female journalists. Hate speech and discriminatory terminology are often used and tolerated in the media and are rarely followed up by regulatory authorities or prosecutors. Recurrent statements by high-level officials on the daily and investigative work of journalists are preventing the creation of an environment where freedom of expression can be exercised without hindrance. Despite these statements having been made also in Parliament, the administrative committee in charge of the application of the code of conduct of the Parliament has not found any violation so far. The two main journalist associations in Serbia recorded an increase in physical attacks and threats against property in 2022, compared with 2021. In June 2023, a group of protesters entered into the private property of one cable TV, with no reactions from the authorities, police or judicial follow-up. There was also an increase in strategic lawsuits against public participation (SLAPP), notably launched by members of national and local authorities. Cases were raised, for example, against one investigative portal and local media. Investigative journalists also continued to face either frequent refusals by public bodies to disclose information, or no response at all ('administrative silence'). Furthermore, the possibility of journalists to report on ongoing criminal proceedings is excessively limited in the legal framework.

The police and the prosecution service reacted swiftly to several cases of attacks and threats, working with the standing working group on the safety of journalists. The other working group for the safety and protection of journalists, established by the government in December 2020, has not met since June 2022. The majority of media associations had left the group in spring 2021 while another media association left in December 2022. In 2022, the Office of the

Republic Public Prosecutor (RPPO) registered 83 cases of criminal acts committed against journalists (87 cases in 2021). According to the RPPO's information regarding those acts that qualify for criminal prosecution, by the end of March 2023, the RPPO had proceeded with 75 of the 83 cases filed in 2022, while 8 cases had been dismissed. In total, 34 cases had been finalised (including 5 convictions), while criminal proceedings continue for the remaining cases (6 cases before the court, 29 in pre-investigation, 5 in investigation (evidential actions), and 7 cases without identified perpetrators). A conviction of a local official and the prison sentence was confirmed in the re-trial regarding the case of the arson attack on the house of an investigative journalist in December 2018, after the earlier decision had been overturned in 2021. Another conviction sentence, among others, was made in the case of an attack against a local radio station, despite challenges in the process. A number of other cases, including those with death threats, have still not been resolved. Regarding the work of the commission tasked with looking into three cases involving the murders of journalists, the Court of Appeals opened a re-trial in the case of the murder of Slavko Ćuruvija and completed the hearing in March 2023, which is now pending the final verdict more than 24 years after his murder. There were no developments in the two other murder cases from 1994 and 2001.

Legislative environment

Serbia continued implementing the media strategy action plan. Several processes were relaunched after the formation of the new government in October 2022, after increasing delays. In light of the wide scope of the planned reforms, appropriate human resources are needed in the newly formed Ministry of Information and Telecommunications. The working group established to monitor implementation of the action plan, including media representatives, did not meet as regularly as planned and there were delays in the adoption of quarterly monitoring reports. The initial action plan implementing the media strategy expired at the end of 2022 and a new action plan for the period 2023-2025 has not yet been adopted. Consultations resumed in November 2022 on amending the Law on public information and media, which notably deals with public co-financing of media through calls for proposals, state ownership of media, self-regulation and the transparency and functionality of the media registry. In the current system, the print media with the most violations of the journalistic code of professional conduct recorded by the Press Council, including those with court convictions, are not precluded from – and in effect continued – receiving public co-funding, especially at local level. According to the media strategy, this issue should be addressed by laying down binding criteria for complying with the journalistic code of conduct and by requiring applicants to accept the authority of the Press Council. Work started in January 2023 on drafting amendments to the Law on electronic media, which must strengthen the independence and transparency in the work of the Regulatory Authority of Electronic Media (REM), effectively safeguard media pluralism, and clarify the procedure for issuing licences for the provision of audiovisual media services. Public consultations on these two draft laws were launched in September 2023. Following public consultations, consultations with media associations and hurried consultations with the European Commission amendments were adopted to the laws on public information and media and on electronic media in October 2023 before the dissolution of parliament. Overall, the new laws will strengthen the independence of the regulatory body for electronic media (REM). and reinforce its mandate for tackling threats to media pluralism. The process of nominating REM Council members was depoliticised while steps were taken to enhance the protection of the rights of persons with disabilities, minors and national minorities. The authorities and the media associations also reached agreement on the role of the Press Council, while steps were taken to render the process of public co-funding more transparent and accessible. They also codify the role of the Press Council and render the process of public co-funding more transparent and accessible. In the context of elections, the ban on media

coverage of officials who are also candidates taking part in official gatherings organised for the opening of infrastructure or other facilities was extended to 30 days, which is an improvement of the current situation. However, the legislative process was not finalised fully in line with the EU *acquis* and European standards. The ownership of media by state-owned enterprises was prominent in deliberations. An important step was taken with respect to the application of criteria aligned with the EU *acquis* to the assessment of state aid, while it should be clarified that antitrust and merger control rules apply to the media sector and safeguards to protect media pluralism and editorial independence remain to be improved. The implementation of such safeguards will need to be closely monitored in practice. The third law planned by the media strategy, the Law on public broadcasters, has yet to be amended.

Implementation of legislation / institutions

REM fails to demonstrate its independence in a consistent manner and to exercise its mandate to the full in safeguarding media pluralism and professional standards. In July 2022, REM awarded all four national television licences – which have a validity of 8 years – to the same previous licensees despite the fact that they had received warnings from REM due to violations of their legal obligations during the previous period. Several of these channels continued not to respect legal provisions. In August 2022, REM published a call for the allocation of a fifth media service licence with national frequency, which has still not been awarded, without credible justification. According to the published call, REM was expected to decide within 30 days of publishing the list of eligible applicants. The REM Council suspended its work between 9 and 21 December, claiming to protest against public criticism it had received concerning the unallocated fifth frequency. REM subsequently resumed its work but unilaterally decided not to proceed with the allocation of the fifth frequency while a complaint brought by one applicant is pending at the administrative court.

In May 2023, in the context of tragic mass shootings, REM appeared before the Parliament's Committee for Culture and Information to present its report on media monitoring for the period October 2022 to March 2023, reflecting also on the topic of violence in media. Despite the fact that several TV channels broadcast content that encourages overt or covert hatred or violence, including by providing a platform for convicted war criminals, REM concluded that all of the media, except one, overall met the provisions set out in the Law on electronic media. During the reporting period, several TV channels with national frequencies, including TV Pink and Happy TV, fell short of their own commitments and obligations on programming for children, culture and education, based on which they had obtained a (renewed) national frequency. In May 2023, REM awarded a cable and IPTV licence to the publisher of a print tabloid which, according to the Press Council, frequently breaches the ethical code of conduct. In June 2023, one member of the REM Council resigned due to disagreements with the work and conduct of the regulator.

Serbia needs to take urgent action to counter anti-EU narratives propagated by numerous media outlets, and to counter foreign information manipulation and interference, most obviously in the context of Russia's war of aggression against Ukraine. Sputnik applied for the public competition for the issuance of licences for the provision of radio media services for the Belgrade area, which was rejected in December 2022 by REM. Russia Today's (RT) international channel in the English language was not banned by REM and is still broadcast in Serbia on the cable TV. In addition, in November 2022, RT launched a local RT Balkan multimedia web platform in the Serbian language, also hosting government representatives in its video format. The outlet also promoted military recruitment for the Wagner paramilitary group, which is prohibited under Serbian legislation but was not followed up by prosecution services. These outlets, together with Sputnik Serbia and other local media, produce and/or

disseminate content that manipulates the information environment in Serbia. Such content is echoed in a large portion of mainstream media in Serbia and in the region more broadly. Local civil society, the media and fact-checking community have been making valuable efforts in countering disinformation.

Public service broadcasters

The improved balance of representation of political parties on the public broadcaster during the electoral campaign in spring 2022 did not continue to the same extent beyond the election period. Shortcomings in public service media legislation, identified by the media strategy, still need to be addressed by amending the law. Public broadcasting services in minority languages need to be strengthened, in line with the Chapter 23 interim benchmark, especially as regards Radio Television Srbija (RTS) (*see also the section on minorities*). The partial budget financing of Radio Television of Vojvodina (RTV) was extended to 2023. The position of RTV managing director, which had been vacant since the expiry of the previous mandate in July 2021, was filled in October 2023 following a lengthy appointment process. Some other RTV management positions have also been vacant since July 2021. Some RTS employees held a warning strike demanding better employment conditions, while the management board president filed a criminal complaint against the director and another editor, under suspicion of fraud. In June 2023, a public protest was held outside RTS premises as the dismissal of its management is among the requests of the citizens' protests 'Serbia against violence'.

Economic factors

Political and economic influence on the media remains a source of concern. The media strategy proposes measures to address issues of transparency in ownership structures and fairness in financing media content and advertising from state resources, which are overdue (*see also legislative environment*). The media sector privatisation process has yet to be completed in line with the objective set in the media strategy. The media strategy also highlighted the absence of suitable criteria and mechanisms for assessing the existence of media pluralism, and identified measures aimed at addressing these issues; they now need to be implemented. A local civil society organisation monitoring central news shows on the five television channels with national coverage during the period June 2022 to May 2023 calculated that the ruling coalition received 95% of airtime and the opposition 5%; this ratio was similar for the public broadcaster RTS 1 (94% v 6%).

Professional organisations and working conditions

The lack of job security for journalists and the editorial environment encourage tabloidism. Further efforts are needed to improve journalistic standards, media literacy and overall resilience. The increasing trend of SLAPP lawsuits is of concern as it puts pressure on the media's financial and human resources capacity.

(*See also Chapter 10 – Digital transition and media*).

Freedom of artistic expression

Freedom of artistic expression is broadly guaranteed. Statements by MPs of the ruling coalition were made that productions involving government critics should not receive public funding.

While legislation on **freedom of assembly and association** is generally in line with European standards, Serbia has yet to align further with the joint Venice Commission and OSCE/ODIHR Guidelines on Freedom of Peaceful Assembly. Freedom of assembly is a fundamental EU right, which needs to be both protected and exercised peacefully and in full respect of the rule of law and public order. This right also apply to civil servants. Following the Ombudsman's findings

on the lawfulness of the work of the Ministry of the Interior during the July 2020 citizens' protests related to the COVID-19 pandemic, all criminal charges against police officers addressed thus far have been dismissed and a disciplinary measure (fine) was imposed on one officer (*see also prevention of torture and ill-treatment*). As regards the environmental protest in Šabac in 2021, in November 2022 the Ombudsman issued a recommendation to initiate disciplinary proceedings against police officers who did not protect citizens from a group of hooligans who attacked them. The Ministry of the Interior informed that disciplinary proceedings against police officers could not be taken due to the statute of limitations, namely the fact that the initiation of disciplinary proceedings for minor violations of official duty expires 6 months from the date of execution or, for serious violations, after 1 year. The Ombudsman also issued a recommendation to wear uniforms with visible police identification; while this is required by the law on the police, such identification is not always visible when police officers wear protective gears during demonstrations. The EuroPride march in Belgrade in September 2022 was protected by a high number of law enforcement officers. Nevertheless, some instances of violence against participants were reported. In cases addressed so far, prosecutors found no criminal acts of violence against the participants. A Pride march took place in Belgrade in September 2023 without incidents. In February 2023, a gathering of neo-Nazi groups that celebrated Milan Nedić, the Nazi collaborator in WWII, was protected by the police. A number of peaceful mass protests by citizens - Serbia against violence – have taken place since May with support from several opposition parties. Freedom of assembly was guaranteed and protests took place mostly unhindered. However, the protests were sometimes accompanied by verbal attacks on participants by politicians and parts of the media, which also consistently downplayed the size of protests.

Issues of labour and trade union rights are further covered in Chapter 19 – Social policy and employment.

Regarding **property rights**, the Agency for Restitution continued with restitutions in kind and first instance decisions on the return of confiscated properties. Based on the coefficient for financial restitution when restitution in kind is not possible, the government issued bonds in January 2023 worth about EUR 40.14 million with maturities of 5, 10 and to be 12 years. It also provided claimants with an initial cash advance as a form of compensation. This is expected to be done annually until the process is completed.

In April 2023, the government established the Council for monitoring implementation of the strategy and action plan on **non-discrimination**, which is chaired by the Minister for Human and Minority Rights and Social Dialogue and composed of representatives of the relevant institutions and CSOs. Serbia has yet to adopt a national housing strategy addressing non-discrimination in terms of housing policies and taking into account the 2016 report of the UN Special Rapporteur on adequate housing. The 2022 report of the Commissioner for the Protection of Equality indicates an increase in the number of citizen complaints (2021: 1 372; 2022: 1 879), and in the number of recommendations issued by the Commissioner to public bodies (2021: 312; 2022: 412). The percentage of Commissioner recommendations that were implemented remained high (2021: 82%; 2022: 88%). The Parliament needs to timely react to the requests of the Commissioner so that her Office can be provided with adequate human resources, in line with the staff systematisation decision. Further work is still required to fully align the Law on the prohibition of discrimination with the EU *acquis*, and in particular Directive 2000/78/EC establishing a general framework for equal treatment in employment and occupation, as well as with European standards. The criminal code relating to prohibition and punishment of criminal racial acts has yet to be aligned with the EU *acquis*. Hate speech, threats and violence continued to target human rights defenders, the Roma community, and lesbian,

gay, bisexual, transgender, intersex and queer (LGBTIQ) persons. The Commissioner for Equality reported cases of attacks and threats against migrants organised by extremist and far-right groups, as well as attacks based on hatred and ethnic identity.

Following the previous adoption of a strategy and action plan on **gender equality**, the Coordination Body for gender equality was re-established in October 2022 and includes an expert group with representatives of both public authorities and CSOs. The Council for Gender Equality was established in April 2023. Several provisions of the Law on gender equality, including those on reporting and data collection obligations and on funding of specialised services, will enter into force only in 2024. No progress has yet been demonstrated in enforcing the Law on gender equality as regards the obligations of education institutions to include the gender perspective and remove gender stereotypes from curricula, textbooks and learning materials. Moreover, eighth grade biology textbooks were modified in October 2022 following the conclusion of the National Educational Council that ‘no interpretation of a programme can contain elements of ideology’. The Ministry of Education claimed that, despite the modifications, the revised textbooks still contain the concept of gender equality and the prohibition of discrimination. An increased number of budget users introduced gender-responsive budgeting in their 2023 budgets. More efforts are needed to collect official sex-disaggregated data and statistics, which are lacking in several domains. In 2022, the Commissioner for the Protection of Equality reacted with statements and warnings on several cases of discriminatory attitudes and verbal violence against women, including by public figures. Roma women, older women, poor women, women with disabilities, refugee and internally displaced women, continue to experience multiple and intersecting forms of discrimination. These women continue to have limited access to health, education, employment, and social assistance, and they lack protection from gender-based violence. The role of the media in the production and reproduction of gender-based violence and gender stereotypes is still a source of concern, including when representing women victims of femicide or women in governing or decision-making roles. Discriminatory attitudes and verbal violence against women were expressed by Members of Parliament and other public figures.

The action plan and related funding for the April 2021 strategy against violence against women and domestic violence are now significantly delayed. A new, third, action plan for the implementation of UN Security Council Resolution 1325 on Women, Peace and Security has yet to be adopted following the expiry of the previous one in 2020. Implementation of the law against domestic violence needs to be improved. An integrated system must be set up for collecting and monitoring cases of violence disaggregated by type of violence and by relationship between perpetrator and victim. Serbia still lacks reliable official statistics but it is estimated that 27 femicides occurred in Serbia in 2022 and 20 in the first half of 2023. In its 2019 baseline report on Serbia, the Group of Experts on Action against Violence against Women and Domestic Violence (GREVIO) made recommendations that have yet to be addressed. One such recommendation is to amend the definition of rape in the criminal code to comply with the Istanbul Convention ratified by Serbia. A more comprehensive response is needed to all instances of violence against women covered by the Istanbul Convention, including rape, stalking, sexual harassment and forced marriage. The very few support services for these cases of violence are predominantly run by CSOs and operate on a limited budget. The transparency and fairness of public funding in this area needs to be demonstrated; an evaluation of the outcome of completed projects is also needed (*see also civil society*). Police protocols do not mandate cooperation with specialist support services or the routine referral of victims, resulting in the underuse of existing CSO expertise. The law against domestic violence does not assign women’s CSOs a standard role in drawing up individual protection plans, as recommended by GREVIO, but leaves their participation to the discretion of the relevant

prosecutor's office. The legal provision offering victims the possibility to participate in the creation of individual protection plans needs to be enforced. Even though there are 11 functioning safe houses in Serbia for victims of gender-based violence, they are understaffed and lack sustainable and adequate funding and capacity, in terms of housing capacity, accessibility, and geographical spread. Attention needs to be paid to ensuring equal access to safe houses for all women, including refugee and migrant women, transgender women and women from other marginalised groups. Appropriate funding is needed to ensure implementation of the national programme for safeguarding and improving sexual and reproductive health, and access to quality services in this area.

On the **rights of the child**, the Council on the Rights of the Child, the coordination body in charge of monitoring the strategy for the protection of children from violence, was re-established in March 2023; it has yet to be supported by a technical body and a cross-sectoral group to enable the effective coordination and monitoring of this strategy. No annual implementation report has been published since the adoption of the strategy in 2020. No national action plan for the rights of the child is in place since the expiry of the previous one in 2015. Further work is needed to implement the 2017 recommendations of the UN Committee on the Rights of the Child. Serbia has yet to ratify the UN Convention on the Rights of the Child's third optional protocol on a communication procedure, which it signed in 2012. Serbia needs to address the recommendations of the Lanzarote Committee on the effective implementation of the Council of Europe Convention on the Protection of Children against Sexual Exploitation and Sexual Abuse (the Lanzarote Convention), which it ratified in 2012. Serbia also needs to amend its family law to explicitly prohibit corporal punishment of children in the family and to ban child marriage. Upgraded sectoral protocols are needed following the previous adoption of a general protocol for the protection of children from abuse and neglect. The Law against domestic violence needs to be amended to ensure that every child who is a witness or victim of domestic/partner violence is always included in the court's individual protection plan. A new Law on juvenile offenders and protection of minors in criminal proceedings has yet to be adopted to align with the EU *acquis* and international standards. Child offenders with mental health problems do not have sufficient access to mental health and psychosocial support services. The principles of the best interests of the child and child participation are yet to be properly operationalised in all court and administrative proceedings. Statistical data on vulnerable groups, including Roma children and children with disabilities, is still not disaggregated. Reliable and comparable data disaggregated by age and sex is essential for addressing violence against children. Although a relatively small number of children are placed in institutional care (under 100 children per 100 000 children), violations of child rights in large-scale institutions remain a concern. Children with disabilities, who are vulnerable to multiple forms of exclusion and abuse, constitute the largest group of children in institutions as they are over-represented (70%) among children living in residential large-scale institutions. Despite a moratorium being in place to prevent institutionalisation of children aged 0-3, this continues to occur, which constitutes a serious cause for concern.

On the **rights of persons with disabilities**, Serbia has yet to adopt implementing legislation for the December 2021 Law on temporary social care residents. There is still no legal basis for ensuring that placement decisions in care homes are subject to regular court reviews. Deprivation of legal capacity procedures need to be changed to strengthen the position of the individuals concerned, as noted in the 2022 CPT report. Amendments to the Family Law, aimed at abolishing the existing system of complete deprivation of legal capacity, as planned by Q2 2021 in the Chapter 23 action plan, have yet to be adopted. An implementation report for 2022 on the strategy for the rights of persons with disabilities has yet to be published. The action plan and related funding for the January 2022 strategy on deinstitutionalisation are now

significantly delayed and, as a consequence, community-based services have yet to be further developed. Deinstitutionalisation needs to be prioritised by the authorities. Women with disabilities in residential institutions continue to face gender-specific forms of violence. Funding for developing community-based services, and for supporting licensed service providers and social services, remains insufficient.

As regards the **rights of lesbian, gay, bisexual, transgender, intersex and queer (LGBTIQ) persons**, a Pride march took place in Belgrade in September 2023 without incidents. There were no developments on the draft law on same-sex partnerships initiated by the Ministry of Human and Minority Rights and Social Dialogue, nor on the Ombudsman's recommendation to regulate legal gender recognition, as already planned in the previous anti-discrimination strategy. The Ministry for Human and Minority Rights and Social Dialogue established cooperation with a CSO that organised training sessions for employees of the Ministry to strengthen their capacities on issues faced by intersex persons. Difficulties remain, especially in smaller municipalities, in implementing amendments to the Law on birth registry, which enable data on gender changes to be entered into the registry. The implementation of hate crime legislation, including on grounds of sexual orientation, remains inadequate. The premises of the Pride Info Centre in Belgrade were subject to multiple attacks during the reporting period. Centralised official data on hate crimes, broken down by bias motivation, is still lacking. Due to a lack of trust in institutions and fear of secondary victimisation, cases of violence and discrimination towards LGBTIQ persons are often unreported. Transgender persons are particularly vulnerable to violence, abuse and discrimination. Intersex persons remain invisible both socially and legally. The lack of adequate mental health services for LGBTIQ persons became particularly visible during the COVID-19 pandemic and is still a concern.

Concerning **procedural rights**, the legal framework remains only partially aligned with the EU *acquis*, notably as regards procedural rights of suspects and accused persons in criminal proceedings and the rights of victims and their family members. In this context, legislative changes are planned by the strategy and action plan on the rights of victims and witnesses of crime, and on the rights of suspects, but the implementation of the strategy has proceeded at a slow pace since its adoption in 2020, as amendments to the Criminal Procedural Code have not yet been adopted. The victim focal points at public prosecution offices and the victim support services at high courts still need to be established by the State. Victim support is provided to a limited number of victims by local CSOs not funded by the authorities; these usually include specifically vulnerable victims of crime, such as victims of trafficking in human beings or gender-based violence, and children. No effective referral mechanisms exist so far between the institutions. During the criminal procedure, victims are guaranteed the right to access justice and to testify. Victims who have been granted the status of specifically vulnerable victim have the possibility to testify in special, secluded premises in court houses during trial, in order to avoid physical contact with the perpetrator. In practice, and as only five of the 25 high courts have been equipped with special rooms where testimonies can be provided via audio/video link, for cases where the law entitles them to this protection, victims are not always protected from having to face the accused during proceedings. The number of decisions rendered on compensation claims within the criminal justice procedure is growing at a very slow pace. No state-run compensation fund is available for victims of crime.

Regarding **access to justice**, there is a need to further raise awareness of the availability of legal aid among the most vulnerable and marginalised individuals. This also needs to take into consideration the recommendations to Serbia from the Committee of the Convention on the Elimination of All Forms of Discrimination against Women (CEDAW) regarding women's access to justice in all cases of gender-based discrimination. CSOs continued to provide

information and support to beneficiaries. In the third year of implementation of the Law on free legal aid, local services in municipalities approved 95% of free legal aid requests. The Ministry of Justice shared a template on necessary documentation with all local self-government units. There is a need to improve the existing capacity and cooperation between different service providers, including through training courses on application of good governance and anti-discrimination standards in decision-making. An analysis of the necessary amendments to the Law on free legal aid was finalised, but the revision of procedural laws, the law on court fees and the tariff regulation has been delayed.

The legal framework for respect for and protection of **minorities** and cultural rights is broadly in place and generally upheld, in line with the Council of Europe Framework Convention on National Minorities. Implementation of Serbia's '*Action plan for the realisation of the rights of national minorities*' and relevant legislation needs to lead to a tangible improvement in the effective exercise of the rights of individuals belonging to national minorities throughout the country. Serbia needs to address the recommendations contained in the fourth opinion of the Council of Europe's Advisory Committee for the Framework Convention. Among other actions, it still needs to set up a sustainable data collection framework and to revitalise inter-ethnic relations, taking into account the need to involve the majority in Serbian society in integrating and including national minorities. All new national minority councils were constituted following the elections held in November 2022, except the Albanian one which was constituted after repeat elections held in May 2023. Following these elections, the working group in charge of drafting the new action plan in this area, including representatives of National Minority Councils, was reappointed. A new population census was conducted in October 2022, preceded by translation of census questionnaires into languages of national minorities and awareness-raising campaigns. The proper functioning and independence of national minority councils remain important. The Ministry for Human and Minority Rights and Social Dialogue maintained good cooperation with national minority councils. The amounts allocated under the Fund for the National Minorities for 2023 remained the same as in 2022. Members of the Albanian national minority raised concerns about the way police were checking residence status in South Serbia, resulting in the 'passivisation' of certain addresses; there is a need for the authorities to better explain to the public how these checks are being conducted and whether South Serbia is specifically targeted. Following a dialogue between the authorities and representatives of Albanians living in South Serbia in the framework of the 'Seven Points Action Plan', an action plan for improvements in the representation of Albanians in institutions was prepared but has yet to be adopted. Local councils for inter-ethnic relations exist in all 73 municipalities where such an obligation is stipulated by the law; however, the full implementation of their mandate has yet to materialise as council members have not always been nominated or councils often do not meet. Despite the legal obligation to take into account the ethnic composition of the population, national minorities remain under-represented in the public administration. The new public employees register, with the voluntary option of declaring national affiliation for statistical purposes, is not yet operational.

Progress on printing certain textbooks in minority languages needs to be further intensified, in line with the Chapter 23 interim benchmark. The process of preparing and printing textbooks continued and produced positive results. The publication of textbooks in some minority languages for use in secondary schools remains limited. The monitoring of the implementation of curricula for teaching Serbian as a non-mother tongue in pilot schools is ongoing. Access to religious worship in minority languages has yet to be enabled throughout Serbia. Public broadcasting services in minority languages are still not sufficient, except for some local broadcasters in Vojvodina. Following the process of media privatisation, such broadcasting needs to be made sustainable, taking into account the April 2021 recommendations of the

Committee of Ministers of the Council of Europe to ‘closely monitor the impact of the privatisation process on minority media’ and to ‘take the necessary measures to preserve sustainable editorial and financial independence of all minority media, including those linked to national councils of national minorities’ (*see also public service broadcasters*). There have been instances of hate speech against national minorities in the media. An appeal procedure is still ongoing before the Constitutional Court following the confirmation, in December 2021, by the appellate court of the decision of the Higher Court to reject a lawsuit filed by the president of the Albanian National Minority Council against a minister for the alleged use of hate speech. In March 2023, the Commissioner for Equality reacted publicly to the statement of one mayor targeting the Roma minority, criticising it as discriminatory.

Regarding **Roma inclusion**, robust monitoring and data collection is needed to implement the new strategy and action plan and to support Serbia in delivering on the commitments made in the Poznan Declaration - signed at the Western Balkans Leaders’ Summit in July 2019 - including its quantitative targets, as updated at the October 2022 Roma Ministerial meeting. In June 2023, Serbia established a coordination body chaired by the Prime Minister. An expert group to support the monitoring of the strategy and action plan has yet to be established. Inter-ministerial coordination, coordination between the national and local authorities, and Roma-sensitive budgeting all still need to be strengthened. Job descriptions for local Roma coordinators, pedagogical assistants, and health mediators have yet to be unified and become an integral part of local self-government services, with additional financial resources.

Most Roma people in Serbia have civil documentation. The number of individuals at risk of statelessness in Serbia fell significantly to 2 000. The procedure for registering all births, regardless of the parents’ status, needs to be implemented effectively and monitored. In the area of education, Roma students in elementary and secondary education continued to receive scholarships through affirmative measures. School dropout rates remain high, especially for Roma girls. Only 7% of Roma children up to 5 years of age attend preschool, compared with 61% in the general population. Only 28% of children living in Roma settlements enrol to upper secondary education, and the rate of completion of secondary school is 61% (overall population 98%), while that rate is the lowest for girls from Roma settlements (49%). Segregation in education needs to be addressed. Roma students are still over-represented in special schools and classes. Transition from education to the labour market is especially challenging for young Roma people. The national programme for transforming undeclared work among Roma has yet to be adopted to support the Poznan Declaration’s objective on employment. Following the adoption of the Law on social entrepreneurship, which is expected to encourage formal work of the Roma, registration of the status of social enterprises is possible since November 2022. As of June 2023, 11 social enterprises had registered. A total of 44 young college-educated Roma have completed training courses at the National Academy for Public Administration since the start of this programme in 2021. Another 26 Roma men and women have so far been employed in local self-governments following a public call launched in 2022. Overall, the Roma are still under-represented in the public administration.

Almost 20% of the population of the Roma settlements that were mapped have no or irregular access to safe drinking water, while over 55% have no or irregular access to sewer networks, and 14.5% have no or irregular access to electricity. The legalisation of Roma settlements needs to be tackled as a matter of priority as required by the Poznan Declaration, notably by updating and sharing the database on settlements and assigning staff to manage it effectively. Forced evictions are still taking place, which is not in line with the Law on housing or international standards. This Law needs to be implemented effectively, especially the provisions prescribing housing support and relocation of informal settlements. Roma returnees under readmission

agreements are in a particularly difficult situation in terms of social and economic inclusion. Limiting the number of children eligible for parental and child allowance, and conditioning the parental allowance on certain criteria, such as school attendance and vaccination of children, are disproportionately affecting Roma children and families. Children of Roma origin are over-represented among child offenders, in particular among children referred to educational/correctional institutions. Although child marriage is not common in the general population in Serbia, early and child marriage remains an issue of concern among Roma girls living in settlements; 56% of women aged 20-24 in Roma settlements were married before age 18 and 16% before age 15. Domestic violence also often goes unreported.

There are 194 662 **internally displaced persons** (IDPs) in Serbia, of whom 68 500 remain vulnerable and with displacement-related needs. The closure of the last collective centre in Bujanovac is ongoing. The strategy on IDPs expired in 2020; a new strategy and action plan need to be adopted. The Law on permanent and temporary residence needs to be consistently applied to allow Roma IDPs living in informal settlements to obtain registered residence and access to basic socio-economic rights. Roma IDPs remain the most marginalised and vulnerable. Serbia is engaged in the regional dialogue on ‘durable solutions for displaced persons from Kosovo’ (the ‘Skopje process’).

2.2.2 Chapter 24: Justice, freedom and security

The EU has common rules for border control, visas, residence and work permits, external migration and asylum. Schengen cooperation entails the lifting of border controls inside the EU. Member States also cooperate with Serbia in the fight against organised crime and terrorism, and on judicial, police and customs matters, all with the support of EU justice and home affairs agencies.

Serbia has **some level of preparation** to implement the EU *acquis* on justice, freedom and security. **Some progress** was made in addressing last year’s recommendations, in particular through the adoption of the Schengen action plan in July 2023 and further alignment with the EU’s visa policy by reinstating visa requirements for six countries. The Law on internal affairs has twice been withdrawn from the legislative process and is now once more under revision. The proposed law must address the long-pending issue of police autonomy from the Ministry of the Interior during pre-investigation and investigation phases, and the recommendations of the Council of Europe Committee for the Prevention of Torture (CPT).

Serbia contributed to the management of the mixed migration flows towards the EU and cooperated with the EU, EU Member States and its neighbours to implement the EU Action Plan on the Western Balkans presented by the Commission in December 2022. Efforts continued to host and accommodate substantial numbers of third-country nationals, with EU support. Serbia extended for one more year until March 2024 temporary protection to Ukrainian citizens having fled Russia’s war of aggression against Ukraine.

Serbia continued to implement the EU-Serbia readmission agreement and to carry out border control and surveillance effectively. Implementation of the new integrated border management strategy for 2022-2027, with its 2022-2024 action plan, is delayed. The IBM Coordination Body was appointed in June 2023. Access to and provision of information regarding the asylum procedure has yet to be improved, in particular at the airports in Nis and Kragujevac. Serbia needs to further align with the EU’s visa policy as set out in the Commission’s sixth report under the visa suspension mechanism of October 2023. The Government proposed amendments to the Law on citizenship that provided the possibility to apply for Serbian citizenship after only a short period of residence and work. While the EU respects the sovereign right of Serbia to decide on its citizenship and naturalisation policies, the Commission has

expressed its concerns to the competent Serbian authorities as regards the possible security risks for the EU linked to the fast-track acquisition of visa-free travel rights for nationals of countries that would be otherwise visa required. Following the concerns raised by the EU the Government has withdrawn the proposal. Serbia needs to adopt a new strategic document and accompanying action plan that cover all forms of radicalisation and violent extremism (irrespective of political, religious or ethno-nationalist so-called justification), in line with EU policies. A baseline study on all forms of radicalisation and violent extremism present in Serbia was adopted in October 2023.

In the coming period, Serbia should in particular:

- amend the Law on internal affairs to make the police fully autonomous from the Ministry of the Interior and fully accountable only to the Prosecutor's Office during pre-investigation and investigation phases;
- further implement the EU Action Plan on the Western Balkans, in particular by swiftly concluding the negotiations for a new Status Agreement with Frontex; further aligning with the EU visa policy; taking measures to systematically register and identify migrants, develop swift asylum procedures and increase capacities for managing effective return operations;
- adopt a national strategy for the prevention and suppression of trafficking in human beings and the protection of and support to victims, and increase national coordination efforts against trafficking.

In 2020, Serbia adopted a revised action plan for Chapter 24. It sets out Serbia's commitments, including in terms of timelines, for meeting the interim benchmarks of the EU common position for this chapter. In general, indications of delays in this report are measured against the deadlines established by Serbia in these revised action plans. The Ministry improved the practice of publishing reports on the implementation of the action plan for Chapter 24 with the timely publishing. The latest report covers the period July-December 2022. From February 2020 to November 2021, no meetings were held between the negotiating group for Chapter 24 and civil society organisations under the umbrella of the working group for Chapter 24 of the National Convention on the European Union. The meetings then restarted. After November 2021, only one such meeting was held (July 2022).

Fight against organised crime

Serbia has **some level of preparation** in the fight against organised crime. **Limited progress** was made in addressing last year's recommendations, in particular on detection and prevention of migrant smuggling and trafficking in human beings. A slight increase in financial investigations and confiscation of assets was also noted in 2022. The number of new investigations and indictments increased; first instance and final convictions (in particular money laundering) decreased. Extended confiscation is not systematically applied. Proactive criminal investigations and the systematic tracking of money flows, especially in cases of inexplicable wealth, are still not common practice. There has so far been insufficient follow-up in terms of investigation and prosecution to the recent attacks in the north of Kosovo. However, the understanding and the investigation approach has improved, and police, prosecutors and criminal judges are aware of the importance of consistently applying a 'follow the money to find the crime' approach and using circumstantial evidence. Serbia needs to align its legislation with Directive (EU) 2018/1673 on combating money laundering by criminal law.

Serbia has yet to conduct an analysis of the roles and practices of security services and of the National Security Council in carrying out criminal investigations related to serious and organised crime, although preparatory works have started.

There is well-established cooperation with CEPOL, Eurojust, Europol and INTERPOL, notably on weapons trafficking, drugs trafficking, and the fight against high-profile organised crime groups.

Serbia needs to further increase the technical, financial and human resources capacity of the Prosecutor's Office for Organised Crime to perform its duties in an independent manner (including premises to accommodate new staff).

Serbia should adapt its approach from one based on cases to a strategy against criminal organisations, and from focusing on cases of low or medium importance to high-profile cases aiming at dismantling big and international organisations and seizing assets.

In the coming period, Serbia should increase its efforts to address these shortcomings and:

- increase the efficiency of prosecution of serious and organised crime cases, including cases of money laundering, and the seizure and confiscation of criminal assets by systematic tracking of money flows, the efficient use of special investigative measures and the systemic use of extended confiscation;
- amend the criminal code in order to criminalise effectively the trafficking of weapons; adopt the new Law on weapons and ammunition; step up the fight against the storage, sale and ownership of illegal firearms;
- take concrete steps to ensure a clear separation of the mandates and regulations concerning the interception of communications for criminal investigation on the one hand, and for security purposes on the other.

Institutional set-up and legal alignment

In Serbia, there are 439 police officers per 100 000 inhabitants, compared with an EU average of 335.3 (Eurostat, 2019-2021). The Prosecutor's Office for Organised Crime (POOC) still needs to recruit three prosecutors to fill all 25 posts, a number which itself is insufficient, considering that Serbia has a prosecution-led pre-investigation and investigation system. There is a need to develop a 'systematisation rulebook' on the basis of a baseline analysis, which takes into consideration the extended jurisdiction and powers of this office. Furthermore, this office should be given more technical resources to carry out relevant special investigative measures, such as covert interception of communication autonomously and independently. POOC should be more accountable to the public concerning its activities and should provide feedback when deciding not to proceed with investigation, or to dismiss a case. The working conditions of general competence prosecutors' offices should be improved across the country.

Serbia has yet to conduct an analysis of the roles and practices of security services in investigations into serious and organised crime cases. The current criminal procedure code provides for covert interception of communication to be executed also by the Security Information Agency (BIA) and the Military Security Agency. This should be subject to an analysis to see whether it is in line with EU best practices. The use of security services in criminal proceedings should be forbidden or limited to exceptional cases regarding the interception of communications. A clear separation needs to be made between the remits and regulations for criminal investigations and those for security purposes.

