1. INTRODUCTION

1.1. CONTEXT

Following Georgia's application for EU membership in March 2022, the Commission issued an opinion¹ on the application where it identified 12 priorities for the country to continue proceed on its accession process. These priorities relate to the EU's values and standards, in particular: democracy and the rule of law, including justice reform and public administration reform, as well as fundamental rights. On 23 June 2022, the European Council expressed its readiness to grant the status of candidate country to Georgia², once the 12 priorities have been addressed and invited the Commission to report on the implementation of the twelve priorities. To complement the opinion, in February 2023 the Commission published the analytical reports on Georgia's alignment with the EU *acquis*³.

This report is the Commission's first annual enlargement report on Georgia, replacing the previous annual Association Implementation Reports. At the invitation of the European Council, it includes a detailed assessment of Georgia's fulfilment of the 12 priorities laid down in the Commission opinion on Georgia's application for membership.

The Georgian Parliament prepared a Strategy for EU Membership Candidacy in July 2022. Parliamentary committees and dedicated working groups have been set up to implement the strategy, with support from the government. Civil society organisations and political parties also took part in policy processes to bring the formulation and implementation of reforms forward.

The Georgian government has declared that EU membership is its strategic goal and is making efforts in reforms and legislative alignment. In this context, coherent action and sustained effort are needed. In April 2023, the government approved the 2023 action plan for EU integration of Georgia, including the activities to be carried out in 2023, expected outcomes, timeframes, and sources of funding.

Regarding the EU's common foreign and security policy (CFSP), following Russia's war of aggression against Ukraine, Georgia has aligned itself with international and EU initiatives in support of Ukraine, including on Resolutions adopted by the UN General Assembly and Human Rights Council and the Council of Europe. Georgia did not align with the EU's restrictive measures against Russia and Belarus, nor with the related statements by the High Representative on behalf of the EU. In May 2023, the Georgian government's decision to resume flights with Russia also raised concerns in terms of its commitment to align with the EU in its foreign policy, as per the EU-Georgia Association Agreement.

Georgia has continued to steadily implement the Association Agreement (AA), including a Deep and Comprehensive Free Trade Area (DCFTA).

The EU supports Georgia's sovereignty and territorial integrity within its internationally recognised borders and has been engaged since 2008 in peaceful conflict resolution efforts, including through the EU Monitoring Mission and the work of the EU Special Representative for the South Caucasus and the crisis in Georgia. The Georgian government does not exercise effective control over Georgia's regions of Abkhazia and South Ossetia⁴.

³ SWD(2023) 31 final

⁴ This report does not address the situation in both regions.

1.2. SUMMARY OF THE REPORT⁵

As regards the **political criteria**, overall, the legislative framework, institutional setup and vibrant civil society provide Georgia with some level of preparation to further democratic and rule of law reforms. Nevertheless, the reform process has been hampered by continuing political tensions, deep polarisation, the absence of constructive engagement between political parties and the challenges of building consensus on key matters of national interest.

Cross-party tensions between the ruling majority and the opposition, as well as limited consultation with civil society affected decision-making processes and the implementation of reforms. Parliament led the efforts to address the 12 priorities laid down in the Commission opinion and in July 2022, soon after the opinion was published, it set up working groups to debate the necessary reforms.

Substantive cross-party work in Parliament was hampered by limited inclusion (by the ruling party) of the opposition in drawing up legislation, as well as by on-and-off boycotts by parts of the opposition. Nevertheless, there were good examples of cross-party cooperation and votes, including amendments to the Parliament's rules of procedure that were adopted in November 2022 to moderately increase the level of parliamentary oversight.

A number of crucial laws for the EU integration path were taken through Parliament in the second and third quarter of 2023 with overall limited consultations, nor thorough analysis of compliance with EU or Council of Europe standards. With most of the work on the 12 priorities left to the Parliament, government action to accelerate the reform process and strengthen good governance led to limited progress in some reforms and some progress in others. The President vetoed several laws she assessed as contrary to the country's European integration process.

Civil society is well developed, diverse, vibrant and continues to enjoy the freedom to operate. The involvement of civil society in decision-making processes (opinion priority 10), at first promoted by Parliament through inclusion in working groups on the 12 priorities, was tainted by the March 2023 draft law creating a registry for 'agents of foreign influence'. The draft law, which was eventually withdrawn following large protests in Tbilisi and strong international reactions, sowed distrust among civil society for the government and triggered a boycott of consultations on key reforms. This has persisted even after the law was withdrawn, although the government and Parliament held two conferences with civil society on 25 July and 13 September to re-establish good cooperation and announced to continue coordination meetings with CSOs. The Speaker of the Parliament took up the chairmanship of the Permanent Parliamentary Council on Open Governance in September 2023.

A Memorandum on cooperation between the Parliament of Georgia and the Georgian National Platform of the Eastern Partnership Civil Society Forum was signed in October 2023.

Georgia is moderately prepared in the area of **public administration reform**. Some progress has been achieved in preparing and adopting the strategies for public administration and public finance management, and their related actions plans. The regulatory and procedural foundation

⁵ This report covers the period from June 2022 to June 2023. It is based on input from a variety of sources, including contributions from the government of Georgia, the EU Member States, European Parliament reports and information from various international and non-governmental organisations. It also includes the results of comparative assessments and indices produced by other stakeholders, in particular in the area of rule of law. The report uses the following assessment scale to describe the state of play: early stage, some level of preparation, moderately prepared, good level of preparation and well advanced. To describe progress made during the reporting period, it uses the following scale: backsliding, no progress, limited progress, some progress, good progress and very good progress. Where appropriate, interim steps have also been used.

for evidence-based policy making needs to be enforced. Efforts need to be maintained to ensure a stable, accountable and transparent civil service system.

The judicial system of Georgia has some level of preparation and limited progress has been achieved. On the functioning and overall capacity of **the judiciary**, four consecutive waves of reform have improved the legal framework. Some legislative changes were adopted, including on the accessibility of court decisions, the quality of reasoning for judicial appointments and on increasing the professional experience requirement to 10 years for the selection of Supreme Court nominees. Parliament adopted amendments to the Law on Common Courts in June 2023 and drafted additional amendments in September 2023 implementing some of the recommendations of the Venice Commission including on the suspension of judges from office and, restrictions of the grounds of judge's disciplinary liability. However, the amendments did not address the most important recommendations of the Venice Commission (stated in its opinions of March 2023 and October 2023) regarding a comprehensive reform of the High Council of Justice (HCJ) and the binding nature of the decisions of the Supreme Court on appeal against HCJ decisions in the selection process of the Supreme Court judges. Namely, further broader reforms to ensure the full independence, accountability and impartiality of all judicial and prosecutorial institutions, especially the HCJ need to be undertaken in line with European standards and the recommendations of the Venice Commission. In particular, improvements and additional safeguards concerning the functioning and powers of the HCJ are needed and an effective right of appeal for the selection of Supreme Court judges should be ensured by clarifying the binding nature of the Supreme Court decision for the HCJ. Parliament elected two remaining non-judge members to the High Council of Justice with some concerns raised regarding the selection procedure. Finally, the pending amendments concerning the nomination procedure of the Prosecutor General through qualified majority in Parliament should be adopted.

Georgia has made some progress in the **fight against corruption** and has some level of preparation. In line with recommendations in the opinion, an Anti-corruption Bureau was established, combining several anti-corruption functions in a single body. Legislation on the Anti-Corruption Bureau was sent to the Venice Commission in September 2023.

Georgia endorsed an action plan on de-oligarchisation on 14 September and sent the action plan to the Venice Commission for opinion in September 2023. The action plan builds on the European Commission's recommendations and the Venice Commission's opinion of June 2023 to follow a systemic approach, including by reinforcing the rules on competition policy, media diversity and the financing of political parties. The action plan has been revised in October strengthening the co-ordination and setting clearer timelines for actions. The draft law on de-oligarchisation which envisaged a 'personal' approach was voted down in third reading in Parliament on 19 September. Overall, prosecutions and convictions on corruption cases have increased compared to 2021. Further action is needed to further complete the de-oligarchisation action plan and start its implementation, to establish a track record of investigations, prosecution, adjudication and final convictions of corruption cases, notably at high-level and, in particular, to address the challenge of large-scale vested interests and their influence in both the political, judicial and economic spheres.

Georgia made some progress in **fighting organised crime** and has some level of preparation. It participated in an increasing number of joint operations with EU Member States and neighbouring countries. A new national strategy for combating organised crime, together with an action plan, is in place. The anti-money laundering legislation partially reflects the recommendations made by the Financial Action Task Force, as well as relevant international legislation. The Government adopted the Report on Money Laundering and Terrorism

Financing Assessment Risks in Georgia on 3 October 2023.

There are still outstanding recommendations from the Council of Europe's Moneyval to be addressed. A national counterterrorism strategy for 2022-2026 and the corresponding action plan were adopted in 2022. More effort is needed to improve the coordination and effectiveness of law enforcement in fighting certain forms of crime, such as money laundering and financial crimes.

On **fundamental rights**, Georgia has ratified most international human rights conventions and instruments, and complies overall with its obligations under international human rights law. A national strategy for human rights protection was adopted in March 2023. A draft action plan was elaborated and was submitted for civil society consultations. The strategy contains some positive elements concerning economic and social rights. However, several key issues remain to be addressed, notably discrimination on grounds of sexual orientation and gender identity as well as the independence, accountability and transparency of the judiciary. The amendments remain to be aligned with the recommendations of the Venice Commission issued on 9 October 2023.

As regards the safeguard of fundamental rights, the amendments to the Criminal Procedure Code, which raised serious concerns regarding compliance with European standards were adopted, overruling Georgia President's veto. The amendments remain to be aligned with the recommendations of the Venice Commission opinion of October 2022. Parliament adopted a legislative package with amendments to eleven legislative acts that make reference to the ECtHR. The new Public Defender was appointed in February 2023, including with votes from the opposition. Challenges remain in adopting national strategies to fight all forms of hatred and discrimination and to protect minorities.

On **freedom of expression**, Georgia has some level of preparation and achieved limited progress. The right to freedom of expression is respected and upheld. Georgia improved its position in the World Press Freedom Index by 12 places (from 89th position in 2022 to 77th in 2023). There are no restrictions on the online media environment, which is increasingly diverse. Civil society actively contributes to political dialogue.

Georgia has continued to align its legislation with the key principles of the Audio-visual Media Services Directive (AVMSD) and in October adopted related amendments to the law on broadcasting. The effective independence of the national regulator, the Communication Commission remains to be ensured. The Parliament is currently discussing amendments in this regard. The media environment is largely pluralistic, but also highly polarised and working in a hostile environment. The intersection of business and political interests continued to hamper media independence.

Intimidation and physical and verbal attacks on media professionals have taken place, especially in the context of demonstrations and election rallies. Follow-up investigations are not yet effective. Strong language against media emanates also from senior government officials.

Court proceedings and investigations against opposition media owners have become frequent. Recent verdicts have a negative effect on critical media reporting.

Challenges persist regarding the exercise of the right to freedom of assembly, notably for persons in the most vulnerable situations, and this includes the right to peaceful protest, as seen during the violent attacks against participants in the Tbilisi Pride on 8 July 2023. On 5 October, the Georgian Parliament adopted amendments to the Law on Assemblies in expedited

procedure, without prior consultations. The civil society and the Public Defender expressed concerns with this Law and the President vetoed it on 17 October.

During the reporting period, Georgia adopted a series of strategic documents and legislation on **gender equality**, including on gender-based violence against women and domestic violence. The package of adopted laws introduced a gender impact assessment for all legislative acts and aimed to ensure compliance with the Council of Europe Convention on Preventing and Combating Violence against Women and Domestic Violence (“Istanbul Convention”). The legal definition of ‘rape’ needs to be brought in line with the Istanbul Convention (as it is based on the absence of consent). On an institutional level, response to gender-based violence is well defined and operational. However, protective measures, survivors support services and post-shelter support need further improvement.

The legal framework on **migration** is partially aligned with the EU *acquis* but needs further alignment. Georgia strengthened its institutional resources and capacity to manage migration. Georgia’s visa liberalisation framework should be further improved and benchmarks met.

Legislation on **asylum** is broadly in line with the EU *acquis*. The asylum management system has been put under increased pressure with the influx of Ukrainian nationals into Georgia and the issue of stranded migrants. The implementation and enforcement capacity of the asylum management system in Georgia needs further strengthening.

On the **economic criteria**, Georgia is moderately prepared to establish a functioning market economy. Real GDP growth exceeded 10% for the second year in a row, the external position improved significantly, inflation moderated and the fiscal deficit and public debt fell significantly.

Georgia also demonstrates a satisfactory track record in carrying out sound macroeconomic policies, and the institutional and regulatory environment is favourable overall. Regarding the capacity to cope with competitive pressure and market forces within the EU, Georgia has some level of preparation. The structure of the economy is relatively well diversified, albeit with a high share of low value-added sectors. The EU remains Georgia’s largest trade partner but the share has been gradually decreasing in favour of geographically closer economies.

On **public procurement**, Georgia has some level of preparation. Good progress was made in adopting the new Law on public procurement in February 2023. Further work is needed to align its legislative framework with the EU public procurement *acquis*, including utilities and concessions. On **statistics**, Georgia has some level of preparation, with limited progress made with adopting the Law on official statistics. The adequacy of Geostat, Georgia’s National Statistics Office – in terms of human, financial and IT resources – needs substantial improvement. Georgia has some level of preparation in the area of **financial control**, where the country made no progress, notably on public internal financial control and internal audit.

On **good neighbourly relations and regional cooperation**, Georgia is committed to improving bilateral relations with candidate countries, potential candidates and neighbouring EU Member States. Georgia remains committed to the Eastern Partnership and maintained its engagement in several regional cooperation initiatives. Georgia enjoys a strategic partnership with Türkiye and Azerbaijan. Relations with neighbouring EU Member States Romania and Bulgaria are good, with a strong focus on connectivity in the Black Sea.

On Georgia’s ability **to assume the obligations of EU membership**, the country continued its work on alignment with the EU *acquis* in many areas; overall there was some progress.

Regarding **cluster 2 on the internal market** Georgia is moderately prepared in the areas of right of establishment and freedom to provide services, although no progress was registered in

the reporting period. The country has some level of preparation in terms of the free movement of goods, on which there was limited progress, and in terms of company law, notably with the strengthening of auditing. Georgia is at an early stage of preparation when it comes to the free of movement of workers, with limited progress on circular migration. Limited progress can also be reported on intellectual property with the adoption of amendments to the Law on patent. There is some level of preparation on consumer and health protection, where the country made limited progress. Significant efforts are still needed on ensuring quality healthcare coverage for all. The national competition agency responsible for enforcement of consumer protection measures should be properly staffed. No progress can be reported on competition policy, where the Georgian State Aid Commission still lacks operational independence. There was limited progress on free movement of capital, where Georgia needs to follow up on outstanding recommendations from the MONEYVAL report. Georgia has some level of preparation in the area of financial services and made limited progress during the reporting period.

In **cluster 3, competitiveness and inclusive growth**, Georgia is moderately prepared in economic and monetary policy; enterprise and industrial policy; science and research; education and culture and the customs union. Georgia has some level of preparation in digital transformation and media, social policy and employment and is in between some and moderate level of preparation in taxation. The country has made some progress in digital transformation and media, taxation and science and research. Georgia has shown limited progress on enterprise and industrial policy.

In **cluster 4, green agenda and sustainable connectivity**, Georgia is at an early stage of preparation in environment and climate change. Georgia finalised its long-term low-emission development strategy. It has some level of preparation in the areas of energy, transport policy and trans-European networks. A new market-based support scheme for renewable energy production was introduced. Some progress was achieved on trans-European networks and more effort is needed to improve transport and energy infrastructure. Georgia achieved some progress with the adoption of the new National Transport and Logistics Strategy, the adoption of the Railway Strategy in February and the adoption of the Maritime code. More effort is needed in the transport sector, with a notable focus on road safety, rail sector reform, and incorporating the principles of the smart and sustainable mobility strategy.

In **cluster 5, resources, agriculture and cohesion**, Georgia is at an early stage of preparation in the chapters on agriculture and rural development and financial and budgetary provisions. Georgia is in between an early stage and some level of preparation regarding regional policy and coordination of structural instruments. It has some level of preparation in food safety, veterinary and phytosanitary policy and fisheries. Some progress was made in regional policy and limited progress in agriculture and rural development, with the amendment of the Law on agricultural cooperatives. No progress was registered in fisheries and on financial and budgetary rules. More effort is needed to increase human and administrative capacity in the field of fisheries and aquaculture. It is also important to adopt the new regional development strategy and consider expanding its coverage to the whole country.

In **cluster 6, external relations**, Georgia is moderately prepared. Limited progress was made on external relations, where Georgia is expected to align its legislation on export controls on dual use goods with the EU *acquis*. Limited progress was made on foreign, security and defence policy. In line with its long-standing policy, Georgia did not align with the EU's restrictive measures (sanctions) regarding Russia, including airspace closure.

In the area of Common Foreign and Security Policy, following Russia's war of aggression against Ukraine, Georgia has aligned itself with international and EU initiatives in support of Ukraine, including on Resolutions adopted by the UN General Assembly and Human Rights

Council and the Council of Europe. Georgia did not align with the EU's restrictive measures against Russia and Belarus nor with the related statements by the High Representative on behalf of the EU. Georgia's alignment with EU statements and Council decisions under the CFSP remained largely the same (44% in 2022, 43% in August 2023).

Georgia is expected to considerably increase its alignment rate with EU statements and Council decisions under the CFSP. Georgia has shown active engagement in ensuring that the territory of Georgia and/or legal entities registered in Georgia are not used to circumvent these sanctions, including sanctions in the financial sector.

1.3. ASSESSMENT OF THE IMPLEMENTATION OF THE 12 PRIORITIES IN THE COMMISSION'S OPINION

Priority 1: address the issue of political polarisation, through ensuring cooperation across political parties in the spirit of the April 19 agreement.

Most Members of Parliament have ended their boycott of Parliament and a few laws were passed with cross-party support. Regular ministers' question times take place in Parliament with attempts aiming to start cross-party discussion notably on EU-path related reforms. Parliament voted against impeaching the President of Georgia. The use of harsh rhetoric continues with incidents of disinformation regarding the EU.

Cooperation, compromise-building and inclusive consultations with opposition parties and civil society, notably with regards to reforms that relate to Georgia's EU agenda, should be further pursued. All parties and stakeholders should build on the broad consensus towards Georgia's European path in line with the will of the vast majority of Georgian citizens.

Priority 2: guarantee the full functioning of all state institutions, strengthening their independent and effective accountability as well as their democratic oversight functions; further improve the electoral framework, addressing all shortcomings identified by OSCE/ODIHR and the Council of Europe/Venice Commission in these processes".

Amendments to the rules of procedure strengthened parliamentary oversight functions and led to increased ministerial hearings. The use of these oversight prerogatives should be enacted including by enabling the setting up of parliamentary investigative committees and the participation of opposition parties in the "trust group" overseeing the security services. Parliament adopted, in an expedited manner and by later overruling a veto by the President, amendments on the functioning of the National Bank of Georgia which raised concerns in relation to the Bank's independence. The Government adopted a public administration reform strategy and an action plan. Investigations into the large-scale wiretapping revealed in 2021 are still outstanding. Georgia should ensure effective parliamentary oversight, notably of security services, and independence and impartiality of its key institutions.

The electoral code and the law on political associations were amended to align with some Venice Commission and ODIHR recommendations and with support from some opposition MPs. Parliament later voted to reverse the amendments to the Electoral Code changing the appointment procedure of the Central Election Commission chairperson and overriding a veto by the President. Georgia sent these amendments to the Venice Commission for consultation in September 2023. Georgia should address key ODIHR/VC recommendations from past elections, on intimidation and abuse of administrative resources and should address the recommendations in the upcoming Venice Commission opinions in a timely manner, before the next elections take place.

Priority 3: adopt and implement a transparent and effective judicial reform strategy and action

plan post-2021 based on a broad, inclusive and cross-party consultation process; ensure a judiciary that is fully and truly independent, accountable and impartial along the entire judicial institutional chain, also to safeguard the separation of powers; notably ensure the proper functioning and integrity of all judicial and prosecutorial institutions, in particular the Supreme Court and address any shortcomings identified including the nomination of judges at all levels and of the Prosecutor-General; undertake a thorough reform of the High Council of Justice and appoint the High Council's remaining members. All these measures need to be fully in line with European standards and the recommendations of the Venice Commission".

Non-judge members of the High Council of Justice (HCJ) were elected. Parliament adopted amendments to the Law on Common Courts in June 2023 and drafted additional amendments in September 2023, addressing some of the Venice Commission key recommendations. The June amendments addressed one key recommendation - the procedure for suspension of judges from office, and some additional issues. The Venice Commission opinion acknowledged that if the draft September amendments were to be adopted, one other key recommendation would be addressed, namely the restriction of the grounds of judge's disciplinary liability. The amendments did not address the core recommendations of repeated Venice Commission opinions, regarding a comprehensive reform of the HCJ and regarding the Supreme Court. In particular, these relate to the functioning and powers of the HCJ, including on the mandate of the members of the HCJ, the transfer of judges without their consent and an effective right of appeal in the selection of Supreme Court judges.

Georgia should still pursue a holistic and effective reform of the judicial system to ensure effective independence, accountability and impartiality of all judicial and prosecutorial institutions with thorough reform of the High Council of Justice. Draft constitutional amendments on the Prosecutor General's appointment should be adopted.

Priority 4: *strengthen the independence of its Anti-Corruption Agency bringing together all key anti-corruption functions, in particular to rigorously address high-level corruption cases; equip the new Special Investigative Service and Personal Data Protection Service with resources commensurate to their mandates and ensure their institutional independence.*

Parliament passed legislation establishing an Anti-corruption Bureau to oversee and coordinate Georgia's anti-corruption policy and draw up recommendations. The Bureau was granted powers to monitor asset declarations and party financing and to adopt recommendations on whistle-blower protection. The Prime Minister appointed the head of the Bureau for a term of six years. Georgia withdrew from the OECD anti-corruption network. The EU has requested Georgia to repeal the decision of February 2023 to withdraw from the OECD anti-corruption monitoring network for Eastern Europe and Central Asia (OECD/CAN) and fully implement recommendation from the previous rounds. Parliament adopted legislation, strengthening the investigative authority of the Special Investigative Service and social protection benefits of the Personal Data Protection Service personnel. Outstanding 2022 ODIHR recommendations on the appointment and dismissal of the Head of Service should be addressed. Georgia should also review the legislation on the Anti-Corruption Bureau, the Special Investigation Service and the Personal Data Protection Service addressing upcoming Venice Commission recommendations.

Priority 5: *implement the commitment to "de-oligarchisation" by eliminating the excessive influence of vested interests in economic, political, and public life.*

The draft law on de-oligarchisation envisaging a "personal" approach was voted down by Parliament. The government adopted an amended action plan on de-oligarchisation. The action plan builds on prior Venice Commission recommendations to follow a "systemic" approach, with a focus on the fight against corruption, public procurement, competition policy, justice

reform, the fight against money laundering, financing of political parties and media; the amendments strengthened its implementation with clearer timelines.

Georgia should continue developing and improving the de-oligarchisation action plan to ensure that all key areas are adequately addressed with effective measures and with clear institutional arrangements. Efficient implementation of the plan should lead to building a tangible track record. An inclusive and robust mechanism for coordinating and monitoring should swiftly be put in place allowing also to timely review and complement the plan whenever needed.

Priority 6: *strengthen the fight against organised crime based on detailed threat assessments, notably by ensuring rigorous investigations, prosecutions and a credible track record of prosecutions and convictions; guarantee accountability and oversight of law enforcement agencies.*

The Government adopted the 2023-2024 Action Plan for the National Strategy of Fight against Organised Crime. Georgia stepped up its cooperation with Europol and the Member States. Parliament consulted NGOs and sent 76 recommendations on fight against organised crime, cybercrime, human trafficking, money laundering, terrorism financing and drug-related crimes to relevant executive agencies for implementation. The Government adopted a Report on Money Laundering and Terrorism Financing Assessment Risks in Georgia on 3 October 2023. Addressing recommendations of the Council of Europe's Moneyval needs to continue.

Priority 7: *undertake stronger efforts to guarantee a free, professional, pluralistic and independent media environment, notably by ensuring that criminal procedures brought against media owners fulfil the highest legal standards, and by launching impartial, effective and timely investigations in cases of threats against safety of journalists and other media professionals.*

An opposition TV Director was released from prison following a presidential pardon. Georgia has adopted amendments to the Law on Broadcasting to address the core principles of the EU's Audiovisual Media Service Directive (AVMSD) notably the issues of non-incitement to violence and hatred and the protection of minors. Georgia should continue work towards ensuring the effective independence of the media regulator (Georgian National Communication Commission) and build trust with the media sector. A first proposal to strengthen its independence is under discussion. Georgia should investigate and prosecute cases of threats against safety of journalists and other media professionals.

Priority 8: *move swiftly to strengthen the protection of human rights of vulnerable groups, including by bringing perpetrators and instigators of violence to justice more effectively.*

A National Human Rights Strategy was adopted. Civil society and international organisations submitted comments notably to strengthen protection of all vulnerable groups. A draft National Action Plan is being prepared with civil society consultations launched on 1 November 2023. The main 2023 Pride event had to be cancelled, due to far-right groups disrupting the festival. On 5 October 2023, the Georgian Parliament adopted amendments to the Law on Assemblies following an expedited procedure, without prior consultations. Civil society organisations and the Public Defender expressed concerns with this Law and the President vetoed it. Georgia should further the investigations against the instigators of the violence during the 2021 Pride event. Georgia should complete the National Action Plan for Human Rights Protection following the consultation process just launched, which needs to be inclusive, and start its implementation.

Priority 9: *consolidate efforts to enhance gender equality and fight violence against women.*

In a very inclusive process, Parliament adopted a package of draft laws related to compliance with the Istanbul Convention, mandatory Gender Impact Assessment for all legislative acts and several amendments regulating the fight against violence against women. The State Concept on Economic Empowerment of Women was approved and the validity of gender quotas in Parliament extended until elections in 2032. **This priority is completed.**

Priority 10: Civil society ensure the involvement of civil society in decision-making processes at all levels

Civil society representatives were invited to participate in the work on the 12 priorities. Civil society organisations (CSOs) could attend meetings and put questions to Public Defender candidates. In March, a draft law creating a registry for “agents of foreign influence” was adopted by Parliament and later withdrawn following large protests. In July and September, the ruling party held inclusive conferences on the implementation of 12 priorities with opposition and civil society organisations, in a move to resume constructive engagement with civil society, including on the EU integration process. A Memorandum on cooperation between the Parliament of Georgia and the Georgian National Platform of the Eastern Partnership Civil Society Forum was signed in October 2023. Structured engagement and dialogue with civil society at all levels, including with government, regional and local authorities, requires further strengthening to ensure CSOs can effectively and meaningfully engage in policy and decision-making. Georgia should also refrain from adopting measures which could hamper or restrict meaningful participation of civil society in such processes.

Priority 11: adopt legislation so that Georgian courts proactively take into account European Court of Human Rights judgments in their deliberations.

Parliament adopted a legal package on legislative mechanisms ensuring reference to European Court of Human Rights (ECtHR) decisions by Georgia’s courts, facilitating access to such decisions and supporting the professional development of judges, prosecutors and defence lawyers in that regard. All parties supported the legislation and voted in favour. **This priority is completed.**

Priority 12: ensure that an independent person is given preference in the process of nominating a new Public Defender (Ombudsperson) and that this process is conducted in a transparent manner; ensure the Office’s effective institutional independence.

A new Public Defender was appointed in February 2023 with votes from opposition MPs. The Public Defender’s Office operates with a high level of credibility in the Georgian society. **This priority is completed.**

2. CLUSTER 1: FUNDAMENTALS OF THE ACCESSION PROCESS

2.1. FUNCTIONING OF DEMOCRATIC INSTITUTIONS AND PUBLIC ADMINISTRATION REFORM

2.1.1. Democracy

Overall, the legislative framework, institutional setup and vibrant civil society provide Georgia with a good level of preparation for further democratic and rule-of-law reforms. This level of preparation was negatively affected in practice by the country’s deep political polarisation, the lack of effective cross-party cooperation on both the reform agenda and parliamentary oversight, as well as several instances of malpractice in the context of elections which were not effectively investigated.

The government agreed to undertake further reforms under the EU-Georgia Association Agenda. Nevertheless, a number of key measures remain to be adopted during the reporting period. Lack of cross-party consensus hampered legislative work, such as furthering judicial reform.

Elections

Overall, the electoral framework is in line with relevant international standards.

In December 2022, Parliament adopted amendments to the Election Code with multiparty support, some of which were in line with previous OSCE/ODIHR recommendations. The amendments did not address some of the key outstanding OSCE/ODIHR recommendations.

The latest amendments to the Election Code adopted in June 2023 are not in line with the Commission opinion's priority 2c nor with numerous recommendations, since they give a simple majority of Parliament members unilateral power to appoint the Central Election Commission (CEC) Chair and CEC non-party members, with no effective involvement of other institutions, including the President. Additional draft amendments to the Election Code were sent to the Venice Commission for opinion in September 2023.

Parliamentary elections are approaching in 2024 and the Parliament has yet to elect a permanent Central Election Commission (CEC) Chair and two CEC professional members. A need for comprehensive electoral reform remains.

Overall, the **electoral framework** is in line with relevant international standards enshrined in the International Covenant on Civil and Political Rights (ICCPR) and other international human rights conventions such as the Convention on the Elimination of all Forms of Discrimination against Women (CEDAW) and the Convention on the Rights of Persons with Disabilities (CRPD). Further constitutional amendments, complementing those adopted in 2018 and 2020 and envisaged by the 19 April agreement, are pending in Parliament.

The term of the Central Election Committee (CEC) Chairperson, who had been elected by simple majority for 6 months, expired in August 2022. Since then, Parliament has failed to elect a new CEC Chairperson.

In December 2022, Parliament adopted amendments to the Electoral Code and to the Law on political associations of citizens, with cross-party support. The initial parliamentary process on this reform did not meaningfully involve opposition parties and civil society organisations on the substance, though later work in the committee and plenary was more inclusive. Some of the changes envisioned by the amendments are in line with previous recommendations by the OSCE/Office for Democratic Institutions and Human Rights (ODIHR). The amendments also envisage the widespread use of electronic technologies which is broadly supported by most political parties. The proposed amendments were not based on a comprehensive review of the Electoral Code and only addressed a selection of issues.

Some issues raised by ODIHR in past observations were recalled in the Joint Opinion of the Venice Commission and OSCE/ODHIR issued in December 2022 and remain unaddressed. These include the delimitation of electoral districts, changes to the media campaign regulations and preventive measures against the intimidation of voters.

In June 2023 Parliament approved amendments to the Electoral Code and the Rules of Procedure. Parliament overruled the President's veto on the amendments on 3 July. The revised procedure overrides the stipulations in the 19 April agreement, with the Chairperson and seven members of the Central Election Commission (CEC) to be nominated for election by the Speaker of Parliament, instead of the President. Parliament will elect the Chairperson and

members of the CEC by a majority of votes from the entire composition (76 votes, as opposed to the current rule requiring 100 votes). Additional draft amendments to the Election Code were sent to the Venice Commission for opinion in September 2023.

Investigations into reports of intimidation, vote-buying and pressure on candidates and voters have so far not led to prosecutions or convictions. In July 2022, the Office of the Prosecutor General launched an investigation following the publication of documents pointing to possible cases of large-scale electoral malpractice, including vote-buying by civil servants and pressure on voters involving the security services. This has not so far led to criminal prosecutions against any individual.

No nationwide **elections** were held during the reporting period. By-elections were held on 1 October 2022 in Senaki municipality and on 29 April 2023 for a parliamentary seat in Poti-Senaki-Khobi and for several local positions. For the first time, electronic technologies were used on a large scale (at 117 out of 165 polling stations). The Central Election Commission (CEC) reported that small technical errors occurred at several electoral precincts but that these errors were promptly eliminated and did not impede the voting process.

As regards **women's participation** in elections, following the introduction of gender quotas for parliamentary elections, 27 out of the current 139 MPs are women. Still, women remain under-represented in public office.

Parliament

Parliament led the efforts to address the 12 priorities in the European Commission opinion. However, this effort was adversely affected by the deep political polarisation and limited inclusivity of opposition on the substance of the reforms.

Not all parliamentary procedures function effectively in the spirit of control and accountability, mostly due to strong tensions between the ruling party and opposition parties. The EU-mediated 19 April agreement (2021) provided an opportunity to tackle this deep polarisation and forge a cross-party consensus on crucial reforms, particularly in the electoral and judicial fields. More needs to be done to reduce polarisation and improve Parliament's oversight and control over the government and effective scrutiny of legislative implementation.

During the reporting period, substantive cross-party work in Parliament was limited due to (i) a lack of genuine inclusion of the opposition by the ruling party in drawing up legislation and (ii) on-and-off boycotts by parts of the opposition, notably the United National Movement party. Opposition parties argue that most of their legislative proposals are not scheduled for debate or included as part of draft laws. Elements from the 19 April agreement are still pending implementation. Key topics of political tension related to issues such as the deteriorating health of former President Mikheil Saakashvili and, in March 2023, the initial support by the ruling party for a 'foreign agents' draft law. Nevertheless, increasingly during the reporting period, most Members of Parliament have returned to Parliament.

There were good examples of cross-party cooperation and votes. Parliament established several working groups to address the 12 priorities. It also managed to elect a new Public Defender in March 2023. In May, Parliament elected three new non-judge members in the High Council of Justice (part of priority 3). Two non-judge members remain to be elected.

The **emergency procedure** to pass legislation, including in areas relevant to EU commitments, is regularly used and, at times, for issues that are perceived to be institutionally sensitive. There is a legal framework providing for comprehensive impact assessments of proposed legislation, but it is only partially implemented.

Amendments to the Parliament's rules of procedure were adopted in November 2022 to increase the level of **parliamentary oversight** to some extent. Oversight over security services, including through the 'trust group' in Parliament, remains limited, with only three MPs from the ruling majority participating in the meetings. One of the key instruments for parliamentary oversight is the ability to set up parliamentary investigative commissions with a low threshold of 50 votes, which the opposition can gather alone. In April 2023, the ruling party used procedural means to prevent the opposition from setting up such a commission to investigate allegations of corruption in the judiciary, following visa restrictions on four judges by the U.S. Department of State. The ruling party used the same procedural means to prevent the opposition from creating an investigative commission over the 'case of call centres'.

Governance

There was overall limited progress during the reporting period in strengthening good governance. The Parliament took an active role in implementing the 12 priorities. The government continued to declare that EU membership is its strategic goal and promoted its European agenda. The President vetoed several laws.

In April 2023, the Government approved the action plan for EU integration of Georgia for 2023, including the activities to be carried out in 2023, expected outcomes, timeframes and sources of funding. The Prime Minister chaired the EU Integration Commission.

The relationship between the President and the government or the ruling party has been increasingly challenging. The President vetoed legislation several times, a veto which the Parliament has overruled in several instances. On 14 September the ruling party filed a complaint with the Constitutional Court initiating impeachment proceedings against the President. Following the Constitutional Court decision on 16 October 2023, Parliament voted against impeaching the President.

Commitments to strengthen **local governance** and municipal services are included in the 2020–2025 decentralisation strategy, the public administration reform strategy and action plan, and the 2030 national development strategy-vision. In December 2022, the Parliament adopted amendments to the Local Self-Government Code, to allow the government to prematurely terminate the mandate of a city council if it fails to adopt the municipal budget within the first 3 months of the year.

Political culture for multi-party dialogue and coalition governance at local level is limited, leading to deadlocks in councils where the ruling party at national level does not also have the majority at local level. Participatory mechanisms for engaging civil society organisations and citizens in local decision-making process are codified in the Local Self-Government Code. The enforcement of the Code is uneven and differs widely across the municipalities. Only three out of 64 municipalities have female mayors (Rustavi, Dusheti and Ninotsminda, 4.7%).

Civil society

Georgia does not yet have a comprehensive government strategy in place for supporting or cooperating with civil society. Mechanisms for consultation with civil society in policy making and law making exist both at central and municipal level. Parliament invited civil society organisations (CSOs) to participate in the working groups on the 12 priorities. With some exceptions, these organisations were able to attend meetings and actively participate, although their input was rarely included in draft legislation or appointment processes. A dedicated mechanism for public online consultations or contributions for draft laws or policy documents is currently lacking.

Civil society in Georgia is well developed, diverse and vibrant and continues to enjoy the freedom to operate, albeit in an increasingly hostile environment. The **legal framework** remains conducive to an active civil society, due to streamlined registration and reporting requirements, the existence of a differentiated tax regime, and the absence of limitations on the freedom of association and the freedom to operate.

There is some level of involvement of CSOs in **policy dialogue**. Parliament invited CSOs to participate in the working groups on the 12 priorities, during the reporting period, and particularly in the first months of 2023. At the same time, certain CSOs have been increasingly excluded from policy consultation and some have withdrawn from consultation forums. Following the proposal and subsequent withdraw of the ‘foreign agents’ law, not all member organisations of the Consultative Group of the Permanent Parliamentary Council of Open Governance, which had suspended their membership in March 2023, returned. In September 2023 the Speaker of the Parliament took up the chairmanship of the Permanent Parliamentary Council on Open Governance. A dedicated mechanism for public online consultations or contributions for draft laws or policy documents is currently lacking. Draft legislation is available online.

The enabling environment has increasingly come under attack through hostile rhetoric by political leaders and radical groups and, intermittently, through draft legislation that would have labelled CSOs who receive foreign funding as ‘foreign agents’ and subjected them to possible penalties for non-compliance, including criminal prosecution. On 7 March 2023, the ruling majority passed one of the draft laws its first reading. This prompted condemnation from large segments of Georgian society and led to large demonstrations on 7 and 8 March. As a consequence, the parliamentary majority effectively withdrew the draft law on 10 March, in a second reading, by abstaining from voting. Opposition parties voted in favour of this withdrawal.

Mechanisms for consulting the public on policy-making and law-making exist at both central and municipal level. However, meaningful utilisation of these mechanisms is uneven and varies based on the sensitivity of the subject and institutions. The primary institutionalised mechanism for state-CSO cooperation, aimed at increasing public accountability and transparency, is the Open Government Partnership (OGP). Georgia has a progressive legislative framework for OGP coordination and CSO engagement. However, it has not adopted national OGP action plans since 2019, for two consecutive cycles. The country is currently under review by the OGP based on two consecutive procedures: Procedural Review – for failing to adopt an action plan for two consecutive cycles – and Response Policy Procedure, initiated on the basis of a letter of concern from a CSO.

Also, Georgia does not yet have a comprehensive government strategy in place for supporting or cooperating with civil society. Parliament has not made progress in adopting the state plan for supporting the development of CSOs, initiated during the previous parliamentary term.

The enabling **financial environment** for CSOs is largely in place, but a framework for the transparent and objective distribution of public money, including municipal funds, needs to be introduced. Public funding for CSOs is available, but is not fully developed and is distributed unevenly. The majority of CSOs, in particular at local level, are dependent on funding from foreign donors, and other means for ensuring their financial sustainability (e.g. crowdfunding, donations) are not well developed. Volunteering is legally regulated and strategic documents envisage specific steps to promote volunteering culture, especially among young people. The culture of volunteering in Georgia remains weak, due to a lack of legislative incentives, a dearth of diverse volunteering opportunities and a low level of public awareness about volunteering activities.

Civilian oversight of the security and intelligence sector

In addition to the Parliament's oversight role, a number of other institutions have oversight powers over the security sector. The rules and procedures covering civilian oversight are well defined in the respective legislative framework. In practice, the conduct of oversight faces shortcomings due to institutional reticence, the weakening of the state inspection bodies in 2022 (see above), the limited participation of opposition MPs and decreasing involvement of civil society.

Since the end of 2022, the earlier practice of dialogue with selected civil society organisations during the preparation of strategic documents has ceased. The Parliament's Security and Defence Committee does not consistently engage in dialogue and exchange with civil society organisations.

To date, there has been no effective investigation into the September 2021 leak of a large number of wiretapping recordings. The Prosecution is still waiting for the results of internal investigations within the State Security Service, and there have been no prosecutions to date. The Parliament amended the Criminal Procedure Code to allow for covert investigative actions in more cases and for longer periods. Oversight bodies, CSOs and the international organisations, including the Venice Commission, have voiced concerns in respect of these issues.

2.1.2. Public administration reform

Overall, Georgia **is moderately prepared** in the area of public administration reform (PAR). **Some progress** has been achieved with the preparation and adoption of the PAR and public finance management strategies and related actions plans. Georgia's civil service presents some fragmentation, limited standardisation and would benefit from a more comprehensive vision on digital transformation.

Efforts need to be maintained to ensure a stable, accountable and transparent civil service system.

In the coming year, Georgia should in particular:

- revise the legislation on the legal entities of public law to reduce the number of legal entities, classify them by functional criteria, and ensure that those with executing authority belong to the civil service;
- strengthen the legal mandate and capacity of the Administration of Government to coordinate the operations of the ministries; strengthen the mandate of the Civil Service Bureau for standardisation, monitoring and scrutiny, beyond its advisory role;
- review the legal framework to effectively guarantee citizens' right to access to public information.

Strategic framework for public administration reform

After a two-year gap, the government, in consultation with relevant public stakeholders, elaborated a new **public administration reform** (PAR) strategy. The new strategy and its action plan were adopted on 16 February 2023. It covers all PAR areas, except public finance management (PFM), which is covered by a separate strategy. The strategy mostly focuses on further implementation of previous reforms, with some bottlenecks such as public administration fragmentation, limited standardisation in civil service and lack of a clear vision for digital transformation.

Policy development and coordination

The institutions and the regulatory framework for central government **policy development and coordination** are in place and are functioning well. The Administration of Government of Georgia together with the Ministry of Finance, Ministry of Justice and Ministry of Foreign Affairs (for European integration) performs all expected functions of the centre of government. It includes effective policy coordination among these institutions.

A handbook supporting the rules of procedure for development, monitoring and evaluation of policy documents provides the regulatory and procedural foundation for **evidence-based policy** making. This framework needs to be enforced by further strengthening the capacity and implementation of policy monitoring, both in ministries and in the centre of government. The implementation of the system of regulatory impact assessments has not been fully incorporated into the decision-making process to improve the evidence behind adopted government policies. A ‘Gender Impact Assessment’ on Georgia’s Public Service Law was conducted.

Public financial management

Significant progress was made in terms of PFM. The government drafted a comprehensive PFM strategy in December 2022, which was adopted on 23 May 2023. The strategy is based on the Public Expenditure and Financial Accountability (PEFA) 2022 Assessment and was published for stakeholder consultations online. The PFM action plan is prepared on a yearly basis and is monitored through quarterly reports.

Significant progress has been achieved in terms of transparency of public finances in line with international standards. In the 2021 Open Budget Survey, published online in 2022, Georgia ranked first in the world in terms of state **budget transparency** (Open Budget Index). Transition to a fully automated VAT refund system has been ensured, which is an important step in terms of both tax reform and business.

Improvements are still needed in fiscal risk reporting; public assets and investment management; annual financial reports; fiscal strategy and revenue administration. Reforms in these areas will bring Georgia even closer to best international and EU practice.

Public service and human resources management

The **public service and human resources management** is based on a coherent legal framework. Constant efforts are needed to further strengthen a merit-based, professional civil service at all levels of the administration, as well as transparent recruitment, promotion and dismissal procedures.

In 2022, women represented 33 % of the civil servants, and 43% of middle or high managerial position. Only 13% of heads and deputy heads of public institutions were women (2021 data: 33%, 41% and 16%).

A new Head of the civil service bureau was appointed in September 2022. The Civil Service Bureau is a crucial institution for managing the civil service, developing policies and drafting legislation. Being a legal entity of public law (LEPL), it has no authority to enforce the application of the regulations or standardise practices. The PAR strategy and its 2023-2024 action plan include measures aimed at reinforcing the bureau’s accountability towards the Public Service Council. As the council is only an advisory body, the political responsibility for the public service is not attributed clearly. This continues to hamper the comprehensive implementation of public service reforms.

The legislation regulates the basic features of recruitment of civil servants. The main principles related to merit are clearly stated. Mobility, promotions and disciplinary procedures are well regulated according to good international practices. The provisions related to termination and

demotion largely meet EU standards. There is no defined ‘senior civil service’ in the Georgian system that could properly delineate the civil service from the political sphere. The fact that all human resources decisions are made by the ministers or deputy ministers, instead of senior civil servants, increases the risk of politicisation of the civil service and overburdens ministers with daily work routines.

Accountability of administration

Overall, the central government is coherently organised and the legal framework is being improved to ensure efficient and effective **accountability** lines between supervisory and subordinated bodies.

Some shortcomings of the public service at horizontal level are present. There are a high number of institutions, or LEPLs, which develop and implement government policies and whose staff are not covered by the public service legislation. The legislation on the LEPLs, therefore, needs to be revised to reduce the number of legal entities, classify them by functional criteria, and ensure that those with executing authority belong to the civil service.

Implementation of the **citizens’ right to good administration** can differ among various government institutions, in terms of length of proceedings, impartiality and substantiation of decision-making. Public Defender’s Office and State Audit Office are key institutions monitoring enforcement of this right; however, their recommendations are not consistently implemented.

Georgian constitution guarantees **citizens’ right to seek full compensation** for damages inflicted by unlawful actions or omissions of the public administration through court procedures, however, excessive length of the judicial proceedings in cases of administrative disputes (529 days in 2022) is hampering the effective judicial control over the citizens’ right to good administration, as well as right to seek compensation. The length of judicial proceedings needs to be reduced.

Access to public information is ensured by the legal framework. Its enforcement is mixed across various government institutions. The long-awaited review of the overall framework needs to be carried out to enhance the administrative capacity for effective enforcement. Publication of information – including publishing monitoring and activity reports – is uneven and needs to be significantly improved. The legal framework to effectively guarantee citizens’ rights to access to public information should be reviewed.

Systematic **implementation of recommendations by independent oversight bodies** such as the State Audit Office and the Public Defender Office is yet to be achieved. In 2022, only 12% of the 334 recommendations issued by the Public Defender in its annual parliamentary report were fully implemented by authorities – 23.6% were partially implemented, 54.7% were not implemented and the remaining became irrelevant.

Service delivery to citizens and businesses

A key government priority is to ensure a more **user-oriented service delivery**. Georgia is advanced in the provision of e-public services. Moreover, it has expanded the ‘one-stop shop’ network of public services at central and local level for services that cannot be provided electronically.

With the 2022-2025 public services development strategy, adopted in April 2022, and the recent 2023-2026 PAR strategy (including a pillar on public service delivery) the government has a strategic framework to focus on public services. Both strategies noted several gaps in public service design and delivery.

2.2 RULE OF LAW AND FUNDAMENTAL RIGHTS

2.2.1. Chapter 23 - Judiciary and fundamental rights

The EU's founding values include the rule of law and respect for human rights. An effective (independent, high-quality and efficient) judicial system and an effective fight against corruption are of paramount importance, as is respect for fundamental rights in law and in practice.

Overall, in the area of judiciary and fundamental rights, Georgia has **some level of preparation**. During the reporting period, **limited progress** was made overall.

Functioning of the judiciary

Georgia has **some level of preparation** in the area of the judiciary apply the EU *acquis* and European standards in this area. Overall, it has made **limited progress**.

Four consecutive waves of reform prior to 2022 have improved the legal framework related to the functioning of the judiciary and the overall capacity and organisation of the justice system. Parliament adopted a judicial reform strategy and action plan. However, the strategy and action plan do not address key challenges in the justice system, in particular the need to strengthen the integrity of the highest judicial bodies. Some legislative changes were adopted, including on accessibility of court decisions, the quality of reasoning for judicial appointments and on increasing the professional experience requirement to 10 years for the selection of Supreme Court nominees.

In June 2023 Parliament adopted amendments to the Law on Common Courts and drafted additional amendments in September 2023 implementing some of the Venice Commission's recommendations. However, the most important recommendations of the European Commission and of the Venice Commission as stated in its consecutive opinions (of March 2023 and October 2023), notably regarding reforming High Council of Justice and recommendations regarding the Supreme Court were not addressed. Namely, further broader reforms to ensure the full independence, accountability and impartiality of all judicial and prosecutorial institutions, especially the HCJ need to be undertaken in line with European standards and the recommendations of the Venice Commission. In particular, improvements and additional safeguards concerning the functioning and powers of the HCJ are needed and an effective right of appeal for the selection of Supreme Court judges should be ensured by clarifying the binding nature of the Supreme Court decision for the HCJ. At the same time, the Venice Commission acknowledged improvements on some recommendations including the suspension of judges from office and restrictions of the grounds of judge's disciplinary liability.

A broad justice reform remains outstanding. In particular, reforms to ensure the full independence, accountability and impartiality of all judicial and prosecutorial institutions, especially the Supreme Court, the Prosecutor General and the High Council of Justice (HCJ), need to be addressed. These reforms need to be undertaken, in line with European standards and the recommendations of the Venice Commission (Venice Commission).

In the coming year, Georgia should:

- adopt amendments to the Law on Common Courts to bring it fully in line with Venice Commission recommendations as regards the powers of the High Council of Justice (HCJ) concerning transfers and disciplinary proceedings of judges, and an effective right of appeal for appointments of Supreme Court judges.
- adopt a broader reform of the judiciary, in particular, reform the HCJ in line with Venice Commission recommendations. In particular, establish a system of extraordinary integrity

checks, with the involvement of international experts with a decisive role in the process, for candidates and persons currently appointed to all leading positions in the judiciary, in particular the HCJ, the Supreme Court and court presidents. Furthermore, establish a system of effective permanent and periodic asset declarations with the involvement of international experts in an oversight and advisory function.

→ adopt the draft constitutional amendments which include changing the appointment procedure of the Prosecutor General from simple to qualified majority in Parliament; align the law on the Prosecutor's Office with European standards, following the recommendations of the Venice Commission, OECD and the TAIEX peer review on the functioning of the justice sector and the fight against organised crime.

Strategic documents

In October 2022, the Georgian Parliament's Legal Affairs Committee published its judicial reform strategy and action plan. It lists 16 priorities, with a strong focus on efficiency measures, mostly related to the courts system, such as ensuring an optimal number of judges and other court officials, reducing caseloads by promoting alternative dispute resolution channels, improving technical infrastructure, etc.

The action plan also refers to improving the implementation of judgements by the European Court of Human Rights, strengthening the institution of trial by jury, improving the quality of reasoning accompanying court decisions, strengthening social protection guarantees for judges and increasing public communication, including on court decisions. However, the strategy and action plan do not address key challenges in the justice system and do not include major strategic items (detailed analysis of implementation of previous reforms and remaining challenges, sequence of actions, timelines, definition of responsible bodies, indicators, monitoring mechanism, etc.).

Management bodies

The High Council of Justice (HCJ) is the principal body managing the judicial system and the careers of judges. The Prosecutorial Council, the governing body for the prosecution, has a much more limited role in the management of the prosecution and the careers of prosecutors, which is largely in the competence of the Prosecutor General. Outstanding issues with regard to the composition, the functioning and powers of both bodies in line with European standards and Venice Commission recommendations, remain to be addressed. In addition, to ensure the independence, accountability and impartiality of the justice system, broader reform of judicial institutions remains to be prepared and adopted in line with European standards.