Concerning **trafficking of weapons**, the same provision in Serbia's legal framework on weapons-related offences covers actions relating to trafficking of weapons and to illegal

possession and other less relevant actions. Hence, it is not possible to distinguish the number of convictions relating to trafficking in weapons from those related to illegal possession and other offences. Analysis by the UN Office on Drugs and Crime of the alignment of legislation with the UN Firearms Protocol confirmed that the criminal code needs to be amended to appropriately criminalise the trafficking of weapons. The working group on amending the law continued its activities and proposed amendments to Article 348 of the criminal code.

Intensified efforts are evident related to the alignment of legislation with the EU *acquis*. However, some additional activities would need to be carried out in line with the Regional Roadmap to better control of SALW in the Western Balkans, such as awareness raising, outreach and education on the dangers and risks related to the misuse, illicit possession, and trafficking of firearms/SALW.

Operationalisation of the Firearms Focal Point (FFP) continued during 2022 and remains to be made fully operational.

The 2017-2022 strategy for prevention and suppression of **trafficking in human beings**, especially women and children, and protection of victims expired, without ever an action plan being adopted. The report on the implementation of the expired strategy and its external evaluation were finalised. The Council for Combating Human Trafficking has not held a session for almost four years. The Centre for protection of victims of human trafficking is operating. The shelter part of the centre obtained the license and is fully functional. The Ombudsman's reports to the Centre for protection of victims successfully resulted in positive identification of 62 victims. However, the Ombudsman noted the lack of a systematic approach by the competent state authorities combatting trafficking in human beings and the lack of timely protection and assistance to victims, including a large number of children.

Legislative alignment on the **environmental liability and environmental criminal law** *acquis* has not progressed.

The legal framework is still insufficient to guarantee the operational autonomy of the police from the Ministry of the Interior during the pre-investigation and investigation phases, in order to be fully accountable only to the prosecutor. The new Law on internal affairs will have to address this issue as well as the recommendations of the CPT.

Media relations, including press releases on ongoing investigations and trials, are still managed mainly by politicians and representatives of the Ministry of the Interior and not by the prosecution service and/or the police. The prosecutors' offices (especially the Supreme Public Prosecutor's Office) needs to improve its external relations capacity, including relations with media. Government officials, including some at the highest level, and Members of Parliament, continue to comment publicly on ongoing investigations or court proceedings, as well as on the work of individual prosecutors and judges. Such comments are in contradiction with the code of conduct of Members of Parliament. Several media outlets made public leaked information on ongoing investigations, including defendants' statements on alleged links between politicians and organised criminal groups, creating undue pressure on individual members of the judiciary or the prosecution service.

The 2022-2024 action plan for implementing the anti-money laundering/counter-financing of terrorism (AML/CFT) strategy for 2022-2024 was adopted by the government in March 2022. The Reports on the implementation of the Action Plan for 2022 and the first quarter of 2023 have been prepared. The Coordination Body for the Prevention of Money Laundering and the Financing of Terrorism (AML/CFT Coordination Body) is responsible for monitoring implementation of the AML/CFT strategy and for reporting on implementation of the action plan. It is chaired by the Minister of Finance, and comprises members representing

23 institutions/authorities/bodies. The Ministry of the Interior's Financial Investigation Unit (FIU) carries out the functions of Serbia's **Asset Recovery Office (ARO)** relating to the exchange of police data in line with the EU *acquis*. In order to be fully operational and to cooperate effectively with the asset recovery offices of EU Member States, it will require access to all relevant databases in Serbia. This should be enabled through interoperability of the relevant databases at national level. The ARO would need to have a fully operational centralised case management system in place, compatible with the prosecutors' case management system (SAPO) and investigative software (SIDDA/SIDNA). In 2022, a total of 9 156 messages were exchanged via SIENA (8 087 in 2021) and a total of 538 messages were exchanged via CT SIENA (110 sent and 428 received).

The Financial Investigation Unit of the Ministry of the Interior received a total of 372 requests for financial investigations from the competent Serbian Prosecutor's Offices in 2022 (188 in 2021). During the same period, the FIU implemented 498 orders on prohibition of disposal of property and on temporary confiscation of movable property (230 in 2021).

Established within the Service for Special Investigative Methods (SSIM) of the Criminal Police Directorate, Serbia's Fugitive Active Search Team (FAST) is considered to be one of the most proactive and reactive units within the European Network of Fugitive Active Search Teams (ENFAST). According to feedback from the 37 countries participating in ENFAST, FAST Serbia is highly ranked in the entire network both by the number of arrests carried out in Serbia (following police cooperation requests disseminated by other FAST units) and arrests executed abroad (based on police cooperation requests produced by FAST Serbia).

Serbia uses SOCTA (Serious and Organised Crime Threat Assessment) to set operational priorities for fighting organised crime. The Ministry of the Interior prepared the national SOCTA for the period 2020-2023.

In Serbia, the police services still lack a shared case/workflow management system, connecting all institutions and giving them access to a common database. A comprehensive analysis of the state of play of business processes in the Ministry of the Interior and other institutions in charge of combating organised crime has been made. Work is ongoing to formulate a conceptual model of the case management system.

The centralised case management system for prosecutors (SAPO) needs to become fully operational. Since the SIDDA/SIDNA investigative software cannot run at full capacity because not all relevant data reaches it, technical and legal preparations progressed for a single centralised criminal intelligence system (NCIS).

Serbia should urgently assess the interoperability of the information systems and databases of all national law enforcement agencies and units before making any further purchases and improvements.

Implementation and enforcement capacity

As regards the **track record in organised crime**, the data provided by Serbia shows a mixed picture: the number of new investigations and indictments increased while first instance and final convictions decreased.

The number of new investigations increased in 2022. Investigations were initiated against 176 individuals compared with 130 in 2021 (110 in 2020). The number of indictments increased in 2022: 127 individuals were indicted compared with 100 in 2021 (108 in 2020). The number of first instance convictions decreased in 2022: first instance convictions were

rendered against 13 individuals compared with 46 in 2021 (127 in 2020). The number of final convictions decreased in 2022: 96 individuals were convicted in 2022 compared with 98 in 2021 (72 in 2020).

Under general jurisdiction, the data that Serbia has provided show that, in 2022, new investigations were initiated against 2 392 individuals (2 206 in 2021) and 8 595 indictments have been issued (8 165 in 2021). First instance judgments were rendered against 7 291 individuals (5 461 in 2021) and final convictions were rendered against 6 636 individuals (5 788 in 2021).

The number of final convictions is still low. Some trials, such as those of Saric, Belivuk, Jovanjica, are ongoing.

In case of recent attacks in the north of Kosovo there has been either no follow-up at all by Serbian prosecution (in case of the attack against KFOR of 29 May in Zvečan/Zvečan) or a very limited one (in case of the attack on Kosovo Police of 24 September). Perpetrators have not yet been brought to justice.

A comprehensive analysis of the effectiveness of the criminal justice system was done, which was submitted to the Ministry of Justice, and which will form the basis of the work of the Working Group for Amendments to the Criminal Procedure Code.

Cooperation and coordination among law enforcement agencies still needs to be strengthened. Measures in the criminal procedure code designed to prevent the excessive delay in proceedings need to be applied more systematically.

The use of plea agreements needs to be carefully balanced against the need to avoid any impression of impunity in serious and organised crime cases.

Currently, there are three active task forces – for combating organised crime and other particularly serious crimes, for combating crimes against legal traffic with elements of organised crime and for combating human smuggling. They are headed by public prosecutors for organised crime, the members of which include representatives of all competent state authorities.

Concerning **international police cooperation**, there is well-established cooperation with CEPOL, Eurojust, Europol and INTERPOL, including on high-profile organised crime cases.

There is a continuously increasing use of the secure communication channel SIENA (both in terms of exchanged messages and initiated cases) in the last three years. Statistics for 2022 point to the same positive trend: in 2022, a total of 9 156 messages were exchanged via SIENA (8 087 in 2021).

Serbia actively participates in the European Multidisciplinary Platform Against Criminal Threats (EMPACT). In 2022, Serbia participated in 67 operational actions and was a co-leader of one operational action (in the operational action plan (OAP) on cannabis, cocaine and heroin). In 2023, Serbia is participating in 64 operational actions while being a co-leader of two operational actions (in the OAPs on cocaine, cannabis and heroin and in the OAP on migrant smuggling). Serbia continued to participate in the EMPACT joint action days. For the time being, the Serbian police refrained from taking part in the activities where Kosovo is mentioned as an operational action leader or co-leader.

Cooperation between Serbia and the EU Agency for Law Enforcement Training (CEPOL) is well established and based on a working arrangement. A dedicated contact point is in place. Serbia has full access to the CEPOL Exchange Programme as well as to CEPOL's free-of-charge electronic learning system LEEd. It is recommended that authorities of Serbia, with the

assistance of CEPOL, design, prepare and organise targeted training to address firearms trafficking and environmental crime as priority training topics at national level.

Financial investigations are not a regular practice in every criminal investigation even if the situation has improved. Proactive criminal investigations are needed, including pre-seizure planning and a systematic tracking of money flows, aimed not only at asset recovery, but also at gathering circumstantial evidence of inexplicable wealth. In 2022, financial investigations were initiated in 145 cases (128 in 2021). In 2022, there were temporary confiscations in 5 cases and 4 cases of final **confiscation of assets** (6 temporary and no final confiscation in 2021). In the first half of 2023, four final decisions on temporary and four final decisions on permanent confiscation of property resulting from a criminal activity were made.

Extended confiscation is not systematically applied. However, even though results are yet to be seen, understanding and the investigation approach has improved and prosecutors are aware of the importance of consistently applying a ‘follow the money to find the crime’ approach. This should lead to better results in the future in both track records of final convictions and the track record of seizure and confiscation of assets.

Recommendations from last year’s report are still relevant, concerning analysis of the Law on the seizure and confiscation of the proceeds of crime and the manner in which financial investigations are conducted. The criminal procedure code (CPC) and the 2016 Law on seizure and confiscation of proceeds of crime (LSCPC) do not make a clear distinction between direct confiscation systems (‘material gain’ under the criminal code/CPC) and extended confiscation (‘assets’ under the LSCPC). A serious limitation to the application and effectiveness of the LSCPC lies in the fact that it only applies to a limited number of criminal offences and only if a certain threshold of material gain is reached. Third-party confiscation is not systematically used, in part because the LSCPC only allows it when assets have been transferred firstly for a manifestly inadequate price and secondly with the aim of preventing seizure. Furthermore, the law does not provide for a rebuttable presumption of fraudulent transaction (thus liable to third-party extended confiscation) when assets are transferred from the accused to a close family member. The provisions of the Law reduce the effectiveness of extended confiscation.

In practice, to establish that assets are disproportionate to lawful income, prosecutors, financial forensic experts and the Financial Investigation Unit frequently rely on open-source databases such as the land registry, tax administration, or city heating records. This approach does not involve a full forensic analysis of defendants’ property and hardly provides an accurate picture of a defendant’s lifestyle. Without an in-depth investigation or a lifestyle analysis, spending by the defendant may remain hidden (e.g. travel, buying of movable goods) which would otherwise reveal the assets to be more disproportionate to the defendant’s lawful income. The proactive role of the judges in following and encouraging this approach is therefore essential.

In 2022, 35 people were convicted for **illegal crossing of the state border and migrant smuggling** (29 in 2021) in the context of organised crime, and 89 under general jurisdiction (71 in 2021). Six organised criminal groups with a total of 52 suspects were prosecuted and 869 migrants identified.

As in the previous 2 years, no individuals were convicted for **trafficking in human beings** in the context of organised crime in 2022, whereas under general jurisdiction, 9 individuals were convicted (15 in 2021).

There were 14 convictions for mediation in prostitution related to trafficking in human beings under organised crime jurisdiction and 11 (3 in 2021) under general jurisdiction. Given the migratory flows through its territory, Serbia needs to build the capacity to detect possible third-country victims of trafficking in human beings.

In 2022, none of the victims of trafficking in human beings was granted a status of an especially vulnerable witness. It is essential to provide victims of trafficking in human beings with proper protection during trials, including granting them the status of an especially vulnerable witness. This is important not only to avoid re-victimisation but also to collect evidence of force, threat or exploitation, as required by the criminal code for this offence.

In 2022, the Centre for the Protection of Trafficking Victims received 138 new reports on potential trafficking victims; it formally identified 62 victims. Sexual exploitation is still the most dominant form (55%), followed by forced begging at 12.9%, multiple exploitation at 11.3%, forced marriages at 9.5% and labour exploitation at 6.4%. The percentage of children among the victims is extremely high and amounts to 40%. The majority of victims are Serbian. Foreign victims identified in 2022 were all women, from Bosnia and Herzegovina, Uganda, Cameroon, Congo and Tunisia.

Since autumn 2021, CSOs have been publicly drawing attention to a case of potential trafficking in human beings for the purpose of labour exploitation concerning Vietnamese workers, referring to alleged ‘deceptive’ and ‘coercive recruitment’ practices, such as debt bondage, and ‘coercion at destination’, such as confiscation of passports. No progress has been reported on this issue.

In 2022, five individuals (none in 2021) were convicted for **weapons-related offences (including trafficking in weapons)** in the context of organised crime. In 2022, 999 people were convicted in courts of general jurisdiction (735 in 2021).

The new draft law on weapons and ammunition, aiming at further alignment with the EU *acquis*, was finalised during the reporting period, and adoption is pending.

The strategy for small arms and light weapons control (2019-2024) is being implemented, as are related international obligations arising from the roadmap for a sustainable solution to the illegal possession, misuse and trafficking of small arms and light weapons and ammunition in the Western Balkans. The accompanying 2-year action plan (2019-2020) expired and a new one was prepared and submitted in July 2023 for public/e-consultation. As a follow-up to the mass shooting events that took place at the beginning of May 2023, Serbia, with technical assistance from the South Eastern and Eastern Europe Clearinghouse for the Control of Small Arms and Light Weapons (SEESAC), implemented another legalisation campaign. By 1 June, 41 376 firearms, 11 123 explosive devices and more than 2 million rounds of ammunition were handed over, which is more than 10 times the number of firearms turned in during four similar legalisation campaigns implemented between 2015 and 2020.

The instruction on the way of handling weapons, ammunition and explosive devices found on the crime scene by authorised officers and the Protocol for securing weapons found at the crime scene were adopted in May 2022.

The application “Stolen and missing weapons” is operational and regularly updated.

The ballistic laboratory is in the process of accreditation, expected in 2023.

The 2019-2023 strategy and action plan for the **fight against cybercrime** are being implemented. Training was given to strengthen the operational capacity of the Special Prosecutor’s Office for Cybercrime. More human resources are needed for investigations into credit card, e-commerce and e-banking abuses, and for combating illicit and harmful content on the internet.

In 2022, a total of 5 630 criminal cases were submitted to the Special Prosecutor’s Office for High-Tech Crime. During the reporting period, requests for gathering necessary information

were submitted against 196 individuals, investigation/evidential actions were undertaken against 245 individuals, indictment acts were filed against 108 defendants, and 94 defendants were convicted.

Concerning the ‘showing, procuring and possession of pornographic material and child pornography’, investigations/evidential actions were launched against 47 individuals in 2022. Indictments were filed against 40 defendants, and 50 individuals were finally convicted.

Serbia is a party to the Council of Europe Budapest Convention on Cybercrime and was among the 22 countries that signed its Second Additional Protocol on enhanced cooperation and disclosure of electronic evidence on 12 May 2022 and ratified it in February 2023.

The witness protection unit hired six more police officers. Technical capacities were improved by getting three special vehicles with a degree of protection.

In 2022, as regards the fight against **money laundering**, and based on indictments by the special prosecutor for organised crime, there were 3 final convictions (7 in 2021).

Serbia has a well-functioning central record of beneficial owners. In 2022, the Business Registers Agency filed a total of 2 121 (2 726 in 2021; 1 900 in 2020) requests to institute misdemeanour proceedings; the competent misdemeanour courts rendered 1 904 (502 in 2021) decisions. Serbia reported 1 563 suspicious transactions in 2022 compared with 2 053 in 2021 (2 276 in 2020).

Overall, the fight against money laundering and financing of terrorism should focus on the sectors most at risk for money laundering, including the financial sector and designated non-financial business and professions (e.g. real estate sector, casinos, lawyers, notaries, currency exchange offices). Unusual proliferation of assets or money administration inconsistent or not proportionate with regular business practices should be subject to preventive checks to detect links with criminal activities. The APML (the Serbian Financial Intelligence Unit) is well developed.

Serbia should step up its efforts on fighting **environmental crime** and create awareness about the phenomenon. Enforcement remains a key priority, including establishing a track record in alignment with the Environmental Crime Directive. The Ministry of the Interior set up the unit for environmental crime suppression and environment protection within the General Police Directorate. The unit is operational. In 2022, a total of 244 messages were exchanged via SIENA regarding environmental crimes. During the same period, there was one order to conduct an investigation (none in 2021), 16 indictments (13 in 2021), four first instance convictions (11 in 2021) and two final convictions (6 in 2021).

Additional effort should be put into the fight against **illicit trafficking of cultural property** and into protecting cultural heritage, and to bolster cooperation with countries in the region on fighting illicit trafficking of cultural goods.

Cooperation in the field of drugs

Institutional set-up and legal alignment

The national drug strategy expired at the end of 2021. It will be used until the new one is enacted. Work on the new policy document ‘*Operational plan for the prevention of drug abuse for period 2023-2027*’ is ongoing.

A working arrangement between the European Monitoring Centre for Drugs and Drug Addiction (EMCDDA) and the Office for Combating Drugs, the Ministry of the Interior and the Ministry of Health has been in force since December 2020, and cooperation extremely good. Serbia has a well-established national early-warning system to liaise with EMCDDA on

new psychoactive substances and new trends. This also applies to the associated risk assessment procedure and the subsequent control mechanism for adding new psychoactive substances to national drug control legislation. Serbia regularly updates and publishes reliable information on new psychoactive substances. In 2022, the list of psychoactive controlled substances was updated twice and a total of 42 new psychoactive substances were added to the list. All tables for the 2022 data reporting cycle were sent to EMCDDA within the deadline.

Serbia's National Drug Observatory is fully staffed and operational. The National Drug Observatory continued with implementation of its three core functions: data collection; monitoring, analysis and interpretation of the data collected; and reporting and dissemination. Serbia progressed on data collection, analysis and reporting though there is room for additional improvement to be fully aligned with the requirements and methodology of the EMCDDA.

The decree on the manner of preserving, sampling, storing and destroying psychoactive substances has been in force since August 2021, providing a necessary legislative framework for psychoactive controlled substances, i.e. chemical/biological material either seized or confiscated. However, the current legislation still requires that the entire seized quantity be kept as material evidence for court proceedings. A national contact point for the transmission and analysis of samples of controlled psychoactive substances has been appointed in July 2023.

As of 2021, four regional centres are operating as part of the Drugs Combating Service of the Department for Coordination, Cooperation and Drugs Abuse Prevention.

In February 2022, the Drugs Combating Service created two new job positions totalling 80. Not all positions have been filled and it is expected that only 73 will be filled by the end of 2023.

Implementation and enforcement capacity

In 2022, 34 individuals were convicted under the organised crime jurisdiction for the production, processing, sale or offering for sale of narcotics, and 766 under general competence jurisdiction. The Prosecutors' Office for Organised Crime filed indictments against 44 individuals.

In 2022, a total of 7.08 tonnes of various substances (including 61.22 kg of heroin) were confiscated, as well as significant quantities of ecstasy, amphetamine, etc. Some 1.08 tonnes of seized psychoactive substances and 2 722 pieces of various narcotic drugs were destroyed in 2022, and an additional 2.0 tonnes were destroyed in May 2023. The destruction of seized precursors remains an issue that needs to be regulated by new legislation. In 2022, a working group prepared the decree on the destruction of precursors, which remains to be adopted. By December 2022, 77 tonnes of precursors were collected, packed and properly stored, while awaiting destruction.

In May 2023, in a coordinated action with Europol and the Dutch police, an organised criminal group behind multi-tonne shipments of cocaine trafficked from Colombia, Brazil and Ecuador to the EU was dismantled. As a result, 13 individuals were arrested in Serbia and 0.7 tons of cocaine seized in the Netherlands, 1.2 tonnes in Belgium and 5 tonnes in Aruba. In addition to drugs, vehicles, firearms, explosives and about EUR 3 million were seized.

During the 2022 data collection exercise under the EMCDDA-IPA 7 project, Serbia provided, for the first time, data on all the security indicators: drug law offences, drug seizures, drug purity/potency, drug composition, drug prices, and cannabis cultivation sites. It furthermore demonstrated a good capacity to collect and store data on these indicators. Some of the indicators still need improvement with a view to being aligned with EU standards.

At the end of 2022, Serbia submitted the updated national drug situation overview.

A software programme is in operation that gives daily updates on quantities of seized drugs, and provides an e-communication channel on seized drugs with the National Forensic Centre on Seized Drugs. 'Security bags' were introduced to prevent any tampering with collected evidence. Since January 2021, seized drugs are stored centrally in five containers and in line with clear guidelines based on legal advice.

The government produced a number of documents as part of the programme for the prevention of the use of psychoactive substances, based on scientific evidence and in alignment with international standards. A comprehensive and all-involving prevention programme is still not in place.

Fight against terrorism

Institutional set-up and legal alignment

Following the expiry of the 2017-2021 national strategy for prevention and fight against terrorism, a new strategic document and accompanying action plan to cover all forms of radicalisation and violent extremism (irrespective of political, religious or ethno-nationalist root causes), in line with EU policies, remain to be adopted. A baseline study on all forms of radicalisation and violent extremism present in Serbia was adopted in October 2023. This study should be an annex to the new strategy.

A mechanism for regular monitoring and reporting on implementation of the strategy was never fully operational. Implementation reports on the activities envisaged under the expired 2017-2021 strategy are prepared but not yet adopted.

In July 2022, the Serbian Regulation on criteria for the identification of critical infrastructure and the manner of reporting entered into force, creating the conditions for implementation of the legislative framework for critical infrastructure. The process of identifying critical infrastructure is ongoing.

Following the adoption in June 2021 of the Law on the national database for the prevention and fight against terrorism, the work on establishment of the national database is in its final stage. Implementation of the Law should be closely monitored to prevent any potential abuse.

Implementation and enforcement capacity

Serbia regularly reports on implementation of the bilateral arrangement in the framework of the EU-Western Balkans Joint Action Plan on Counter-Terrorism for the Western Balkans. The sixth report was submitted in February 2023 and the seventh report in August 2023. Serbia does not participate regularly in the meetings of regional network of national P/CVE coordinators, chaired by the EU. Serbia appointed in July 2023 a new National Coordinator for the Prevention and Combating of Terrorism and the new members of the National Coordination Body for the Prevention and Fight against Terrorism. The new coordinator and the new National Coordination Body should step up timely and efficient implementation of the Joint Action Plan and participation in planned and agreed projects.

In 2022, there were no convictions concerning terrorism offences. Under general competence jurisdiction, one person was convicted for 'participation in war or armed conflict in a foreign country'. The Prosecutors' Office for Organised Crime filed an indictment against one person for the offence of 'public inciting to commission of terrorist offences' (Article 391a Criminal Code).

A regional network of P/CVE specialists was established. It is composed of prison, probation and other P/CVE practitioners and decision-makers, coming from local P/CVE coordination mechanisms or other institutions or organisations.

Activities aimed at preventing all forms of radicalisation and violent extremism, including those conducted in collaboration with civil society organisations, are still under-represented both in the national strategic framework and on the ground. Strategic communications campaigns to address the problem have not been developed.

Training started in May 2022 for the members of four local teams in charge of reintegration, rehabilitation and resocialisation of foreign terrorist fighters and their families.

A mapping of the groups most vulnerable to radicalisation has not yet been conducted. Measures undertaken to prevent and address violent extremism in sport do not yet appear to be sufficient. No concrete steps have been taken to explore possible connections between right-wing extremism and football ultras and hooliganism. Collaboration with civil society organisations in P/CVE activities is still extremely rare. The authorities have not yet put in place a consistent response to activities of far-right groups. Support from the Radicalisation Awareness Network, notably on strategic communications, could be increasingly requested.

The National Council for the Prevention of Negative Phenomena in Sports has been established. The main task is to coordinate activities to prevent violence and misbehaviour of spectators at sports events, doping in sports, match-fixing and other negative phenomena in sports, as well as to fulfil international commitments in these areas.

Additional efforts are needed to investigate and prosecute recruitment networks of foreign fighters, particularly in the context of Russia's war of aggression in Ukraine.

Authorities should improve capacity to address terrorist and extremist content online, increasing efforts to refer terrorist content to internet companies and enhancing efforts to empower civil society to develop effective counternarratives online.

Serbia remains a reliable cooperation partner for Europol and Eurojust. Serbia has an additional contact point for Eurojust – a national correspondent for terrorism matters. Serbia updates Europol on the foreign fighters' list and terrorism-related incidents and effectively uses SIENA for counter-terrorism. Cooperation with Europol has enabled Serbia to start addressing terrorist content online. It actively participated in the Europol 'Check the Web' project and uses SIRIUS platform for internet-based investigations. Moreover, the posting of a Serbian Liaison Officer at Europol has continued to prove very valuable for strengthening cooperation. Serbia continues to participate in the integrative internal security governance (IISG) mechanism.

In 2022, Serbia also took part in a number of INTERPOL operations and projects (e.g. Hotspot Mediterranean 2022) and actively participated in CEPOL activities.

Serbia continued to apply the approach to preventing and combating the financing of terrorism, based on risk assessment. The overall terrorism financing risk in 2022 was assessed as medium-to-low, while the risk of weapons of mass destruction proliferation financing was assessed to be low-to-medium.

Judicial cooperation in civil, commercial and criminal matters

Eurojust and Serbia have continued their good cooperation in criminal matters, notably through the Serbian Liaison Prosecutor (seconded in March 2020), by taking part in four joint investigative teams (JIT) supported by Eurojust in 2022, along with 12 coordination meetings. In 2022, Serbia acted upon 181 cases (including 100 requests from the previous reporting period). Assistance was requested from Serbia in 41 operational cases, while Serbia requested assistance through Eurojust in 40 cases (compared with 20 cases in 2022). Serbia is the second most-requested country in the region, and the fifth most-requested third country in Eurojust's network. Serbia appointed a representative to the contact group of the Western Balkan CRIM

JUST project. There is a need to discuss working arrangements for cooperation with the European Public Prosecutor's Office (EPPO). According to the 2022 EPPO Annual Report, Serbia was involved in one EPPO case in 2022 as place of criminal activity and financial damage (one in 2021).

Reporting continued on implementation of the 2007 Hague Convention on Child Support (HCCH), in force since February 2021. Serbia is considering the possibility of accession to the HCCH 2019 Judgments Convention (Recognition and Enforcement of Foreign Judgments in Civil or Commercial Matters). National legislation still needs to be aligned with the EU *acquis*. Following the adoption of constitutional amendments, initial steps were taken for amending the Criminal and Criminal Procedure Code, the Law on Juvenile Criminal Offenders and Criminal Protection of Juveniles. This would be the basis to proceed with the adoption of the new Law on Judicial Cooperation in Criminal Matters with EU Member States. Analysis of administrative/training and budgetary/financial requirements since 2021 still need to be followed up.

In 2022, Serbia worked on 3 413 new requests for mutual assistance in **civil** matters (1 925 incoming and 4 453 outgoing) and resolved 3 376 cases in total (including from the previous period). Among them, Serbia replied positively to 2 350 and negatively to 1 026 requests. The average duration of procedure for providing MLA was 388 days. For requests in **criminal** matters, Serbia worked on 4 871 cases in 2022 (3,487 incoming and 1,384 outgoing), resolving 4824 requests (4 200 positively and 901 negatively). Serbia continued its regular workflow, with an average duration of procedure (for providing MLA) of 388 days in civil and 486 days in criminal matters. There were no developments regarding the Montenegrin extradition request to ensure that former President of the State Union of Serbia and Montenegro serves his (final and enforceable) prison sentence.

Legal and irregular migration

Serbia contributed to the management of the mixed migration flows towards the EU and cooperated with the EU, EU Member States and its neighbours to implement the EU Action Plan on the Western Balkans presented by the Commission in December 2022. Serbia took in particular steps to further align its visa policy with the EU visa policy. Additional progress along all the pillars of the Action Plan is expected.

Serbia participates in the regional Anti-Smuggling Operational Partnership with the Western Balkans (launched in the EU-Western Balkans Justice and Home Affairs Ministerial meeting on 3 November 2022) to support law enforcement and judicial cooperation against criminal smuggling networks, and to increase border management capacities. Serbia also took part in the regional meeting of the Network of European Immigration Liaison Officers which took place in Tirana on 28-29 March 2023, to facilitate the exchange of operational information and intelligence and support the implementation of the Anti-Smuggling Operational Partnership.

Institutional set-up and legal alignment

Responsibilities for managing migration are shared between the Ministry of the Interior, the Commissariat for Refugees and Migration, and the following ministries: Labour, Employment, Veteran and Social Affairs; Foreign Affairs; Justice; Defence; Health; and Education, Science and Technological Development. They are coordinated by the government working group on mixed migration, with the Commissariat for Refugees and Migration acting as secretariat.

Amendments to the Law on foreigners and the Law on employment of foreigners were adopted in July 2023 aiming at further alignment with the EU *acquis*. The amendments to the Law on foreigners are linked to the deadline for extension of the temporary residence permit and its

extended duration. Furthermore, it is proposed that temporary residence will be issued in the form of a card and not in the form of a sticker in the passport. Amendments to the Law on employment of foreigners aim at unifying the procedure for obtaining a temporary residence permit and the procedure for obtaining a work permit.

In March 2022, the government adopted a decision providing facilitated access to its territory and granting temporary protection to all people having fled Russia's war of aggression against Ukraine. The decision was extended in March 2023 for another year. It allows access to the right of residence, identity documentation, the right to education, access to the labour market and healthcare in accordance with the regulations governing the rights of foreigners. It is largely in line with the EU Temporary Protection Directive. An updated response plan for people fleeing Russia's war of aggression against Ukraine, which includes reception and protection measures, was adopted by the government in March 2023.

The response plan for the management of mixed migration was updated in July 2022. It covers the main priority areas such as: border management and prevention of migrant smuggling; access to asylum; reception and assistance to vulnerable migrants; assisted voluntary return and reintegration in the countries of origin; and supporting local communities under high migratory pressure.

As for combating irregular migration, the 2022-2027 strategy for integrated border management and the 2022-2024 action plan, adopted in August 2022, put special emphasis on efficient registration of irregular migrants and on their processing, but also on coordination among institutions within the migration management system and on return procedures to either the country of origin or the country of previous entry.

In March 2023, Serbia became an observer in the European Migration Network through the signature of an administrative agreement between the Commissariat for Refugees and Migration, as national contact point, and the European Commission.

Serbia has 12 bilateral readmission agreements, including with Bosnia and Herzegovina, Montenegro and North Macedonia. A readmission agreement was signed with Azerbaijan in November 2022. Negotiations with Argentina, Belarus, Georgia, Türkiye and Ukraine are ongoing.

Efforts to establish cooperation with countries of origin of irregular migrants have been made with Afghanistan, Algeria, Iraq, Iran, Morocco and Pakistan. As no response was received from them, at the end of 2021, an emergency request was sent to the authorities of Pakistan, Iraq, Algeria and Morocco. The Iraqi authorities indicated that there is no readiness to conclude a readmission agreement; the others have not responded so far.

Implementation and enforcement capacity

The Western Balkan migratory route continues to be firmly established and to exert pressure on the entire region. Serbia played an active and constructive role in the management of mixed migration flows towards the EU and continued to cooperate effectively with its neighbours and EU Member States. Serbia, supported by the EU, continued to host and accommodate substantial numbers of third-country nationals.

According to the Commissariat for Refugees and Migration (KIRS), in 2022 a total of 124 127 migrants passed through the reception and asylum centres in 2022 which represents a sharp increase in comparison with 2021 (68 308). The length of the average stay went down to 16 days (30 in 2021) and the average number of people hosted in government centres on any one day increased from 4 684 in 2021 to 4 809 in 2022. For the same period, the Ministry of the

Interior reported that 12 852 irregular migrants had been apprehended within Serbia in 2022, of which 36% originated from Afghanistan and 29% from Syria.

In 2022, 51 017 migrants were prevented from entering at the border and 182 criminal charges (129 in 2021) were filed against 249 people (190 in 2021). This includes 6 criminal charges against 52 members of organised criminal groups, suspected of smuggling irregular migrants to Bosnia and Herzegovina, Croatia and Hungary.

Daily cooperation with Europol's European Migrant Smuggling Centre takes place at several levels, including through EMPACT (European Multidisciplinary Platform Against Criminal Threats). Serbia participated in several international operations aimed at combating both irregular migration and trafficking in human beings. Serbia has also established together with Hungary and Austria the operational task force "ladder" targeting violent migrant smuggling at the Hungarian-Serbian border.

As regards accommodation in open centres for irregular migrants, there are 11 reception/transit centres with a total capacity of 2 800 places in solid buildings; an additional 1 500 places for short stay could be made available in Rubb Halls. Including the 2 500 beds in asylum centres, the total number of available places amounts to 6 800. Since the number of migrants hosted in government centres in 2023 fell to 2 200 on average, two reception centres (Divlijana and Bogovadza) were closed and two centres temporarily shut down.

The Commissariat for Refugees and Migration is operating without a full complement of staff, while staffing in the reception centres remains fully dependent on external (EU) funding.

As regards detention capacities, the extension of the centre for foreigners in Padinska Skela is ongoing. It will provide an additional 60 places (bringing the total capacity to 110 places). In 2022, a total of 272 foreign nationals were placed in the detention centre for foreigners in Padinska Skela, mostly citizens of Afghanistan, Syria, Türkiye and India. The mobile centres in Dimitrovgrad and Plandiste for short-term detention, with a capacity of 100 places each, are used mainly in the context of readmission. In 2022, these facilities accommodated a total of 303 foreign nationals, mostly citizens from Afghanistan, Syria and Morocco.

In 2022, Serbia increased by 72 the number of police officers engaged to provide personal and facility security in detention centres.

The age and gender structure of irregular migrants is similar to previous years with a majority of young adult single males. The top three nationalities are Afghan, Syrian and Pakistani, representing 77% of accommodated individuals in 2022.

One of the most vulnerable groups of children are unaccompanied and separated children travelling alone or in a group of adults and often staying outside of the centres; they are the hardest to reach and link with needed services and resources. For those unaccompanied children accommodated in the asylum or reception centres, presence of adult beneficiaries in the same facilities poses additional protection risks. Appropriate accommodation and protection arrangements, especially in cases of unaccompanied and separated children, are exclusively dependent on external funding.

On average, in 2022, 126 unaccompanied and separated children were present on the territory of Serbia per month (5% more than in 2021), and a total of 2 688 (100% more than in 2021) throughout the year. In 2022, the Centres for Social Work issued a total of 1 048 decisions on guardianship. State-run social protection institutions accommodated 72 unaccompanied children while 22 unaccompanied asylum-seeking children were accommodated in NGO shelters.

Although the legislative framework for protecting refugee/migrant children is mostly in line with international standards, limited resources and implementation within the social welfare system create protection gaps. These include an overstretched guardianship institution, overstrained case management capacity dependent on external funding, and poor application of best interest assessment/determination procedures.

Serbia has continued to satisfactorily implement the EU-Serbia readmission agreement, which is facilitated by implementing protocols concluded with 21 EU Member States. However, Serbia should continue cooperating on readmitting irregularly staying third country nationals that reached the EU via Serbia, in application of the EU-Serbia readmission agreement. In 2022, 5 710 Serbian nationals were ordered to leave and 3 190 were effectively returned.

An assisted voluntary return and reintegration programme continues in Serbia, offering support to those migrants wishing to return to their countries of origin. With the support of the EU and EU Member States, the International Organization for Migration (IOM) is implementing the assisted voluntary return and reintegration (AVRR) programme, building the capacity of Serbia's return system and facilitating access to assisted voluntary return. In 2022, 130 people were returned to their country of origin, of which 53 to India, 13 to Cuba, 10 to Tunisia, 10 to Jordan, 8 to Pakistan and 6 to Iraq.

The Ministry of the Interior is in charge of forced return. Non-voluntary returns are sporadic and ad hoc. Comprehensive return management is still lacking in Serbia; this is a combination of several factors, including lack of cooperation with key countries of origin for non-voluntary returns/readmission, as well as institutional and operational gaps preventing the operation of non-voluntary returns. Serbia should resume systematic registration of migrants. As part of the registration process, screening for nationality, vulnerability and need for international protection should be carried out, as well as collecting information for risk analysis, on irregular migration and on other cross-border crime including trafficking in human beings and terrorism. The registration data should also include data to enable the authorities to potentially process individuals for voluntary and forced return in line with the national legal framework. Out of 3 286 requests, 1 754 were approved and 679 third-country nationals were returned to Serbia. The largest numbers of requests were submitted by Croatian and Romanian authorities for readmission of nationals from Burundi, Afghanistan, India and Cuba.