Parliament adopted amendments to the Law on Common Courts in June 2023 and drafted additional amendments in September 2023 implementing only some of the Venice Commission's recommendations. The amendments did not address the most important recommendations of the European Commission and the Venice Commission (opinions of March 2023 and October 2023), such as the transfer of judges without consent, the need for further reform of the HCJ including balance between judge and non-judge members in decision-making, restricting re-appointment of HCJ members and ensuring staggered election of HCJ members, and ensuring an effective appeal in the selection procedure of the Supreme Court Judges by clarifying that the SC decisions are binding.

The June amendments had addressed one key recommendation - the procedure for suspension of judges from office - and additional issues: limiting the grounds for withdrawal of a member of the HCJ; clarifying the moment when disciplinary proceedings should be considered as initiated; facilitating the procedure for access to court decisions. In addition, the Venice Commission opinion acknowledged that if the draft September amendments were to be

adopted, one other key recommendation would be addressed, namely the restriction of the grounds of judge's disciplinary liability based on the violation by a judge of the principle of "political neutrality". These amendments are still to be adopted.

Regarding the composition of the HCJ, in October 2022, two new judge members were elected to the HCJ. The speed, quality and level of transparency of this process were criticised by the EU, opposition parties and civil society. These appointments followed the election of a total of six judge members on 26 May and 31 October 2021, despite similar criticisms. For two years (from June 2021 until May 2023), the HCJ operated without five non-judge members, whose election requires a qualified majority (90 votes) in Parliament. In May 2023, three non-judge members were elected and the two remaining positions were filled in October 2023.

The appointment process for the **Prosecutor-General** needs to be improved to ensure it is transparent and based on criteria of integrity, independence, impartiality, and competence. In particular, draft constitutional amendments remain to be adopted to introduce a qualified majority vote in Parliament. In October 2022, the draft constitutional amendments on the Prosecutor General's appointment passed first reading.

The power to nominate a candidate for the position of Prosecutor General rests with the **Prosecutorial Council**. On 12 January 2023, the Prosecutorial Council unanimously elected its chair by secret ballot; there was only one candidate for the position. The recommendations of the OECD fifth-round monitoring report on anti-corruption reforms and Venice Commission opinions concerning the prosecution service remain to be addressed. This includes revising the composition of the Prosecutorial Council to ensure a better balance between prosecutor and non-prosecutor members, strengthening the internal independence of prosecutors by shifting certain powers concerning judges' career from the Prosecutor General to the Prosecutorial Council. To address these points, a comprehensive set of legislative amendments taking into account existing recommendations should be prepared and adopted in consultation with the EU, the Venice Commission and relevant stakeholders.

Independence and impartiality

Some work has been done to improve the **constitutional and legislative frameworks** to guarantee the independence of the judiciary and its impartiality. The Law on Common Courts remains to be aligned with European standards, as outlined in the section concerning management bodies. Furthermore, a more thorough and comprehensive reform of the High Council of Justice (HCJ) is needed as recommended above, to help further consolidate the independence and impartiality of the judiciary, improve public trust and address the problem of publicly perceived corporatism and problems of integrity in the HCJ. To address these systemic challenges, as also raised by the Venice Commission in its October 2023 opinion, there is a need for more thorough and more systematic integrity checks in line with best practices as established in the region, in consultation with the European Commission and the Venice Commission. Georgia could establish a system of extraordinary integrity checks with the involvement of international experts with a decisive role, for candidates and persons currently appointed to the leading positions in the judiciary, in particular the HCJ, the Supreme Court and court presidents. Furthermore, to safeguard the integrity of judicial office holders in the long term, a system of effective permanent and periodic asset declarations –with the involvement of international experts in an oversight and advisory function - should be established.

A system for the nominal **random allocation of cases** to judges is in principle in place. To reduce numerous exceptions to this rule (only 62% of cases are allocated by using the automated case management system, the rest is distributed manually), more needs to be done

so that the allocation of cases is not subject to undue influence. Case assignments are processed through the computerised distribution of cases, via a random algorithm. Different reasons for reassigning a case include conflict of interest declared by the judge, recusal of the judge or a request from the parties, and physical unavailability (illness, longer absence).

The **Constitutional Court** is a judicial body of constitutional control. In November 2022, the Constitutional Court partially satisfied the legal claim by the former State Inspector and the Public Defender against the Parliament, finding that the dismissal of the State Inspector and her deputies was not matched by providing either an adequate and equivalent position or fair compensation. There are several cases of high public interest which have been pending before the court for a significant time, including for instance on the amendments to the Law on common courts as well as on the legislation regulating secret surveillance. The announcement of the related judgments is still pending.

As for the Prosecutor's Service, the **external independence** of prosecutors is, in principle, guaranteed by the Constitution and the Law on the Prosecutor's Service. The Criminal Code (CC) criminalises any form of unlawful interference with the activities of a prosecutor that disrupt the comprehensive, complete and objective investigation of a case.

Regarding the **internal independence of prosecutors** including safeguards preventing undue interference by superiors, the law does not mention the obligation of the superior prosecutor (including the Prosecutor General) to provide instructions in written form; nor does it mention the right or duty of the subordinated prosecutor to draw attention to the (alleged) illegality of an instruction received. Mechanisms for reviewing the legality of instructions by an independent body are missing. Furthermore, the Criminal Procedure Code empowers prosecutors in management positions to remove subordinate prosecutors from an investigation and to assign their responsibilities to other prosecutors without any justification. The current legislative framework concerning internal independence of prosecutors must be revised to align with European standards, taking into account recommendations of the OECD, and the Venice Commission.

Accountability

The High Council of Justice is competent to initiate and conduct disciplinary proceedings, suspend and dismiss judges. The position of an Independent Inspector for disciplinary proceedings has been established, however, the number of proceedings resolved in line with the recommendations of the inspector is rather low (around 30%). While some work has been done to align the legal framework on the disciplinary liability of judges with European standards, further amendments are necessary in line with the recommendations of the Venice Commission.

The legal framework on the disciplinary liability of prosecutors remains to be further aligned with European standards, in line with the recommendations of the Venice Commission and GRECO.

Codes of ethics for judges and prosecutors are in place, as is a complaint mechanism. A system of verification of asset declarations by judges and prosecutors exists, but its practical implementation, including in terms of scope, needs improving.

The recommendations in the Council of Europe's Group of States against Corruption (GRECO) fourth evaluation round suggested widening the asset declaration regime to cover all prosecutors. On 16 May 2023, the parliament adopted amendments to the Law on conflict of interest and corruption which extend the asset declaration regime to all prosecutors.

Professionalism and competence

The system for recruiting, selecting, appointing, transferring, and dismissing judges in courts of first and second instance is managed exclusively by the HCJ. Presidents of individual courts are appointed by the HCJ. Supreme Court judges are selected and nominated by the HCJ and appointed by Parliament by simple majority.

The legal provisions on appointing judges and prosecutors stipulate that the appointments must be largely based on merit and objective criteria, as assessed through public competitions. A substantive reform of the functioning and powers of the HCJ is required to increase its transparency, integrity, and accountability, including concerning its competences related to appointments, appraisals, promotions, transfers, disciplinary measures and appeals, in line with European standards and the recommendations from the Venice Commission and ODIHR.

One of the objectives of the judicial reform strategy and action plan is to increase the number of judges. Only eight out of 76 vacant positions for judges in district (city) courts and appeals courts were filled as a result of the latest competition. More needs to be done to fill existing vacancies with qualified candidates that demonstrate the required integrity, including by attracting applications by ensuring that competitions are open and merit based.

The Prosecutor General appoints, promotes, releases from their position and dismisses employees of the Prosecutor's Office according to criteria for recruitment and grounds for discharging from office. The internal Career Management, Ethics and Incentives Council has an advisory role. The Prosecutor General thus has substantial discretion in the process.

Quality of justice

On **transparency of the justice system**, open access to reasoned court decisions in compliance with data protection rules has yet to be ensured. Based on judicial amendments adopted in June 2023, all court decisions following an open court session will be fully available on formal freedom of information (FOI) requests. At the same time all court decisions will be published on a dedicated website in a depersonalised manner. In both cases the decisions will only be available after final resolution of the case, which can take years. This process remains to be brought in line with European standards and Venice Commission recommendations.

The Supreme Court publishes annual statistical data for each year of cases in the common courts. The HCJ publishes activity reports covering several years. An integrated case management system is in place but needs to introduce a statistical element. Court-related mediation procedures are available in Georgia.

Judges are trained at the High School of Justice and prosecutors by the Training Centre of the General Prosecutor's Office. Training for judges should include case-based training on how to use indirect evidence, especially related to corruption and money laundering cases. For prosecutors further training and exchange of best practices should be developed in the field of asset recovery and financial investigations.

The number of judges in 2022 was 329, with 53.4% of them female, with only three female court presidents. The number of prosecutors in 2022 was 415, of which 33.7% were female. The number of staff is low compared to the European averages of 21 judges/12 prosecutors per 100 000 inhabitants⁶ (9 judges and 12 prosecutors per 100 000 inhabitants). The allocated 2022 budget for law courts increased to EUR 39.4 million and the implemented total budget was EUR 35.6 million (0.14% of GDP).

Efficiency

⁶ According to the Council of Europe European Commission for the Efficiency of Justice (CEPEJ).

As to the length of court proceedings, the disposition time in civil and commercial cases decreased to 257 days in 2022, compared to 433 days in 2020. For administrative cases the disposition time increased to 529 days in 2022, compared to 440 days in 2020. For criminal cases the disposition time in 2022 was 132 days, almost the same as in 2020 when it was 126 days.

The development in **clearance rates** in the first instance reflect a similar tendency with the clearance rate for civil and commercial cases improving from 87% in 2020 to 101% in 2022. The **backlog** for pending criminal cases was 4 322 in 2020 and 6 536 in 2022 in first instance, and 746 in 2020 and 784 in 2022 in second instance. For civil and commercial cases, the number of pending cases in first instance was 59 515 in 2020 and 63 969 in 2022.

The Constitutional Court had 284 pending constitutional complaints/submissions as of 31 December 2022 and its clearance rate in 2022 was 84%, compared to a clearance rate of 50% in 2021 and 106% in 2020. Very few submissions (only two in 2022) are presented to the Constitutional Court by Georgian courts and the Public Defender's Office regularly submits constitutional complaints.

Fight against corruption

Georgia **has some level of preparation** in the fight against corruption and made **some progress**. Georgia's legal framework on anti-corruption is largely approximated to the EU *acquis* and international norms following substantial legal reforms. In May 2023, Georgia implemented one outstanding GRECO recommendation by widening the scope of the asset declaration regime to cover all prosecutors. An Anti-Corruption Bureau was set up in 2022. The legal framework was amended to strengthen the investigative authority of the Special Investigation Service (SIS) and the Personal Data Protection Service (PDPS). Legislation on the Anti-Corruption Bureau, the SIS and the PDPS was sent to the Venice Commission in September 2023. Further efforts need to be undertaken to tackle high-level corruption and, in particular, to address the challenge of large-scale vested interests and their influence in both the political, judicial and economic spheres. Georgia has not yet developed a new national anti-corruption strategy or action plan.

In the coming year, Georgia should in particular:

- align the legislation on the Anti-corruption Bureau to the ODIHR/Venice Commission recommendations and ensure that the new Bureau, as well as the relevant enforcement agencies, operate independently and effectively, avoiding any politically selective approach; in particular, asset declarations should be audited against the legitimate income and investigations should take place in case of unexplained differences; Georgia should also develop and adopt an anti-corruption strategy and action plan, ensuring it is comprehensively implemented through realistic timelines, adequate funding and monitoring mechanisms;
- repeal the decision of February 2023 to withdraw from the OECD anti-corruption monitoring network for Eastern Europe and Central Asia (OECD/CAN) and fully implement recommendations from the previous rounds;
- on de-oligarchisation, implement the action plan following a systemic approaching line with the recommendations by the Venice Commission (Opinion of March 2023 and Opinion of June 2023). This includes that a new anti-corruption strategy and action plan needs to be adopted and its full implementation ensured by providing adequate funding and monitoring mechanisms.

Track record

A large number of corruption cases involving **low and-medium level** officials have been successfully prosecuted, primarily in the public procurement field. As regards the track record of investigations, prosecution, adjudication and final convictions of corruption cases, notably of **high-level corruption** cases, in 2022 a total of seven high-level officials were prosecuted and six officials were convicted for corruption. Overall, prosecutions and convictions on corruption cases have increased compared to 2021: 36% increase in prosecutions and 73.5% increase in convictions.

Detailed statistics and analytics on the detection, investigation, prosecution and adjudication of corruption cases, especially high-level corruption cases are deficient and needs to be more proactively published. Public communication and accountability on alleged high-level corruption cases also need to be strengthened.

Allegations of high-level corruption cases need appropriate follow up. The GRECO recommendations on preventing corruption in respect of judges are yet to be fully implemented (out of four recommendations in this area, three have been partially implemented and one has not).

The 2022 **asset declaration** monitoring results by the Civil Service Bureau detected violations in 52% of verified declarations (181 out of 346 asset declarations). The Civil Service Bureau actively applied administrative penalties for violations related to asset declarations. No case was referred for criminal investigation. The asset declaration monitoring has not detected any cases of illicit wealth or high-level corruption.

In 2022, 30 reports of wrongdoing were filed by **whistle-blowers** on a special online platform for whistleblowing reports created by the government. No information is available on what measures have been taken to address them.

Institutional framework

Prevention of corruption

The framework for policy coordination is in place, but it is not properly utilised in practice as the main anti-corruption policy coordination platform, the National Anti-Corruption Council, has not met since 2019. Pursuant to the establishment of the Anti-Corruption Bureau, some aspects of policy coordination were assigned to the Bureau, such as coordinating the drafting, implementation and monitoring process of the national anti-corruption strategy and the action plan. The mandate of the National Anti-corruption Council was also adjusted, and the Council was tasked with developing recommendations on implementing adopted anti-corruption policy documents. The mandates of the Bureau and the Council, especially in the policy development and monitoring domains, need to be clearly delineated.

In November 2022, the Parliament passed legislation in its third and final reading (with no votes from the opposition), establishing an **Anti-Corruption Bureau** to oversee and coordinate Georgia's anti-corruption policy and draw up proposals/recommendations. The Bureau will also have the mandate to monitor asset declarations (previously done by the Civil Service Bureau), monitor party financing (previously done by the State Audit Office) and adopt recommendations on protecting whistle-blowers. The Bureau took over these responsibilities on 1 September 2023. It does not have investigative functions. On 10 February 2023, the Prime Minister appointed the head of the Anti-Corruption Bureau for a term of 6 years. The legislation was not sent to the Venice Commission for an opinion. The opposition parties and CSOs expressed strong reservations as to the Bureau's independence and effectiveness. Legislation

on the Anti-Corruption Bureau was sent to the Venice Commission for opinion in September 2023.

Several Ministries and agencies developed or are developing an integrity risk assessment document. There is no systematic approach nor framework for risk assessment.

In November 2022, the Parliament passed the draft law on de-oligarchisation at its second reading, with 76 votes (with no votes from the opposition). After a Venice Commission opinion on March 2023, on 12 April 2023 Parliament sent an updated reform to the Venice Commission for a second opinion. In its final opinion the Commission unequivocally recommended not to adopt the proposed law due to its expected ineffectiveness, as well as the risks it posed for democracy and the rule of law. Instead, the Commission recommended countering undue influence by oligarchs through systemic reforms. On 19 September, the Parliament voted down the draft law. Georgia endorsed an action plan on de-oligarchisation on 14 September and sent the action plan to the Venice Commission for an opinion in September 2023. The action plan follows a systemic approach and builds on the recommendations by the Venice Commission (Opinion of March 2023 and Opinion of June 2023).

Law enforcement

There is no dedicated law enforcement, prosecution services or specialised courts for fighting corruption. The investigative mandate is spread among the Prosecution Service, the State Security Service, the Ministry of Justice and the Ministry of Finance. The corruption investigation units within these institutions lack autonomous powers and safeguards for independence, to prevent risks of undue political influence. Transparent appointment procedures for the heads of these units are also lacking. Similarly, there is no stand-alone body in charge of investigating/prosecuting high-level corruption. More needs to be done to strengthen the specialisation and efficiency of investigations in this area.

Legal framework

Georgia has introduced substantial legal reforms to combat corruption, with a view to approximating to the EU *acquis* and international norms. Georgia is a party to all key international anti-corruption conventions, including the UN Convention against Corruption (UNCAC) and the Council of Europe Criminal Law Convention against Corruption and the Civil Law Convention against Corruption.

Georgia is a participating state of the Group of States against Corruption (GRECO). It has implemented or dealt with eight of the 16 recommendations contained in the 4th Round Evaluation Report. In May 2023, Georgia implemented one outstanding GRECO recommendation by widening the scope of the asset declaration regime to cover all prosecutors. A recommendation about limiting the immunity of judges to activities relating to their participation in judicial decision-making ('functional immunity') remains to be implemented.

Georgia is also a member of the Anti-Corruption Network of the Organisation for Economic Cooperation and Development (OECD/ACN). On 16 February 2023, the government declined to join the new round of monitoring from this network, which would have assessed the country's anti-corruption framework using an updated methodology. There was no further follow-up of its recommendations.

The system of asset declarations for public officials is in place, and the laws regulate conflict of interests and protection for whistle-blowers. The scope of the law related to asset declaration and its implementation and monitoring should be improved, and whistle-blower protection needs to be strengthened and aligned with the EU *acquis*. The administrative capacity to obtain effective control of party financing and electoral campaign financing needs to be strengthened.

Lobbying in Georgia is regulated by the Law on Lobbying.

Strategic framework

The latest strategy and action plan for 2019-2020 dates from 2019. Less than half of the action plan measures (43.5%) were fully implemented and outstanding measures have not yet been addressed. The preparation of a national anti-corruption strategy and action plan are underway. The corruption risk assessment methodology is being revised.

Anti-corruption policies are also included in some thematic strategies as crosscutting issues (e.g. Public Administration Reform strategy, decentralisation strategy), but these lack a comprehensive and systematic approach. Sectors most vulnerable to corruption require targeted risk assessments and dedicated measures.

Fundamental rights

The legislative and institutional framework on fundamental rights is largely in place. The priorities from the Commission opinion that fall under fundamental rights are Priority 8 on ensuring the human rights for vulnerable groups, Priority 9 on gender equality and fighting violence, Priority 11 on legislation related to the European Court of Human Rights (ECtHR), and Priority 12 related to an independent Public Defender. An action plan for the National Human Rights Strategy is being developed, with consultations launched with civil society. In September Georgia has submitted the law on Personal Data Protection and SIS to the Venice Commission.

In the coming year, Georgia should in particular:

- ensure that the follow-up action plan to the 2022-2030 national human rights strategy is finalised in an inclusive manner and takes into account the main issues raised by the Public Defender, civil society and relevant international organisations. Strengthen the implementation of the anti-discrimination legislation; take more decisive measures to address and prevent hate speech and hate crimes;
- adopt national strategies to fight all forms of hatred and discrimination, and protect ethnic and religious minorities;
- investigate and prosecute the organisers of the violence on 5 July 2021 and 8 July 2023 at Tbilisi Pride, adopt the Human Rights action plan ensuring also the rights of LGBTIQ persons; ensure full respect and protection for freedom of assembly and freedom of expression, in particular by reforming the code on administrative offences, including through a broad participation by stakeholders;
- address the gaps in the new Personal Data Protection law and strengthen the Personal Data Protection Service in line with forthcoming Venice Commission Opinion, to ensure that the new data protection regulations are adequately implemented.

Georgia has ratified all major European and main **international human rights instruments**. It has not ratified the Convention for the Protection of All Persons from Enforced Disappearance and the International Convention on the Protection of the Rights of All Migrant Workers and Members of Their Families. Georgia still needs to ratify several key ILO conventions including the Labour Inspection Convention, the Occupational Safety and Health Convention, the 2014 protocol to the Forced Labour Convention, the Minimum Wage Fixing Convention, the Social Security (Minimum Standards) Convention, the Maternity Protection Convention and the Violence and Harassment Convention.

During the reporting period Georgia underwent a few periodic reviews: the International Covenant on Civil and Political Rights (ICCPR) in July 2022; the Committee on the

Elimination of Racial Discrimination (CERD) in December 2022; the Committee on the Elimination of Discrimination against Women (CEDAW) in February 2023 and the Committee on the Rights of Persons with Disabilities (CRPD) in March 2023.

It has not yet ratified the Occupational Safety and Health Convention (C155), the Promotional Framework for Occupational Safety and Health Convention, the 2014 Protocol to the Forced Labour Convention (P29), the Labour Inspection Convention (C81) or the Labour Inspection (Agriculture) Convention (C129) have not yet been ratified. To fulfil its reporting obligations before the UN treaty and charter-based bodies, Georgia has developed national reporting processes. All government reports are now subject to parliamentary scrutiny.

The recommendations are not always fully implemented. The mandate to monitor the level of implementation is vested in the Parliament.

The 2022 Human Rights strategy does not include references to the rights of LGBTIQ persons and discrimination on grounds of sexual orientation and gender identity, specific provisions related to effective protection of privacy, nor does it address the challenges related to torture, not the least that the definition in Georgian law does not meet the relevant international standards. There is a need to develop a comprehensive monitoring and data collection system in order to assess the level of implementation of human rights legislation, policies, and strategies. On 1 September 2023, the Human Rights Department was established under the Government Administration. An action plan for the National Human Rights Strategy is being developed and consultations with civil society were launched early November. This consultation process should continue ensuring broad and inclusive process engaging further civil society and also international partners.

Procedural rights are protected by the Constitution and the legal framework is generally in line with international standards. The UN has expressed concerns regarding the persisting protection gap in the Code of Administrative Offences, including insufficient safeguards for administrative detainees, the lack of clarity about standards of proof, which often results in the burden of proof being borne by detainees, and the absence of the meaningful right to appeal detention decisions. This puts them at a higher risk of ill treatment, both at the time of arrest and during detention. During the reporting period, the ECtHR found a violation of Article 6 § 1 of the Convention in several cases.

The government took positive steps to ensure the protection of victims' rights. In 2022, the Special Investigation Service issued an order granting a probable victim the right to study case materials during an investigation even before receiving victim status. Moreover, a council for reviewing the complaints of victims in life infringement cases was established at the General Prosecutor's Office in December 2022. The council is empowered to review a victim's complaints regarding the effectiveness of investigations into life infringement cases and prepare a recommendatory decision for the Prosecutor General. The Public Defender reports that the practice of granting victim status is inconsistent in criminal cases. In most cases, victim status is granted after receiving expert opinions and (sometimes) launching prosecution against a specific individual.

In 2022, the Public Defender also reported that in some instances the right to fair trial was not respected and a conviction was delivered in breach of the principle of legality. There have also been cases in which the fairness of the court proceedings was not guaranteed. There are some challenges with reported practice of bringing citizens as witnesses to police facilities and arresting them.

In June 2023, there were 172 applications pending before the European Court for Human Rights (ECtHR). The Court delivered judgements on 20 applications and found breaches of the

European Convention on Human Rights in 14 out of 15 cases, relating mainly to the right to respect for private and family life, the right to a fair trial, the prohibition of torture and freedoms of assembly and association. In the reporting period, 179 new applications were allocated to a decision body. Currently, there are 34 cases under enhanced supervision by the Committee of Ministers.

On 31 December 2022, Georgia had 68 cases pending execution (compared to 63 in 2021 and 53 in 2020), of which six were leading cases classified under the enhanced procedure (compared to 5 in 2021 and 5 in 2020), and 21 were leading cases classified under the standard procedure. Of the leading cases under the enhanced procedure, 5 have been pending for 5 years or more; similarly, 5 of the leading cases under the standard procedure have been pending for 5 years or more (compared to 4 in 2021 and 3 in 2020).

The pending caseload includes cases and groups of cases concerning ill-treatment, hate crimes and domestic violence. The cases were also characterised by ineffective investigations into them, restrictions on the right to liberty and security for purposes not prescribed by the European Convention, violations of the right to freedom of assembly and the right to freedom of religion or belief, and the right to a fair trial. The new violations found by the Court in 2022 concerned the right to a fair trial and property rights.

In October 2022, Parliament passed the legal package aimed at enabling Georgian courts to proactively take into account the judgments and decisions of the ECtHR. The initiative focused mainly on legislative mechanisms stimulating the reference to ECtHR decisions by Georgia's courts, supporting the professional development of judges, prosecutors and defence lawyers and raising the quality of reference to ECtHR decisions in their work, establishing new organisational units in the courts' system for analysing ECtHR decisions and increasing access to them for judges.

Regarding the national framework for respect, protection and fulfilment of human rights, the Public Defender's Office (PDO) continues to implement its mandate including as regards the national preventive mechanism, anti-discrimination mechanism and the mechanism of monitoring the rights of persons with disabilities. The Office currently has sufficient financial and staffing resources to perform its duties. Currently there are 123 permanent positions in the PDO and 19 of those remain vacant. In March 2023, 38 contracted employees were added to the Office. In 2023, funding for the Public Defender's Office increased by GEL 406,000 compared to 2022 and amounts to a total of GEL 9.27 million (EUR 3.3 million).

During the reporting period, the mandate of the Public Defender expired. Priority 12 of the Commission opinion highlighted the need to ensure that an independent person is given preference in the process of nominating a new Public Defender and that this process is conducted in a transparent manner. It also stressed the need to ensure the Office's effective institutional independence. In September 2022, the Parliament launched an open call for candidates. No candidate received support from a sufficient number of MPs. Following this failed attempt, the procedure reverted to one nominee per party. As a result, a new Public Defender was elected on 7 March by 96 votes (with 10 votes coming from the opposition), with no one voting against. The United National Movement abstained from voting. On 3 April, the Public Defender appointed two new deputies.

In March 2023, Parliament adopted the national strategy for human rights. The process of finalising the strategy was criticised for its lack of a consultative approach and insufficient time to provide feedback. The strategy contains positive elements concerning economic and social rights, though it does not adequately address several key issues, notably discrimination on

grounds of sexual orientation and gender identity, independence of judges, protection of journalists, the and the right to privacy and elimination of torture.

The Constitution explicitly prohibits the use of the death penalty. The Public Defender found in 2022 many cases of failure by the government to conduct a proper investigation into cases where the **right to life was violated**. In 2022, the ECtHR found violations of the right to life in two cases.

Prohibition of **torture and ill-treatment** is enshrined in the Constitution. The Inter Agency Council on Combating Torture and other forms of Ill Treatment coordinates and monitors the fight against torture. Its latest action plan expired at the end of 2022. The 2023-24 action plan is currently being drafted. A manual on the use of qualifications for torture, humiliating or inhuman treatment exceeding official authority and other related crimes was created by decision of the Special Investigation Service in July 2023.

The Georgian Criminal Code has an article on torture and inhuman or degrading treatment as well as other articles that provide for lesser penalties, including an article on exceeding official powers. Effort should be made to apply the appropriate article when investigating allegations of ill treatment or torture by law enforcement officials, to avoid the occurrence of ill treatment or torture being underestimated.

The Prosecution Service has the remit to investigate torture and ill treatment committed before 1 November 2019 and the Special Investigative Service (SIS), established on 1 March 2022, has jurisdiction over such crimes after this date. The mandate of the SIS is very broad and its jurisdiction has been extended several times since its establishment. This entails the risk that its key mission, i.e. investigation of torture and ill treatment committed by law enforcement officers, does not get sufficient attention or resources. In September 2023, Georgia has submitted the law on SIS to Venice Commission. The SIS reported that it had received 2 514 applications/reports since its creation in March 2022 until the end of 2022. A large number of the alleged victims are detainees, be it persons under administrative arrest or subject to pre-trial detention or imprisoned convicts. Criminal investigations were launched in 420 cases, of which 56% concerned ill treatment by law enforcement officers.

In 2022, the Prosecution Service of Georgia (PSG) launched investigations into 3 criminal cases on allegations of ill treatment in penitentiary institutions and 8 cases on alleged ill treatment committed by police officers. The Service prosecuted 4 officers in penitentiary institutions and 7 police officers for ill treatment. Three of the prosecuted persons had been investigated by the SIS. It is important to provide statistics that enable the monitoring of the entire criminal justice chain, to determine the number of investigated, prosecuted and convicted cases of ill treatment and thus evaluate the quality of investigations and the propensity of the PSG to prosecute.

In 2022, the first instance courts did not hear any cases related to law enforcement based on Article 144 (1) of the Criminal Code, which criminalises ‘torture’. First instance courts delivered convictions in three cases on the basis of Article 144 (3) of the Criminal Cod, which criminalises ‘humiliation or inhuman treatment’ and one case under Article 333 of the Criminal Code covering use of force/exceeding official power.

The National Preventive Mechanism (NPM) carried out its mandate by performing 148 monitoring visits to 118 places where individuals were deprived of their liberty in 2022. Of the 129 NPM recommendations from 2021, only 25% have been implemented. The Georgian authorities need to implement more of the recommendations by the NPM and other monitoring bodies, including the CPT.

Efforts to reduce the **prison** population need to progress, as the country remains among the top five European countries regarding incarceration rate (265 per 100 000). However, the occupancy rate is only around 82%: with a capacity of 11 656, the penitentiary system housed 9 542 inmates in December 2022.

The legislative framework on criminal penalties is largely in line with relevant European standards, regulating custodial penalties and offering a number of non-custodial penalties as well as probation. The system for implementing non-custodial and probation measures is well advanced and functions well. In general, the penalties system established by the criminal code should allow wider application of non-custodial measures and probation, and an early release mechanism. A new penitentiary code was adopted in first reading by the Parliament in June 2023.

The Public Defender's annual report for 2022 does not report any deteriorated conditions/capacities in police detention centres, except for a reduction in the number of monitoring cameras in most police institutions. The same goes for the overall assessment of conditions in pre-trial detention/prison facilities managed by the Ministry of Justice/Special Penitentiary Service. As per the 2021 report by the Council of Europe's Committee for the Prevention of Torture (CPT), based on inspection visits in 2021 to three semi-open prisons, disparities in conditions between cells were reported along with lack of sufficient administrative control. The shortcomings have been acknowledged by the MoJ and action is now planned as part of the new (still draft) penitentiary strategy for 2023-26.

Since his return to Georgia in September 2021, former President Mikheil Saakashvili has been imprisoned under charges including abuse of power, for which he is serving a six-year sentence, with several other criminal charges still pending against him. Since May 2022, he has been serving his sentence in the VivaMedi Clinic. Strong concerns continue to be raised regarding the deterioration in his health. In 2022, Mr Saakashvili applied to the Georgian courts for deferral of his sentences on health grounds; this was denied in March 2023 by the Tbilisi Court of Appeals.

The Georgian authorities have a legal responsibility to protect the health of all detainees, to provide adequate medical treatment and respect their fundamental rights, in line with Georgia's international commitments. In April 2023, Mr Saakashvili's lawyers applied to the ECtHR to use an interim measure, arguing that his medical condition cannot be treated in any facilities in Georgia. The ECtHR ruling, issued on 11 May, did not instruct the Georgian authorities to transfer Mr Saakashvili to Poland for medical examination and treatment.

Parliament adopted the Personal **Data Protection** Law on 14 June 2023, which was sent to the Venice Commission for opinion in September 2023. The law aims to align Georgia's legislation with the EU *acquis*. It has been under discussion for several years. Overall, the new legislation provides for improvements in comparison to the 2011 law. Several issues are still to be addressed, notably regarding rules on international data transfers and certain exemptions/limitations to data protection rights. The law will be applicable as of 1 March 2024. The country has signed and ratified Council of Europe data protection Convention 108 and its Additional Protocol 181, but has not yet signed Convention 108+ (the modernised version, from 2018).

The new Personal Data Protection Service (PDPS) was created in March 2022 after the dissolution of the State Inspector's Service. Its role is to monitor the lawfulness of data processing and oversee covert investigative action and the activities carried out at the central database for electronic communication identification data. In the reporting period, the Service received 220 applications/notifications related to lawfulness of personal data processing (137

applications/notifications related to data processing in private institutions, 47 in public institutions and 36 in law enforcement bodies). The Service identified 99 cases of unlawful processing of personal data, of which 39 cases were studied in the scope of the examinations (inspections) initiated in 2022 and completed in the reporting period. 60 cases were studied in the scope of the examinations (inspections) initiated and conducted in 2023. The Service imposed fines and warnings as administrative penalties in 74 cases.

In June 2022, the Parliament adopted the draft Law on amendments to the Criminal Procedure Code. This significantly extends the list of crimes under which the use of covert investigative measures in investigations is allowed, as well as the permissible duration of a covert investigative measure. The amendments were vetoed by the President of Georgia. On her request, the Venice Commission, in its opinion of 22 August 2022, concluded that the law was adopted in a hasty procedure, highlighted the inadequate oversight mechanism for the secret surveillance measures, and urged the authorities to re-examine the legislation. Moreover, the Venice Commission underlined that covert surveillance should be seen as an exception and be very carefully worded and narrowly interpreted by the government. In spite of these clear recommendations to take a cautious approach, the Parliament overruled the President's veto on 6 September and the law was enacted. This development raises serious concerns.

The investigation that started in September 2021 into the eavesdropping and illicit surveillance of politicians, journalists, civil society activists and the diplomatic community, including tapes of private life and correspondence, has not been concluded. The repeated calls, including by the Public Defender, to improve accountability and effective institutional oversight are yet to be addressed.

Freedom of thought, conscience and religion is constitutionally guaranteed. Georgia's anti-discrimination legal framework prohibits discrimination and manifestation of intolerance on the ground of religious beliefs. The Criminal Code prohibits any unlawful obstruction to holding worship and religious rites, violation of equality or interference with the establishment of religious associations.

However, religious minorities face several challenges in exercising their freedom of religion notwithstanding this comprehensive legal framework. For example, there is insufficient funding provided to religious minorities for rehabilitating their places of worship and an unequal application of tax exemptions for religious organisations. Other issues include the denial of a request to construct a new mosque in Batumi City and subsequent legal proceedings, allegations of stigmatisation, pressure to convert and harassment against members of religious minorities, particularly Muslim students, in state schools. The main policy-making government body, the State Agency on Religious Issues, does not have the full trust of the public and there are concerns about its security-centric approach to minority religious issues.

Hate crimes towards religious minorities are addressed, though some investigations into alleged attacks, discrimination and physical violence committed on the grounds of religious intolerance lack effectiveness.

Regarding the **fight against antisemitism**, Georgia reported only few cases of antisemitic hate-speech in 2022. The government is taking measures to safeguard Jewish culture and heritage in Georgia.

Freedom of expression

Georgia has reached **some level of preparation** on freedom of expression and made **limited progress**. The Law on broadcasting was amended to further align with the Audiovisual Media Service Directive. In Georgia, there is an overall pluralist, diverse but highly polarised media landscape. Critical media reporting is available. Freedom of expression is overall respected and upheld. Georgian citizens and civil society enjoy their rights of freedom of speech. Most of the TV broadcasters are affiliated to political parties, deepening the political divisions in the country. This is contrary to the prohibition on political parties owning media outlets. Georgia made some progress on the issue of ownership concentration with the revised Law on Public Broadcasting. The government and CSOs have taken steps to engage in a structured dialogue including on freedom of expression. There was also progress in the regulation of party financing with Parliament adopting in December 2022 electoral amendments including a party financing cap.

Continued public attacks and discrediting rhetoric against journalists and media professionals by high-level public officials and politicians, from both government and opposition, as well as from violent far-right groups, have created a somewhat hostile environment, posing a threat to media freedom and pluralism. Delays by public institutions and officials in responding to (or failure to respond to) requests for information, especially from critical and independent media, raise concern.

In the coming year, Georgia should in particular:

- ensure the safety of journalists and provide prompt, impartial and due legal follow-up in cases of attacks against and intimidation of journalists, including as regards the instigators of the 5 July 2021 violence against over 50 journalists;
- improve the independence of the national media regulator (Communication Commission) in line with the principles of Audiovisual Media Service Directive and European standards;
- align further the legislative framework with European and international standards notably regarding hate crimes and hate speech including the 2008 Framework Decision on combating certain forms of expressions of racism and xenophobia.

Intimidation of journalists

The media environment is largely pluralistic, but also highly polarised. Georgia needs to follow the EU's policies on the protection and safety of journalists and media professionals. The Council of Europe (CoE) has conveyed strong concerns related to both Georgia's legal and policy framework and its implementation in terms of protection and safety of journalists. In 2020-2022, the CoE's Platform on Safety of Journalists received 16 alerts of violence and threats of violence against journalists in Georgia, compared to no alerts in the 3 previous years. Georgia's security indicator deteriorated from 100 to 135 in the Reporters without Borders 2023 Index, as the country slid from 77th to 89th place.

The organisers of the violence on 5 July 2021 remain at large. 60 individuals (including 48 journalists and one cameraman) and one legal entity – 'Tbilisi Pride' – are recognised as victims. The Prosecution Service prosecuted 31 individuals for participating in the violence; proceedings against 14 defendants were concluded. As for the organisers of the violence, investigations are officially still ongoing. No prosecution took place during the reporting period. Georgia needs to urgently follow-up on these cases and ensure the perpetrators and instigators of the violence are brought to justice.

In November 2022, the Tbilisi Court of Appeals ruled to uphold Mtavari Arkhi TV director sentence of 3 years and 6 months in prison, finding him guilty on two counts under Article 220 of the Criminal Code, abuse of power. The Public Defender found the judgement and reasoning

of the court to be unfounded and unsubstantiated in terms of conviction as well as sentencing. In June 2023, the Supreme Court reaffirmed the above-mentioned judgement by upholding prison sentence and ruling that the filed cassation appeals were inadmissible. On 22 June, President Zourabichvili used her discretionary right and signed the decree on pardoning the Mtavari Arkhi TV director, who was released from prison on the same day.

Several court proceedings and investigations against opposition media owners took place. Recent libel and defamation lawsuits and verdicts have a problematic effect on critical media reporting. In addition, there is a number of ongoing cases against journalists, including those dismissed from Rustavi 2.

Legislative environment

The Constitution and the Law on freedom of speech and expression provide for the right to freedom of expression as per international human rights law.

The Law on broadcasting was amended in October 2023 following intensive discussions with the European Commission. Amendments were adopted to ensure the enforcement of the rules prohibiting incitement to violence and hatred and protection of minors and to introduce a system of self-regulation with legal backstop, aiming at alignment with the AVMSD. To ensure transparent and trustful relations with media the effective independence of the Communication Commission needs to be further ensured. Georgia shared proposals in this regard and should adopt transparent rules relating to the decision-making processes of the national regulator, including the publicity of their decisions and the handling of complaints. Further, the transparency of the appointment of candidates and grounds for dismissal of its members should be adapted building on European standards. Ensuring that all decisions are made public with increased dialogue can further assist in this task and assist developing conducive environment for cooperation with media sector. Further, the grounds for dismissal of its members should be reinforced building on best current practice.

The legislative framework needs to be fully aligned with the EU recommendation on protection, safety and empowerment of journalists. There are serious shortcomings regarding investigation and prosecution. The Council of Europe recommends amending Article 154 of the Penal Code and the Law on Assemblies and Demonstrations.

Implementation of legislation/institutions

The Georgian National Communication Commission (ComCom) regulates activities in the field of broadcasting and electronic communication. Its rulings have a mandatory effect. Its governing body is composed of five elected Commissioners and a Chair. The ComCom functional independence and impartiality needs to be further demonstrated with transparent proceedings and trustful relations with media stakeholders. The letter from the Chairmen of the Georgian Parliament confirms the commitment to work on the issue of independence which should be swiftly addressed. Among other issues, the duration of the Commissioners' tenure and the quorum for decisions raise concerns. The mechanism for selecting its members should be revised to ensure transparency.

Public service broadcaster

The independence of the Georgian Public Broadcaster (GPB) is guaranteed under the Law on broadcasting. It has significant budget funding of at least 0.14% of the previous year's GDP, as well as income from broadcasting fees.

Economic factors

Transparency of media ownership is guaranteed by law. In a context of strong political and editorial divisions, media operates on market principles, which include the use of public procurement rules to buy airtime (including advertising) - also by government agencies. The exception being for key public information.

The arrest of and court cases against some media owners and directors had a chilling effect on the fundraising and sales ability of the smaller, critical pro-opposition TV companies, resulting in a fall in their sponsorship revenues and advertising income.

Internet

The Constitution guarantees the right of access to and free use of the internet. (*See data protection section*).

Freedom of artistic expression

Neither the Constitution, the Law on culture or the Law on freedom of speech and expression restrict freedom of artistic expression. The 2020-2025 culture strategy is in place. Information on its implementation is scarce and dialogue between the government and civil society remains limited.

Georgia is a signatory of the 2005 UNESCO Convention on the Protection and Promotion of the Diversity of Cultural Expressions. More incentivising, lobbying and funding of a diverse range of artistic expression is needed. There have been several high-profile incidents of alleged restriction and hindrance of artistic expression, including restricting access to public funding and cancelling movie screenings.

Professional organisations and working conditions

Georgian journalists and media outlets are represented by several membership-based, associations/organisations which lobby on their behalf. These include the Georgian Charter of Journalism Ethics, the Media Advocacy Coalition, the Georgian Alliance of Broadcasters and the Georgian Regional Media Association (GRMA). There is a dialogue between the government and professional bodies, but its impact is limited. Considerable delays and a recurring refusal to access public information pose a serious challenge for media and CSOs, affecting the timeliness, accuracy and quality of their work and reporting.

Associations set professional standards for ethical reporting, ethical coverage of sensitive issues (such as suicide, children's issues and victims of sexual violence). Enforcement of professional standards set by professional bodies is not mandatory. National and regional TV broadcasters have internal self-regulation mechanisms to review and respond to complaints.

The rights to freedom of assembly and association are guaranteed by the Constitution and regulated by the Law on assemblies and demonstrations. There are some legal restrictions in place prescribed by the Constitution and the law itself. For example the constitutional right does not cover those serving in the army or law enforcement. On 5 October 2023, Parliament adopted amendments to the Law on Assemblies and Manifestations in expedite manner and without prior consultations. The Public Defender and CSOs expressed concerns with this Law and the President vetoed it on 17 October. The amendments allow for arbitrary and undue restrictions on the right to freedom of assembly.

Georgia needs to ensure judicial follow-up regarding the alleged excessive use of force and disproportional measures used by law enforcement officers during the 7-9 March 2023 protests, where thousands of demonstrators gathered in front of the Parliament building, protesting

against the draft ‘foreign agents’ law. The Special Investigation Service launched an investigation into alleged excessive use of force and ill treatment by law enforcement officers during the protests, based on 22 received complaints.

Georgia has not yet reformed its administrative offences’ system, which continues to use the Law on administrative offences to address alleged administrative misconduct during public gatherings. The Code is the only remaining legislative act in force that was adopted during the Soviet period and lacks substantial procedural guarantees (e.g. burden of proof, presumption of innocence, comprehensive examination of a case) to ensure the right to a fair trial in the light of freedom of assembly. The legislative ambiguities in the Code allow arbitrary decisions to restrict freedom of assembly.

During the reporting period, the ECtHR found violations of Article 11 (freedom of assembly and association) in three cases. On 2 June 2023, police detained seven human rights defenders and activists protesting in front of the Parliament, sparking strong reactions about potential violation of freedom of assembly and the freedom of expression.

Georgia has a comprehensive legislative framework on **non-discrimination**, which is largely in line with the EU *acquis* and international standards. Its enforcement requires substantial improvements. Strategic policy aimed at strengthening equality is in place. It does not specifically recognise challenges faced by certain persons in vulnerable situations, such as LGBTIQ persons, failing to plan specific measures to eliminate prevailing discriminatory practices.

The Public Defender’s Office examined 153 cases of alleged discrimination in 2022, 20% of which concerned alleged discrimination on the grounds of dissenting opinion. 13% of the cases concerned discrimination based on sex/gender and disability and 11% were about discrimination on the grounds of sexual orientation and gender identity.

The Criminal Code defines aggravating circumstances for hate crimes. Strategic frameworks for law enforcement agencies also include measures to address hate crimes. There are shortcomings in terms of prompt and effective investigation, as well as identifying a hate motive and conviction for hate-crimes against persons belonging to minority groups or in vulnerable situation, often perpetrated by extreme right-wing groups, remains to be ensured. In 2022, the number of prosecuted hate crime cases significantly increased, as the Prosecutor’s Office launched prosecutions against 1 172 individuals (compared to 834 in 2021 and 95 in 2020) on alleged crimes on grounds of intolerance, of which a majority of cases concerned intolerance based on gender (1 065), followed by sexual orientation (37), gender identity (18) and race or ethnic background (12 cases). Similarly, convictions for hate crimes have increased, as 585 individuals were convicted in 2022 for hate crimes, compared to 321 in 2021 and 50 persons in 2020.

Regarding consolidation of efforts to achieve **gender equality** (one of the 12 EU priorities for Georgia), the government and the Parliament adopted three strategic documents in 2022: the national action plan on combating violence against women and domestic violence and measures to be implemented for the protection of victims/ survivors (2022-2024); the national action plan for implementing the UN Security Council resolution on Women, Peace and Security (2022-2024) and the gender equality concept.

All these documents were drafted with the support of international and local CSOs.

In 2022, Parliament initiated and adopted several legislative initiatives to address gender equality. In a very inclusive process, Parliament adopted a package of draft laws on 15 December, related to compliance with the Council of Europe Convention on Preventing and Combating Violence Against Women and Domestic Violence, better known as the Istanbul

Convention, mandatory gender impact assessment for all legislative acts and several amendments to combat violence against women and girls. The legal definition of rape is not in line with the Convention as it is not based on the absence of consent.

In February, Parliament approved amendments to the Electoral Code, which extended gender quotas for parliamentary and municipal elections by 4 years (until the 2032 elections) and introduced gender quotas under the earlier Constitutional Court Decisions. In March, Parliament adopted a Plan for the economic empowerment of women.

Another positive step, in December 2022, was the adoption of amendments by Parliament to the law on Normative Acts, to introduce mandatory gender impact assessments for all draft legal initiatives. In 2022, the Ministry of Finance introduced Gender-Responsive Public Financial Management (GRPFM) Assessment, which creates a roadmap mainstreaming gender-responsive budgeting and gender-sensitive reporting. The Ministry of Internal Affairs updated the domestic violence risk-assessment tool, to improve its effectiveness. The updated tool entered into force in May 2023.

According to Georgian criminal legislation, so-called honour crimes are an indicator of gender-based discrimination. On an institutional level, the response to gender-based violence is well defined and operational; it needs to be improved in practice, including in terms of protective measures, survivors support services, and post-shelter services/support. The 2022 decision to provide financial compensation to victims of domestic violence is a step forward in creating a better supporting environment for victims. The necessary minimum standards for temporary housing for victims of violence against women and/or domestic violence were approved on 11 July 2023. As a result, the existence of victim status as a barrier of receiving services has been abolished from July 2023. The UN has expressed concerns about the prevalence of sex-selective abortions in Georgia, particularly among minorities.

Economic participation of women remains low compared to men. The gender pay gap is significant, with women earning monthly on average about 30% less than an average nominal salary of men.

Women's political participation in the decision-making process remains a low, especially at the local level. Gender quotas in the 2020 parliamentary elections did not change the fact that the number of women in elected positions remains low. Women constitute only 17% of all Members of Parliament. The share of local women council members doubled from 11% to 24% at the local government level, as a result of the 2021 elections. There are only three women mayors.

Georgia needs to promote gender balance in decision-making and politics with and address the non-enabling environment both within party structures and in society, but also women's capacities to finance election campaigns, gender-based disinformation and cyber-discrimination against women politicians, as well as stereotypes and perceptions of women's roles and girls' role in the society.

Significant improvements in sex-disaggregated/sensitive data collection were introduced. This needs to be further improved, especially at regional/local levels, to enable evidence-based policymaking.

Georgia has a comprehensive legal framework **on the rights of the child**. Progress in this area has been achieved. The systematic collection of reliable and comparable data disaggregated by age and sex is essential for setting evidence-based policy priorities and ensuring the effective protection of children. Georgia should further develop a child-sensitive social protection system to reduce/prevent child-poverty and providing services that promote inclusion of

children with disabilities, especially at municipal levels. According to a 2023 UNICEF study, 37.8% of children in Georgia are materially deprived. In recent years, the government has substantially increased child benefit programmes. The benefits only cover children under the age of 16 and almost half of poor families (47%) do not benefit from the programme, supposedly due to fact that they are above poverty line.

Georgia is a member of the Lanzarote Committee. However, violence against children, including corporal punishment, remains a persistent problem. The official data of the Agency for State Care reveals an increasing number of verified cases of violence against children: 1 781 cases in 2022, compared to 714 cases in 2021 and 618 cases in 2020. This echoes a similarly increasing trend in the number of cases reported to the Agency.

Prompt and effective investigation of cases involving violence against children is lacking. Georgia has not adopted a national strategy on addressing violence against children, which is addressed under the 2022-2030 national human rights strategy. However, the launch of centres for psycho-social services (Barnahus), which provide child-friendly, interdisciplinary and multi-agency services for child victims of sex-crimes, is seen as a positive step.

Georgia has made progress in the de-institutionalisation process of large-scale institutions. Effective investigation of the alleged mistreatment incidents that occurred over several years at the Ninotsminda orphanage is still pending and should be swiftly followed-up. Georgia needs to prioritise the development and adoption of a credible deinstitutionalisation strategy and ensure the transition to community-based care.

The existence of child, early and forced marriage and adolescent pregnancies also requires more coordinated and effective prevention. The Ministry of Internally Displaced Persons from the Occupied Territories, Labour, Health and Social Affairs registered 815 cases of adolescent pregnancies in 2022, marking an increase over previous years (518 cases in 2021 and 578 in 2020). The Ministry of Internal Affairs launched investigations into 171 cases of alleged child marriage. A coherent child-friendly justice system reform is also needed.

Concerning the **rights of persons with disabilities**, Georgia has a comprehensive legal system in place, being a party to the UN Convention on the Rights of Persons with Disabilities (CRPD) and its Optional Protocol. According to data from September 2022, there are 125 467 registered persons with disabilities in Georgia, representing 3.4% of the population. The real number is estimated to be larger, possibly 558 000.

In February 2023, the government adopted a strategy on deinstitutionalisation and independent living for persons with disabilities, together with a 2023-2030 action plan. In 2022, positive steps were taken to ensure the rights of persons with disabilities, including roughly 20% more funding for social packages, to counter inflation. Persons with disabilities working in the public sector can now maintain their social payment. There were 78 persons with disabilities employed in the civil service in 2022, compared to 80 in 2021 and 51 in 2020. Persons with disabilities continue to face discrimination in many aspects of life, from education to poor social awareness in general, and remain one of the most marginalised groups in the country.

The disability assessment system has not yet moved away from the medical model and still largely disregards individual functioning and environmental factors that undermine the well-being of persons with disabilities. The legislation requires the government to shift from a medical to a biopsychosocial assessment model in 2023. In March 2023 the action plan on introducing a biopsychosocial model of assessment for disability was approved by the Ministry of Labour, Health and Social Affairs (MLHSA).

National accessibility standards are not effectively enforced and a lack of access to buildings, transport and services persists, with persons with disabilities facing physical and sensory obstacles.

The upholding of the **rights of lesbian, gay, bisexual, transgender, intersex and queer (LGBTIQ) persons** remains a challenge. In Georgia LGBTIQ persons are one of the most marginalised groups, subjected to systemic homophobia, negative social attitudes and political exploitation of homophobic sentiments.

The national strategy for the protection of human rights for 2022-2030 does not address LGBTIQ rights. The authorities fail to recognise and acknowledge the systemic nature of discriminatory patterns and inequalities affecting LGBTIQ persons, and this has resulted in significant gaps in the measures taken to address these concerns. There is an absence of concrete measures to support LGBTIQ persons, combating discrimination based on sexual orientation and gender identity.

The use of hate speech by politicians and public figures fuels hatred towards LGBTIQ persons, makes them socially unacceptable and extends the scope of violence against them. Investigations into alleged hate crimes in 2022 failed to meet standards of effectiveness and timeliness. A similar conclusion was made by the Council of Europe's Commissioner for Human Rights, who identified the failure to identify and correctly qualify hate motives as one of the biggest challenges.

No investigation or prosecution has taken place of the instigators and organisers of the violence during the events of the Tbilisi Pride march in 2021. On 16 January 2023, a Court of Appeal reduced the charges against the perpetrators (and excluded the qualification of 'organiser').

The issue of legal gender recognition is not regulated, and the general procedures are vague. On 1 December 2022, the ECtHR found a violation of Article 8 of the European Convention on Human Rights (the right to protection of private and family life) in the case of three transgender men v. the Georgian state.

Regarding the **protection of persons belonging to minorities**, 13.1% of the population of Georgia (488 136 people) belong to a national minority. Of those, 6.27% are ethnic Azerbaijanis and 4.53% ethnic Armenians. There are other ethnic groups, such as Kists, Udis, Avars, Assyrians, Ossetians, Yezidis, Kurds, Ukrainians, Russians, Greeks, Jews and Roma⁷, in total making up about 2.4% of the population.

The political representation for minorities is limited, including at local level. In the Parliament, 6 MPs belong to the national minorities (3 Azerbaijanis, 2 Armenians and 1 Yazidi). At municipal level, several local councils have a majority of minority representatives (in Akhalkalaki 35 out of 42 members are from national minorities, in Ninotsminda 29 out of 30).

The 2021-2030 state strategy for civic equality and integration is being implemented. The government has prepared a 2023-24 action plan with a special focus on empowering women and young people from minority backgrounds, through targeted programmes and improved knowledge of the national language as a key priority. One of the priorities in the strategy is 'national language to support integration'.

The systemic problems in the minority educational system have resulted in various education-related issues, including poor knowledge of the national language. Minority pupils have lower PISA scores than other Georgian pupils, which reflects educational inequality in terms of

⁷ In line with the terminology of European institutions the umbrella term 'Roma' is used here to refer to a number of different groups, without denying the specificities of these groups.

access to pre-school education and a lack of resources for schools in areas densely populated by minorities. Teacher training and materials for teachers of the Georgian language and minority languages is not sufficient.

There are around 22 TV stations broadcasting in minority languages, over ten online media outlets and several radios run by minorities. Minority media face similar problems to those of ‘critical’ national media outlets, e.g. lack of financing, attacks against journalists, slandering.

Lack of equality was also observed regarding the rights of religious communities (10.7% Muslim and 2.9% of Armenian Apostolic Christianity). The Orthodox church (representing 83.4%) enjoys unequal privileges in terms of owning or purchasing state property and as regards taxes. Allocation of municipality funding is also discriminatory towards some religious groups. The Defence Code of 11 July 2023 provides for an exemption to military service for clergy in the Orthodox church, but not in other confessions.

According to the 2014 population census, there are about 640 **Roma** living in Georgia. Most of them are registered and have identity documents. In general, they have access to social services and education. There is no specific legislative framework to address Roma issues, given the small number of them residing in Georgia. The State strategy for civic equality and integration for 2021-2030 and its accompanying action plan address all minorities, including Roma, to protect and support their cultural identity and increase their participation in different spheres of social life. The Roma are one of the most discriminated ethnic groups and suffer from more limited access to housing and government services and experience literacy problems, which impact children’s education. It is also a cause of concern that children living and/or working on the streets are predominantly Roma.

The Constitution states that citizens must be afforded the same rights regardless of ethnicity, and in accordance with international law, must ‘have the right to develop freely, without discrimination and interference, their culture.’ According to the 2022 OHCHR report, Georgia supports activities aimed at promoting the culture of national minority representatives and inter-cultural dialogue. National minority theatres, museums and cultural centres receive government funding. The registration of monuments of cultural heritage is ongoing and various buildings have received monument status. The monuments of various national minorities are being monitored and rehabilitated.

There are approximately 92 000 **internally displaced** families from the breakaway regions of Abkhazia and South Ossetia (more than 290 000 internally displaced people, or IDPs). There is a need to ensure that resources are distributed based on needs rather than IDP status. To date, a long-planned IDP social allowance reform, aiming to change assistance from status-based to needs-based, had not been implemented. Providing IDP families with durable, permanent accommodation remains a challenge. In 2022, the government provided 3 530 internally displaced families with new housing. The 2023-2024 action plan for implementing the state IDP strategy envisages a reduction in provision of durable housing solutions. Parliament introduced additional amendments in December 2022, following which any IDP born after 2022 will no longer have a right to request housing individually, unless they are a member of a nuclear family. Both these amendments constitute positive steps towards a needs-based rather than status-based assistance policy.

As regards **property rights**, Georgia has legislative guarantees in place. The process of initial registration of land through the cadastral system has not been finalised. Approximately 708,000 ha of territories in the country remain to be registered in the property registry.

2.2.2. Chapter 24 - Justice, freedom and security

The EU has common rules governing border control, visas, residence and work permits, external migration and asylum. Schengen cooperation entails removing border controls inside the EU. EU Member States also cooperate with Georgia in the fight against organised crime and terrorism, and on judicial, police and customs matters, with the support of EU Justice and Home Affairs agencies.

Georgia has **some level of preparation** for implementing the EU *acquis* in this area. **Some progress** was made, through the continued implementation of the action plan for justice, freedom and security. Criminal justice reform and police reorganisation have gained momentum but so far results are limited. Reception centres for migration and asylum are now operational and so far coping with the inflow of migrants. The centres represent a major step forward in creating a sound migration and asylum management system in the country.

In the coming year, Georgia should in particular:

- continue to fulfil the visa liberalisation benchmarks as regards unfounded asylum applications in EU Member States;
- continue to fulfil the visa liberalisation benchmarks regarding anti-money laundering measures to combat money laundering and preventing/tackling corruption and organised crime;
- properly implement the EU's Integrated Border Management strategy and its accompanying action plans.

Fight against organised crime

Georgia has **some level of preparation** in fighting organised crime. **Some progress** was made by adopting and implementing a dedicated action plan and, to a lesser extent, strengthening the accountability and oversight of law enforcement agencies. The Government adopted the Report on Money Laundering and Terrorism Financing Assessment Risks in Georgia on 3 October 2023.

Georgia participated in an increasing number of joint operations with EU Member States and neighbouring countries. A national strategy for combating organised crime was adopted in 2021 and a subsequent action plan is in place and being implemented.

The anti-money laundering legislation partially reflects the recommendations by the Financial Action Task Force (FATF) and relevant international legislation. The country also needs to align its legislation with Directive (EU) 2018/1673 on combating money laundering by criminal law. There are still outstanding recommendations from the Council of Europe's Committee of Experts on the Evaluation of Anti-Money Laundering Measures (Moneyval) to be addressed. Georgia needs to improve its track record of proactive investigations, prosecutions and final convictions in organised crime and money laundering.

More needs to be done to improve the coordination and effectiveness of law enforcement in fighting certain forms of crime, such as money laundering and financial crimes.

In the coming year, Georgia should in particular:

- increase the effectiveness of the investigation into criminal networks with further reform on intelligence-led policing and increasing investigators' analytical capabilities;
- strengthen the Interagency Coordinating Council for Combating Organised Crime to improve cooperation and increase the efficiency and effectiveness of the fight against organised crime;

→ strengthen the accountability and oversight of law enforcement agencies.

Institutional set-up and legal alignment

Georgia has 11 415 police officers (11 337 in 2021) which is 309.5 police officers per 100 000 inhabitants in 2022, compared with an EU average of 335 police officers per 100 000 inhabitants over 2019-2021.

The fight against **organised crime** falls under the remit of several law enforcement and security administrations in Georgia. Coordination of policy development and implementation lies with Georgia's Inter-agency Coordination Council for Combating Organised Crime. It is composed of the Ministry of Internal Affairs (MIA), the Ministry of Justice (MoJ), the Ministry of Finance, the Ministry of Education and Science as well as the General Prosecutor's Office and the State Security Service. MIA acts as the Secretariat of the Interagency Council. The Asset Recovery Office is set up within the Public Prosecution Office. There has been a significant increase in seized/confiscated assets, especially in money laundering and corruption-related cases. In 2022, the Prosecutor General's Office confiscated EUR 19 856 600 worth of assets (compared to EUR 5 668 484 in 2021) in money laundering cases and EUR 1 578 600 worth of assets (compared to only EUR 180 330 in 2021) in corruption cases. Georgia's financial monitoring service is the Financial Intelligence Unit (FIU). It continued to strengthen its analytical capacity for data processing and financial analysis. No beneficial ownership register has been created yet.

Georgia has ratified the UN Convention against Transnational Organised Crime, as well as its protocols on Trafficking in Persons and Smuggling of Migrants. In these areas the criminal code is partially in line with the EU *acquis*. The Law on confiscation of criminal assets is partially aligned with the EU *acquis*.

The main strategic priorities for combating organised crime are reflected in the 2021-2024 national strategy for combating organised crime. In April 2023, the government approved the 2023-2024 action plan under this strategy. On 3 October 2023, the Government adopted the Report on Money Laundering and Terrorism Financing Assessment Risks in Georgia.

As a way to implement Priority 6 in the European Commission's opinion, a parliamentary working group on strengthening the fight against organised crime was created, under the leadership of the Parliament's Defence and Security Committee. In October 2022, the Committee adopted an action plan with 76 activities tackling organised crime, cybercrime, trafficking in human beings, money laundering, terrorism financing and drug-related crimes.

Amendments to the Criminal Procedure Code on the separation of powers between criminal prosecution and investigation bodies are in process. The reform is part of the commitments taken by the government in the context of the 2021-2027 EU-Georgia Association Agenda.

The legislation on trafficking in human beings is well developed. The criminal code criminalises trafficking in human beings for the purpose of sexual and labour exploitation and lays down penalties ranging from seven to 12 years imprisonment for offences involving an adult victim, and from eight to 12 years for those involving a child victim.

The Labour Inspection Service is responsible for detecting forced labour and/or labour exploitation cases in public and private companies.

To reinforce the proactive identification of possible cases among children working and/or living on the street, special guidelines for eight mobile groups of the Agency for State Care were developed in collaboration with the MoJ, the Agency for State Care and the International Organisation for Migration.

The Ministry of Justice (MoJ) coordinates the fight against **trafficking in human beings** leading the Anti-trafficking Interagency Coordination Council (THB Council). Further capacity building for the relevant law enforcement agencies is needed. The new 2023-2024 national action plan was adopted in December 2022. It is based on the '4Ps' principles (i.e. Protection, Prevention, Prosecution and Partnerships) and is in line with most of the EU, UN and Council of Europe (GRETA) special rapporteurs and the US State Department recommendations and strategic priorities. The THB Council approved the governmental strategy on protecting homeless children from violence, including trafficking in human beings in December 2022.

Fight against cybercrime is one of the core priorities of the 2021-2024 strategy for combating organised crime. Georgia is party to the Budapest Convention on Cybercrime, except for the Second Additional Protocol to the Convention. Georgia's criminal law is largely in line with the Lanzarote and Budapest convention requirements in terms of addressing online child sexual abuse and exploitation. A National Action Plan for Combatting Violence against Children in the Digital Environment aligned with the Lanzarote Convention is needed.

The **possession of weapons by civilians** is regulated by article 236 of the Criminal Code, which envisages criminal liability for the illegal purchase, storage, carrying, manufacturing, transportation, forwarding or sale of firearms (other than smooth-bore firearms (shotguns) for hunting), ammunition, explosive substance or explosive devices. The Law on Weapons and regulations were amended to prevent and reduce cases of non-designated use of weapons and to restrain illegal circulation of weapons.

In September 2022, the Parliament adopted amendments on combating money laundering and the financing of terrorism, to align with the 5th EU anti-money laundering Directive, including regulations and a supervisory mechanism on virtual assets. Still, Georgia has yet to fully align with this Directive. The 2023-2026 national anti-money laundering strategy was approved on 4 April 2023, together with and its implementing action plan on prevention, detection and combating money laundering and terrorist financing as well as financing weapons of mass destruction.

Witness protection in criminal proceedings is regulated by Chapter 9 (Articles 67-71) of the Criminal Procedure Code.

Implementation and enforcement capacity

Georgian organised crime groups operate beyond Georgia's borders and are active in migrant smuggling, organised property crime, trafficking in human beings, firearms and drug trafficking, money laundering and other related crimes, such as document fraud.

The number of investigations into organised crime in 2022 was 196 (compared to 100 in 2021). The number of prosecuted and convicted individuals for organised crime ('thief in law' offences) has increased. In 2022, 257 people were prosecuted/indicted for different organised crimes (211 in 2021), of which 83 fell under 'thief in law' offences. 161 people were convicted of organised crime in 2022 (94 in 2021) and 87 for 'thief in law' offences, compared to 39 in 2021 (an increase of 123%).

Georgia needs to strengthen the professional development of training for the employees of the agencies involved in fighting cybercrime.

On **international police cooperation**, Georgia concluded a Working Arrangement with the European Union Agency for Law Enforcement Training (CEPOL). It is recommended that the Georgian authorities, with the assistance of CEPOL design, prepare and organise targeted training to address the priority training topics at a national level.

An operational cooperation Agreement with the European Union's law enforcement Agency (Europol) is in force. Georgia has increased its participation in Europol Analytical projects. Between May 2022 and February 2023, 1 002 pieces of operative information related to more than 4 500 people were shared by MIA with Europol members and partner countries through the SIENA channel. In 2022, 2 970 information were exchanged compared to 2 505 in 2021 (+20%). Moreover, in 2022 62 cases were initiated via SIENA compared to 33 in 2021 (+93%).

Since March 2023, Georgia has been participating in a Joint Investigation Team (JIT) to fight irregular migration, initiated by Italy, Greece, Ukraine and Georgia.

Georgia substantially increased its participation in the context of the European Multidisciplinary Platform Against Criminal Threats (EMPACT), from 40 operational actions in 2022 to 79 actions in 2023. Georgia is co-leading one operational action in 2023, as it did in 2022. Georgia's EMPACT coordinator actively participates in the meetings of the EMPACT national coordinators.

Georgia has been actively involved in working groups as a member of Interpol. In the reporting period, a large amount of operational information was exchanged with various countries through Interpol channels. Currently, the MIA deploys police attachés in several partner states, covering numerous countries (including EU Member States and EU/Schengen Associated States).

Concerning **domestic operational capacity**, the modernisation of the police forces continued with further development of intelligence-led policing (ILP), aiming to establish a unified system for crime information and analysis. With the aim of supporting the smooth implementation of the ILP reform process, an action plan for 2023-2025 was adopted in April 2023. Moreover, by the end of 2022, community-led policing was introduced in all police divisions in Tbilisi and the concept has been launched in Rustavi.

In 2022, 96 cases of investigations of crimes under Art. 194 of the Criminal Code 'Legalisation of illegal income (**money laundering**)' were registered and 19 cases solved – compared to 64 cases registered and 17 solved in 2021.

Georgia is primarily a country of origin and, to a lesser extent, of destination and transit, for victims of **trafficking in human beings**. The number of investigations, prosecutions and detected victims of trafficking was gradually increasing until 2021, when there were 16 investigations, five prosecutions and two convictions (compared with 19 investigations, seven prosecutions and four convictions in 2021).

On **arms control** in 2022, the first instance courts heard 14 cases (against 16 people); in 13 cases (against 13 people) courts delivered convictions and in one case (against three people) the court delivered an acquittal. In 2021, the first instance courts heard eight cases (against nine people).

Cooperation in the field of drugs

Institutional set-up and legal alignment

The 2023-2030 national drug strategy was adopted on 24 February 2023 along with its accompanying action plan for 2023-2024 and the 2022-2026 national action plan for the drug information system. The Ministry of Justice serves as a national focal point for the Reitox network run by the European Monitoring Centre for Drugs and Drugs Addiction.

The **legal framework** for the fight against drugs consists of specific legislation and provisions in the criminal code, which include both criminal and administrative penalties. The legal framework for this is largely in line with the EU *acquis*. Rules on minimum sentences and

penalties for drug-related criminal offences need to be further aligned. Georgia is party to the relevant international narcotic drug control conventions.

Georgia has had a National Drugs Observatory (NDO) since 2020, which is in charge of collecting and analysing data for evidence-based drug policy. The Observatory is hosted by the Interagency Coordinating Council for Combating Drug Abuse and is part of the Ministry of Justice. The Early Warning System (EWS) on new psycho-active substances (NPS) has not yet become operational.

Implementation and enforcement capacity

Georgia is a transit country located on the Caucasus drugs route, used among other things for smuggling heroin from Iran to Türkiye and onwards into the EU. Drug seizures also include hemp and cannabis. Addressing drug transit and drug trafficking is one of the biggest challenges of the law enforcement system, as outlined in the National Strategy on Combating Organised Crime. The Ministry of Internal Affairs continuously implements measures aimed at reducing illicit drug trafficking. In 2022 3 112 kg of illicit narcotic substances were seized (compared with 2 581 kg seized in 2021). In 2022 202 people were accused of illegal sales of drugs (136 in 2021).

The National Drug Observatory has no dedicated budget but it can rely on the financial resources and infrastructure of the Ministry of Justice. Although the laboratory of the Ministry of Internal Affairs is well equipped, the implementation of a National Early Warning System (NEWS) on new psychoactive substances (NPS) is at an early stage and needs to be developed. Both the law enforcement system and the National Drug Observatory are in need of further capacity building. The National Drug Observatory should further improve its reporting and effectively make the NEWS operational.

In September 2022, the MoJ signed a second technical cooperation working arrangement document with the European Monitoring Centre for Drugs and Drug Addiction (EMCDDA). Several national data collection systems are available in Georgia, some compatible with EMCDDA protocols.

There are two types of treatment available in Georgia for drug users and people with substance use disorders (SUD): opioid agonist therapy (OAT) and withdrawal-oriented therapy, including detoxification. Methadone maintenance therapy (MMT) is available only in public clinics. Suboxone maintenance therapy is available in both public and private clinics. The country has relevant regulatory framework and standards for treatment management, and the EMCDDA's treatment demand indicator has been in operation since 2021. Psychosocial rehabilitation capacities and possibilities are still limited and need further development. In Georgia, harm reduction programmes are implemented by low-threshold service providers, which are members of the Georgian Harm Reduction Network (GHRN). Services are funded mainly by the Ministry of Health and the Global Fund to Fight AIDS, Tuberculosis and Malaria, and in some cases by other independent projects.

Fight against terrorism

Institutional set-up and legal alignment

A permanent interagency commission, composed of high-level representatives from all agencies responsible for preventing and combating terrorism, is chaired by the State Security Service of Georgia (SSSG). The SSSG is responsible for terrorism-related incidents and investigations, including cases of terrorism financing and cyber-terrorism.

Anti-terrorism legislation is largely aligned with the EU *acquis* and relevant international law,

including UN Security Council Resolutions. It is a criminal offence to use Georgia's online space to support terrorism and/or incite terrorism. Georgia has a legislative framework on protecting critical information infrastructure, though the overall critical infrastructure protection framework is still being prepared.

Georgia has a comprehensive legal framework in place to criminalise terrorism financing and has adopted a law on facilitating measures to counter money laundering and terrorism financing. Georgia continues to be only partly compliant with the Financial Action Task Force recommendation relating to an independent financial investigation unit/financial intelligence units.

A national counterterrorism strategy for 2022-2026 and the corresponding action plan were adopted in 2022. The 2021-2030 national strategy on reducing chemical, biological, radiological and nuclear threats also covers arms control in each of these domains.

The first money laundering and terrorist financing risk assessment was adopted in October 2019. The Government adopted the Report on Money Laundering and Terrorism Financing Assessment Risks in Georgia on 3 October 2023. Following the 2020 evaluation by the Council of Europe's Moneyval committee, Georgia has been in an enhanced follow-up procedure. In the first follow-up report, Georgia was, for one recommendation (financial intelligence unit), upgraded from 'partially compliant' to 'largely compliant'. The upgrade was possible because of the amendments to the Law on anti-money laundering/counter-terrorism financing (AML/CFT). Georgia also amended the AML/CFT law in order to fulfil the relevant FATF recommendations.

Implementation and enforcement capacity

Georgia is involved in international efforts in the fight against terrorism and is an active member of the Global Coalition against Daesh (ISIS). Georgia has signed bilateral international agreements that include cooperation in the fight against terrorism with 29 partner countries, of which 17 are EU Member States.

In May 2022, five individuals were convicted of membership of a terrorist organisation, joining a foreign terrorist organisation and assisting in terrorist activities. They were sentenced to imprisonment for a term of 10 to 12 years.

The SSSG detained a Georgian citizen on his arrival at Tbilisi International Airport in December 2022 and brought charges against him for joining a foreign terrorist organisation and assisting in terrorist activities. He was detained as a measure of constraint.

Following a special operation, in 2023 the SSSG's counterterrorism centre arrested a Georgian citizen who was an ISIS leader, on the basis of court decision. An investigation was launched under the Criminal Code, which criminalises joining a foreign terrorist organisation and supporting it in terrorist activities. In May 2023, the counterterrorism centre arrested a number of ISIS supporters (six Georgian citizens and one foreign national). Investigations were launched.

In December 2022, the SSSG further expanded cooperation with Europol's three operational analysis projects on counterterrorism (on 'Travelers', Terrorist Finance Tracking Programme and 'Check the Web') and joined the Counter Terrorism Joint Liaison Team (CT JLT).

Judicial cooperation in civil and criminal matters

Georgia is a member of The Hague Conference on Private International Law and party to six of its core conventions, including the Convention on service of documents (1965), the Convention on the taking of evidence (1970) and the Convention on international child

abduction (1980).

Georgia has not ratified the Convention on Choice of Court agreements (2005), the Convention on the international recovery of child support and other forms of family maintenance (2007) and its Protocol on the law applicable to maintenance obligations, nor the Convention on the recognition and enforcement of foreign judgements in civil or commercial matters (2019). Georgia has appointed a Liaison Prosecutor at Eurojust.

Georgia's Law on international cooperation in criminal matters provides the basic legal framework for judicial co-operation in criminal matters. Cooperation in criminal matters, as well as recognition and enforcement of foreign judicial decisions outside the framework of bilateral agreements and conventions, is allowed based on special agreements or reciprocity with other countries. The MoJ and the Prosecutor's Office, as the central authorities designated in accordance with international agreements, manage Georgia's international judicial cooperation in civil and criminal matters.

The Prosecution Service of Georgia concluded a working arrangement with the European Public Prosecutor's Office (EPPO) on 28 September 2022.

Foreign judicial decisions are legally enforceable in Georgia if recognised by a competent court in Georgia, under the conditions outlined in the Law on international cooperation in criminal matters. The Convention on international child abduction is implemented efficiently. Georgia does not have a practice of direct judicial communication with countries outside the EU.

All aspects of customs cooperation are covered under Chapter 29 – Customs union.

Legal and irregular migration

Institutional set-up and legal alignment

The State Commission on Migration Issues (SCMI) has, since 2010, been the Government's consultative body for discussing and taking decisions on various important issues related to migration management.

As of 2022, the SCMI has nine line ministries as fully-fledged members and a number of bodies with consultative status (international and local NGOs, the Public Defender's Office and educational/research institutions). The SCMI and its secretariat are in charge of developing and implementing Georgia's migration strategy, coordinating migration management and developing and monitoring the strategy's annual action plans. The existing institutional architecture is well established and functions effectively.

The 2021-2030 migration strategy covers the improvement of migration management, facilitating legal migration, the fight against irregular migration, the reintegration of returned migrants, an improved asylum system and the integration of aliens. The strategy includes a whole-of-government approach and considers gender equality and human rights issues as cross-cutting ones. Annual action plans are developed and implemented by the relevant line ministries.

Amendments to the Law on labour migration were prepared by the Ministry of Internally Displaced Persons from the Occupied Territories, Labour, Health and Social Affairs, and were adopted by Parliament in May 2023. The amendments aim to refine existing legal norms and enforcement mechanisms in terms of labour emigration and immigration.

The fight against irregular migration and the administration of the Temporary Accommodation Centre are led by the MIA. The 'Procedure for Detaining and Accommodating Aliens in the Temporary Accommodation Centre' was amended on 25 July 2023 and the 'Rule for Accommodation of the Asylum-seeker in the Reception Centre or Another Place' was amended

on 17 August 2023.

Georgian legislation on foreigners is broadly in line with the EU *acquis*. It provides for the *nonrefoulement* principle, and for a maximum detention time for irregular migrants in detention centres. The legal framework needs to be further aligned regarding migrants' rights, notably for vulnerable migrants. Georgia joined the European Migration Network as an observer in 2021.

Georgia has **readmission agreements** with the EU (in force since 2011) and bilaterally with Denmark as well as with the UK, Switzerland, Norway, Iceland, Montenegro, the Republic of Moldova, Belarus and Ukraine. Under the aegis of the EU agreement, it has concluded bilateral implementing protocols with 12 EU Member States⁸. Georgia is in the process of concluding (i) further bilateral implementing protocols with the remaining EU Member States and (ii) is negotiating readmission agreements with additional countries.

Implementation and enforcement capacity

In 2022, there were 580 illegal crossings of Georgia's borders (Art. 344 CCG), compared to 438 in 2021. In the area of migrant smuggling, Georgia cooperates with international organisations and partner countries in the framework of police and international cooperation on combating cross-border crime.

The implementation of the Readmission Agreement with the EU is very good, as corroborated in the last Joint Readmission Committee meeting in November 2022. In 2022, 8 045 Georgians returned to Georgia following an order to leave. Of these, 2 870 fall under the assisted voluntary category, 3 375 under assisted forced return and 1 560 were non-assisted voluntary returnees.

The overall level of coordination of migration management in the country is well-designed. The recent changes in Georgia's migration landscape, caused by the Russia's war of aggression against Ukraine, highlighted existing challenges in migration management. The government demonstrated an openness to refugees and Ukrainian citizens with its limited long-term strategy.

In recent years, the MIA took major steps to improve the effectiveness of detection and expulsion mechanisms for individuals staying in Georgia without a permit, in accordance with existing international standards. In 2022, 165 legal expulsion orders were executed by the MIA, mostly for citizens of Iran, Türkiye and Azerbaijan.

The only Temporary Accommodation Centre (TAC), operated by the Migration Department of the MIA, can accommodate up to 60 detainees. In 2022, 73 foreigners were placed in the TAC (including a high number of citizens of Türkiye (23) and Azerbaijan (10)). In the first quarter of 2023, there were 38 foreigners placed in TAC. TAC has the policy to prevent all forms of discrimination and a mechanism to report ill-treatment, and constant efforts are made to improve both the conditions in the centre and the capacities of the personnel working there. Staffing situation is good.

2022 was an exceptional year in terms of returns to Georgia, reaching the highest number ever: 2 945 persons from 31 countries. In 2022, Greece outnumbered all other countries with 55.69%, followed by Germany (23.19%), Austria (4.92%), France (3.46%) and Switzerland (3.43%).

⁸ Belgium, Bulgaria, Czechia, Germany, Estonia, Lithuania, Luxembourg, Hungary, Netherlands, Austria, Romania, Slovakia.

The reintegration programmes of returning migrants need improvement as they do not sufficiently address the specific needs of all categories of returnees (e.g., vulnerable returnees groups versus highly skilled migrants).

The Agency of Internally Displaced Persons, Eco-migrants and Livelihood Provision (the Livelihoods Agency), operating under the Ministry of Internally Displaced Persons from the Occupied Territories, Health, Labour and Social Affairs (MoLHSA) is not sufficiently budgeted to deal with the challenges of return and re-integration of migrants. Recognising this limitation, the draft Reintegration Policy has been developed by MoLHSA, introducing a more holistic approach to reintegration based on the whole-of-government approach. The draft is under interagency review and is expected to be endorsed by September 2023. MoLHSA plans the establishment of a returned migrants registration and reintegration management digital system.

Asylum

Institutional set-up and legal alignment

Asylum procedures are the responsibility of the migration department of the MIA.

Georgia is a party to the 1951 Geneva Convention on the status of refugees and its 1967 Protocol. Legislation on asylum is broadly in line with the EU *acquis*, notably on improved reception standards and the rights of asylum applicants such as rights for employment, secondary education, psychological and social aid, reunification of families and subsidiary protection. As to the alignment of legislation and standards regarding interview techniques, access to rights and legal aid, international partners, in particular the UNHCR, report that this is sufficiently addressed.

A programme for the integration of persons under international protection, asylum seekers and stateless persons is run by the Livelihoods Agency and the MoLHSA agency.

Cooperation between Georgia and the European Union Agency for Asylum (EUAA) started in 2013.

Implementation and enforcement capacity

According to MIA data, in 2022, 1 473 individuals applied for asylum in Georgia.

The top countries of origin were Ukraine (516 in 2022, 3 in 2021), Türkiye (203 in 2022, 137 in 2021), Iran (194 in 2022, 125 in 2021) and Russia (115 in 2022, 54 in 2021).

Most asylum seekers were male, and the biggest age group was 26-40 years old, followed by 41-65 years old. The gender distribution (i.e. mostly male) is similar in the case of the major countries of origin. However, in the case of Ukraine, more women applied for asylum than men.

Numerous challenges in asylum/migration management appeared with the influx of Ukrainian nationals into Georgia. Around 24 000 Ukrainian citizens were living in the country as of the first quarter of 2023. They have been granted an extended stay in the country for 2 years. They enjoy certain access to health and social services. Given the increase in asylum applications, the only state-run reception centre is full, and some asylum-seekers have turned to the UNHCR for assistance with accommodation. Services for vulnerable asylum-seekers, such as those in need of psychological or psychiatric treatment, are largely lacking and are fulfilled by a number of grass-roots CSOs, many of them established by the Ukrainian nationals themselves.

Another challenge for asylum management is the high number of stranded migrants in Georgia who turn to the asylum procedure after they fail to obtain or extend a short-term residence

permit. This illustrates that the various stages of the country's immigration policy (visa, admission into the country and residence) are not fully synchronised with each other.

Visa policy

The main authorities responsible for examining visa applications are the Consular Department of the Ministry of Foreign Affairs (MFA) and Georgia's diplomatic missions and consular posts abroad. The visa register/database is hosted by the MFA. Visa legislation is broadly in line with the EU *acquis*, but the list of non-EU countries with which Georgia maintains visa-free regimes is not fully aligned with the list of non-EU countries whose nationals are subject to a visa for short stays in the EU. There are 17 such countries: Ecuador, Iran, Jordan, Kazakhstan, Kuwait, Kyrgyzstan, Lebanon, Oman, Qatar, Russia, Saudi Arabia, South Africa, Tajikistan, Thailand, Türkiye, Turkmenistan and Uzbekistan. The Commission issued a recommendation for Georgia to align its visa policy to the EU in its sixth report under the Visa Suspension Mechanism⁹. Security features of visas and travel documents are broadly aligned with EU standards.

Georgia does not have agreements with non-EU countries to issue visas on its behalf. Individual activities related to the issuance of visas can be entrusted to a non-EU country only under conditions determined by an international agreement or treaty.

The implementation of the **visa-free regime** with the EU, which has been in place since 2017, is globally satisfactory. Overall, Georgia continues to fulfil the visa liberalisation benchmarks and has taken action to address the Commission's previous recommendations. The law on pre-departure checks on the credentials of Georgian nationals who wish to travel to the EU (in place since January 2021) continues to be implemented by the MIA's Patrol Police Department at the country's three international airports and at the Sarpi border crossing point.

According to the MIA, in 2021 there were 1 952 cases (1 896 unique individuals) and in 2022 2 726 cases (2 667 unique individuals) of Georgian citizens being denied exit to board a direct flight to the EU, based on insufficient compliance with the basic criteria of Georgia's pre-departure law. Further effort is needed to address unfounded asylum applications in EU Member States, in line with the recommendation issued in the sixth report under the Visa Suspension Mechanism. In 2022, a record number of 28 797 Georgians applied to the EU+ countries for asylum¹⁰.

Schengen and external borders

Institutional set-up and legal alignment

Border management is the responsibility of the MIA, the Ministry of Finance (Revenue Service) and the Ministry of Defence.

Under the MIA, the Georgian border police are responsible for protecting state borders (land and maritime) and the Patrol Police Department is responsible for the state border regime (document checks and border migration control) at border crossing points. Border control legislation is partly aligned with the EU/Schengen *acquis*. The Georgian Air Code obliges the air carrier to communicate **advance passenger information/passenger name records** (API/PNR) to the authorised state institution. Exactly which information should be provided under the API/PNR and the terms and conditions of its management is defined by Georgian implementing legislation.

The Integrated Border Management strategy for 2023-2027 was approved by the government

⁹ COM(2023) 730 final

¹⁰ https://euaa.europa.eu/latest-asylum-trends-annual-overview-2022#footnote5_t7thsbh.

on 9 March 2023. The strategy determines the priorities for 2023-2027 to further improve the government's integrated border management system. It includes a chapter on cooperation with the European Border and Coast Guard Agency (Frontex) and, in general, follows the structure of similar strategic documents adopted by Member States of the European Union. The strategy lacks a particular emphasis on several cross-cutting elements, in particular human rights and gender aspects. It envisages that the Frontex handbook on fundamental rights in border guarding will be integrated by the MIA Academy of Georgia within the national training curricula. Furthermore, the chapter on monitoring and evaluation of the strategy implementation, essential for guiding the National Security Council in conducting regular monitoring and evaluation exercises, was excluded from the final draft. Only general monitoring principles are included. This undermines the oversight of the strategy and monitoring and evaluation (M&E) mechanism.

Implementation and enforcement capacity

Further improvement of border guard training modules and training on implementation methods is needed. A trend of high outflow of personnel is observed at border crossing points, as well as at the green border (land border crossing points). This would need to be assessed and could serve as a basis for further support.

Border checks satisfy minimum standards, although there is a need for additional technical and human resources to improve their quality. The MIA's border management and coordination division oversees the preparation of border management strategic documents, establishing a unified border risk analysis system and coordinating activities by analytical units involved in the border management process in terms of border risk assessment.

Since 2021, the amended Law on the rules and procedures for Georgian citizens exiting and entering Georgia is enforced and establishes criteria under which a Georgian citizen may be denied issuance of a passport required to temporarily leave Georgia and may be denied crossing the state border when travelling to a Member State of the European Union or a Schengen-associated country. The abovementioned criteria partially reflect the entry conditions for third-country nationals provided in the Schengen Borders Code.

Georgia's **risk assessment** methodology is based on the common integrated risk analysis model (CIRAM) developed by Frontex and includes the three factors – threat, vulnerability and impact – defining border risks.

Customs risk management is fully automated and implemented in the automated customs data system and databases for border crossing of passengers, goods and vehicles moving through the customs border and customs clearance processes. The MIA has not yet fully operationalised the information flow and intelligence cycle layouts at all levels of analysis (tactical, operational and strategic). A systematic intra- and inter-agency information exchange between the agencies and/or departments involved needs to be set up.

Inland measures and the fight against cross-border organised crime requires improvement in investigations and prosecution of criminal offences. Fighting human trafficking, migrant smuggling, firearms trafficking and terrorism require more efficient delineation of jurisdictions and powers. Exchange of criminal intelligence and biometric data requires significant improvements. Approaches to countering transnational crime remain fragmented and largely based on disconnected efforts by different units of the MIA, Revenue Service and the State Security Service of Georgia .

From an investigation standpoint, serious crimes require more efficient delineation of responsibilities and powers. Currently, Georgia does not see smuggling of migrants as a

separate phenomenon from irregular migration. Responsible entities and departments mainly deal with each case of illegal border crossing (or attempted illegal border crossing) individually, based on their narrow remit, without really looking into the background of a crime and who stands behind it. The practice of changing identity in Georgia still seems possible based on several cases detected in recent years. This modus operandi by Georgian nationals is used to avoid Schengen Information System (SIS) hits, thereby evading detection at the European Union's external borders in case of entry ban or arrest warrant. To identify and dismantle transnational migrant smuggling networks, Georgia needs to set up a unified, comprehensive approach for thorough intelligence collection and investigation .

The MIA has proactive cooperation with Europol's European Migrant Smuggling Centre (AP Migrant Smuggling). Information on the investigation of criminal cases conducted in Georgia in the field of irregular migration is shared with the Centre. Georgia cooperates with INTERPOL on combating the illegal transfer of migrants and trafficking in human beings. To this end, in June 2022, Georgia joined the 'ODYSSEY' project initiated by Interpol Member States.

Concerning API/PNR, Georgia now receives passenger data from almost 60% of airlines. Passenger data analysis is currently conducted by each body (MIA, RS, SSSG) separately. To efficiently fight terrorism and serious crime, Georgia needs to (i) establish a joint inter-agency passenger information unit (PIU), (ii) develop information sharing schemes between different bodies and (iii) develop PIU analytical capacities.

The MIA signed a working arrangement with Frontex in 2008, which was renewed in 2021. The common core curriculum developed by Frontex is implemented in border-related courses provided to border police and Patrol Police officers by the Ministry of Internal Affairs Academy. Georgia is an associate member of the Frontex Partnership Academies Network. Georgia participates in the joint operation coordination points, aimed at improving border security, operational cooperation and the exchange of information and best practice among participating countries. Georgia is one of the most frequent destinations for Frontex returns by both scheduled and charter flights. The overall cooperation with Georgian authorities, as well as the efficiency of returns to Georgia has been very good. Moreover, Frontex is currently exploring opportunities for more advanced cooperation with Georgia in coast guard functions.

Cooperation is active with the Frontex risk analysis network. The Frontex Liaison Officer to the Eastern Partnership countries has been physically deployed to the region as of 16 July 2022 with a mandate covering all six countries, including Georgia. Among the main tasks, the officer facilitates the implementation of inter-institutional working arrangements and supports the coordination of joint activities and operational cooperation between Frontex and the countries in the region.

On operational cooperation with neighbouring countries, Georgia has bilateral agreements with neighbouring countries, mainly on customs: Azerbaijan, Armenia, Türkiye and Russia. There is an agreement between the governments of Georgia and Azerbaijan to construct the first joint border crossing point in the region.

Some measures are in place to fight **corruption** on the border, in particular the possibility to conduct inspections when disciplinary norms are violated and to impose disciplinary penalties.

Protection of the euro against counterfeiting (criminal aspects)

In 2000, Georgia acceded to the 1929 Geneva Convention for the suppression of counterfeiting currency but has not yet ratified it. The Criminal Code (Article 212) provides for liability for counterfeiting.

2.3. ECONOMIC CRITERIA

<i>Table 1.1:</i> Georgia - Key economic figures	2014-19 average	2020	2021	2022
GDP per capita (% of EU-27 in PPS) ¹⁾	31.9	33.6	34.5	37.1
Real GDP growth	4.2	-6.8	10.5	10.1
Economic activity rate of the population aged 15-64 (%) , total	53.9	50.5	50.9	51.9
<i>female</i>	44.8	40.4	40.5	41.5
<i>male</i>	64.5	62.0	62.9	64.0
Unemployment rate of the population aged 15-64 (%) , total	20.8	18.5	20.6	17.3
<i>female</i>	18.6	16.2	17.8	14.6
<i>male</i>	22.6	20.2	22.7	19.3
Employment of the population aged 15-64 (annual growth %)	0.1	-4.2	-2.0	5.4
Nominal wages (annual growth %)	6.5	5.4	9.5	22.0

Net foreign direct investment, FDI (% of GDP)	8.0	3.6	4.9	6.7
General government balance (% of GDP)	-1.5	-9.3	-6.1	-2.7
General government debt (% of GDP)	39.5	60.1	49.4	39.8

Source: National sources; 1) IMF.

In line with the conclusions of the European Council in Copenhagen in June 1993, EU accession requires the existence of a functioning market economy and the capacity to cope with competitive pressure and market forces within the Union.

2.3.1 The existence of a functioning market economy

Georgia is **moderately prepared** for establishing a functioning market economy. In 2022, the country continued its strong recovery from the 2020 pandemic-induced recession. Real GDP growth exceeded 10% for the second year in a row, where the outturn in 2022 was positively affected by the indirect impact of Russia's war of aggression against Ukraine, including the inflow of migrants from Russia and their spending. Georgia's external position improved significantly in 2022, following high deficits in previous years. While inflation remained elevated in 2022, it fell sharply in early 2023. The combination of high economic activity, elevated inflation and a stronger currency, accompanied by the unwinding of the pandemic-driven support measures by the authorities, led to a significant reduction in Georgia's fiscal deficit and public debt ratios in 2022, to 2.7% and 39.8% of GDP, respectively.

Georgia demonstrates a satisfactory track record in carrying out sound macroeconomic policies. Prudent fiscal policy before the pandemic (with deficits averaging 1.5% of GDP in 2014-2019, and public debt below 40% of GDP in 2019) allowed the authorities to provide significant fiscal stimulus after the outbreak of COVID-19. The central bank has a track record of successfully containing inflationary pressures (inflation averaged 3.8% in 2014-2019) and its policy response to the crisis appears appropriate in view of the size of the shock. The macroeconomic policy mix in 2022 helped building resilience and supported a balanced and strong economic recovery that

helped the country weather well the sizeable external shocks related to the war in Ukraine. It also contributed to some consolidation of the country's fiscal position.

The institutional and regulatory environment is favourable overall. Some challenges persist, in particular as regards the unfinished judicial reform, the adverse impact of political polarisation on business confidence, and a large degree of political control over public institutions and their limited transparency. The strong economic activity in 2022 led to significant improvements in the labour market which, however, continues to be characterised by a very high unemployment rate and a high share of informal employment. The share of state-owned enterprises in the economy is relatively low and the authorities continue to pursue important reforms of corporate governance. The banking sector is well capitalised and shows high liquidity and profitability, although the non-banking segments of the financial sector remain underdeveloped.

In the coming year, Georgia should in particular:

- continue to implement prudent fiscal, monetary and other policies underpinning macroeconomic and financial stability, in particular in view of a potential reversal of the financial flows related to the new Russian migrants;
- address the main weaknesses in the Georgian labour market, such as the low employment rate, high level of informal employment, as well as significant gender disparities and regional differences;
- further develop the non-banking segments of the financial sector.

Economic governance

The authorities continued to implement sound fiscal and monetary policies and to advance economic reforms. Georgia has a good track record in carrying out prudent macroeconomic policies, which have helped it address various recent external shocks. In 2022, the authorities weathered well the fallout from Russia's war of aggression in Ukraine by preserving macroeconomic stability, as reflected by strong economic activity, amid lower inflation than in many peer countries and a contained budget deficit. The National Bank of Georgia (NBG) has been instrumental in safeguarding macroeconomic stability during recent shocks. In June 2023, the Parliament adopted amendments to the Law on NBG that could weaken its institutional independence, which is critical for sustaining the credibility of the institution.

Georgia has progressed on implementing the three-year stand-by arrangement with the IMF that started in June 2022. The first review was completed in December 2022. Although a staff-level agreement was reached for the second review in May 2023, the review remains on hold as IMF staff consider the implications of recent amendments to the NBG law for achieving the objectives of the programme. The programme aims at entrenching macroeconomic stability by reducing fiscal and external deficits and bringing inflation to target, further enhancing financial sector resilience, and stimulating agreed reforms in the governance of state-owned enterprises, public financial management, and tax and customs administrations. The authorities treat the arrangement as precautionary, i.e. with disbursements envisaged only in case of a deterioration of Georgia's external position.

Macroeconomic stability

Economic activity recovered strongly in 2021 and 2022 from the recession induced by the COVID-19 pandemic in 2020. Real GDP growth reached double-digit levels in both 2021 (10.5%) and 2022 (10.1%). As a result, by the end of 2022, economic output was more than 13% higher than its pre-pandemic level. This translates into still low GDP per capita in

purchasing power parity of 37% of the EU average in 2022. While 2021 GDP growth was driven by household and government consumption, the 2022 expansion was the result of a strong positive impact from net exports, to a large extent driven by the services sector due to the ongoing recovery of tourism, the inflow of Russian migrants, as well as by a delayed

rebound in investment activity. Despite the increase in real wages, household consumption declined in real terms in 2022, on account of the high base but also the elevated inflation during the year. Government consumption also contracted as the authorities continued to phase out support measures introduced as a response to the pandemic.

Georgia exhibits a high (albeit decreasing) current account deficit

due to its significant deficit in trade with goods. The current account deficit averaged 9.0% of GDP in 2014-2019. It then widened to above 10% of GDP in 2020-2021, before narrowing to a record-low 4.0% of GDP in 2022. In particular, the surplus in services increased sharply to 10.9% of GDP in 2022 from 3.9% of GDP in 2021, thanks to the recovery of the tourism sector and a strong rise in exports of IT services. Georgia's merchandise trade deficit remained high at 20.7% of GDP in 2022, a reflection of its relatively narrow export base. While the deficit on the primary account rose on the back of an increase in reinvested earnings by foreign companies, the surplus on the secondary account increased thanks to growing remittances. Money transfers from Russia surged fivefold.

Georgia managed to increase its foreign exchange reserves to USD 4.9 billion at the end of 2022 from USD 4.3 billion at the end of 2021 thanks to the narrowing current account deficit and a sizeable FDI inflow, as well as foreign exchange purchases by the NBG. This meant that reserves exceeded the 100% level of the IMF's Assessing Reserve Adequacy metric. Supported by the strong nominal GDP growth and the

appreciation of the local currency, the share of gross external debt in GDP declined by more than 20 percentage points on the year in 2022 and dropped below 100% for the first time since 2014.

While consumer price inflation remained elevated in 2022 (11.9% on average), it eased sharply in 2023 to 0.9% year-on-year in August, well below the central bank's 3% target. Before the pandemic, inflationary pressures were muted and largely neutralised by the sound policies of the central bank. The disinflation in 2023 reflected the pass-through from the sharp appreciation of the local currency in 2022 (it gained 10% against the USD and 24% against the EUR), the tight monetary policy by the central bank and the stabilisation, and in some cases decrease, in global food and energy prices. The introduction of a price cap on pharmaceutical prices in early 2023 also supported the downward trend. Despite the lower consumer price

growth, the central bank kept its tight policy stance unchanged at 11.0% for a long time before it started a cautious easing cycle in May 2023, when it reduced the key policy rate by 50 basis points, followed by cuts of 25 basis points each in August and in September. This tight monetary policy together with macroprudential measures, has led to a slowdown in credit growth in 2022, in particular for households. Credit activity was mainly driven by domestic currency loans, as the central bank raised the reserve requirements for loans in foreign currency in order to reduce risks to financial stability. This slowdown ended a drawn-out credit boom, during which the stock of loans to the national economy in local currency had risen by nearly 20% on average annually in 2014-2021.

In 2022, public finances benefited from strong revenue growth supported by robust economic activity and elevated inflation, and from the fiscal consolidation efforts

including unwinding pandemic support and saving some of the revenue windfall. This followed two years (2020 and 2021) of high budget deficits, when the state intervened intensely to contain the impact the COVID-19 pandemic. Before the pandemic, the budget deficit was low at 1.5% of GDP on average in 2014-2019, in line with the cautious fiscal stance taken by the authorities. In 2022, reflecting the high economic growth and

inflation, general government revenues increased by 30% in nominal terms. At the same time, current expenditure grew by 9% and capital outlays by 24%. As a result, the general government deficit narrowed to 2.7% of GDP and thus returned below the 3%-of-GDP ceiling envisaged by Georgia's fiscal rules. This outcome was more favourable than had been planned in the fiscal consolidation path for 2022 (a deficit of 4.3% of GDP). After a sharp increase of approximately 20 percentage points during the pandemic, Georgia's public debt-to-GDP ratio declined rapidly in 2021 and 2022. At 39.8% of GDP at the end of 2022, it returned to its pre-pandemic level and was well below the 60% of GDP ceiling set by the country's fiscal rule. The improvement of the debt ratio in 2022 was mainly the result of the high nominal GDP growth and the substantial appreciation of the local currency.

The public finance governance framework was further strengthened. The 2022 Public Expenditure and Financial Accountability assessment, using an international methodology, showed that the public finance system performed well, especially as regards transparency of public finances, predictability and control in budget execution, external scrutiny and audit. Based on these results, a new Public Finance Management (PFM) strategy for 2023-2026 was prepared. The new strategy focuses on public asset management, revenue arrears monitoring, implementation of international public sector accounting standards, consolidation of central government financial statements, as well as gender-responsive budgeting. In February 2023 a public debt management strategy for 2023-2026 was adopted. It provides for a further shift to financing in local currency to minimise foreign exchange risks and deepen the local financial market. The authorities have also further developed green budgeting mechanisms.

In sum, the macroeconomic policy mix has been adequate in terms of coping with sizable external shocks, helping to mitigate the impact on people and businesses, while supporting a strong economic rebound following the pandemic. The authorities phased out

pandemic-related spending and increased capital expenditures. They also used the opportunity to rebuild fiscal buffers. The reduction of the fiscal deficit and the public debt ratios suggests a considerable improvement in the fiscal space, which is essential in view of the high investments needs in infrastructure and education. Further improvements in revenue mobilisation and in managing public investments, including better prioritisation, could improve expenditure efficiency. The tight monetary policy helped manage inflationary pressures in 2022 and was among the key factors for the sharp slowdown in inflation in early 2023.

Functioning of product markets

Georgia's business environment has been liberalised and the barriers to market entry are low. For instance, registering of a company requires just one single procedure and is completed within one day at a very low cost. In mid-2023, the number of active business entities was 32% higher than in 2021, and the number of active solo entrepreneurs was 39% higher. The insolvency legislation from 2020 has facilitated insolvency proceedings, made them more transparent and reduced their duration and costs.

The institutional and regulatory environment is favourable overall, but some challenges persist. Georgia scored very well on regulatory quality (close to EU average) and government effectiveness (better than some Member States), as measured by the 2022 World Bank's Worldwide Governance Indicators. Georgia has a comparatively low level of perceived corruption. It was ranked 41st out of 180 countries in the 2022 Transparency International's corruption perception index. However, some challenges related to the business environment persist. They include reduced business confidence due to deep political polarisation and political control over many public institutions and the prevalence of vested interests. Stalled judicial reform and inefficiencies of the court system are also considered as weaknesses in terms of protecting property rights, and thus constitute obstacles to Georgia's investment climate.

The authorities introduced or expanded a number of business support programmes, aimed in particular at small and medium enterprises (SMEs), in line with Georgia's SME development strategy and its action plan. These measures included providing micro-grants to SMEs, introducing growth hubs (business incubators) to provide local SMEs with advisory and digital services, and providing export promotion and assistance to foreign investment projects in some sectors.

The state footprint in the economy is modest. State-owned enterprises (SOEs) accounted for 3.5% of the value added of Georgian companies and 8% of employment in 2022. Three SOEs were privatized in 2022, four were liquidated and two filed for bankruptcy. The total amount of state aid issued by public bodies in Georgia and reported by the Georgian National Competition Agency was very low at GEL 3 million (below EUR 1 million). The scope of state aid reported in Georgia diverges from the EU *acquis* and is much narrower.