In 2022, Serbia submitted 1 657 requests to foreign authorities for the readmission of third-country nationals, of which 1 585 requests were approved and 191 individuals were returned from Serbia. The lack of enforceable bilateral readmission agreements with third countries is a serious obstacle, hindering Serbia's ability to manage returns effectively. In line with the EU Action Plan on the Western Balkans, Serbia should pursue its efforts to increase returns to their countries of origins of migrants with no right to stay.

Asylum

Institutional set-up and legal alignment

Serbia has the necessary institutions to manage asylum applications. The Asylum Office (AO), a separate unit within the Border Police Directorate, is in charge of determining status, while appeals against its decisions can be submitted to the Asylum Commission and subsequently to the Administrative Court of Appeal. The Asylum Commission is composed of representatives from different line ministries, including an independent expert and chaired by a representative of the Ministry of the Interior.

In 2022, the Asylum Commission rendered 62 decisions, but none of them granted international protection and only 10 appeals were upheld (i.e. the cases were referred back to the AO). The

third appeal authority, the Administrative Court, rejected all complaints. No applicants were heard by the appeal authorities. The Asylum Commission and the Administrative Court did not exert corrective influence over the decisions of the AO.

The Commissariat for Refugees and Migration is responsible for the reception of asylum seekers and integration of people granted international protection.

Serbia's legal framework is largely aligned with the EU *acquis*. Serbia needs to further adapt its legislation, notably as regards effective 'access to the procedure' (Article 36 of the Law on asylum and temporary protection), 'appeal bodies' (Article 21), 'rights and obligations of applicants/persons under international protection' (Articles 48-73), 'free legal aid' (Article 56), and 'safe third-country procedure' (Article 45). Amendments to the Law on asylum and temporary protection are under consultation.

Implementation and enforcement capacity

The number of asylum seekers remained very low in 2022. Serbia is still a transit country. Out of the 4 243 individuals who expressed the intention to seek asylum and obtained a registration certificate, only 320 officially lodged an asylum application. The absconding rate remains higher than 50%, while subsidiary statuses are accorded more extensively than refugee statuses.

In 2022, decisions were made on a total of 2 302 individuals. Only 10 asylum seekers received refugee status, 20 received subsidiary protection, while 62 had their asylum request denied. In 257 cases, the procedure was discontinued because the applicant absconded. For 1 164 citizens of Ukraine a certificate on registration of intention for temporary protection was issued and 1115 decisions on granting temporary protection were delivered.

Further alignment with the EU *acquis* and international standards, as well as more effective implementation, is still needed to ensure fair and fast asylum processing, especially regarding the length of the asylum procedure and an increase of the refugee recognition rate. Prompt identification of vulnerable asylum seekers needs to be continuously ensured by the competent authorities and at the earliest reasonable time; manifestly unfounded and founded claims need to be promptly processed.

The provision of information and access to legal counselling for asylum seekers at Nikola Tesla airport has improved. Sufficient safeguards to prevent refoulement should be included in the operating procedures of the border police. Independent monitoring could further ensure that border authorities are acting in line with the principle of non-refoulement and the prohibition of collective expulsion.

The quality of asylum decisions needs to be further improved through sustainable quality assurance mechanisms and harmonisation of the decision-making process. The AO needs to increase its capacity for actual handling of asylum applications. The Asylum Commission and the Administrative Court need to apply their corrective influence over the decisions of the Asylum Office more effectively and review cases on merits. Further advanced training is needed, including for adjudicators at the second and third instances, as well as ensuring standardised and sustainable training resources.

Additional capacity building for the Asylum Commission and the specialisation of judges in the administrative court could improve legal certainty. There is no state-funded free legal aid in the asylum procedure.

Serbia has a fully functioning biometrics database and a system for automated fingerprint identification, used within the Ministry of the Interior; both of these are used for registering asylum seekers. Irregular migrants who are not declaring their intention to seek asylum are not

registered and no status determination takes place. This contributes to the vulnerability of migrants transiting the country. Currently all police stations, but not all border crossing points, in Serbia have access to the automated fingerprint identification system. Serbia has developed a roadmap for enabling future operations in relation to the Eurodac and Dublin Regulations, containing steps on legal, strategic, technical and training-related preparations.

In accordance with the Law on asylum and temporary protection, the Commissariat for Refugees and Migration takes care of the material conditions for receiving asylum seekers. There are six centres for asylum with a total capacity of 2 500 places.

The basic legal framework for integration exists, including good practices of individual integration plans. However, major obstacles to integration in practice remain the quality of ID documents to facilitate their access to socio-economic rights and services, and the lack of issuance of travel documents. Also, the relevant legislation needs to be amended to provide refugees with access to permanent residency and citizenship. The funds needed for integration programmes for people granted asylum are provided in the budget on an annual basis. The funds provided for in the 2022 budget were sufficient to cover the current needs.

Serbia proposed amendments to the Law on citizenship according to which a foreigner may be granted Serbian citizenship after living in Serbia for only a short period of time. The applicant had to have a Serbian secondary school diploma or a recognised higher education diploma from a third country, be self-employed or employed by a Serbian company. Applicants with an approved right to asylum fulfilling the same criteria could apply for citizenship after three years of residence in Serbia.

While the EU respects the sovereign right of Serbia to decide on its citizenship and naturalisation policies, the Commission has expressed its concerns to the competent Serbian authorities as regards the possible security risks for the EU linked to the fast-track acquisition of visa-free travel rights for nationals of countries that would be otherwise visa required. Serbia should refrain from any amendment of its citizenship law that would provide the possibility of a fast-track acquisition of Serbian citizenship for third-country nationals who have resided for only a very short period in Serbia. Such a possibility risks undermining the EU visa policy since Serbian citizens are allowed to travel visa-free to the EU. Following the concerns raised by the EU the Government has withdrawn the proposal.

An updated roadmap for cooperation with the European Union Agency for Asylum (EUAA) is being implemented. Serbia participated as an observer in the reception network organised by the EUAA. A European migration liaison officer, responsible for the entire region, operates from Belgrade.

Visa policy

Serbia's visa policy is not yet fully aligned with the list of third countries whose nationals are subject to a visa for short stays in the EU. Nationals of the following countries that are on the EU visa-required list can still travel visa-free to Serbia: Armenia, Azerbaijan, Bahrain, Belarus, China, Indonesia, Jamaica, Kyrgyzstan, Kuwait, Kazakhstan, Mongolia, Oman, Qatar, Russia, Suriname and Türkiye.

In 2022, nationals of Burundi, Tunisia, India, Cuba and Türkiye in particular were using Serbian territory to undertake irregular migration towards EU Member States along the Western Balkans route. By September 2022, some 15% of all irregular border crossings in 2022 (compared with 4% in 2021) were accounted for by nationals who could travel visa-free to at least one Western Balkan partner.

In October 2022, the Serbian government decided to abolish the visa exemptions for Tunisia and Burundi nationals and, in December 2022, this was likewise decided for Guinea Bissau, India, Cuba and Bolivia. The President of India visited Serbia in June 2023 and a visa simplification mechanism was announced. In June 2023, the President of Cuba visited Serbia and an agreement on a visa-free regime for holders of official and diplomatic passports was signed.

The sixth report under the visa suspension mechanism (October 2023) noted that Serbia has taken action to address the Commission's previous recommendations. However, further efforts are needed on visa policy, border management, the fight against corruption and organised crime, and preventing and countering all forms of violent extremism.

The visa-free regime with the EU continued to be smoothly implemented. The number of first-time asylum applications from Serbia in the EU was 2 390 in 2022 (2 055 in 2021; 1 770 in 2020). In the first 5 months of 2023, the number of first-time applicants was 1 355.

The Serbian visa issuing system is partially in line with the EU visa code. For further compliance, Serbia has to adjust visa procedures and visa regimes to bring them into line with relevant EU regulations. The Serbian visa information system is operational in all diplomatic missions and consular posts. The issuing of visas at national border crossing points is exceptional. The Commission's sixth report under the visa suspension mechanism of October 2023 concluded that Serbia continues to meet the visa liberalisation benchmarks.

Schengen and external borders

Institutional set-up and legal alignment

The border police is a specialised civilian body and is part of the General Police Directorate within the Ministry of the Interior. The legal framework for border control is largely aligned with the EU *acquis* (latest changes in 2018). Continued efforts are needed on further legal alignment and implementation of EU requirements. Issues relating to national borders are regulated in the Law on border control.

In July 2023, the government adopted the Schengen action plan. The new 2022-2027 integrated border management (IBM) strategy and its action plan were adopted in August 2022. The strategy defines a new concept of integrated border management in light of the new EU policy on IBM and includes border control and border checks and State border surveillance (green border surveillance). Following adoption, the new Coordination Body for monitoring the IBM strategy and action plan was appointed in June 2023. Consistency between strategic documents in the border control area needs to be achieved.

Implementation and enforcement capacity

In 2022, 261 graduates from the Centre for Basic Police Training were admitted to the Border Police Directorate. The Border Police Administration is regularly planning professional training for border police officers, who, after successful completion of the training, are assigned to its organisational units. A common training programme and common risk analysis, in accordance with the common integrated risk analysis model (CIRAM) methodology, is implemented at national level. Further efforts are needed at regional and local level regarding the staffing and training of risk analysts.

The implementation of the IBM action plan is delayed.

Significant investment is needed in human, financial and technical resources for border control (second-line checks, border surveillance and equipment for the detection of forged documents), and in infrastructure at border crossing points, in line with Schengen requirements. Serbia

should also increase the capacity of all stakeholders in IBM to achieve interoperability with EU border management information systems. Serbia needs to intensify its efforts to implement the Directive on the obligation of carriers to communicate advance passenger data, and the use of passenger name record (PNR) data for the prevention, detection, investigation and prosecution of terrorist offences and serious crime.

Inter-agency cooperation is satisfactory, e.g. between border police and customs at border crossing points. Further improvements are needed on information exchange through mutual access to databases and a formalised and secure information exchange system. An anti-corruption preventive mechanism for Authorities involved in IBM (the Border Police, Custom Service, Veterinary Directorate and Directorate of Plant Protection) has been adopted, but further efforts are needed at regional and local level.

Serbian authorities have established solid cooperation links with the European Border and Coast Guard Agency (Frontex). The joint operation with the Serbian border police at the Serbian-Bulgarian border that started in 2021 was extended to include the Serbian-Hungarian border. The aim of this cooperation is to control irregular immigration flows, to tackle cross-border crime and to strengthen European cooperation. Progress has been made in the negotiations on the new status agreement between the EU and Serbia. Its conclusion will, in line with the new mandate of Frontex, enable deployment also at third-country borders, such as at the border with North Macedonia.

Based on the Police Cooperation Convention for Southeast Europe (PCC SEE), the Ministry of the Interior established a cooperation with all neighbouring countries. Joint patrols with neighbouring countries are ongoing with Hungary, North Macedonia and Romania. Information exchange takes place through joint contact centres. Serbia receives capacity building and border management assistance from EU Member States.

In 2022, a total of 23 control activities were carried out in the organisational units of the Border Police Administration. Disciplinary proceedings for serious violations were initiated against 121 police officers. The Internal Control Sector filed criminal charges against police officers suspected of the criminal offence of abuse of official position under Article 359 of the criminal code. A new preventive anti-corruption mechanism was adopted and training courses for participants of all IBM agencies were held. Leaflets on anti-corruption awareness were distributed at all border crossing points (including the airport).

The Interim Common Crossing-Points (CCPs) between Kosovo and Serbia continue to be operational. Only two of the six permanent CCPs have been established (Merdare and Mutivodë/Mutivode). Serbia still has not established permanent CCPs to be hosted by their side (Jarinje/Rudnica, Končulj/Dheu i Bardhë and Depce/Muçibabë), which led to a suspension of EU funds for this project in July 2018. In addition, Serbia needs to engage constructively to enable the construction of the third CCP hosted by Kosovo in the north of Kosovo at Tabavije/Bërnjak-Tabalije/Brnjak. Additional efforts are required from Serbia to close illegal roads and bypasses to ensure exclusive use of official crossing points for goods and persons entering into or leaving Kosovo.

2.3. ECONOMIC CRITERIA

<i>Table 4.1:</i>	2014-19	2020	2021	2022
Serbia - Key economic figures	average			
GDP per capita (% of EU-27 in PPS) ¹⁾	40	43	44	44
Real GDP growth	2.4	-0.9	7.5	2.3
Economic activity rate of the population aged 15-64 (%) , total	64.9	66.4	70.3	71.4
<i>female</i>	57.1	59.2	63.0	64.4
<i>male</i>	72.7	73.6	77.5	78.3
Unemployment rate of the population aged 15-64 (%) , total ¹⁾	15.4	9.5	11.4	9.7
<i>female</i>	16.2	9.9	12.4	10.1
<i>male</i>	14.7	9.2	10.6	9.4
Employment of the population aged 15-64 (annual growth %)	3.8	-0.2	2.6	2.3
Nominal wages (annual growth %)	3.9	9.4	9.4	13.8

Source: national sources

In line with the conclusions of the European Council in Copenhagen in June 1993, EU accession requires the existence of a functioning market economy and the capacity to cope with competitive pressure and market forces within the Union.

2.3.1. The existence of a functioning market economy

Serbia is **at a good level of preparation** and has made **some progress** in developing a functioning market economy. After a strong rebound in 2021 from the contraction induced by COVID-19, the Serbian economy decelerated substantially in 2022 impacted by the economic fallout from Russia's war of aggression against Ukraine, in particular as regards rising inflation via soaring energy and food prices. Consumer price inflation surged in 2022 and continued to rise in early 2023, reaching a peak of 16.2% in March 2023, which led the central bank to steadily tighten its policy stance. After widening sharply in 2022, the current account deficit decreased in the first half of 2023, in particular due to the lower cost and the lower volume of energy imports. Banking sector stability was maintained while lending growth decelerated substantially. High inflation helped improve the budget balance in 2022, despite very substantial capital transfers to state-owned energy utilities and further ad hoc fiscal support measures that were not always well targeted. Budget revenues also benefited from progress with tax administration reforms. The public debt ratio fell and public finances are expected to be anchored by a new set of fiscal rules. The unemployment rate decreased in 2022 and vulnerable categories of workers benefited from the recovery. However, structural problems persist, including a labour supply impacted by outward migration, persistent skills mismatches, and a gender employment gap. Ensuring timely implementation of the youth guarantee plan is expected to contribute to addressing the skills mismatch.

Major reforms of public administration (such as the wage system reform) and of the governance of state-owned enterprises (SOEs) continued to advance slowly, prolonging long-standing

inefficiencies. However, in 2023, there has been some acceleration of governance reforms, in particular in the energy sector. The regulatory and administrative burden for doing business has been reduced, but the private sector continues to be affected by a lack of transparency and predictability in the way business-related legislation is adopted. Structural challenges remain for State aid, competition and public procurement. The State retains a strong footprint in the economy and the private sector is underdeveloped and hampered by weaknesses in the rule of law, in particular regarding the tackling of corruption and judicial inefficiency. Last year's recommendations have been partially implemented and remain partly valid.

In the coming year, Serbia should in particular:

- plan a gradual deficit reduction in the 2024 budget and in the medium-term fiscal framework in line with Serbia's commitments in its Stand-by Arrangement (SBA) with the IMF and the new fiscal rules;
- continue the preparatory steps towards an appropriately designed public sector wage system reform; and
- continue the deployment of the SOE ownership and management strategy for 2021-2027 by implementing the remaining steps of the 2021-2023 action plan and by preparing a new time-bound action plan for 2024-2027.

Economic governance

The authorities have remained committed to macroeconomic stability and economic reforms. Reacting to lower domestic energy production and higher energy import costs in the context of Russia's war of aggression against Ukraine, the government provided very significant budget support to state-owned energy utilities in 2022 to mitigate the effects on domestic households and enterprises. To address steadily rising inflation rates throughout 2022, the National Bank of Serbia (NBS) tightened monetary policy by gradually raising its key policy rate from 1% in March 2022 to 6.2% in June 2023. Good progress has been made as regards the adoption of new fiscal rules and the e-invoicing reforms. Structural weaknesses remain in fiscal governance, in particular concerning the unreformed wage system and fiscal risk assessment, the business environment, public and tax administration, and in the way the State intervenes and manages its presence in the economy, in particular concerning state-owned enterprises (SOEs). Serbia has started the implementation of a new SBA with the International Monetary Fund (IMF) running from December 2022 to December 2024, worth approximately EUR 2.4 billion conditioned on the implementation of important economic reforms. The SBA replaced the non-disbursing Policy Coordination Instrument.

The policy guidance jointly agreed at the May 2022 Economic and Financial Dialogue between the EU and the Western Balkans and Türkiye has been partially implemented.

The authorities provided very substantial fiscal support in 2022 to mitigate the energy crisis and effectively planned further gradual fiscal consolidation. A new set of fiscal rules with debt-level-dependent deficit ceilings as a cornerstone was adopted. A new model of electronic fiscalisation and the transition to electronic invoicing have been successfully completed. The first steps in the action plan for the new state-owned enterprise ownership and management strategy have been substantially implemented. However, Serbia is still not prioritising investments in a harmonised manner based on relevant assessments, and issues remain in the areas of competition and State aid, as well as in the area of public procurement (see also Chapter 5 on public procurement and Chapter 8 on competition policy). The long-term energy and climate strategy is yet to be adopted in the course of 2023. The first auction on renewable energy was launched in June 2023. There was no measure to increase the adequacy of benefits

under the financial social assistance scheme to reduce poverty, while partial progress was made to facilitate school-to-work transitions. Implementation of structural reforms should be speeded up with the help of well-designed measures broken down into clear activities and timelines.

Macroeconomic stability

Economic activity remained relatively resilient through successive crises but decelerated strongly in 2022. After an average GDP growth rate of 3.6% in 2016-2019, a relatively mild

contraction by 0.9 % in 2020 and a strong rebound by 7.5% in 2021, output growth decelerated to 2.3% in 2022. The slowdown was especially strong in the second half of the year due the economic fallout from Russia's war of aggression against Ukraine, in particular on inflation via soaring energy and food prices. Growth was also impacted by reduced production capacity of electric utility

Elektroprivreda Srbije, dampening industrial output and increasing imports of electricity and coal. GDP growth in 2022 was mostly driven by private consumption and inventories, which were partially offset by negative contributions to growth of net exports and gross fixed capital formation. On the supply side, the services sector accounted for the bulk of annual growth, while agriculture and construction contributed negatively, primarily due to the drought and base effects from high construction activity in 2021. In the first half of 2023, real GDP expanded by 1.3% year-on-year, mostly driven by net exports and gross fixed capital formation, largely offset by negative contributions to growth from inventories, and from government and private consumption due to high inflation. After remaining broadly unchanged for most of the last decade, the income gap with the EU slightly narrowed in recent years as per capita GDP in purchasing power standards rose from 40% in 2018 to 44% of the EU average in 2021, remaining stable at 44% in 2022.

After a sharp widening in 2022, the current account deficit narrowed substantially in the first half of 2023. After an average of around 5% in the period from 2018 to 2020, the external

deficit widened sharply to 6.9% of GDP in 2022, from 4.2% in 2021. A substantial increase in the merchandise trade deficit (particularly due to high energy imports) and a higher primary income deficit (mainly reflecting increases in reinvested earnings and dividends) were only partially offset by a higher surplus on the secondary income balance (reflecting in particular increased worker remittances) and on

the services trade balance. The deficit was more than fully covered by net inflows of foreign direct investment that reached 7.1% of GDP in 2022 (after 6.9% of GDP in 2021). Decreased energy imports, partly related to higher domestic electricity production following the partial recovery of domestic production capacity, and the decrease in energy prices were among the main drivers of a sharp narrowing of the current account deficit by 82% year-on-year in the first half of 2023. After a gradual decline from 73.4% in 2015 to 61.4% in 2019, external debt

to GDP increased to 69.4% in 2022, reflecting in particular high public financing needs in 2020-2022. Official foreign exchange reserves have remained at more than twice the level of short-term external debt and solidly covered more than 5 months of imports of goods and services at the end of 2022 and early 2023.

Consumer price inflation surged in 2022 and continued to rise in early 2023 before starting a gradual decline in the second quarter of 2023. Following low and rather stable inflation for 7 consecutive years, and a pick-up to an annual average of 4% in 2021, consumer price inflation surged further to an annual average rate of 11.9% in 2022. This was the result of a steady increase throughout the year, reaching a level of 15.1% in November and December followed by a further increase to a peak of 16.2% in March 2023, well above the upper end of the central bank's target tolerance band of 3% \pm 1.5 pps. Inflation started to decline in the second quarter of 2023, down to 12.5% year-on-year in July. The strong increase in headline inflation continued to be driven by food and energy prices while core inflation also picked up steadily throughout 2022 and early 2023, peaking at 11.3% in March 2023. The NBS started to gradually raise its key policy rate in April 2022, bringing it up (in monthly steps of either 50 or 25 basis points) from 1.0% in March 2022 to 6.0% in April 2023, before pausing its tightening cycle in May 2023 ahead of further increases to 6.25% in June 2023. To stabilise the exchange rate in the face of alternating appreciation and depreciation pressures, the central bank continued to apply its policy of frequent interventions on both sides of the foreign exchange market.

The general government deficit decreased in 2022 as a high level of fiscal support to state-owned energy utilities and a series of ad hoc expenditure measures were largely offset by

the balance-improving effects of high inflation. Following prudent fiscal policies with budget surpluses in 2017 and 2018 and a balanced budget in 2019, sizeable COVID-19 crisis mitigation measures contributed to deficits of 8.0% of GDP in 2020 and 4.1% of GDP in 2021. The general government deficit decreased to 3.2% of GDP in 2022, helped by the effects of high inflation in terms of boosting

revenue and keeping spending increases below the rate of nominal GDP growth. The deficit thus turned out substantially below the revised target of 3.8% of GDP in the November 2022 amending budget, despite very substantial liquidity support to the state-owned energy utilities *Elektroprivreda Srbije* (EPS) and *Srbijagas* (amounting to a total of around 2.7% of GDP) and a series of ad hoc support measures to the private sector implemented throughout the year. This concerned in particular direct lump sum cash payments to young people aged between 16 and 30 (0.4% of GDP), increased family allowances and assistance for mothers to buy real estate (0.2% of GDP) and increased agricultural subsidies (0.2% of GDP). However, while this had been stipulated in the jointly agreed policy guidance in May 2022, no measure was taken to increase the coverage and adequacy of benefits for individuals and families under the financial social assistance scheme to reduce poverty. At the same time, the phasing-out in 2022 of the COVID-19-related 2021 fiscal support measures helped contain overall expenditure growth in 2022 at 11% year-on-year, which was lower than the 13.4% increase in revenue. Expressed as a share of GDP, total revenue increased by 0.1 pps, while total spending decreased by 0.9 pps due to very high nominal GDP growth. Part of the fiscal support could have been better targeted to the most vulnerable households and firms, also in view of the inflationary effect of non-

targeted transfers. Notwithstanding the crisis context, capital spending decreased only slightly from a record level of 7.5% of GDP in 2021 to 7.2% of GDP in 2022 and was budgeted at 6.8% of GDP for 2023. The 2023 budget targets a further 0.5 pps reduction of the fiscal deficit to 3.3% of GDP (as compared to the projected 2022 out-turn of the November 2022 amending budget) which would however correspond to a slight increase as compared with the 2022 out-turn of 3.2% of GDP. The September 2023 amending budget revised downwards the 2023 fiscal deficit target to 2.8% of GDP, using the fiscal space from reduced support to state-owned energy utilities and increased excise duties for a series of expenditure measures, including higher subsidies for agriculture, a one-off lump-sum payment to children and extraordinary pension and wage increases for teachers and nurses. Two days after the adoption of the amending budget, a new one-off payment to pensioners was announced.

Following a crisis-induced increase in 2020 and a moderate fall in 2021, public debt continued on a downward path in 2022. The general government debt-to-GDP ratio had fallen from a peak of over 70% in 2015 to 53% in 2019 and thus moved closer to the ceiling of 45% laid down in the fiscal rules of the budget system law. After an increase to 57.8% in 2020, as a result of the high COVID-19 crisis-induced deficit, and broad stabilisation at 57.1% in 2021, the debt ratio fell to 55.6% in 2022, particularly supported by high inflation. Due to less favourable conditions on international and domestic financial markets, Serbia did not issue any Eurobonds in 2022 to cover the increased financing needs related to costly energy imports, but concluded the EUR 2.4 billion 2-year SBA with the IMF with an immediate disbursement of EUR 1 billion in December 2022 and secured a bilateral loan from the United Arab Emirates of USD 1 billion, which was also disbursed in December 2022. On 19 January 2023, in view of some stabilisation of financing conditions on international markets, Serbia issued a USD 1 billion 10-year Eurobond and a USD 750 million 5-year Eurobond at coupon rates of 6.25% and 6.5%, respectively.

Fiscal governance reforms have progressed well, particularly as regards the adoption of revised fiscal rules. Revenue collection surpassed expectations in the 2 years preceding the COVID-19 crisis and performed well throughout 2020-2022, supported by increasing inflation and continuous improvements in the tax administration. Following a delay of several years (due in part to the COVID-19 crisis), a new system of fiscal rules was adopted in December 2022. The central rule consists of a general government deficit ceiling depending on the level of debt⁷. The deficit rule will however only enter into force in 2025 because specific deficit targets for 2023 and 2024 had already been agreed in the SBA with the IMF. The new rules also include a cap on the general government wage bill at 10% of GDP and a modified rule for pension indexation for which the calculation methodology will vary according to the ratio of pension expenditure to GDP. While their enforcement mechanism may need to be strengthened, the new rules are reasonably credible and binding due to their relative flexibility at lower debt levels / lower shares of pensions/salaries relative to GDP. However the announcement in June 2023 of an extraordinary pension increase in October 2023 going beyond the new indexation formula seriously weakens the credibility of the new pension indexation rule already in its first year of application. The public sector wage system reform has been postponed to 2025, but the new central electronic public wage and employment registry (Iskra) became operational for some sectors in 2022 and is planned to be rolled out to most of the public sector (except military, security and higher education institutions) by the end of 2023 as an important preparation for the reform. In the absence of a comprehensive wage system reform, another ad hoc extraordinary increase (25% as against the 12.5% general

⁷ 3% of GDP if debt is below 45% of GDP; 1.5% of GDP if debt is below 55% of GDP; 0.5% if debt is below 60% of GDP and 0% if debt is above 60% of GDP.

increase of public sector wages) has been implemented for military personnel as of January 2023 and a further ad hoc 5.5% extraordinary increase for some categories of workers in education and health as of September 2023 has been included in the September 2023 amending budget. Progress in addressing weaknesses in budget planning and implementation has been slow. The November 2022 amending budget was adopted using the urgent procedure, but the 2023 budget adoption was broadly in line with the normal legislative procedure (albeit with some delay). The September 2023 amending budget was again adopted under urgent procedure. Neither the 2022 amending budget nor the 2023 budget provided an adequate level of transparency regarding the breakdown of capital transfers and guarantees to SOEs, in particular to EPS and *Srbijagas*. The Fiscal Strategies are subject to frequent changes, sometimes within weeks after their adoption, thereby undermining the credibility of these strategic fiscal documents. There was a meaningful parliamentary debate on the 2023 budget and the government also submitted to Parliament the final annual budget execution report for 2021. The well-established Fiscal Council has continued to function properly and produce independent fiscal assessments and recommendations.

The macroeconomic policy mix has remained overall appropriate. It helped sustain macroeconomic stability and supported the resilience of economic activity in the face of successive shocks. Prudent fiscal policy before the COVID-19 crisis created the policy space for sizeable fiscal support to mitigate the impact of the COVID-19 and energy crises while maintaining macroeconomic stability. Monetary policy reacted to surging inflation via steady gradual monetary tightening. The acceleration of economic reforms and their full implementation remain key to ensure a sustainable recovery and further strengthen the economy's potential in terms of competitiveness and inclusive growth, thereby supporting real convergence with the EU.

Functioning of product markets

Business environment

Serbia has in recent years reduced the regulatory and administrative burden on businesses, but some weaknesses remain. Some business procedures have been significantly simplified and their cost reduced, but many burdensome administrative procedures remain, especially for small and medium-sized enterprises (SMEs). Local firms have to make 33 tax payments per year, twice as many as in the regional peers. The many parafiscal charges remain high and non-transparent, lacking rationalisation, thus undermining the predictability and stability of Serbia's tax system and hampering economic development. The business community generally considers the Law on foreign exchange transactions to be too restrictive in its design and unpredictable in its application. In 2022, the number of registrations of new legal business entities rose by 16.7%, while the registrations of solo entrepreneurs rose by 21.8%. In 2022, 19.4% more legal entities and 4.8% more entrepreneurs were deleted from the register than in 2021. The implementation of the action plan for the simplification of administrative procedures further advanced through the optimisation, digitalisation or discontinuation of administrative procedures as well as the establishment of a single public register of administrative procedures. In May 2023, Serbia introduced mandatory online company registration, which should contribute to reduce the costs and the time of setting up a company.

The legal framework is prone to unexpected and significant changes, which can be detrimental to business. Business predictability is negatively affected by the lack of full transparency in the adoption of legislation. Government decisions in a number of business-relevant areas are still often taken without proper consultation with businesses and social partners and under too short time constraints. This includes numerous temporary trade

restrictions and price caps introduced by Serbia throughout 2022 (*see also Chapter 30 on external relations*) with little or no notice, thus negatively impacting the stability of supply-chains, and further hampering the predictability for businesses and investors.

Further efforts are needed to improve the quality, independence and efficiency of the justice system. An efficient and independent judicial system is a prerequisite for a predictable investment- and business-friendly environment, and is necessary in order to encourage innovation, attract additional foreign direct investment, and secure tax revenues. Businesses also raise the issue of the lack of reliability in contract enforcement, as well as lack of expertise among judges, particularly in complex areas of law such as competition, intellectual property, or taxation, which leads to inconsistency in rulings. Moreover, the business environment remains hampered by red tape, political interference and limited public administration efficiency. Serbia ranked 101st out of 180 countries in the 2022 corruption perception index compiled by Transparency International, thus continuing the negative trend of rankings that have been steadily deteriorating since 2018 when Serbia ranked 87th.

Despite some progress, the widespread informal economy remains a major impediment to the development of a strong corporate sector and the consolidation of a functioning market economy. Driving forces behind the informal economy include high taxes and social security contributions on the lowest salaries leading to a notably regressive tax wedge, a lack of financial resources and favourable loans, para-fiscal charges, hidden tax fees and red tape. The consequences are tax evasion, market distortion, unfair competition and inefficient resource allocation. Notable investment has been made to reduce the size of the informal sector, but the pace of reform is slow. The full entry into force of the Law on fiscalisation and amendments adopted in December 2022, as well as the full implementation of the Law on electronic invoicing as of January 2023, has finalised the introduction of the e-fiscalisation and e-invoicing systems, which provide for real-time tracking of the issuance of fiscal receipts, thereby enabling the Tax Administration to better monitor and counter tax evasion. Taxpayers fully adopted the e-fiscalisation system by 1 May 2022. The new Law on e-invoicing entered into force on 1 January 2022 and after phased introduction achieved full enforcement of electronic invoicing on 1 January 2023. In March 2023, the government adopted the 2023-2025 Programme for Combating the Grey Economy. The Programme encompasses 23 measures aimed at strengthening the capacity of inspections and misdemeanour courts, improving tax supervision and reporting procedures and fiscal and administrative relief of legal businesses. Further improvements in anti-money laundering/combating the financing of terrorism are ongoing.

State influence on product markets

The legal framework in competition and State aid is largely in line with the EU *acquis*, but implementation needs to be improved. The Commission for Protection of Competition and the Commission for State aid control are operating as legally independent bodies. However, the Commission for State aid control has yet to be substantiated by a consistent and transparent track record. In the area of State aid, well-defined rules are not always implemented due to strong political pressure for financial assistance, channelled to SOEs and large foreign investors. These resources are often substantial and may have a significant impact on competition. State support is not sufficiently transparent, including in the 2023 budget. After a strong growth of reported State aid from 2% of GDP in 2019 to 5% of GDP in 2020, the share of State aid dropped to 3.5% of GDP in 2021. The share of COVID-19-related State aid dropped from 54.4% in 2020 to 28.7% in 2021. In view of strongly rising food and energy prices, the government has maintained a series of temporary price caps for basic food and fuel prices, as well as trade restrictions, since the end of 2021/early 2022, which were regularly prolonged or

adjusted throughout 2022 until the end of April 2023 with some exemptions (*see also Chapter 30 on external relations*).

Privatisation and restructuring

Albeit shrinking, the role of the State in the economy remains large and hampers competition while the governance of SOEs recorded limited progress and the restructuring of key utility companies is advancing only slowly. SOEs continue to dominate many sectors, including energy, transport, utilities, telecommunications, infrastructure, mining and extraction of natural resources. Their outsized presence deters private investment and innovation and impedes overall competitiveness. Furthermore, many of Serbia's SOEs do not apply adequate corporate governance rules and operate with low efficiency and high costs. Most public companies continue to rely on direct or indirect State subsidies, and their governance remains under strong political influence. The irregular appointment of acting managers for extended periods, instead of using the standard nomination process, which requires a public competition and certain minimum qualifications criteria, has yet to be addressed. The government continued the implementation of the 2021-2027 strategy on state ownership and management of SOEs, which aims at more sustainable and efficient management of these enterprises, albeit with significant delays. As part of the strategy and the ongoing IMF SBA, the government has committed to improve governance practices in SOEs. This is in particular expected to be tackled through the new Law on SOE management adopted in September 2023. The law has been developed in agreement with the IMF and based on OECD guidelines. The financial performance of SOEs has led to the build-up and materialisation of fiscal risks, particularly in the energy sector. *Srbijagas* is estimated to have received around EUR 1.3 billion in budget support in late 2021 and in 2022, while EPS reported to have suffered losses of up to EUR 630 million in 2022. Overall, SOEs still account for around a sixth of value added and formal employment in Serbia. In 2022, the number of SOEs yet to be addressed through either bankruptcy or privatisation was brought down from 62 to 60⁸. The implementation of the strategy for banks with state ownership continued. The State remains in control of key entities in the insurance sector. Serbia has yet to implement its action plan on gas unbundling adopted in May 2021 and to finalise the certification of *Transportgas Srbija* and *Yugorosgaz Transport* to open the wholesale gas market and third-party access to the gas transmission system.

Functioning of the financial market

Financial stability

Financial stability has been maintained and macro-prudential indicators remained sound. The banking sector's aggregate capital adequacy (regulatory capital to risk-weighted assets) stood at 20.2% at the end of 2022, well above the minimum of 8% set by the central bank. Liquidity remained high. The profitability of the banking system increased with improved returns on assets (1.9% at the end of 2022 compared with 1.2% at the end of 2021) and a jump in return on equity (13.9% at the end of 2022, compared with 7.8% at the end of 2021). The non-performing loan ratio further decreased by 0.6pps year-on-year to 3.0% by the final quarter of 2022 before moving up slightly to 3.2% by the end of the second quarter of 2023. The broad stability of the NPL ratio was also supported by regulatory changes in December 2022 to support the restructuring of debt, i.e. to extend the maturity of loans, for those impacted by the economic crisis. The authorities have continued to address legacy non-performing loans in the portfolio of the Deposit Insurance Agency. The central bank and the

⁸ A Strategic Partnership Agreement between the Serbian Government, majority Russian-owned NIS, and HIP-Petrohemija was signed in December 2021 and the transaction was finalised in June 2023.

government continued to implement the 'dinarisation' strategy to boost the use of the local currency in the banking system. However, reflecting some remaining uncertainties related to the crisis, the share of dinar-denominated loans and deposits of both households and firms fell somewhat in 2022. While the share of dinar-denominated loans continued to decline in the first half 2023 (to 34.0% in June), the share of dinar-denominated deposits rose to 41.1%, thereby more than recovering from the temporary fall in 2022.

Access to finance

Impacted by monetary tightening, credit activity has slowed down. Credit activity expanded by 7.3% in 2022, but loan growth has been gradually slowing down to a year-on-year rate of 0.8% in June 2023, partly due to the significant increases in the key policy rates by the NBS and the ECB. Credit growth was mostly due to liquidity and working capital loans and housing loans respectively. Foreign-owned (EU-based) banks continued to dominate the financial system, holding around 85% of banking system assets. The continuing consolidation of the banking system via mergers and acquisitions has further reduced the number of banks from 22 at the end of June 2022 to 20 at the end of June 2023. Non-banking financial institutions continue to be largely absent, the legal framework for the leasing sector has still not been reformed, and there was no progress in establishing the legal framework for microfinance institutions.