Corporate governance reform for the remaining SOEs is among the government's priorities and is progressing well. In December 2022, the government adopted the public corporation reform strategy for 2023-2026 and a respective action plan for its implementation. The strategy envisages a dual model for SOE ownership (50% of shares in each SOE for the Ministries of Finance and Economy, respectively), operation on the basis of commercial principles, selection of independent supervisory boards and avoiding quasi-fiscal activities unless explicitly mandated and compensated, in line with international best practices. The implementation of the strategy started with a pilot project covering three public corporations: Georgian Railways, United Airports of Georgia and Gas Transportation Company.

The share of the informal sector in Georgia's economy is considered to be substantial, but

is difficult to measure¹¹. A significant part of workers are employed informally, most of them in agriculture or in seasonal jobs. Informality significantly reduces the country's tax revenues, exacerbates poor working conditions and distorts competition. Further efforts are needed to promote formalisation, adjust tax policy measures and stimulate digital payments.

Functioning of the financial market

The Georgian banking sector remains sound. It is strongly concentrated in the two largest domestic banks, out of 14 in total. At the end of the first quarter of 2023, the banking system's capital adequacy ratio stood at a comfortable 20.8% and most lenders remained very profitable (29% return on equity). Asset quality continued to improve as the ratio of non-performing loans decreased from 5.2% at the end of 2021 to 3.8% at the end of the first quarter of 2023. Due to measures undertaken by the central bank (such as non-remuneration of the minimum reserves in foreign currencies kept by banks at the national bank) coupled with rising USD and EUR interest rates, the share of loans and deposits in foreign currencies (dollarisation) declined substantially from 51% and 58% respectively at the end of 2021 to 44% and 52% in the first quarter of 2023. The inflow of Russian migrants contributed to a substantial increase in deposits in Georgian banks.

Non-banking segments of the financial sector remain underdeveloped. Georgia's insurance sector is small with 18 insurance companies and at total insurance premium of GEL 910 million in 2022 (1.3% of GDP). The largest part of this is health insurance. Car insurance is expected to grow fast after the introduction of mandatory third party vehicle liability insurance, where the respective legislation is being currently finalised by the authorities. In 2022, only 7% of cars in the country were insured. The capitalisation and liquidity of the Georgian Stock Exchange (GSE) are limited, with stocks of 8 companies admitted for trading and a total market capitalisation of GEL 2.3 billion (3.2% of GDP) in April 2023. Since its peak in 2007, trading activity for stocks listed on the GSE has been decreasing, and a number of Georgian companies have chosen to list on international stock exchanges. In December 2022, the government adopted its 2023-28 capital market development strategy, which focuses on two main goals: developing capital market instruments and deepening of the investor base.

Access to finance has improved in recent years but is still considered as a major obstacle by many SMEs. The central bank has made substantial efforts to improve the regulatory framework and the infrastructure for digital financial services. The size of financial intermediation, measured by the ratio of loans to non-financial sector and households to GDP, has increased over the last five years from 55% at the end of 2017 to 62% at the end of 2022, as against 90% of GDP in the EU. Credit growth reached 12.1% year-on-year at the end of 2022 (excluding the effect of exchange rate fluctuations) and was faster for corporate than for retail loans. Nonetheless, access to bank loans continues to be a major obstacle for many small and medium enterprises, for instance due to substantial collateral requirements, while non-bank sources of finance are largely absent, and the existing financial products and services fail to meet the diverse needs of enterprises throughout their lifecycles. To overcome this obstacle, Enterprise Georgia, a government agency, facilitates access to finance for the private sector through credit guarantees, subsidising interest rates on bank loans and other instruments, while the Georgia Innovation and Technology Agency provides targeted support for start-ups. As a new measure aimed at stimulating lending to very small companies, especially in agriculture, the Parliament approved a law on micro banks which entered into force in July 2023.

¹¹ According to World Economics (2022), which uses an average of the latest estimates from economists around the world, the informal economy represents about 46% of GDP in Georgia, versus an EU average of 16.9 %. Such estimations need to be taken with caution given the variety of methodological approaches.

Functioning of the labour market

The situation on the labour market improved in 2022 but remains characterised by many weaknesses. The unemployment rate increased from the pre-COVID average of 19.5% in 2017-19 to 20.6% in 2021 and then decreased by over 3 percentage points year-on-year to a still high 17.3% in 2022. The structurally low employment rate rose from 40.4% in 2021 to 42.9% last year. These rates, calculated by the national statistical office (Geostat), are based on ILO definitions covering the population aged 15 years or older and are not directly comparable with Eurostat labour indicators for EU countries. The positive trends on the labour market in 2022 can be attributed to high economic growth, the arrival of qualified migrants following the outbreak of the war in Ukraine, but also to more active labour market services provided by the State Employment Support Agency. These included vocational training, internships, career guidance, intermediary services and, since March 2022, public works. To analyse the existing mismatch between labour skills and business needs, the Ministry of Economy conducted in 2022 a survey of business demand for skills on a big sample of large and small companies. Despite these improvements, numerous structural weaknesses in the Georgian labour market persist. A large share of employment is still focused on traditional sectors with low value-added (such as agriculture), and the ability of more productive sectors to create opportunities for high-skill employment remains limited. Georgia has considerable levels of informal employment (estimated by Geostat at 28% of non-agricultural employment), gender disparities and regional differences. For instance, the employment rate in 2022 was 52% for men and only 35% for women. The share of young people who are neither in employment nor in education or training (NEETs) was also very high at 30.7% in 2022, as against the EU average of 11.7%. While Georgia's labour market regulation is not considered as distortive, there is some room to improve labour market intermediation channels, facilitate flexible working arrangements to improve employment of women, and enhance vocational training.

In 2022, the average monthly wage increased by 9% in real terms (22% in nominal terms) and amounted to GEL 1592 (EUR 517). As in the case of employment indicators, wage levels displayed large gender and regional disparities, with men earning on average over 20% more than women.

2.3.2. The capacity to cope with competitive pressure and market forces within the Union

Georgia has **some level of preparation** to cope with competitive pressure and market forces within the EU. While the country has a strong track record in attracting foreign direct investment from the EU, which remains its largest trade partner, the EU's share in trade has been gradually decreasing, in favour of geographically closer economies. The structure of the economy is relatively well diversified, albeit with a high share of low value-added sectors. Its high exposure to tourism and the low value-added base of its exports makes Georgia particularly vulnerable to external shocks.

Despite some progress, the limited level of educational achievement, quality and labour-market relevance of education weighs on the development of Georgia's human capital and holds back its potential growth. Spending on research and innovation is low and very few

firms innovate. The level of investment is broadly comparable to EU, but the quality and density of the transport network remains low, despite recent investment in this area. While it has developed a stable and reliable energy sector, the country remains heavily dependent on imported energy sources. Access to digital infrastructure has improved substantially in recent years and is in line with EU levels.

In the coming year, Georgia should in particular:

- further develop its transport and energy infrastructure, in compliance with international Public Investment Management standards.
- stimulate innovation and make concerted efforts to support both public and private investment in R&D, also with a view to promoting exports.
- Improve the quality of education and training to ensure that their outcomes align with labour market needs.

Education and innovation

Despite the reforms, the outcomes of the educational system are poor. Public spending on education represented 3.6% of GDP in 2021, below the EU average of 5%. While 93% of the population has at least upper secondary education, a higher share than the EU average, only 35% have completed tertiary education, as against 41% in the EU. However, available indicators point to the quality of education as being rather low. For instance, Georgia was ranked only 70th out of 77 countries participating in the 2018 PISA assessment measuring reading outcomes in secondary education, well behind all EU countries. The unified strategy for education and science (2022-2030), adopted in August 2022, lays out priorities for improvements in this area. They include increasing access to early childhood education, development of a methodology and standards for vocational qualification system, improving the quality of higher education and making it more international.

Spending on R&D was very low at some 0.3% of GDP in the last five years (EU average: 2.2% of GDP in the same period). Georgia ranked 74th (out of 132 economies) in the 2022 Global Innovation Index compiled by the World Intellectual Property Organisation. In particular, the country exhibits weaknesses in domestic industry diversification, high-tech manufacturing, software spending, intellectual property receipts and logistics performance, among others. According to a 2022 World Bank report, very few Georgian firms innovate. The reasons include, a limited innovation ecosystem, lack of dedicated finance and advisory services supporting innovation, limited managerial capabilities, a small market and a low number of engineers and scientists. As a result, only 7% of firms introduce new or significantly improved goods or services into the market.

Physical capital and quality of infrastructure

Investment in Georgia represented 22.3% of GDP in 2022, similar to the EU average, having increased by 20% in real terms on the year following significant declines in 2020 and 2021. However, only a part of this amount was spent on infrastructure. There is a need for continued investments in a range of transport and energy infrastructure projects to enhance transit trade potential, energy independence, and connectivity with neighbouring countries and the EU. There are also some issues regarding the efficiency of public investment, operations and maintenance, and challenges to leverage public-private-partnerships. To address these challenges, the authorities work on improving the institutional framework for public investment. For instance, since 2023 all new investment projects over a specified threshold have to be selected according to internationally recognised public investment management

guidelines.

Georgia has developed a stable and reliable energy sector. However, the country is heavily dependent on imported energy. In spite of a very high share of electricity generation coming from domestic hydropower (81%), almost all other energy sources, including gas, oil products and coal, are imported. The government is focused on securing private investment to construct new hydropower stations, wind and solar power generation, increase energy efficiency and diversify fossil fuel supply sources and routes. In 2022, Georgia developed a support scheme for renewable power generation based on competitive bidding. The first auction took place in February 2023.

In transport, the quality and density of road and rail network remains weak despite gradual improvement. Poor transport infrastructure hampers internal and external connectivity and leads to poor road safety. The efforts on road infrastructure focus on the construction of the missing part of the East-West Highway (part of European route E60), with one of the sections completed in late 2022. Apart from roads, ports and railways also remain underdeveloped and face capacity constraints, in part due to lack of sufficient investment.

Access to digital infrastructure has improved substantially in recent years and is in line with EU levels. 92.3% of Georgian households have fixed broadband internet access at home, in line with the EU average.

Sectoral and enterprise structure

Tourism and low value-added sectors account for a sizeable share of Georgia's economy. The services sector accounts for approximately 60% of GDP. This share has been relatively stable since 2014. Within services, tourism has been playing an increasingly important role over the years. It was severely hit by the COVID-19 pandemic but has been steadily recovering since then. The number of international visits in 2022 was some 40% lower than the peak recorded in 2019 but tourism revenues have reached an all-time high. Industry, including construction, is the second largest sector of the economy with a share of 24.6% of GDP in 2022. Industrial production is dominated by low value-added sectors: commodities (predominantly metals), agricultural products and food processing. These are also Georgia's key export items. IT and communication was the sector witnessing the strongest expansion in 2022 and increased its share in GDP by more than one percentage point to 4.7%. While still sizeable when compared with the EU average (1.4% of GDP in 2022), agriculture has been steadily losing ground and accounted for 7.0% of GDP in 2022, down from 9.6% in 2014.

As regards employment, the share of people working in agriculture is disproportionately high, even if this has decreased in recent years. This suggests continued low productivity in the sector, which seems to be a reflection of the still high reliance on small-scale farming that hinders economies of scale. People employed in agriculture amounted to 17.9% of the total in 2022, thus making the sector the biggest employer in the country. It is followed by wholesale and retail trade (15.0%), industry (11.9%) and education (11.7%). Construction and transportation are among the sectors that have witnessed the sharpest rise in employment in the last five years, and the information and communication sector grew very fast in 2022.

SMEs remain key for the Georgian economy despite a gradual decline in their role in recent years. In 2022, they accounted for 37.3% of the turnover and 52.8% of the value added by all companies. This is well below the 55.1% and 59.2% respective average annual values for the 2014-19 period. At the same time, the number of employees at SMEs went down to 58.3% from 67.6%. Access to finance remains a key constraint for the development of the sector.

Economic integration with the EU and price competitiveness

Georgia is an open economy with a persistently high merchandise trade deficit driven by a relatively weak domestic export base; its trade integration with the EU is moderate.

Following the sharp contraction caused by the COVID-19 pandemic due to the hit on the sizeable tourism sector, Georgia's trade openness as measured by the ratio of trade with goods and services related to GDP recovered strongly to 117.2% of GDP in 2022. The EU is the country's main trading partner but its share in the total turnover in merchandise trade has been gradually declining due to a stronger increase in nominal trade with non-EU countries. After peaking at nearly 28% in 2016, it has gradually eased to 20.5% in 2022. The decline was particularly pronounced for Georgia's exports of goods. The EU's share in them fell to 15.4% in 2022, down from 28.7% in 2015. Georgia has strong links with all its neighbours - Türkiye and Russia are the next two biggest trade partners besides the EU.

Georgia remains an attractive destination for foreign investments. In 2014-2019, FDI inflows amounted to nearly 10% of GDP each year on average. Following a short-lived drop with the pandemic, they rebounded strongly in 2022 to exceed for the first time USD 2 billion (8.3% of GDP). While, similarly to previous years the majority of the FDI reflected re-invested earnings that are supported by the favourable tax regime, there was also a significant increase in equity investments in 2022. The EU is traditionally the biggest source of FDI for the country. In 2018-2022, the EU-27 accounted for 37% of total FDI inflows, followed by the UK (27%), Türkiye and the US. The sectoral breakdown of FDI is diversified. The financial sector was by far the biggest recipient of FDI (30% in 2018-22), while the real estate, energy, manufacturing, trade, entertainment and other sectors also attracted significant investment.

The real effective exchange rate has appreciated strongly following the pandemic, implying that Georgia's competitiveness has weakened. Supported by the recovery of the tourism sector and the large money transfers associated with the relocation of Russian citizens and businesses following the start of the war in Ukraine, it appreciated by nearly 40% in cumulative terms in 2021 and 2022 and continued this upward trend in the first four months of 2023. In particular, the real exchange rate of the local currency against the euro appreciated by 53% over the course of 2021 and 2022.

2.4. PUBLIC PROCUREMENT, STATISTICS, FINANCIAL CONTROL

Chapter 5 - Public procurement

EU rules ensure that the public procurement of goods, services and works in any Member State is transparent and open to all EU companies on the basis of non-discrimination and equal

treatment.

Georgia has **some level of preparation** in the area of public procurement. **Good progress** was made with the adoption of the new Law on public procurement in February 2023.

In the coming year, Georgia should:

- further align its legislative framework with the EU public procurement *acquis*, including utilities and concessions;
- further align its legislation with the directive **on procurement in the fields of defence and security**;
- further consolidate the capacity of the Dispute Resolution Council.

Institutional set up and legal alignment

The **legislative framework** remains partly aligned with the EU *acquis*. Parliament adopted a new public procurement (PP) Law in February 2023, aimed to align with the EU Directive 2014/24 on public procurement. The new PP Law regulates, among others, public procurement procedures and tools, dispute review, reporting and control. It also includes provisions on defence and security-related public procurement. The main provisions of the new Law will enter into force on 1 January 2025. In February 2023 Parliament also amended sectoral laws regulating certain aspects of public procurement. The EU Directive on procurement by entities operating in the water, energy, transport and postal services sectors has still not been aligned with.

State purchases in the range of GEL 5 000 to 200 000 are conducted through a simplified electronic tender which is a substitute to single-source procurement. Purchases above GEL 200 000 mandate a call for a regular e-tender.

Implementation and enforcement capacity

In 2022, the **public procurement market** amounted to 10.3% of the country's GDP, compared to 10% in 2021. It represented 38% of the state budget. According to the State Procurement Agency (SPA), the central public procurement institution responsible for the public procurement system, electronic and consolidated tenders placed through the state procurement system made up 82.4% of the total volume of purchases.

Regarding **monitoring of contract award and implementation**, the contracts signed through simplified purchase amounted to 17.6% of total purchases. Government procurement is often driven by a lowest bid consideration versus a best value for money approach, which can lead to the cheapest offer winning at the expense of quality. The use of negotiated procurement procedures without prior publication decreased to 18% in 2022, as compared to 18.4% in 2021. The use of centralised procurement and framework agreements was GEL 543.6 million (7.3%) in financial year 2022, and GEL 526.6 (9%) in financial year 2021. The proportion of the overall value of public procurement awarded to SMEs increased to 22% in 2022 as compared to 2021. Tender cancellation was almost the same – 846 (2%) cases in 2022 as compared to 844 (2%) cases in 2021.

The SPA's capacity to manage public procurement process is good. The SPA has been essential in the drafting and adoption of the new PP Law and is actively involved in the drafting and preparation of new secondary legislation required under the new Law. It efficiently runs the e-procurement system and provides consistent training to contracting authorities and economic operators. Further capacity development is required to fully transpose and implement the EU *acquis*.

Capacity development

With a view to strengthen the capacity of public, business and civil sectors' representatives, the SPA elaborated a comprehensive internal roadmap which plans a series of capacity building activities during 2024-2025. A series of training sessions, practical workshops, public awareness actions, guidelines and users' guides are needed to ensure proper launching of the full-scale public procurement transformation reform in line with AA/DCFTA commitments and newly adopted PPL.

Additional technical assistance is needed for institutional capacity building to properly design and establish a fully new public/administrative body, the Central Purchasing Body (CPB).

The relevant activities related to the conduct of public procurement are defined by the current Law on State procurement, including the conditions for avoiding and the grounds for identifying conflicts of interest. The newly adopted Law of Georgia on public procurement (PPL) provides more detailed and extensive regulations regarding the issues of conflict of interest in public procurement in line with EU Directive 2014/24/EU.

To mitigate corruption risks in public procurement proceedings, SPA permanently monitors the adherence to principles of publicity, fairness and non-discrimination during the entire public procurement process. National legislation also provides for administrative liability and/or criminal liability in accordance with the Administrative offences code and the Criminal code. Moreover, the SPA works in close cooperation with law enforcement agencies and the State Audit Office during criminal cases, investigation or administrative punishment proceedings.

An efficient remedy system

The Procurement Dispute Resolution Council is 'institutionally hosted' by the Competition Agency. The council is independent and its members are selected through a public competitive procedure and later appointed by the Prime Minister. The Council handled 862 complaints in 2022.

The legislation on the **right to legal remedy** needs to be aligned with the EU *acquis*. The new public procurement law contains several provisions safeguarding the independence of the Council, but it does not cover public procurement processes that are implemented according to the rules of international financial institutions. The Council has therefore no jurisdiction over complaints lodged by bidders participating in tender procedures launched to award contracts financed by international financial institutions. This situation leaves the harmed party without any recourse to legal remedy. This is not fully in line with the main principles of the EU legal framework.

Chapter 18 - Statistics

EU rules require that EU Member States are able to produce statistics based on professional independence, impartiality, reliability, transparency and confidentiality. Common rules are provided for the methodology, production and dissemination of statistical information.

Georgia has some level of preparation in the area of statistics. **Limited progress** was made in the reporting period, with the adoption of the Law on official statistics. To a large extent, national legal instruments are in place for producing required statistical data and further developing the system to approximate it with EU standards. As regards administrative capacity, adequacy of resources is of concern. Geostat, the National Statistics Office of Georgia has a relatively small number of employees and salary levels are not aligned with those of officials in other areas of public service. Financial and IT resources are also relatively limited. Data

transmissions to Eurostat are limited.

In the coming year, Georgia should:

- strengthen coordination and cooperation between Geostat and the Administration of Government, as well as with line ministries and agencies;
- improve the human and technical capacity of the statistical office;
- increase production and transmission of timely and high-quality data to Eurostat.

On 31 May 2023, the Parliament adopted the new Law on official statistics, which entered into force on 30 August 2023. The primary objective of the law is to bring Georgia's official statistical legislation in line with international standards and European legislation, as well as to fulfil the obligations outlined in the Association Agreement between Georgia and the European Union.

The new Law addresses issues such as the concept of ‘professional independence’; the status and appointment of the Executive Director of Geostat; and access to relevant administrative data for statistical purposes in line with the internationally-recognised statistical principles. Two institutions are recognised as official statistics producers: Geostat and the National Bank of Georgia.

To strengthen the availability and access to data sources, improved coordination and cooperation between multiple government institutions is still needed in the national statistical system. This applies to holders of administrative data and producers of statistics.

As regards **registers and classifications**, Georgia has been implementing NACE Rev. 2 (Statistical classification of economic activities in the European Community), CPA 2008 (Classification of products by activity), ISCO-08 (International standard classification of occupations), the Standard international trade classification (SITC, Rev. 4) and ISCED 2011 (International standard classification of education) with different degrees of compliance with the EU *acquis*. The statistical **business register** held by Geostat is largely in line with international recommendations and alignment on classification is partial. A population register is currently not established in Georgia.

On **macroeconomic statistics**, Georgia introduced the UN standard 2008 System of National Accounts (2008 SNA) methodology in 2019 and compiles main annual and quarterly aggregates; sector accounts; and supply use and input output tables. Georgia needs to start submitting national accounts data to Eurostat. Georgia needs to start submitting excessive deficit procedure tables and data on government finance statistics to Eurostat. In addition, the institutional arrangements need to be carefully reviewed to assure statistical independence to delineate the general government sector and the recording of its operations. Georgia should start developing data compliant with the ESA 2010. The country needs to start submitting regional GDP tables, consistent at statistical regions level – equivalent to level two of the nomenclature of territorial units for statistics, also referred to as NUTS 2. Annual financial sector accounts are not transmitted.

In 2022, Geostat published the harmonised index of consumer prices (HICP), but it has not been validated by Eurostat. Data on housing price statistics are not transmitted to Eurostat.

Balance of Payments (BOP) statistics are compiled and disseminated by National Bank of Georgia (NBG) according to methodology of the BPM6, connected with BOP or its components.

Business statistics are not transmitted to Eurostat.

On **social statistics**, the next population and housing census is scheduled for 2024, between 14 November and 19 December (the last population census was conducted in 2014). The programme of the 2024 general population census was adopted in June 2022. The population register is yet to be created. Demographic statistical data were transmitted to Eurostat, but improvements are needed. Statistics on international migration are incomplete and work on statistics concerning asylum and managed migration is needed.

The last agriculture census was conducted in 2014. The next agriculture census will be carried out in 2024, together with the general population census. Geostat relies on an integrated approach of agriculture census and sample surveys to produce the official **agricultural statistics**.

Environment statistics data is not transmitted to Eurostat. There are no waste statistics in the country. Geostat disseminates several environmental indicators and accounts based on administrative sources or data obtained from other statistical surveys. On transport statistics, in 2022, Geostat started producing additional indicators of rail transport statistics, air transport statistics and road freight transport statistics, but data is not transmitted to Eurostat.

On **energy statistics**, Georgia is aligned with the EU statistical *acquis* set out in the Statistical Requirements Compendium, in line with the provisions adopted by the Energy Community in agreement with the European Commission. It includes for instance statistics on passenger kilometres, energy consumption by transport and energy efficiency of buildings. The production of energy efficiency indicators still needs to be carried out.

Chapter 32 - Financial control

The EU promotes the reform of national governance systems to improve managerial accountability, sound financial management of income and expenditure, and external audit of public funds. The financial control rules further protect the EU's financial interests against fraud in the management of EU funds and the Euro against counterfeiting.

Georgia has **some level of preparation** in the area of financial control. **No progress** was made in the reporting period. The Law on public internal financial control (PIFC) is an adequate basis for enabling the development of PIFC in line with international standards and to meet EU PIFC requirements. Managerial accountability, financial management and control and internal audit are not implemented effectively. This is due to insufficient capacity, low understanding of their benefit across the public service and ineffective accountability arrangements between ministries and their subordinate bodies.

In the coming year, Georgia should:

- Implement financial management and control arrangements and strengthen the managerial accountability;
- consolidate the capacity of the Central Harmonisation Unit within the Ministry of Finance in terms of human and financial resources;
- establish an official anti-fraud coordination service.

Public internal financial control

The **legal framework** for public internal financial control (PIFC) is in place. It adequately covers financial management and control, internal audit and the role of the Central Harmonisation Unit.

The 2021-2024 public internal financial control system strategy is being carried out. In terms of **financial management and control**, the focus is on improving the methodological base and

promoting awareness and accountability in the target institutions (mostly central ministries), followed by implementation. In terms of **internal audit**, key elements are: developing methodological and auxiliary manuals; evaluating the quality of the activities of internal audit subjects; enhancing the qualifications of internal auditors both at the central and local level; and developing the concept of certification of internal auditors.

Internal audit units are established in all line ministries, local government units and in legal entities of public law. Capacity of internal audit units to conduct different types of audit in line with international standards and the quality of produced reports vary across ministries.

Financial management and control systems are still at an early stage of development. The government adopted a decree to regulate the establishment of managerial and control systems in the public sector. The progress in establishing the financial management control system is limited to few line ministries.

A **central harmonisation unit** has been established in the Ministry of Finance. The unit does not have sufficient leverage and staff to effectively support implementing PIFC reform and depends heavily on donor support. The State Audit Office also cooperates (providing training courses) with the Central Harmonization Unit to strengthen the efficiency of the internal financial control system of public agencies. As for cooperation with the Prosecutor's Office, when signs of crime are detected during the audit process, such cases are immediately sent to the Prosecutor's Office. The annual activity report of the Prosecutor's Office presents information on the actions taken on the cases. The report is public.

External Audit

Georgia's State Audit Office operates in line with international best practices. The constitution and organic Law on state audit ensure the Office's financial and operational independence. Remaining weaknesses relate to the legal protection and tenure of the auditor general and to the unclear mandate for auditing state owned enterprises and tax revenues.

The State Audit Office carries out all types of audits and provides audit findings to the public. Audit guidelines are in line with international or ISSAI standards. The State Audit Office covers 90% of central government expenditures and audits local governments at least once every three years. Improvements are needed in terms of completion and publishing of conducted audit reports and in terms of frequency of municipal finances audits.

A permanent working group that is functioning under the Budget and Finance Committee of the Parliament scrutinises audit reports within 6 months after receiving documents from State Audit Office. The audit hearings are open to participation from civil society organisations and other interested stakeholders.

The implementation rate of State Audit Office's recommendations by the executive remains low (47% fully implemented in 2022, compared to 45% in 2021).

Protection of the EU's financial interests

Georgia started the process of legal approximation of the EU *acquis* requirements of Directive on the fight against fraud to the EU's financial interests by means of criminal law, and the continuation of this alignment is to be encouraged. Cooperation in investigations between the European Anti-Fraud Office (OLAF) and relevant national authorities takes place on a case-by-case basis. Georgia nominated the Prosecutor's Office as main focal point for cooperation with OLAF. Efforts should continue in developing a track record of cooperation on investigations. No **anti-fraud coordination service (AFCOS)** has been officially designated and progress on this should be made.

3. GOOD NEIGHBOURLY RELATIONS AND REGIONAL COOPERATION

Georgia maintains dialogue and actively participates in the framework of the **Eastern Partnership**, and in various regional cooperation platforms such as the Central European Initiative (CEI), the Black Sea Economic Cooperation Organisation (BSEC), the Organisation for Democracy and Economic Development (GUAM), the Southeast European Cooperation Process (SEECP) and the Regional Cooperation Council (RCC).

Georgia also helps implement the Central European Free Trade Agreement (CEFTA).

Georgia and **Türkiye** enjoy a strategic partnership. Since 2016, Georgia and Türkiye have a High-Level Strategic Cooperation Council at Prime Minister level. Türkiye is Georgia's second largest trading partner among those with free trade regimes. There are major energy projects such as the Baku-Tbilisi-Ceyhan oil pipeline and the Baku-Tbilisi-Erzurum gas pipeline. Georgia, Türkiye and Azerbaijan have a political trilateral format since 2012 at Minister of Foreign Affairs level.

Georgia and **Ukraine**, an 'Association Trio' member, have a strategic partnership since 2017, but relations are currently strained. Georgia is a participant of the Crimea International Platform. While Georgia continues to support Ukraine's territorial integrity and sovereignty, including through co-sponsorship of Ukrainian UN resolutions, Ukraine considers Georgia's position on the Russian aggression as ambivalent, criticising, inter alia, the non-alignment of Georgia with EU sanctions against Russia and absence of military-technical cooperation. The Government of Georgia continues to support more than 24 000 war-affected Ukrainians currently staying in Georgia. The resumption of flights between Russia and Georgia and the health conditions of former Georgian President Saakashvili, a Ukrainian citizen, had led to additional diplomatic tensions.

Georgia and **Azerbaijan** enjoy solid relations built on an understanding of regional geopolitical challenges and mutual interests, particularly in energy and trade. Georgia and Azerbaijan broadly cooperate in regional energy development, transportation and economic partnership projects.

In December 2022, Georgia signed a quadrilateral Memorandum of Understanding with Azerbaijan, Romania and Hungary on a strategic partnership in the field of green energy development and transmission. The Memorandum includes the promotion of a future Black Sea electricity cable. In June 2023, the Parliament of Georgia approved a Georgia-Azerbaijan bilateral agreement on cooperation on defence issues.

Georgia and **Moldova**, an "Association Trio" member, traditionally enjoy good bilateral relations. The recent period has been marked by intensified dialogue manifested in the visits of the President and Foreign Minister of Georgia to Moldova, and the visit of the Deputy Prime-Minister of Moldova to Georgia. During these visits, the two countries discussed strengthening their political dialogue and further expanding sectoral cooperation. A special emphasis was placed on furthering the common goal of EU membership.

In 2022, Georgia strengthened its engagement and further broadened its range of cooperation with **Albania, Bosnia and Herzegovina, Montenegro, North Macedonia and Serbia**, particularly given their experience and expertise in the EU enlargement process. With these countries, Georgia enjoys an active exchange of visits at various levels and interactions within the international forums, which facilitates the further advancement of bilateral relations based on mutual interest. In addition, Georgia has a memorandum of understanding with **Serbia** (between the Ministries of Foreign Affairs) on cooperation in the field of European integration, covering a broad range of topics and relevant state institutions. It is currently

considering signing similar memoranda with **Albania, Bosnia and Herzegovina, Montenegro, and North Macedonia**. Georgia does not recognise **Kosovo**^{*} as an independent state.

Relations with neighbouring EU Member States **Romania and Bulgaria** are good, with a strong focus on connectivity in the Black Sea.

4. ABILITY TO ASSUME OBLIGATIONS OF MEMBERSHIP

CLUSTER 2: INTERNAL MARKET

This cluster covers: free movement of goods (Chapter 1); freedom of movement for workers (Chapter 2); right of establishment and freedom to provide services (Chapter 3); free movement of capital (Chapter 4); company law (Chapter 6); intellectual property law (Chapter 7); competition policy (Chapter 8); financial services (Chapter 9); and consumer and health protection (Chapter 28). This cluster is key for Georgia's preparations for the requirements of the EU's internal market and is of high relevance for the development of the common regional market.

Georgia is moderately prepared in the areas of right of establishment and freedom to provide services, with no progress registered in the reporting period. The country has some level of preparation in terms of the free movement of goods, on which there was limited progress, and in terms of company law, notably with the strengthening of auditing. Georgia is at an early stage of preparation when it comes to the free of movement of workers, with limited progress on circular migration. Limited progress can also be reported on intellectual property with the adoption of amendments to the Law on patent. There was limited progress on free movement of capital, where Georgia needs to follow up on outstanding recommendations from the Moneyval report.

Some level of preparation can be noted on consumer and health protection where the country made limited progress. Significant efforts are still needed on ensuring quality healthcare coverage for all, as well as on ensuring proper staffing of the national competition agency responsible for consumer enforcement. No progress can be reported on competition policy, where the State Aid Commission still lacks operational independence. Georgia has some level of preparation in the area of financial services and made limited progress during the reporting period.

Chapter 1 - Free movement of goods

The free movement of goods ensures that products can be traded freely across the EU based on common rules and procedures. Where products are governed by national rules, the principle of the free movement of goods prevents these rules from creating unjustified barriers to trade.

Georgia has **some level of preparation** in the area of free movement of goods. **Limited progress** was made, notably to align with a few elements of the EU *acquis* in the new and global approach sectors. There is almost no alignment under the old approach, including almost none regarding the EU *acquis* on motor vehicles and on chemicals and almost all procedural measures.

In the coming year, Georgia should:

^{*} This designation is without prejudice to position on status and is in line with UNSCR 1244(1999) and the ICJ Opinion on the Kosovo declaration of independence.

- implement market surveillance in compliance with the EU *acquis* and phase out the ‘pre-notification’ system of market surveillance before placement on the market;
- adopt a strategy and action plan with a clear timeline to complete alignment with the EU *acquis* on the standards, conformity assessment, accreditation, metrology and market surveillance;
- put into force and implement legislation to align with the EU *acquis* on energy labelling.

General principles

Some of the elements of the general principles of the legislative and institutional framework for the free movement of goods are in place. Georgia is partly aligned with the EU *acquis* on standards, conformity assessment, accreditation, metrology and market surveillance due to its obligations under the AA and DCFTA.

Non-harmonised area

Georgia will need to review all its legislation, processes, and procedures that could impact the free movement of goods in the non-harmonised area and decide how it will address any elements that are not compliant with the obligations of **Articles 34-36 Treaty on the Functioning of the European Union**. These non-compliant elements will need to be repealed, or amended, and/or mutual recognition provisions will need to be introduced. The main entry point on technical barriers to trade is Georgia’s national agency for standards and metrology (GEOSTM).

Harmonised area: quality infrastructure

The legal basis and administrative structure for technical regulations, standards, conformity assessment, accreditation, metrology and market surveillance are in place. These are partly aligned with the EU *acquis*.

Standardisation is regulated by a national law that is partly aligned with the EU *acquis*. The Law has provisions on the functioning and organisation of GEOSTM as the national body for standardisation. Since January 2023, GEOSTM is an affiliate member of the European Committee for Standardisation and the European Committee for Electrotechnical Standardisation. Since November 2022, GEOSTM has been an associate member of the European Association of National Metrology Institutes (EURAMET). As of 2022, Georgia has adopted 11 936 European standards. Georgia still has many conflicting Soviet-era standards in place. No Georgian entities are members of the European Technical Standards Institute (ETSI). Georgia launched a new export assistance programme in 2022, which includes three components: product licensing/certification; branding/product packaging; and stimulating international sales/entering the international trade network. Since 1 January 2023, GEOSTM offers standards to small and micro enterprises for special prices.

The Law on product safety and free movement code, which is partly aligned with the EU *acquis*, regulates Georgia’s **accreditation** framework. The Unified National Body on Accreditation, an associate member of the European cooperation for Accreditation, ensures the accreditation of conformity assessment. In September 2022, the digitalisation of the state programme for accreditation services was completed. All accreditation services – including application for accreditation, document review, exchange with accredited organisations, and protection of electronic accreditation documentation – are delivered electronically to certified organisations.

The legal base for **conformity assessment, metrology and market surveillance** is partly aligned with the EU *acquis*. Georgia currently relies on a ‘pre-notification’ system of **market**

surveillance before placement on the market. This is not aligned with the EU *acquis* and is currently only applied to what are identified as high-risk products. The Market Surveillance Agency is an independent body. In 2022, the Market Surveillance Agency did 461 market surveillance inspections, focusing on in three types of consumer products (toys, devices working on gas fuel and personal protective equipment) and three types of industrial and construction products (construction goods, machinery and pressure equipment). In the reporting period, the agency took seventeen types of toys off the market.

Harmonised area: sectoral legislation

As regards the ‘**new and global approach**’, the level of alignment remains low. Georgia adopted legislation that is designed to align with the EU *acquis* on cableways, gas appliances, protective systems intended for use in potentially explosive atmospheres, lifts, measuring instruments, civil explosives, recreational craft, eco-design, and medical devices. . The legislation on construction products is now extended to 22 different types of construction products. No progress is reported regarding alignment with the EU *acquis* on electromagnetic compatibility, aerosol dispensers, simple pressure vessels, outdoor equipment noise emissions, pyrotechnic articles, measuring equipment, bottles as measuring containers, or non-automatic weighing devices. In early 2023 Georgia adopted implementing legislation on radio equipment and on electrical equipment intended for use within certain voltage limits designed to ensure alignment with the relevant EU *acquis*.

On ‘**old approach product legislation**’, no progress is reported on alignment with the EU *acquis* on motor vehicles, two or three wheeled vehicles, tractors, non-road mobile machinery, registration, evaluation, authorisation and restriction of chemicals, chemicals classification, packaging and labelling, aerosol dispensers; good laboratory practice, fertilizers, detergents, pre-packaging, or medicinal products pricing.

On **procedural measures**, Georgia has not made any progress on aligning to the EU *acquis* on firearms, crystal glass, defence products, defence procurement, footwear, textile labelling and mixtures, the return of **cultural objects** unlawfully removed from the territory of an EU country, or on **drug precursors** (although some procedures were reported on this).

Georgian market surveillance does not foresee measures related to anti-corruption.

Chapter 2 - Freedom of movement for workers

Citizens of one Member State have the right to work in another Member State and must be given the same working and social conditions as other workers.

Georgia is at an **early stage of preparation** in the area of free movement for workers. **Limited progress** was made, through closer cooperation with EU Member States to coordinate circular migration and the amendments to the Law on labour migration. The country needs to align its legislation with the relevant EU *acquis*, including its interpretation in the case law of the Court of Justice of the EU.

In the coming year, Georgia should:

- work on concluding additional agreements on social security coordination, notably with EU Member States;
- take into account the EU *acquis* on the coordination of social security systems when conducting social security system reforms;
- Start work to prepare for joining the European Network of Employment Services (EURES) upon accession.

Regarding **access to the labour market**, the legal framework does not restrict the employment of foreigners and does not require a work permit for citizens of the 99 countries (including all EU Member States) that benefit from visa-free travel, allowing them to stay in the country for a determined period of time without a residence permit. Citizens of countries that require a visa to enter Georgia also need a work residence permit. In 2021 3 897 and in 2022 4 712 work residence permits were issued. No work permit is required for EU citizens and they can stay up to one year without a residence permit with the same labour rights as Georgian citizens. No special regime is in place for family members of EU workers.

Employment in public administration is reserved for Georgian citizens for professional civil servant positions, but no nationality conditions apply to administrative and labour contract employees.

Parliament adopted amendments to the law "on labour migration" on 17 May 2023 some of which entered into force upon publication in the Official Journal, while others will do so on 1 September 2023. The amendments aim to refine existing legal norms and enforcement mechanisms in terms of labour emigration and immigration, although some have the potential to make legal employment of foreigners more difficult. Labour laws prohibit discrimination on several grounds, including nationality.

There is no preparatory work in place for Georgia to access the **European Employment Services** network. Georgia has three websites for job vacancies (for national / international / public positions). The website for national positions is managed by the State Employment Support Agency (SESA) and is a countrywide database for publishing vacancies, job applications and CVs. In June 2023, initial contacts were made with the European Labour Authority (ELA).

As regards the **coordination of social security systems**, Georgia has signed three international bilateral agreements on social security (Germany, Bulgaria and France), and has therefore some experience in applying the principles of social security coordination. Death grants, unemployment benefits and pre-retirement benefits are not covered by legislation, although sickness benefits in kind and family benefits are provided. EU rules related to supplementary pension rights of mobile workers are not incorporated into legislation.

Georgia has not implemented a national health insurance card, so the implementation of the **European Health Insurance Card** (EHIC) might therefore be challenging.

Chapter 3 - Right of establishment and freedom to provide services

EU natural and legal persons have the right to establish themselves in any Member State and to provide cross-border services. For certain regulated professions, there are rules on the mutual recognition of qualifications. EU rules on postal services focus on improving the quality of universal service, gradual market opening to competition, and the establishment of an independent regulator.

Georgia is **moderately prepared** regarding the right of establishment and freedom to provide services. There was **no progress** made. Its legal framework provides equal treatment of the rights of foreign natural and legal persons to establish companies and branches of foreign legal persons in Georgia. Efforts are needed to align with the EU *acquis*, notably on postal services and mutual recognition of foreign qualifications for regulated professionals.

In the coming year, Georgia should:

- align with the EU Services *acquis* (Directive 2006/123/EC);
- align with the EU postal *acquis* and update the AA/DCFTA annex on rules applicable to

postal and courier services;

- align with the Directive 2005/36/EC on the recognition of professional qualifications, including Directive 2005/36/EC on recognition of professional qualifications and Directive 2018/958 on a proportionality test before adoption of new regulation of professions.

Overall, regarding the freedom of establishment and the freedom to provide services, Georgia's **legal framework** does not contain differences or discriminatory provisions in respect of the rights of foreign natural and legal persons to establish companies and branches of foreign legal persons in Georgia. There was no progress in aligning with the Services Directive, with which the Georgian legal framework is partially aligned.

Georgia has a well-structured and advanced institutional and regulatory framework for SME policy. New businesses can be established within one day.

As regards **postal services**, Georgia still needs to align its legislation with the three Postal Services Directives and the Regulation on cross-border parcel delivery services. Preparations are ongoing in the framework of the EU-Georgia AA/DCFTA process to update the Annex XV-C of the Association Agreement on rules applicable to postal and courier services with the EU Regulation on cross-border parcel delivery services. Georgia should continue preparing the amendments to its postal law to align with the commitments in the updated Annex by the end of 2024.

Regarding **mutual recognition of foreign qualifications for regulated professions**, the legislation in Georgia is not aligned with the applicable EU *acquis*. The professions of midwife, nurse responsible for general care, veterinary surgeon and architect are not regulated in Georgia.

Chapter 4 - Free movement of capital

In the EU, capital and investments must be able to move without restrictions, with common rules for cross-border payments. Banks and other economic operators apply certain rules to support the fight against money laundering and terrorist financing.

Georgia is **moderately prepared** in terms of free movement of capital. There was **limited progress** in the reporting period, including the adoption of the anti-money laundering/countering financing of terrorism strategy and action plan. Georgia needs to continue alignment with the EU *acquis* in anti-money laundering and payment systems.

In the coming year, Georgia should:

- further align its legal framework with the EU Payment Services Directive 2 and in the area of money laundering and combatting terrorist financing;
- follow up on outstanding recommendations from Moneyval, in particular on transparency and beneficial ownership of legal persons and legal arrangements;
- implement the national money laundering and terrorist financing risk assessment.

On **capital movements and payments**, existing legislation does not impose capital controls or any other restrictions on capital movements. Certain capital transactions are monitored for anti-money laundering purposes only. There are no restrictions in place for foreign exchange operations.

Except for agricultural land, which can only be owned in exceptional situations, foreigners may acquire and own real estate in Georgia.

As regards **payment systems**, Georgia is partially aligned with the EU *acquis*, administrative

capacity and enforcement. The government has enacted amendments to the Law on payment systems and payment services in September 2022 to align with the EU Payment Services Directive 2. This includes removing restrictions on using electronic money for merchant accounts; ensuring non-discriminatory access to the payment systems; and enabling payment initiation services and account information access services. According to central bank data, there are 32 registered payment service providers, including e-money providers.

The alignment of the legislative and institutional framework for **anti-money laundering** is incomplete. Fully effective coordination and cooperation between supervisory, law enforcement and prosecutorial authorities requires more efforts. According to the Law on anti-money laundering, the national risk assessment of money laundering and terrorist financing, first adopted in 2019, should be updated at least once every 3 years. The Government adopted the Report on Money Laundering and Terrorism Financing Assessment Risks in Georgia on 3 October 2023. The anti-money laundering/countering financing of terrorism strategy and action plan were adopted on 4 April 2023. Georgia's anti-money laundering legislation partly addresses recommendations of the Financial Action Task Force and relevant international legislation. Outstanding recommendations from Moneyval remain unaddressed, as Georgia had only progressed in the field of development of interagency cooperation capacities of the Financial Monitoring Service.

The Financial Monitoring Service of Georgia (the national FIU) continued to strengthen its analytical capacity for data processing and financial analysis. No beneficial ownership register has been created yet. According to the activity report of the Prosecutor General, in the first 9 months of 2022, 81 million GEL (around 29 million EUR) worth of assets were seized/frozen (out of which 49% in immovable properties, 47% in money, and 3% in cars, down from 132 million GEL (around 47 million EUR) in 2021).

Chapter 6 - Company law

The EU has common rules on the formation, registration and disclosure requirements of a company, with complementary rules for accounting and financial reporting, and statutory audit.

Georgia has **some level of preparation** in the area of company law. There was **limited progress** in the reporting period related to increasing the reliability and quality of auditing. Georgia needs to align with the EU *acquis* on cross border operations and company reporting.

In the coming year, Georgia should:

- amend existing national legislation to align with the EU *acquis* on takeovers, shareholder rights, including the encouragement of long-term shareholder engagement, and on disclosure of information on foreign branches;
- align national legislation with the *acquis* on cross-border conversions, mergers and divisions and on the use of digital tools and processes in company law
- align with the EU *acquis* on financial reporting standards relating to small entities;
- provide the appropriate level of financial and human resources for effective oversight, investigations and sanctions tasks.

Georgia is partially aligned with EU *acquis* in terms of **company law**. The National Agency of Public Registry is the authority responsible for registering companies and disclosing company information. There are no rules on disclosing information on foreign branches, as required by the EU *acquis*. Financial information in the business register needs to be disclosed. The National Agency of Public Registry (NAPR) was established to create a more unified,

modern, transparent and efficient public registry. The administrative capacity of the NAPR requires further strengthening. The National Bank of Georgia's corporate governance code for public issuers approved on December of 2021 reflects EU and international standards. Georgia is carrying out a gap assessment on takeover bids to further align with the EU *acquis* in this area. Georgia also has to align shareholder rights, including the encouragement of long-term shareholder engagement (Shareholder Rights Directives) and gender equality on boards of directors (2022 Directive). Further alignment is needed with the 2019 Directive on digital tools and processes and the 2019 Directive on cross-border operations (mergers, divisions, conversions).

On **company reporting**, there is partial alignment of the main legal requirements with the EU *acquis*, including the transparency requirements for listed companies. Further alignment is needed on the financial reporting principles relating to small entities; the criteria to define company size categories; and country by country reporting by very large multinational companies. Georgia will also need to align with the most recent EU *acquis* on corporate sustainability reporting.

On **statutory audit**, national legislation is partially aligned with the main legal requirements of the EU *acquis* in this area. Georgia's Service for Accounting, Reporting and Auditing Supervision (SARAS) is the competent authority for audit oversight, including monitoring the quality control system of an auditor/audit firm. In January 2023, a rule – approved by SARAS – for conducting investigations of auditors/audit firms came into effect, and was aimed at increasing the reliability and quality of the statutory audit process. In December 2022, amendments to the Law on accounting, reporting and auditing supervision and to the Law on facilitating the prevention of money laundering and terrorism financing were adopted. The scope of obliged entities under SARAS' supervision was expanded as a result, Georgia should nevertheless pay attention to improving the administrative and financial capacity of SARAS for a more effective audit oversight system.

Chapter 7 - Intellectual property law

The EU has harmonised rules for the legal protection of intellectual property rights (IPR), copyright and related rights. Rules for the legal protection of IPR cover, for instance, patents and trademarks, designs, biotechnological inventions and pharmaceuticals. Rules for the legal protection of copyright and related rights cover, for instance, books, films, software and broadcasting.

Georgia has **some level of preparation** in the area of intellectual property law. **Limited progress** was made with the adoption of the Law on patent.

Legislation on copyright and industrial property rights is partially aligned with the EU *acquis*, but a substantial amount of work remains to be done. Georgia should continue to strengthen the capacity of law enforcement authorities in intellectual property matters.

In the coming year, Georgia should in particular:

- align with the most recent EU *acquis* in the area of copyright and related rights, including on the digital single market;
- align with the Directive on trade marks, the Directive on the legal protection of designs and the Directive on trade secrets;
- continue strengthening collaboration with European Union Intellectual Property Office to further advance and consolidate the objectives achieved so far.

The Law on copyright and related rights regulates the area of **copyright and related rights** in

Georgia. This law is partially aligned with the copyright *acquis*. It does not cover the more recent EU *acquis*, most notably the Directive on copyright in the digital single market. The National Intellectual Property Centre (Sakpatenti) is responsible for intellectual property policy. It oversees both the development of the intellectual property system in the country and the grant of industrial property rights.

On **industrial property rights**, Georgia is partially aligned with the Regulation on compulsory licensing of patents relating to the manufacture of pharmaceutical products for exports to countries with public health problems. It is also partially aligned with the *acquis* on supplementary protection certificates for medicinal products. The amendments to the Law on patents were adopted in May 2023 to ensure compliance with the European Patent Convention. Further work is needed to align with the Directive on trademarks and the Directive on the legal protection of designs. No progress is registered to align with the Directive on trade secrets.

In the area of **enforcement**, stronger border, criminal, civil and administrative enforcement is needed. The Ministry of Finance and the Prosecution Service are the main institutions competent for enforcing industrial property rights, with both the Ministry of Economic and the Communication Commission having a limited role. Georgia drafted the administrative offences code, the criminal code, the civil procedure code, and the Law on border measures related to intellectual property. In 2022, around EUR 1.2 million worth of counterfeit goods were seized by both the Investigation Service of the Ministry of Finance and the Revenue Service.

Georgia is a member of the World Trade Organization. It subscribes to the minimum intellectual property rights protection standards set in trade-related aspects of the intellectual property rights agreement. Georgia is not a member of the European Patent Convention. A validation agreement between Georgia and the European Patent Organisation was signed on 31 October 2019. The agreement was ratified by the Parliament in May 2023.

EU-Georgian Intellectual Property Project (EUGIPP), run by the EUIPO to support Sakpatenti advanced the trademark, design and copyright framework and helped to harmonise it with EU legislation and practices. However, a substantial amount of work remains to be done thus should be continued.

Chapter 8 - Competition policy

EU rules protect free competition. They include antitrust rules on restrictive agreements between companies and abuse of a dominant position, and also include rules on concentrations between companies which would significantly impede effective competition. EU rules also set out a system of State aid control. Governments are only allowed to grant State aid if restrictive conditions are met, with a view to preventing distortion of competition.

Georgia is at an **early stage of preparation** in the area of competition policy. There was **no progress** in the reporting period. The country should continue to align its legislative framework, in particular on abuse of dominant position and cartels, as well as State aid. The Georgian National Competition Agency needs to build a solid track record of enforced decisions. Georgia should significantly strengthen the institution's administrative capacity and raise awareness about State aid rules among aid grantors.

In the coming year, Georgia should in particular:

- align the legal framework on antitrust, mergers and State aid with the EU *acquis*;
- grant enforcement powers to the State aid authority, in particular to recover unlawful/incompatible State aid and ensure its decisions cannot be overturned by the government;

→ strengthen the institutional administrative capacity.

Antitrust and mergers

EU provisions on restrictive agreements and on abuse of dominant positions are to a large extent mirrored in the 2014 Law on competition. The Law also provides *ex ante* control of the effects on competition of mergers above certain turnover thresholds, in line with the principles of the EU Regulation on mergers.

On the **institutional framework**, the Georgian National Competition Agency (GNCA) is responsible for enforcing competition rules. The agency is an operationally independent body.

On **enforcement capacity**, the GNCA currently has 60 staff. Its administrative capacity needs to be further strengthened, in particular through relevant training programmes.

On **implementation**, From 15 June 2022 to 15 June 2023 the GNCA completed 5 investigations and approved 7 concentrations (total amount of decisions -12), which took place in hospital services, fuel and construction markets. As of 15 June 2023, GNCA had 6 ongoing investigations.

The GNCA actively participated in three investigations during the reporting period conducted by sector regulators and is reviewing the admissibility of seven complaints made by undertakings from various industries.

The GNCA monitored two markets: glass waste collection/recycling and fuel (gasoline and diesel). Monitoring of three other markets is ongoing: the motor fuel market (compressed natural gas and liquefied petroleum gas), the nut market and insurance services offered by banks when granting credit.

State aid

The **legal framework** on State aid is not in line with the EU *acquis*. The Law on competition foresees that notification and prior approval of the GNCA is required only for aid for economic development of certain regions and aid to promote the preservation of culture and cultural heritage. Other types of aid, such as aid environmental aid; in the case of a disaster; aid granted to fulfil international obligations; and aid for important national projects do not require notification and prior approval of the agency. The agency has conducted an analysis on the current gaps and priorities to be addressed in the area of State aid, including the availability of a State aid registry.

On the **institutional framework**, enforcement of State aid provision of the Law on competition is the responsibility of the GNCA. In certain economic sectors, such as energy, regulatory bodies are responsible for enforcing applicable provisions, on mergers, antitrust and State aid. They are also responsible for enforcing the Law on competition. There is no formal complaint procedure for State aid.

The **enforcement capacity** of the agency needs to be strengthened, notably through relevant training for staff. On **implementation**, no decisions were taken in 2022 on State aid issues, only information on *de minimis* State aid was collected.

Liberalisation

Georgia's competition and State aid legislation is fully applicable to public undertakings and those with special or exclusive rights. The rules on financing services of general economic interest are not aligned with the EU *acquis*.

Chapter 9 - Financial services

EU rules aim to ensure fair competition between, and the stability of, financial institutions, namely banking, insurance, supplementary pensions, investment services and securities markets. They include rules on the authorisation, operation and supervision of these institutions.

In the area of financial services Georgia has **some level of preparation**. Georgia made **limited progress** in the reporting period, by adopting legislation on activity of micro banks covered bonds and sustainable finance. The country should make further efforts to align with the financial services *acquis*, focusing on the priorities identified based on the current state of play.

In the coming year, Georgia should in particular:

- adopt and implement legislation on domestic motor third party liability insurance;
- continue efforts in alignment with the EU *acquis* related to the regulation of banking and insurance sectors (including bank resolution and bank deposits guarantee schemes) and the regulation of securities markets, investment funds and investment services.

As regards **banks and financial conglomerates**, the banking sector appears well capitalised (regulatory capital is above 20%, while the Tier 1 capital amounts to over 17%) and highly liquid. Following a substantial rise following the outbreak of the pandemic, the level of non-performing loans declined steeply in 2021 and 2022. The system of deposit insurance is regulated by the Law on deposit insurance, which established the Deposit Insurance Agency, implementing the system, and the Deposit Insurance Fund. The Law on Deposit Insurance is based on the EU Deposit Guarantee Schemes Directive but requires further alignment with the EU *acquis*. The coverage level in particular is GEL 15 000 (around EUR 5 300), far below the EUR 100 000 level needed to comply with the EU *acquis*.

Georgia has at its disposal early intervention powers and a resolution regime for banks. The National Bank of Georgia is the designated resolution authority. New institutional features have been put in place to support the execution of the new regime. Additional steps are needed to align the Georgian framework with the EU recovery and resolution framework. Georgia had indicated that legislation establishing a resolution fund and implementing the minimum requirements for eligible liabilities would be passed by the end of the reporting period.

The Law on activity micro banks adopted in February 2023, entering into force on 1 July 2023, was designed to increase competitiveness in the market and foster diversification of products offered by the microfinance sector.

As regards **insurance and occupational pensions**, the adoption and implementation of legislation on domestic motor third party liability insurance is still pending. On 28 June, Georgia adopted the Law on voluntary private pension, which will enter into force partially on 1 January 2024, and fully on 1 January 2025.

For both insurers and reinsurance undertakings, the current supervisory regime in Georgia is based on the Solvency I regulatory framework. In December 2022, the NBG developed and approved policy guidance on a corrective action framework for banks, in line with relevant guidelines of the European Banking Authority. These clarify the grounds for the use of supervisory measures, early intervention measures and revocation of banking activity licenses.

Georgia's **financial market infrastructure** legislation is only partly aligned with the EU *acquis* and the alignment with several EU Regulations is still pending.

The legislative framework for **securities markets and investment services** is in place. The

Georgian financial sector is moderately sized. The regulated market in Georgia is presented by the stock exchange. There are no Multilateral Trading Facilities or Organised Trading Facilities on Georgian market. Georgia has requirements regarding the listing on the stock exchange which are similar to the rules set out in the EU Listing Directive.

The Parliament adopted legislation on covered bonds in November 2022 with the objective of diversifying the source of financing for the local commercial banks and helping to develop the mortgage market.

The Parliament is also discussing a draft legislation on the development of the securitisation instrument for fund raising.

As regards sustainable and **digital finance**, in September 2022, the NBG published its working paper on central bank digital currencies. In February 2023 the NBG invited local fintech companies to express interest in participating in a pilot project of the digital lari.

Georgia has made some progress on sustainable finance. In January 2023, the Regulation on Loan Classification and Reporting according to the Sustainable Finance Taxonomy (Taxonomy Regulation) entered into force. The Taxonomy Regulation formally defines green, social and sustainable loans and imposes reporting requirements for commercial banks on taxonomy-aligned loans. In addition, the NBG, in cooperation with various local and international stakeholders, has developed the Sustainable Finance Taxonomy for Georgia. The Taxonomy provides the market with a classification system for identifying activities and/or project categories that deliver on key climate, green, social, or sustainable objectives. It is closely linked to the EU Taxonomy, but it is tailored to the features of the Georgian economy and financial sector and closely follows international practices. Further work could be done in this area, in order to implement a comprehensive sustainable finance framework and a disclosure regime for financial and non-financial companies taking into account sustainability considerations.

Chapter 28 - Consumer and health protection

EU rules protect consumers' economic interests, including in relation to product safety, dangerous imitations and liability for defective products. The EU also ensures high common standards for tobacco control, blood, tissues, cells and organs, and medicines for human and veterinary use. The EU also has rules for upholding patients' rights in cross-border healthcare and in preparing for and responding to cross-border health threats, including communicable diseases.

Georgia has **some level of preparation** in the field of consumer and health protection. There has been **limited progress** in the reporting period on consumer protection capacity and on alignment to the EU *acquis* on blood. Attention should be paid to aligning national legislation on consumer protection and on health with the EU *acquis* and ensuring it is properly enforced.

In the coming year, Georgia should:

- make progress on aligning consumer law with the EU *acquis*;
- ensure that the staffing and capacity of the national competition agency correspond with its increased competencies on consumer protection;
- make progress to align blood, tissues, cells and organs, tobacco control and on medical devices with the EU *acquis*.

Consumer protection

The main consumer enforcement authority is legally the Georgian National Competition

Agency (GNCA). After the Law on the protection of consumer rights entered into force on 1 June 2022, the agency increased its enforcement capacities. For example, it has had a hotline in place since September 2022 on consumer rights and to file complaints. It also performs awareness raising campaigns.

Georgia's national legislation on consumer protection is partly aligned with the EU *acquis*. It is not aligned with the EU *acquis* on: package travel and linked travel arrangements; timeshares; representative actions; digital content rules; the sale of goods and with the latest changes to EU consumer legislation introduced by Directive (EU) 2019/2161.

Since November 2022, GNCA began receiving consumer complaints and actively conducting investigations, including in the pharmaceutical, fuel and tobacco markets. It also began monitoring prices on the food market. In the first 5 months, 194 applications were submitted to GNCA, out of which 118 investigations were launched. Violation of consumer rights was proved in five cases (based on 16 applications). Twenty-eight commitment agreements (based on 49 applications) have been signed, whereby traders took responsibility to restore the rights of affected consumers and to change their policies in line with relevant legislation. 80 % of applications were related to distance trading and 20% to on-site trading. Monthly statistics are produced and published and will be available in the GNCA's annual report.

Georgia's legal framework on **product safety** is partly aligned with the EU *acquis*. Georgia currently relies on a 'pre-notification' system of **market surveillance** before placement on the market. This is not fully aligned with the EU *acquis*. Currently, it is only applied to what are identified as functions for high-risk products. In 2022, the agency implemented 461 market surveillance inspections, on three types of consumer products (toys, devices working on gas fuel and personal protective equipment) and three types of industrial and construction products (construction goods, machinery and pressure equipment). In the reporting period, the agency took seventeen types of toys off the market.

Public health

As regards **public health**, a national health strategy covering the period 2022-2030 is in place. The objectives are to achieve universal health coverage, ensuring equal access to affordable health care and the highest level attainable of health services with financial risk protection for all. On **eHealth**, some elements are in place, such as: a registry of new cases; a hospital discharge registry; data collection on cancer, births and pregnancies. The national strategy for 2017-2030 has been developed to support healthcare for mothers and new-born children. Maternal mortality remains high in Georgia, most deaths resulting from preventable causes. The total health expenditure in Georgia as a % of GDP – 7.4%.

Georgia is partly aligned with the EU *acquis* on **tobacco control**. Georgia adopted implementing legislation on tobacco products and packaging designed to partly align to the EU *acquis* in December 2022. It is a party to the WHO Framework Convention on Tobacco Control but is yet to complete its accession to the protocol to eliminate illicit trade in tobacco products.

Georgia is partly aligned with the EU *acquis* on serious **cross-border threats to health including communicable diseases**. It has established an epidemiological surveillance system; a list of communicable diseases that are subject to surveillance; a central body for disease control and public health; and an early warning system to notify serious cross-border threats to health. Georgia has in place its 2023-2030 strategy for the prevention of non-communicable diseases.

With regards to **blood, tissues, cells and organs** Georgia's legislation on **blood** is designed to be aligned with the relevant EU *acquis*, it is not aligned on tissues, cells and organs. Oversight

functions are not yet fully carried out in line with EU standards.

As regards **patients' rights in cross-border healthcare**, under Georgia's legal base, citizens of EU Member States and other countries can receive medical treatment in Georgia. In addition, reimbursement is foreseen for Georgian citizens under certain conditions for treatment abroad within the framework of a relevant state programme.

On community-based **mental health**, Georgia's 2022-2030 national mental health strategy supports the deinstitutionalisation of mental health services by strengthening community-based care for people with mental health issues. In 2022, 8.4% of beneficiaries were treated in mental health hospitals, while the remaining received needed care at one of the community-based services.

Georgia is implementing **drug abuse** prevention and harm reduction legislation to be aligned with the relevant EU recommendations. Georgia's legislation is partly aligned with the EU *acquis* to protect the workers from adverse health effects arising from **exposure to electromagnetic fields** in working conditions.

As regards **non-communicable diseases**, Georgia has national **cancer** screening programmes. There is also a national programme in place to treat and provide pharmaceutical products to persons with **rare diseases**.

Georgia's national legislation is partly aligned with the EU *acquis* on market authorisation of **medicines all products for human use**. Pharmaceutical reference prices have been approved in early 2023. Issues remain with quality assurance and post-marketing monitoring. As regards **medicinal products for veterinary use**, information was not available on the state of legal alignment to the EU *acquis*, nor was it available on the administrative capacity or enforcement system. Information was also not available on aligning **cosmetics** with the EU *acquis*. Georgia is not aligned with the EU *acquis* on **cosmetics** or on **medical devices**.

As regards **health inequalities**, access to health services for the Roma population is guaranteed under Georgia's laws on healthcare and on the elimination of all forms of discrimination.

The Georgian Law on medicines and pharmaceutical activities is a legal basis for the state to ensure the lawful practice of circulating pharmaceutical products. The pharmaceutical sector in Georgia has a high-level of vertical and horizontal integration and a holding structure. The medications and medical equipment are procured mainly by means of electronic public bidding at specifically designated electronic platform.

CLUSTER 3: COMPETITIVENESS AND INCLUSIVE GROWTH

This cluster covers: digital transformation and media (Chapter 10); taxation (Chapter 16); economic and monetary policy (Chapter 17); social policy and employment (Chapter 19); industrial policy (Chapter 20), science and research (Chapter 25); education and culture (Chapter 26); and the customs union (Chapter 29).

Georgia has reached a moderate level of preparation in economic and monetary policy; enterprise and industrial policy; science and research, education and culture; and the customs union. Georgia has some level of preparation in digital transformation and media, social policy and employment and has some level of preparation/is moderately prepared in taxation. The country has made some progress in digital transformation and media, taxation and science and research and limited progress in enterprise and industrial policy.

Chapter 10 - Digital transformation and media

The EU supports the smooth functioning of the internal market for electronic communications, electronic commerce and audio-visual services. The rules protect consumers and support the

universal availability of modern services.

Georgia has **some level of preparation** in the area of information society and media. **Some progress** was made towards alignment with the Directive on audio-visual media services (2010/13/EU) with amendments addressing the key issues of non-incitement to hatred and protection of minors. Georgia should ensure its digital policy strategies are aligned with the EU strategies ‘Shaping Europe’s Digital Future’ and the ‘Digital Compass’. The lack of a universal service regime prevents universal services being implemented under the EU Electronic Communications Code.

In the coming year, Georgia should:

- ensure high-level as well as inter-institutional coordination on digitalisation reforms;
- swiftly implement the recently adopted Laws (Law on infrastructure sharing and on Electronic-commerce) to align with the EU *acquis*;
- strengthen the effective independence of the media regulator (the Georgian National Communication Commission), and develop a cybersecurity strategy towards alignment with the directive on measures for a high common level of cybersecurity across the union(NIS 2).

Georgia lacks an overarching digital strategy, although the 2021 national broadband development strategy covers the majority of digital related topics and seeks to address the urban rural divide by investing in broadband connectivity. A system to monitor the progress of implementing the strategy should be developed.

Internet is accessible to over 88% of households in the country with the number of mobile internet subscribers rapidly growing. Full coverage with high-speed internet of some rural, remote and high mountainous areas remains a challenge.

On 21 May 2023, parliament adopted the Law on infrastructure sharing, inspired by the Broadband Cost Reduction Directive (2014/61/EU).

On 13 June 2023, the parliament adopted the law on "Electronic Commerce" and related laws, aiming to regulate the rights and obligations of intermediary service providers, and enhance consumer protection through increased transparency and standardisation of information services.

In the field of **information society services**, Georgia’s basic legal framework on the open reuse of public sector information is only partly aligned with the Directive on open data. Georgia has not aligned with the Regulation on geo-blocking or the platform-to-business relations Regulation, the Digital Markets Act and the Digital Services Act. Georgia’s participation in the various areas of digital research and innovation covered by Horizon Europe (artificial intelligence, microelectronics, photonics, quantum, etc.) is limited. The Law on e-commerce was adopted on 13 June 2023.

The 2021-2024 **cybersecurity** strategy would benefit from alignment with the latest EU *acquis* in the field (NIS 2 Directive). Implementing legislation – such as a technical regulation of the network sensor of critical information system entities of first and higher categories – is being prepared.

Georgia has expressed an interest to join the EU’s ‘roam like at home’ regime, which would require approximation of the roaming-related EU *acquis* and its implementation. The Commission has assessed that a long-term roaming arrangement between the EU and Georgia is possible, building on Georgia’s Association Agreement with the EU. As a follow up, Georgia

should start aligning with the relevant EU *acquis*. In addition, a revised regional roaming agreement is under negotiation among the five concerned eastern partnership countries (excluding Belarus).

Regarding **audiovisual policy**, amendments to the broadcasting Law were adopted in October 2023. The issues of protection of minors and non-incitement to hatred were addressed in line with the Audiovisual Media Service Directive. The Law also introduced a self-regulation system with a legal backstop as recommended by the EU. Outstanding issues remain on the effective independence of the national regulator. In particular, further work should be undertaken to increase transparency (i.e publishing of all decisions) and reinforce the grounds for dismissal.

The Georgian National Communication Commission (ComCom) is the national regulatory authority. In addition to the Constitution, the Law on National Regulatory Bodies formally establishes ComCom's independence both financially and politically, although there are problems with the effectiveness of this independence. ComCom is mandated to develop **media literacy**. Both state and non-state actors are working to promote and improve media literacy skills of children and teachers. During the reporting period, the Ministry of Education and the National Communication Commission trained 600 teachers in tackling disinformation and promoting digital literacy.

Chapter 16 - Taxation

EU rules on taxation cover value added tax, excise duties and aspects of corporate taxation. They also cover cooperation between tax administrations, including the exchange of information to prevent tax evasion.

Georgia is in between **some and moderate level of preparation** in terms of taxation. There was **some progress** in the reporting period aligning the legislation with the EU *acquis* on VAT and excise duties. Georgia undertook important legal and administrative steps in order to introduce an automatic exchange of financial account information in line with OECD global standards.

In the coming year, Georgia should:

- further align legislation on direct taxation with the EU *acquis* and international best practices.
- ensure the implementation of the automatic exchange of tax information with EU Member States in line with the OECD Global Standards.
- further align legislation on VAT and excise duties with the EU *acquis*.

As regards **indirect taxation**, the standard VAT in Georgia is 18%. Tax legislation on VAT is partly aligned with the EU *acquis*. As regards excise duties on tobacco products, there was limited progress in reintroducing duties equally for national and imported products. Excise duties on alcohol and alcoholic beverages are partly aligned. Georgia confirmed that it will reach the EU minimum levels of taxation on tobacco products by the end 2025. Progress is needed, energy products and electricity to reach the EU minimum levels of taxation and to adopt the EU's system of warehousing and duty suspension. The EU excise movement control system has to be put in place.

As regards **direct taxation**, residents of Georgia are taxed on their worldwide income; the income tax rate is 20%. Income from rent is taxed by 5% and from gambling business by 10%. A special tax regime is applied for micro and small businesses. Since 2017, only distributed profit is subject to taxation, retained or reinvested profit is not taxed. Legislation for direct

taxation has to be brought in line with a number of EU Directives (on merger, parent-subsidiarity, interest and royalties).

Georgia has taken no action to lay down rules that would cover the scope of the Directives on parent-subsidiarity, interest and royalties, merger, and anti-tax avoidance.

Regarding **administrative cooperation and mutual assistance**, Georgia is a member of the inclusive framework on base erosion and profit shifting. Georgia has signed the Multilateral Convention to implement tax treaty-related measures to prevent base erosion and profit shifting. The country is also a member of the OECD Global Forum on Transparency and the OECD Exchange of Information for Tax Purposes. Georgia has committed to introducing the international standard on automatic exchange of financial account information by 2023. Double taxation agreements with all EU Member States are in force.

In November 2022, Georgia signed the Multilateral Competent Authority Agreement on Automatic Exchange of Financial Account Information. In December 2022, Georgia then passed primary legislation and signed the Common Transmission System Agreement, which will take effect before their first exchange in 2024. Georgia also joined the Global Revenue Statistics Initiative in December 2022.

Georgia joined and is a full member of the EU Fiscalis programme.

On **operational capacity and computerisation**, the Georgian revenue service under the Ministry of Finance is tasked with collecting all national taxes. It is also tasked with customs control of incoming and outgoing goods. The revenue service employs around 3 700 staff in 15 departments, organised along functional lines. This allows for a separation of policy and planning, as well as operational and support responsibilities. The revenue service adequately performs its functions and is broadly in line with international practice.

Chapter 17 - Economic and monetary policy

EU rules require the independence of central banks and prohibit them from directly financing the public sector. Member States coordinate their economic policies and are subject to fiscal, economic and financial surveillance.

Georgia **is moderately prepared** in the area of economic and monetary policy. **No progress** was made in the reporting period. Any change to the central bank's governance framework should be carefully contemplated not to undermine its independence.

In the coming year, Georgia should:

- maintain the independence of the National Bank of Georgia and ensure an orderly appointment of the next governor of the bank;
- make steps towards strengthening the institutional set up of the independent fiscal institution, its legal mandate and the capacity to undertake qualitative analytical work.

On **monetary policy**, the country's legal framework is partially aligned with the EU *acquis*. The National Bank of Georgia (NBG) oversees monetary policy, and its primary objective is to ensure price stability, which is in line with the EU monetary policy legislative framework.

The NBG intervenes sporadically to offset short-term fluctuations arising from capital flows. Last year's NBG interventions on foreign exchange markets contributed to increased foreign currency reserves.

The institutional independence of the NBG is guaranteed by the constitution and the organic Law on the NBG. The NBG is presided by the governor and the board; the bank's governor is

selected by the bank's board and appointed by the President. The incumbent Governor completed his seven-year term in March 2023. His successor needs to be appointed in an orderly manner to ensure that the independence of the NBG is maintained.

In February 2023, the amendments adopted by the Parliament created a new position of first vice-president of the NBG to assume the role of an acting governor after the expiry of the governor's term for an undetermined period of time. This provision is not in line with EU *acquis*, which requires that the statutes of national central banks should provide clear rules for the appointment of the new governor in order to ensure the institutional independence and avoid any external interference. The amendments were subsequently vetoed by the President of Georgia. Parliament overrode the veto with the adoption of amendments on 13 June 2023. In line with these amendments, the first vice-president of the bank, acting also as its governor, was selected in June. In September, three vice presidents resigned over a decision taken by the acting governor to reverse an initial NBG decision to enforce US sanctions imposed on a Georgian-Russian businessman.

Regarding **economic and fiscal policy**, the system of public finances in Georgia is considered strong and transparent, as confirmed by the Public Expenditure and Financial Accountability Assessment carried out in 2022. However, there are some issues where further alignment with the international standards and EU *acquis* is needed, including on the role of Georgia's independent fiscal institution.

The Parliamentary Budget Office (PBO) provides budget analysis and macro-fiscal projections and is considered by the authorities as the independent fiscal institution. A self-assessment in line with the OECD Principles for Independent Fiscal Institutions carried out by the PBO in 2022 indicated several areas for improvement, including PBO's official mandate, legal guarantees of independence and autonomy, strengthening skills in quantitative analysis, and the necessity to add an advisory council. Therefore, the institutional set up, legal mandate and capacity to undertake analytical work of the independent fiscal institution need to be substantially strengthened to be in line with the OECD and EU requirements.

Georgia implements a medium-term budgetary framework that covers macro-fiscal framework and sectoral expenditures over a four-year period.

Georgia's numerical fiscal rules set ceilings on general government deficit (3% of GDP) and government debt (60% of GDP). These rules were strictly complied with before the pandemic, then suspended and complied with again in 2022.

Chapter 19 - Social policy and employment

EU rules in the social field include minimum standards for labour law, equality, health and safety at work and non-discrimination. They also promote social inclusion, social protection, and social dialogue at EU level.

Georgia has **some level of preparation** in the field of social policy and employment. **Some progress** was made in the reporting period, including the adoption of resolutions on health and safety at work aimed at aligning with the EU *acquis*, and strengthening the capacity of the Labour Inspection Office. On social policy, further steps were taken towards a more comprehensive and sustainable social protection system. Across all policy areas Georgia needs to continue work on aligning with the EU *acquis*.

In the coming year, Georgia should:

- further align with the EU labour and occupational safety and health *acquis*; specifically with the pending Directives on occupational safety and health;

- adopt a comprehensive and sustainable social protection system, including unemployment and minimum income benefits, promote social dialogue, and engage in a wider discussion on the reform of the minimum wage;
- ratify and implement relevant International Labour Organization conventions, in particular C081 on labour inspection.

Regarding **labour law**, Georgia has legislation concerning all eight Directives where it has an obligation to harmonise with the EU *acquis* under the AA/DCFTA. Legislation concerning the rights of young workers aims at aligning with the relevant EU *acquis*. Georgia demonstrates an overall good understanding of the EU *acquis* in most areas of labour law. However, further alignment efforts are required, including as regards directives applicable in specific sectors, such as transport.

The Labour Code reform of 2020 significantly improved the labour regulations in the country, however, the reform contains major gaps in terms of introducing gender-responsive family policies in particular paternity or carer's leave and flexible working arrangements.

Georgia has not yet ratified some relevant International Labour Organization conventions, including those on labour inspections, occupational safety and health at work, and violence and harassment at work. As regards labour inspections, Georgia is working towards ratification of ILO Convention 81.

On occupational **health and safety at work**, the 2019 Organic Law on Occupational safety is mainly based on the EU Framework Directive. However, it seems not fully aligned with the EU *acquis* on occupational safety and health since it only applies to employers and workers bound by a labour agreement – including child workers, – and limits the possibility to detect/identify instances of exploitation and forced labour. This limits its application and leaves out informal employers and employees outside its application.

Work is also ongoing to align legislation with individual directives on health and safety at work. In this context, between July 2022 and May 2023, Georgia adopted four resolutions aimed at incorporating provisions of 5 EU Directives (90/270/EEC, 89/654/EEC, 89/656/EEC, 92/58/EEC, 90/269/EEC).

The enforcement of labour law and health and safety at work is covered by the mandate of the Labour Inspection Office under the Ministry of Internally Displaced Persons. In the course of 2022, the Labour Inspection Office's capacities – both institutional and human resource – were strengthened. Due to the specific nature of the work, continuous upskilling activities are needed to maintain a high quality of inspection activities.

During 2022, 35 people died – compared to 37 in 2021 – and 253 were injured at work. Although there is a steady decrease in the number of occupational accidents the average incidence of fatal occupational accidents remains higher than in the EU.

Concerning **social dialogue** there is a limited coverage of collective agreements in the country. Collective agreements are mostly signed at company or enterprise level and only one sectoral collective agreement has been concluded. Social partners require capacity-building activities in order to allow for effective social dialogue.

On **employment policy**, there are two main policy documents: the Law on Employment Promotion and the 2019-2023 National Strategy of Labour and Employment policy. Some efforts have been made to adopt legislation in line with the EU *acquis* on guidelines for employment policies and on enhanced cooperation between public employment services.

On **Labour force participation**, the government's new initiative to improve the employability

of the population receiving social allowances, managed by the State Employment Support Agency, benefited 29 323 individuals between March 2022 and March 2023.

The **unemployment rate** in 2022 in Georgia constituted 17.3%, down from 20.6% in 2021, presumably as a result of post-COVID-19 recovery. However, already in the first quarter of 2023, unemployment rate increased to 18%. Unemployment rate among men is higher than that of women (19.3% vs 14.6%). In 2022, women's labour force participation rate (%) remained much lower (41.5%) compared to men's (64%). Women's employment rate (%) is again much lower (35.4%) than that of men (51.7%).

Informal employment remains a challenge, with approximately a third of the population being engaged in it in 2022 (28.4%). Here, again, more men are engaged in informal employment than women (33.4% vs 22.5%).

Share of NEETs (youth aged 15-29 not in employment, education or training) remains high, ranging between 23.4% (15-24) and 30.7% (15-29 years old) and needs to be addressed.

On **social protection and inclusion** Georgia's social protection system is funded by the general tax revenue, except for statutory funded pensions, which are funded by contributions. In 2022, 5.7% of GDP was spent on social protection programmes – compared to 6.4% in 2021. Universal pension was increased in 2023. In 2021, 17.5% of the population lived below the national poverty line.

In February 2023, the Ministry of Internally Displaced Persons from the Occupied Territories, Labour, Health and Social affairs adopted the 2023-2030 action plan for the strategy on the independent living and de-institutionalising of persons with disabilities. This started the process of shifting from institutional to community-based care for vulnerable people. The legislative framework to enable municipalities to plan social services, as well as their capacities to implement these, need to be strengthened.

Georgia lacks a national strategy on the **de-institutionalisation** of children. However, the government has made steps to deinstitutionalise remaining non-state regulated religious residential institutions. Further measures are needed to address the lack of proper standards in boarding schools.

The Constitution of Georgia includes several articles related to principles and rights at work, including **equality and non-discrimination**. The Law on the elimination of all forms of discrimination forbids all forms of discrimination.

As regards **equality between women and men in employment and social policy**, the basic institution and provisions exist in current legislation.

The government increased the state allowance of maternity/child adoption benefits from GEL 1 000 to 2 000 from 1 January 2023. Secondary school teachers can now receive 100% salary during maternity leave.

Chapter 20 - Enterprise and industrial policy

EU industrial policy strengthens competitiveness, facilitates structural change, and encourages a business-friendly environment that stimulates small and medium-sized enterprises.

Georgia is **moderately prepared** in the area of enterprise and industrial policy. There was **limited progress** in the reporting period. Special attention is needed to diversify inward foreign direct investment to tradable industries and linkages to the domestic industrial tissue.

In the coming year, Georgia should:

- adopt strategies for green growth and on investment promotion;
- develop an industrial strategy and action plan with stakeholder consultations for implementation starting 2025;
- align with EU legislation on late payments;
- strengthen the capacity of the administration and of the private sector to apply regulatory impact assessments.

As regards **industrial and enterprise policy principles**, Georgia bases its development strategy on the driving forces of infrastructure development, domestic and foreign direct investment in industry as well as on SMEs, notably innovative start-ups. digital transformation (*see chapter 10 - Digital transformation and media*). Georgia's government programme expresses the orientation of its industry strategy, yet not its means. Its expiry in 2024 requires the early start of formulating a strategy for economic and industrial development, with sufficient concrete detail to reduce a fragmentation and thorough stakeholder consultations. An update to the "investment promotion strategy and action plan 2020-2022" is overdue and the adoption of a green growth strategy still outstanding. Georgia is piloting the design of a smart specialisation strategy in the Imereti region. The reduction of skill mismatches through re-training of the workforce remains to be seen.

The business environment is overall good with certain important challenges in need of determined improvement (*see the section on Functioning of product markets*). Informal business practices may hinder scale up notably in non-food manufacturing.

The government adopted in December 2022 a new governance code for state-owned enterprises. A strong oversight role of the Ministry of Finance is part of it. Three of the main state-owned enterprises started introducing the new governance in the first quarter of 2023.

The scope of applying regulatory impact assessment remains limited. Capacity within the government and within the private sector needs to be strengthened in this regard.

The **SME policy environment** in Georgia is generally considered to be well-developed and supportive. The strategy for the development of small and medium-sized enterprises for 2021-2025 continues to be implemented. Women entrepreneurship policies were enhanced with the state concept on the economic empowerment of women. The SME definition is in line with the EU definition to the extent that it is based on staff headcount and annual turnover.

As regards **industrial and enterprise instruments**, an alignment is needed with the Late Payment Directive. Notably provisions on payment terms require clarification and the key provision on late payment interests to be introduced.

Enterprise Georgia is launching an export assistance programme to promote the growth of export-oriented small and medium-sized businesses. A technology transfer pilot programme has been successfully implemented by the Georgian Innovation and Technology Agency. The government plans to adopt and expand the programme under the state budget and institutionalise a central technology transfer office at the innovation and technology agency.

No practical steps were taken to implement the cluster development framework.

Negotiations are currently in their early stages regarding Georgia's participation in the new Single Market Programme. In the event of a positive outcome of these negotiations, considerable awareness-raising and capacity building would be needed to support Georgian applicants.

As regards **sectoral policies**, noteworthy is the expected development of a new mining code.

Chapter 25 - Science and research

The EU provides significant support for research and innovation. All Member States can participate in the EU's research and innovation programmes and benefit from them, especially where there is scientific excellence and solid investment in research and innovation.

Georgia is **moderately prepared** in the area of science and research. There was **some progress** in the reporting period, particularly in terms of integration into the European Research Area (ERA) and increasing participation in Horizon Europe. Georgia expressed a commitment to participate in all 20 ERA Actions, launched open science initiatives and opened its Horizon Europe Office.

In the coming year, Georgia should:

- prepare and adopt a national European research area roadmap including a strategic and well-defined approach to open science, researchers' mobility, and implementing European Research Area voluntary actions;
- proactively support cooperation between research and industry and promote innovation in line with the 5 flagships of the new European innovation agenda;
- strengthen the implementation and internationalisation of sector-specific scientific priorities, and implement smart specialisation in the Imereti Region.

Georgia has been taking important steps to modernise its research and innovation policy and to align with EU policies, following the recommendations of the Horizon 2020 Policy Support Facility. The new Unified National Strategy for Education and Science for 2022-2030 and the Sectoral Action Plan for 2022-2024 were adopted in 2022. Both are aligned with the strategic objectives of the European Research Area. The internationalisation strategy approved in March 2023 for the Shota Rustaveli National Scientific Foundation should contribute to further integration into the European Research Area.

Since January 2021, Georgia has been associated to the **framework programme** Horizon Europe with 16 grants awarded to Georgian research and innovation stakeholders, a success rate of 16.54% and an overall EU contribution of EUR 2.2 million. Georgia joined the European Cooperation in Science and Technology (COST) association in 2022. Georgia remains active in Eastern Partnership regional cooperation on research and innovation.

There were 11 860 researchers in Georgia in 2021. State funding for science and research is gradually increasing. In 2023, the total state funding amounts to EUR 27,563,787.20 which is 13.8% higher than in 2022.

Georgia has successfully implemented several measures in the reporting period aiming to increase its participation in Horizon Europe. A Georgian researcher mobility scheme was launched with EU funding. The Georgian Horizon Europe office trained stakeholders in proposal drafting and organised National Contact Points (NCP) information events. Georgia is well connected to all NCP Networks (including the Widera network).

Georgia launched in cooperation with the European Open Science Cloud Association a national open science cloud (GEOSC) and took important steps to establish the GEOSC National Association and to integrate in the European Open Science Cloud.

The Georgian Innovation and Technology Agency (GITA) launched new national funding schemes for public grants and established a centralised Technology Transfer Office (TTO). Georgia should be encouraged to take up the opportunities presented by the European Institution of Innovation and Technology (EIT).

Work on developing a regional **smart specialisation** strategy in Imereti was launched following the finalisation of the entrepreneurial discovery process in October 2022. The adoption of the strategy document is planned for the end of 2023.

Chapter 26 - Education and culture

The EU supports cooperation in education and culture through funding programmes and the coordination of Member State policy through the ‘open method of coordination’. The EU and the Member States must also prevent discrimination and ensure quality education for children of migrant workers, including those from disadvantaged backgrounds.

Georgia is **moderately prepared** in the area of education and culture. There was **some progress** in the reporting period in that policies are in place which need to be adopted and implemented. The education system and youth policy, and training and qualifications policy, are broadly aligned with EU objectives. Cultural policy broadly reflects the general priorities of the new European agenda for culture. Georgia enjoys a good level of cooperation with its European partners on sport.

In the coming year, Georgia should:

- implement its education and science strategy, and adopt and start implementation of the 2022-2027 vocational education and training strategy;
- adopt and start to implement the 2022-2027 career guidance strategy;
- enhance public consultation and civil dialogue on culture.

On **education and training**, the constitution ensures the right to education. In August 2022 the government approved a unified strategy of education and science for 2022-2030.

Data collection on education is well-developed, overseen by EMIS – the education management and information system¹². Georgia participates in international surveys, such as PISA – the OECD programme for international student assessment. In the 2018 PISA studies, Georgia’s share of 15-year-old underachievers in reading was 64.4%, compared to an EU average of 22.5%. Georgia participated in PISA 2022 and results will be available in Autumn 2023.

In the field of higher education, Georgia has been a member of the Bologna process since 2005 and has ratified the Lisbon Recognition Convention.

Concerning social inclusion in education, the state ensures universal access to primary, basic and secondary education for every child. The Law on general education and the national curriculum recognise the individual and alternative forms of education. For accessible and quality education, Georgia developed additional services for students with special educational needs in public schools.

In the field of **vocational education training** (VET), Georgia aims to promote private sector involvement in work-based learning and dual education. Creating partnerships with business is a guiding principle in Georgia’s technical and VET reform. The Vocational Skills Agency was established in 2021 by the Ministry of Education and Science and Georgian Chamber of Commerce and Industry to promote interaction and partnership with private sector. Two new strategies: the 2022-2027 VET strategy and career management services strategy for all formal education levels are expected to be approved in 2023. Parliament adopted on 28 June 2023

¹² EMIS collects data on pupils/students and teachers/trainers at the different levels and sectors of the educational system, including: early childhood education and care; school education; vocational education and training; higher education; and adult learning.

amendments to the Law on education quality enhancement regarding teaching of VET programmes.

In 2022, Georgia joined the European Alliance for Apprenticeships.

Georgia has revised its regulations, procedures and tools to align with the EU's 2012 recommendation on validation of non-formal and informal learning.

The development of digital skills is an integral part of Georgia's educational curricula in VET and at each level of higher education.

On green education the new national strategy places emphasis on digital transformation, global citizenship, democratic culture, and the green transition, and sustainable development is required in institutional and program level programmes. Green and digital education and STEM are priority topics of the new national curriculum, and teacher training on environmental education and on sustainable development takes place. In order to promote scarce environmental professions, the "Green Scholarships" programme was introduced.

In the field of **youth** policy, both the 2020-2030 Georgian national youth policy concept and the 2023-2026 state youth strategy prioritise the active involvement of young people in public life and democratic processes. There are no concrete mechanisms for youth participation in policy making at national and local levels. although the local self-government code describes the principles and forms of citizen's participation in local self-government in general.

Georgia cooperates on **sport** with European partners, including through the European Week of Sport Beyond Borders and the Council of Europe's sport partnership.

Overall, Georgia's **cultural policy** documents and programmes, including the 2020-25 culture strategy, reflect the general priorities of the new European agenda for culture, although in the reporting period there were a few cases of limiting cultural freedom. There is limited dialogue on overall cultural policy between the government and civil society in general.

Georgia participates in international actions of the 2021-2027 Erasmus+ programme and in eTwinning, and benefits from international youth actions of Erasmus+ and European Solidarity Corps programmes, participates in the Culture and Cross-Sectoral (and partially in the MEDIA) strands of the Creative Europe programme, and regional actions such as EU4Culture.

Chapter 29 - Customs union

All Member States are part of the EU customs union and follow the same customs rules and procedures. This requires legislative alignment as well as adequate implementing and enforcement capacity, and access to the common computerised customs systems.

Georgia is **moderately prepared** in the area of the customs union. There was **some progress** in the reporting period. Customs legislation is not aligned with the EU *acquis*.

In the coming year, Georgia should:

- further align its 2019 national Law on customs with the Union Customs Code;
- improve administrative and operational capacity and increase resources of the customs service;
- strengthen the administrative capacity in the IT customs sector.

Customs legislation

The new customs code entered into force in 2019 and is partly aligned with the Union Customs Code. The code needs to further align on duty relief; value added tax on imports; transit; and

simplification procedures. In January 2023, Georgia adopted an amendment to its code on duty relief. Namely, Book X, on an exemption from customs debt, which will enter into force on 1 January 2026.

Georgia is a party of the Pan-Euro Mediterranean Convention on the rules of origin. Georgia also benefits from diagonal cumulation of origin between the Pan-Euro Mediterranean Convention member countries. Georgia completed the procedure to apply revised transitional rules of the convention in 2021.

Since August 2022, there is progress with two authorised economic operators now in operation in the country. Nevertheless, the national programme for authorised economic operators needs to mature.

Georgia is in the process of accession to the Convention on the Simplification in Trade in Goods and the Convention on a Common Transit Procedure. Georgia has developed the NCTS IT system and on 3 April 2023, Georgia has started the national application of transit and published national instructions on the possibility of using the new computerised transit system when carrying out customs formalities. For the past year, Georgia regularly attends the EU counter-terrorism coordinator working group meetings as an informal observer.

The risk management system is automated and compares import, export and transit data against active risk profiles.

The legislation on customs enforcement of intellectual property rights is generally in line with the EU *acquis*, despite some divergences. Clarifications are needed on whether Georgia's law on border measures related to intellectual property predicts the destruction of goods suspected of infringing intellectual property rights sent in small consignments. Georgia is aligned on *ex officio* control measures on IPR at the border, although trends for *ex officio* detentions are declining.

Georgia seems to have in place a cash controls system that appears to be aligned with the EU *acquis* despite some differentiations.

The legislation concerning the import and export of cultural goods is in broadly aligned with the EU *acquis*. Cross-border smuggling of tobacco products and other illicit activities in the regions close to breakaway regions is an area where improvements are needed. It is recommended that Georgia joins the WHO Framework Convention on Tobacco Control Protocol to Eliminate Illicit Trade in Tobacco Products.

In October 2022, Georgia expressed interest in deploying the electronic freight transport information (eFTI scheme) within the framework of the EU4Digital project. Georgia's participation in the eFTI network would further strengthen the regulatory convergence in the relevant customs areas.

Administrative and operational capacity

The Georgia Revenue Service is the legal entity established under the Ministry of Finance. It has adequate financial and operational capacity to cope with assigned tasks. The revenue service needs to adapt its structure to the EU customs requirements and attract additional resources. The revenue service also has to upgrade its procedures and customs information and technology systems to make it compatible with those of the EU.

Georgia is a full member of the EU Customs programme.

CLUSTER 4: THE GREEN AGENDA AND SUSTAINABLE CONNECTIVITY

The cluster on Green Agenda and sustainable connectivity covers: transport policy (chapter

14); energy (chapter 15); trans-European networks (chapter 21); and environment and climate change (chapter 27).

Georgia is at an early stage of preparation in environment and climate change. Georgia adopted its long-term low emission development strategy. It has some level of preparation in the areas of energy, transport policy and trans-European networks. A new market-based support scheme for renewable energy production was introduced. Some progress was achieved on trans-European networks and more efforts are needed to improve transport and energy infrastructures. Some progress was recorded with the adoption of the National Transport and Logistics Strategy (2023-2030) in August 2023, the adoption of the new Rail Strategy in February 2023 and the adoption of the Maritime Code in May 2023. More efforts are needed in the transport sector, with notable focus on road safety, rail sector reform and incorporation of the smart and sustainable mobility strategy principles. Georgia continued improving its civil protection system and showcased a clear commitment in strengthening its resilience in the area of disaster risk.

Chapter 14 - Transport policy

The EU has common rules on technical and safety standards, security, social standards, State aid and market liberalisation in road transport, railways, inland waterways, combined transport, aviation and maritime transport.

Georgia has **some level of preparation** in terms of transport policy. **Some** progress was noted in the reporting period with the adoption of the National Transport and Logistics Strategy (2023-2030) and its 2023-2024 action plan in August 2023, the adoption of the new Rail Strategy in February 2023 and the adoption of the Maritime Code in May 2023. Georgia needs to make additional efforts on road safety (e.g align with EU *acquis* concerning the procedures for checks on the transport of dangerous goods by road).

In the coming year, Georgia should:

- align and implement itself with the transport *acquis* in all sectors and at all levels of government;
- enhance the administrative capacity and infrastructure maintenance for road safety, as well as launch and implement awareness-raising campaigns to reduce the high number of road accidents and fatalities.

On **general transport**, since December 2022, Georgia is an observer member of the Transport Community Treaty and is collaborating pro-actively within the treaty's structures. This association will contribute to closer integration of Georgia within the EU transport market. Closer association with the Transport Community can support Georgia on its European path, as the Transport Community plays an important role supporting the enlargement process through the implementation of the relevant EU transport *acquis*. The national transport and logistics strategy was adopted on 15 August 2023 for the period 2023-2030, with a corresponding action plan for 2023-2024. Larger cities should develop sustainable urban mobility plans, which respect of environmental and social standards, following best EU practices.

The main competences in the transport sector are exercised at state level by the Ministry of Economy and Sustainable Development. The other key bodies are: the Land Transport Agency, the Maritime Transport Agency and the Civil Aviation Agency. The gradual integration of Georgia into the EU internal aviation market is governed by the European Common Aviation Area Agreement signed in 2010 and in force since 2 August 2020.

Regarding **road transport** and **road safety**, the 2022-2025 national Road Safety Strategy was approved in July 2022 and is in line with EU and UN targets to reduce fatal and serious road traffic injuries. Road safety is still a concern with higher levels of casualties than the EU average. Georgia is largely aligned with relevant provisions of the European agreement concerning the work of crews of vehicles engaged in international road transport. Tbilisi will host the Secretariat of the Regional EaP Road Safety Observatory (RSO), due to be established in 2023.

Georgia has not adopted main EU texts related to driving and rest times, such as the Regulation on the harmonisation of certain social legislation relating to road transport; the Directive for posting drivers in the road transport sector; and the Directive on the organisation of the working time of people performing mobile road transport activities. Amendments were made to the Regulation on periodic technical inspection in December 2022, including on noise inspection. Georgia acceded on 19 September 2016 to the UNECE Agreement concerning the International Carriage of Dangerous Goods by Road (ADR) and should now extend the scope of its legislation to the national operations with dangerous goods. Relevant EU *acquis* (e.g. concerning the procedures for checks on the transport of dangerous goods by road) needs to be transposed as well.

Regarding market access, the regulation establishing common rules on conditions to be complied with to pursue the occupation of road transport operators has been fully aligned for domestic transport operators, but only partially for transport operators dealing with international transportation of goods and passengers.

On rail transport, the latest amendments to the Railway Code of May 2023 foresee the establishment of a Railway Transport Agency, under the Ministry of Economy and Sustainable Development, as of 1 July 2023. The Agency will act as an incident and accident investigation body. There is no market and no competition for rail services. Separation between infrastructure management and transport operations is not provided. There is only one integrated railway, the JSC Georgian Railway. Safety responsibilities lay solely with the incumbent rail company JSC Georgian Railway.

There is no independent safety supervision. Technical specifications for interoperability are not implemented.

On maritime transport, the country is a member of the Black Sea Memorandum of Understanding and has implemented the Directive on port state control to some extent. Georgia needs to implement legislation aligning to the Port Services Regulation. The Maritime Code was adopted end May 2023 and improves the labour and social status of the Georgian sailors. The national procedure for the ratification of the International Labour Organisation's Maritime Labour Convention is completed. Georgia also participates in the Black and Caspian Sea (BCSEA II) technical assistance project implemented by the European Maritime Safety Agency (EMSA).

On civil aviation, Georgia has implemented more than half of the aviation *acquis* governing market access, air traffic management, aviation safety, security, environment, and consumer protection which is fully implemented. The EU regulations on social aspects have not been implemented yet. Georgia is signatory of EUROCONTROL, the International Civil Aviation Organization and the European Civil Aviation Conference. It is an observer of the European Union Aviation Safety Agency.

There are some provisions on **EU passenger rights** and clear progress made in terms of passenger rights in the aviation sector. Further efforts are needed to reinforce passenger rights in all modes of transport.

There are no provisions on **multimodal and combined transport**.

Chapter 15 - Energy

EU energy policy covers energy supply, infrastructure, the internal energy market, consumers, renewable energy, energy efficiency, nuclear energy, nuclear safety, radiation protection and nuclear safeguards.

Georgia has **some level of preparation** in the area of energy. There was **limited progress** in the reporting period. The country needs to reinforce interinstitutional cooperation and coordination to improve its fragmented and inconsistent legislative framework. Overall, Georgia needs to step up its efforts towards establishing functional internal markets and integrating into the regional market. Unbundling its energy utilities remains an important priority for Georgia, as does establishing its oil stocks.

In the coming year, Georgia should:

- finalise electricity market opening and the unbundling of the transmission system operators in electricity and gas;
- transpose and implement the Electricity Integration Package adopted by the Energy Community Ministerial Council in December 2022.
- Adopt the National Energy and Climate Plan (NECP) in line with the Energy Community 2030 energy and climate targets, taking due account of recommendations issued by the Energy Community Secretariat and commit the necessary institutional capacity for its implementation.

Georgia developed an adequate regulatory framework and liberalised their energy markets in line within a fixed timeframe and in line with the treaty requirements. Parts of the EU *acquis* are derogated since Georgia currently has no direct connection to energy networks of any EU or Energy Community Treaty country.

There are currently no main **overarching strategic documents** on energy policy in place. The draft National Energy and Climate Plan (NECP) has been submitted to the Energy Community Secretariat on 21 July 2023, slightly beyond the deadline of 30 June. The final NECP will have to be in line with the Energy Community 2030 energy and climate targets and take due account of recommendations issued by the Energy Community Secretariat. Georgia does not have emergency oil stocks to ensure **security of supply**. There is a lack of human resources in the Ministry of Energy, in particular concerning fulfilling security of supply obligations. The country has not aligned with Directive on oil stocks imposing an obligation to maintain minimum stocks of crude oil and/or petroleum products. The adoption of gas security of supply rules is pending. Georgia's main electricity supplier, the Enguri/Vardnili hydropower cascade, is partially located in the breakaway region of Abkhazia.

Concerning the **internal energy market**, Georgia has aligned with the third energy package, mainly through the Law on energy and water supply, as well as with a set of implementing legislation. The transposition and implementation of the newly adopted Electricity Integration Package is still pending (transposition deadline is end of 2023). Georgia has not finalised the unbundling of the transmission system operators in electricity and gas. The Georgian electricity transmission system operator GSE is still not unbundled, despite the Georgian National Energy and Water Supply Regulatory Commission provisionally certified the electricity transmission system operators in 2021. The electricity distribution system operators are legally and functionally unbundled. The gas distribution system operators (including SOCAR owned undertakings) are not unbundled. The Georgian National Energy and Water Supply Regulatory

Commission is responsible for maintaining balance in the energy and water supply sectors between the interests of customers and regulated companies. This ensures the development of the regulatory framework and promotes competition.

In the **electricity** sector, the launch of day-ahead, intra-day, balancing and ancillary services markets was postponed. The deregulation of production and large customers follows the market opening scheme of the electricity market concept design and is expected to be finalised in the upcoming years. Small enterprises and households will remain subject to the historical electricity supplier. A high number of renewable energy producers are under power purchase agreements. A new support mechanism – market-based contracts for differences – has already been introduced. The first auction for 300 MW of renewable energy was successfully completed in April 2023. Joint capacity allocations between Georgia and Türkiye via the allocation platform for the region of Southeast Europe should be discussed following the launch of market opening.

Georgia is not directly interconnected with EU Member States. Its electricity network is synchronised with Russia's and Azerbaijan's electricity grids. Electricity is either exported or imported from its neighbours, including Türkiye, depending on the season.

In the **gas** sector, Georgia concludes supply contracts bilaterally for the long term. The natural gas market concept includes the establishment of a natural gas exchange and an over-the-counter auction platform. The Georgian gas exchange was established but is not yet operational. The gas market is characterised by a high level of concentration. Gas-fired thermal power plants operate with gas received from Azerbaijan. Georgia already aligned its legislation with the Regulation on wholesale energy market integrity and transparency.

The country hosts important gas and oil pipelines for the Southern Gas Corridor. It is dependent on gas imports from Azerbaijan and Russia, though at a marginal level from the latter. Georgia needs to implement the security of gas supply regulation. Gas cross-border interconnection points are nearing their maximum physical operating capacities. Georgia does not possess gas storage, which poses some risks during high-demand peak days.

In the area of **renewable energy**, the Law on promotion of generation and consumption of energy from renewable sources needs to be aligned with the Renewable Energy Directive. The revision is in its final stages. A new market-based support scheme for renewable energy production was introduced in December 2022, envisaging auctions for a total installed capacity of up to 1 500 MW. The first auction announced in February 2023 has been completed. Provisions related to the sustainability of biofuels are pending.

On **energy efficiency**, Georgia is aligned with the Directives on energy labelling and the energy performance in buildings. Fifteen energy efficiency bylaws were adopted in 2022 and 2023. The remainder of implementing legislation is still to be adopted. On energy labelling, the adoption of eleven product regulations is pending, in addition to three that are already adopted. An advanced draft of the long-term building renovation strategy has already been developed.

On **nuclear energy, nuclear safety and radiation protection**, Georgia has no nuclear power sites on its territory. Georgia is a party to international conventions concluded under the auspices of the International Atomic Energy Agency, except for the Convention on Nuclear Safety. Georgia has developed a national strategy for radioactive waste management taking into consideration provisions under the Directive on radioactive waste. Georgia has adopted the Law of Georgia on radiation protection, nuclear safety and security on 15 June 2023. Georgia still has to fully align with and implement the Directives on nuclear safety; the management of spent fuel and nuclear waste; basic safety standards and drinking water. Georgia still also has to consider accession to the Convention on Nuclear Safety.