Functioning of the labour market

The labour market confirmed its post-pandemic recovery, but outward migration and a steady population decline continue to weigh on labour supply. Following the detrimental impact of the COVID-19 pandemic, the labour market recovery continued in 2022, although at a decelerating pace. The unemployment rate decreased by 0.6 pps. year-on-year to 9.2% in Q4-

2022. This marks a return to the long-term trend of gradually falling unemployment. Several categories of vulnerable workers benefited from the recovery. Thus, the long-term unemployment rate was down by 0.6pps year-on-year to 3.9% in the fourth quarter of 2022, the youth unemployment rate decreased by 4.4 pps year-on-year to 24.3% in Q4-2022. The share of young people aged 15 to

24 not in employment nor in education or training (NEET) dropped to 11.9% in Q4-2022 (-3.7pps year-on-year) while in the population aged 15-29 the NEET rate decreased to 15.2% (-2.2pps year-on-year). The youth employment-related active labour market policy programme "My first salary" continued for a third cycle starting in late 2022 with around 9,000 participants. Women benefited most from improvements on the labour market (with unemployment rates standing at 8.8% for women against 9.5% for men in Q4-2022) yet continued to be far less active than their male counterparts (47.6% participation rate for women compared with 63.2% for men in the last quarter of 2022). In parallel, the rate of total informal employment in the fourth quarter of 2022 was down 0.9 pps year-on-year to 12.8%. Total registered employment in Serbia increased by 1.6% year-on-year, also supported by the issuance of work permits to foreign workers. However, in structural terms, the labour force may have peaked as the declining working age population is taking its toll on labour supply. A steady population

decline of around 0.5% every year, along with large-scale emigration across the occupational spectrum remains a key medium- to long-term challenge for economic development. In addition, persistent skills mismatches, the gender employment gap, inadequate activation of young people, and large regional disparities have continued to weigh on the functioning of the labour market. An evaluation of the strategy on economic migration for 2021-2027 and its corresponding action plan for the period 2021-2023 is needed to assess its impact on returnees and circular migration and to identify and take appropriate action.

Real wages have stagnated, mostly due to high inflation. The average real net wage decreased by 1.5% year-on-year in March 2023 as the average nominal net wage increase of 14.5% year-on-year was more than offset by high inflation. The authorities have continued to gradually reduce the overall tax wedge by increasing the non-taxable part of salaries from RSD 19 300 to RSD 21 712 as of 2023. However, the tax wedge is still disproportionately high for people with low salaries and therefore aggravates in-work-poverty. It also continues to be an impediment for the formalisation of labour. In line with expectations for the overall increase in wages, the government increased the minimum hourly wage by 14.3% in 2023, to RSD 40 020. Around one in six registered employees receives the minimum wage.

2.3.2. The capacity to cope with competitive pressure and market forces within the Union

Serbia is **moderately prepared** and has made **some progress** in coping with competitive pressures and market forces within the EU. The structure of the economy improved further and economic integration with the EU remained high. However, the quality and relevance of education and training does not fully meet labour market needs. Public investment has remained at a high level with the aim to address serious infrastructure gaps after years of underinvestment. SMEs still face a number of challenges, including an uneven playing field as compared with large companies and foreign investors. Last year's recommendations have been partially implemented and remain partly valid.

In the coming year, Serbia should in particular:

- further tailor education and training to labour market needs, in particular in the area of vocational education and training;
- ensure a harmonised approach for prioritising and monitoring all investments and basing investment decisions on feasibility studies, cost-benefit analysis and environmental impact assessments, and apply to all projects the principles of competition, equal treatment, non-discrimination and transparency in public procurement and State aid procedures in line with the EU *acquis*; and
- advance on the green energy transition in particular through decarbonising the industry especially in the energy sector; increase investments into renewables and energy efficiency supported by cost-recovering tariffs; accelerate implementation of the action plan on gas unbundling and decrease its energy dependence on Russia.

Education and innovation

Despite some progress, the quality and relevance of education and training does not sufficiently meet labour market needs. Public spending on education stood at around 3.3% of GDP in 2021, below the EU average of 4.7%. Pre-primary school enrolment (age 0 to 5 years) was at 47% in 2021, while compulsory education is almost universal although showing downward trends. The high proportion of early school leavers (young people aged 18-24 who at best completed primary education and did not pursue further education) continues to be a problem and amounted to 5.1% in the third quarter of 2022. Lower secondary school education

results for 15-year-olds lag behind the EU average, although Serbia's PISA rating is the best in the Western Balkans and its average scores are close to those of some EU Member States (Bulgaria, Greece and Romania). Higher education attainment in the population aged 25-34 (ISCED levels 5-8) stood at 33.9% in 2021. The authorities are gradually updating both the general and vocational pre-university curricula to make them more relevant to labour market needs, at the same time consolidating the national qualification framework set-up. The adoption of new qualification standards and/or modernisation thereof has continued at a slow pace, with a strong focus on higher education. Efforts have been made to expose students to work-based learning under both upper secondary and higher vocational education and training. As participation rates in lifelong learning are traditionally low (4.8 % in 2021), the offer of formal and informal learning would usefully be further diversified and promoted among both the working and non-working adult population.

Serbia has a relatively good scientific base but research and development spending remains low at around 1% of GDP. Government funding was stable at around 0.4 % of GDP. The lack of human resources for research and development and weak cooperation between businesses and academia continue to present problems. To increase innovation and scientific research, Serbia continues to support the Innovation fund and the Science fund that are running numerous specialised financing instruments and grant schemes. Five years after a science and technology park was established in Belgrade, three additional ones have been established in Novi Sad, Čačak and Niš but further support services for these institutions are still needed. The smart specialisation strategy, the industrial policy strategy, the strategy for the development of start-up ecosystems and the strategy for the development of artificial intelligence are all being implemented.

Physical capital and quality of infrastructure

Investment has remained high, with significant emphasis on road and rail infrastructure, but infrastructure gaps remain. Public investment decreased slightly from a record level while private investment broadly stagnated in 2022. The economy is attracting significant net foreign direct investment flows which stood at 6.9% of GDP in 2021 and 7.1% of GDP in 2022. Outward investments of Serbian companies abroad remained very modest. The share of total investment in the economy increased to 22.8% of GDP in 2022, up from 17.7% of GDP in 2017. However, physical infrastructure needs further upgrading and expansion. A continued high level of public investments is planned in 2023, particularly in railways, roads, including local and regional roads, energy infrastructure, and also environmental investments.

The institutional framework for public investment is weak. The 'user pays' principle is not sufficiently applied when it comes to maintaining existing infrastructure and implementing new infrastructure investment plans. The legislative framework for public investment management put in place in July 2019 provides a basis for a sounder project selection process, better prioritisation and more comprehensive planning across different tiers of the government. However, the framework allows too many exemptions to the rule, which significantly reduces its effective impact. Public procurement rules are not always fully compatible with EU standards, particularly in the case of intergovernmental agreements. Moreover, the existing public procurement rules are not always fully complied with, as also evidenced by an increasing number of irregularities.

The energy sector remains largely inefficient and highly polluting; the regulatory and green transition reforms are progressing slowly. Energy infrastructure is largely outdated and many individual heating systems use wood and coal as fuel, contributing to the energy sector being the main source of air pollution in Serbia. The decarbonisation of the energy sector, the need to increase the use of more renewable sources, and restructuring of SOEs

dominating the sector remain a big challenge, and investments in the green energy transition are progressing too slowly. In June, Serbia adopted amendments to the Law on renewables and launched the first call for auctioning of new renewable sources. Serbia has yet to adopt its national integrated energy and climate plan and an energy strategy. Electricity tariffs for households have been gradually increased including under the SBA agreed with the IMF. However, prices remain below market prices and should increase in line with the SBA to cover costs, and subsequently to support the necessary investment in infrastructure. Serbia remains dependent on its single gas supplier Gazprom and the Russian majority control of Serbia's gas infrastructure and oil industry continued. However, in order to reduce the dependence on Russian gas, work on the gas interconnector between Serbia and Bulgaria has advanced and construction of an interconnector with North Macedonia is under preparation. Implementation of the action plan for the unbundling of state-owned enterprise *Srbijagas* is still pending. The Balkan stream gas pipeline section in Serbia is operational but there is no third-party access.

Serbia has made good progress on digital transformation across the economy. Digitalisation remains a key priority for the government. The action plan under the 2023-2025 e-government development programme was adopted in April 2023, with the objective to improve the quality of public services by ensuring interoperability, efficient coordination, project management and legal certainty over e-government use, and to foster the use of open data. The e-government national portal is continuously upgraded with new services, serving as a one-stop shop for e-government services and as a central point of access for businesses and citizens. Serbia's communications infrastructure still requires systematic improvement of both regulation and investment. Broadband roll-out is too slow, preventing the uptake of e-government and business services, and slowing down the digital transformation of the economy. There was some progress with the connection of public institutions and 150 000 households to fast broadband and speeds of 100Mbps. Supported by the inflow of Russian citizens to Serbia, the robust growth of the information and communication sector continued, with exports of ICT services in 2022 valued at EUR 2.7 billion, an increase of 45% compared with 2021.

Sectoral and enterprise structure

Manufacturing has decreased its weight in the economy over recent years while the share of construction and some services has risen and the share of agriculture has broadly stabilised. The manufacturing industry continues to be the single largest sector in terms of its share of GDP, at 13% in 2021, although on a declining trend over the years. It is followed by wholesale, retail and vehicle repair accounting for 11.8% of GDP in 2021, on an increasing trend. Services sectors dominate the economy, together providing more than 60% of total value added. Reflecting a new investment cycle, the construction sector increased its share in GDP from 3.0% in 2013 to 6.0% in 2021 (up from 5.4% in 2020), strongly supported by capital investments in infrastructure. The weight of the agricultural sector has broadly stabilised at around 6.3% of GDP since 2017 after a downward trend over the previous few years. The share of agriculture in total employment continued to fall steadily from about 20% in 2014 to around 17% in 2017 and further to around 15% in 2021. In 2022, construction and the agriculture sector had a negative impact on GDP growth, impacted in particular by increased costs of inputs, lower credit activity and the drought.

Small and medium-sized enterprises (SMEs) are the backbone of the Serbian economy. The SME sector provides close to 60% of total employment and turnover in the economy, and around 50% of the value added. SMEs are particularly active in construction, accommodation and food services, retail, and real estate. The authorities are implementing several programmes to support SME development, focusing on boosting innovation, finance, and

internationalisation. Loans to SMEs accounted for about 60% of total corporate loans in December 2022. Their cost of borrowing has increased significantly due to increases in the key policy rates to combat inflation, and remains significantly higher than that of large companies. SMEs still face a number of challenges, including an unpredictable business environment, a lack of non-bank financing and high tax compliance costs. SMEs often face an uneven playing field as large enterprises and foreign investors often have direct lines of communication to the government and benefit much more from state subsidies, thus enjoying an advantage over domestic SMEs.

Economic integration with the EU and price competitiveness

Economic integration with the EU remained high. The EU remains Serbia's biggest trading and investment partner, accounting for 58.7% of its total trade and for 32.9% of foreign direct investment inflows in 2022. Total bilateral trade between the EU and Serbia increased significantly, by 27.7% year-on-year, from EUR 30.6 billion in 2021 to EUR 39.1 billion in 2022. Serbian imports from the EU grew at a somewhat faster pace than exports to the EU, with the EU registering a surplus of EUR 3.7 billion in 2022. After the EU, Serbia's main trading partners in 2022 were the signatories of the Central European Free Trade Agreement (10.3% of total trade), China (8.7%), Russia (5.8%) and Bosnia and Herzegovina (5.3%). Foreign direct investment inflows, of which typically around two thirds originated from the EU in 2010-2020 (and close to 90% from Europe), have partially shifted towards growing inflows of around one quarter from China in 2021-2022. Notwithstanding ongoing remedy efforts via online health and customs clearance, transit facilitation through international cooperation agreements and the regional green corridor (EU, CEFTA, Western Balkans and Türkiye), there are still significant bottlenecks at border crossing points with neighbouring EU countries; these hamper the potential for deeper trade relations and economic integration with the EU. Trade openness, after a steady increase from 92% of GDP in 2014 to 111.5% in 2019, decreased to 103.9% in 2020 due to the COVID-19 crisis, before rebounding strongly to 115.6 % in 2021 and 137.6% in 2022.

The real effective exchange rate has been on an appreciating trend in recent years. The dinar-euro nominal exchange rate remained broadly stable in 2022 and the first half of 2023, as pressures on the dinar were successfully neutralised by the central bank. As regards the CPI-based real effective exchange rate REER, after a depreciation in the period 2014-2016 cumulatively by almost 9%, 2017-2018 saw an REER appreciation of around 7%. After depreciating slightly in real terms in 2019 (0.2%), the dinar continued to appreciate, by 3.5% cumulatively in 2020-2021 (almost in equal amounts in both years). The appreciation trend continued in 2022 (1.1%) and accelerated strongly in the first half of 2023 due to the significant inflation differential with main trading partners. The unit labour cost (ULC)-based REER depreciated cumulatively by around 8% in the period 2014-2016, while in the period 2017-2019 REER appreciated by around 17% cumulatively, mostly due to wage growth in the private

sector. The trend has continued in recent years, resulting in ULC-based REER appreciation of almost 8% in 2020, 4% in 2021 and 9% in 2022. According to the latest IMF external sustainability assessment (done in June 2023), the exchange rate was considered broadly consistent with the fundamentals.

2.4. PUBLIC PROCUREMENT, STATISTICS FINANCIAL CONTROL

Chapter 5: Public procurement

EU rules ensure that the public procurement of goods, services and works in any Member State is transparent and open to all EU companies on the basis of non-discrimination and equal treatment.

Serbia is **moderately prepared** in the area of public procurement. **Some progress** was made with the repeal of the Law on special procedures for linear infrastructure projects, which seriously undermined the effective implementation of the Law on public procurement. Serbia needs to ensure that exemptions from the Law on public procurement are in line with the EU *acquis* and the Stabilisation and Association Agreement, including notably in the context of intergovernmental agreements. The capacity of the Public Procurement Office, the Commission for Public-Private Partnerships and Concessions, the Republic Commission for Protection of Rights in Public Procurement Procedures and the Administrative Court needs to be further strengthened.

In the coming year, Serbia should in particular:

- further align with the 2014 EU Directives on public procurement, in particular by adopting amendments to the Law on public-private partnerships and concessions and by ensuring that projects financed from public funds are subject to public procurement procedures; and
- ensure that procurement rules under intergovernmental agreements concluded with third countries comply with the public procurement principles, in line with the EU *acquis*.

Institutional set-up and legal alignment

Serbia's **legal and institutional frameworks** on public procurement are broadly aligned with the EU *acquis*. The adoption of amendments to the Law on public-private partnerships and concessions to align with the EU Directive on concessions is still pending. In July 2023, the Parliament enacted the Law repealing the Law on special procedures for linear infrastructure projects from 2020, which provided for the exemption of linear infrastructure projects of 'special importance for the Republic of Serbia' from the application of the Law on public procurement. In July 2023, the Serbian government adopted a Decree on the selection of a strategic partner for the implementation of a project of construction without management and maintenance of self-balanced large-scale solar power plants with battery systems for electrical energy storage in the Republic of Serbia, which introduces derogations from the Law on public procurement and the Law on public-private partnerships and concessions. Additionally, in October 2023, Parliament adopted the Law on special procedures for the implementation of the international specialised exhibition EXPO Belgrade 2027, which exempts projects from the application of the Law on public procurement.

The public procurement development programme for 2019-2023 was implemented through the action plan for 2022. A new action plan for 2023 was adopted.

The **Public Procurement Office** (PPO) conducts compliance supervision of the Law on public procurement and maintains the public procurement portal. The PPO is also in charge of proposing implementing legislation.

Implementation and enforcement capacity

In 2022, the **public procurement market** increased by around 18% in terms of total value of concluded contracts, from EUR 4.75 billion in 2021 to EUR 5.6 billion. Its share in GDP also grew from 8.9% in 2021 to 9.3% in 2022. The average number of bids per tender remained at 2.5. The share of tenders with only one submitted bid remained very high, falling slightly from 52.6% in 2021 to 51.6% in 2022. The Serbian government committed to reduce this share to 47% by 2024. The share of contracts awarded to foreign bidders remained particularly low at 1% of the total value of contracts.

Regarding **monitoring of contract award and implementation**, the proportion of negotiated procedures without prior publication of a notice fell significantly from 7.7% in 2021 to 0.97% in 2022. The share of open procedures increased from 91.3% in 2021 to 98.8% in 2022. The use of the best price-quality ratio criterion remained low at 4% in 2022, while the lowest price criterion remained dominant in 96% of conducted public procurement procedures. New functionalities of the public procurement portal were introduced in 2022, with the aim to increase transparency and efficiency. Workshops and webinars have been organised to train bidders and contracting authorities to use the e-procurement portal. The number of requests submitted by the PPO to the relevant courts to initiate misdemeanour procedures increased significantly from 143 in 2021 to 429 in 2022.

The exemptions from the Law on public procurement on the basis of intergovernmental agreements fell significantly to 0.5% of the total value of exemptions in 2022, or EUR 33 million, compared with EUR 735 million reported in 2021. However, given the large volume of big infrastructure projects that have been concluded on the basis of intergovernmental agreements, the reported total value of exemptions is low. The State Audit Institution found irregularities in cases covering 18.88% of the value of public procurement contracts inspected in 2022. These findings raise concerns and need to be closely followed.

The **capacity to manage public procurement processes** remained stable. The PPO had 42 employees in 2022, down from 44 in 2021. A total of 398 public procurement officers were certified on the basis of the Law on public procurement.

The Commission for Public-Private Partnerships and Concessions approved a total of 253 public-private partnership project proposals, including 86 with concession elements, mostly in the urban transport, sanitation and urban planning sectors. The Commission remains understaffed.

Efficient remedy system

Legislation on the **right to legal remedy** is broadly in line with the EU *acquis* and is enforced by the Republic Commission for Protection of Rights in Public Procurement Procedures, an independent state body. The Republic Commission solved 709 cases on requests for the protection of rights in 2022. Public procurement procedures were partially or fully annulled in 349 cases (49% of all solved cases). The number of contracting authorities not complying with decisions of the Republic Commission remains stable at below 1% of the overall decisions taken. The Republic Commission took decisions in 52 cases on complaints about decisions of contracting authorities in 2022. It imposed one financial fine on contracting authorities not complying with its decisions while annulling two contracts in 2022.

Regarding the Republic Commission's **implementation capacity**, the number of staff decreased from 52 in 2021 to 46 in 2022, nine of whom are elected officials. Due to limited specialisation and training, the Administrative Court's capacity to deal with the complexity, diversity, and overall quantity of cases and lengthy legal proceedings, remains weak.

Cooperation between the PPO and the Republic Commission with the Administrative Court on exchange of knowledge and information needs to be strengthened.

Chapter 18: Statistics

EU rules require Member States to produce statistics based on professional independence, impartiality, reliability, transparency and confidentiality. Common rules are in place for the methodology, production and dissemination of statistical information.

Serbia is **moderately prepared** in the area of statistics. **Good progress** was made during the reporting period with the population and housing census in October 2022 and preparations for the next census on agriculture, planned to start in October 2023, in line with EU and international standards. Overall, Serbia continued to submit statistical data to Eurostat. The compilation of macroeconomic statistics in line with the European System of Accounts (ESA) 2010 continued to improve. However, a new statistical law has still not been adopted. Last year's recommendations remain largely valid.

In the coming year, Serbia should in particular:

- adopt a new statistical law to increase the independence of the statistical office;
- continue preparations and carry out the census on agriculture in line with the relevant EU legislation and international standards; and
- continue to improve the compilation of macroeconomic statistics in line with ESA 2010.

The legal framework for **statistical infrastructure** is largely in line with the European Statistics Code of Practice. A new law on official statistics, which should enhance the professional independence of the Statistical Office of the Republic of Serbia (SORS) and improve the alignment of the Statistical System with the Regulation (EC) No 223/2009, still needs to be adopted. The National Coordination Board of Official Statistics includes representatives of all responsible producers of official statistics. Serbia continued to integrate systems for administrative data through cooperation agreements and database linkages with a number of Serbian institutions and registers. The administrative capacity of SORS still needs to be strengthened, as its operations remain hampered by the lack of sufficient and adequately skilled staff. SORS continued to increase submission of data to Eurostat, but the coverage of data submission needs to be further expanded. The main classifications (NACE Rev. 2, ISCO-08) are aligned with the EU *acquis*. Registers are updated regularly.

Concerning **territorial classification**, Serbia continued to compile regional accounts and submit them to Eurostat, including the 2022 transmission. Serbia provided regional accounts data at statistical level 2 and 3 but the number of years is not yet uniform across variables.

Regarding **macroeconomic statistics**, SORS continued to compile data on quarterly and annual GDP at current and constant prices, and in chain-linked volumes. Seasonally adjusted quarterly national accounts are sent to Eurostat. Quarterly non-financial sector accounts have yet to be compiled; only non-financial annual sector accounts are transmitted to Eurostat and published. Serbia has further advanced work on compiling supply-use and input-output tables; the country delivered all relevant ESA 2010 tables in this area. SORS sends good-quality monthly data on international trade in goods, in accordance with the required breakdown by mandatory partner country. The compilation of data on trade by enterprise characteristics was submitted to Eurostat but more work is needed to meet all requirements set out in the compilers guide on trade by enterprise characteristics. The National Bank of Serbia (NBS) compiles the monthly and quarterly balance of payments, as well as data on the quarterly international investment position. As regards government finance statistics (GFS) and excessive deficit

procedure (EDP), Serbia should continue efforts to further adhere to ESA 2010. SORS continues to provide EDP on regular basis twice a year. Progress was observed in coverage of the questionnaire related to the excessive deficit procedure notification tables. In particular, Serbia should intensify efforts to improve the data quality of the EDP table 2. SORS still considers the non-financial accounts of government finance statistics as provided to Eurostat as experimental and not fit for publication. Despite this, other Serbian non-financial accounts of general government data, less aligned with international standards, is being published nationally and internationally. Quick progress in publishing the data being provided to Eurostat is strongly encouraged in order to establish fiscal transparency. The NBS set up the system for compiling annual financial sector accounts statistics. Progress was made by SORS and the NBS in providing quarterly non-financial accounts of general government and quarterly general government gross debt. Continued efforts are needed to produce the complete data required by the ESA 2010 transmission programme, notably by developing quarterly financial accounts and financial balance sheets.

With regard to structural **business statistics** (SBS), Serbia has implemented the EU *acquis* to a great – but not yet fully – extend. Serbia transmits SBS data and metadata to Eurostat in good quality and in the required technical format. More work is needed to achieve full coverage and punctuality. Most of the data on internal tourism and some data on national tourism are collected and transmitted. For inland waterway, road and railway transport, data is collected but needs to be further aligned with the EU *acquis*. A few test datasets for road freight transport have been transmitted and Serbia is currently designing their complete road freight transport survey. Serbia continued to communicate some figures on all six datasets of the Eurostat/ITF/UNECE Common Questionnaire. In 2023, Serbia for the first time transmitted transport statistics at regional level, providing a significant set of data. Air transport statistics are highly compliant and a few improvements need to be made to reach full compliance. Serbia continued to provide in a timely manner the mandatory research and development (R&D) data and statistics on the government budget allocation for R&D, for some of which transmission is voluntary. Serbia also continued to provide the regional data. The Community Innovation Survey is conducted regularly every 2 years and the data is sent to Eurostat. The annual surveys on information and communication technology (ICT) fully meet EU standards and are carried out regularly, covering households/individuals and businesses. Serbia is fully compliant for most of the short-term business statistics indicators.

Serbia partially complies with the EU *acquis* on **social statistics**. The survey on income and living conditions is carried out regularly, in compliance with EU standards, and data is sent to Eurostat. Serbia is fully compliant in social protection statistics and provides Eurostat with European system of integrated social protection statistics (ESSPROS) data and metadata of good quality and coverage, in accordance with the legal deadlines. Labour market earnings and labour cost statistics are broadly in line with the EU *acquis*. Serbia carries out the labour force survey (LFS) in accordance with the regulations and sends good-quality micro data to Eurostat (annual and quarterly), and LFS quality reports based on the new LFS questionnaire. Further progress is still needed to produce good statistics on job vacancies. Concerning the healthcare expenditure statistics, Serbia provided compliant data for reference year 2021 for the first time in 2023. Serbia is fully compliant as regards the European health interview survey. Statistics on external migration and asylum are collected by the Ministry of the Interior. They are only partly aligned with the relevant EU requirements so further alignment is needed. Serbia provides most of the required education statistics. The population and housing census, postponed from 2021 due to the COVID-19 pandemic, took place successfully in October 2022 without major incidents. The dissemination of results from the census started in December 2022. Final results were published in May 2023.

Regarding **agricultural statistics**, Serbia is highly compliant in producing crop statistics. Animal production statistics, including milk and milk product statistics are fully compliant with applicable EU regulations. Serbia continued the preparatory work for the agriculture census which is planned to take place from October to December 2023 (postponed due to the COVID-19 pandemic). SORS still needs to develop, produce and submit to Eurostat supply balance sheets, economic accounts for agriculture and agriculture price statistics in line with the Eurostat methodology.

Annual and monthly **energy statistics** are produced and sent for all relevant energy sources. Serbia transmits good-quality data on **waste statistics** to Eurostat. Only the dataset on number and capacity of disposal landfills is yet to be completed. Some **environmental accounts data** is produced. transmits complete data on physical energy flow accounts , albeit quality can further improve. Serbia transmits complete data on **environmental taxes accounts** with good quality, and should continue to work to improve the quality of **environmental goods and services sector accounts**. Serbia transmits incomplete data on **air emissions accounts** and the quality needs improvement. In general, the quality of environmental accounts data improved, but further efforts are needed in this area. Serbia reports some **water statistics** and those statistics do not have legal basis. Serbia is also making progress in the area of pesticide statistics but does not yet deliver data on pesticide statistics, fertiliser consumption or gross nutrient balances.

Chapter 32: Financial control

The EU promotes the reform of national governance systems to improve managerial accountability, sound financial management of income and expenditure and external audit of public funds. The financial control rules further protect the EU's financial interests against fraud in the management of EU funds and protect the euro against counterfeiting.

Serbia is **moderately prepared** in the area of financial control. **Limited progress** was made in the reporting period, notably with the continued implementation of public internal financial control (PIFC). However, last year's recommendations have not been met. Therefore, these remain valid. A midterm approach on PIFC, consistent with the Law on the planning system, is being implemented. Overall, additional efforts are needed to embed managerial accountability in the administrative culture and to strengthen the functioning of internal control and internal audit. High-level political support remains critical for the required shift to performance management and implementation of PIFC reforms in entire public sectors.

In the coming year, Serbia should in particular:

- ensure full coherence of the PIFC legal basis with the general legal framework;
- establish an effective internal audit function in all central budget institutions; and
- adopt a managerial accountability roadmap and ensure its effective implementation.

Public internal financial control (PIFC)

A **strategic framework** for PIFC is broadly in place, under the 2021-2030 PAR strategy and the 2021-2025 public financial management (PFM) reform programme. PIFC is comprehensively covered as a separate pillar embedded in the PFM reform programme. In addition, further PIFC measures are envisaged by the local self-government system reform programme for 2021-2025 and the public policy management and regulatory reform programme for 2021-2025. The development of managerial accountability is included in the accountability and transparency pillar of the PAR strategy and the public policy management and regulatory reform programme. The full establishment of analytical units in ministries and

proper implementation of midterm planning must foster effective consolidation of strategic, operational and financial management functions and increase managerial accountability. In 2022, a total of 22 institutions adopted and published their medium-term plans for the period 2022-2024, in line with the Law on the planning system.

In the reporting period, Serbia continued to focus on operationalising the principle of **managerial accountability** through the preparation of a draft managerial accountability roadmap. Weaknesses in performance management and lines of accountability between independent bodies and their parent institutions persist.

The capacities to implement **internal control** standards, including risk management, have to be further increased at both central and local government level and be integrated in the administrative culture. Serbia has continued to implement the obligation for heads of institutions using public funds to sign an annual statement on the status of their internal control systems. The establishment of an irregularity reporting system for budget beneficiaries in line with the guidelines on irregularity management needs to be ensured in practice. The Ministry of Finance has a centralised budget inspection function that needs to be strengthened. Mapping the entire national inspection environment and ensuring its proper role and scope remains a priority.

Internal audit practice is broadly in line with international standards. However, not all institutions that are required to establish an internal audit unit have done so and many internal audit units do not have a sufficient number of auditors. Most central institutions carry out audits according to strategic and annual audit plans. Internal audit recommendations need to be implemented in a timely manner and the quality assurance of internal audit further developed.

The **central harmonisation unit** continued to focus on system development and dissemination of methodological guidance. It has continued to conduct internal audit and internal control quality reviews. The quality of the unit's annual report on the state of PIFC implementation is improving. However, its use as a tool to improve PIFC needs to be enhanced, and timely publication needs to be ensured.

External audit

Serbia's **constitutional and legal framework** provides for the independence of the State Audit Institution (SAI) in line with the standards of the International Organization of Supreme Audit Institutions. The SAI's financial independence was respected during the 2022 budget approval.

The SAI's **institutional capacity** to carry out its core audit tasks is adversely affected by the continued focus on the detection of errors and filing of misdemeanour and economic offence and criminal charges against individuals. This affects its capacity to undertake its core audit task. The appropriateness of this requirement in the SAI law should be reviewed in the medium term. The long-standing issue of not having suitable business premises is yet to be resolved.

The **quality of audit work** is constantly improving with the support of the dedicated sector for audit methodology and quality control. In 2022, the SAI continued to improve its working methodology. It has maintained focus and improved capacity for performance audits with 14 performance audits carried out in 2022. In 2022, the SAI produced 284 audit reports, including 98 compliance audit reports, 93 financial statement reports, 24 financial statement and compliance audit reports, 24 compliance and performance audit reports, 14 performance audit reports, and 31 reports on the audit of response reports. Since 2019, the SAI has been publishing responses to the audit reports and post-audit reports.

The SAI increased the **impact of its audit work** by monitoring the implementation of its recommendations and cooperation with stakeholders, improving the overall transparency of its

work, and increasing its communication with the media. The SAI activity report was discussed both in the relevant parliamentary committee and in the plenary. The SAI's internal audit unit has only one employee and is still to be properly staffed.

Protection of the EU's financial interests

Serbia has achieved a high degree of **EU *acquis* alignment**, but full alignment with the EU Directive on the fight against fraud to the EU's financial interests by means of criminal law still needs to be ensured. The strategic plan for combatting fraud and managing irregularities in handling financial resources of the European Union in the Republic of Serbia for the period 2021-2023 is in place. The **anti-fraud coordination service (AFCOS)** in the Ministry of Finance has eight employees, falling short of the planned 13. In 2022, AFCOS conducted three administrative checks, compared with seven in 2021 and eight in 2020.

In January 2023, the Serbian government adopted a Decision on the establishment of the network for combatting fraud and for managing irregularities in handling financial resources of the EU, to reflect changes within the institutions represented in the AFCOS Network. Serbia continued its **good cooperation with the European Commission** during investigations, including the follow-up of recommendations. During the reporting period, Serbia reported 12 irregularities via the irregularity management system, of which seven were classified as suspected fraud. Serbia should maintain its efforts in further developing a solid track record on cooperation in investigations and reporting of irregularities.

Protection of the euro against counterfeiting

In this area, Serbia has achieved a high degree of **EU *acquis* alignment**. The legislation foresees that the National Bank of Serbia carries out the **technical analysis** and provides specialised training for the licensed entities that authenticate euro coins and process euro banknotes. The central bank has formal **cooperation agreements** with the European Commission on coins and with the European Central Bank on banknotes. Regional cooperation with other central banks is ongoing. The central bank continued to develop its administrative capacities by participating in several international and domestic seminars, conferences and workshops, primarily as a follow-up to the Pericles 2020 programme.

3. GOOD NEIGHBOURLY RELATIONS AND REGIONAL COOPERATION

Good neighbourly relations and regional cooperation form an essential part of Serbia's European integration process. They contribute to stability, reconciliation and a climate conducive to addressing open bilateral issues and the legacies of the past.

Serbia maintained its engagement in a number of regional cooperation initiatives, such as the Central European Free Trade Agreement (CEFTA), the Energy Community, the Transport Community, the South-East European Cooperation Process (SEECP) and the Regional Cooperation Council. During the reporting period, disagreements with Kosovo over the implementation of the Dialogue agreement on Kosovo's representation and denomination in regional cooperation initiatives have hampered the smooth functioning of these initiatives. In December 2022, Serbia hosted the biannual General Assembly of the Parliamentary Assembly of the Black Sea Economic Cooperation⁹.

⁹Serbia also actively participates in the Adriatic-Ionian Initiative, the European Union Macro-Regional Strategies for the Danube Region, the Adriatic and Ionian Region, the Regional School of Public Administration (ReSPA) and the Brdo-Brijuni process.

The **EU-Western Balkans Summit** in December 2022 took place, for the first time in the region, in Tirana. The summit focused on support to the region in the fields of energy and migration, and on youth cooperation, roaming, green lanes and overall progress on implementing the Economic and Investment Plan.

On the **Common Regional Market**, a political breakthrough was achieved at the Berlin Process Summit in November 2022, where leaders from the Western Balkans adopted the three mobility agreements on higher education qualifications, on professional qualifications and on free movement with identity cards. Serbia ratified all three mobility agreements in April 2023 and deposited the related ratification notifications. A number of important decisions agreed at technical level within CEFTA remain blocked.

There are no outstanding issues concerning Serbia's respect for the **Dayton/Paris Peace Agreement**. Serbia continues to support Bosnia and Herzegovina's territorial integrity and its path to joining the EU. As envisaged by the Dayton agreement, Serbia continues to develop special relations with *Republika Srpska* entity, as well as to publicly promote such relations. Regular and frequent meetings were held between the Serbian leadership (President, Prime Minister, Speaker, Ministers, including the Minister for European Integration) and the leadership of *Republika Srpska*. In August 2023, a session of two governments and of the Cooperation Council was held in Banjaluka. Serbian authorities also met the new High Representative for Bosnia and Herzegovina who visited Belgrade in October 2022 and February 2023.

Serbia has continued to closely cooperate with Bosnia and Herzegovina, Croatia, Montenegro and Serbia under the **Sarajevo Declaration Process**, which aims to find sustainable solutions to refugees and displaced persons as a result of the armed conflicts in ex-Yugoslavia during the 1990s. Within the framework of the Regional Housing Programme, 6 894 housing units had been built, purchased or reconstructed by end of August 2023 in Serbia, able to accommodate about 20 680 individuals. Significant challenges remain regarding the economic and social integration and well-being of many families, which is required to ensure the sustainability of return, but also to ensure adequate protection and opportunity in cases of no return.

The unresolved fate of **missing persons** who disappeared during the conflicts in the 1990s remains a key issue to be solved in the Western Balkans. In July 2023, there were still 9 781 missing persons as a legacy of the conflicts. Serbia participated in the work of the Missing Persons Group (MPG) under the framework plan, and the Serbian government Commission on the Missing Persons also engaged in activities with the International Committee of the Red Cross (ICRC) and the International Commission on Missing Persons (ICMP) to promote bilateral cooperation with Croatia, Bosnia and Herzegovina and Montenegro in the resolution of missing person cases. In June 2023, rules of procedure for cooperation between Montenegro and Serbia were formally signed with a view to implement the bilateral cooperation protocol. Bilateral cooperation with Croatia on these issues resumed on an informal basis, with a number of meetings in January and March 2023, as part of broader efforts to improve bilateral relations. The Belgrade delegation to the ICRC-chaired working group on missing persons remained engaged in 2022 and 2023, including in assessing possible gravesites in Serbia and Kosovo. No session of the working group took place after April 2021 as the Kosovo delegation refuses to hold new meetings until the Serbian delegation changes its head. Nonetheless, lower levels of the mechanism (sub-working group on forensic issues and analytical team) continued to work on concrete cases and sites. In May 2023, the leaders of Serbia and Kosovo, in the context of the EU-Facilitated Dialogue, endorsed the Declaration on Missing Persons committing to

full implementation of respective commitments in this area, and improving their cooperation under the ICRC-chaired working group.

Serbia remained overall committed to maintaining good **bilateral relations** with other enlargement countries and neighbouring EU Member States.

Relations with *Albania* remained good overall. In September 2022, a memorandum of understanding on cooperation in the energy sector was signed. In July 2023, Albanian Prime Minister visited Belgrade and Serbian Prime Minister visited Tirana for a regional meeting.

Relations with *Bosnia and Herzegovina* are good and overall stable. The new Minister of Foreign Affairs of Bosnia and Herzegovina visited Serbia in February 2023 and met all Serbian leaders. Border demarcation issues need to be resolved and the countries still need to reach an agreement on two dams on the Drina River and a part of the Belgrade-Bar railway, which crosses into Bosnia and Herzegovina.