On **nuclear safeguards**, upon accession, the existing systems of accountancy and control of nuclear materials in Georgia would need to be adapted to accommodate for the safeguards provisions (Chapter 7) of the Euratom Treaty. This means that state and operators systems would need to incorporate reporting obligations to the Commission and allow for access to nuclear materials and installations by Commission Inspectors.

Georgia would also have to accede to the existing safeguards agreement (INFCIRC/193 and its Additional Protocol) between the Euratom Non-nuclear Weapon States, the Euratom Community and the International Atomic Energy Agency (IAEA). Georgia's own existing comprehensive safeguards agreement with the IAEA would be suspended.

Chapter 21 - Trans-European networks

The EU promotes trans-European networks (TENs) in the areas of transport, telecommunications and energy to strengthen the internal market and contribute to growth and employment.

Georgia has **some level of preparation** in trans-European networks. There was **some progress** in the reporting period, notably with the adoption of the 2023-2030 National Transport and Logistics Strategy and the actual implementation of TEN-T projects (e.g East-West Highway). The legislative framework needs to be aligned with the trans-European networks for transport and trans-European networks for energy regulations to implement transport and energy projects. Transport and energy infrastructures are insufficiently developed. The implementation of connectivity reform measures in Georgia is slow.

In the coming year, Georgia should:

- improve the performance of the rail and road networks in terms of quality, capacity and safety;
- align with the Regulation on guidelines for trans-European energy infrastructure.

The Trans-European **Transport Networks** (TEN-T) were extended to the Eastern Partnership, including Georgia. The extension to Georgia identifies core and comprehensive networks. An indicative trans-European transport networks investment action plan for the Eastern Partnership was jointly prepared by the World Bank and the European Commission. The action plan supports key investments priorities with EUR 3.4 billion for all modes of transport on the extended core network. Its deadline is in 2030.

Developing transport infrastructure is listed in key strategic documents, such as the 2021-2024 Towards Building a European State programme and the recently adopted 2023-2030 National Transport and Logistics Strategy.

An amendment to the TEN-T map was formalised through the signature of the High-Level Understanding between the EU and Georgia on the adaptation of the indicative TEN-T in March 2023 and added a new core road alignment in Algheti-Sadakhlo. The Georgian indicative network consists of 751 km of railways (out of which 599 km are on the core network), 856 km of motorways (out of which 795 km are on the core network), three ports (one of which is core) and one core airport. Georgia has yet to inform if transport infrastructure meets TEN-T infrastructure requirements.

The limited capacity of existing international state roads are the main bottlenecks reducing the performance of the core motorway network. The road infrastructure is generally of a poor standard, in terms of safety, capacity and quality.

Concerning railways, authorities are addressing bottlenecks that have been identified on

the core network via the railway modernisation project. The works are expected to be finalised by the end of 2023. The rail network infrastructure and rolling stock are often obsolete with respect to quality, capacity and safety standards. The Baku-Tbilisi-Kars railway line is another major railway project, which is 85% completed.

Alignment with the Regulation on guidelines for the **trans-European energy infrastructure** – TEN-E Regulation – as adapted and adopted by the Ministerial Council of the Energy Community is required. The project application was selected in the list of projects to potentially be included in the 2022 European Network of Transmission System Operators ten-year electricity network development plan. Replacing the dead-end gas supply system with a highly secure circular-type system of loops and interconnectors is the objective of the 2021-2030 ten-year natural gas transmission network development plan.

Challenges to the gas transmission network include: the difficulty or even impossibility of the existing transmission system or contractual limitations to balance hourly consumption disparity; non-backed-up cross-border pipelines; and suspended construction of natural gas storage. The non-back up of interconnection lines; the radial/inadequately backed-up network of western Georgia; the dead end (mainly 220 kV) transmission lines both in the western and eastern part of the power transmission system; and exploring alternative solutions to ease the impacts of cross border infrastructure constraints are the main challenges for the electricity transmission network.

A derogation from cross-border cooperation rules applies until Georgia has a physical interconnection with the EU or the Energy Community electricity markets. At this stage, there is only a bilateral cross-border capacity allocation on the interconnectors with Türkiye. Rules for the management of cross-border electricity flows and capacity allocation were drafted as part of the transmission grid code. No agreements with neighbouring transmission system operators and the development of the framework for market-based mechanisms for cross-border exchange are yet signed.

Chapter 27 - Environment and climate change

The EU promotes strong climate action, sustainable development and protection of the environment. EU rules contain provisions addressing climate change, water and air quality, waste management, nature protection, industrial pollution, chemicals, noise and civil protection.

Georgia is at an **early stage of preparation** in the field of environment and climate change. There was **some progress** in the reporting period, notably with the adoption of a long-term low emission development strategy and with the improvement of the capacity of its civil protection and disaster risk management system. The gaps in the level of alignment with policy ambition and legal obligations in sectors covered under this chapter remain wide. Climate neutrality by 2050 was established as a policy target. Moving more vigorously towards a low-emission, resilient, green economy needs increased political attention, as well as a whole-of-government and whole-of-the-economy approach. Georgia continued to strengthen its civil protection and disaster risk management system.

In the coming year, Georgia should:

- strengthen administrative and inspection capacities in the environment and climate sector and implement structural reforms;
- align with the EU water *acquis*;
- implement commitments under the Energy Community's Decarbonisation Roadmap and

urgently prepare for the Emissions Trading System (ETS) in line with the Energy Community recommendation, notably on the Monitoring, Reporting and Verification of emissions;

→ adopt a climate law in order to enhance the level of ambition of Georgia on climate change mitigation and adaptation and ensure consistent, timely implementation.

Environment

Georgia has some level of alignment with EU **horizontal legislation**. The country is party to the Aarhus Convention and follows some of its provisions on access to environmental information and justice. Several IT portals help to ensure a certain degree of public access to environmental information. This remains insufficient, fragmented and cumbersome. Environmental policy **implementation and enforcement** represent a challenge, notably due to limited administrative capacity. Various aspects of Georgia's environmental compliance assurance system must improve to tackle the high level of environmental non-compliance in the country.

Although Georgia's legislation on environmental impact assessments is in place, it still needs to be further developed and effectively implemented. This includes transboundary cooperation given that Georgia is not a party to the Espoo Convention. The country signed but has not ratified the protocol on strategic environmental assessment. Overall, there are significant capacity constraints in implementing, monitoring and enforcing the Environmental Assessment Code.

The Law on environmental liability establishes financial liability for environmental damage and a requirement to remediate environmental damage. While being a step in the right direction, the Law is not fully in line with the EU Environmental Liability Directive as concerns its scope and definitions. Four resolutions necessary for the implementation of the Law were adopted during the reporting period.

On **air quality**, Georgia is partially aligned with the EU *acquis*. Air quality standards were established for all pollutants covered by the Directives on ambient air quality. Exceedances are recorded, notably those concerning particulate matter in major cities. The air quality monitoring system is partially aligned with EU standards and an air quality index website is accessible. The Central Zone Air Quality Plan was approved in July 2023. Since 2021, continuous monitoring of air emissions applies to 94 large stationary facilities but only about a fifth of them report information to an electronic system established to this end. An air quality monitoring plan for Rustavi has been prepared. Significant gaps still exist regarding alignment with the Directive on national emission reduction commitments, but progress is made notably on emission projections and inventories. The technical regulation determining the emission standards for vehicles was approved in June 2023. The regulatory framework was amended in order to ban the export of catalyst converters for three years. Georgia is party to the United Nations Economic Commission for Europe Air Convention but not yet to any of the latest three protocols.

Georgia is at an early stage of alignment with EU **noise** legislation. Preparation of the strategic noise maps and action plans needs to start.

Georgia's alignment with the EU **waste management** and circular economy legislation is at an early stage. Alignment with the revised Waste Framework Directive, and all relevant waste streams legislation needs to be further consolidated. This includes adopting national legislation in line with the EU sewage sludge and ship recycling rules. Significant investments are needed to modernise the waste management system and put in place waste collection and treatment

infrastructure, especially at municipal level. The 2013-2030 national waste management strategy was amended in August 2022, incorporating modified targets and addressing the issues of bio-degradable and hazardous waste. A new structural unit for industrial emissions and waste control services was established in April 2023, as part of the Department for Environmental Supervision.

In the area of **water quality**, the level of alignment is limited. A new water Law has been adopted in June 2023. A Georgian water information system has been developed. Identification of nitrate vulnerable zones and an assessment of the need to upgrade the existing surface and groundwater monitoring networks are currently conducted. The legal framework for the protection of marine environment is included within the fourth national environmental action programme adopted in 2022. The country conducts hydrobiological monitoring of coastal waters of the Black Sea.

There is good alignment on **nature protection**, notably through compliance with some of the obligations under the Bern Convention. Georgia's current emerald network presents a sufficiency rate to achieve the network objectives by only 30% despite the relatively constant progress. Georgia needs to update its national biodiversity strategy and action plan. A dedicated biological diversity Law is being developed. A biodiversity monitoring system and a strategy for invasive alien species need to be developed. Georgia should strengthen administrative capacities and increased dedicated financial resources. A new national forest programme process was approved in April 2023, which will further enhance discussion in the forestry sector.

Regarding the EU *acquis* on **industrial pollution control and risk management**, compliance with the EU's industrial emissions legislation require significant legislative work and investments. Further legislative alignment with the EU industrial accidents *acquis* is also necessary. A single national pollutant release and transfer register that gathers the various information in one place does not yet exist in the country. Public authorities view the existing electronic systems for air emissions reporting and water reporting, as well as the waste reporting system that is under development, as steps towards having a national pollutant release and transfer register. Georgia is a signatory of the Protocol on pollutant release and transfer registers to the Aarhus Convention and plans to eventually ratify it. Work in this area needs to be accelerated and guided by the European Regulation on pollutant release and transfer register.

As for **chemicals management**, to implement the Stockholm Convention on Persistent Organic Pollutants, the polychlorinated biphenyls inventory of equipment in the electricity supply sector was carried out and a database was developed. Rules and safety norms for the management of equipment and oils containing polychlorinated biphenyls and their waste were adopted in December 2022. The level of transposition of the chemicals *acquis* is limited and important provisions are missing. The Parliament ratified the Minamata Convention on Mercury in May 2023. Significant efforts are needed to enforce and implement the chemicals legislation, considering the complex tasks under this sector.

Georgia made progress in building the capacity of its **civil protection and disaster risk management** system at central and local levels. It has a 24/7 operational duty service, which cooperates with the European Commission's Emergency Response Coordination Centre. Roles and responsibilities of different actors involved in disaster risk management are clearly defined and, together with the establishment of the Training Division, the basic training programme has been upgraded. Emergency management plans have been developed at a local level in six municipalities. The overall strategy for the development and modernisation of its civil protection system should be developed focusing on preparedness and prevention measures. In this regard, the early warning systems of Georgia could be further strengthened.

Climate change

Georgia is at an **early stage of preparation** and made **some progress** over the reporting period on the **climate change acquis**, including its obligations under the Energy Community Treaty. A long-term low emission development strategy was adopted on 24 April 2023 with a climate neutrality target in 2050. Georgia submitted an updated Nationally Determined Contribution under the Paris Agreement in May 2021 including an unconditional 35% emission reduction target by 2030 compared to 1990 and a conditional 50-57% target; it adopted a 2030 climate change strategy and a 2021-2023 action plan. Georgia has no climate change law yet.

Georgia has currently only a basic national system for monitoring and reporting of greenhouse gas emissions. Georgia prepares its greenhouse gas inventory biennially. Considerable efforts are needed to align Georgia with relevant EU legislation in that respect, notably in the context of the Energy Community.

Consistently with the Energy Community's Decarbonisation Roadmap, Georgia needs to roll out a robust MRV system for as a preliminary step to carbon pricing. Georgia needs to take the necessary steps to set up a mechanism for emission trading to stimulate industrial and energy decarbonisation and to appropriately prepare for the introduction of the EU Carbon Border Adjustment Mechanism.

Georgia did not align with the Directive establishing a scheme for greenhouse gas emission allowance trading and needs to urgently step up the introduction of an emission trading system.

Regarding emissions from transport Georgia has not implemented CO₂ performance standards for new vehicles, nor has it enacted measures to promote monitoring and availability of consumer information on fuel economy and CO₂ emissions in respect of the marketing of new cars. Concerning fuel quality, legislation is in place and the quality of petrol and diesel meets the Euro 5 standard. The country participates in the European Civil Aviation Conference and volunteered to participate in the global carbon offsetting and reduction scheme for international aviation.

Georgia is a party to the Montreal Protocol on substances that deplete the ozone layer. The parliament ratified the Kigali amendment to the Montreal Protocol in June 2023. Georgia is not fully aligned with the current versions of the Regulation on ozone depleting substances or the Regulation on fluorinated greenhouse gases. Some efforts have been made to align with the basic elements of previous versions of those regulations.

Georgia has not developed relevant national legislation in line with the Directive on carbon capture and storage.

Georgia established a climate change council at ministerial level to ensure better coordination; However, the country still lacks a consistent whole-of-government approach systematically mainstreaming climate considerations into policy-making. Administrative capacity remains weak in terms of both human and financial resources and needs to be urgently enhanced.

Over the reporting period, major pieces of EU climate legislation were updated in order for the EU to cut emissions by at least 55% by 2030 compared to 1990, starting with the EU ETS Directive. Georgia should take this revision into account and align its own legislation.

CLUSTER 5: RESOURCES, AGRICULTURE AND COHESION

Cluster 5 on resources, agriculture and cohesion covers: agriculture and rural development (chapter 11); food safety, veterinary and phytosanitary policy (chapter 12); fisheries and aquaculture (chapter 13); regional policy and coordination of structural instruments (chapter 22); financial and budgetary provisions (chapter 33).

Georgia is at an early stage of preparation in the chapters agriculture and rural development, financial and budgetary provisions. Georgia is in between an early stage and some level of preparation regarding regional policy and coordination of structural instruments. It has some level of preparation in food safety, veterinary and phytosanitary policy and fisheries and aquaculture. Some progress was made in regional policy and limited progress in agriculture and rural development with the amendment of the Law on agricultural cooperatives. No progress was registered in fisheries and aquaculture and on financial and budgetary provisions. Additional efforts are needed to increase human and administrative capacity in the field of fisheries and aquaculture. It is also important to adopt the new regional development strategy and consider expanding the coverage to the whole country.

Chapter 11 - Agriculture and rural development

The EU's common agricultural policy supports farmers and ensures Europe's food security. It helps tackle climate change and the sustainable management of national resources; maintains rural areas and landscapes across the EU; and keeps the rural economy alive by promoting jobs in farming, agri-food industries and associated sectors. This requires strong management and control systems. There are also common EU rules for marketing standards, quality policy and organic farming.

Georgia is at an **early stage of preparation** in the area of agriculture and rural development. **Limited progress** was made in the reporting period, such as on the amendment of the Law on agricultural cooperatives. Georgia will need to fully align with the EU's *acquis* in the area of agriculture and rural development, and establish the structures, systems and the administrative capacity to be able to implement and enforce it effectively.

In the coming year, Georgia should:

- progress on aligning the legal framework with the EU *acquis* in the field of agriculture and rural development;
- continue efforts towards a full-scale land parcel identification system layer for the entire country and create a plan;
- the setting-up of an integrated administration and control system in line with the EU *acquis*;
- start the creation of a farm accountancy data network (FADN) or similar system monitoring farm income activities;
- review the resolution on organic production to align it with the EU's new regulation on organic production, in force since January 2022.

On **horizontal issues**, Georgia's policy in this area is governed by the 2021-2027 strategy for agriculture and rural development and an action plan for its implementation. The Ministry of Environmental Protection and Agriculture (MEPA) is responsible for agriculture and rural development policy formulation. Within the food and rural development department of MEPA, two sectoral departments were created in 2023.

An integrated administration and control system (IACS) in line with the EU *acquis* will need to be established. A land parcel identification system (LPIS) software is in place at the National Wine Agency, but progress is needed towards a full-scale LPIS for the entire country. Amendments to the Law on wine were adopted in June 2023 envisaging the production of a single cadastre of vineyards by the National Wine Agency.

A National Pasturelands Management Policy document was adopted focusing on the prevention of land degradation, biodiversity conservation of pasture lands, improvement of

their productivity and promotion of sustainable development of livestock production. There is no farm accountancy data network (FADN) or similar system monitoring farm income activities. A farm advisory system operates under the Rural Development Agency (RDA) providing information at centres across the country on RDA programmes and projects.

On Common market organisation (CMO), alignment with the EU *acquis* remains limited mostly related to certain marketing standards where Georgia should make efforts to fully align with EU *acquis*. The Law on agricultural cooperatives was amended in December 2022 with the ambition to modernise and align it with the EU *acquis*. A vineyard register is in place with more than 80% of the vineyards registered based on orthophoto maps design by global positioning system (GPS) technology and the declaration of grape growers.

On rural development, the 2021-2027 agriculture and rural development strategy with its 2021-2023 action plan constitutes Georgia's policy framework. An inter-agency coordination council, including relevant stakeholders, coordinate and closely monitor the strategy's implementation. Funding is provided through the agriculture budget. No progress on approximation was registered.

As regards **quality policy**, Georgia has legislation regulating the registration, protection and use of protected designations of origin and geographical indications.

Legislation in the area of **organic farming**, needs to be further aligned with the EU's *acquis*.

Chapter 12 - Food safety, veterinary and phytosanitary policy

EU hygiene rules for foodstuff production ensure a high level of food safety. Animal health and welfare and the safety of food of animal origin are safeguarded together with the quality of seeds, plant protection material, the protection against harmful organisms and animal nutrition.

Georgia has **some level of preparation** in the area of food safety, veterinary and phytosanitary policy. There was **some progress** made over the reporting period, by signing an amendment to Annex XI-B of the Association and Deep and Comprehensive Free Trade agreement. There is a risk of a widening gap between legal approximation and effective implementation. A comprehensive food safety implementing strategy, review of policy and institutional reforms needs to be carried out. There are significant delays in effective implementation of new legislation, weakening some of them and leading to reduction in controls.

In the coming year, Georgia should in particular:

- further align legislation with the EU *acquis*;
- enhance implementation of aligned legislation by regional and local services as well as industries concerned;
- strengthen surveillance capacity and diagnostic resources.

In the area of **general food safety, food safety rules and specific rules for feed**, Georgian producers have not obtained yet authorisation for the export to the EU of queen bees and fishery products from aquaculture. Budgetary allocations have not increased since 2020. They are insufficient to effectively implement some elements of the new legislative framework or to provide the required support to food business operators. Meeting the EU requirements for hazelnuts remains difficult for Georgia. The EU maintains a high level of regulated imports controls to detect contaminations with aflatoxins.

In March 2023, Georgia and the EU signed an amendment to Annex XI-B of the Association and Deep and Comprehensive Free Trade agreements, according to the Council Decision (EU)

2023/187 of 23 January 2023.

Legislation and organisation of the Georgian control system is partially in line with EU *acquis*. National legislation and implementing rules for export to the EU are generally in line with EU requirements. Due to ineffectiveness of the surveillance system and lack of diagnostic resources, the competent authorities cannot yet deliver the full necessary level of assurances.

Alignment on **veterinary policy** has not yet been achieved on animal welfare, notably during transport and slaughter. Georgia continued to carry out activities to control, prevent and eradicate communicable animal diseases in line with the 'One Health' approach. National legislation to align with the *acquis* on crisis management has not yet been achieved. Georgia's state laboratory of agriculture oversees food safety, veterinary and phytosanitary inspection activities. Its main responsibilities are laboratory testing. The laboratory has been accredited according to ISO IEC 17025. The laboratory network operates countrywide. Residue monitoring is being carried out. Georgia has established the rapid alert system for food and feed and has a national contact point of communication with the relevant team in the EU.

As regards **placing on the market of food, feed and animal by-products**, the National Food Agency continued to carry official checks. Business operators producing, processing and distributing food of animal origin are not yet registered in the registry of economic activities. Laboratory testing of samples taken within the scope of official controls is performed at laboratories accredited in accordance with the ISO 17025 standard. Georgia's in-country laboratory testing capacity does not yet correspond to the EU *acquis* on either sanitary and phytosanitary or food safety. Some operational issues persist as regards EU's trade control and export system, notably on issuing electronic certificates. Georgia is now able to add new establishments, as well as apply for amendments through the system.

On **phytosanitary policy**, considerable implementing legislation to align with the EU *acquis* is in place. Economic operators with relevance in the field of plant health are not yet registered in the register of economic activities. National legislation on maximum residue levels of pesticides in or on food and feed of plant and animal origin is not yet aligned with the EU *acquis*.

As regards **genetically modified organisms**, legislation is in place to regulate their use in closed systems; cross-border movement; traceability; labelling; marketing; safety and packaging.

Chapter 13 - Fisheries and aquaculture

The common fisheries policy lays down rules on fisheries management, protects living resources of the sea and limits the environmental impact of fisheries. This includes setting catch quotas, managing fleet capacity, rules on control and inspection, rules on markets and aquaculture and support for fisheries and coastal communities. Further, it promotes a sustainable aquaculture.

Georgia has some level of preparation in this chapter. There was **no progress** made in the reporting period. Georgia lacks a standardised fisheries policy and effective implementation across the country in line with the EU *acquis*. Focus should be on improving administrative structures, including the establishment of a managing authority.

In the coming year, Georgia should particularly:

- continue aligning its legislation with the EU's common fisheries policy and fisheries and aquaculture *acquis*;
- increase its human and administrative capacity in the field of fisheries and aquaculture;

→ become a fully-fledged member of the General Fisheries Commission for the Mediterranean.

Georgia has adopted legislation to manage fisheries and aquaculture in line with the principles of the common fisheries policy. Georgian legislation effectively defines the basic requirements such as the obligation of the flag state, coastal state, port state and market state. The number of marine fishing vessels was indicated by Georgia as 32 in 2022. These vessels are only active in national waters.

Sea fishing production was 53 53 500 tonnes in 2022 (declined from 89 600 tonnes in 2019). Aquaculture production in 2019 reached almost 2 500 tonnes, exceeding the production in 2017 by 20 percent.

Georgia manages the **fisheries resources** based on scientific advice and on the collection of data. The data collection framework needs to be strengthened. Georgia should invest efforts in reducing by-catch of sensitive species and promote the use of selective gear. There is active and constructive cooperation in the framework of the bilateral EU-Georgia dialogue in the fight against illegal, unreported and unregulated fishing. A proper level of implementation has yet to be achieved. A **fleet management system** is in place. A fishing vessel register and regime are lacking.

Some limited elements of an **inspection and control** system have been developed but an overall approach to checks and inspection is needed. Georgia has no specific **structural actions for fisheries**. A limited number of **state aid** measures exist applicable to fishing, including a specific credit programme with low interest rates.

Concerning **market policy**, general standards on hygiene for food and products of animal origin are in place. Product information is provided to consumers, such as ingredients, weight, and shelf life. Georgia needs to align specific provisions on fishery and aquaculture products put on the market with the EU Common Market Organisation Regulation. Legal Framework of recognition of professional organisations, such as producer or inter-branch organisations are not in place.

Regarding **international agreements**, Georgia cooperates on marine fisheries with the General Fisheries Commission for the Mediterranean as the relevant regional fishery management organisation. It is strongly encouraged that Georgia becomes a full member. The country has to invest efforts in reducing by catch of sensitive species and promote the use of selective gear. Georgia has a bilateral agreement on fish farming with Ukraine.

Georgia participates in the Common Maritime Agenda, the EU sea-basin strategy for the development of a sustainable blue economy in the Black Sea. It is quite active in the implementation of its priorities, with a positive commitment both at the national and grassroots level. Georgia is encouraged to continue its positive regional cooperation under the Common Maritime Agenda with the other participating countries and to lead work on areas that are considered important for the country.

Chapter 22 - Regional policy and coordination of structural instruments

Regional policy is the EU's main tool for reducing regional disparities and investing in sustainable and inclusive socio-economic growth. It is operating through "shared management" between the Commission and EU Member States. The implementation of cohesion policy programmes requires appropriate administrative capacity on programme and project level, the establishment of systems of sound financial management and control and also the fulfilment of other EU acquis elements such as environmental or public procurement legislation.

Georgia is in between an **early stage and some level of preparation** in the area of regional policy and **some progress** was made with the adoption of the intermediate harmonisation plan to align with the EU statistical system. The legislative framework on regional policy should be further aligned with the EU *acquis* to implement this policy effectively. The country needs to strengthen its administrative capacity in programming, implementing, monitoring and evaluating EU funds, while building on the experience from the European Neighbourhood Instrument (ENI) cross-border cooperation (CBC) and Interreg NEXT programmes. Regional development and cohesion remain important challenges. Efficient coordination is needed among the levels of government on preparing and implementing relevant sector strategic and planning documents. Strengthened capacity is needed to identify and target regional disparities and plan interventions (in terms of programmes and projects) in line with the EU practice (programming cohesion funds).

In the coming year, Georgia should in particular:

- build on its experience with EU shared management through involvement in ENI CBC and Interreg NEXT programmes;
- use positive outcomes of the pilot regional development programme (PIRDP 2019-2022) in the new state programme targeting territorial development and increase coverage to potentially the whole country (excluding large urban centres Tbilisi and Batumi) and deepening the competitive project selection procedure.

The **legislative framework** remained broadly unchanged. A number of initiatives related to transferring certain types of property to local authorities and fostering inter-municipal cooperation were adopted during the reporting period. Those changes cleared administrative bottlenecks and facilitated the successful implementation of regional policy programmes.

On the **institutional framework**, at national level, the Ministry of Regional Development and Infrastructure oversees regional development policy planning and coordination. In 2022, municipalities were equipped with six new devolved powers in the fields of education; child protection; social protection; natural resources management; and environmental protection to increase the role of municipalities in managing a substantial share of public affairs. As of 2023, a minimum guaranteed amount under VAT has been introduced for municipalities with smaller revenues to further strengthen their financial independence and complement the equalisation concept.

Georgia has number of regional policy strategies and programmes that aim to align with EU cohesion policy principles, including the 2019-2022 pilot regional development programme and 2019-2023 strategy for development of Georgia's mountain settlements. The first phase of the programme covered four regions¹³ and was implemented according to the participatory model of multilevel governance used under the EU cohesion policy.

The regulation regarding the distribution of funds for projects to be implemented in the regions of Georgia – which is one of the tools to tackle disparities within the country – was amended in 2022. The regulation introduces competition between municipalities based on their performance.

Georgia has gained experience with EU shared management through its participation in the 2014-2020 European neighbourhood instrument cross-border cooperation programme for the Black Sea basin. It also actively participates in its successor the Interreg NEXT 2021-2027 Black Sea programme that is fully in line with EU cohesion policy principles.

¹³ Kakheti, Imereti, Guria, Racha-Lechkhumi and Kvemo Svaneti

Georgia started piloting smart specialisation in the Imereti region with the support of the European Commission's Joint Research Centre. The entrepreneurial discovery process was implemented in 2022, which followed a framework methodology agreed with the Commission's Joint Research Centre.

Monitoring data is collected according to the methodology approved by the government commission on regional development. The annual monitoring reports present financial and physical progress and the achievement of outputs. The annual budget allocations, as well as actual expenditures are included in the monitoring data that is collected.

Evaluations of the programmes are performed on an *ad hoc* basis and are mostly conducted by external experts, with support from international partners.

The nomenclature of territorial units for statistics methodology is not yet applied in Georgia. The intermediate harmonisation plan that aims to align Georgia's statistical system with the European system was consolidated and adopted in early 2023, paving the way for further integration in the EU system and practices.

On **financial management, control and audit**, the financial framework doesn't allow budget flexibility in terms of carryover to the next year's budget. There are good examples of EU-funded programmes that involve co-funding from the State. These include the pilot integrated regional development programme, as well as EU direct grants provided to municipalities under 'Mayors for Economic Growth', 'Covenants of Mayors' and 'Civil Society Organisations and Local Authorities' instruments.

The financial management and control system for EU funds in place is entrusted to the authorities. The internal financial control system (as described in chapter 32) remains weak.

Internal audits are established in (i) line ministries and autonomous republics, (ii) legal entities of public law and state-owned enterprises, (iii) local administrations. External audit is performed by the State Audit Office which is part of the group of auditors for the ENI CBC and Interreg programmes. The office has a commitment to audit each municipality every three years. There were no developments in the reporting period.

Chapter 33 - Financial and budgetary provisions

This chapter covers the rules governing the funding of the EU budget ('own resources'). These resources mainly consist of: (i) contributions based on the gross national income of each Member State; (ii) customs duties; (iii) the non-recycled plastic resource and (iv) a resource based on value-added tax. EU Member States must have the appropriate administrative capacity to adequately coordinate and ensure the correct calculation, collection, payment and control of own resources.

In the area of own resources Georgia is **at an early stage of preparation**. There was **no progress** made. The basic principles and institutions for the underlying policy areas are in place and functioning but need further alignment with the EU *acquis*. The country should focus on aligning with the accounting standards of the 2010 European System of Accounts. It should also focus on setting up a coordinating body to implement the own resources' administrative conditions.

In the coming year, Georgia should:

- further align its 2019 Law on customs with the Union Customs Code;
- strengthen the operational capacity of the revenue service;
- align with the accounting standards of the 2010 European System of Accounts.

As regards **traditional own resources**, Georgia has structures in place to levy customs duties at the point of import. It operates a national VAT system. VAT legislation is partially aligned with the EU *acquis*. Some provisions still need to be standardised. Georgia needs to further align its 2019 Law on customs with the Union Customs Code.

The mid-term revenue strategy 2021-2024 sets out three strategic priorities: improved tax and customs legislation; institutional development; and international cooperation.

Georgia will need to continue to work on establishing the relevant institutions involved in the own resources system, an own resource coordination body and implementing rules.

As regards **administrative infrastructure**, the Ministry of Finance has the overall responsibility for financial and budgetary issues. The revenue service, in charge of tax and customs issues, is a legal entity of public law under the Ministry of Finance. The revenue service needs to strengthen its operational capacity and computerise its key business processes.

National accounts and gross national income are computed but they are based on the definitions and accounting rules of the 2008 United Nations System of National Accounts and not on the 2010 European System of Accounts standards. There has been no work to switch to the European system or to collect national data.

CLUSTER 6: EXTERNAL RELATIONS

There are two chapters in this cluster: external relations (Chapter 30); foreign, security & defence policy (Chapter 31). Georgia is moderately prepared and made limited progress in both.

Chapter 30 - External relations

The EU has a common commercial policy towards third countries, based on multilateral and bilateral agreements and autonomous measures. There are also EU rules in the field of humanitarian aid and development policy.

Georgia **is moderately prepared** in the area of external relations. There was **limited progress** made. Some measures were taken to improve the investment climate Georgia has good administrative capacity to manage commitments in external commercial relations, and as a World Trade Organization member, is already following a large part of the main multilateral trade agreements that the EU also follows.

In the coming year, Georgia should, in particular:

- align the relevant legislation with the EU *acquis* on trade in certain goods that could be used for capital punishment, torture or other cruel, inhuman or degrading treatment or punishment;
- establish a legal framework covering international cooperation and development policy as well as humanitarian aid towards non-EU countries in line with EU policies and principles.

On the **common commercial policy**, Georgia officially became a member of the joint initiative on the Services Domestic Regulation at the 12th WTO Ministerial Conference in June 2022, based on EU recommendations. Georgia also became a party to the joint initiatives on the investment facilitation for development and on micro, small and medium enterprises. Georgia participated in the Ukraine solidarity meeting in the WTO and aligned with the meeting press statement on 12 June 2022.

For Georgia, it remains important to focus on removing regulatory constraints to improve the investment climate – including the wider legal framework, investment promotion strategy and

institutions, policies to promote responsible business conduct, and impediments to growth of priority sectors. This will help Georgia attract FDI that can have a positive impact on productivity and inclusive, sustainable growth.

Concerning **dual-use items**, export controls on dual-use goods are applied in accordance with its 2013 Law on the control of military and dual-use goods. Georgia is not a member of multilateral export control regimes such as the Wassenaar 53 arrangement, the Nuclear Suppliers Group, and the Missile Technology Control Regime. Additionally, Georgia is neither a participant nor an adherent to the Australia Group. There are certain trade restrictions in place, particularly regarding some goods from the Russian Federation and Belarus. Regarding the transit of goods through Georgia, customs controls on the movement of military and dual designation goods (as well as other sanctioned products) are particularly tightened.

Regarding trade defence instruments, Georgia has a law in place on anti-dumping measures. No legislation on the application of countervailing and safeguard measures is in place. Until now, there have been no cases recorded. The Georgian Competition Agency is equipped with the necessary personnel and is encouraged to share European experience on awareness raising among the industry.

No specific legislation regarding **export controls** on goods that could be used for capital punishment, torture or other cruel, inhumane or degrading treatment is in place. Georgia is a member of the Alliance for Torture-Free Trade. Georgia is not a member of the Kimberley Process and as such does not control trade in rough diamonds. There is no national framework in place to control foreign direct investment in strategically sensitive sectors, infrastructure, technologies or inputs.

In terms of **administrative capacity**, Georgia has shown good capacity in managing its commitments in external commercial relations in implementing the Deep and Comprehensive Free Trade Agreement Area and in its function as a member of the WTO. Regarding enforcement, the institutional capacity has been reinforced and modified in line with the country's regulatory approximation commitments under the Deep and Comprehensive Free Trade Agreement.

As regards **bilateral agreements with third countries**, Georgia is a party to 16 free trade agreements, including with the European Free Trade Association, China, Türkiye, and the United Kingdom. Preferential agreements are in place with some countries with whom the EU does not have preferential agreements: Armenia, Azerbaijan, the Russian Federation, Turkmenistan and Uzbekistan. In March 2023, the United Arab Emirates and Georgia concluded negotiations on the Comprehensive Economic Partnership Agreement.

Georgia has 34 Bilateral Investment Treaties in force with other countries, including with 16 Member States, the United Kingdom and Belarus. In February 2023, the fifth round of negotiations on the Foreign Investment Promotion and Protection Agreement with Canada was completed. The sixth round is expected by the end of 2023.

As regards **development policy and humanitarian aid**, Georgia is a recipient of aid programmes rather than a humanitarian aid donor. Only limited support to other countries was provided. There is no legislation in place on humanitarian aid and no dedicated budget line. Dedicated administrative structures are not in place. Georgia has no legislation on development policy nor an administrative structure for it.

Chapter 31 - Foreign, security and defence policy

Member States must be able to conduct political dialogue under the EU foreign, security and defence policy, align with EU statements, take part in EU action, and apply agreed sanctions

and restrictive measures.

Georgia is **moderately prepared** in this area. **Limited progress** was made in the reporting period. Following Russia's war of aggression against Ukraine, Georgia aligned with EU positions in international fora, including in the UN General Assembly (UNGA). Georgia has not aligned with restrictive measures (sanctions) against the Russian Federation and Belarus and with the High Representative (HR) declarations on this matter. However, Georgia cooperated very closely and proactively with the EU on prevention of sanctions circumvention. Georgia's alignment rate with declarations by the High Representative on behalf of the EU and Council decisions on restrictive measures remained largely at the same level. Georgia continued to participate in EU crisis management missions and operations under the common security and defence policy.

Considerable additional efforts are needed to increase the convergence in the area of foreign and security policy, in particular the alignment with declarations by the High Representative on behalf of the EU and Council decisions as well as the application of restrictive measures.

In the coming year, Georgia should, in particular:

- considerably increase its alignment rate with EU CFSP statements and decisions; avoid actions and statements that go against EU positions on foreign policy; continue efforts to increase hybrid/cyber resilience, through the adoption of a whole of society approach.
- continue to ensure that the territory of Georgia and/or legal entities registered in Georgia are not used to circumvent EU sanctions, notably in relation to Russia and Belarus.

The **political dialogue** between the EU and Georgia on common foreign and security policy (CFSP) continued. The EU and Georgia engaged in a policy dialogue on CFSP in the framework of the EU-Georgia Association Council in September 2022. In addition, the annual High-Level Political and Security Dialogue was held in January 2023, complementing regular exchanges and further promoting gradual convergence. Annual consultations on security and defence also took place in January 2023 with representatives of the Ministry of Defence.

In the area of the CSFP, in 2022, Georgia's alignment rate with relevant statements of the High Representative on behalf of the EU and Council decision was 44%. The rate has remained largely at the same level (decreased to 43%) in 2023.

In line with its long-standing policy, Georgia did not align with the EU's **restrictive measures** regarding Russia, including airspace closure. Georgia aligned with the special "Donetsk and Luhansk" sanctions. Georgia also did not align with any of the Belarus sanctions, the statements by the High Representative on behalf of the EU and Council Decisions on Iran, Türkiye and several African countries, nor with sanctions under the EU Global Human Rights sanctions regime.

Despite the lack of alignment, Georgia has pro-actively engaged in ensuring that the territory of Georgia and/or legal entities registered in Georgia are not used to circumvent these sanctions, including financial sector sanctions. Georgia introduced control for sanctioned goods at its borders. Georgia also controls transit of goods destined not only to Russia and Belarus, but also to Central Asia, Armenia and Iran. Georgia is reporting cases of controlled/stopped goods where circumvention of EU sanctions is suspected with relevant EU authorities.

More widely, Georgia has aligned itself with international and EU initiatives in support of Ukraine, including on resolutions adopted by the General Assembly of the United Nations, the Human Rights Council, the Council of Europe.

Georgia cooperates constructively with the EU in international fora and is a member of various **international organisations**, including the United Nations, the Council of Europe, the Organisation for Security and Cooperation in Europe and the Organisation of the Black Sea Economic Cooperation. Georgia is a member of the Human Rights Council until 2025. Georgia ratified the Rome Statute of the **International Criminal Court** in 2003. Georgia aspires to North Atlantic Treaty Organisation membership (enshrined also in its Constitution) and has been contributing to NATO-led operations.

Georgia is actively engaged in supporting **disarmament and non-proliferation** at international, regional and bilateral levels. Georgia is fulfilling all its commitments to the International Atomic Energy Agency, the Organisation for the Prohibition of Chemical Weapons and the Biological Weapons Convention.

On **security measures**, Georgia and the EU signed an agreement on security procedures for the exchange and protection of classified information in 2016, but the agreement is not yet implemented as the finalisation of relevant procedures is still ongoing on both sides.

Security and defence cooperation strengthened over the reporting period, including in the framework of the European Peace Facility. Georgia continued to actively participate in EU crisis management missions and operations under the Common Security and Defence Policy (CSDP), notably the EU Training Mission in the Central African Republic. Georgia discontinued its contribution in June 2023.

Georgia continued to cooperate with the EU to address its vulnerabilities to **hybrid threats**, identified through the hybrid risk survey process.

ANNEX I – RELATIONS BETWEEN THE EU AND GEORGIA

On 3 March 2022, Georgia presented its application for membership of the European Union. The European Council granted **European perspective** to Georgia in June 2022, with 12 priorities to be addressed in order to be granted candidate status.

The EU and Georgia signed an **Association Agreement, including a Deep and Comprehensive Free Trade Area** in 2014, which fully entered into force on 1 July 2016. The AA/DCFTA is the legal instrument serving as the basis for political association and economic integration between the EU and Georgia. Overall, Georgia continued to broadly implement its obligations under the Association Agreement. Regular political and economic dialogue between the EU and Georgia has continued through the AA/DCFTA structures. The Association Council met in September 2022, the Association Committee in Trade Configuration in December 2022 and the Association Committee in July 2023 and the Regular subcommittee meetings were held throughout the period. The Parliamentary Association Committee met in June 2023.

In addition to the AA/DCFTA structures, a Human Rights Dialogue with Georgia is in place since 2009 and convenes annually. The High-Level Strategic and Security Dialogue, taking forward cooperation on foreign and security policy, was held in January 2023.

The Georgian government does not exercise effective control over the breakaway regions of Abkhazia and South Ossetia. The EU supports Georgia's sovereignty and territorial integrity within its internationally recognised borders and has been engaged since 2008 in peaceful conflict resolution efforts, including through the **EU Monitoring Mission** and the work of the **EU Special Representative** for the South Caucasus and the crisis in Georgia. The EU Monitoring Mission is the only international presence on the ground, counting more than 300 personnel.

Citizens of Georgia enjoy **visa free travel** to the Schengen since March 2017. As part of the visa liberalisation monitoring mechanism, the Commission has been regularly assessing the progress made by the country in implementing reforms introduced under the visa roadmap. The Commission's sixth Report under the Visa Suspension Mechanism published in October 2023 concluded that Georgia continues to fulfil the visa liberalisation benchmarks and has taken action to address the Commission's previous recommendations, however, further efforts are needed. A readmission agreement between the European Union and Georgia is in place since 2011.

Regarding **bilateral financial assistance**, the indicative bilateral allocation for Georgia for the period 2021-2024 amounts to EUR 340 million under the Neighbourhood, Development and International Cooperation instrument – Global Europe 2021-2027 (**NDICI-GE**). The 2022 annual action programme was adopted in December 2022 with an envelope of EUR 85 million, with two action documents focusing on support Georgians SMEs, the implementation of the DCFTA as well as supporting the new public finance management reform strategy. In addition, EUR 25 million are allocated for the Neighbourhood Investment Plan (NIP) and EUR 6 million for the Civil Society Facility. The bilateral annual programmes are complemented by a package of multi-country and regional programmes supporting, among others, the environmental sector, dealing with migration, education, culture, as well as TAIEX and competitiveness programmes together with IFIs and international organisations. Georgia also actively participates in the Interreg NEXT 2021-2027 Black Sea programme. To facilitate progress on sustainable development in the country, Georgia is participating as observer in a pilot project under the Technical Support Instrument.

Since its launch in 2009, Georgia has participated in the Eastern Partnership (EaP). This overarching framework has further boosted bilateral and regional relations with the EU. Under the Eastern Partnership **Economic and Investment Plan (EIP)**, in cooperation with European financial institutions, the EU aims to mobilise for Georgia around EUR 3.9 billion in public and private investments. The EIP accompanies the recovery, resilience and reform: post 2020 Eastern Partnership priorities as agreed during the Eastern Partnership Summit in 2021. The core of these investments is the six flagships identified with the Georgian government, including Black Sea connectivity (electricity and digital cables) and transport, SME development, digital connectivity, air quality and energy efficiency). Implementation under the flagships is generally progressing well. So far EUR 1.7 billion has been leveraged in key sectors of the Plan.

The new activities are built on and added to the closed and the few on-going regional programmes under **European Neighbourhood Instrument 2014-2020** which are providing significant support through EU Technical Cooperation Facility, budget support, the Civil Society Facility and projects aiming at the social and economic development of the country, as well as improving the reform process of the Rule of Law sector, Fundamental Rights, Public Administration Reform, and other critical sectors.

Since 2014 Georgia has progressively extended its **participation in EU programmes**. It currently takes part in Horizon Europe, Creative Europe, EU4Youth, and the Black Sea Interreg programme and has recently joined the Customs programme. Organisations and individuals from Georgia can also benefit from certain actions of the Erasmus+ and European Solidarity Corps Programme.

STATISTICAL DATA (as of 31/08/2023)
Georgia

ANNEX I – RELATIONS BETWEEN THE EU AND MOLDOVA	117

1. INTRODUCTION

1.1. CONTEXT

Following the application of the Republic of Moldova for EU membership in March 2022, the Commission identified nine steps for Moldova to proceed on its accession process in its opinion on the membership application.¹ These steps relate to the EU's values and standards, in particular democracy and the rule of law, including justice reform and public administration reform, as well as fundamental rights. In June 2022, the European Council granted candidate status to Moldova and invited the Commission to report on the implementation of the nine steps.² To complement the opinion, in February 2023, the Commission published the analytical reports on the country's alignment with the EU *acquis*.³

Since the start of Russia's war of aggression against Ukraine, Moldova has been tackling unprecedented challenges, including large numbers of refugees, inflation, threats to its energy supplies, violations of its airspace, and many hybrid actions such as foreign interference and information and manipulations and cyberattacks. In addressing these challenges, Moldova has shown its resilience and commitment to progress its EU agenda while taking measures to mitigate the impact of Russia's war of aggression. Moldova continues to implement the EU-Moldova Association Agreement, including its Deep and Comprehensive Free Trade Area. Over the past year, Moldova has also taken decisive action on the nine steps. The executive and legislative branches of power have worked together on the country's reform agenda with the support of the Moldovan people. The granting of candidate status for EU membership in June 2022 has accelerated reform efforts.

Moldova has welcomed the highest number of displaced persons fleeing Russia's war of aggression against Ukraine per capita in Europe. By doing so, the country has demonstrated once more that it is a reliable partner. In 2023, Moldova hosted the European Political Community, underlining its readiness to stand together with its European Union partners to address the current challenges.

The EU remains fully committed to support a comprehensive, peaceful and sustainable settlement of the Transnistrian conflict. This should be based on the sovereignty and territorial integrity of Moldova in its internationally recognised borders, with a special status for the Transnistrian region. The DCFTA applies to the entire territory of Moldova.

1.2. SUMMARY OF THE REPORT⁴

On the **political criteria**, Moldova has continued reform efforts to strengthen democracy and the rule of law despite multiple challenges linked to Russia's war of aggression against Ukraine. Good progress was made on electoral legislation over the reporting period in

¹ COM(2022) 406 final

² EUCO 24/22

³ SWD(2023) 32 final

⁴ This report covers the period from June 2022 to June 2023. It is based on input from a variety of sources, including contributions from the government of the Republic of Moldova, the EU Member States, European Parliament reports and information from various international and non-governmental organisations. It also includes the results of comparative assessments and indices produced by other stakeholders, in particular in the area of rule of law.

The report uses the following assessment scale to describe the state of play: early stage, some level of preparation, moderately prepared, good level of preparation and well advanced. To describe progress made during the reporting period, it uses the following scale: backsliding, no progress, limited progress, some progress, good progress and very good progress. Where appropriate, interim steps have also been used.

addressing and implementing the remaining recommendations made by the Organisation for Security and Co-operation in Europe's Office for Democratic Institutions and Human Rights (ODIHR) and the Venice Commission, in their opinions issued in December 2021 and October 2022. The electoral legislation has been comprehensively amended to address inconsistencies, and a new Electoral Code was adopted in December 2022. Further amendments to the Electoral Code were adopted in October 2023, which provided for the possibility to ban from running for elected office members of political parties that have been declared unconstitutional by the Constitutional Court. These amendments still need to be consulted with the Venice Commission, to ensure alignment with European standards.

In addition, the authorities need to implement the electoral legislation by strengthening the Central Election Commission with sufficient authority, resources and technical expertise to carry out its work effectively. Moldova needs to ensure the transparency of political party funding and the accountability of campaign finance. To further reduce the risk of malign interference, the country needs to regulate the involvement of third parties in election campaigns, in line with the Group of States against Corruption (GRECO) and ODIHR recommendations.

Over the reporting period, **Parliament** played a major role in the EU accession process, supporting the government's reform efforts. Distrust and an occasional lack of transparency resulted in a low engagement of the opposition in the law-making process. Further efforts should be made to improve transparency by planning oversight activities and public hearings, publishing the parliamentary calendar sufficiently early, and increasing the level of accountability of parliamentarians. The process of amending Parliament's Rules of Procedures should be accelerated and ensure a broader involvement of civil society. A strong parliamentary majority supported the reforms initiated by President Maia Sandu and the government. A government reshuffle took place in February 2023, and the new government has remained focused on Moldova's reform agenda. The government worked actively on the EU reform agenda and on dealing with the consequences of Russia's war of aggression against Ukraine. It took steps to improve the transparency of decision-making and democratic accountability mechanisms. It also ensured a good level of coordination and policy planning. Decisive efforts are needed to ensure that adopted legislation is implemented effectively, and all parts of regulatory policy are applied at all levels of government.

An enabling environment exists for **civil society** organisations (CSOs), with legal and financial frameworks in place. The legislative framework is in line with international standards. Moldova has involved civil society in decision-making. Further efforts should focus on adopting the national strategy on civil society development and improving the quality of public consultation processes to improve transparency and get CSOs more involved in policy dialogue, especially in parliamentary debates and at local level.

Moldova has some level of preparation in the area of **public administration reform**, and some progress has been made. In particular, the new public administration reform strategy for 2023-2030 was adopted in March 2023, and its implementation programme for 2023-2026 was adopted in June 2023. Due to a complex salary grid and the many different job classifications, civil servants' pay varies and is inconsistent across the administration. Moldova started addressing this issue by adopting a new law on salaries. Moldova needs to continue increasing its capacity to implement the reforms and provide good quality public services at all levels.

Moldova has some level of preparation in the area of the **judiciary**. The country made good progress in the reform of the justice sector. Candidates for the Superior Council of Magistracy (SCM) and the Superior Council of Prosecutors (SCP) had to undergo a pre-

vetting based on the corresponding law adopted in line with Venice Commission recommendations. Parliament also adopted a law on Supreme Court of Justice (SCJ) reform and the vetting of its candidates and of its sitting judges has started, in line with Venice Commission recommendations. On 31 July 2023, Parliament adopted a law on the further vetting of judges and prosecutors in high level positions, which was consulted with the European Commission and broadly aligned with Venice Commission recommendations. However, the President then returned the law to Parliament with additional changes, which Parliament adopted on 22 August 2023. The additional revisions were sent to the Venice Commission for review.

The length of proceedings, low clearance rates and the large backlog of cases negatively affect the judicial system's efficiency. There was no significant progress in the prosecution of high-profile corruption cases and long-standing criminal cases. One verdict was passed on two fugitive oligarchs. Due to the lack of a quorum in the SCM, no new judges have been appointed in the past 3 years. However, following the appointments of three non-judge members and four judge members to the SCM in March and April 2023 respectively, the SCM restored its quorum and made new appointments across the judiciary, including to new ranks. The new judicial map, which should reform the court system, needs to be finalised.

Moldova has some level of preparation in the **fight against corruption**. Some progress has been made and needs to be sustained to remove the many remaining blockages that hinder the reform processes. The legislation was amended by the Parliament in July 2023 to clarify the mandates of the National Anticorruption Centre and the Anticorruption Prosecutor's Office. New legislation for trials *in absentia* that entered into force in July 2022 was used to finalise a judgment in the case against two well-known oligarchs. The track record of high-level corruption convictions increased slightly. Amendments to the law on whistle-blowers were adopted by Parliament in June 2023.

Moldova has some level of preparation in implementing the EU *acquis* on the **fight against organised crime**. Some progress was made including the fight against financial crime and the recovery of assets. Assets belonging to three prominent oligarchs were seized. The national asset recovery programme for 2023-2027 and its action plan were adopted in December 2022 and are now being implemented. The good progress on seizure and confiscation of assets linked to organised crime should be sustained. Cooperation with EU Members States, the European Border and Coast Guard Agency (Frontex), Europol and the EU Agency for Law Enforcement Training (CEPOL) has been expanded with steer provided by the EU Moldova Support Hub for Internal Security and Border Management. Moldova has signed a Status Agreement with Frontex. Moldova has made repeated commitments to and progress in the fight against arms trafficking, drugs, trafficking in human beings and migrant smuggling. It adopted a new sectoral development strategy on the prevention and fight against organised crime for 2022-2025 in December 2022 to support the implementation of the integrated home affairs strategy (2022-2030), which was adopted in September 2022, and appointed a national firearms focal point. In March 2023 the country also revised its Law on the regime of arms and ammunition for civilian use, aiming to align it with the EU *acquis*.

Moldova's anti-terrorism legislation is generally aligned with the EU *acquis* and applicable international law. The national programme for the consolidation and realisation of anti-terrorist protection measures for the critical infrastructure objectives for 2022-2026 and the action plan for its implementation were adopted in October 2022. The country adopted legislation to prevent and combat the financing of terrorism in April 2023.

The legislative and institutional framework on **fundamental rights** is largely in place, and the government has made a clear commitment to meet its international obligations on human

rights. Several steps were taken to implement the Council of Europe Convention on Preventing and Combating Violence against Women and Domestic Violence. In particular, the Government strengthened the mandates of the Equality Council and the People's Advocate and adopted programmes on strengthening gender equality and support to the Roma⁵. Persons belonging to minorities, persons with disabilities, lesbian, gay, bisexual, transgender, intersex and queer (LGBTIQ) persons and the Roma in particular continue to face discrimination, including in the labour market. Detention conditions in prisons exceed their intended capacity and need to be improved. Issues of overcrowding, inadequate access to medical treatment and lack of reporting or investigations of potential ill treatment and violence remain largely unaddressed.

Moldova has a pluralistic media environment and has some level of preparation in **freedom of expression**. The country made some progress during the reporting period, in particular on the issue of ownership concentration. Legislation contains provisions to prevent concentration of media and ensure transparency of media ownership. The Audiovisual Council needs to boost efforts to implement these rules. To ensure compliance with the European Media Freedom Act, the Audiovisual Media Services Code must address political bias in state media. The government is taking steps to address disinformation in media, which remains a challenge, especially disinformation spread online. In an attempt to limit Russian disinformation, in December 2022, the Commission for Exceptional Situations ordered the suspension of six TV stations that rebroadcast content from Russia; the decision was challenged in court. Several attempts of intimidation and harassment of journalists were reported in 2022, primarily in Găgăuzia.

On **good neighbourly relation and regional cooperation**, Moldova maintains good dialogue and actively participates in various regional cooperation platforms. These include the Central European Initiative (CEI), the Black Sea Economic Cooperation Organization (BSEC), the Organization for Democracy and Economic Development (GUAM), the Southeast European Cooperation Process (SEEC) and the Regional Cooperation Council (RCC). The country also contributes to implementing the Central European Free Trade Agreement (CEFTA). Moldova chaired the GUAM in 2022 and the BSEC in the second half of 2022 and assumed the Presidency of the CEI in January 2023.

On the **economic criteria**, Moldova is in between an early stage and some level of preparation in establishing a functioning market economy. The authorities have remained committed to pursuing macroeconomic stability and economic reforms in a difficult economic and social environment caused by Russia's full-scale invasion of neighbouring Ukraine. During the last decade, Moldova has been able to sustain economic growth of about 3.1% per year on average amid the pandemic and other economic headwinds. Public finances have been stable with a low deficit (at about 1.5% of GDP on average over 2014-2019)) and a comparatively low debt level. The National Bank of Moldova had been generally successful in keeping inflation within the target range set at 5% (+/-1.5 percentage points). After a strong rebound from the COVID-19 crisis, growth contracted sharply in 2022 due to the energy crisis and a severe drought that caused output in agriculture and related industries to plummet. High inflation, caused by soaring energy and food prices, depressed households' disposable incomes and consumption, while war-related uncertainty contributed to weaker investment. On the external side, the already high current account deficit widened further, reflecting the weak export base and low productivity. As a result of the deep recession and

⁵ In line with the terminology of European institutions the umbrella term 'Roma' is used here to refer to a number of different groups, without denying the specificities of these groups.

the increase in social spending to alleviate the energy price shock, the budget deficit widened in 2022, and it is set to remain at a comparable level in 2023. Public debt remains low and is largely extended on concessional terms.

The state still has a considerable influence on key economic sectors, including telecommunications, energy, and transport, as well as in price-setting. The authorities are carrying out a comprehensive screening of state-owned enterprises, some of which are loss-making, in order to restructure and privatise them. At the same time, they are working to improve corporate governance and accountability in the sector. Despite the economic recession, the financial sector remains stable, reflecting the impact of previous reforms and prompt regulatory action to curb the rapid increase in household lending. The labour market recovered from the pandemic and was relatively robust in 2022. However, it continues to be characterised by a very low participation rate, which is linked to the high share of people working abroad or only willing to work abroad.

Moldova is in between an early stage and some level of preparation in terms of its capacity to cope with competitive pressure and market forces in the EU. Despite large investments in education, outcomes remain well below those in the EU. This contributes to the persistent mismatch between the skill level of the workforce and what employers require, which is one of the key business environment obstacles for firms. Investment in research and development remains low and has been falling despite the government's strategy to increase it. Moldova's physical infrastructure remains underdeveloped in part due to the lack of government investment. The stock of foreign direct investment is also low, reflecting weaknesses in the business environment and continuing problems with corruption and the protection of property rights. Digitalisation is lagging behind: just over two thirds of households are connected to the internet and about 40% of government services for businesses are available online. The Moldovan economy remains heavily reliant on the agricultural sector, and there is a large productivity gap compared with the EU. Moldova is a relatively open economy and is closely integrated with that of the EU.

On its ability to assume the obligations of EU membership, the country continues its work on alignment with the EU *acquis* in many areas. Moldova is in the early stages of preparation regarding the freedom of movement for workers **in cluster 2 on the internal market**. On company law Moldova is in between early stage to some level of preparation. There has been some level of preparation in the other areas under this cluster: right of establishment and freedom to provide services, free movement of goods, intellectual property law, financial services, competition policy and consumer and health protection. There has been limited to some progress during the reporting period in these areas, good progress was made in financial services, and some progress was made in the free movement of capital.

Moldova has some to moderate level of preparation in areas linked to **cluster 3 on competitiveness and inclusive growth**. It made some progress in economic and monetary policy, enterprise and industrial policy, science and research and education and culture. It has achieved some level of preparation in digital transformation, media and taxation, where it also made good progress. Moldova has some level of preparation in social policy and employment, where some progress has been made. On customs union Moldova is in between some and moderate level of preparation while achieving some progress during the reporting period.

On **cluster 4 on the Green Agenda and sustainable connectivity**, Moldova is at an early stage of preparation in the environment and climate change. It has made some progress during the reporting period by passing cross-cutting environmental legislation and implementing laws on nature protection and industrial emissions. Moldova has some level of

preparation in the areas of transport and trans-European networks, including the association to the Connecting Europe Facility and the observer status in the Transport Community. On energy, Moldova made good progress: it had the highest progress performance rate among contracting parties in the Energy Community Annual Implementation Report 2022.

Moldova is mainly at an early stage of preparation for all chapters of **cluster 5 on resources, agriculture and cohesion**, except food safety, veterinary and phytosanitary policy where it has achieved some level of preparation. Overall, during the reporting period, there was good progress on food safety, veterinary and phytosanitary policy. The remaining chapters achieved some or limited progress. Further efforts are needed in all these areas.

On **cluster 6 on external relations**, Moldova is moderately prepared in the area of external relations where it made some progress during the reporting period. In the area of common, foreign, security and defence policy, the country is in between moderate and good level of preparation. In the latter, good progress was made during the reporting period. Moldova's alignment with declarations by the High Representative on behalf of the EU and Council decisions under the EU's common foreign and security policy (CFSP) was 54% in 2022 and has considerably increased to 78% in 2023. Following Russia's war of aggression against Ukraine, Moldova aligned with EU positions in international fora, including in the UN General Assembly (UNGA), the Human Rights Council, and the Council of Europe. On **migration**, since the outbreak of Russia's war of aggression against Ukraine, Moldova has faced unprecedented inflows of refugees (the highest number of refugees per capita in Europe). As of 31 July 2023 and since the Russia's full scale invasion of Ukraine, out of the 792 605 individuals that entered Moldova across Ukrainian borders, 86 363 Ukrainian citizens and 7 624 third-country nationals remained on its territory. Since 1 March 2023, the government has implemented a decree granting temporary protection to displaced persons from Ukraine, enabling its beneficiaries to obtain an identity document issued free of charge for 1 year. Following the unprecedented influx of people fleeing Ukraine, which put Moldova's already limited capacity under pressure, the country's authorities maintained their efforts and mobilised resources to provide immediate humanitarian assistance as prescribed in the state of emergency.

1.3. ASSESSMENT OF THE IMPLEMENTATION OF THE NINE STEPS SPECIFIED IN THE COMMISSION'S OPINION

Step 1 – Complete essential steps of the recently launched comprehensive justice system reform across all institutions in the justice and prosecution chains, to ensure their independence, integrity, efficiency, accountability and transparency, including through efficient use of asset verification and effective democratic oversight; in particular, fill all the remaining vacancies of the Supreme Council of Magistracy and in its specialised bodies.

Moldova has reformed its judicial framework and consulted the Venice Commission on the most important laws including on: reforming the Supreme Court of Justice, external evaluation of judges and candidates to the Supreme Court of Justice, the Prosecutor's Office, the disciplinary liability of judges and the external evaluation of judges and prosecutors. Moldova initiated the vetting of candidates to the Supreme Council of Magistrates, the Supreme Council of Prosecutors as well as to the Supreme Court of Justice. The Supreme Council of Magistrates is now fully operational with 8 out of 12 new members appointed. At the end of October, a competition for the Prosecutor General position was also launched. Judges and prosecutors in training now need to declare their assets when enrolling in the National Judicial Institute.

Moldova should ensure a transparent and merit-based process for appointments to the main judicial and prosecutorial governance bodies, including for the appointment of a new Prosecutor General .

Step 2 - Across all these areas, address shortcomings identified by OSCE/ODIHR and the Council of Europe/the Venice Commission.

Moldova adopted the electoral code in 2022 that was drafted in cooperation with OSCE/ODIHR and the Venice Commission. Other nine laws were submitted for review and recommendations are being addressed. **This step is completed.**

Step 3 – Deliver on the commitment to fight corruption at all levels by taking decisive steps towards proactive and efficient investigations, and a credible track record of prosecutions and convictions; substantially increase the take up of the recommendations of the National Anticorruption Centre.

Moldova has adopted legislation to reform special investigation activities, to protect whistle-blowers and to delineate the competencies of the anti-corruption institutions. New legislation facilitating investigations *in absentia* was applied in more than 20 corruption cases. The number of investigations, convictions and prison sentences for corruption cases increased in 2022. Additional amendments to the Code of Criminal Procedure have streamlined court proceedings and will reduce their duration. The General Prosecutor’s Office and the European Public Prosecutor’s Office signed a working arrangement, resulting in joint training and an exchange of information. New heads of the National Integrity Authority and the National Anti-Corruption Centre were appointed.

Moldova should ensure that anti-corruption institutions are functioning within a clear organisational structure and with adequate resources.

Step 4 – Implement the commitment to “de-oligarchisation” by eliminating the excessive influence of vested interests in economic, political, and public life.

Moldova has adopted an action plan, pursuing a strategic approach to de-oligarchisation by setting up an inclusive and robust mechanism for coordinating and monitoring, and demonstrating implementation with clear timelines and planning of sectoral interventions. It has addressed the supervision and control of political party financing through amendments to the electoral and criminal codes. It has strengthened the Audiovisual Media Services Code to prevent dominant players on the media market, and it adopted amendments to the competition law. Parliament also adopted amendments to the Law on public-private partnership. The mechanism for conviction *in absentia* was used to convict a well-known oligarch and in ongoing proceedings against a second oligarch. Both cases are accompanied by substantial asset seizures and measures to combat the electoral influence of the said individuals.

Moldova should continue updating and implementing the de-oligarchisation action plan, including through relevant regulations such as on cash payments and on financial flows. The existing coordination should allow for timely review and to complement the plan whenever needed.

Step 5 - Strengthen the fight against organised crime, based on detailed threat assessments, increased cooperation with regional, EU and international partners and better coordination of law enforcement agencies; in particular, put in place a legislative package on asset recovery and a comprehensive framework for the fight against financial crime and money laundering, ensuring that anti-money laundering legislation is in compliance with the standards of the Financial Action Task Force (FATF).

In December 2022, Moldova adopted a new sectoral development strategy on the prevention and fight against organised crime for 2022-2025 to support the implementation of the integrated home affairs strategy (2022-2030), which was adopted in September 2022. The country adopted a mechanism for extended confiscation, amendments to the law on combating money laundering and approved a national asset recovery programme. As a result of these regulations, it is possible to confiscate assets that have been transferred by those convicted to third parties as well as to confiscate assets in the absence of the convicted person. Thanks to these regulations and its enforcement, assets belonging to prominent oligarchs were seized. Moldova works closely with international partners through the EU Support Hub for Internal Security and Border Management. International cooperation has developed significantly at investigative and operational levels with effective use of joint investigation teams. Moldova has also signed a Status Agreement with Frontex. **This step is completed.**

Step 6 - Increase the capacity to deliver on reforms and provide quality public services including through stepping up implementation of public administration reform; assess and update the public administration reform strategy.

In March, Moldova adopted a new Public Administration Reform Strategy for 2023-2030. After functional review of the ministries, a significant number of new positions were created to strengthen the capacity of institutions to work on EU accession. Moldova has adopted a law on increasing salaries for certain categories of public servants. The country adopted and started implementation of a law on the voluntary amalgamation of local authorities. It continued improving the accessibility of public services through digital platforms. Cooperation with OECD has been stepped up notably with the Support for Improvement in Governance and Management (SIGMA) initiative and Moldova has undergone a structural review of its public administration. In this context, Moldova established an action plan to implement the ensuing recommendations. **This step is completed.**

Step 7 - Complete the reform of Public Financial Management including improving public procurement at all levels of government.

The government adopted a Strategy for the Development of the Public Finance Management for the years 2023 – 2030. Moldova has adopted legislation addressing public capital investment projects and low value public procurements together with a National Programme for the Public Procurement System Development. The country has thus established a unified set of rules for public investment projects financed from the state budget. To implement its Public Finance Management Development Strategy Moldova is putting in place an implementation action plan and shared its core elements this October. **This step is completed.**

Step 8 - Enhance the involvement of civil society in decision-making processes at all levels.

Moldova established a Platform for dialogue and civic participation in the Parliament's decision-making process. The country adopted a new programme for the development of the civil society organisations and a law on access to information of public interest. It amended its regulation on the grant financing mechanism to strengthen the financial sustainability of civil society. It will be important to continue systemic involvement of civil society actors in public consultations, maintain transparent and timely agenda setting of Parliament and finalise Parliament's rules of procedure. **This step is completed.**

Step 9 - Strengthen the protection of human rights, particularly of vulnerable groups, and sustain its commitments to enhance gender equality and fight violence against women.

Moldova has transposed the Istanbul Convention into the national legislation, strengthened the Equality Council and improved the institutional capacity of the Ombudsman. The country adopted programmes to promote and ensure gender equality to support the Roma population and to implement strategy for strengthening inter-ethnic relations. **This step is completed.**

2. CLUSTER 1: THE FUNDAMENTALS OF THE ACCESSION PROCESS

FUNCTIONING OF DEMOCRATIC INSTITUTIONS AND PUBLIC ADMINISTRATION REFORM

2.1.1 Democracy

The reporting period was marked by the government's stability amid polarisation of the political scene. A strong parliamentary majority supported the reforms initiated by President Maia Sandu and the government. A government reshuffle, which took place in February 2023, did not affect the political stability or the political drive to continue pro-European reforms. Following the nine steps of the Commission Opinion, Moldova adopted a new Electoral Code in December 2022 and took steps to reduce the influence of vested interests in political life. The government organised comprehensive working groups aiming to align the country's legislation with the EU *acquis*.

Elections

Good progress has been made over the reporting period in addressing and implementing the outstanding recommendations on electoral legislation made by the Organisation for Security and Co-operation in Europe's Office for Democratic Institutions and Human Rights (ODIHR) and the Venice Commission, in their opinions issued in December 2021 and October 2022. The electoral legislation has been comprehensively amended to address inconsistencies, and a new Electoral Code was adopted. Moldova needs to consult with the Venice Commission the latest changes to the Electoral Code, to ensure alignment of the provisions related to the electoral ban with European standards. In addition, the authorities need to implement the electoral legislation by strengthening the Central Election Commission with sufficient authority, resources and technical expertise to carry out its work effectively. The focus should be placed on ensuring the transparency of political party funding and the accountability of campaign finance. To reduce the risk of malign interference, further options could be explored to regulate the involvement of third parties in election campaigns, in line with GRECO and ODIHR recommendations.

Candidate lists for parliamentary and local elections are drawn up in compliance with the 40% minimum representation quota for men and women. The latest round of parliamentary elections in July 2021, according to the ODIHR, were well run and competitive, and fundamental freedoms were largely upheld.

The new Electoral Code was adopted by Parliament in December 2022 and entered into force on 1 January 2023. The new version addressed key recommendations by international and local expert organisations, including from the ODIHR July 2021 Election Observation Mission report and Venice Commission Opinions, issued up until the end of October 2022. Measures have been taken to: (i) strengthen laws on financing initiative groups and electoral campaigns; (ii) clarify the rules on voting abroad; (iii) improve the impartiality of the Central Election Commission (CEC) and (iv) address undue influence on public officials and voters, political bias of news outlets and possible vote-buying.

The CEC's capacity was strengthened by creating a special unit to oversee the financing of political parties and electoral campaigns. The CEC has initiated contravention proceedings for late or a lack of reporting against seven political parties and initiated investigation procedures against 12 political parties for unjustified use of public funds allocated to them. There was also progress in establishing interoperability with and a data exchange through the governmental MConnect platform, which enabled the CEC to carry out checks on political party financing more effectively.

The first round of elections of the Bashkan (Governor) in the autonomous region of Gagauzia was held on 30 April 2023. Anti-corruption prosecutors raided the offices of the Şor political party on 7 and 16 May and started an investigation into vote-buying. The second round of the elections was held on 14 May 2023, and it was won by Evghenia Guţul, a candidate from the Şor party. No international observation mission or official local observation mission was deployed; 75 international observers were registered. The elections were validated by the Appeal Court in Comrat on 22 May 2023.

The new Electoral Code will only apply to the territory of Gagauzia as of 1 January 2024. Further efforts are needed to ensure that the Gagauzian electoral legislation and the Moldovan Electoral Code are consistent and to apply the legislation across the country equally in line with international principles and standards.

In June 2023, the Constitutional Court, in response to a notification from the government, delivered a judgement which declared unconstitutional the Şor Party. The Şor Party was subsequently dissolved. In July 2023, the Electoral Code was amended introducing the possibility to ban certain individuals from running for elected office on the basis of their membership in political parties that have been declared unconstitutional by the Constitutional Court.

After the constitutionality of these amendments was successfully challenged before the Constitutional Court, new legislative amendments to the Electoral Code were adopted on 4 October 2023. The new amendments, which revise the criteria for banning individuals from running for elected office, still have to be consulted with the Venice Commission, to ensure alignment with European standards.

Parliament

Over the reporting period, Parliament played a major role in the EU accession process, supporting the government's reform efforts. Distrust and an occasional lack of transparency resulted in a low engagement of the opposition in the law-making process. Further efforts should be made to improve transparency by planning oversight activities and public hearings, publishing the parliamentary calendar sufficiently early, and increasing the level of accountability of parliamentarians. The process of amending Parliament's Rules of Procedures should be accelerated and ensure a broader involvement of civil society.

The Parliament of the 11th legislature, elected in the early elections of 11 July 2021, has a record number of women Members of Parliament in the history of the Moldovan Parliament: 41 out of 101 MPs (40.6%). A major contribution to this development is the 40% gender quota for cabinet and party lists, which was introduced in 2016. There are no female party leaders. Nevertheless, many women hold other leadership positions in political parties and are chairs of parliamentary committees.

Key legislative initiatives on European integration, such as the national development strategy "European Moldova 2030", were voted through by the parliamentary majority. Parliament adopted new legislation and amendments to existing legislation to address the nine steps of

the Commission Opinion in line with European standards and the EU *acquis*. In this process, Moldovan lawmakers requested opinions of the Venice Commission and broadly implemented its recommendations before final adoption of this legislation.

Russia's war of aggression against Ukraine and its aftereffects on Moldova has further divided political and societal attitudes over the foreign policy course of the country. There was limited inter-party dialogue to address reconciliation and key matters of national interest. The opposition does not have a clear position on the strategic choice of the country's leadership to join the EU. Distrust among the political forces remains prevalent and incentives to constructively engage in a political dialogue and consensus building remain weak. Out of 362 legal drafts adopted in 2022, only 13 were submitted by the opposition or together with the opposition. It is important that Parliament follows up the European Parliament's proposal to support dialogue between the majority and the opposition, including by organising a preparatory mission for the first round of the Jean Monnet Dialogue in 2023.

The new Electoral Code strengthens the supervision of party financing. This is an area that has been seen as a source of high-level corruption and attempts to capture state institutions. Investigations were launched into the Şor Party's alleged illegal financing, both in terms of expenses for public events and the financing of party staff⁶. Leaders of major political parties have left the country to avoid corruption trials.

The fugitive oligarch and leader of the Şor Party was found guilty in the "bank fraud" case and sentenced to 15 years in prison. He has also been sanctioned by the EU, as well as the US and UK, for carrying out actions that undermine or threaten the sovereignty and independence of Moldova; several people affiliated with the party have been arrested on suspicion of illicit financing and preparing mass unrest. On 19 June 2023, the Constitutional Court admitted a notification by the government on the unconstitutionality of the Şor Party, based on an article of the Constitution that states that "parties that oppose political pluralism, the principles of rule of law, sovereignty and independence and the territorial integrity of Moldova are unconstitutional". The Şor Party was dissolved with immediate effect and excluded from the political party register.

Parliament's oversight role, control of the government and scrutiny of legislative developments are in place. Annual reports by public institutions are submitted on time, and Parliament is making efforts to organise hearings on the reports during the plenary. However, implementation of some methods and instruments of parliamentary control, including *ex post* impact assessments, should be improved, especially for legislation related to EU integration. The working methods of special investigative parliamentary committees should be strengthened as they have so far failed to deliver tangible results.

CSO monitoring in 2022 highlighted several gaps hindering the transparency of decision-making and public participation in Parliament. In 2022, 71 draft normative acts were approved by Parliament under the priority or the urgent procedure (around 20% of the total). A total of 65 draft laws were voted in two readings at the same plenary in 2022, and 124 draft laws were adopted in two readings within 30 days (34% of the total) from the moment the draft was registered.

Laws adopted in shortened procedures or within the minimum timeframes reduced the opportunity for inclusive legislative processes and meaningful debates, thus affecting the

⁶ The Şor Party is suspected of illegal financing, both in terms of expenses for public events and the financing of party staff: the party spent EUR 600 000 but reported only 2% of this amount (EUR 12 000); (ii) the monthly salaries paid to party staff amounted to EUR 100 000; and (iii) expenses for transporting protest participants amounted to about EUR 182 000 (MDL 3.5 million). More than 97 locations associated with the Şor Party were searched.

quality of legislation.

There were 44 announcements of public consultations in 2022. Parliament created in June 2023 a Platform for dialogue and civic participation in the decision-making processes of the Parliament, to facilitate participation, improve involvement, and encourage civic initiatives in the future.

Governance

The government worked actively on the EU reform agenda and addressing the consequences of Russia's war of aggression against Ukraine. It took steps to improve the transparency of decision-making and democratic accountability mechanisms. It also ensured a good level of coordination and policy planning. Decisive efforts are needed to ensure that adopted legislation is implemented effectively, and all parts of regulatory policy are applied at all levels of government.

The government should adopt a mechanism for the effective parliamentary scrutiny of decisions issued by the Commission for Emergency Situations, in line with the Siracusa Principles⁷.

The government should pursue local government reforms, including creating incentives for local authorities to amalgamate.

The current government has publicly declared its commitment to accelerating the reform process and strengthening good governance. This follows a long period of effective state capture, with vested political interests exerting control over key parts of Moldova's government.

On 10 February 2023, the Prime Minister, Natalia Gavriluța, announced her resignation after 18 months in office. The new Prime Minister, Dorin Recean, was appointed by the President with Parliament's support, and the new government was sworn into office on 16 February 2023. The change of government did not affect the country's political stability. The main priorities of the new government programme are economic development, state security, discipline in state institutions and order in the country. European integration features as one of the key objectives, including fully implementing the nine steps and aligning national legislation with the EU *acquis*. In July 2023, the government underwent a reshuffle, which resulted in the resignation of three ministers (Internal Affairs, Infrastructure and Regional Development as well as Education and Research). Women's representation is lower at local level where they hold 22.2% of mayoral positions and 38.8% of seats in local, district and municipal councils.

The government set out its long-term priorities in the national development strategy. The national development plan for 2023-2025 was adopted in February 2023 to implement the measures of a long-term strategic plan as well as to integrate requirements related to the country's candidate status into the national reform agenda. In February 2023, the government also adopted the action plan for 2023, which contains specific commitments to harmonise national legislation with the EU *acquis*. Sectoral strategies have been adopted to implement the national development plan in several areas, such as education and youth.

In December 2022, the government set up a coordination mechanism for European integration. This brings political and government representatives together and is chaired by

⁷ Siracusa Principles on the Limitation and Derogation Provisions in the International Covenant on Civil and Political Rights.

the President of the Republic. The National Commission for European Integration adopted the action plan to implement the nine steps, the action plan to align national legislation with the EU *acquis* and a separate action plan on de-oligarchisation.

The government adopted several strategies, including the strategy for public administration reform for 2023-2030 in March 2023 and the strategy of public finance management development for 2023-2030 in February 2023. Amendments to the Law on the People's Advocate were also adopted by Parliament in February 2023, which helped strengthen the independence of the institution and reinforced democratic accountability mechanisms in Moldova.

The transparency of legislative decision-making improved over the reporting period. A new Law on free access to public information entered into force in April 2023. The law is in line with the Council of Europe's Trømso Convention and the recommendations of the OECD and the World Bank. Around 80% of draft decisions and laws initiated by ministries during 2022 were opened for public consultation. However, draft legislative acts lack accompanying information and explanatory documents and do not provide a full overview of the decision-making cycle.

The legal framework for regulatory impact assessments is in place and is in line with the best international practices suggested by the OECD. The Guidelines on *Ex ante* Analysis For Policy and the Handbook for Assessment of Economic Costs Of Public Policy were amended and adjusted in 2022 with the help of EU donors.

Independent and regulatory agencies in Moldova are still prone to influence by private interests and by the bodies or industries they are charged with regulating. Additional efforts are needed to shield regulatory agencies from third-party influence, including by strengthening accountability and introducing measures to promote integrity. The senior management of regulatory enforcement structures should be appointed in a transparent manner, following clear procedures and based on professional skills. The government introduced a state of emergency, approved by Parliament, on 24 February 2022, which is extended every 60 days. This enabled the government to adopt measures to handle the energy crisis and attempts at external destabilisation. The use of extraordinary tools, in the form of decisions by the Commission for Emergency Situations, has been limited overall and related to the need to react quickly to crisis situations. A mechanism for effective parliamentary scrutiny of the decisions issued by the Commission for Emergency Situations is needed, in line with the Siracusa Principles. The adoption of a related law should be accelerated.

A persistent problem is the limited capacity of Moldova's public administration and a chronic shortage of qualified human resources. This affects the government's ability to implement strategies and reforms. To increase the efficiency of existing staff, Moldova needs to set up better regulation at all levels of government, improve coordination and avoid overlapping responsibilities among regulatory authorities and levels of government. Limited fiscal space impedes further possibilities to increase government wage expenditure. From 1 January 2023, the salaries of public sector employees were raised by a fixed sum of MLD 1 300 (EUR 260). The government also took targeted measures to increase salaries for some categories of public employees, such as those working on priority tasks on EU accession, as of January 2023. However, salary reform remains a crucial issue to be addressed to ensure a uniform approach and make working in the public service more attractive.

Moldova needs to advance with reforms of local government to make it more efficient and accountable. Voluntary amalgamation, the first stage of the local public administration reform, should be followed by further measures. Upcoming local elections in autumn 2023

have led to the local administrative reforms becoming highly politicised. The overall reorganisation of competencies between central and subnational levels is needed to secure additional financial resources for municipalities and strengthen public finance management at local level.

Civil society

An enabling environment exists for CSOs, with legal and financial frameworks in place. The legislative framework is in line with international standards. Moldova has involved civil society more in decision-making.

Further efforts should focus on adopting: the national strategy on civil society development and improving the quality of public consultation processes to improve transparency and get CSOs more involved in policy dialogue, especially in parliamentary debates and at local level.

Moldovan public institutions recognise that an empowered civil society is a crucial component of democracy. Civil society has played an essential role by monitoring government policies, such as the progress on the nine steps of the Commission Opinion. CSOs provided essential support to refugees and public institutions during the massive inflow of displaced persons in 2022 resulting from Russia's invasion of Ukraine. The overall legal and regulatory framework governing the establishment and functioning of CSOs is in line with international standards.

The registration procedure for CSOs is free of charge and takes a maximum of 15 days. Since June 2022, registration forms can be submitted electronically, signed by a qualified electronic signature. Registration is carried out based on a list of documents set out in legislation. The declaration on the beneficial owner of the legal entity, which is required under anti-money laundering and counter-terrorism financing rules, has been criticised by civil society as restricting the right to associate. In 2022, there were no cases of involuntary suspension or liquidation of CSOs. In February 2023, Parliament adopted the Law on associations for intercommunity development, recognising the important role of CSOs in local development.

State funding can be provided to CSOs through different mechanisms. These include non-reimbursable financing, contracting works and services or special purpose financing, such as social order, percentage designation, and direct subsidies. In a positive development, in July 2022, Parliament adopted amendments improving the legislation on philanthropy and sponsorship. This clarifies rules on donations and ensures the transparency of philanthropic activity and sponsorship. In September 2022, the government adopted the Framework Regulation on the non-reimbursable financing mechanism for projects of non-commercial organisations. The government Decision created a uniform and stable framework for financing CSOs from the public budget through cooperation between central and local public administrations and non-commercial organisations.

A concept for a new strategy for civil society development opened for public consultation in May 2023. One of the successful actions of the NGO council on advocacy was to reactivate the Certification Commission for public benefit status, which allowed CSOs to continue having this status. The new concept for the development of civil society and the establishment of a permanent platform for dialogue and civic participation in the legislative decision-making process needs to be accelerated.

The mechanism for public consultations with civil society clearly sets out stages, deadlines and conditions for conducting public consultations in the decision-making process. Draft decisions and calls for consultation by the public authorities, except Parliament and local administration who publish announcements, are uploaded to the online platform. The

platform does not always provide the necessary documents, information or changes made to the proposed drafts (such as the divergences table, which includes suggestions from CSOs), and authorities do not give public feedback on CSOs' proposals.

Civilian oversight of the security and intelligence sector

Parliament's National Security, Defence and Public Order Committee and its subcommittee, which was set up within this Committee specifically for parliamentary control over the activity of the Security and Intelligence Service, regularly monitor the security and intelligence sector. The Committee monitored the following areas: national security; data, IT and cybersecurity; national defence; public order; anti-corruption and integrity. Over the reporting period, the Committee held regular weekly sessions and carried out monitoring based on the action plan of parliamentary control by the Committee for 2022. A similar action plan for 2023 was adopted in March 2023. The Committee's oversight work included hearings on activities of relevant security and intelligence institutions, reports on the implementation of laws under the responsibility of the Committee, as well as inspection visits to state agencies of the security sector.

2.1.2. Public administration reform

Moldova has **some level of preparation** in the area of public administration reform, and **some progress** has been made. In particular, the new public administration reform strategy for 2023-2030 was approved in March 2023 and its implementation program 2023-2026 was approved in June 2023. Due to a complex salary grid and the many different job classifications, civil servants' pay varies and is inconsistent across the administration. Moldova started addressing this issue by adopting a new law on salaries.

Moldova also adopted a new strategy for the development of public finance management for 2023-2030.

In the coming year, Moldova should, in particular:

- implement and monitor the public administration reform strategy effectively, including by adopting the complete regulatory framework for territorial reform through voluntary amalgamation, namely the law and the government decision on the methodology for the voluntary amalgamation;
- finalise the salary reform plans and start its implementation;
- implement the new public finance management strategy, including by strengthening inter-institutional coordination.

Strategic framework on public administration reform

A new strategic framework for **public administration reform** for 2023-2030 was adopted by the government on 15 March 2023 and the implementation program of the strategic framework for the period 2023-2026 was approved on 7th of June 2023. This followed an extensive consultation process with key stakeholders, including local public administrations, the Congress of Local Authorities from Moldova, civil society, development partners and Members of Parliament. Their input has been taken into consideration and is reflected in the final approved version of the strategy. The strategy and the implementation program were made available on the platform of the Joint Commission for Decentralisation to increase transparency. The public administration reform strategy targets five major areas: (i) management of the civil service; (ii) the institutional framework of the central public administration; (iii) the strategic planning system and development of public policies; (iv) the simplification and development of e-

services; and (v) local public administration reform, mainly a territorial reform by voluntary amalgamation. In addition, the strategy provides a three-level monitoring framework to coordinate the implementation and monitoring process. A set of performance indicators measuring the achievement of policy objectives have been identified, and their baseline or target values are set by the implementation program 2023-2026. A functional review was published in October and an action plan was established to implement the ensuing recommendations.

In line with the strategy, authorities need to adopt the law on voluntary amalgamation to improve the capacity of local government to provide quality public services for citizens and to approve the methodology for voluntary amalgamation. The law on voluntary amalgamation has been adopted in July 2023. Amalgamation of local governments should reduce excessive fragmentation, improve the viability and capacity of local administrations and ultimately improve service delivery for local communities.

The strategy's financial sustainability is partially ensured by the medium-term budgetary framework and by international donors' technical assistance programmes.

Commitment to the effective implementation of the reform is ensured at the highest level, but it is less clear at the lowest level of political parties and local government associations, notably with regards to local government reforms and in the area of professionalisation of the civil service.

Policy development and coordination

The regulatory and institutional framework of the policymaking system is coherent and well-designed, but it is not effectively implemented. Analytical capacities and sectoral expertise in the line ministries, including policy coordination units, are relatively modest, especially in areas such as data analysis and modelling, quantitative methods of policy analysis and quantitative policy impact assessment. The government adopted several measures to increase the institutional capacity to carry out reforms and improve the policy coordination process, such as restructuring departments dealing with policy analysis, monitoring and evaluation. A special position of deputy secretary general was created to streamline the internal coordination work on EU accession in a number of ministries. The government adopted a regulation allowing a monthly financial incentive of up to 50% of the base salary for staff involved in policy design, evaluation and monitoring related to the European integration process.

Inter-ministerial and public coordination and consultation procedures and mechanism are formalised and function relatively well, even if the early policy preparation process remains fragmented and isolated at the level of central public initiator. For instance, during the period June 2022 – March 2023, over 90% of policy and legal proposals were included in public consultation and coordination with the major stakeholders, including business organisations, NGOs.

Despite a suitable regulatory framework, important problems remain. These problems, mostly caused by the low administrative capacity in central public institutions, are: (i) an isolated approach to policy design and a lack of consultation, transfer of information and dialogue across the central public administration from the early stages of policymaking; (ii) a very limited use of *ex-ante* and *ex-post* evaluations and no overall effective use of **evidence-based policy instruments**; (iii) limited use of cost estimations or linking financial resources requests in policy documents with the medium-term expenditure framework; (iv) a fragmented approach to monitoring and no systematic collection of the relevant data; (v) limited use of consultation platforms and transparency during the process; and (vi) poor

cross-cutting policy coordination, particularly among the State Chancellery, the Ministry of Finance and the Ministry of Foreign Affairs and European Integration.

Public financial management

On 22 February 2023, Moldova adopted a new multiannual strategy for the development of **public finance management** for 2023-2030 in line with the national and sub-national public expenditure and financial accountability assessments published in 2022 and 2023. The *ex-post* evaluation of the 2013-2023 public finance management strategy emphasised improvements in the implementation period, notably on the budgetary process at central and local levels. The strategy includes seven major reform areas with medium- and long-term priorities and expected results.

Moldova has also applied to participate in the economic reform programme, which will help the country with medium-term budget planning and prioritisation of structural reforms. The Ministry of Finance continued its efforts to improve the **transparency of public finance management**, which is reflected in the improved Open Budget score.

Following the publication of the public finance management strategy, the authorities organised the first Public Finance Management Policy Dialogue in Chişinău in May 2023 with the participation of national and international stakeholders. The commitment of the authorities to improve the governance of public funds was further confirmed, including by setting up an independent and credible Fiscal Council. The government has adopted a new regulation on public investment management, its provisions need to be properly implemented to efficiently support the selection and channelling of domestic and external financing resources for infrastructure development. There is also consensus that additional efforts are necessary to improve public procurement and national public sector accounting standards to improve accountability and **effective governance of public finances**. The implementation of the public finance management strategy requires time to implement, resources and external support, and the Ministry of Finance needs to strengthen its capacity and improve the quality of dialogue on the governance of public finances with public and private stakeholders.

Public service and human resources management

The State Chancellery is nominally in charge with the management of the civil service. The legal framework is in place for a professional and non-politicised public service: the legislation and regulation regarding the recruitment procedure for the civil service were mainly developed based on the principles of public administration. Some 70% civil service positions were recruited based on competition and promotion, but the turnover rate was in 2021 high: 11,24% and participation to competitions limited: 1,7 persons for a vacant position. Integrity of the civil servants are well regulated through a civil servants' code of conduct, legislation on the evaluation of institutional integrity, and regarding wealth and personal interests' declaration, together with a set of control and endorsement procedures from National Integrity Authority, National Anticorruption Centre. Despite this suitable regulatory framework, the implementation is mainly realised through administrative practices on **recruitment** and **promotion** procedures, and is still hindered by formalism, absence of skill assessment, weak evaluation process, and inadequate restrictions on political influence, especially in top management positions.

On gender equality in the administration, there is an imbalance between the high number of women in public positions and the low number of women in senior positions. General public positions are mostly occupied by women (74% women and 26% men). The share of women in senior public positions is 60%, while in public management positions it stands at 70%. In

executive public roles, it reaches 76%. Public positions with special status are mainly occupied by men (80%) are better paid than those with a general status.

The civil service management system is heavily fragmented and understaffed. The national information system for managing human resources in the civil service is not functional due to the problems of maintenance and up-dating by its private provider.

A career in the civil service, especially for young professionals, is not attractive. This is due to the inadequate **remuneration** and an unpredictable career development system. The existing system for the **professional development** of civil servants does not sufficiently respond to the needs of the public service, especially those in the local public administration.

Human resources in Moldova's public administration are heavily affected by external migration and by other specific factors on an already very tight labour market.

The public administration pay system is of critical importance. The initial draft law on a unitary pay system corresponded to the principles of public administration. The law that was finally adopted by Parliament contained amendments that watered down the original draft and the original concept, and other changes were introduced later under special laws. Thus, the current salary pay system in Moldova's budgetary public sector continues having systemic shortcomings: the inequity of the salary pay scales, the lack of a performance-based environment in the system, and the difficulty to attract and keep staff, especially young people.

Accountability of the administration

The legal framework on the structure and accountability lines of public administration establishes the mandates and the competences of the central public authorities, subordinate administrative authorities, and other public institutions. The legal framework does not sufficiently delineate clear functions for the subordinated institutions, nor rules for ensuring their independence. More so, the rules regarding the financial self-management are often unclear. The pay system and the staffing schemes are not aligned and are a source of staff rotation and understaffing.

The legal framework regarding services is unclear, especially between commercial and non-commercial activities and profit or non-profit status. As a result, in many cases public institutions provide commercial services on the side of public services, while being subsidised by the public budget.

Generally, the government reporting allows public scrutiny: evaluation and monitoring reports of major national policies and of action plans are published regularly on the Government portal on the institution's respective official web pages. The public administration is regularly scrutinised by independent oversight bodies, such as the People's Advocate's (Ombudsperson) office and the Court of Accounts, which are autonomous and independent authorities. The competences to issue recommendations and decisions for the relevant independent oversight bodies are set out in their normative acts.

The **right to access public information** is regulated by the Law on access to information and the Law on transparency in decision-making. A new law on access to information was adopted in June 2023, largely in line with CoE Trømso Convention as well as with international organisations recommendations.

Any person who considers that an administrative decision or action/inaction of the public authorities infringes her/his right or freedom established by law, has the right to resort to a prejudicial dispute resolution procedure or to bring an action in administrative litigation. The

right to seek compensation for any administrative prejudice is guaranteed by the Constitution. The effectiveness of the judicial review of administrative actions is an area of concern. While the formal guarantees of access to administrative justice are in place, the public are increasingly affected by growing backlogs.

Service delivery to citizens and business

Public services are delivered online and/or through a one-stop shop. The Public Services Portal (services.gov.md) is a single point of access for individuals and legal entities to information on public administrative services.

Another initiative developed by the Electronic Governance Agency is the establishment of Unified Public Service Centres, providing common access points to a wide range of public services available in electronic format. One of the main objectives of the institution is to simplify the process of providing good quality public services to people from rural areas and the diaspora. A total of 32 public services are now accessible via the public e-services platform. Moreover, another 42 public services have been integrated with the public MDelivery service, which allows documents to be requested and delivered directly to the user's home address.

2.2. RULE OF LAW AND FUNDAMENTAL RIGHTS

2.2.1. Chapter 23: Judiciary and fundamental rights

The EU's founding values include the rule of law and respect for human rights. An effective (independent, high-quality and efficient) judicial system and an effective fight against corruption are of paramount importance, as is the respect for fundamental rights in law and in practice.

Moldova has some level of preparation to apply the EU <i>acquis</i> and European standards in the area of justice and fundamental rights and, overall, made some progress in these areas.

Functioning of the judiciary

Moldova has some level of preparation in the area of the judiciary. The country made good progress in the reform of the justice sector. Candidates for the Superior Council of Magistracy and the Superior Council of Prosecutors SCP had to undergo vetting based on the corresponding law adopted in line with Venice Commission recommendations. Parliament also adopted a law on Supreme Court of Justice reform and the vetting of its candidates and its sitting judges, in line with Venice Commission recommendations, has started. At the end of October, Moldova announced a competition for the position of Prosecutor General. In July 2023, Parliament adopted a law on the further vetting of judges and prosecutors in high level positions, which was consulted with the European Commission and broadly aligned with Venice Commission recommendations. However, the President then returned the law to Parliament with additional changes, which Parliament adopted in August 2023. The final version of the law was sent to the Venice Commission for review.
--

The length of proceedings, low clearance rates and the large backlog of cases negatively affect the judicial system's efficiency. There was no significant progress in the prosecution of high-level corruption cases and long-standing criminal cases. However, there was a verdict on fugitive oligarchs. Due to the lack of a quorum at in the SCM, no new judges have had been appointed in the past 3 years. However, following the appointments of three non-judge members and four judge members to the SCM in March and April 2023o23 respectively, the SCM restored its quorum and made new appointments across the judiciary, including to new
--

ranks. The justice reform strategy and action plan for 2022-2025 were adopted in December 2021, with strong focus on restoring public trust in the judiciary. Moldova has been implementing the justice sector reform strategy and action plan for 2022-2025, with strong focus on restoring public trust in the judiciary. The new judicial map, which should reform the court system, needs to be finalised.

In the coming year, the country should in particular:

- pursue implementation of the justice reform strategy, in particular the pre-vetting and vetting processes in line with Venice Commission recommendations and the subsequent appointment of the remaining members of the Superior Council of Magistracy (SCM), the Superior Council of Prosecutors (SCP) and the Supreme Court of Justice but also the members of the SCM and SCP colleges and other judges and prosecutors in an objective, transparent and merit-based procedure, in line with European standards: demonstrate a clear track record in this regard;
- improve the functioning of the National Institute of Justice, develop human resource strategies for the judiciary and prosecution services and finalise the new judicial map following a systematic approach in line with European standards and based on a comprehensive analysis of the state of play;
- consolidate the capacity of the judicial system and its self-governing institutions, including improving the quality and efficiency of the work of the Superior Council of Magistracy and Superior Council of Prosecutors.

Strategic documents and budget

The implementation of the 2022-2025 justice reform strategy and its action plan is ongoing. This is coordinated by a monitoring group set up in 2022 at the Ministry of Justice. In 2022, the Ministry demonstrated genuine commitment to implement the reforms and took the first steps to implement the strategy. These included the initiation of (subsequently adopted) legislation on the pre-vetting of SCM and SCP candidates, on the reform and vetting of the Supreme Court of Justice and its judges and candidates and on the further vetting of other high level judges and prosecutors.

Management bodies

The SCM and the SCP are the main self-government bodies of the judiciary. The two institutions manage the judicial system and the careers of judges and prosecutors. All members of both the SCM and SCP are appointed for a 4-year term. Their composition and appointment procedures are broadly in line with European standards.

In April 2022, Constitutional amendments concerning the role, the composition and the specialised bodies of the SCM, as well as changes related to the appointment and other career aspects of judges entered into force. These amendments significantly improved the legal framework concerning the independence, accountability and efficiency of the judiciary and judicial administration, in accordance with the recommendations of the Venice Commission and GRECO.

The SCM is made up of 6 judge members and 6 non-judge members. The SCP has 13 members: 5 prosecutors, 4 non-prosecutor members and 4 *ex officio* members: the Prosecutor General, the chairperson of the SCM, the Minister of Justice and the People's Advocate (Ombudsman).

The subordinated Colleges of the SCM are the College for the Selection and Career of Judges, the College for Performance Evaluation of Judges, the Disciplinary College and the

Judicial/Prosecutorial Inspection. The subordinated Colleges of the SCP are the College for Selection and Career of Prosecutors, the College for Performance Evaluation, and the Disciplinary College.

The Law on the extraordinary evaluation (“pre-vetting”) of candidates for vacant positions in the SCM, the SCP and their Colleges entered into force in March 2022, in line with Venice Commission recommendations. It establishes the Pre-Vetting Commission of 3 national and 3 international members. As regards the SCM, the Pre-vetting Commission finalised its evaluation in January 2023. Only five judge candidates and three non-judge candidates obtained positive decisions. Several judges appealed to a special appeals body at the SCJ against the Pre-Vetting Commission’s negative decisions. The mandate of the Pre-Vetting Commission was extended to ensure the functioning of this body until the end of the appeals process. A new call for applications was initiated for the remaining vacant positions for SCM non-judge members as well as for the remaining vacant positions reserved for judges from the second and third instance.

Following several years with an incomplete composition, the SCM quorum was restored when Parliament appointed three non-judge members in March 2023 and the General Assembly of Judges appointed four judge members (in addition to one judge member already in office) in April 2023, bringing the overall number of members to 8 out of 12. Three non-judge members and one judge member remain to be appointed.

The SCM with restored quorum is exercising its mandate, including the appointment of new judges, and has issued a decision on the transfer of judges from lower instances to the SCJ to replace resigning judges following the resignation of 20 out of 25 SCJ judges.

On 9 June, Parliament adopted the amendments to reform the SCM colleges for the selection and performance evaluation of judges. The two colleges were merged into a single body comprising 9 members (5 career judges and 4 representatives from civil society) serving 6-year terms. Judges will now be evaluated every 5 instead of 3 years, based on professional competence, organisational skills, and professional integrity.

In July, the Parliament adopted new rules on the selection, promotion and disciplinary liability of prosecutors, mirroring the new rules for judges and merging the colleges responsible for selection and performance evaluation of prosecutors. It also adjusted the composition of the SCP: From 2026, the Minister of Justice and the SCM President will no longer be SCP members.

In the framework of the pre-vetting process, the candidates for the SCM and SCP colleges still remain to be pre-vetted and appointed and a call for applications has been launched in this regard.

Outstanding issues regarding the functioning of both councils to be addressed include the filling of remaining vacancies in the SCM and its specialised bodies by the General Assembly of Judges (two judge member) and the Parliament (two non-judge members). The evaluation of candidates for the SCP is ongoing and SCP vacancies remain to be filled. Plans to appoint the first pre-vetted members of the SCP in August 2023 failed after the General Assembly of Prosecutors decided to postpone the vote until all pending appeals against the pre-vetting results have been resolved. At the end of October, a competition for the position of Prosecutor General was also launched.

Independence and impartiality

Judicial independence is enshrined in the Constitution. The constitutional amendments which entered into force in April 2022 introduced a number of elements improving judicial

independence in line with Venice Commission recommendations. Changes include introducing the appointment of all judges including the SCJ by the President upon proposal of the SCM (with a one-time veto of the President, however, the final decision lies with the SCM), instead of the Parliament, to reduce the risk of politicisation. In addition, the amendments removed probationary periods for judges, regulated the functional immunity of judges at constitutional level, and changed the composition of the SCM (ensuring that at least half of the members are judges elected by their peers).

In April 2022, in line with Article 16 of the Constitution, the SCM presented a list of 39 judges to be reconfirmed in office to the President. President Sandu rejected 25 judges on the list based on integrity and reputational criteria. She then issued a decree to appoint the other 14 shortlisted judges until their retirement age. The newly formed SCM can have a second review of the rejected judges and submit their list to the President again.

Judicial appointments remain a challenge in Moldova. Graduates from the National Institute of Justice (NIJ) and non-graduates who have 5 years of experience and have passed the NIJ final examination are eligible for appointment. The results of the NIJ final examination are just one of the selection criteria (accounting for 70% of the mark). Other criteria are the length and nature of professional experience and a letter of recommendation. The Selection Committee is not bound to follow the ranking of the NIJ final examination. Candidates with the best marks in the exam were often not among those proposed by the SCM for presidential appointment.

The SCP has selected new prosecutors from the group of NIJ graduates. The SCM, on the other hand, has mainly selected experienced lawyers in the latest rounds of appointments without justifying its decisions on the selection and appointment of new judges. As a result, more than 90 NIJ graduates have been placed on waiting lists for judicial appointments.

On 30 March 2023, Parliament adopted the Law on the Supreme Court of Justice (SCJ), changing its composition and powers in line with recommendations from the Venice Commission. The SCJ was reduced from 33 to 20 members, whereby 11 will be chosen from among judges and 9 from among lawyers, prosecutors and legal academics. The SCJ's main responsibility is still to ensure the law is consistently applied throughout national jurisdiction.

In October 2022, Parliament amended the Law on the Prosecution Service, generally in line with the Venice Commission recommendations. Efforts are still needed to consolidate the functional independence of the Prosecution Service and the efficiency of the General Prosecutors Office.

Accountability

Parliament adopted two laws providing the legal basis for vetting respectively the Supreme Court judges (including candidates) and the other categories of judges and prosecutors, particularly those in high level positions, comprising a third of all judges and prosecutors. The laws were prepared broadly in line with Venice Commission recommendations.

First, on 30 March 2023, Parliament adopted the law on the external evaluation of the sitting judges and candidates for the SCJ. The law provides for setting up an Evaluation Commission comprising three local and three international members tasked with assessing the financial situation and the integrity of SCJ judges and candidates. After this reform measure was announced in February 2023, 20 out of 25 SCJ judges submitted their resignation and the SCM decided to transfer judges to the SCJ from lower courts, to keep the SCJ operational.

Second, in July 2023, Parliament adopted a law on the further vetting of judges and

prosecutors in high level positions, which was consulted with the European Commission and broadly aligned with Venice Commission recommendations. However, the President returned the law to Parliament with additional changes, which Parliament adopted in August 2023. These additional revisions have not been consulted with the Venice Commission. The law foresees the creation of two evaluation commissions, one for judges and one for prosecutors, both comprising three local and three international members each. The final version of the law was sent to the Venice Commission for review in September 2023.

In February 2023, Parliament adopted amendments to the law on the disciplinary liability of judges, which entered into force on 18 April 2023. With these amendments, the composition of the disciplinary board has been reduced to seven members, two broad disciplinary offences have been deleted, certain aspects of the procedure have been clarified and the right to appeal against SCM decisions directly to the SCJ has been restored. However, in accordance with GRECO recommendations of March 2023, the objectivity, efficiency and transparency of the disciplinary liability remain to be further strengthened in law and in practice.