Relations with *Montenegro* are overall stable. The Serbian President attended the inauguration ceremony of the new Montenegrin President, who visited Serbia in July 2023. In September 2022, the Prime Minister of Montenegro visited Serbia. Serbian media outlets have a strong footprint in Montenegro's media landscape. The participation of mayors and heads of local assemblies of six municipalities from Montenegro and representatives of the former Democratic Front at the Serbian Parliament's Committee for Diaspora and Serbs in the region sparked controversy in Montenegro. In August 2023, Serbia banned the entry of a former Montenegrin Deputy Prime Minister on alleged security grounds.

Relations with *North Macedonia* are good. In March 2023, the Prime Minister of North Macedonia visited Belgrade and three memorandums of understanding were signed. They concern measures promoting the movement of people and goods, cooperation in the mining and energy sector, and a project to establish an interoperable electronic tolling system. In April 2023, a memorandum of understanding on cooperation in EU integration was signed.

Relations with *Türkiye* are very good. In January 2023, the Serbian Minister of Foreign Affairs visited Ankara. In December 2022, a Turkish parliamentary delegation was in Belgrade. In March 2023, Serbia donated EUR 1.5 million of assistance to Türkiye and Syria following the devastating earthquake. In June 2023, the Serbian First Deputy Prime Minister and the Minister for Foreign Affairs, in the capacity of special envoy of the Serbian President, attended the inauguration of the Turkish President. In August 2023, the two Presidents met in Hungary in the margins of a wider event.

Serbia has not joined the sanctions against the Russian Federation, but it supports the territorial integrity and sovereignty of *Ukraine* (for more details see Chapter 31). Serbia provided humanitarian assistance and energy equipment to Ukraine. In August 2023, Serbian President had the first official bilateral meeting with his Ukrainian counterpart in Athens, following a brief and informal meeting between the two in the margins of the European Political Community summit in the *Republic of Moldova* in June 2023. In February 2023, allegations of Serbian football fans' involvement in an attempted *coup d'état* or destabilising activities promoted by Russia in Moldova created short-lived tensions that were quickly resolved at the highest bilateral level. Serbia's relations with *Georgia* are overall good. A memorandum of understanding between Serbia and Georgia is in place on cooperation in the area of European integration. Trade exchanges with the three countries are underdeveloped.

Relations with neighbouring **EU Member States Romania** and **Bulgaria** are overall good and with **Hungary** very good. In June 2023, a Strategic Cooperation Council with Hungary was established and held its first session; 12 agreements were signed. Relations with **Croatia**

improved. In January 2023, the Ministers of Foreign Affairs of the two countries met twice, and Serbia appointed a State Secretary in the Ministry of Foreign Affairs as the national coordinator for addressing open issues with Zagreb. The Croatian and Serbian Prime Ministers met twice, in January 2023 in Croatia and in June 2023 in Serbia, in the margins of their informal visits to the other country to meet representatives of their respective national minority.

4. NORMALISATION OF RELATIONS BETWEEN SERBIA AND KOSOVO

The EU-facilitated Dialogue on normalisation of relations between Kosovo and Serbia continued in the reporting period with regular meetings at the level of Leaders and Chief Negotiators. After months of intense negotiations and with the support of key partners, the Parties reached an Agreement on the Path to Normalisation in Brussels on 27 February 2023, and agreed on its Implementation Annex in Ohrid, North Macedonia, on 18 March 2023. As part of the Agreement, the Parties took note that the Agreement and the Implementation Annex will become integral parts of the respective EU accession processes of Kosovo and Serbia.¹⁰

Both Kosovo and Serbia are yet to start implementation of their respective obligations stemming from the Agreement, which are valid and binding for the Parties and part of their European paths. The Parties are urged to start engaging more constructively and start implementation without further delay or precondition. This includes the establishment of the Association/Community of Serb Majority Municipalities (A/CSM). Kosovo is expected to start the process leading to the establishment of the A/CSM based on the European proposal presented to the Parties on 21 October 2023 and Serbia is expected to support this process and start delivering on their key obligations from the Agreement in parallel. Formalities, including related to adoption, should not stand in the way of making progress in implementation. The Parties further have an obligation to fully implement all past Dialogue Agreements. The constructiveness of the Parties is assessed based on their implementation performance. The European Council on 26 October 2023 regretted the lack of implementation by both Parties of the Agreement on the path to normalisation and its Implementation Annex as well as other agreements reached in the EU facilitated dialogue, led by the High Representative and supported by the EU Special Representative.¹¹ Normalisation of relations is an essential condition on the European path of both Parties and both risk losing important opportunities in the absence of progress. Despite the conclusion of the Agreement on the Path to Normalisation, the Dialogue has been hampered throughout the reporting period by a number of negative developments and crises in the north of Kosovo triggered by actions of one or both Parties. Kosovo has executed a number of such actions in the north of Kosovo, including the increased presence of Kosovo's special police and expropriation of land, which have created widespread

¹⁰ Implementation Annex to the Agreement on the Path to Normalisation of Relations between Kosovo and Serbia: This Annex constitutes an integral part of the Agreement. Kosovo and Serbia fully commit to honour all Articles of the Agreement and this Annex, and implement all their respective obligations stemming from the Agreement and this Annex expediently and in good faith. The Parties take note that the Agreement and the Implementation Annex will become integral parts of the respective EU accession processes of Kosovo and Serbia. The Parties note that immediately after the adoption of the Agreement and this Annex, the EU Facilitator will start the process to amend the Chapter 35 benchmarks for Serbia to reflect Serbia's new obligations stemming from the Agreement and this Annex. The agenda of Kosovo's Special Group on Normalisation will equally reflect Kosovo's new obligations stemming from the Agreement and this Annex. The Parties agree to endorse the Declaration on Missing Persons, as negotiated under the EU-facilitated Dialogue, as a matter of urgency. To implement Article 7, Kosovo launches immediately negotiations within the EU-facilitated Dialogue on establishing specific arrangements and guarantees to ensure an appropriate level of self-management for the Serbian community in Kosovo, in compliance with relevant previous Dialogue agreements as determined by the EU Facilitator. The Parties agree to set up a Joint Monitoring Committee, chaired by the EU, within 30 days. The implementation of all provisions shall be ensured and supervised by the Joint Monitoring Committee. To implement Article 9, the EU will organise a donor conference within 150 days to set up an investment and financial aid package for Kosovo and Serbia. No disbursement will happen before the EU determines that all provisions of the Agreement have been fully implemented. Kosovo and Serbia agree that all Articles will be implemented independently of each other. The order of the paragraphs of this Annex is without prejudice to the order of their implementation. Kosovo and Serbia agree not to block implementation of any of the Articles. All discussions related to implementation of the Agreement will take place under the EU-facilitated Dialogue. Kosovo and Serbia recognise that any failure to honour their obligations from the Agreement, this Annex or the past Dialogue Agreements may have direct negative consequences for their respective EU accession processes and the financial aid they receive from the EU.

¹¹ <https://www.consilium.europa.eu/media/67627/20241027-european-council-conclusions.pdf>

discontent among the local Kosovo Serb population and negatively affected the Dialogue. The mass resignation of Kosovo Serbs from Kosovo institutions – police, judiciary, and administration – in November 2022, roadblocks in the north of Kosovo in reaction to arrests of Kosovo Serbs in December 2022, as well as the boycott of early local by-elections in April 2023 by Kosovo Serbs further damaged the Dialogue and exacerbated the negative atmosphere around it. As a result of the Kosovo Serbs leaving all Kosovo institutions in November 2022, by-elections took place in the four Kosovo Serb majority municipalities in the north of Kosovo on 23 April 2023. While the elections were held in line with the legal framework of Kosovo, not all parties and communities made use of their democratic right to participate and vote in the elections, resulting in a record low turnout, which does not offer a long-term political solution for these municipalities.

While there had been no progress in the implementation of the Energy Roadmap adopted in June 2022, the tentative agreement in August 2023 between the commercial companies KEDS and Elektrosever on the scope of functions potentially marks a significant step forward in the implementation of the Roadmap. The Parties are now expected to quickly enable the signing of the outstanding commercial and technical agreements between the two companies to ensure that people living in the four Kosovo Serb-majority municipalities in the north start paying for the electricity they consume.

During the reporting period, the Parties agreed on and endorsed the political declaration on Missing Persons in May 2023. The Parties are encouraged to start implementation of the declaration immediately and, as the first step, agree to the Terms of Reference for the Joint Commission that is to be established as per the declaration.

When it comes to the state of play on implementation of past Dialogue agreements:

- The withdrawal of Kosovo Serbs from Kosovo institutions in November 2022 and the boycott of local elections in the north of Kosovo in April 2023 violate Serbia's Dialogue obligations and they constitute severe backsliding in Serbia's compliance to the April 2013 "First agreement of principles governing the normalisation of relations" and direct violation of the Justice Agreement of 2015. Serbia is urged to encourage Kosovo Serbs to return to the institutions immediately and Kosovo to enable this return to happen. Since November 2022, neither Party has taken any steps in this regard. The recruitment of new Kosovo Serb police cadets undertaken by the Kosovo Police while welcomed, did not follow the procedures in line with Dialogue agreements.
- There has still been no further progress on the implementation of the August 2015 Agreement. While the EU welcomes the presentation of a first draft Statute of the A/CSM to the High-level Dialogue in May 2023, the draft presented is not in line with the relevant Dialogue Agreements. A European proposal for the establishment of the A/CSM in Kosovo was presented to the Parties on 21 October 2023. Formalities, including related to adoption should not stand in the way of making progress in implementation. Kosovo and Serbia are now urged to engage constructively on the establishment of the A/CSM with no further delay, conditions or obstructions. This obligation forms a part of the implementation of the Agreement on the Path to Normalisation of Relations, which the Parties are expected advance on, without delay or precondition, as recalled by the European Council in October 2023. The issue of Serbia-run structures needs to be addressed in this same context.
- The works on the Mitrovica Bridge have long been completed and Serbia is expected to engage constructive to allow the bridge to be opened to vehicle traffic without obstruction. Any decision on opening of the Bridge has to be agreed and coordinated in the Dialogue.

- As regards the technical Dialogue agreements (2011-2012), some are not or only partially being implemented. Until sustainable solutions are found, both Parties need to remain committed to the continued implementation of the agreement on representation and participation of Kosovo in regional forums and not block the work of regional forums over bilateral disputes. The implementation of the cadastre and acceptance of university diplomas agreements is still pending due to non-implementation by Serbia. Serbia also has yet to address the issue of re-located Serbian administrative customs structures with Kosovo denomination that operate from within Serbia, and to cease the issuance of documentation or affixing of stamps with denomination that contravenes the related agreement.
- On IBM, the Interim Common Crossing-Points (CCPs) between Kosovo and Serbia continue to be operational. Only two of the six permanent CCPs have been established (Merdare and Mutivodë/Mutivode). Serbia still has not established permanent CCPs to be hosted by their side (Jarinje/Rudnica, Končulj/Dheu i Bardhë and Depce/Muçibabë), which led to a suspension of EU funds for this project in July 2018. In addition, Serbia needs to engage constructively to enable the construction of the third CCP hosted by Kosovo in the north of Kosovo at Tabavije/Bërnjak-Tabalijs/Brnjak. Additional efforts are required from Serbia to close illegal roads and bypasses to ensure exclusive use of official crossing points for goods and persons entering into or leaving Kosovo. Serbia also must allow resumption of the joint technical IBM meetings at all levels.
- On Freedom of Movement, after months of tensions, Kosovo and Serbia agreed in November 2022 that Serbia will stop issuing new licence plates with Kosovo cities' denominations, and that Kosovo will suspend any further actions related to re-registration of vehicles. The full implementation of the Freedom of Movement agreements is still pending. This also requires the Parties to find a permanent solution to the issue of licence plates in compliance with the relevant Dialogue agreements. Lack of such solution has continued to cause tensions in the north of Kosovo during the reporting period.
- Both Parties need to fully respect the Telecoms Agreement and not put its hitherto successful implementation at risk. Kosovo needs to ensure that MTS d.o.o has a business licence for the functions that have been agreed as part of the Agreement to enable the company to continue providing mobile and landline telephony services. MTS d.o.o needs to engage constructively and in line with the Kosovo law to enable this to happen.
- The processing of the Mutual legal assistance requests has been stopped by Serbia. Serbia needs to resume the processing immediately, in line with the relevant Dialogue Agreement.
- Both Parties need to respect the Arrangements for Official Visits more consistently. Kosovo needs to allow the visits of the Serbian Chief Negotiator and other Serbian government officials when they are announced and conducted in line with the Arrangements, which has not always been the case during the reporting period.

Overall, Serbia has remained engaged in the Dialogue, but it needs to demonstrate more serious commitment, invest more efforts and make compromises to take the normalisation process forward. Serbia needs to uphold its Dialogue commitments and commit to the full implementation of all past Dialogue agreements and the Agreement on the Path to Normalisation of Relations. Moving forward, Serbia also needs to make further substantial efforts to avoid actions that undermine stability and rhetoric that is not conducive to dialogue. Serbia also needs to create a conducive environment for the conclusion of the legally-binding normalisation Agreement with Kosovo, including in its international relations. Serbia is expected to engage more constructively to enable negotiations on the comprehensive legally-

binding normalisation Agreement to start and show flexibility in order to make rapid and concrete progress. Reaching such an Agreement is urgent and crucial so that Kosovo and Serbia can advance on their respective European paths. An important requirement for negotiations on the comprehensive legally-binding Agreement is for the Parties to implement the Agreement on the Path to Normalisation swiftly and efficiently and without any conditions or obstructions.

The reporting period was marked by multiple crises and violent incidents in the north of Kosovo. The most serious crisis during the reporting period occurred on 24 September 2023, when Kosovo Police was attacked by heavily armed individuals, who were surprised in the midst of a major weapons' smuggling operation, leaving one police officer dead and three wounded. During the operation the attackers had taken several pilgrims hostage while barricading themselves in the Serbian Orthodox Monastery of Banjska/Banjskë, which they left behind when fleeing. During the ongoing investigation into the events large amounts of military-grade weapons were seized. In the following days the Deputy Leader of Srpska Lista, through his lawyer, announced that he prepared and coordinated the attack. He was questioned by Serbian authorities, shortly detained and released with his passport confiscated. The Serbian government pronounced a day of mourning "over tragic events", which was largely observed as commemoration of the attackers. In the days following the attack, Serbia increased its military presence in the vicinity of Kosovo, which was subsequently reduced. The perpetrators of the attack need to be apprehended and swiftly brought to justice and Serbia is expected to fully cooperate and take all the necessary steps in this regard. The attack should not serve as an excuse for either side to divert attention from the EU-facilitated Dialogue. Kosovo and Serbia must pursue sustained de-escalation efforts, as well as ensure the holding of new elections in the north of Kosovo as soon as possible, with the active participation of Kosovo Serbs.

Prior to it, another serious escalation took place in May 2023, when the newly elected Kosovo Albanian mayors were installed in the municipal buildings in the north of Kosovo, against the clear recommendation of the international community, which triggered protests by Kosovo Serbs. Some turned violent and led to unacceptable and unprovoked attacks against citizens, KFOR soldiers, law enforcement and representatives of media, which are yet to be condemned, investigated, prosecuted and acted upon by Serbia. Several arrests of Kosovo Serbs by Kosovo Police in relation to their alleged involvement in the violence of 29 May in Zvečan/Zvečan, which did not systematically and fully adhere to the legal requirements, are of concern.

To find a way out of the cycle of crises, the Parties are expected to meet the requests of the EU, as per the statements by the High Representative on behalf of the EU from 3 June 2023¹² and 19 September¹³ related to de-escalation on the situation on the ground, enabling new early elections with unconditional participation of Kosovo Serbs, return to the Dialogue and implementation of all Agreements. The European Council expressed on 26 October 2023 that failure to de-escalate the tensions will have consequences.¹⁴

5. ABILITY TO ASSUME THE OBLIGATIONS OF MEMBERSHIP

¹² <https://www.consilium.europa.eu/en/press/press-releases/2023/06/03/statement-by-the-high-representative-on-behalf-of-the-eu-on-kosovo-and-latest-developments/>

¹³ <https://www.consilium.europa.eu/en/press/press-releases/2023/09/19/belgrade-pristina-dialogue-statement-by-the-high-representative-on-behalf-of-the-european-union-on-expectations-from-serbia-and-kosovo/>

¹⁴ <https://www.consilium.europa.eu/media/67627/20241027-european-council-conclusions.pdf>

CLUSTER 2: INTERNAL MARKET

This cluster covers free movement of goods (Chapter 1), freedom of movement for workers (Chapter 2), right of establishment and freedom to provide services (Chapter 3), free movement of capital (Chapter 4), company law (Chapter 6), intellectual property law (Chapter 7), competition policy (Chapter 8), financial services (Chapter 9), and consumer and health protection (Chapter 28). Four chapters have been opened, namely chapters 4, 6, 7 and 9. Opening benchmarks are yet to be met on chapters 1 and 8. This cluster is key for Serbia's preparations for the requirements of the EU's internal market and is of high relevance for early integration and the development of the Common Regional Market.

Progress was limited in most areas within the cluster. No progress was registered in the area of free movement of capital.

In the coming period, Serbia is invited to focus on the following areas: adopting an action plan to ensure compliance with Articles 34-36 of the Treaty on the Functioning of the European Union and a strategy and action plan for implementing the *acquis* on free movement of goods; enhancing cooperation with EU Member States on coordination of social security systems; adopting the Law on services; liberalising capital movements in line with obligations under the Stabilisation and Association Agreement (SAA); aligning with the *acquis* on company law, particularly on takeover bids; aligning the copyright and related rights legislation with the EU directives on collective rights management and on orphan works; aligning the existing fiscal State aid schemes with the EU *acquis* and improving the track record in the area of competition and State aid; continue to align the banking regulation with the revised versions of the Capital Requirements Regulation and the Capital Requirements Directive (CRR/CRD); and further aligning with the EU consumer protection and health protection *acquis*, including on substances of human origin, tobacco and medicines for human and veterinary use.

Chapter 1: Free movement of goods

The free movement of goods ensures that many products can be traded freely across the EU based on common rules and procedures. Where products are governed by national rules, the principle of the free movement of goods prevents these rules creating unjustified barriers to trade.

Serbia is **moderately prepared** in the area of free movement of goods. **Limited progress** was made on last year's recommendations by adopting implementing legislation on the classification, labelling and packaging of chemicals (CLP), and by further aligning with the EU *acquis* on eco-design. Other recommendations from last year's report remain valid.

In the coming year Serbia should in particular:

- finalise and adopt an action plan to ensure compliance with Articles 34-36 of the Treaty on the Functioning of the European Union (TFEU), and a strategy and action plan for implementing the EU *acquis* in this chapter for sectoral ('new approach' and 'old approach') and horizontal legislation and relevant organisations;
- align with the latest market surveillance *acquis* by adopting the law on market surveillance;
- provide adequate administrative, financial and human resources capacity for market surveillance, the agency for the homologation of vehicles, and for implementation of the European Regulation on Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH).

General principles

On the **general principles**, Serbia still needs to adopt a strategy and an action plan to implement the EU *acquis* related to this chapter for sectoral ('new approach' and 'old approach') and horizontal legislation, and for relevant organisations.

Non-harmonised area

On **horizontal measures**, Serbia still needs to adopt, and then start to implement, an action plan ensuring compliance with **Articles 34-36** of the Treaty on the Functioning of the European Union (TFEU). Serbia partly aligned with the EU *acquis* on mutual recognition.

Harmonised area: quality infrastructure

The quality council, an expert advisory body established to further promote and improve quality infrastructure, did not provide recommendations on quality infrastructure-related activities during the reporting period. Shortages in human resources for the quality infrastructure institutions dealing with standardisation have been addressed, while the Accreditation Body of Serbia (ATS), market surveillance, the agency for homologation of vehicles and REACH would benefit from further strengthening.

In 2022, the government adopted the Regulation on notification and information of technical regulations, conformity assessment and standards, aiming to fully align with the EU *acquis* on information in the field of technical regulations. Overall, further efforts need to be made to raise awareness and understanding of quality infrastructure among business and consumers in Serbia.

On **standardisation**, there are 176 active national standardisation technical committees in the Institute for Standardisation of Serbia. In the reporting period, the Institute adopted 99.39% of the European Committee for Standardisation (CEN) standards, 97.33% of the European Committee for Electrotechnical Standardisation (CENELEC) standards, and 100% of the European Telecommunications Standards Institute (ETSI) standards. 8.3% of European standards and deliverables were adopted by the 'translation method'.

The number of **conformity assessment** bodies in Serbia is currently 774. Out of these, 19 are designated and registered for carrying out conformity assessment in accordance with technical legislation. Although the obligations regarding certificates of conformity were repealed by Serbia in February 2022, by amending the Law on products for general use, a small number of certificates of conformity continue to apply to imports of goods such as drones, construction products such as cement, steel for the reinforcement of concrete, and for screws. During the reporting period, the Accreditation Body of Serbia (ATS) awarded 28 new accreditations, revoked eight and suspended four.

Serbian legislation remains partly aligned with the EU *acquis* on **accreditation**. In October 2022, the European co-operation for Accreditation formally confirmed that the ATS remains a signatory in the field of calibration, testing including medical testing, inspection, certification of management systems, certification of products, processes and services, and certification of persons, and confirmed that the ATS is compliant with requirements in the field of proficiency testing providers.

In the field of **metrology**, Serbian legislation remains partly aligned with the EU *acquis*. During the reporting period, the Directorate of Measures and Precious Metals (DMDM) published 172 new calibration and measurement capabilities in various fields. The number of internationally recognised standards for calibration and measurement stands at 34.

On **market surveillance**, Serbia's legislation remains to be aligned with the latest EU *acquis*. Although aided by its IT platform (e-Inspektor), the market surveillance inspectorate, which has 458 systemised positions, has reduced the number of staff to 322 employees. Its financing and budget still require additional resources. In the reporting period, the market surveillance and inspection authorities carried out 5 825 inspections and ordered 627 corrective and restrictive measures for non-compliant or unsafe products. The sanitary inspection has removed approximately 34 tonnes of unsafe imported products off the market.

Harmonised area: sectoral legislation

In the area of '**new and global approach**' **product legislation**, Serbia adopted implementing legislation designed to fully align with the EU *acquis* on eco-design. Serbian legislation on cableways, radio equipment, gas appliances, construction products, civil explosives, pyrotechnic articles, medical devices and *in vitro* medical devices remains partially aligned with the EU *acquis*.

In the area of '**old approach product legislation**', some progress was made on alignment with the Classification, Labelling and Packaging Regulation (CLP), through the adoption of implementing legislation. The administrative and inspection capacity for implementing the EU *acquis* for vehicle homologation requires strengthening. Serbia is partly aligned with the EU *acquis* on detergents. It is not aligned with the EU *acquis* on motor vehicles, two or three wheeled vehicles, tractors, non-road mobile machinery emissions, fertilisers, and drug precursors.

On **procedural measures**, in May 2023 Serbia adopted a national control list for **dual-use goods** designed to be aligned with the EU *acquis*, and in May 2023 published a national control list of **weapons**. Serbian legislation on firearms and medicinal products pricing remains to be aligned with the EU *acquis*.

Chapter 2: Freedom of movement for workers

Citizens of one Member State have the right to work in another Member State and must be given the same working and social conditions as other workers.

Serbia is **moderately prepared** in the area of freedom of movement for workers. Serbia made **limited progress** in this area by continuing to carry out preparations for joining the European network of employment services (EURES).

No new bilateral agreements with EU Member States on coordination of social security systems have been concluded. Therefore, last year's recommendation remains valid.

In the coming year, Serbia should in particular:

- step up cooperation with EU Member States on coordination of social security systems;
- initiate preparations for joining the European Labour Authority.

Regarding **access to the labour market**, the procedures for issuing work permits to EU citizens, who are currently covered by rules for third-country nationals, need to be further simplified. In 2022, a total of 35 173 work permits were issued, of which 2 101 to EU citizens.

Serbia's National Employment Service (NES) has continued to carry out preparations for joining the European network of employment services (**EURES**), notably by initiating preparations for adapting the work processes of NES to EURES requirements. Two new migration service centres were opened in Subotica and Vranje, in addition to the seven existing ones. NES organised EURES-related training sessions for the staff of its migration services centres and completed the reengineering of its information system.

Serbia needs to initiate preparations for joining the **European Labour Authority**.

Regarding the **coordination of social security systems**, bilateral agreements are in place with 20 EU Member States. No new bilateral agreements were concluded. Overall, legislative, technical and administrative conditions for social security institutions to cooperate with their counterparts in EU Member States need to be further improved.

There were no developments on the **European Health Insurance Card**.

Chapter 3: Right of establishment and freedom to provide services

EU natural and legal persons have the right to establish themselves in any Member State and to provide cross-border services. For certain regulated professions, there are rules on mutual recognition of qualifications. EU rules on postal services focus on improving the quality of universal service, gradual market opening to competition, and the establishment of an independent regulator.

Serbia is **moderately prepared** in these areas. **Limited progress** was made on the right of establishment and freedom to provide services, with the continued screening and alignment of sectoral laws with the EU *acquis* and the further strengthening of the capacity of the postal services inspectorate. Nevertheless, last year's recommendations remain valid.

In the coming year, Serbia should in particular:

- adopt the horizontal Law on services, complete alignment of sectoral laws with the horizontal law and the EU *acquis*, and establish a point of single contact via a portal that offers online information to service providers, including on all relevant administrative procedures;
- complete alignment with the EU postal *acquis*; and
- continue alignment with the EU *acquis* on mutual recognition of professional qualifications, including on the directives on recognition of professional qualifications and on a proportionality test before adoption of new regulation of professions.

In the areas of the **right of establishment** and **freedom to provide cross-border services**, the horizontal Law on services, aiming to align with the EU Services Directive, remains to be adopted. Serbia has continued with the screening and alignment of sectoral laws with the draft horizontal law and the EU Services Directive. During the reporting period, Serbia concluded the screening process of 15 laws, 15 implementing laws and 8 regulations in the field of environmental protection. No point of single contact has been established; its establishment and functioning are dependent on the adoption of the horizontal Law on services.

The Law on **postal services** is aligned with the 1997 and 2002 Postal Services Directives and partially with the 2008 Postal Services Directive, as it maintains a reserved area for the provision of universal service. Serbia is currently preparing to complete the alignment of its national legislation with the 2008 Postal Services Directive and the Regulation on cross-border parcel delivery services. In 2022, Serbia also concluded an analysis for the implementation of the Regulation on cross-border parcel delivery services, as envisaged under the action plan of the strategy for the development of postal services for the period 2021-2025, which will inform preparations for amending the Law on postal services. The Regulatory Agency for Electronic Communications and Postal Services is the independent national regulatory authority in the field of postal services. In October 2022, a new Ministry of Information and Telecommunications was formed, including a department for postal inspection. The upgraded administrative capacity of the postal services inspectorate is sufficient to ensure compliance with the current Law on postal services and monitor the national postal market. Serbia should

complete the regulatory alignment with the EU postal *acquis* and continue preparing for implementing the new postal market rules, in view of amending the postal law.

In the field of **mutual recognition of professional qualifications**, national legislation is largely aligned with the EU *acquis*. A preliminary list of 50 regulated professions, drafted with EU support, is still pending adoption. Serbia has adopted the three agreements, reached in 2022 in the framework of the Berlin Process, on recognition of professional and academic qualifications. Further alignment is still needed on the relevant sectoral legislation.

Chapter 4: Free movement of capital

In the EU, capital and investments must be able to move without restrictions, with common rules for cross-border payments. Banks and other economic operators apply certain rules to support the fight against money laundering and terrorist financing.

Serbia is **moderately prepared** on free movement of capital. **No progress** was made during the reporting period. Last year's recommendations remain valid.

In the coming year, Serbia should in particular:

- liberalise capital movements in line with its obligations under the Stabilisation and Association Agreement, in particular by removing the remaining restrictions on the acquisition of agricultural land by EU nationals, and by adopting amendments to the Law on the elements of property law relations, to ensure equal treatment on the acquisition of property rights; and
- demonstrate, through a track record, increasing effectiveness in monitoring, supervision, financial intelligence, investigation and reporting.

In the field of **capital movements and payments**, Serbia has liberalised many capital transactions. Certain restrictions on capital movements remain for reasons of public policy and macro-financial stability. These must be justified, targeted and proportionate and should be gradually lifted. There are still some restrictions and authorisation requirements regarding the possibility of residents to engage in deposit operations abroad. The agricultural law still does not provide EU citizens and Serbian citizens with the same conditions in terms of acquiring agricultural land. Amendments to the legislation on elements of property law relations, which will aim at providing EU citizens with the same treatment as Serbian nationals regarding the acquisition of real estate, are still being drafted. Against this background, Serbia is not complying with its obligations under the SAA.

On **payment systems**, no changes were made to align the Law on multilateral interchange fees and special operating rules for card-based payment transactions with the EU *acquis* and SAA obligations (*See Chapter 8 – Competition policy*). The National Bank of Serbia continued with the preparatory activities to fully align the Law on payment services and relevant by-laws with the Payment Service Directive 2 (PSD 2). Serbia has currently 12 licensed payment institutions and 4 electronic money institutions providing payment services.

On the **fight against money laundering and terrorism financing**, Serbia is still reporting to MONEYVAL about the implementation of the outstanding 2016 mutual evaluation report recommendations. Serbia will remain in enhanced follow-up and is expected in 2023 to report back to MONEYVAL on progress to strengthen its implementation of anti-money laundering and counter-terrorist financing measures. The 2022-2024 action plan accompanying the national anti-money laundering/countering the financing of terrorism strategy is being implemented.

The rulebook on internal organisation and job classification in the Administration for the Prevention of Money Laundering (APML) was amended in December 2022 to reflect internal organisational changes. Its administrative capacity decreased further to 28 employees against the envisaged 42 members. In 2022, 1 563 suspicious transactions were reported.

Chapter 6: Company law

The EU has common rules on the formation, registration and disclosure requirements of a company, with complementary rules for accounting and financial reporting, and statutory audit.

Serbia has a **good level of preparation** in company law. **Limited progress** was made with the mandatory electronic filing of applications for incorporation for joint-stock and limited liability companies, and for limited and general partnerships. Further alignment is needed in the company law area. Therefore, last year's recommendation remains valid.

In the coming year, Serbia should in particular:

- further align with the EU *acquis* on company law, particularly on takeover bids; and
- start working on aligning national legislation with the EU *acquis* on cross-border conversions, mergers and divisions and on the use of digital tools and processes in company law.

As regards **company law and corporate governance**, Serbia's legislation is largely aligned with the EU *acquis*. Adoption of a new law on takeovers of joint-stock companies and related legislation to align with the *acquis* on company takeovers is still pending. Further alignment is needed with the directives on the use of digital tools, the directive on cross-border operations (mergers, divisions, conversions), and the directive on gender equality on boards of directors.

Serbia's Corporate Governance Code is based on EU best practice and OECD principles. The Serbian Business Registers Agency acts as a one-stop shop where companies obtain a unique registration and tax identification number and online access to company information. It also provides for electronic registration of the formation of limited liability companies. In May 2023, the electronic filing of applications for incorporation became mandatory for joint-stock and limited liability companies, and for limited and general partnerships. Company information in the business register is stored electronically in a database, which should be technically ready to interconnect with the EU Business Registers Interconnection System upon EU accession. Serbia's Law on companies defines the formation of a European Company and European Economic Interest Grouping; as yet there are no plans for alignment regarding the statute for a European cooperative society.

Regarding **company reporting**, under the Law on accounting and related financial reporting rules, companies must compile financial statements and submit them to the Serbian Business Register Agency. More than 5 400 accounting services providers have been registered in the new Register of Accounting Services Providers, in compliance with the Law on accounting. There are sanctions for the non-publication of individual and consolidated financial statements. Moving forward, Serbia will need to harmonise its legislation to align with the 2022 EU Directive on corporate sustainability reporting. Implementation of the 2021 Law on capital market began in January 2023, following adoption by the Securities Commission, in July 2022, of a set of implementing legislation. The Law is partially aligned with the EU Transparency Directive for listed companies. The Securities Commission is the Officially Appointed Mechanism for the central storage of regulated information. It is also the body responsible for quality assurance and public audit oversight. Implementation of the Law on auditing is

discussed by the audit public oversight board and relevant action plans are revised on an annual basis.

Chapter 7: Intellectual property law

The EU has harmonised rules for the legal protection of intellectual property rights (IPR), copyright and related rights. Rules for the legal protection of IPR cover, for instance, patents and trade marks, designs, biotechnological inventions and pharmaceuticals. Rules for the legal protection of copyright and related rights cover, for instance, books, films, software and broadcasting.

Serbia has a **good level of preparation** on intellectual property rights. **Limited progress** was made with slightly improved statistics on enforcement and the launching of an electronic interface for the submission of requests for the protection of intellectual property rights to the Market Inspectorate. Last year's recommendations remain valid.

In the coming year, Serbia should in particular:

- align the copyright and related rights legislation with the EU directives on collective rights management, on orphan works and on certain permitted uses of certain works and other subject matter protected by copyright and related rights, for the benefit of persons who are blind, visually impaired or otherwise print-disabled; and
- strengthen enforcement by improving capacities and further increasing the coordination of different stakeholders.

Preparations of a new Law on **copyright and related rights** continued, with the aim to ensure full alignment with the *acquis* on collective rights management and orphan works. The new law also aims to fully implement the Marrakesh Directive. Serbia has yet to align with the EU Directives on copyright and related rights in the Digital Single Market (DSM Directive) and on online transmissions of broadcasting organisations and retransmissions of television and radio programmes (SatCab II Directive).

On **industrial property rights**, the supplementary protection certificate manufacturing waiver started to apply from 2 July 2022. The Intellectual Property Office remains relatively well staffed and efficient in registering trademarks.

On **enforcement**, the number of employees in the Market Inspectorate specialising in the field of intellectual property remained unchanged at 40 inspectors. In October 2022, their area of work expanded to include identification of infringements in computer software, taking over the competence from the Tax Administration, which employed four inspectors for these tasks. To strengthen the capacity of the Market Inspectorate, a department for IPR enforcement and prevention of illegal trade and a special unit for IPR enforcement were created. The number of software legality checks carried out by the Tax Administration slightly decreased in 2022. The overall amount of counterfeit and pirated goods confiscated and destroyed by the Market Inspectorate increased significantly in 2022 (321 362, compared with 61 747 in 2021). The number of procedures carried out by the Market Inspectorate, both *ex officio* and following requests submitted by economic operators, increased year-on-year. The number of customs officers specialised in intellectual property protection remained stable at 12 employees in 2022. The number of items detained by the Customs Administration increased substantially in 2022 (1 134 213, compared with 145 866 in 2021), as well as the number of destroyed items (159, compared with 48 in 2021). The latest amendments to the Regulation on the conditions and method of implementation of measures for the protection of intellectual property rights at the border entered into force in January 2023. Due to inadequate specialisation and the increasing

number of incoming cases, the capacity of the judiciary to handle intellectual property rights cases remained limited.

Work to further align with the EU Directive on the enforcement of IPR is ongoing. The coordination body for the enforcement of intellectual property rights held one meeting in 2022, while the working groups established informal cooperation, notably in testing the electronic platform for information exchange among IPR enforcement institutions. However, the platform remains to be launched. The Market Inspectorate launched an interface for electronic submission of requests for protection of intellectual property rights.

Chapter 8: Competition policy

EU rules protect free competition. They include antitrust rules against restrictive agreements between companies and abuse of a dominant position, and rules on concentrations between companies which would significantly impede effective competition. EU rules also set out a system of State aid control. Governments are only allowed to grant State aid if restrictive conditions are met, with a view to preventing distortion of competition.

Serbia is **moderately prepared** in the area of competition policy. **Limited progress** was made on legislative alignment of State aid rules with the EU *acquis*, in the form of the adoption of implementing legislation. However, last year's recommendations on the alignment with the EU *acquis* and obligations under SAA of the fiscal State aid schemes and the Law on multilateral fees and special operating rules for card-based payment transactions have not been met.

In the coming year, Serbia should in particular:

- align the existing fiscal State aid schemes and work towards aligning the Law on multilateral interchange fees and special operating rules for card-based payment transactions with the EU *acquis* and SAA obligations;
- ensure that the notification and standstill obligations are systematically respected for all State aid measures and establish a solid track record in the implementation of laws on protection of competition and State aid control; and
- finalise the inventory and define an action plan for the alignment of all existing State aid schemes identified as incompatible with the SAA obligations.

Antitrust and mergers

The **legislative framework** is broadly in line with Articles 101 and 102 TFEU and related provisions of the SAA. The current Law on protection of competition provides for an *ex ante* control of mergers. Three block exemption regulations providing further alignment with the EU *acquis* remain to be adopted. The legislative framework is yet to be fully brought in line with EU guidelines and communications in this area. No progress was made in aligning Article 9 of the Law on multilateral interchange fees and special operating rules for card-based payment transactions with the EU *acquis* and the relevant provisions of the SAA.

Regarding the **institutional framework**, the Commission for Protection of Competition (CPC) is the independent authority responsible for implementing the legal framework. Over the past years, the CPC has built a reputation as an operationally independent institution. However, the transparency of the institution's work needs to be strengthened and decisions should be systematically published.

The **enforcement capacity** of the CPC is adequate with 59 employees, of whom 33 are case handlers with an appropriate level of expertise. On **implementation**, the CPC has continued to

investigate a significant number of antitrust cases. In 2022, the CPC adopted 3 decisions on restrictive agreements and 2 on abuse of dominant position. A total of 8 dawn raids in the context of 3 cases were conducted in 2022. The leniency programme was not used. The level of imposed fines remained stable at around EUR 1 million in 2022. There were no mergers prohibited and no merger decisions with remedies in 2022. The CPC published 2 sector enquiries in 2022 concerning the markets of online food delivery platforms and other postal services. The CPC issued 10 opinions on draft legislation in 2022. The practice of consulting the CPC on all relevant legislation should continue and its opinions should be systematically taken into account. In 2022, the number of CPC decisions upheld by appeal courts dropped to 9, down from 14 in 2021. The capacity and specialisation of the judiciary to deal with complex competition cases remains modest and needs to be improved significantly. Advocacy activities picked up in the reporting period with promotion of the CPC's competition compliance programme, but they still need to be further stepped up.

State aid

Regarding the **legislative framework**, the Law on State aid control is broadly in line with the EU *acquis* and the relevant provisions of the SAA. Five new decrees were adopted during the reporting period, on the content and form of State aid notifications, on conditions and criteria for compliance of State aid granted to undertakings operating in the railway sector, on conditions and criteria for compliance of state aid to undertakings operating in the air transport sector, on conditions and criteria for compliance of aid for accelerated investments in sectors strategic for the transition towards a net-zero economy and on conditions and criteria for the compliance of state aid granted in the form of guarantees. The temporary framework on State support to the economy in the context of the COVID-19 crisis partially expired on 30 June 2022. Remaining provisions in force are broadly in line with the EU temporary framework.

During the reporting period, the Commission for State Aid Control (CSAC) adopted four guidelines on assessing the compliance of state aid for research, development and innovation, on assessing whether the transaction constitutes state aid, on assessing the compliance of state aid for environmental protection and energy sector and on assessing the compliance of special cases of state aid to undertakings operating in the air transport sector. However, implementing legislation should be further aligned with the EU *acquis*. The existing State aid schemes, most notably the fiscal State aid schemes established by the Laws on corporate income tax, on personal income tax and on free zones, are not yet aligned with the EU *acquis*. CSAC prepared its 2022 annual report on the inventory of State aid schemes. It also submitted to the Commission an updated inventory of State aid schemes not aligned with the *acquis*. However, the Commission's comments on the inventory are yet to be fully taken on board and an action plan with a clear timetable for alignment of the schemes identified as incompatible remains to be adopted by the government. Furthermore, the regional aid map is yet to be drafted.

On the **institutional framework**, CSAC is responsible for implementing the Law on State aid control. The law provides that CSAC is accountable to the Parliament and secures its legal independence. However, the operational independence of CSAC needs to be demonstrated by establishing a transparent track record that shows consistent and satisfactory implementation of the law.

CSAC's **enforcement capacity** should be further strengthened. It has only 20 full-time employees from a total of 23 members of staff including the president, 4 council members and 11 case handlers; this is significantly fewer than the 27 budgeted employees.

The **implementation** of the Law on State aid control should be further strengthened. In particular, the notification and the standstill obligations are still not respected systematically,

and State aid is occasionally provided to economic operators, particularly foreign investors, without prior approval by CSAC. The number of decisions taken upon notification dropped to 105 in 2022, from 139 in 2021. The number of decisions adopted in *ex post* procedure increased to 7 in 2022, from 2 in 2021. CSAC significantly increased the number of negative decisions to 6 in 2022, from 1 in 2021. The number of conditional decisions increased to 3 in 2022, from 1 in 2021. There were no appeals of CSAC's decisions in the reporting period. The electronic platform to help monitor compliance regarding the cumulation of aid has yet to be completed. The Government adopted CSAC's reports on State aid granted in 2020 and 2021 with delay, whereas the 2022 report has yet to be adopted. CSAC should ensure the strict enforcement of its State aid rules, also with regard to the implementation of State aid rules in large projects carried out in cooperation with third countries. Advocacy activities among aid-granting authorities need to continue as awareness of State aid rules remains to be addressed systematically.

Liberalisation

Provisions on financing of services of general economic interest are included in two decrees adopted in October 2021, one on public service compensation to undertakings entrusted with responsibility for the provision of services of general economic interest and one on *de minimis* aid for provision of services of general economic interest. Enforcement of competition rules for public companies needs to be intensified. There is no evidence of the existence of commercial monopolies within the meaning of Article 37 TFEU.

Chapter 9: Financial services

EU rules aim to ensure fair competition among, and the stability of, financial institutions, namely banking, insurance, supplementary pensions, investment services and securities markets. They include rules on authorisation, operation and supervision of these institutions.

Serbia remains **moderately prepared** in the area of financial services. **Limited progress** was made with the start of the application of the Law on capital market, following the adoption of a set of implementing legislation. The country should make further efforts to align with the financial services *acquis*, focusing on the priorities identified based on the current state of play. Last year's recommendations remain valid.

In the coming year, Serbia should in particular:

- continue to align the banking regulation with the revised versions of the Capital Requirements Regulation and the Capital Requirements Directive (CRR/CRD);
- align national legislation with the revised version of the EU Bank Recovery and Resolution Directive (BRRD); and
- continue to work towards full alignment with the Solvency II Directive.

On **banking and financial conglomerates**, Serbia has largely implemented the Basel III standards. The banking sector's prudential ratios are regularly monitored by the National Bank of Serbia (NBS), following adoption in 2016 of amendments to the decision on reporting requirements for banks. Alignment of national legislation with the revised version of the EU Bank Recovery and Resolution Directive (BRRD) and with parts of BRRD 1 (notably on the establishment and use of a dedicated resolution fund financed with contributions from banks) is still to be completed. The gap analysis regarding alignment of the national legal framework with the relevant EU banking *acquis* is still ongoing overall.

The current administrative capacity of the NBS in this area is adequate.

Regarding **insurance and occupational pensions**, the drafting of the new Law on compulsory traffic insurance is still under way. Preparatory work continues in the context of aligning with the Solvency II Directive, in line with the strategy for implementation. Certain provisions were already implemented regarding qualitative requirements under pillar 2, but further work is still to be carried out to ensure full alignment with the EU *acquis*. Alignment is still to be completed as regards the Directive on the activities and supervision of institutions for occupational retirement provision in the areas of cross-border activities, investment rules and regulation of technical provisions.

In the area of **financial market infrastructure**, Serbia has focused on the implementation of its Capital Market Development Strategy 2021-2026. The 2021 Law on capital market has been applied since January 2023, following adoption by the Securities Commission, in July 2022, of a set of implementing legislation. With its implementation, Serbia aims to align with the Directive on settlement finality in payment and securities settlement systems.

On **securities markets and investment services**, the Law on capital market aims at aligning the Serbian regulatory framework with the Markets in Financial Instruments Directive (MiFID II). Serbia's legal framework has a high level of alignment with MiFID II, Prospectus Regulation and Market Abuse Regulation and a low level of alignment with the MiFIR framework. The administrative capacity of the Securities Commission in this area remains weak. On investment funds, the Law on open-ended investment funds with public offering is partially aligned with the Directive relating to undertakings for collective investment in transferable securities (UCITS). The 2020 Law on alternative investment funds is largely aligned with the Directive on alternative investment fund managers, although further work is needed towards full alignment.

In the area of **sustainable and digital finance**, the Law on digital assets has been in force since 2021. The NBS and the Securities Commission are the two competent authorities for licensing services related to digital currencies and tokens. Serbia is not currently developing a national sustainable finance strategy, but the NBS monitors the developments in the field of ESG.

Chapter 28: Consumer and health protection

EU rules protect consumers' economic interests and in relation to product safety, dangerous imitations and liability for defective products. The EU also ensures high common standards for tobacco control, blood, tissues, cells and organs, as well as medicines for human and veterinary use. The EU also has rules for upholding patients' rights in cross-border healthcare and in preparing for and responding to cross-border health threats including communicable diseases.

Serbia is **moderately prepared** in consumer and health protection. **Limited progress** was made concerning the use of the newly established online platform for alternative dispute resolution, awareness-raising on consumer rights, and the quality control of medicines. The recommendations of the previous report remain valid.

In the coming year, Serbia should in particular:

- strengthen the overall managerial capacity, human resources and financial sustainability of the public health insurance fund, and of the relevant authorities for consumer protection, market surveillance and sanitary inspection;
- further align its legislation with the *acquis* on substances of human origin, on patients' rights in cross-border healthcare, on tobacco control, and on medicines for human and for veterinary use.

Consumer protection

On general aspects of **consumer protection**, Serbia now has two ministries dealing with this area: the Ministry of Internal and Foreign Trade and the Ministry of Youth and Tourism. The amended Law on consumer protection, adopted in September 2021, has contributed to a higher number of out-of-court procedures and mediation between traders and consumers. The newly established national council for consumer protection provided opinions and suggestions on the 2023-2024 Action Plan of the Strategy for Consumer Protection but did not hold any sessions in the reporting period. Serbia initiated 806 misdemeanour orders based on violations of the Law on consumer protection.

There are 12 registered consumer organisations in the national registry. In 2022, 10 consumer organisations' projects were selected to receive financing in four administrative regions, with various programmes to be implemented in the field of consumer protection. At the end of the reporting period, Serbia had 35 alternative dispute resolution (ADR) bodies. An ADR online platform launched on the website of the Ministry of Internal and Foreign Trade considerably helped with the resolution of ADR cases.

In March 2023, the National Bank of Serbia became a full member of the International Financial Consumer Protection Organisation FinCoNet. In 2022 and 2023, in its capacity as an ADR body in charge of financial institutions, the National Bank of Serbia (NBS) resolved a total of 4 783 complaints, of which 3 714 related to banks and payment service providers and 1 069 to insurance companies, while in the case of individual consumer complaints related to banks as service providers, the NBS resolved 1 413 complaints. The NBS resolved 23 mediation proceedings resulting in agreement among parties.

There was no change in the mode of cooperation between ministries and consumer organisations. Consumer protection organisations would benefit from further promotion to the general public of their work on the protection of consumer interests and rights. The authorities' administrative capacity still needs strengthening for consumer protection, inspection services for consumer protection and for product safety issues. Serbia's legislation is designed to be aligned with the *acquis* on consumers rights, while further legislative alignment is required with the Consumer Protection Cooperation Regulation.

There were no developments in the reporting period regarding **product safety-related issues**. On market surveillance, the sanitary inspection's administrative capacities need to be strengthened. The product safety council did not hold any sessions. In the reporting period, the market surveillance and inspection authorities conducted 5 825 inspections and ordered 627 measures for non-compliant or unsafe products. In the reporting period, the National Register of Consumer Complaints registered 22 216 complaints, of which 68% related to goods and 32% to services. The sanitary inspection has removed approximately 34 tonnes of unsafe imported products off the market.

On **non-safety-related issues**, Serbia's legislation remains partly aligned with the *acquis* on consumer protection. Further alignment with the EU *acquis* is needed regarding package travel and linked travel arrangements, the sale of goods, cooperation between national authorities responsible for enforcing consumer protection laws; multiannual consumer programmes; online resolution of consumer disputes; contracts for the supply of digital content and services; and alternative resolution of consumer disputes. Furthermore, the latest changes to EU consumer legislation introduced by the Directive on better enforcement and modernisation of Union consumer protection law and mortgage credit directive have yet to be implemented.

Public health

In the area of **public health**, Serbia's healthcare legislation is partly aligned with the EU *acquis*. The sustainability of the public health insurance fund still needs to be ensured. The national plan for human resources in the health sector has still not been fully implemented. Compliance with EU health indicators is not yet achieved and the EU-funded centralised electronic health record system, completed in 2015, is still not being used.

Tobacco control legislation remains partly aligned with the EU *acquis*. A strategy on tobacco control remains to be adopted, including an action plan on alignment with the EU *acquis* in this field and with the World Health Organisation Framework Convention on Tobacco control. Serbia should intensify inspections in this area.

Serbia is partly aligned with the *acquis* on **blood, tissues, cells and organs** in regard to transplantation of cells and tissues, and on human organ transplantation. EU-level quality, safety standards and inspection services remain to be fully developed. The ongoing strengthening of the administrative capacity in the Directorate of Biomedicine is a welcome development, and the recruitment process should be swiftly completed.

On **cross-border healthcare**, Serbia is partly aligned with the *acquis* on the application of patients' rights. Surveillance and response capacity for **serious cross-border health threats, including communicable diseases**, remains limited and requires modernisation. Serbia reports surveillance data on several communicable diseases to the European Centre for Disease Prevention and Control (ECDC) surveillance system according to the EU surveillance standards (EpiPulSe / TESSy). While Serbia adopted a new digital health programme in 2022, a centralised health information and communication system remains to be implemented.

In the area of **communicable diseases**, further attention is needed on effective and sustainable financing of disease-specific strategies, including the national HIV/AIDS strategy. Awareness-raising, particularly on the importance of child vaccination, is also needed. While Serbia has a national surveillance system for anti-microbial resistance in humans, the prescription of antibiotics needs to be more strictly controlled to strengthen the fight against anti-microbial resistance. Ongoing work on upgrading the quality control and standardisation of laboratories needs to be completed.

Health promotion necessary to help prevent **non-communicable diseases** remains limited. **Cancer screening** for colorectal, breast and cervical cancers continues to progress at a slow pace and is not performed in a systematic manner in many regions of the country. The national institute for radiology and oncology maintains the cancer register.

Community-based **mental health** services remain underdeveloped, with low accessibility. While Serbia has a 2019-2026 programme for mental health protection, it remains to be costed and fully implemented. There has not been any progress on **nutrition and physical activity**.

Serbia's legislation is still only partly aligned with the *acquis* on **medicines for human and veterinary use**, and on **preventing drug abuse**. Serbian legislation on pricing of **medicinal products** is still not aligned with the EU *acquis*. While a national programme to reduce the harmful effects of alcohol and alcohol-induced disorders was adopted in 2017, it remains to be implemented. In September 2022, Serbia adopted implementing legislation aiming to improve the quality control of medicines and medical devices.

On **health inequalities**, access to healthcare services remains an issue for persons with disabilities, persons living with HIV, children and adults who use drugs, prisoners, women involved in prostitution, LGBTIQ persons, internally displaced persons and Roma.

Serbia needs to fully implement the specific Operational plan for **prevention of corruption** in the areas of health. This includes the adoption of amendments to the legislation in the health

sector in accordance with the analysis of risks to corruption in the Law on medicines and medical devices.

CLUSTER 3: COMPETITIVENESS AND INCLUSIVE GROWTH

This cluster covers chapters 10 (Digital Transformation and media), 16 (Taxation), 17 (Economic and monetary policy), 19 (Social policy and employment), 20 (Industrial policy), 25 (Science and research), 26 (Education and culture), and 29 (Customs). Five chapters are open (chapters 17, 20, 25, 26 and 29) and two are provisionally closed (chapters 25 and 26). No opening benchmarks are left to be met on any of the chapters within this cluster. This cluster and the reforms concerned have significant links to Serbia's Economic Reform Programme.

Progress was achieved in all of the areas under this cluster, particularly in the areas of: social policy and employment through the adoption of a new law on health and safety at work; digital transformation and media through further alignment with the European Electronic Communications Code; economic and monetary policy through the adoption of a new set of fiscal rules to anchor fiscal policy; taxation through developments in the areas of e-fiscalisation, e-invoicing and excises; enterprise industrial policy through adoption of strategy new law on state ownership and management of business entities owned by the Republic of Serbia and education, through taking continued steps towards ensuring compliance of the quality assurance system in higher education with the recommendations of the European Association for Quality Assurance in Higher Education (ENQA).

In the coming period, Serbia is invited to particularly focus on the following areas: adopt legislation in line with the media strategy; further align its electronic communications legislation with the updated EU regulatory framework; ensure full financial and operational independence of the regulators for electronic communication and postal services (RATEL) and for electronic media (REM); make progress towards alignment in the areas of VAT, excise duties and direct taxation; increase the level of transparency for capital transfers and guarantees to state-owned enterprises in the State budget; ensure adequate financial and institutional resources for employment and social policies; make further efforts to improve the predictability of the business environment; increase national funding for research and innovation; ensure full compliance of the policy and institutional framework for quality assurance in higher education with the recommendations of the ENQA; and further upgrade relevant IT systems.

Chapter 10: Digital transformation and media

The EU supports the proper functioning of the internal market for electronic communications, electronic commerce and audiovisual services. The rules protect consumers and support the universal availability of modern services.

Serbia is **moderately prepared** in the field of digital transformation and media. **Limited progress** was made by means of the adoption of the Law on electronic communications, digitalisation in the area of e-government, and in aligning with EU digital Single Market objectives. Construction of ultra-fast broadband infrastructure in rural areas and support to the digitalisation of schools continued. Serbia joined the Digital Europe Programme in June 2023. The recommendations of the last report remain largely valid.

In the coming year, Serbia should:

- further align its electronic communications legislation with the updated EU regulatory framework, including the Broadband Cost Reduction Directive;
- ensure full financial and operational independence of the regulators for electronic communication and postal services (RATEL) and for electronic media (REM) in

compliance with the EU *acquis*, and urgently encourage the regulators to work proactively and fully carry out their mandates;

→ adopt the Law on electronic media, in line with the EU's Audiovisual and Media Services Directive, and in consultation with the relevant stakeholders.

In the field of **electronic communications and information technology**, the Law on electronic communications, aiming to align with the European Electronic Communications Code, was adopted in April 2023. Changes to the election of management board members for the Regulatory Agency for Electronic Communications and Postal Services (RATEL) aim to provide an additional degree of independence; however, the regulator's operational and financial independence remains to be ensured. Some steps were taken to improve the regulator's administrative capacity, but further efforts are needed, including through staff retention measures. Serbia maintains a salary cap for RATEL employees.

The first phase of the EU-funded ultra-fast broadband communication infrastructure roll-out in rural areas, aiming to connect around 90 000 households and 600 schools with fast broadband, is ongoing, while the second phase has been signed and a third phase is under consideration. The working group for drafting the Law on broadband in alignment with the Broadband Cost Reduction Directive was set up; however, the law remains to be adopted.

No progress has been noted concerning the implementation of **competitive safeguards**. Ongoing issues remain to be addressed, including access for users and operators to infrastructure including optical fibres, ducts and public operators' infrastructure and dark fibres, and remaining restrictions imposed by environmental and municipal planning legislation, in particular at local government level. The working group tasked with identifying and providing recommendations to remove these obstacles has not provided any output to date. Several legal disputes and proceedings are ongoing involving **Telekom Srbija** – whose majority stakeholder is the State – and private companies, both in Serbia and abroad.

Serbia is yet to adopt secondary legislation on minimum conditions for issuing individual operator licences for spectrum use for the **5G frequency auction**. The date of the auction was postponed to the fourth quarter of 2023.

The 112 European emergency number calling system, developed through a donation from the Chinese government and operational as of July 2023, remains to be fully implemented according to EU standards.

In the field of **cybersecurity**, Serbia possesses the relevant legal framework and has a functioning national computer emergency response team (nCERT); however, capacities should be strengthened and upgraded. Work is under way to further align Serbia's legislation with the EU *acquis* on cybersecurity, including with the NIS2 Directive.

On **regional integration**, Serbia continued to pursue the Western Balkans digital agenda policy priorities. Serbia participated in the 2nd Ministerial EU-Western Balkans Regulatory Dialogue held in June 2023, signing the Digital Europe Programme association agreement on the occasion. In June 2023, Serbia took part in a High-Level Cybersecurity Conference organised by the Regional Cooperation Council, as part of an EU cyber capacity building regional project for the Western Balkans. It is important that Serbia now signs and implements the Memorandum of Understanding on a 5G roadmap for digital transformation, taking into account the EU toolbox of risk mitigation measures on the security of 5G networks. Following the introduction of the Roam Like at Home regime in the region in July 2021, in December 2022 a Roaming Declaration was signed, which enabled the first reduction of roaming charges

between the EU and Western Balkans as of 1 October 2023. The glidepath for the reduction of data roaming price caps was announced in May 2023.

In the field of **digital transformation**, Serbia adopted the e-Government Development Programme with the implementing 2023-2025 Action Plan in April 2023. The number of databases connected to the new government service information system has increased, as has the number of services at the upgraded national e-government portal, now featuring approximately 340. The uptake in the number of e-citizens amounts to approximately two million. As for open data, Serbia has significantly improved the number of datasets available by the Statistics Office and on the country's open data portal in machine-readable formats. Serbia has not yet aligned with the EU's Open Data Directive. However, Serbia has an open data policy in place with an action plan for measures to support the publication and reuse of open data. Serbia is encouraged to remain aligned with the European Interoperability Framework.

Regulation of the broader digital economy environment continued. The Laws on e-fiscalisation and e-invoicing are being implemented, **e-commerce** increased further with the number of online transactions growing by 25.76% year-on-year, while cases of various forms of electronic platform, SMS or email abuse are handled by the Supreme Public Prosecution and Special Prosecution Office for High Tech Crime. In the e-commerce domain, alignment with the Digital Services Act and Digital Markets Act needs to be stepped up, to provide predictability for the business community. The ICT sector has continued its rapid growth, with exports in 2022 totalling EUR 2.7 billion, which constitutes an increase of 45% year-on-year.

In April 2023, Serbia adopted the Ethics Guidelines for the Development, Implementation and Use of Reliable and Responsible AI, based on UNESCO's recommendation on the ethics of artificial intelligence, which aim to align with EU guidelines on the ethical use of **artificial intelligence**.

In **audiovisual policy** after increasing delays, Serbia relaunched media legislation reforms as part of the media strategy implementation. In January 2023, work started on drafting amendments to the Law on electronic media, which must strengthen the independence and transparency in the work of the Regulatory Authority for Electronic Media (REM), effectively safeguard media pluralism, and clarify the procedure for issuing licences for the provision of audio-visual media services. Public consultations on the draft law were launched in September 2023. Overall, positive steps were taken to strengthen the independence the regulatory body for electronic media (REM). However, the legislative process was not finalised fully in line with the EU *acquis* and European standards. Full alignment with the revised European Audiovisual and Media Services Directive within the required timeline is needed to ensure continued participation in the MEDIA and cross-sectoral strands of the Creative Europe programme.

The **Regulatory Authority for Electronic Media** (REM) fails to demonstrate its independence in a consistent manner and to exercise its mandate to the full in safeguarding media pluralism and professional standards, which is an essential element of the Audiovisual and Media Services Directive. In August 2022, following the allocation of the four media service licences for television broadcasting with national frequency to their previous holders, despite receiving warnings from REM for violating their legal obligations during the previous period, REM published a call for the allocation of a fifth license. However, the deadline as provided for in the published call has long passed and the fifth license has still not been awarded, with no credible justification given.

In May 2023, in the context of the tragic mass shootings, REM appeared before the Parliament's Committee for Culture and Information to present its report on media monitoring for the period October 2022 to March 2023, reflecting also on the topic of violence in media. REM concluded that all of the media, except one, overall met the provisions set out in the Law on electronic media. During the reporting period, several TV channels with national frequencies, including TV Pink and Happy TV, fell short of their own commitments and obligations on programming for children, culture and education, based on which they had obtained a (renewed) national frequency. In May 2023, REM awarded cable and IPTV licence to the publisher of a print tabloid, which frequently breaches the ethical code of conduct, according to the Press Council. In June 2023, one member of the REM Council resigned due to disagreements with the work and conduct of the regulator.

The Law on **public broadcasters** is yet to be amended, as required by the media strategy. Radio Television Serbia (RTS) was again not included in state budget funding for 2022, in line with the media strategy, while Radio Television Vojvodina (RTV) received state budget support, enabled through the amended Law on temporary financing of public media services. The position of RTV managing director was filled in October 2023 following a lengthy appointment process. Some RTS employees held a strike demanding better employment conditions, while the president of the management board filed a criminal complaint against the director and another editor, under suspicion of fraud.

On **media literacy**, Serbia organised and participated in a number of activities as part of the media strategy, including workshops for public administration institutions, as well as producing guidelines for the business community.

Chapter 16: Taxation

EU rules on taxation cover value-added tax, excise duties and aspects of corporate taxation. They also cover cooperation between tax administrations, including the exchange of information to prevent tax evasion.

Serbia is **moderately prepared** in the area of taxation. **Limited progress** was made with further activities in the implementation of the Tax Administration transformation programme and developments in the areas of e-fiscalisation, e-invoicing and excises. Last year's recommendations remain valid.

In the coming year, Serbia should in particular:

- continue with the implementation of the Tax Administration transformation programme, notably procuring and starting the implementation of an integrated information system to support the Tax Administration's new business model, and increase its human resources; and
- further align with the EU *acquis* in the areas of VAT, excise duties and direct taxation.

In the area of **indirect taxation**, in December 2022, the Law on fiscalisation was amended. This aims at modernising the process of **VAT** collection and increasing the efficiency of the control and fight against the informal economy, to ensure better implementation and alignment with the wider legal framework. Amendments to the Law on tax procedure and tax administration harmonised the laws with the provisions of the Law on personal income tax, the Law on fiscalisation and the provisions of the Criminal Procedure Code, combatting tax evasion. Amendments to the Law on VAT harmonised processes with the Law on fiscalisation and the Law on electronic invoicing. The Law on electronic invoicing was extended and became mandatory for all business-to-business transactions in January 2023. **Excise duties** on alcohol and tobacco remain under the EU minima, though the latter is updated twice a year.

Unlike in the EU, Serbia's excise duty on energy does not apply to gas, oil, coke or coal. The Law on excise duties has yet to be fully aligned with the EU *acquis*. In September 2023, Serbia adopted a law amending the Law on excise duties to update the rates and include natural gas in its scope. An effective system to control and monitor the movement of excisable products is not yet fully in place.

With regard to **direct taxation**, in December 2022, amendments were adopted to the Law on personal income tax, the Law on contributions for compulsory social insurance and the Law on corporate income tax. Financial intermediaries are required to report to the Tax Administration regarding recipients of savings income. The changes aim to further improve the business environment and to reduce the informal economy. Business associations continue to emphasise the need for further improving processes for public consultations, including on specific fiscal secondary legislation. Parafiscal charges remain numerous, high and non-transparent, lack rationalisation and thus undermine the predictability and stability of Serbia's tax system.

Regarding **administrative cooperation and mutual assistance**, Serbia has double taxation agreements with 26 EU Member States (no agreement with Portugal). Serbia remains committed to apply OECD base erosion and profit shifting minimum standards. While it has signed the Convention on Mutual Administrative Assistance in Tax Matters, Serbia has not yet committed to automatically exchange financial account information based on the OECD Global Standard, although it has chosen to do so on a bilateral basis with one third country.

Efforts to improve **operational capacity and computerisation** of the Tax Administration and to fight tax evasion, notably on VAT and excise duties, resulted in better tax collection. This included the continuation of efforts to improve business processes, improved risk assessment practices, and better capacity-building for existing staff. The Tax Administration still lacks administrative capacity and adequate staffing. However, three public competitions were organised and a total of 77 employees were recruited in 2022. Given the high number of retirees and competitive pressure from the private sector, recruiting and retaining qualified staff remains an important issue. The Tax Administration transformation programme for the period 2021-2025 is being implemented, with the adoption of a change management plan and a general business model for the Tax Administration (including improving its IT systems and infrastructure), as well as a range of other activities. Further efforts are needed to improve the predictability and consistency of tax decisions and to provide timely, high-quality services to taxpayers. Appeal procedures against Tax Administration decisions remain lengthy.

Chapter 17: Economic and monetary policy

EU rules require the independence of central banks and prohibit them from directly financing the public sector. Member States coordinate their economic policies and are subject to fiscal, economic and financial surveillance.

Serbia is **in between a moderate and a good level of preparation** in the area of economic and monetary policy. **Some progress** was made on last year's recommendations with the adoption of a new set of fiscal rules to anchor fiscal policy.

In the coming year, Serbia should in particular:

- further align the legislation on the National Bank of Serbia (NBS) with the EU *acquis* to ensure its full independence;
- further align the budget system law with Directive 85/2011 in the field of macroeconomic and fiscal projections, a three-year expenditure perspective, transparency, and accounting and statistical reporting;
- increase the level of transparency for capital transfers and guarantees to state-owned enterprises in the State budget.

On **monetary policy**, the legal framework for the NBS is well developed. Under applicable law, price stability is the NBS's principal objective, fully in line with the primary objective of the European System of Central Banks. Serbia's legislation does not contain provisions that can be regarded as establishing privileged access of the public sector to financial institutions. However, further amendments to the Law on the NBS and the Law on public property are required in order to ensure the full functional, institutional, personal and financial independence of the NBS and the prohibition of monetary financing, in line with the EU *acquis*.

Regarding **economic policy**, further alignment with the Directive on Requirements for budgetary frameworks is needed through amendments to the Law on the budget system regarding macroeconomic and fiscal projections, a three-year expenditure perspective, transparency, and accounting and statistical reporting. The implementation of the budget process remained broadly unchanged as the 2023 budget was adopted in line with the budget calendar. However, the parliamentary debate on the draft budget was called under urgent procedure, having a negative impact on the quality of the debate (*see also Public financial management under the political criteria*). In addition, amending budgets were adopted in November 2022 and September 2023, both under urgent procedure. Moreover, neither the amending budget nor the 2023 budget provided an adequate level of transparency regarding the breakdown of capital transfers and guarantees to state-owned enterprises. The government continued to frequently introduce *ad-hoc* measures with an additional fiscal impact not included in the regular budgetary planning framework, such as extraordinary pension and wage increases and one-off payments to certain categories of the population.

The alignment of fiscal reporting with the European system of national and regional accounts (ESA 2010) continued to improve but has yet to be completed. Programme budgeting needs to be strengthened and administrative and IT capacity bolstered. In December 2022, Serbia adopted a new system of fiscal rules through amendments to the Law on the budget system. The revised law defines a general government deficit ceiling as a share in GDP, includes a cap on the public wage bill at 10% of GDP, and has a modified rule for pension indexation. However, in June 2023, the government announced an extraordinary pension increase in September 2023 outside the new rule for pension indexation which seriously affects the credibility of the new pension indexation mechanism. While the deficit correction enforcement mechanism may need to be further strengthened, the new deficit rule can be considered reasonably credible and binding. The deficit rules is expected to effectively enter into force in 2025, as deficit targets for 2023 and 2024 have been defined under Serbia's Stand-by Arrangement with the International Monetary Fund agreed in December 2022. The Fiscal Council is an independent institution, which continued to provide independent fiscal

assessments and recommendations and to actively participate in debates on economic and fiscal policy.

The 2023-2025 **Economic Reform Programme** (ERP) was submitted on time. As in previous years, its analytical diagnostics were solid. The ERP is broadly aligned with the reform priorities identified by the Commission and its structural reform part remains largely unchanged from the previous year, reflecting delays in implementation. The ERP still fails to effectively address underlying structural weaknesses in the rule of law, which continue to negatively impact the business environment. The macroeconomic and fiscal frameworks are sufficiently comprehensive and integrated with the overall policy objectives, providing an adequate basis for policy discussions.

Chapter 19: Social policy and employment

EU rules in the social field include minimum standards for labour law, equality, health and safety at work and non-discrimination. They also promote social inclusion and social protection, and social dialogue at EU level.

Serbia is **moderately prepared** in the area of social policy and employment. Serbia made **some progress** on last year's recommendations by adopting a new law on health and safety at work. The new law is partially aligned with the EU *acquis*. However, a Youth Guarantee coordinator was lacking for part of the reporting period and the Youth Guarantee implementation plan was not yet adopted. Budget allocations for active labour market policies (ALMP) as a percentage of GDP did not increase in 2023. The drafting of a new labour law has yet to be initiated. There was no measure to increase the coverage and adequacy of benefits for individuals and families under the financial social assistance scheme, which aims to reduce poverty.

Most of last year's recommendations have not yet been implemented and remain valid. In the coming period, Serbia should in particular:

- conduct a functional review of ALMP and of the workload of National Employment Service advisers to ensure adequate financial and institutional resources for employment and social policies and target more systematically the young, women and long-term unemployed, and start piloting the Youth Guarantee in Serbia;
- initiate consultations on a new labour law, including provisions on foreign seconded workers in line with the EU *acquis*, and avoid further delays in implementing the action plan for Chapter 19;
- improve the coverage and adequacy of social benefits for people below the poverty threshold, including financial social assistance and child allowance, and address the issue of the high caseload of social welfare centres.

In the field of **labour law**, the 2014 law remains only partially aligned with the EU *acquis* and the drafting of a new law has yet to be initiated. The proportion of undeclared work was stable (13.2% in 2021; 13.6% in 2022). There are currently 230 labour inspectors. The recruitment of additional labour inspectors to reach the target of 360 inspectors by Q4 2020, in line with the Chapter 19 action plan, is delayed and postponed to Q4 2025. In 2022, 16 cases of child labour were identified by labour inspectors, down from 39 in 2021. According to the latest child labour survey (2021 data) from the International Labour Organization (ILO), the child labour prevalence rate stands at 9.5% for 5–17-year-olds and 9.3% for 5–14-year-olds. Boys (11.7%) are more likely to be involved in child labour and in hazardous work than girls (7.2%), and most child labour is found in agriculture. Most children report to be involved in child labour to contribute to family income, to acquire skills or to help in family business. Serbia needs to

address the recommendations of the Council of Europe Group of Experts on Action against Trafficking in Human Beings (GRETA) who urged the authorities, in its report published in June 2023, ‘to intensify their efforts to prevent and combat trafficking for the purpose of labour exploitation, including by strengthening the capacity of labour inspectors, proactively and thoroughly investigating allegations of trafficking for labour exploitation involving foreign workers’. The law on inspection oversight does not comply with the relevant ILO conventions that were ratified by Serbia, notably to ensure that labour inspectors are empowered to enter workplaces freely and without giving notice.

In the area of **health and safety at work**, a new law adopted in April 2023 is partially aligned with the EU *acquis*. The number of workplace fatalities decreased slightly in 2022 (56 casualties, down from 61 in 2021), with most cases occurring in the construction industry.

Social dialogue remains weak, in particular regarding the involvement of social partners in policy developments relevant to them. A new law on the right to strike has yet to be adopted; the current law of 1996 is not in line with international standards. Serbia still needs to adjust the legal framework and strengthen the capacity of social partners to foster collective bargaining. Sectoral collective agreements are typical in the public sector, with 12 currently concluded agreements. However, hardly any have been concluded in the private sector, with only two sectoral collective agreements. The minimum hourly wage was increased by 14.3% in January 2023 by means of a government decision, as consensus could not be reached within Serbia’s Economic and Social Council. The latter needs to be consulted in due time on new policy initiatives and draft laws in order to be able to fulfil its statutory role.

On **employment policy**, the employment rate (20-64-year-olds) rose from 66.7% in 2021 to 69.3% in 2022. Youth unemployment (15-24-year-olds) decreased from 26.4% in 2021 to 24.4% in 2022 but remains high. The share of young people not in employment, education or training (NEET 15-29-year-olds) also decreased from 18.8% in 2021 to 15.1% in 2022. The introduction of the Youth Guarantee in Serbia aims to address youth unemployment, support labour market integration and ensure that no young person is left behind. A Youth Guarantee coordinator was lacking for part of the reporting period and the Youth Guarantee implementation plan was not yet adopted. Serbia continued to implement the My First Salary programme, which aims at activating young people without prior work experience. The two previous cycles of this programme covered over 17 000 young people and the new cycle reached over 9 000 people in 2022, a majority of whom had secondary education (76%). Since the entry into force of the law on social entrepreneurship, the Council for Social Entrepreneurship has met on a regular basis. As of June 2023, 11 social enterprises had registered. Budget allocations for active labour market policies did not increase in 2023 and continued to be far too low to cover the number of jobseekers, with spending around 0.1% of GDP. As a result, only 23.5% of the registered unemployed benefitted from active labour market policies in 2022 and fewer than 5% overall had access to subsidised activation measures. Workers from across the occupational spectrum continued to emigrate, contributing to, among other factors, a 1.3% decrease in working age population in 2022. Serbia continued to implement the 2021-2027 economic migration strategy to encourage the return of expatriated workers and attract foreign experts. According to the data of the National Employment Service, the largest workforce deficits are in the fields of economy, law and administration, trade, catering and tourism, geodesy and construction, mechanical engineering, and metal processing.

There were no developments as regards preparations for the **European Social Fund** (*see also Chapter 22 - Regional policy and coordination of structural instruments*).

In the area of **social inclusion and social protection**, in 2022, according to the latest survey on income and living conditions (SILC), the at-risk-of-poverty or social exclusion rate was

28.4% (EU-27 21.7%). As in previous years, there is more poverty in rural than in urban areas. The at-risk-of-poverty rate shows that individuals aged 18-24 were the most exposed to this risk (27.7%), and individuals aged 65 and over (22.7%). The at-risk-of-poverty-rate for children (0-17) was 20.8% in 2021. Only 2.7% of the population were covered by financial social assistance (FSA) benefits. Serbia adopted a support package to help vulnerable families and businesses cope with the energy crisis. However, there was no measure to increase the coverage and adequacy of FSA benefits for individuals and families to reduce poverty. Monthly financial social assistance for three-member households was RSD 15 806 (about EUR 136) while the minimal average basket and at-risk-of-poverty threshold were RSD 39 623 (EUR 337) and RSD 43 315 (EUR 368) respectively. Therefore, the benefit accounted for around 40% of the minimal basket and was far below the at-risk-of-poverty threshold of 60% of the median income. Public expenditure on social protection and budget transfers as a share of GDP have been gradually decreasing in recent years. In 2022, out of total public expenditure of 46.8% of GDP (47.4% in 2021), social transfers accounted for 13.0% of GDP (13.6% in 2021), of which pensions accounted for 9.0% of GDP (9.7% in 2021). Furthermore, the number of beneficiaries of poverty-targeted programmes decreased while those of categorical programmes increased. According to the authorities' ex post analysis of the first year of functioning of the social card register, in use since April 2022, this register has helped social welfare staff identify both 'errors of inclusion' and 'errors of exclusion' in individuals' eligibility to social assistance benefits. However, CSOs raised concerns on the risks of Roma and other vulnerable individuals – such as individuals performing seasonal or part-time work - being unduly excluded from the benefits if their specific circumstances, in addition to the data automatically processed by the social card register, are not sufficiently assessed by social welfare staff prior to a decision being made. In addition, it could be challenging for these vulnerable individuals to exercise their right to appeal an exclusion decision.

A new strategy for social protection and amendments to the law on social welfare are still pending. The quality and coverage of social services need to improve, and oversight and regulatory mechanisms, monitoring and evaluation need to be strengthened. Means-tested social assistance programmes, with strict eligibility criteria, do not sufficiently reach the poor. There are significant regional variations in coverage, and a large share of children living in poverty are not covered by any benefit. The capacities of the social protection system were slightly increased by recruiting 230 new staff in 2022; however, according to the estimate of authorities, an additional 700-1 000 staff are lacking. The system of earmarked transfers to the local level, introduced in 2016 by the Law on social welfare, is still not implemented systematically and transparently.

In the area of **deinstitutionalisation**; an action plan and funding, to accompany the strategy adopted in January 2022, is significantly overdue. In the field of **non-discrimination in employment and social policy**, most complaints received by Serbia's Commissioner for Equality are still related to the area of employment. Measures aimed at promoting the employment of Roma have yet to deliver results (*see also Chapter 23 – Judiciary and fundamental rights*).

In the area of **equal opportunities for women and men in employment and social policy**, the position of women on the labour market in Serbia remains unfavourable in comparison with the position of men. The employment rate for men (20-64-year-olds) and their activity rate are both 13.9 percentage points higher than those for women. The gender pay gap is 8.8% in Serbia. A pay gap also exists in modern occupations, such as the ICT field where the gap is even higher at 9.1%. The economic analysis of the monetary value of unpaid care work shows that its contribution to the national GDP is about 21.5%. Only 25% of women in Serbia are real estate

owners. Although the legislation grants both maternity and paternity leaves, gender-based stereotypical preconceptions persist about childcare and household work being a woman's responsibility. Women worked 2.5 hours more per day than men on care work for children and older people. This is one of the largest gaps in the field of time (16.2 points) between the EU-27 and Serbia in the 2021 gender equality index. The legislation is not fully aligned with the EU *acquis* with regards to maternity, paternity and parental leave rights. This includes further defining these rights in Serbian legislation in line with their definitions and purpose in the EU *acquis*. The lack of state services for childcare in rural areas also increases the amount of unpaid household work for women.

Chapter 20: Enterprise and industrial policy

EU industrial policy strengthens competitiveness, facilitates structural change and encourages a business-friendly environment that stimulates small and medium-sized enterprises (SMEs).

Serbia is **moderately prepared** on enterprise and industrial policy. **Limited progress** was made with the adoption of a new law on the governance of state-owned enterprises.

Last year's recommendations nonetheless remain largely valid.

In the coming year, Serbia should in particular:

- further improve the predictability of the business environment, with the emphasis on ensuring direct involvement of businesses in the process of regulation;
- adopt a new action plan for the implementation of the industrial strategy; and
- reallocate budgetary resources for foreign direct investment incentives to financial and technical support to SMEs.

With regard to **industrial policy**, Serbia has been implementing the strategy for industrial development 2021-2030, together with the related action plan for 2021-2023. Serbia has yet to adopt its annual report on the implementation of the industrial strategy covering 2022. The conclusions of this report should feed into Serbia's new action plan for the subsequent period. The action plan should also take into account new circumstances relevant to industry, for example the EU Carbon Border Adjustment Mechanism and ensure a solid system of evaluation indicators and benchmarks to support the strategy's implementation.

On **enterprise policy**, Serbia adopted in October 2023 a new strategy and action plan to support the development of SMEs, entrepreneurship and competitiveness, replacing the strategy for 2015-2020. Serbia should initiate its implementation in line with the related action plan. Serbia's legislation is largely aligned with the EU *acquis* on combatting late payments in commercial transactions. However, work needs to continue towards full alignment, as Serbia is still to align its rules on payments, indemnity interest rates, expedited recovery procedures and compensation with the EU Directive in this area. In September 2023, Serbia adopted a new Law on the management of companies owned by the Republic of Serbia, as part of the implementation of the strategy on state ownership and management of business entities owned by the Republic of Serbia. Progress on governance reform and the restructuring of industrial state-owned enterprises is lagging. The privatisation of Petrohemija was finalised in June 2023. Two companies were dissolved, bringing the number of companies in the privatisation portfolio down from 62 in June 2021 to 60 in June 2023 (*see also The existence of a functioning market economy*).

Businesses in Serbia continue to identify corruption and issues in the upholding of rule of law as key obstacles to **investment** and economic development. Serbia should continue to increase predictability in the business and administrative environment, in particular for SMEs.

Performance measurement for policymaking activities should be developed, and more emphasis should be put on implementing the ‘think small first’ principle. The regulatory impact assessment with the SME test needs to be systematically carried out when drafting laws and implementing legislation. Implementation of the multiannual administrative reform is ongoing, which aims to optimise and improve the transparency of all administrative procedures. The digital e-consultation portal for public participation in legislative processes is increasingly used. However, considerable scope remains to mainstream its use among public institutions, particularly at the local level. Continued and effective communication on this tool is crucial to ensure that businesses are properly consulted and informed about regulatory changes in a timely manner.

On **enterprise and industrial instruments**, Serbia continues to use budgetary subsidies for newly created jobs as an incentive for foreign direct investments. This approach is not consistent with its industrial policy goal of privileging value added over labour cost, and with the continued need to better integrate SMEs into domestic and international supply chains. The budget for SME measures is growing but remains modest compared to the amounts of State aid and tailor-made services offered to large investors. The lack of specialised support and advisory services for businesses limits the possibilities of domestic companies to modernise and qualify as suppliers to multinational enterprises. Favourable loans and guarantees for SMEs are provided by the Ministry of Economy and the Development Fund through joint programmes with commercial banks. These programmes provide financial support for the purchase of equipment, financial support to start-ups, and financial support for development projects. Nevertheless, access to finance by start-ups remains an impediment to their growth. On 21 September, Serbia signed the association agreement on its participation in the Single Market Programme.

In **sectoral policies**, current support for investment continues to prioritise manufacturing.

Chapter 25: Science and research

The EU provides significant support to research and innovation. All Member States can participate in the EU’s research and innovation programmes and benefit from them, especially where there is scientific excellence and solid investment in research and innovation.

Serbia is at a **good level of preparation** in the area of science and research. **Limited progress** was made with an increase in efforts to support cooperation between businesses and academia. The national level of investment in research remains low. Last year’s recommendations remain valid.

In the coming year, Serbia should in particular:

- increase its national funding for research and innovation;
- align with the European Research Infrastructure Consortium Regulation; and
- follow up on the actions of the new European Research Area.

On **research and innovation policy**, the main priorities of the European Research Area are implemented through the 2021-2025 strategy for development of a start-up ecosystem and its action plan for 2021-2023. Measures introduced to increase the number of start-ups and opportunities for private investors, technology transfer and economic growth include improvement of tax laws for start-ups and creation of a start-up portal aimed at facilitating

business and providing access to potential investors and funds. With the implementation of the Law on innovation activity, the register of subjects of the national innovation system is now managed under the Innovation Fund. This enables companies to register easily and obtain better access to funding sources. The Science Fund is fully operational as a funding mechanism.

The national level of investment in research remains low at 0.99% of GDP in 2021 (0.91% in 2020), with only one third of this amount coming from the private sector. Serbia should continue to integrate into the new European Research Area in accordance with its plan to increase investment into research and innovation by 50% over the next five years. Serbia has a smart specialisation strategy in place for the period of 2020-2027. However, it needs to adopt and implement the related action plan for 2023-2025.

Regarding EU **framework programmes** and international cooperation, Serbia has been successfully participating in Horizon Europe, EUREKA and the European Cooperation in Science and Technology (COST). In February 2023, Serbia completed the national ratification process of the Horizon Europe Association Agreement. With support from Horizon 2020, a new building of the BioSense Institute was opened to serve as a regional centre of excellence in the field of nanotechnologies, biosensors and digital agriculture.

Regarding innovation measures, the Serbian Innovation Fund and the science and technology parks continue to be active with increasing financial contributions. The Innovation Fund's Katapult Accelerator for start-ups currently supports 39 companies. Further integration into the new European Innovation Agenda and activities of the European Innovation Council is strongly encouraged.

Serbia is an emerging innovator in the European innovation scoreboard. However, private sector research and innovation expenditure remains too low. While public support for cooperation between businesses and academia has improved, further efforts are needed.

Chapter 26: Education and culture

The EU supports cooperation in education and culture through funding programmes and the coordination of Member State policies through the 'open method of coordination'. The EU and the Member States must also prevent discrimination and ensure quality education for children of migrant workers, including those from disadvantaged backgrounds.

Serbia is at a **good level of preparation** in the area of education and culture. **Some progress** was made on implementing last year's recommendations, by consolidating the national qualifications framework (NQF) system and taking some steps to ensure compliance of the quality assurance system in higher education with the recommendations of the European Association for Quality Assurance in Higher Education (ENQA), and by amending a number of laws in the field of education. Last year's recommendations remain largely valid.

In the coming year, Serbia should in particular:

- increase participation in early childhood education and care, in particular of children from disadvantaged backgrounds;
- continue with the operationalisation of the NQF system, with additional focus on the quality and scope of non-formal education, as well as higher education; and
- ensure full compliance of the policy and institutional framework for quality assurance in higher education with the recommendations of the ENQA.

In the area of **education and training**, Serbia has yet to adopt a new action plan for 2024-2026 on the implementation of the 2030 education strategy. In September 2023, Serbia adopted

amendments to three framework laws in the area of education: the Law on the national qualifications framework, the Law on secondary education, and the Law on higher education. Amendments to the Law on educational inspection were also adopted.

The level of spending on education in Serbia was 3.3 % of GDP in 2021, below the EU average of 5 %. The student population has continued to decrease due to negative demographic trends and emigration. Enrolment and completion rates in pre-university education remained high, whereas enrolment in secondary education lagged behind that of primary education. The coverage of children with preschool education slightly increased in 2021 to 65.5 %, down from 63.7 % in 2020. The enrolment rate in mandatory preschool education remained stable at 97.3 % in 2022 as compared to 97.8% in 2021. Further efforts are needed to achieve equitable preschool education for the most disadvantaged children, by strengthening governance and expanding the scope and quality of infrastructure and services. In 2022, the rate of early school leavers decreased to 5 %, down from 6.3 % in 2021, while lifelong learning participation in 2022 dropped further to 3 %, down from 4.8 % in 2021.

The digital transformation of the education system continued, including in developing infrastructure and teacher digital competencies. In higher education, ICT programmes exist in 51 institutions that in total result in 1 000 graduates from these programmes annually. The pre-university level curricula includes to mandatory subject to develop digital skills and competencies, including computer science. However, while the development of the education management information system has progressed, it requires further consolidation, including capacity-building of staff to use data for policymaking and monitoring purposes. Serbia has yet to incorporate green and environmental topics into its curricula. Work to reform the general secondary education curriculum continued with the completion of the fourth year of elective programmes, including for classes with a stronger focus on specific fields. No significant change took place as regards the low take-up of vocational education and training (VET). Serbia should continue modernising and streamlining qualifications standards to improve VET relevance and further develop the national work-based learning model for VET. The share of recent graduates from VET benefitting from exposure to work-based learning during their vocational education and training was 17.1 % in 2022. The number of secondary VET graduates who entered higher education dropped slightly in 2022 to 73.8 % (85.5 % boys, 64.9 % girls) , down from 75 % in 2021. The employment rate of VET graduates (aged 20-34) remained low at 66.6 % in 2022 (58.4 % girls, 72.9 % boys). Regional training centres for training, reskilling and upskilling in the context of lifelong learning have started to be set up. However they are yet to become operational and capacities need to be strengthened. In November 2022, Serbia established an Office for Dual Education and a National Qualifications Framework tasked with coordinating and monitoring policies. Serbia remains committed to the Osnabruck Declaration on VET as an enabler of recovery and just transitions to digital and green economies.

Concrete operational steps are still pending to strengthen the policy and institutional framework for quality assurance in higher education, in line with the recommendations of the European Association for Quality Assurance in Higher Education (ENQA) on better governance and quality assurance principles. The Serbian national accreditation body has yet to apply for renewed membership of ENQA, following its suspension in early 2020. The attainment of tertiary level qualifications for persons aged 25-34 (ISCED levels 5-8) slightly decreased to 33.4% in 2022, down from 33.9 % in 2021, remaining significantly below the 2030 EU target of 45%. The sector, higher education in particular, remains vulnerable to corruption.

The institutional set-up under the NQF should be further strengthened. There is a slow increase in the number of developed qualification standards in secondary VET. Higher education is yet

to see the development of qualification standards and the way it will link with quality assurance procedures in higher education. In order to have a meaningful impact on students' skills development, and in order to address the continued broad skills mismatch on the labour market, this must be followed by the development of modernised curricula, teacher training and delivery in classrooms. The lack of opportunities for reskilling and upskilling in Serbia is a key obstacle to higher youth and adult employment and activity rates. The introduction of the validation system of non-formal and informal learning is progressing slowly and is yet to be scaled up systematically. Efforts to create a more favourable environment for standardising and expanding career guidance and counselling services should be intensified.

Progress was made in increasing the participation of disadvantaged students at all levels of education. The implementation of measures to reduce drop-out rates and segregation needs to be strengthened, especially at local level. The set-up of assistive technology resource centres needs to become functional to provide relevant additional support services for inclusive education. It is necessary to remove obstacles to the engagement of teaching assistants for children with disabilities as a new service in the education system. As required by Serbia's Law on gender equality, efforts should be intensified to develop teaching materials and empower teachers to build student competencies related to gender equality, health, reproductive health, mental health, sex education, and prevention of, and response to, all forms of gender-based violence, including sexual abuse. Serbia needs to make further efforts, including through legislative amendments, to strengthen local mechanisms for prevention of, and protection against, violence and discrimination. In the education system, there is also a need to address the many underlying factors contributing to the criminal behaviour of children, including mental health issues, traumatic experiences, or the availability of specific services for vulnerable children, including the availability of services for mental health issues.

Serbia continued to participate in several international assessments, by conducting a Trends in International Mathematics and Science Study (TIMSS) and an International Computer and Information Literacy Study (ICILS) in 2023, as well as piloting a Teaching and Learning International Survey (TALIS). The introduction of final examinations in secondary education has been postponed for the 2025-2026 school year. The institutional, financial and logistical preparations for its introduction should be accelerated and the reform should be timely communicated to stakeholders.

In 2022, Serbia continued its participation in the Erasmus+ programme as an associated country for the period 2021-2027. Overall, Serbian institutions are participating in almost 800 projects (decentralised actions) with 430 Serbian organisations involved. In addition, Serbia participated in various initiatives such as the Erasmus Days and the European Youth Week. Serbia is successfully implementing the new cycle of the Erasmus+ programme, including the new DiscoverEU component, and the first call for proposals for mobility projects in the field of sport. Serbia is participating in the European Education Area working groups 2021-2025.

In the area of **culture**, Serbia's cultural policy is implemented under the 'Strategic priorities for the development of culture of the Republic of Serbia from 2021 to 2025'.

Serbia has yet to adopt a Strategy of Cultural Development of the Republic of Serbia, pursuant to Article 19 of the Law on culture and in accordance with the guidelines of the Secretariat for Public Policies.

Serbia is implementing measures under the UNESCO Convention on the protection and promotion of the diversity of cultural expressions and is also member of the Convention's Intergovernmental Committee.

In April 2023, the watermills of Bistrica in Petrovac na Mlavi were listed as one of the top seven most endangered cultural heritage sites in Europe for 2023.

Serbia actively participates in the Creative Europe programme. Serbia's Creative Europe Desk successfully implements activities, in line with the 2022-2024 action plan, through providing information and advisory assistance to the institutions and organisations that plan to apply for funds across Serbia. In June 2023, the Ministry of Culture notified the European Commission of the immediate replacement of the Head of the Creative Europe Desk for Serbia.

In December 2022, Novi Sad completed its activities under the European Capital of Culture (ECOC) programme, which included the restoration of five landmark cultural heritage sites. As a follow-up exercise, the Serbian Ministry of Culture launched the 'National Capital of Culture', which will last for 4 years. It aims at decentralising the cultural offer and instigating local cultural development, and mainstreaming culture in local strategic development programmes. The project has identified the city of Čačak as the national capital of culture in 2023.

In February 2023, Serbia adopted a youth strategy to 2030 and in July an action plan on its implementation until 2025. Serbia has yet to adopt the delayed action plan for the implementation of the youth guarantee mechanism. The national youth council was revived and involves youth representatives that advocate for the rights of the young generation in Serbia. However, despite increased efforts, youth policy and support mechanisms remain unevenly developed at local level. The revision and/or preparation of local youth action plans in line with the provisions of the planning system law should be accelerated. The trend of emigrating young and skilled people continued. Unemployment and inactivity rates among young people remain high.

Serbia actively participates in the Erasmus+ for sport programme.

Chapter 29: Customs union

All Member States are part of the EU customs union and follow the same customs rules and procedures. This requires legislative alignment as well as adequate implementing and enforcement capacity, and access to the common computerised customs systems.

Serbia has a **good level of preparation** in the area of customs union. **Limited progress** was made with the adoption of further amendments to existing legislation aimed at further alignment with the EU *acquis*. No progress was made on last year's recommendations, which therefore remain valid.

In the coming year, Serbia should in particular:

- further upgrade the customs processing system by integrating risk management; and
- further develop the national customs IT system to enable integration with the EU systems.

Serbia's **customs legislation** remains largely aligned with the EU *acquis*. In December 2022, Serbia adopted amendments to the customs law and to two regulations, one on customs procedures and customs formalities, and one on customs enforcement of intellectual property rights. These amendments aim at further alignment with the relevant *acquis*. Serbia is a party to the Common Transit Convention, applying EU rules on transit movements. Serbia should play a constructive role under this Convention. Rules on customs enforcement of intellectual property rights remain broadly in line with the EU *acquis*. The Regional Convention on pan-Euro-Mediterranean (PEM) preferential rules of origin is applied in Serbia. Serbia's customs tariff nomenclature for 2023 was harmonised with the EU combined nomenclature in

November 2022. During the reporting period, Serbia issued 11 new certificates for authorized economic operators, bringing the total number to 51.

Legislation on free zones and security aspects still needs to be aligned with the EU *acquis*. Fees are still charged at some border-crossing points on lorries entering customs terminals to discharge customs obligations, which is not in line with Serbia's SAA obligations.

For **administrative and operational capacity**, total customs and **value added tax** revenues collected by the customs administration in 2022 increased by 19% year-on-year.

Work is still ongoing on strengthening the risk management system. Serbia should consistently carry out pre-arrival/pre-departure risk-based analysis, in line with the EU Customs Code. The customs laboratory remain under-equipped.

In terms of the fight against tobacco smuggling, Serbia has been a party to the Protocol to Eliminate Illicit Trade in Tobacco Products since 2017. However, Serbia should continue to strengthen its work, in particular efforts to establish a track and trace system of tobacco products, as provided for by the Protocol. Furthermore, the administrative capacity for the control of illicit tobacco trade is still insufficient.

Furthermore, Serbia agreed in April 2022 to accept requests for assistance from EU Member States and OLAF under Protocol 6 of the SAA on mutual administrative assistance in customs matters in order to investigate suspected cases of circumvention via its territory and/or by legal entities registered in Serbia of EU sanctions introduced in the context of Russia's war of aggression against Ukraine. This allows EU customs authorities to, where appropriate, seek assistance from the Serbian customs authority to investigate EU import or export transactions that may have breached any of the EU sanctions packages (*see also Chapter 30 on external relations, and Chapter 31 on the common foreign and security policy*).

CLUSTER 4: THE GREEN AGENDA AND SUSTAINABLE CONNECTIVITY

This cluster covers four chapters: 14 (Transport policy), 15 (Energy), 21 (Trans-European networks) and 27 (Environment and climate change). The cluster and all chapters were opened in December 2021, after Serbia had fulfilled the remaining requirements, namely an action plan on oil stocks and an action plan on gas unbundling. This cluster is at the heart of the Green Agenda for the Western Balkans and closely linked to Serbia's Economic Reform Programme and the Commission's Economic and Investment Plan.

Some progress was achieved particularly on trans-European networks, where Serbia advanced on upgrading its infrastructure, with works progressing on the Serbia-Bulgaria gas interconnector, and on climate change with the adoption of the Low Carbon Development Strategy 2023-2030. In the coming period, Serbia is invited to focus on the following areas: improve investment prioritisation, planning and management across all areas; continue rail reform and improve the strategic transport framework in line with the EU's and the Western Balkans sustainable and smart mobility strategies; urgently implement its action plan on gas unbundling and further diversify gas routes and supplies to decrease dependence on Russia; adopt an ambitious national energy and climate plan (NECP) consistent with the European Green Deal's zero emission target for 2050 and step up efforts on implementing and enforcing environment and climate legislation, in particular on environmental impact assessment, waste management, air and water quality, transboundary cooperation and law enforcement by inspectorates.

Chapter 14: Transport

The EU has common rules for technical and safety standards, security, social standards, State aid and market liberalisation in road transport, railways, inland waterways, combined transport, aviation and maritime transport.

Serbia has a **good level of preparation** in this field. **Limited progress** was made with the amendments to the laws related to railways and accelerated preparation of the national transport strategy. Investments in railway infrastructure modernisation are getting closer to EU practices, as financing for works has been secured through blending EIB and EBRD loans with EU grant funds.

The recommendations from last year remain valid. In the coming year, Serbia, should in particular:

- on rail reform: strengthen the railway safety system and certification processes, and implement a public service obligation contract and a multiannual infrastructure contract in an evidence-based manner;
- on the transport sector in general: accelerate the preparation of the strategic framework (finalise and adopt a national transport strategy, update the general transport master plan, adopt the strategic direction for intelligent transport systems) and implement it (adopt credible and costed rail and road maintenance plans, align and simplify road and rail border crossing procedures and improve road safety at national and local level, strengthen inspection services to progress on the social *acquis* in road transport, improve safety of transport systems and improve passenger rights in all modes of transport);
- on investment: prioritise investment that is relevant for Serbia's economic development and EU integration, in line with targets of the EU and Western Balkans sustainable and smart mobility strategy and the European Green Deal, base all investment decisions on feasibility studies conducted in accordance with EU best practices and apply transparent procurement procedures.

For the **general transport *acquis***, an update of Serbia's strategic framework remains overdue. Work on the new national transport strategy started in June 2022. Serbia needs to prioritise its finalisation and adoption in line with the agreed sustainable and smart mobility strategy targets. Strategic documents should be based on option analyses, consider regional aspects and be properly costed. For larger transport agglomerations, sustainable urban mobility plans that respect environmental and social standards should be developed following EU practice.

Serbia actively participates in the work of the Transport Community and moderate progress was made on implementation of the five TCT action plans. Serbia needs to demonstrate effective implementation of the Transport Community Treaty and the smart and sustainable mobility strategy.

Serbia's framework for future investment planning should be updated accordingly. Investments in transport infrastructure should be prioritised through a single mechanism, ranked according to relevance for Serbia's economic development and EU integration. Decisions need to be based on feasibility studies and technical designs in line with EU best practice. Procurement procedures need to follow EU standards, respect principles of equal treatment, open competition and transparency, and ensure best value for investment. Investment planning and the financial structuring of railway projects need to be improved. Agencies implementing transport investment projects need to have sufficient capacity and a clear mandate to perform and deliver.

Overall, administrative capacity in the road and rail sector continued to improve. However, it still needs further strengthening, including for the transport of dangerous goods, road safety, intelligent transport systems and rail, the railway regulatory body on technical specifications for interoperability, and the centre for investigation of rail accidents. Regarding public services, Serbia has a high level of alignment with the EU *acquis* on rail transport, but it is only partially aligned on road transport. Serbia is progressing slowly on implementing a methodology for track access charges and a new pricing model for access to railway infrastructure, the capacities should be further strengthened in respect to that.

On road transport, Serbia has a good level of alignment with the EU *acquis*. Alignment with EU legislation is still a priority on road charging, the social *acquis* in road transport, the weight and dimensions of vehicles and on access to the profession of road transport operator, to the international road haulage market and to the international market for coach and bus services. The new Law on road traffic safety has been pending for three years, inspection capacity remains insufficient and the number of road deaths in Serbia exceeds the EU average by more than 33%. However, Serbia has already implemented a number of measures from the TCT Road Safety Action Plan. This includes the collection of road safety KPIs, the alignment of national road safety data to the EU CADaS model and strengthened coordination among all relevant actors concerning the roads safety matter. A Road Safety Strategy for 2023-2030 has been drafted but needs to be adopted. In 2022, Serbia started issuing smart tachograph cards. Legislation on transport of dangerous goods is mostly aligned with the EU *acquis* and also covers transport of hazardous substances.

Improving the road maintenance system remains a priority. Work needs to accelerate on service level agreements, performance-based maintenance contracting, and road asset management. Responsibilities in road maintenance need to be further clarified and capacity increased. Serbia needs to address the issue of potentially discriminatory road charges against foreign operators and the country should decide on its strategic direction for implementing intelligent transport systems. Amendments to the Law on roads are pending.

On rail transport, investment in infrastructure increased and overall reform efforts also increased. Licensing requirements for design and construction of railway infrastructure projects, under the Law on planning and construction, delay project preparation and limit competition. In July 2023, the Law on Interoperability of the railway system and the Law on Railways were enacted by the Parliament. Serbia needs to continue its work on full alignment with the fourth EU railway package. The operational and financial sustainability of independent railway services and infrastructure operators remains on track. Serbia regularly updates its railway network statement, but it is not yet fully compliant with the EU *acquis* and the country's negotiating framework. Serbia made progress, with EU-funded technical assistance, on its deployment plan for the European railway traffic management system.

In 2023, 16 private freight companies operated on the market, two more than in the year before. However, to ensure full opening of the market, further efforts are required, including on train driver licences, safety certificates and mutual recognition of rolling stock. Serbia needs to continue improving its railway safety system, certification procedures, and its administrative capacity regarding training facilities and training programmes. Formal adoption of the provisionally published working versions of 11 technical specifications for interoperability has been pending for four years. Serbia needs to ensure that its railway infrastructure is built in line with these technical specifications and focus on improving human resource management in the railway field (development plans for all rail authorities should be incorporating technological, legal and administrative developments). Progress was made on strengthening the role and capacity of the Railway Directorate following amendments to the Law on railways.

Taking into account Serbia's geographical position as a landlocked country, legislation on **maritime transport** is well aligned with the EU *acquis*. Serbia should continue implementing international conventions.

Regarding **inland waterway transport**, Serbia continues to invest in its inland waterway infrastructure. Such investment needs to be done in line with environmental standards and the cost-effectiveness principle. Serbia's operational river information services system is highly interoperable with those of EU Member States. Serbia took steps to fulfil the preconditions for recognition of navigation certificates in the EU, in accordance with Directive (EU) 2017/2397. While Serbia continued improving its infrastructure for inland waterway transport services, it did not progress on the river ports network statement or on strengthening its administrative capacity.

Serbia has a good level of alignment with the EU *acquis* on **aviation**. During the reporting period, Serbia adopted several regulations on aerodrome certificates, rules of the air and provision of air traffic control, alerting and flight information services, conditions for performing air operations, and common basic standards on civil aviation security. Regarding aviation regulations, Serbia is close to fulfilling all obligations stipulated in the first transitional period of the European Common Aviation Area Agreement. However, Serbia still needs to further align its secondary legislation on State aid with the *acquis* and provide a solid track record in the implementation of laws on protection of competition and State aid control. In the domain of aviation safety, the European Union Aviation Safety Agency continues monitoring the implementation of EU safety standards.

On the Single European Sky, Serbia completed its alignment process. No progress was made regarding lifting the suspension of articles on the licensing of air carriers and the normalisation of the lower airspace regime over Kosovo, which remain important priorities. Serbia needs to apply Regulation (EC) No 1008/2008 on common rules for the operation of air services in the Community, as incorporated into the European Common Aviation Area Agreement.

There is no specific legislation on **combined transport**. Serbia regularly allocates budget funds to promote combined transport, but combined transport should be promoted in a more systemic and strategic manner. The construction of the first modern intermodal terminal in Belgrade was completed in November 2022 and is currently still in the defects notification period. Serbia needs to fulfil its obligations related to procurement of equipment and machinery needed for effective functioning of the intermodal terminal. The company for managing the terminal is yet to become operational.

Serbia should increase its efforts to align with EU legislation on **passenger rights** in all modes of transport.

Chapter 15: Energy

EU energy policy covers energy supply, infrastructure, the internal energy market, consumers, renewable energy, energy efficiency, nuclear energy, nuclear safety, radiation protection and nuclear safeguards.

Serbia is **moderately prepared** in energy. **Some progress** has been made with the drafting of the national energy and climate plan (NECP), adopting the law on energy laying the foundations for the gas unbundling, advancing the works on the gas interconnector between Serbia and Bulgaria, and opening the intraday electricity market. Last year's recommendations remain valid.

In the coming year, Serbia, should in particular:

- finalise and adopt the national energy and climate plan (NECP), in line with the Energy Community 2030 energy and climate targets, taking due account of recommendations issued by the Energy Community Secretariat, and energy sector development strategy, implement measures envisaged in the Roadmap for the EU Energy Support Package and the obligations from the Energy Community Treaty;
- implement overdue action plans, significantly accelerate implementation and finalise the unbundling of the gas system operators; certify Transportgas Srbija and Yugorosgaz and provide effective third-party access at all gas entry points; reduce vulnerability to Russian ownership of key energy assets; certify UGS Banatski Dvor in line with the Gas Storage Regulation;
- align with and implement the Electricity Integration Package adopted by the Energy Community Ministerial Council in December 2022; determine net transmission capacities and capacity allocation on all cross-border interconnections in the context of establishing an integrated electricity market.

The lack of gas market opening and third-party access to the gas network continue to hamper Serbia's security of supply. Works on the EU-funded gas interconnector between Serbia and Bulgaria have advanced. It is important to ensure that the interconnector becomes operational upon completion, without delay. Serbia subscribed to the joint regional gas purchase platform under the REPowerEU mechanism. Serbia's dependence on its single gas supplier Gazprom and Russian majority ownership of Serbia's gas infrastructure and oil industry continued. Serbia must take further steps to reduce this dependency on Russian fossil fuel. Serbia is encouraged to initiate the needed steps to align with the EU Gas Storage Regulation and comply with the obligation to certify gas storage operators by Q1 2024. In the second half of 2022, Electric Power Industry of Serbia (EPS) continued with high imports of electricity due to difficulties in coal production. The problems were partially offset by coal imports. Despite coal shortages which continued in 2023, due to mild winter conditions and winter rainfall, electricity imports ceased. Significant investments in new renewable capacities are needed in order to take forward the decarbonisation of the Serbian economy. In April 2023, EPS became a joint-stock company.

In December 2022, Serbia adopted a Roadmap for the EU Energy Support Package. The Roadmap envisages the finalisation of the unbundling of gas sector utilities only by Q4 2024, which constitutes a significant and regrettable delay in the commitment given to the EU and prolongs the long standing breach of the gas legislation. Serbia should take immediate and concrete steps to accelerate and implement its significantly delayed action plan on gas unbundling; this is a matter of credibility for Serbia in the accession negotiations. In July 2023, the amendments to the Energy Law allowing for the establishment of the Republic Commission for Energy Networks and thus starting the unbundling process were adopted by the parliament.

In December 2022, in line with the Roadmap, Serbia adopted a Decree on energy vulnerable customers. Work on the adoption of a Just Transition action plan is ongoing. It needs to be adopted by December 2023 in line with the Roadmap. The preparation of a plan to implement the Green Agenda is underway. The list of energy infrastructure and energy efficiency projects was adopted in July 2023 in line with the Roadmap.

Although Elektrosever received a supply license in June 2022, following the adoption of the Energy Roadmap as part of the EU-facilitated Dialogue, the conclusion of a commercial contract between the distribution company KEDS and Elektrosever remains pending. Following the separation of the Kosovo transmission system operator KOSTT from the Serbia control block, the Serbian electricity transmission system operator EMS did not determine net

transmission capacities and capacity allocation at the interconnection with Kosovo. Serbia did not make progress in setting up regionally coordinated auctions with its Western Balkan neighbours.

Serbia maintained a high level of alignment with the EU *acquis* on emergency oil stocks. Oil stocks continue to increase and corresponded to 35 days of average daily inland consumption in March 2023. In Smederevo, construction of four oil storage capacity units of 20 000 m³ continued and should be finalised by December 2023, allowing a further increase of oil stocks. A joint public-private partnership is planned to provide additional storage capacity.

Concerning the **internal energy market**, Serbia has to align with and implement Electricity Integration Package adopted at the Energy Community Ministerial Council in December 2022. Trading volumes on the organised day-ahead market decreased by 3% in 2022. An intraday electricity market was opened in July 2023. A balancing energy market is operational, but prices for balancing services are still regulated.

The unbundling of the electricity transmission system operator EMS is still not compliant with the Energy Community rules. The certification and unbundling of gas companies envisaged in Serbia's action plan for unbundling the gas sector continued to be delayed. There is no third-party access in line with the Energy Community rules to the gas system infrastructure of Transportgas Srbija, Gastrans and YugoRosGaz. The Balkan Stream pipeline section in Serbia is operational but there is no third-party access. Regarding the regulatory regime for this project, Serbia recognises the need for a tailor-made solution for the Gastrans company that will comply with EU legislation.

During the reporting period, several decrees were adopted regarding the electricity and gas network codes. Electricity and gas supply prices are deregulated for all customers, however, households and small customers have the right to be supplied under regulated prices. In 2022, the non-regulated market slightly increased and accounted for 51.2% of total end-user electricity consumption and 81.3% of total end-user gas consumption. Due to high electricity prices on the open market, the government introduced a price cap for the non-regulated market, i.e. industry. The regulated electricity price of universal supply to small customers and households is still significantly below the market price, which impedes competition. The International Monetary Fund stand-by arrangement agreed in December 2022 set targets for price increases in 2023. In line with this arrangement, Serbia's electricity and gas suppliers increased prices of electricity and gas in January and May 2023.

The Serbian energy agency is legally and functionally independent from any other public entity, but it has no legal enforcement power to ensure compliance of regulated companies. An increased staffing level is necessary to allow the agency to implement all regulatory responsibilities under the third energy package, the new electricity framework and the new Law on renewable energy.

On **hydrocarbons**, Serbia is implementing its mining law, adopted in April 2021. However, full alignment with the EU Hydrocarbons Directive is pending.

On **renewable energy sources (RES)**, Serbia made some progress on further alignment with the EU *acquis*. In April 2023, Serbia amended the 2021 Law on RES, paving the way to launch the delayed first RES auctions. In June 2023, the Government approved a three-year auction plan 2023 - 2025 with a total capacity of 1 300 MW. First auctions for producers of electricity from renewable energy sources were conducted in July 2023 and results were published. EPS progressed with the preparation of investments for higher capacity RES installations, including a windfarm in Kostolac and solar parks at the ash disposal sites of coal thermal power plants,

thereby pursuing the objectives of the European Green Deal and the Economic and Investment Plan for the Western Balkans.

For full transposition of the Renewable Energy Directive (RED II, Directive (EU) 2018/2001), Serbia should ensure a simplified and swift permit-granting process by designating one or more contact points to provide guidance to applicants. Serbia made no progress in introducing a national scheme to verify the sustainability criteria for biofuels, bioliquids and biomass fuels. The share of RES in the transport sector is still below 1% while the target for 2020 was 10%.

Overall, Serbia's share of RES in gross final energy consumption also decreased by 1% year-on-year and was at 25.28% in 2021. Serbia should set new ambitious annual targets for RES up to 2030 in its NECP, in accordance with the December 2022 Decision of the Ministerial Council of the Energy Community. Serbia has submitted its draft NECP to the Energy Community Secretariat on 29 June 2023, in line with the deadline, and plans to adopt its integrated NECP in autumn 2023, ahead of the deadline of 30 June 2024. The final NECP shall be in line with the Energy Community 2030 energy and climate targets and take due account of any recommendations from the Energy Community Secretariat. The lack of human resource capacity in the Ministry of Mining and Energy's Department for green energy hampers the implementation of RES support schemes. The total capacity of installed RES power slightly increased compared with the previous reporting period. The total capacity of wind power remained the same, while the total capacity of other RES used for electricity generation (not including big hydropower plants) increased to 190 MW.

Serbia continued to progress in aligning with the EU *acquis* on **energy efficiency** by adopting 22 acts of implementing legislation under the new Law on energy efficiency and rational use of energy, these focused on energy savings, eco-design and energy labelling frameworks. The first comprehensive assessment of the potential of high-efficiency cogeneration and district heating, in line with obligation under the Energy Efficiency Directive is under preparation. Nevertheless, only limited progress was made in aligning with the Energy Performance of Buildings Directive (Directive (EU) 2018/844) and setting up an implementing legislation framework for the renovation of building stock. Serbia is missing a national calculation methodology for energy performance of buildings, nearly zero-energy buildings standards for all new public and commercial buildings, and a legislative framework for the increased use of renewable energy, such as an electric vehicle charging infrastructure. Serbia still did not roll out consumption-based metering and billing in district heating, which is a precondition to attract large-scale investments to retrofit the building stock. In its NECP, Serbia should set ambitious targets for energy efficiency and the annual rate of building renovation. The human resource capacity in the Energy Efficiency Administration (EEA) needs to increase, its institutional role must be strengthened, and energy efficiency financing must be increased to take the sector decisively towards the 'energy efficiency first principle'. The EEA still cannot manage energy efficiency measures for individuals without the intermediary role of local self-governments, nor can it run multiannual programmes. In 2023, Serbia continued to expand its housing renovation programme and increased funding for this.

On **nuclear energy, nuclear safety and radiation protection**, Serbia's legislation is partially in line with the EU *acquis*. In the reporting period, a Rulebook on Categorisation of Radiation Practices was adopted. An EU-funded project is being implemented to strengthen Serbia's capacity in the fields of nuclear energy, radiation safety, and radioactive waste management. In May 2023, Serbia signed the European Community Urgent Radiological Information Exchange (ECURIE) Agreement. Serbia can be considered a full member of the ECURIE community upon implementing the required technical arrangements, which is expected to happen in the coming months. Serbia is also a member of the EURDEP community. The

Serbian public utility ‘Nuclear Objects’ has yet to finalise licensing of two old storage facilities, which expired in November 2019, two nuclear research reactors and an abandoned uranium mine. The new radioactive waste processing facility received the trial run licence. The Serbian Radiation and Nuclear Safety and Security Directorate will need to increase its number of employees in order to fulfil its future obligations.

On nuclear safeguards, Serbia would need to start adapting the existing systems of accountancy and control of nuclear materials in order to accommodate for the safeguards provisions (Chapter 7) of the Euratom Treaty.

Chapter 21: Trans-European networks

The EU promotes trans-European networks (TENs) in the areas of transport, telecommunications and energy to strengthen the internal market and contribute to growth and employment.

Serbia is **moderately prepared** for trans-European networks. **Some progress** was made overall, including on infrastructure upgrading, transport projects, the construction of the gas interconnector with Bulgaria and on last year’s recommendation on Serbia’s strategic framework for the transport sector.

In the coming year, Serbia should in particular:

- continue to modernise its transport and energy infrastructure connections in line with the EU’s and the Western Balkans’ sustainable and smart mobility strategies;
- conclude a contract for sections III and IV of the Trans-Balkan electricity corridor, finalise the construction of the Serbia-Bulgaria gas interconnector and put it into operation;
- improve the quality of design and tender documents for transport infrastructure projects to accelerate their effective implementation and contribute to open competition during tendering.

On **transport networks**, challenges in the sector remain: decarbonisation, digitalisation and resilience of transport infrastructure; multiannual maintenance planning and implementation in road and rail; alignment with the TEN-T regulatory framework; and compliance with EU laws and standards on public procurement, State aid and environmental impact assessments. Rail infrastructure needs to comply with the EU’s technical specifications for interoperability. Serbia continues to invest substantial funds in the upgrading of its transport infrastructure. However, Serbia should ensure that investments in its infrastructure from third countries are in line with the EU framework for the screening of foreign direct investments. Investment needs to be designed and implemented in full respect of environmental standards and based on cost-benefit analyses following EU best practice. The legal framework defining the planning, design and construction needs to reflect the principles of transparency and equal treatment. The capacities of agencies responsible for the implementation of investment projects need to be strengthened. Proper financial structuring of projects remains a priority, also for Serbia’s absorption of EU funds.

Serbia is encouraged to remain committed to transport facilitation, focusing on rail and road border crossings. The Serbian authorities are committed to implement the ‘green lanes’ and are encouraged to take steps in this field.

In May 2023, Serbia signed a high-level understanding on the revision of the indicative maps for TEN-T in the Western Balkans. Regarding roads, works on the Niš-Merdare highway with the support of EU funds need to accelerate. So far only around 10% of approved EU grant funds have been used and the tendering of the sections between Niš and Pločnik is delayed.

The preparation of missing project documentation on the section Pločnik-Merdare, for which EU funds have also been secured, is also pending. Regarding rail infrastructure, works on the remaining part of the Budapest-Belgrade line (the Novi Sad-Subotica sub-section) are progressing and are planned to be completed by the end of 2024. Serbian Railways Infrastructure signed a first works contract related to the modernisation of the Niš–Dimitrovgrad railway line. Works are expected to start in November 2023 thus unblocking the long-delayed project. Preparation is progressing, under the EU Economic and Investment Plan, for the modernisation of rail corridor X from Belgrade-Niš to the border with North Macedonia.

The commencement of works on lot 1 of the Stalać-Djunis sub-section funded by the national budget is delayed, although the contract was signed in February 2022. The tendering procedure for the EU-funded lot 2 is underway. Serbia continued implementing its inland waterway programme with delays on some sub-projects. Regarding airport infrastructure, the modernisation of the Nikola Tesla airport in Belgrade advanced considerably.

On trans-European **energy networks**, the administrative capacity for alignment with the EU *acquis* remains insufficient. For further decarbonisation of the electricity sector and an increased share of renewable sources, energy networks need to be upgraded in line with the EU *acquis* on trans-European networks. Regarding the Trans-Balkan electricity corridor, section III from Obrenovac to Bajina Bašta and section IV between Serbia, Bosnia and Herzegovina and Montenegro are in the tendering phase. Work continued on the gas interconnector between Serbia and Bulgaria. The interconnector should be finalised by the end of 2023 and licensing should be completed urgently thereafter to bring it into use as soon as possible.

Chapter 27: Environment and climate change

The EU promotes strong climate action, sustainable development and protection of the environment. EU rules contain provisions addressing climate change, water and air quality, waste management, nature protection, industrial pollution, chemicals, noise and civil protection.

Serbia has achieved **some level of preparation** in the area of environment and climate change. Overall, Serbia made **some progress**, including on last year's recommendations, in particular by adopting the Low Carbon Development Strategy 2023-2030, and drafting its national energy and climate plan (NECP). Serbia also made progress by continuing to increase environmental funding and investments, in particular in the waste management and water quality sectors. The adoption of important legislation and strategic documents is pending.

Last year's recommendations remain largely valid. In the coming year, Serbia should in particular:

- modernise and simplify the overall sector structure and institutions to improve the efficiency and quality of the preparation, implementation and quality control of investments as well as further improve strategic investment planning and management including transparency of procedures;
- align the Law on planning and construction with international standards; adopt EU-compliant Environmental Impact Assessment (EIA) and Strategic Environmental Assessment (SEA) laws; align and adopt the Directive on Environmental Crime;
- implement the Action Plan for Administrative Capacity Development and the Programme of Air Protection; adopt the Decree on appropriate assessment; adopt the Industrial Emissions Directive; resume international cooperation on Transboundary Rivers; implement the Low Carbon Development Plan.

Environment

In the area of **horizontal legislation**, Serbia has a high level of alignment with the EU *acquis*. However, implementation and enforcement need to be further improved, in particular by strengthening administrative capacity at central and local levels, including that of inspectorates and the judiciary, which will require the implementation of structural, cross-sectoral reforms. Legislation on Environmental Impact Assessment (EIA) and Strategic Environmental Assessment (SEA) was drafted but not yet adopted. The SEA of Serbia's Spatial Plan was adopted in March 2023. Serbia should tackle critical deficiencies of the Law on Planning and Construction, including the requirement of public participation and transparency in the issuing of construction permits set out in the EIA. It should also address the practices of issuing construction permits before an EIA procedure and splitting projects into several smaller projects which, taken individually, do not require an EIA process. EIA implementation needs to be considerably strengthened. Serbia needs to carry out SEA for all plans and programmes that fall under the framework for projects listed in the EIA Directive. The quality of public consultations improved marginally during the reporting period. Serbia needs to ensure greater transparency about investments and their environmental effects as well as respect for freedom of expression and assembly in the environmental sector.

In 2022, an inclusive stakeholder process started to support the development of a national Environmental Protection Strategy: Green Agenda for Serbia. In 2023, the Serbian national budget for environment and climate action was increased by 18% compared with 2022. Serbia has increased its budget for environmental programmes and is implementing Calls for Proposals to replace heating equipment, afforestation, and purchase of electric and hybrid vehicles. Although Serbia is substantially increasing investment in environmental protection, it still lacks an effective institutional set-up and transparent procedures. All income generated from environmental fees should be earmarked for environmental purposes.

Transboundary cooperation did not improve during the reporting period. Serbia is encouraged to pursue efforts to improve transboundary cooperation with neighbouring countries. Legislative alignment on environmental liability and environmental crime *acquis* has not progressed. Enforcement remains a key priority including the need to establish a track record on implementing the Environmental Crime Directive.

The Serbian Environmental Protection Agency's (SEPA) annual reports were frequently not published in a timely manner. Under the European Environment Information and Observation Network, Serbia's provisional scores for core data flows in 2022 dropped by 50% compared with 2021, well below the median for EEA-38 countries of 81%.

In the field of **air quality**, Serbia has a good level of alignment with the EU *acquis*, but implementation and enforcement should be further strengthened. In December 2022, following an extensive public consultation, Serbia adopted its first Air Protection Programme for the period 2022-2030 and an action plan. Nevertheless, Serbia continued to exceed EU daily limits of air pollution in 2022. Serbia needs to speed up implementation of air quality plans and further improve air quality monitoring. SEPA improved its communication on air quality. In May 2023, the EU Air Quality Index was proposed by the Ministry of Environment but not yet adopted. The SEPA air quality report for 2021 was published on 21 November 2022. The report listed an increased number of agglomerations with air pollution exceeding EU limits (20) compared with last year (19), meaning that around four million inhabitants are exposed to polluted air. The pollution caused by the Kostolac B thermal power plant needs to be addressed urgently. Serbia has not yet aligned its legislation with the requirements of the EU *acquis* for national emission ceilings. Alignment with the EU *acquis* on volatile organic compound emissions needs to continue. Adequate staffing of SEPA need to be ensured.

Regarding **waste management**, Serbia has a good level of alignment with the EU *acquis*, but implementation should be further strengthened. In April 2023, Serbia amended the Law on waste management. The program for the development of the circular economy was adopted in December 2022. Sorting waste at source rose from 318 tonnes in August 2022 to 762 tonnes in May 2023 in four waste regions, thanks to Team Europe support. Serbia had 12 sanitary landfills at the end of 2022. In 2022, Serbia allocated funds to clean 233 illegal dumpsites, added video monitoring to prevent waste disposal, and improved cooperation with local authorities. About 20% of the municipal waste generated in Serbia is still dumped in illegal dumpsites. The remediation of the Belgrade landfill and the construction of a waste-to-energy facility continued in the reporting period. Serbia's inspection capacity in the waste sector remains insufficient.

The level of alignment with the EU *acquis* on **water quality** is moderate. Overall, Serbia needs to step up its efforts to further align its legislation with the EU *acquis* in this sector, and to strengthen administrative capacity in monitoring, enforcement and interinstitutional coordination. Pollution by nitrogen and phosphorus originates from the energy sector, waste and wastewater public companies, and chemical and mineral industries. Non-compliance with water quality standards remains a serious concern and includes areas where arsenic is present. Belgrade, Niš and Novi Sad do not treat their wastewater; however, works on a wastewater treatment plant and sewage network have started in Niš, with EU and Team Europe funding. In July 2021, Serbia adopted an action plan for implementing its water management strategy, but there is no available monitoring information. Serbia should address river pollution more rigorously and increase cooperation for transboundary rivers such as the Danube, Drina, Dragovištica and Pek rivers. In April 2023, the 1st River Basin Management Plan was adopted. No particular progress has been reported on the implementation of the memorandum of understanding on EIA and SEA signed by Serbia and Bulgaria in May 2022. Improving local governance, in particular for operating and maintaining water and wastewater facilities, remains a priority. Increased transparency on planning, selecting and managing environmental investments must be delivered to ensure better compliance with EU laws and standards in this sector and better value for money. EU-funded work on adequate water fees and tariffs continued with the participation of 33 municipalities. Work on developing flood risk management plans is advancing.

Alignment with the EU *acquis* in the field of **nature protection**, in particular with the Habitats and Birds Directives, is moderate. Serbia needs to address gaps in legislation, which currently allow the hunting of non-hunttable birds, especially the goshawk and the turtle dove. Illegal construction in national parks was reported by the inspectorate but no action was taken. Serbia needs to fully incorporate EU standards on prohibited means of capturing and killing wild animals, including in its legislation on hunting. Authorities need to address illegal hunting and illegal logging more effectively. Preparations for establishing a Natura 2000 network improved thanks to an EU-funded project. Institutional and human resource capacity at national and local levels remains weak, in particular as regards enforcement and wildlife trade. Any further development of hydropower should be in line with EU environmental legislation.

As regards **industrial pollution and risk management**, alignment with most of the EU *acquis* is at an early stage across industry, including as concerns the Industrial Emissions Directive. The Kostolac B thermal power plant is Europe's biggest sulphur dioxide polluter. Its desulphurisation plant started operating in January 2023. Inspection and law enforcement remain areas of concern. Serbia needs to increase its capacity for managing the integrated permitting processes. The quality of Integrated Pollution Prevention and Control permits should be improved. Serbia should enforce the polluter pays principle in order to encourage

industry to invest in green solutions. In 2022, the number of inspections decreased from 4 289 to 3 584 compared with 2021. A new methodology for reporting is in place but should be improved.

Serbia has a high level of alignment with the EU *acquis* on **chemicals**. However, developments on the REACH Regulation and the Classification, Labelling and Packaging Regulation, and on animal experiments and asbestos legislation, continued to be slow. Serbia needs to boost its administrative capacity to implement legislation in these areas and ensure proper monitoring of persistent organic pollutants.

Alignment with the EU *acquis* on **noise** remains at an early stage. Serbia needs to improve its administrative capacity for preparing noise maps and action plans and for enforcing noise legislation.

Regarding **civil protection**, Serbia actively participates in the Union Civil Protection Mechanism (UCPM). In February 2023, Serbia deployed urban search and rescue teams to Türkiye in response to the devastating earthquakes in the region and participated in the work of the operational team for sending humanitarian aid to the citizens of Türkiye and Syria. In March 2023, Serbia sent several energy items via the UCPM to Ukraine to help repair damage caused by Russian attacks on civilian infrastructure. Serbia has a good legal and policy framework for disaster risk management based on the Law on disaster risk reduction and emergency management. Revision of the law is planned in 2023 to address minor shortcomings and introduce new instruments to empower those involved at local level. Serbia improved its preparedness and response capacities. In October 2022, Serbia launched its online disaster risk register (in line with the EU INSPIRE Directive and the EU initiative to enhance data interoperability) which provides real-time data concerning risks in concrete locations. Such data is necessary to take preventive measures and informed decisions in emergency management, post-disaster reconstruction and investment planning. Capacities for response and prevention need to be strengthened through training, particularly for local players involved in emergencies. Serbia is not connected to the Common Emergency Communication and Information System (CECIS) through secure trans-European Services for Telematics between Administrations (sTESTA). Serbia expressed an interest to join the read-only CECIS Civil Protection Lite version available for UCPM participating states that do not yet have the full access to sTESTA and CECIS.

Serbia should inform the EU on the activities of the Niš humanitarian centre, its integration in the emergency management system, and ensure that it does not duplicate the role of the European Commission's Emergency Response Coordination Centre.

Climate change

Serbia has some level of preparation in climate change legislation, but enforcement is at a very early stage. The Low Carbon Development Strategy for 2023-2030 was adopted by the government in June 2023. Serbia adopted three pieces of implementing legislation necessary to implement the climate law. Serbia needs to continue its efforts to integrate climate action into other sectors and ensure policy coordination. Serbia needs to step up efforts to diversify energy sources, develop renewables and decrease energy intensity in order to translate its commitment to the Green Agenda for the Western Balkans into concrete action. This should include the introduction of carbon-pricing instruments and phasing out coal subsidies. Serbia needs to take decisive steps for the establishment of a mechanism on carbon pricing, aligned with the EU Emissions Trading System (EU ETS), to advance the implementation of the EU *acquis* and to adequately prepare for the EU Carbon Border Adjustment Mechanism, that entered into force in its transitional phase as of 1 October 2023.

Serbia's draft national spatial plan, based on its energy strategy, includes new thermal power plants. Serbia should set a coal phase-out date as an effective means to comply with Energy Community law and Serbia's Green Agenda commitments on reaching the EU target of climate neutrality.

In August 2022, Serbia submitted, with some delay, its updated nationally determined contribution to the Paris Agreement, committing to a 33.3% decrease in greenhouse gas emissions by 2030 compared with 1990 levels. Full alignment of legislation on monitoring, reporting and verifying greenhouse gas emissions in line with the EU emissions trading system and the effort-sharing Regulation is still pending. Serbia needs to considerably strengthen its administrative and technical capacity at all levels and further increase investment in its green energy transition.

CLUSTER 5: RESOURCES, AGRICULTURE AND COHESION

This cluster covers chapters 11 (Agriculture and rural development), 12 (Food safety, veterinary and phytosanitary policy), 13 (Fisheries and aquaculture), 22 (Regional policy & coordination of structural instruments) and 33 (Financial & budgetary provisions). Two out of five chapters are open (chapters 13 and 33) with closing benchmarks that remain to be fulfilled in each chapter. The Commission has assessed that opening benchmarks have been met for chapters 11 and 22. Serbia has yet to meet all three opening benchmarks to open Chapter 12.

This cluster comprises policies linked to EU structural funds and developing the capacities to assume responsibilities of a future Member State. It also comprises some of the key policy areas crucial for ensuring sustainable food systems and helping rural communities to develop and diversify economically.

Limited progress was achieved in different areas, e.g. the classification of food establishments and establishments handling animal by-products, and the recruitment of additional staff in the Plant Health Directorate; on financial and budgetary provisions as regards the underlying policy areas affecting the correct functioning of the own resources system; and on regional policy as regards financial management.

In the coming period, Serbia is invited to focus on the following areas: increasing the pace of implementation of the instrument for pre-accession assistance for rural development (IPARD) to ensure a timely use of financial support from the EU so as to avoid further loss of funds; progressing with the revision and implementation of the action plan for *acquis* alignment in agriculture and rural development; adopting a strategy and action plan for alignment with the *acquis* on food safety, veterinary and phytosanitary policy; adopting framework legislation on genetically modified organisms aligned with the *acquis*; adopting the action plan for alignment with the *acquis* on fisheries; implementing the action plan for meeting the requirements of the EU cohesion policy and improving capacity to manage indirect management programmes under EU pre-accession assistance; and drafting an action plan to meet the administrative own resources conditions.

Chapter 11: Agriculture and rural development

The EU's common agricultural policy supports farmers and ensures Europe's food security. It helps tackle climate change and the sustainable management of national resources; maintains rural areas and landscapes across the EU; and keeps the rural economy alive by promoting jobs in farming, agri-food industries and associated sectors. This requires strong management and control systems. There are also common EU rules for marketing standards, quality policy and organic farming.

Serbia has **some level of preparation** in agriculture and rural development. **Limited progress** was made, in particular on recruitment to the IPARD structures and efficiency of processing IPARD applications and payment requests.

Last year's recommendations remain valid. In the coming year, Serbia should in particular:

- take measures to improve implementation and avoid further loss of IPARD funds, ensure the smooth rollover of entrusted IPARD measures to the 2021-2027 period, and prepare new measures for entrustment;
- update and speed up implementation of the action plan for EU *acquis* alignment in agriculture and rural development.

Regarding **horizontal issues**, the adoption of the national programme for agriculture and rural development for the period 2022-2024 is still outstanding. Its complementarity with the IPARD III programme should be ensured. Implementation of the action plan on alignment with the EU *acquis* on agriculture and rural development should continue, with its updating to be finalised in the course of 2023. Serbia should speed up the establishment of the integrated administration and control system (IACS) and the transition from manual to electronic processing of aid applications. The procurement of software for the land parcel identification system (LPIS), a precondition for the start of the IPA 2021 project on the first phase of the establishment of IACS, is still outstanding and should be fulfilled without further delays. Serbia needs to bring its support measures in line with the EU *acquis*. The farm accountancy data network (FADN) is established, but its sample size and the quality of the data needs to be further improved.

In the area of the **common market organisation (CMO)**, the adoption of implementing legislation in the areas of marketing standards, public and private storage, and producer organisations is still pending. A new law on wine has been prepared and should be adopted.

On **rural development**, Serbia is entrusted with budget implementation tasks for four measures under IPARD II. However, delays in payments in 2022 resulted in a loss of EUR 12.8 million of IPARD funds and there is a considerable risk of further losses in 2023. It is important that Serbia fully implements its action plan for better absorption of funds. While a number of staff has been recruited in the IPARD Agency, it is important that Serbia continues filling vacant posts, which is essential for improved and timely implementation of IPARD. Serbia is encouraged to present proposals for credit guarantee schemes, which will assist non-legal entities and small agricultural holdings with access to IPARD funds.

Human resources capacity at the IPARD Agency needs to be secured. A smooth rollover of the entrusted IPARD II measures to IPARD III (2021-2027) is essential and preparation for the implementation of the programme's new measure – *Agri-environment-climate and organic farming*; *Implementation of local rural development strategies (LEADER)*; and *Investments in rural public infrastructure* – needs to start.

As regards **quality policy**, the continuing delay in the adoption of legislation on quality schemes for agricultural products and foodstuffs is hindering the sector's development.

For **organic farming**, new legislation aligning with the EU *acquis* in the area of organics has been drafted and should be adopted without further delay.

Chapter 12: Food safety, veterinary and phytosanitary policy

EU hygiene rules for foodstuff production ensure a high level of food safety. Animal health and welfare, and the safety of food of animal origin, are safeguarded together with the quality of seeds, plant protection material, the protection against harmful organisms and animal nutrition.

Serbia is **moderately prepared** in the area of food safety, veterinary and phytosanitary policy. **Some progress** was made on last year's recommendations, in particular through recruitment of additional staff in the Plant Health Directorate and the classification of food establishments and establishments handling animal by-products.

In the coming year, Serbia should in particular:

- step up the efforts to strengthen the capacities of the line directorates, in particular the veterinary directorate, through recruitment of new staff, training and staff retention policies;
- prioritise the process of upgrading food establishments to align with the EU *acquis*;
- adopt legislation aligned with the EU *acquis* regulating genetically modified organisms (*see also Chapter 30*).

In the area of **general food safety**, Serbia presented an advanced draft of a strategy and action plan for alignment with the EU *acquis*, which is yet to be adopted. A number of framework laws still remain to be aligned with the EU *acquis*. Serbia's risk-based approach for imported foods needs to become more transparent and comprehensive. The periodic delays in issuing import certificates or abrupt shortening of their validity (e.g. for meat or dairy products) continued to constitute non-tariff barriers. Serbia still has not introduced an audit of inspection staff.

On **veterinary policy**, annual programmes consisting of animal health protection measures were adopted in March 2023. African swine fever (ASF) continued to spread rapidly, affecting primarily small holdings in rural areas and causing considerable economic damage. No cases of rabies were noted in the reporting period. While the official system to implement animal health controls is generally well organised, Serbia urgently needs to address a long-standing shortage of official veterinarians, fill well over 150 vacant posts in the Veterinary Directorate both in inspection and policy departments, and increase the number of trainings in the Directorate. Serbia also needs to take additional steps to meet the requirements for export of fresh poultry meat and eggs to the EU. Further alignment is required in the area of animal health to comply with the most recent EU *acquis*. Alignment of national legislation on animal welfare with the EU *acquis* remains to be finalised.

As regards the **placing of food, feed and animal by-products on the market**, in the reporting period Serbia finalised the task of categorisation of food establishments for compliance with the EU *acquis*. However, focused efforts are now necessary to upgrade establishments, including the introduction of a monitoring system. IPARD funds could serve as an important source of funding for this process. Significant work is also needed on field and intermediary collection of animal waste and management of animal by-products.

On **food safety rules and specific rules for feed**, Serbia made no progress in improving milk quality and has not adopted a strategy to align with EU *acquis* standards. Substantial work is needed to gradually widen the scope of related laboratory analysis in this area and increase efforts on awareness-raising for improved hygiene during milk production and for prevention of mastitis. The permitted level of aflatoxins in milk remains five times higher than the limit allowed by the EU *acquis*, while necessary measures to reduce the presence of aflatoxins in animal feed (source of aflatoxins in milk) remain to be implemented.

The capacity of the Directorate for national reference laboratories requires further strengthening in terms of specialist staff and the analytical scope of its laboratories, including those for milk testing.

In the area of **phytosanitary policy**, the 2023 annual programme of plant health measures was adopted in February 2023. Implementation of existing national legislation for the sustainable use of pesticides remains low (e.g. on mandatory control of pesticide application devices). Substantial work is still necessary in this area, including targeted awareness-raising about the risks in pesticide misuse. While some progress was noted in staffing of the phytosanitary inspectorate, policy departments of the Plant Health Directorate remain to be strengthened.

Serbia made no progress to align its legislation on **genetically modified organisms** with the EU *acquis*, in order to regulate this area in a more transparent and safe manner. This is crucial for further progress in negotiations for membership of the World Trade Organisation and is a prerequisite for opening this chapter.

Chapter 13: Fisheries and aquaculture

The common fisheries policy lays down rules on fisheries management, protects living resources of the sea and limits the environmental impact of fisheries. This includes setting catch quotas, managing fleet capacity, rules on control and inspection, rules on markets and aquaculture and support for fisheries and coastal communities. Further, it promotes a sustainable aquaculture.

Serbia is **moderately prepared** in the area of fisheries and aquaculture. **No progress** was made during the reporting period. Last year's recommendations still remain valid.

In the coming year, Serbia should:

- adopt an action plan for full compliance with the requirements of the EU *acquis* by the date of accession, in particular regarding organisation of markets, aquaculture, data collection and control measures, and illegal, unreported and unregulated fishing;
- address the severe understaffing of authorities responsible for policy formulation and anti-fraud controls for fisheries (including border controls).

Serbia does not have a coastline, therefore a large part of the EU *acquis* on fisheries is not applicable. The fisheries and aquaculture chapter also consists of inland fisheries and aquaculture operations. Serbia, however, should not neglect its potential for fish farming and processing, and should dedicate necessary efforts to setting up and strengthening administrative and institutional capacities, which is a prerequisite for the successful implementation of fisheries policy. No progress was noted in the reporting period in addressing severe understaffing in the policy formulation area and in **inter-institutional coordination**, including border and other anti-fraud controls.

On **resource and fleet management**, the European eel, a strictly protected species, is covered by a permanent fishing ban. The collection of statistical data on aquaculture for 2022 is yet to be completed. However, further harmonisation of national legislation for data collection is necessary to include the obligation to record European eel catch both in recreational and commercial fishing. The scientific capacity needed to align data collection principles remains to be strengthened. In the field of **structural actions**, the sector was included in the IPARD support programme, but actual implementation in this area is yet to start. Structural measures have not yet been put in place for small-scale or inland fisheries. On **inspections and control**, Serbia needs to improve official controls of fishery products intended for export to the EU and align related laboratory testing with the EU *acquis*. The implementation of the rulebook on catch certification and bringing the legal framework into full alignment with the EU *acquis* on illegal, unreported and unregulated fishing (IUU) has been repeatedly postponed to 2024. This matter should be addressed as soon as a solution has been found for the fish catch certificate. Legislation on **market policy** still needs to be adopted, in line with the EU *acquis*. As for **State**

aid measures, Serbia still needs to ensure their compatibility with the EU *acquis* and the Common Fisheries Policy before accession.

Chapter 22: Regional policy and coordination of structural instruments

*Regional policy is the EU's main tool for reducing regional disparities and investing in sustainable and inclusive socio-economic growth. It is operating through "shared management" between the Commission and EU Member States. The implementation of cohesion policy programmes requires appropriate administrative capacity on programme and project level, the establishment of systems of sound financial management and control and also the fulfilment of other EU *acquis* elements such as environmental or public procurement legislation.*

Serbia is **moderately prepared** in the area of regional policy and coordination of structural instruments. **Limited progress** has been made on last year's recommendations.

In the coming year, Serbia should in particular:

- urgently implement its action plan on cohesion policy and ensure the timely implementation of IPA III multiannual operational programmes under indirect management;
- improve capacity for indirect management of IPA programmes, including operational programmes, and guarantee that key positions are permanently filled and key staff retained; and
- ensure that all instruments are compliant with EU requirements in terms of programming and partnership principles and factor in the requirements of the future structural/cohesion funds in the institutional set-up.

Serbia is yet to adopt a **legal framework** for cohesion policy. Work on the law on cohesion policy has reached an advanced stage. Multiannual budget planning is regulated through the Law on the budget system, and national co-financing for EU pre-accession programmes is ensured at project level. However, Serbia needs to apply a systematic approach to develop, co-finance and implement multiannual operational programmes. The decree providing the legal basis for the functioning of the Audit Authority under IPA III was adopted in September 2023.

Progress has been made with regard to the institutional framework for cohesion policy. The multiannual operational programmes under the Instrument for Pre-accession Assistance (IPA III) identify the institutions and bodies that will manage and implement such programmes. Continuity is expected between these institutions and bodies and those that will be in charge of structural instruments after accession. Serbia should focus on developing the capacity of these institutions and bodies in view of their future role in cohesion policy. Generally, indirect management structures need to keep improving to manage IPA programmes more timely and efficiently and to be able to operate in an ex-post control environment.

Weaknesses persist in the **administrative capacity** of key institutions managing EU funds. Many managerial appointments are in acting functions only and are not confirmed, creating uncertainty. The turnover of staff in key ministries remains a problem, as experienced staff are regularly replaced by newcomers. The institutions and bodies responsible for managing multiannual operational programmes need to be staffed appropriately. A more effective and holistic retention policy in the public sector remains to be adopted. Improvements in administrative capacity are necessary to minimise the risk of losing IPA funds.

Serbia continues to participate in the EU Strategy for the Adriatic and Ionian Region (EUSAIR) and the EU Strategy for the Danube Region (EUSDR) which promote cooperation and synergies among participating EU and non-EU countries.

On **programming**, the adoption of a development plan, which forms the legal basis for Serbia's regional development policy, remains overdue. In 2023, a working group was established, including relevant stakeholders, to draft the national development plan; its first meeting took place in March 2023. The development plan should acknowledge the development potential of all regions in Serbia and reduce regional and local disparities. The investment planning system continues to lack coherence, leading to non-transparent investment planning and financing and varied technical standards that have an impact on interoperability. Investment planning should be organised to bring Serbia closer to the EU.

On **monitoring and evaluation**, the relevant monitoring committees set up under indirect management continued to function. However, the establishment of a monitoring and evaluation system in accordance with the requirements of cohesion policy remains outstanding.

On **financial management, control and audit**, the capacity of the national systems for indirect management of IPA funds, including in the Audit Authority, continued to improve. The resorption of the payments backlog under indirect management is an urgent priority.

Chapter 33: Financial and budgetary provisions

This chapter covers the rules governing the funding of the EU budget ('own resources'). These resources mainly consist of: (i) contributions based on the gross national income of each Member State; (ii) customs duties; (iii) non-recycled plastic; and (iv) a resource based on value-added tax. Member States must have the appropriate administrative capacity to adequately coordinate and ensure the correct calculation, collection, payment and control of own resources.

Serbia has **some level of preparation** in the area of financial and budgetary provisions. **Limited progress** was made on last year's recommendations as Serbia requested and participated in a study visit on the management and coordination of the EU own resources system. Limited to good progress was made within the underlying policy areas affecting the correct functioning of the own resources system. Last year's recommendations remain largely valid.

In the coming year, Serbia should in particular:

- develop organisational and procedural links between the institutions involved in the own resources system; and
- continue preparations to meet the specific administrative conditions for own resources as laid down in the own resources regulations, including, once the Commission-led workshop on the EU own resources system has taken place, draft an action plan with timelines to meet the administrative own resources conditions.

There was limited to good progress in the underlying policy areas indirectly affecting the own resources system (*for progress in these areas, see Chapters 16 – Taxation, 18 – Statistics, 29 – Customs union, and 32 – Financial control*).

Regarding **traditional own resources** (TOR), the customs legislation is largely aligned with the EU *acquis*. Serbia's customs administration procedures ensure that cases of fraud and irregularities are reported to the national authorities. However, reporting is manual and Serbia does not use OWNRES, or any other similar national electronic database, to report on fraud and irregularities for amounts over EUR 10 000. Customs continued the simulation of TOR

accounts in 2022. However, the current accounting system does not use two different accounts, one for collected or secured debts (A account) and the other for uncollected/unsecured debts or secured but appealed debts (B account). Several departments in the customs administration, including its internal audit department, carry out control activities. The state audit institution is in charge of carrying out external audits.

As regards the **value added tax (VAT)-based resource**, sufficient data sources are available for the calculation of the theoretical non-deductible VAT, deriving from the supply and use tables that were published for the first time in 2019.

As regards the **gross national income-based resource**, national accounts are compiled largely in line with the European System of Accounts (ESA 2010). However, continued efforts are needed to produce the complete data required by the ESA 2010 transmission programme. Serbia continued to improve the exhaustiveness of the national accounts and the gross national income (GNI) calculations. Updated GNI data is available for the period 2005-2020. The GNI estimates include those of the non-observed economy. First estimates for VAT fraud were calculated without breakdown by with/without complicity, so a VAT weighted average rate is still not available. The results of tax audits are received from tax authorities and used to improve the exhaustiveness of the national accounts. Available data generally already meet the necessary standards of quality (reliability, comparability and exhaustiveness) to guarantee the legitimacy of GNI as a benchmark aggregate. The statistical office continued to improve its methods and data sources and regularly transmit GNI and GDP data to Eurostat. The work to establish a GNI inventory, based on the already existing description of sources and methods used to compile national accounts, started in 2018 and is to be finalised in 2024, together with the benchmark revision of national accounts data.

Regarding **administrative infrastructure**, the capacity of the institutions in the relevant policy areas needs to be further strengthened. The group for the coordination and management of own resources of the EU, tasked with ensuring correct calculation, accounting, forecasting, collection, payment, control and reporting on the implementation of the EU's own resources policy and rules, has two employees. In May 2023, Serbia participated in a TAIEX-supported study visit which contributed to improving the coordination tasks of the group. Furthermore, the organisational and procedural links between the institutions involved in own resources should still be developed.

CLUSTER 6: EXTERNAL RELATIONS

There are two chapters in this cluster: Chapter 30 External relations, and Chapter 31 Foreign, security and defence policy. Serbia is yet to meet the two opening benchmarks for Chapter 30, which includes finalising the accession to the World Trade Organization (WTO). In this regard, Serbia should adopt a WTO-compliant law on the trade of genetically modified organisms as a matter of urgency.

The screening report on Chapter 31 is still in the Council. Serbia's common foreign and security policy alignment patterns remained largely unchanged. In 2022, Serbia's alignment rate with relevant High Representative statements on behalf of the EU and Council Decisions was 46%, and reached 51 % as of August 2023. Serbia continued to participate in EU crisis management missions and operations under the common security and defence policy.