One of the main objectives of the justice reform is to streamline the work of anti-corruption and integrity authorities. In particular, the reform addresses the division of responsibilities of the Anti-corruption Prosecutor's Office (APO) and of the National Anticorruption Center (NAC). The relevant legislation was adopted by Parliament in August 2023.

The Code of Ethics and Professional Conduct of Judges adopted by the SCM in 2018 is generally in line with European standards. A Judicial Ethics Commission was set up in March 2017 in the SCM to effectively promote the judicial integrity of judges.

The Law on the status of the judge provides for an evaluation of the level of judges' professional qualifications and skills. Negative outcomes of such an evaluation may lead to an extraordinary evaluation, including when judicial decisions taken by a judge raise doubts about the level of their qualifications and professional skills. This extraordinary evaluation may result in the SCM dismissing the judge.

The system for detecting breaches of integrity rules needs to be made more effective, objective, consistent and credible. In addition, all cases that give grounds for disciplinary or ethical responsibility must be followed up. There is no legal remedy against decisions of both council's ethical commissions, which do not often provide sufficient justification for their decisions.

Professionalism and competence

An integrated file management programme is now in its fifth improved version. The programme covers all of a judge's procedural activities, including registration, distribution and file transfer.

General objective criteria for distributing cases across courts include specialisation (cases for the investigating judge, civil cases, insolvency, etc.) and the complexity of a case. This allows for equally distributing the workload among judges.

Improvements have been made in recent years to independence and objectivity when distributing court cases via the automated distribution system. To avoid manipulation of the automated system, there must be rules that oblige the court president to proactively monitor the distribution of the cases and provide clear reasons for each case assignment, including any exceptions, and communicate this information publicly.

Quality of justice

In 2022, EUR 23.1 million was allocated to courts of law and EUR 19.4 million to the

prosecutors' office. This shows an increase from 2020 when 21.2 million was allocated to courts and EUR 17.4 million to the prosecutors' office.

The number of judges (17) per 100 000 inhabitants is lower than the European average (22.2) and the number of prosecutors (23) is double the European average (11.8).

The National Institute of Justice (NIJ) allocated budget for 2022 was MDL 20 945 900 (approx. EUR 1 047 295) an increase from the allocated budget for 2021 which was MDL 19 988 600 (approx. EUR 1 001 839). NIJ Board annually approves the staff numbers which consists of 73 units from which 25 are filled by the NIJ trainers. The Law on the National Institute of Justice inadequately regulates admission and graduation. There have been efforts to increase the transparency of the admission and graduation processes, but they have not been enough to reverse the negative perception held by the public. In the short term, the country should introduce a set of additional measures to increase both the actual and perceived objectivity of the admission and graduation processes and reduce the subjectivity of the evaluation. In the long term, the NIJ should redesign the whole cycle of admission, initial training and graduation based on competencies in line with European standards and best practices. Currently, a limited number of NIJ graduates are appointed as judges and prosecutors, whereas NIJ should become the single-entry point to these professions.

Regular and thorough evaluation of initial and continuous training programmes should be conducted to improve them. Trainings on judgecraft, including subjects related to legal reasoning, professional ethics and behaviour, transdisciplinary issues, time and case management, information systems and data collection, and effective court management should be developed or revised.

While there is a legal basis for alternative dispute resolution in Moldova, in the form of non-judicial mediation, conciliation and arbitration, its use is limited to less than 1% of total cases. Awareness of the citizens about the alternative dispute resolution service needs to be improved.

Efficiency

The disposition time – the time a judicial system takes to resolve a case - and the number of pending cases remain a major concern. Disposition time in litigious civil and commercial cases increased to 171 days in 2020 compared with 143 days in 2018. The clearance rate in civil cases is 97% in first instance (and 95% in second instance. The clearance rate in criminal cases is 90.8% in first instance and 93.2% in second instance. In administrative cases, this rate is 95% in first instance and 87.7% in second instance.

The backlog of pending court cases amounts to 22 299 and 3 330 cases for the first and second instances respectively. The disposition time for enforcement documents at the end of 2022 was 715 days, the clearance rate stood at 83.5% and the closing rate was 33.7%. In September 2023, the Ministry of Justice approved a regulation according to which all enforcement agents are obliged to keep records of files in the electronic system, improving the traceability and overview on enforcement proceedings.

The 2020 budget for the judiciary system is 0.40% of GDP, which is less than the 2018 budget (0.48% of GDP).

Fight against corruption

Moldova **has some level of preparation** in the fight against corruption. The legislation was amended to clarify the mandates of the institutions in charge of investigation. New legislation for trials *in absentia* was used to finalise a judgment in the case against a well-known

oligarch. The track record of high-level corruption convictions increased slightly. Draft amendments to the law on whistle-blowers were adopted by Parliament in June 2023. **Some progress** has been made and needs to be sustained to remove the many remaining blockages that hinder the reform processes.

In the coming period, Moldova should in particular:

- adopt the new national integrity and anti-corruption strategy 2024 and beyond and its implementation action plan;
- finalise the reform of the anti-corruption institutional framework, in particular increase the capacity of the institutions concerned;
- implement pending GRECO recommendations and the ODIHR opinion and guidance on transparency and accountability.

Track record

One of Moldova's biggest achievements in this area has been improving international cooperation at investigative and operational levels. The Anticorruption Prosecutor's Office is using joint investigation teams effectively with Eurojust support to investigate fraud of USD 1 billion. The Moldovan-Latvian Joint Investigation Team proved successful, and its methodology will be applied to cooperation with other countries, such as Estonia and Switzerland.

During the reporting period, the General Prosecutor's Office and the European Public Prosecutor's Office signed a working arrangement, resulting in joint training and an exchange of information. The National Anticorruption Center (NAC) has strengthened international cooperation with peer institutions, and several bilateral contacts have been established. An example of improved international cooperation, based on direct contact with the EU authorities, was identifying and freezing assets located in Spain worth approximately EUR 56 million related to the USD 1 billion fraud case. Moldovan authorities made a request to identify and freeze the assets in January 2023 with results produced in March 2023.

In 2022, 434 investigations were initiated into high-level corruption offences. These concerned passive corruption (162 cases), active corruption (56 cases), influence peddling (84 cases), abuse of power/abuse of official position (99 cases), excess of power or excess of official authority (29 cases) and negligent performance of duties (4 cases). Out of these, 180 cases were sent to court, resulting in 108 guilty verdicts. Criminal cases against 1 former President of Moldova, 2 judges, 9 prosecutors and 1 Security and Intelligence Service employee were prosecuted and sent to court in 2022.

On corruption offences, in 2022, courts issued 131 sentences against 147 individuals: prison terms for 18 individuals (12.2% of all 147 convicted individuals against 11.6% in 2021); suspended sentences for 64 individuals (43.53% against 47.8% in 2021); fines for 64 individuals (43.53% against 39.2% in 2021); and unpaid community service for one individual (0.68% against 1.4% in 2021).

The high-level public officials and other individuals sentenced by trial courts in 2022 include 1 prosecutor, 3 judges and 12 company managers.

In 2022, 121 **financial investigations** were started in parallel with 94 criminal cases concerning corruption, actions related to corruption and illicit enrichment.

In 2022, 250 requests were sent to the Criminal Assets Recovery Agency, which is 9% or 21 requests more than in the previous year. These included 171 requests related to corruption

cases, 29.54% more than in 2021 when there were 132.

In 2022, parallel financial investigations carried out by criminal investigation officers identified 630 assets worth MDL 2 162 207 564 (approximately EUR 108 million), which were seized by the Criminal Assets Recovery Agency. Out of the seized amounts confirmed by courts (MDL 786 986 848), MDL 717 773 919 (EUR 35.85 million) are related to corruption cases. In 2021, property seized as part of corruption cases was worth MDL 336 168 560 (EUR 16.8 million). When comparing between years 2021 and 2022, this shows an increase of 113.39%.

In 2022 and 2023, the prosecution services requested, and the courts admitted the **withdrawal of immunity** in 9 cases involving 5 judges and 4 Members of Parliament. These individuals were found guilty of crimes under Article 327 of the Criminal Code (abuse of power or abuse of office), Article 307 (issue of a sentence, decision, order or judgment in violation of the law), Article 352/1 (misrepresentation in statements), Article 330/2 (illicit enrichment), Article 190 (fraud), and Article 243 (money laundering).

In terms of cases of illicit wealth detected, between 2022 and until March 2023 the Anti-corruption Prosecutor's Office (APO) initiated 45 criminal cases. Out of these, 3 were dropped and 3 went to court (involving a former judge, a former prosecutor and a former chief of the Security and Intelligence Service). In March 2023, the APO had 50 ongoing criminal cases.

On **whistle-blowers protection**, the People's Advocate's (Ombudsperson's) Office examined 11 complaints from alleged whistle-blowers.

On **conflicts of interest**, in 2022, the National Integrity Authority (NIA) assessed 219 cases of suspected conflicts of interest, out of which 91 were found to be pertinent. As a result of the assessment, it was found that the applied sanctions were a deterrent. On **asset declarations**, as of 1 January 2023, 840 323 declarations were published on the NIA website in the dedicated e-Declaration Portal. Out of these, 72 202 declarations were submitted in 2022. In line with Article 330/2 of the Contravention Code, in 2022, the NIA found 140 misdemeanours breaching the rules on declaring assets and personal interests. In 38 cases, the NIA found reasonable suspicions that a crime had been committed and reported them to the prosecution authorities. In 2022, the NIA applied fines of MDL 487 595 (EUR 24 504).

In 2022, integrity inspectors checked the assets and personal interest declarations of 402 of 440 judges (approx. 91%), 627 of 634 prosecutors (approx. 99%), 2 of 9 members of the Superior Council of Magistracy (approx. 22%), and 3 of 10 members of the Superior Council of Prosecutors (approx. 30%).

On cases infringing the legislation on **political party and electoral campaign financing** in 2022, the Central Election Commission (CEC) started contravention cases against 10 political parties suspected of violating the use of state budget allocations. In Decision 678 of 9 September 2022, the CEC found that the Şor Party had spent undeclared financial and material funds and exceeded the funds ceiling set for the new local election of 29 May 2022. As a result, the CEC sanctioned the party by banning it from receiving state budget allocations for 6 months from 1 January 2023 to 30 June 2023. The legality of the CEC decision was confirmed on 24 October 2022 by a judgment of the Chişinău Court of Appeals and on 31 October 2022 by an irrevocable decision of the Supreme Court of Justice.

Institutional framework

The National Anticorruption Center (NAC), the Anti-corruption Prosecutor's Office (APO) and the National Integrity Authority (NIA) are the main institutions specialised in anti-

corruption and are responsible for integrity and preventing and fighting corruption.

Prevention of corruption

The institutions dealing with preventing and fighting corruption are the police, the border police, the Customs Service, the State Tax Inspectorate, the Office for Prevention and Fight against Money Laundering, and the Criminal Assets Recovery Agency. In November 2022, the NAC organised the European Partners Against Corruption and European Anti-corruption Networks annual summit, which contributed to improved international cooperation and bilateral contacts.

Legislative amendments on the division of investigative powers of the NAC and the APO were adopted by Parliament. The latest amendments adopted in August foresee that the APO will prosecute high-level corruption cases, illegal party funding and corruption involving high amounts of money. NAC and territorial prosecution offices will deal with systemic corruption (e.g. education, health) and petty corruption.

The draft law amending the Law on whistle-blowers was adopted by Parliament in June 2023. It aims to improve the mechanism for disclosing integrity issues and provides for new protective measures for whistle-blowers.

Law enforcement

Under the institutional framework, the prosecution bodies empowered to handle corruption cases include the NAC and the APO. There are no specialised anti-corruption courts or judicial panels, however in June 2023 the President introduced a concept for an Anti-Corruption Court. The law concerning this court was submitted in August 2023 to the Venice Commission. The in-service training programmes for judges and prosecutors used by the National Institute of Justice include the module ‘Economic, corruption, and related crimes’.

The country’s leadership shows strong political will to counter corruption. Concrete action has been taken, aiming for a credible record of prosecutions and convictions. Legislative amendments entered into force in July 2022 introducing new mechanisms for criminal investigation that provide for trials and sentencing *in absentia* of people who try to evade persecution. The first procedures for the completion of criminal proceedings *in absentia* concern a former MP and a party leader oligarch, and a fugitive oligarch, in the case commonly referred to as the ‘bank fraud’ occurred in 2014.

In December 2022, Parliament adopted the national assets recovery programme for 2023-2027 and its action plan. These aim to increase the transparency and accountability of the agencies involved in seizing criminal property.

Amendments to the Criminal Code and the Criminal Procedures Code voted in July 2022 create an extended confiscation mechanism. This allows confiscating assets that were transferred by convicted individuals to third parties. It is applicable in cases involving goods worth 20 medium wages and above and when the person concerned cannot prove legal possession.

Moldova has also pursued systematic efforts to adjust the regulatory framework to ensure the de-oligarchisation of economic, political and public life. Initially, a two-pronged approach was envisaged: (i) the adoption of a framework law on de-oligarchisation; and (ii) a set of amendments to a wide range of laws aimed at consolidating institutions and, therefore, eliminating the influence of oligarchic interests. A law on de-oligarchisation was drafted and submitted for examination to the Venice Commission in its plenary session in March 2023. Following the publication of the Venice Commission’s opinion on it, it was decided to shift

the focus in a more systemic action plan on measures to limit excessive economic and political influence in public life. The draft action plan was opened for public consultation on 13 April 2023. and adopted in May 2023.

Legal framework

Moldova has ratified the UN Convention against Corruption and the Council of Europe conventions in this field. Amendments of the Law on whistle-blowers, aiming to partly harmonise it with the provisions of EU Whistleblowing Directive was adopted by Parliament in June 2023. There are laws in place governing the prevention and sanctioning of conflicts of interest, the declaration and verification of assets, financing of political parties, access to information and protection of whistle-blowers. There is no law on **lobbying**.

The Law on political party financing was amended in December 2022 to ensure transparency on the financing of political parties and effective financial reporting by them.

The legal framework governing **declarations of assets and conflicts of interest** was adopted in 2016 with subsequent amendments adopted in 2021 strengthening the powers of integrity inspectors.

Code of ethics

As mentioned above, Moldova has made systemic efforts to adjust the regulatory framework to ensure the de-oligarchisation of economic, political, and public life. The abovementioned action plan with measures to limit excessive economic and political influence in public life includes seven groups of actions: (i) the use of offshore jurisdictions, privatisation and state property management; (ii) the prevention of money laundering and capacity building for detecting suspicious transactions; (iii) effective identification of the beneficiary owner; (iv) investigation and confiscation of illicit assets; (v) consolidation of competition authorities and prevention of manipulating opinion on audiovisual markets; (vi) improvements in the banking risk assessment; and (vii) ensuring a level playing field in politics.

Strategic framework

The national integrity and anti-corruption strategy (NIAS) for 2017-2023 is the third policy document implemented in the field of anti-corruption and integrity. The six objectives of the current NIAS are: (i) the deterrence of involvement in corruption; (ii) recovery of proceeds obtained from corruption offences; (iii) ethics and integrity in the public, private and non-government sectors; (iv) protection of whistle-blowers and victims of corruption; (v) transparency of institutions, financing of political parties and the media; and (vi) education of society and officials.

The objectives of the NIAS are well interconnected with the UN's Sustainable Development Goals. Additionally, the NIAS is structured into seven pillars, with each pillar clearly setting specific objectives to be achieved. Monitoring and reporting mechanisms should be improved to ensure effective and efficient implementation of the actions. The sectors most vulnerable to corruption require targeted risk assessments and dedicated actions.

Fundamental rights

The legislative and institutional framework is largely in place, and Moldova has made a clear commitment to meet its international obligations on human rights. Efforts were made in the reporting period to implement the Council of Europe Convention on Preventing and Combating Violence against Women and Domestic Violence (Istanbul Convention). . These efforts included strengthening the mandates of the Equality Council and the People's Advocate and adopting programmes on strengthening gender equality and support to the Roma. Persons

belonging to minorities, persons with disabilities and the Roma in particular as well as LGBTIQ persons, continue to face discrimination, including in the labour market. Detention conditions remain poor.

In the coming year, Moldova should in particular:

- further improve gender equality including by undertaking further measures to eliminate gender-based violence, including by adopting and implementing the new national programme on preventing and combating domestic violence and violence against women for 2023-2027 and the new national programme on the acceleration of gender equality for 2023-2027 and its corresponding action plan;
- implement the programme in support of the Roma population for 2022-2025 at all levels of government;
- implement the Committee for the Prevention of Torture recommendations on the prevention of torture and ill-treatment.

Moldova has ratified most key **international human rights instruments**. Moldova is a States Party to all UN core human rights treaties, except the Convention for the Protection of All Persons from Enforced Disappearance. It has also ratified all fundamental and governance Conventions of the International Labour Organisation (ILO), 29 out of 176 technical ILO conventions and the Council of Europe Convention on Preventing and Combating Violence against Women and Domestic Violence ('Istanbul Convention'). EE

On the **promotion and enforcement of human rights**, the central institution is the People's Advocate (Ombudsperson) and the People's Advocate for Child's Right, accredited with 'A' status by the Global Alliance of National Human Rights Institutions. Steps were taken during the reporting period to strengthen the institution and clarify competencies by amending the normative framework. A special parliamentary committee selects the People's Advocate and the People's Advocate for Child's Right. Immunity is granted to the People's Advocate, the People's Advocate for Child's Right and their deputies. Except for flagrant crimes, they can only be detained, arrested or searched with Parliament's consent. Officials of the institution acting on behalf of the People's Advocate and the People's Advocate for Child's Right enjoy inviolability when carrying out their tasks. The procedure for removing both advocates involves a prior hearing by the plenary of Parliament. It is financed from the state budget and its representatives have the right to address Parliament if the provided resources are insufficient to fulfil its mandate.

One of the tasks of the People's Advocate and the People's Advocate for Child's Right is investigating allegations of human rights violations. In 2022, they both examined 282 complaints that met admissibility conditions in human rights and children's rights. They solved issues, such as the rights to health, a fair trial, education work and the prohibition of forced labour, the protection of refugees, the rights of persons with disabilities, and the rights of persons from the territories not under control of the Moldovan government. They carried out over 229 monitoring visits to detention institutions, temporary placement centres and other residential institutions.

In June 2023, there were 1 048 applications pending before the European Court for Human Rights (ECtHR). The ECtHR delivered judgments on 31 applications and found breaches of the European Convention on Human Rights in 23 out of 24 cases, relating mainly to the right to respect for private and family life, the right to a fair trial, the right to liberty and security and to the prohibition of torture. In the reporting period, there were 578 new applications assigned to a decision body. Currently, there are 25 cases under enhanced supervision by the

Committee of Ministers.

The **death penalty** has been abolished in Moldova since 2006. There is no public discussion or debate in society or by any political party to reintroduce it.

Prevention of torture and ill treatment has been an issue of great concern for Moldova for many years. Even though the number of complaints of ill treatment fell by 50% in the last decade, from about 1 000 in 2009 to 500 in 2021, there is still quite a lot to be done. Prosecutors rarely decide to initiate criminal proceedings. The People's Advocate notes that in cases of torture/ill treatment, there is a low rate of prosecution initiated against people who tolerate or carry out those acts. In 2021, prosecutors followed up on only 1 out of 11 complaints of abuse, and only 4-5% of complaints turned into cases before the courts. In 2022, the Prosecutor General registered and examined 485 complaints of allegations of ill treatment. Prosecution was ordered only in 69 cases, of which 8 cases concerned acts of ill treatment, admitted on behalf of minors. In the other 404 cases (83.2% of allegations of torture/ill treatment), there was a refusal to prosecute as these acts were not considered to be crimes, so the alleged guilty individuals went unpunished. Compared with the number of complaints registered in 2022, the 15 criminal cases sent to the court for substantive examination only constitutes 3.09% of the total.

The Council for the Prevention of Torture can carry out (unannounced) preventive and monitoring visits to places where detainees are or may be detained. In 2022, the Council prepared and sent the authorities 20 visit reports with 400 recommendations. The Directorate for the Prevention of Torture of the People's Advocate prepared and sent 9 visit reports to the authorities with 170 recommendations.

The Directorate for the Prevention of Torture of the People's Advocate proactively carries out frequent investigations into ill treatment. The Directorate became involved in investigating high-profile cases. These included the case of a young man who died in prison under unclear circumstances and the case of a conscript soldier who alleged that he had suffered violence at the hands of other soldiers in a military facility. It also produces special reports on individual cases, which can be consulted on the public website of the People's Advocate.

Moldova's **prison system** includes 18 prisons. As of 1 January 2023, there were 6 084 inmates in prison, a fall from 6 396 inmates in 2021. Most ECtHR rulings against Moldova relate to inhumane detention conditions. No measures were taken during the reporting period to remedy the situation. All 18 detention facilities were built during the Soviet period. There have been no major upgrades since Moldova's independence, and the prisons currently exceed their intended capacity. Inadequate access to medical treatment, overcrowding and the general bad state of prison facilities as well as the lack of proper reporting and investigation of potential ill treatment and violence remain largely unaddressed. No amendments were made to the legal framework in to tackle these issues.

The government has allowed local and international human rights observers to independently monitor prison conditions. Human rights defenders report on the existence of 'barrack' systems (large-capacity cells) and overcrowding due to the lack of space.

In June 2022, the Ministry of Justice increased the detention capacity in some prisons. This was contrary to international and national recommendations to substantially reduce prison overpopulation. In its visits, the Council for Prevention of Torture noted overcrowding in three prisons, well above the capacity set by the Ministry of Justice. The problem is most urgent in Chişinău prison. Another concern is that not all prisons have accommodation for preventive detention, and suspects are at risk of being placed in disciplinary sections under

inhumane conditions.

No progress has been made on the plans to build new prisons. The Ministry of Justice is currently running a construction project in Chişinău prison with funding from the Development Bank of the Council of Europe. The People's Advocate regularly looks into cases brought by detainees.

The National Probation Inspectorate is responsible for probation in Moldova. Many amendments to codes and government decisions have been adopted on the execution of court decisions and punishments. These amendments were necessary to link probation to European probation rules and include new concepts in the legislation, such as humanisation of criminal punishments, early parole and conviction with partial suspension of the sentence, probation programmes, improving the quality of pre-sentence reports, electronic monitoring, victim protection, partnership development and promotion of probation.

Post-penitentiary probation aims at supervising, helping and counselling people released from detention to help them adapt to society again. Juvenile probation is carried out for the temporary protection of children in difficulty, resocialisation, and reintegration in the biological or adoptive family, family-type children's homes and the community. CSOs carry out different reintegration and resocialisation programmes, but these only target specific groups of former prisoners and are not run across the country and all prisons. The authorities should strengthen national mechanisms to reduce detention populations, including through the effective application of non-custodial measures and/or other types of punishment.

The Law on **personal data protection** is to some extent aligned with the EU General Data Protection Regulation and the Law Enforcement Directive. Moldova is still in the process of harmonising its national laws, which has been pending since 2020. Laws are being revised/redrafted and will then be submitted to Parliament.

Moldova is party to the Council of Europe Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data. In February 2023, Moldova signed the Protocol amending this Convention, but it has not ratified it yet. In November 2022, Moldova signed the Second Additional Protocol to the Convention on Cybercrime on enhanced cooperation and disclosure of electronic evidence.

The National Centre for Personal Data Protection is the supervisory authority for personal data processing in Moldova. It has 39 staff for the 45 authorised positions, the lowest number since 2018. It suffers from high staff turnover and is facing difficulties in attracting and retaining talent due to low salaries and the high level of expertise required.

In 2022, the National Centre for Personal Data Protection examined 9 838 correspondence documents. In 227 of the complaints registered in 2022, checks on compliance with personal data processing rules were initiated. As a result, 230 decisions were issued, and a breach of legal provisions was found in 105 of them. Moldova should continue its efforts to align its legislation further with the EU *acquis*, train public servants across all institutions to the highest international and EU standards and step up awareness campaigns to inform people about their rights.

The right to **freedom of religion or belief** is generally respected in Moldova. Most of the population professes Orthodox Christianity (96.8% according to the 2014 Census). There are also small Jewish, Roman Catholic and Evangelical communities across the country as well as Jehovah's Witnesses and Mormons. No community has reported any issues in relation to its members' freedom of worship. There is no specific organisation dealing with religious communities. For all public associations and political parties, the Agency of Public Services

registers them. Issues related to violations of freedom of religion or belief are dealt with the Equality Council and the People's Advocate.

There is no state religion. The Law on freedom of conscience, thought and religion sets out that the state recognises the 'exceptional importance and fundamental role' of the Moldovan Orthodox Church in the life, history and culture of the country. The Moldovan Orthodox Church continues to use and control historic and religious properties that had been confiscated during the Soviet era. The government has not addressed long-standing efforts of other religions to reclaim properties confiscated during that time.

The law mandates the restoration of rights and compensation for material damages for victims of the totalitarian regimes that controlled Moldovan territory between 1917 and 1991 and for citizens who were subject to reprisals based on political, national, religious or social grounds. The law specifically refers to restitution of private property for victims of the Soviet era. However, it does not mention property confiscated during the Holocaust and does not apply to communal property confiscated from religious groups.

Registration law provisions on the organisation of religious groups remain unaddressed. The law gives people from all registered religious groups the right to burial space in public cemeteries but is not followed systematically.

The situation on **hate speech** remains problematic. Hate speech itself is not criminalised in Moldova, but the incitement to hate is. Amendments to the Criminal Code, which entered into force in July 2023, are generally compatible with European standards on criminal sanctions for the use of hate speech and on imposing tougher penalties for offences that can be characterised as a hate crime. The Audiovisual Code introduced heavier sanctions for the incitement of hate, especially during election campaigns. Hate crimes are underreported in Moldova and are not investigated and prosecuted enough. Police and the prosecution service do not receive adequate training on investigating these cases, which often do not reach the courts. Due to the lack of action taken by the police, such cases are sometimes referred to the Equality Council, which does not have the power to investigate criminal violations.

The legislative framework for the fight against antisemitism is in place. The action plan (2021-2024) on promoting the memory of the Holocaust and the culture of tolerance to combat racism, antisemitism, xenophobia and other forms of intolerance is generally consistent with the EU strategy on combating antisemitism. However, its implementation is often characterised by a lack of coordination at local level. The government does not provide for the proper maintenance of most Jewish cemeteries across the country or protect them from vandalism. Cases and complaints related to a Jewish cemetery and a synagogue in Orhei have not yet been resolved.

Freedom of expression

Moldova has a pluralistic media environment and has **some level of preparation** in freedom of expression. The country made **some progress** during the reporting period, in particular on the issue of ownership concentration. Legislation sets out rules to prevent concentration of media and ensure transparency of media ownership. The Audiovisual Council needs to boost efforts to implement these rules. To ensure compliance with the European Media Freedom Act, the Audiovisual Media Services Code address political bias in state media. The government is taking steps to address disinformation in the media, which remains a challenge, especially disinformation spread in online media. In an attempt to limit Russian disinformation, in December 2022 the Commission for Exceptional Situations ordered the

suspension of six TV stations that rebroadcast content from Russia; the decision was challenged in court. Several attempts of intimidation and harassment of journalists were reported in 2022, primarily in Gagauzia.

In the coming year, Moldova should in particular:

- protect journalists more effectively against intimidation and attacks, including by thorough law enforcement investigations;
- extend ownership transparency requirements to print and online media;
- improve media self-regulation mechanisms.

The Constitution guarantees the freedom of expression, which is generally respected. There is plurality of the media. Moldova's ranking on the 2022-2023 World Press Freedom Index jumped by 12 places (with Reporters without Frontiers (RSF)'s new methodology from 89th in 2021 to 40th in 2022 to 28th in 2023). The media landscape is affected by concentration and a lack of transparency of media ownership and associated problems of access to the advertising market. Financial sustainability is a challenge for independent media outlets. The press and media are generally free to cover court cases.

The Law on printed media prohibits certain action against journalists, such as obstructing their activity or confiscating their notes, and provides for appropriate punishment. Constraining or exerting pressure by threatening or intimidating journalists is against the law and could lead to criminal liability. In public hearings, the Audiovisual Council examines cases of threats, pressure and intimidation that prevent or restrict the free exercise of the profession of journalists or the activity of media service providers. Where appropriate, the Council notifies the competent authorities.

Intimidation of journalists

Journalists can generally report without state interference, but they do face interference in their work in Gagauzia. In Gagauzia's local legislative assembly, journalists must be registered in the region based on unclear criteria. In July 2022, a journalist of the Nokta news portal was forcibly ejected from a People's Assembly meeting. In August 2022, after a protest in Vulcănești in Gagauzia, supporters of a political party threatened and attacked a Nokta news portal cameraman. The police intervened to protect the cameraman.

In July 2022, the founder of the independent media outlet Jurnal TV was charged with slander. At the first instance, he was found guilty, fined MDL 4 500 and barred from working in television and radio for 6 months. Jurnal TV appealed the decision, and the Chișinău Court of Appeal admitted the appeal in February 2023.

Legislative environment

The legislation on audiovisual media services is not aligned with the Audiovisual Media Services Directive and the Council of Europe's normative standards. Amendments to the Audiovisual Services Media Code were adopted in November 2022 and included rules on sanctioning media outlets. In particular, the current law provides that Parliament's rejection of the Council's annual activity report should result in the legal dismissal of the members of the Audiovisual Council (AVC). However, the law does not provide evaluation criteria on which to base the rejection of the Council's annual report. The fact that the AVC members can be easily dismissed has been criticised as a way of politicising its members. In 2021, Parliament was criticised for dismissing AVC members accused of insufficiently fighting disinformation. However, the consensus among stakeholders is that the AVC's current

members have demonstrated greater independence and commitment to the job than the previous ones. The government needs to approve the amendments proposed by the Council of Europe on appointing and dismissing the board.

In 2022, the AVC devised and began a ‘peer support’ mechanism with the Council of Europe to set a benchmark to consolidate financial and operational stability. The Audiovisual Media Services Code should set out criteria for dismissing the management and the supervisory board of the national television broadcaster and the members of the AVC if their performance is sub-standard. The Code need to be amended to clarify the appointment procedures to ensure the best candidates are selected and avoid early termination on performance grounds. Priority should be given to adequately remunerating the AVC’s professional staff and members. Nevertheless, given the financial constraints on public financing, Moldova does not seem to have sufficient funds earmarked for public services. In addition, the AVC has reduced the amount of staff and technical equipment and has called on international donors for immediate support. This situation leaves the Council vulnerable to commercial and other interests, undermining its independence.

A positive development to ensure equal access to media for competitors during electoral periods is that the new Electoral Code (adopted in December 2022) provides that the AVC should issue weekly reports during the pre-electoral campaign period.

The AVC has undergone a thorough reform during the reporting period. It approved its Regulation of organisation and functioning and on 17 June 2022, approved the new organisational structure comprising 58 staff units. The AVC’s budget increased by 30% between 2022 and 2024. The AVC still needs to consolidate its financial stability and its independence.

Overall, the Audiovisual Media Services Code should be further aligned with the EU Audiovisual Media Services Directive to guarantee the independence of the AVC and the public broadcaster.

Implementation of legislation/institutions

The AVC monitors local content, the fulfilment of Romanian language requirements and the accuracy of broadcast information. It imposed several fines worth several thousand euro on channels that retransmitted Russian political and military content. The monitoring of these channels’ news bulletins indicated that some were broadcasting content produced by outlets banned in the EU and were mainly practising ‘disinformation by omission’: their news bulletins focused on refugees or their economic impact on Moldova without presenting the events of the war against Ukraine.

Media institutions have lodged complaints on being subject to strategic lawsuits against public participation (SLAPPs). The Independent Journalism Centre’s data show 21 strategic lawsuits were registered in 2022 and 2023. For example, the investigative website, CU SENS, was the target of six of these lawsuits in 2022 after publishing two journalistic investigations. A doctor from the Institute of Oncology filed 15 lawsuits against different media outlets after they published a National Anticorruption Center press release about the doctor.

Public service broadcaster

The public service media company, Teleradio Moldova, faces significant challenges: it pays substantial amounts for transmission, operates from an old and oversized building and does not have enough suitable equipment. In addition, it cannot offer competitive salaries or suitable working conditions.

The state budget provides funds to the public service broadcaster. The share of state allocations fell from 0.29% (2022) to 0.25% (2023) of the total state budget.

Under the amended Audiovisual Media Services Code, Teleradio Moldova is allowed to sell advertising. Its estimated advertising revenue for 2023 constitutes 1.5% of the state budget allocations. Media outlets continue to diversify their fundraising activities, including through the monetisation of media products, and through efforts funded by public.

Economic factors

Once a broadcasting licence or cable authorisation is granted, the media service provider or distributor pays a fee, as prescribed in the Law on licensing. The Audiovisual Council can impose financial penalties for breaches of the Audiovisual Media Services Code. These can range from EUR 25 to EUR 5 000 depending on the severity and impact of the case and how often they occur in a 12-month period.

During the reporting period, the AVC took several steps to ensure a fairer audiovisual climate. As a result, the number of TV stations classified as ‘national’ increased from 13 (under a 2019 decision) to 41 (under a 2022 decision). The 41 TV stations are now obliged to produce at least 80% of content in Romanian. The AVC monitoring of more than 10 stations revealed that there is media concentration among three main groups affiliated to fugitive oligarchs and related to the RTR Russian-state media group. After an amendment to the Audiovisual Media Services Code in January 2023, which introduced a new format for the annual report for media providers and distributors, the AVC can reject incomplete reports or sanction channels that have not submitted reports. For the first time, these reports are public in order to improve the transparency of media ownership.

Internet

The online space is not regulated through legislation. Nevertheless, in 2022 and 2023, under a decision of the Commission for Emergency Situations, the Security and Intelligence Service blocked more than 20 websites, which were considered to be spreading disinformation, including from organisations banned in the EU.

Professional organisations and working conditions

There are no unions or trade associations of journalists. Media professionals are represented by media NGOs, which are consulted on a permanent basis on draft bills regulating the media sector. There are 20 professional non-commercial registered media organisations. The Press Council is the only independent self-regulatory body. It examines complaints against the media and monitors whether journalists respect the Code of Ethics (signed by 145 media outlets). Its decisions are recommendations and not mandatory.

Most journalists work under employment contracts at editorial offices registered as public associations or limited liability companies. Journalists and media providers tend to combine their contracts with authorship contracts, which are undeclared employment contracts so that employers pay less taxes.

Freedom of artistic expression

Freedom of artistic and scientific creation is guaranteed under the Constitution. Artistic creation is not subject to censorship and there is no restriction on it. The law sets out that the state may not censor works of art produced in theatres, , and concert venues or critical or analytical material about those performances. There are no known cases of artists being intimidated, and no restrictions have been imposed by state or local authorities or other bodies on performances, exhibitions or other forms of artistic expression.

Anti-propaganda provisions

On 16 December 2022, the Commission for Exceptional Situations ordered the suspension of the broadcasting licence of six TV stations, which mostly rebroadcast content from Russia for ‘lack of accuracy in reflecting national events, but also the war against Ukraine’. Three of the TV stations moved their content to other TV stations. All six companies challenged the Commission in court, and a decision is still pending. The decision of the Commission for Exceptional Situations is only applicable during the state of emergency and is not a permanent legal solution.

Freedom of association and assembly is generally upheld, with several demonstrations and rallies taking place peacefully throughout 2022 and 2023. Some of these protests were organised by people subject to EU sanctions who aimed to destabilise the constitutional order. In September and October 2022, large anti-government demonstrations were organised in Chişinău. The Commission for Extraordinary Situations adopted a decision in October 2022 banning all assemblies that blocked traffic lanes, transport arteries and access to evacuation routes on working days. The decision also limits the duration of assemblies to a maximum of 4 hours and gives the police the power to arrest any protesters disrupting public order. A local human rights association criticised the decision that the authorities could potentially implement measures that would restrict the right to freedom of assembly.

In November 2022, the government requested the Constitutional Court to assess the constitutionality of the Şor Party’s activities. The request argued that action taken by the Şor Party over the previous 6 years was incompatible with the fundamental principles of democracy and requested that the party be excluded from the State Register of Political Formations. The request was confirmed by the Constitutional Court in June 2023. In May 2023, a criminal case on the illegal financing of the Şor Party (including the financing of protests) was sent to court.

The emergency legislation on assemblies has allowed the government to overcome the destabilisation attempts. To avoid restricting freedom of assembly, following the lifting of the State of Emergency, the government should revert to legislation on demonstration that is in line with European best practices.

The adoption of the amendments to the Criminal Code criminalising “separatism” could have negative bearing on freedom of expression and association, rights for national minorities and non-discrimination as well as on Transnistrian conflict settlement dynamics.

On 31 May 2023, the EU announced **sanctions** under two distinct frameworks against seven individuals responsible for supporting or implementing actions that undermined or threatened the sovereignty and independence of Moldova, as well as the country’s democracy, the rule of law, stability and security. The individuals had also carried out activities undermining or threatening the territorial integrity, sovereignty and independence of Ukraine.

On **property rights**, Moldova is a party to the European Convention for the Protection of Human Rights and Fundamental Freedoms, including its first protocol which guarantees property and possession rights. Private property rights are also guaranteed under the Constitution. The share of applications at the ECtHR, which refer to direct or indirect infringement of property rights, remained high in 2022. There are no restrictions on exercising property rights and carrying out property transactions, except for purchases of agricultural land by foreign investors. Domestic procedures related to enforcing reinstatement cases remain complicated and lengthy. Restitution of property, provided for in the national

legislation, is not applied widely. Only some groups, such as victims of communist political repression, are entitled to ask for restitution of some types of property or to apply for compensation.

Moldova has an electronic cadastral system maintained by the Public Services Agency, which is also in charge of registration of ownership rights through its wide network of offices and online systems. There are still many towns and villages where residents do not own the houses they live in, and some people cannot sell or donate their property. For the last several years, Moldova has been implementing a state programme to create a real estate cadastre. The government is carrying out massive cadastral works as well as registering property rights in a real estate register. Individuals can also register ownership of real estate by paying a fee.

The national legal framework recognises equal rights to land for everyone, without any restriction based on nationality or gender. Numerous unresolved claims in courts are related to the restitution of property of religious communities. This stems from a dispute between the Moldovan Orthodox Church and the Bessarabian Orthodox Church. The claims concern the control of more than 800 monasteries and churches considered national heritage monuments.

Minorities face no issues in accessing rights to property documentation. There is no evidence that the Roma population has been particularly discriminated in accessing property documentation. According to the 2014 Population and Housing Census, the Roma population live in 227 localities that represent 14% of all Moldovan localities. The allocation of social housing is carried out according to the legislation. Rules on eviction are non-discriminatory and strictly regulated so that rights, liberties and safety of everyone is ensured. Where eviction is necessary due to social housing being damaged or in danger of collapse, the Law on housing provides that the tenants facing eviction from these premises are given another lease. Such a decision comes from the local council and is contingent on the availability of housing.

Moldovan legislation is largely in line with the EU *acquis* in the areas of **non-discrimination** and equality, and there is a state response to hate crime (in the Criminal Code and the Contravention Code). In May 2022, President Sandu signed amendments to the criminal and misdemeanour codes into law on discrimination and incitement to discrimination or hate-based violence. The new amendments provide for harsher sentences for crimes motivated by stereotypes or prejudice based on race, colour, ethnicity, national origin, social background, citizenship, sex, gender, language, religion or religious beliefs, political views, gender identity, sexual orientation, health, age, disability, or civil status. It also defines ‘genocide propaganda and crimes against humanity’ and introduces a new term, ‘incitement to discrimination’.

The Equality Council investigates allegations of discrimination. Amendments to the Law strengthening the Equality Council were adopted in February 2023 and entered into force on 9 February 2023. The Equality Council’s mission is to prevent and combat discrimination, promoting equality and diversity. The Equality Council’s members cannot be prosecuted or held legally responsible for the opinions they express and the powers they exercise according to the law. The Council prepares and presents to Parliament the general report on the situation on preventing and combating discrimination with recommendations to all institutions, which have competences to fight certain aspects of discrimination. Complaints lodged with the Equality Council in 2022 referred mostly to the labour market (24%), access to goods and services available to the public (22%) and the violation of personal dignity (also 22%). Notably, in 2022, the Council decided on an instance of racial profiling and recommended training for employees on racial profiling and combating prejudices against minorities. In another case, the Council found that hate speech constitutes stigmatisation of the targeted

group, perpetuates negative prejudices and incites discrimination and interethnic hatred.

There is no data on hate-motivated violence and hate crime. The police and prosecution services do not have sufficient training to investigate those cases, which often do not reach the courts. Often cases referred to the Equality Council are not investigated or registered by the police. The platforms recording crimes should be modified to include information on hate crimes, which respects international data collection standards, and distinguish between hate crimes, hate speech and discrimination. The database should contain fields related to biased offences and hate speech.

Legislative steps have been taken to fight **gender inequality** and **violence against women**. Procedures have been developed to increase the ease of access to justice for victims of domestic violence and sexual crimes and improve implementation of the Istanbul and Lanzarote Conventions. The amended Law includes a redefinition of the concept of rape and changes penalties for domestic violence crimes to ensure that preventive detention is possible. The State Agency for Prevention of Domestic Violence against women is being set up with special teams of police, doctors and social workers being trained alongside one another to improve sexual violence investigations.

In March 2023, the first specialised service for victims of sexual violence was set up. In April 2023, the government adopted a new regulation allowing third parties to initiate sexual violence investigations.

The legislative progress in countering gender-based violence has been supported by the entry into force of the Istanbul Convention on 1 May 2022 in line with Moldova's Universal Periodic Review commitments. In November 2022, Parliament passed a package of legislative amendments aimed at aligning national legislation with the relevant commitments of the Convention.

There is more awareness that gender-based violence is a crime punishable under the law. However, cases are still likely to be underreported, and more work on a victim-centred approach is required, to put the rights and dignity of victims - including their well-being and safety - at the forefront of all efforts to prevent and respond to sexual exploitation and abuse and sexual harassment.

On **gender equality**, the new national programme on promoting and ensuring gender equality for 2023-2027 and its corresponding action plan were adopted in April 2023. Both were developed with the active participation of civil society, and most of the recommendations have been taken on board by the authorities.

Moldova should however still revise the legal definition of discrimination against women and girls for it to comprehensively cover all violations that according to international law constitute discrimination based on sex and gender. Still of concern are the limited access to justice for women, insufficient financial and human resources to advance women's rights, and the persistence of patriarchal attitudes and discriminatory stereotypes on the roles and responsibilities of women and men in the family and society. There is also a high prevalence of gender-based violence against women, lack of consideration for the new forms of trafficking in persons, lack of diverse educational choices by women and girls, and gender occupational segregation.

The national legal framework for child protection in Moldova is largely aligned with the international framework for the **rights of the child**. During the reporting period, Moldova adopted the national child protection programme for 2022-2026 with 72 planned actions. A memorandum of understanding between the Ministry of Labour and Social Protection and

UNICEF was signed creating a path to cooperation on implementing the national programme and its action plan mentioned above.

Moldova has ratified the United Nations Convention on the Rights of the Child and the optional protocols. The third optional protocol on a communications procedure was ratified during the reporting period. The country has also harmonised its legislation with the Council of Europe Convention on the Protection of Children against Sexual Exploitation and Sexual Abuse (Lanzarote Convention) and responded to the first and second monitoring rounds.

Moldova is shifting to community-based alternatives to institutionalisation for children removed from parental care. Progress has been achieved in strengthening local institutional capacity with the expansion of professional parental care networks as an alternative to large-scale care institutions for children. The deinstitutionalisation of children with disabilities is progressing and has been boosted through the coordination of government agencies and institutions, parental education activities, increasing participation in early childhood education, and strengthening the monitoring and evaluation capacity at central and regional levels. Insufficiently qualified staff, lack of resources and poor infrastructure hinder the specialised care and support for institutionalised children with disabilities.

The number of minors in detention fell during the reporting period compared with the last 6 years. At the end of 2022, the number of minors convicted in the first instance was 226, constituting 40 convictions per 100 000 minors. The number of minors held in preventive detention was 13, with 32 minors serving prison sentences.

Children in Moldova still face many issues. These include insufficient protection from abuse and violence in educational institutions, insufficient access to child-friendly justice, insufficient protection against torture and ill treatment, lack of psychological support to child victims, inadequate protection for street children, and protection against abuse and neglect, including by parents.

Moldova has some limited progress on the rights of **persons with disabilities**. It has ratified the UN Convention on the Rights of Persons with Disabilities in 2010 and the Optional Protocol to the Convention in 2021. The national law on the inclusion of persons with disabilities implements the Convention and protects the rights of persons with disabilities to fully participate in all aspects of the country's economic, social and political life. The legislation generally ensures that persons in vulnerable situations benefit from protection, social assistance and community social services, but a lack of capacity and resources remains a challenge. This includes prioritising support to families with two or more persons with severe disabilities over support to families with only one, which contradicts the Convention.

The national programme for the deinstitutionalisation of persons with intellectual and psychosocial disabilities from residential institutions for 2018-2026 aims to deinstitutionalise 50% of persons with intellectual and psychosocial disabilities, provide social services at community level and transform residential institutions into regional centres to provide alternative services. Currently there are six temporary placement centres for persons with disabilities: four temporary placement centres for adults with disabilities and two temporary placement centres for children with disabilities. Approximately 1 700 persons with disabilities (of which approximately 400 are children) are placed in residential institutions.

Significant progress has been achieved in closing the educational gap for children with disabilities. To achieve inclusive education, further steps are needed to integrate children with disabilities into the mainstream education system, ensuring access to specialised medical care and rehabilitation, and accessing community-level support and services. Children with more complex needs, e.g. with intellectual disabilities, remain segregated. Tailored educational

plans for children with disabilities are implemented, and a methodological guide on curricular adaptation and evaluation of school progress, in the context of inclusive education, is available. Such solutions are not yet streamlined across the whole country. The number of students with special educational needs and disabilities integrated into general education institutions has increased. At the beginning of the 2022/2023 academic year, 10 500 students with special educational requirements and disabilities were enrolled in general primary and secondary education institutions. Most were enrolled in general education institutions or in schools for children with intellectual or physical development disabilities. Compared with the 2018/2019 academic year, the number of students with special educational requirements rose by 3.8%, and the number of students with disabilities rose by 8.3% in general education institutions. The proportion of boys with special educational requirements and disabilities included in general education remained higher compared with that of girls. In the 2022/2023 academic year, this was 66.2%, compared with 33.8% (in the 2021/2022 academic year, the figures were 65.7% and 34.3%, respectively).

On the rights of lesbian, gay, bisexual, transgender, intersex and queer (LGBTIQ) persons, implementation of the existing legal framework for protection against discrimination and hate crime remains challenging. Highly negative views on LGBTIQ persons and discrimination based on sexual orientation and gender identity is prevalent in society.

Several politicians and political parties, like pro-Russian political parties and groups, have targeted the LGBTIQ community, accusing them of destroying ‘traditional values’. The Moldovan Orthodox Church, which holds a powerful position in Moldovan society, also regularly spreads inflammatory messages about the LGBTIQ community. Civil society initiatives have also been targeted; for example, an anti-bullying school campaign organised by the NGO Genderdoc in cooperation with the Ministry of Education was recently attacked. Opponents started a petition and threatened to sue those educational institutions that participated in the campaign and urged heads of educational institutions not to take part in such campaigns.

In one case, the Equality Council examined statements made by two deputies during televised broadcasts, which were subsequently widely shared on social media, and found them to be hateful and discriminatory.

In June 2022, Chişinău hosted the Moldova Pride festival for the eighth time.

Civil society groups have drawn the attention of authorities to the need to uphold rights of LGBTIQ persons, especially when mass meetings are organised. No real progress has been made to challenge negative LGBTIQ stereotypes. The authorities should aim to implement standards and international practices on eliminating social segregation and discrimination to ensure that minority communities can feel safe as active participants of society.

Moldova has not harmonised its legislation with EU directives on criminal proceedings. Nevertheless, the Constitution and secondary legislation appear to broadly cover the main **procedural rights**. The Moldovan legal framework is not directly aligned with the Victims’ Rights Directive and the Directive on compensation to crime victims. The rights of victims of crime are ensured, both within and outside the criminal proceedings, through the provisions of the Criminal Procedure Code and the Law on the rehabilitation of victims of crime. In addition to victim’s initial procedural rights, an individual may request to be recognised as an injured party by the prosecuting body. This gives them additional rights related to the criminal side of the proceedings and/or be recognised as a civil party. The victim with the procedural status of an injured party / civil party has the right to request and collect full

compensation for the damage caused by the crime. Another guarantee to support the rights of victims of torture was provided through the criminalisation of torture in Moldovan legislation with the introduction of a specific article in the Criminal Code.

A state-guaranteed legal aid system exists, regulated by law and run by the National Council for State-Guaranteed Legal Aid. The system covers all criminal and non-criminal cases examined in court. The law on legal assistance guaranteed by the state distinguishes between two categories of assistance: primary legal aid and qualified legal aid. The law also states urgent legal aid as a type of qualified legal aid.

Preventive coercive measures are applied in exceptional cases for violent, serious and particularly serious crimes. In hearings involving juvenile defendants, the participation of a defence counsel and a pedagogue or psychologist is mandatory. The quality of overall legal assistance guaranteed by the state is not sufficiently ensured. Complaints have been received on the neglect on procedural deadlines, requests for payments for aid and the poor quality of legal support.

Criminal and procedural legislation has been aligned with the provisions of the Istanbul and Lanzarote Conventions. The most significant changes concern the exclusion of the reconciliation mechanism for parties in sexual violence criminal cases, harsher penalties for domestic violence crimes, the right of victims to give evidence in a friendly environment and the redefinition of the concept of rape. The concept of rape has been aligned according to the Istanbul Convention and will allow essential elements to be included in describing the act of rape, which currently is not covered by the criminal law.

In terms of the application of procedural rights, according to the European Court of Human Rights 2022 activity report, more than half of the violations found regarding Moldova concern the right to a fair trial (a total of 234 in 2022).

Persons belonging to national **minorities** sometimes face language barriers, making it difficult to access public services. This particularly concerns court hearings and communication with the courts. The Agency for Interethnic Relations is in charge of relations with national minorities. In September 2022, a new director was appointed to the previously vacant spot. In March 2023, the government adopted the programme for 2023-2025 on the implementation of the strategy for strengthening interethnic relations for 2017-2027.

Moldova has ratified the Framework Convention for the Protection of National Minorities. There are no restrictions on the right to freedom of expression and media, freedom of assembly and association for persons belonging to ethnic or national minorities. Many programmes aim to encourage minority groups to participate in political life. National authorities have committed themselves to increase the number of Roma women in the decision-making processes, including through the representation of persons belonging to national minorities in Parliament. The Gagauz minority is represented by three parliamentarians, and the Bulgarian minority by one parliamentarian. A major aspect in the rights of persons belonging to ethnic or national minorities is the Gagauz Autonomy. This is an entity created in 1994 to protect the rights of persons belonging to the Gagauz minority. Some progress was achieved in this area. A Governor (Bashkan) of Gagauzia is appointed as a full member of the government by a presidential decree. As the supreme official of Gagauzia, all public administration authorities of Gagauzia answer to the Governor. In December 2022, Parliament adopted two laws allowing for mutual consultations between Parliament and the People's Assembly of Gagauzia on all issues related to the autonomy status and competencies in the law-making process. Similarly, Gagauzia can consult the central authorities on different issues related to proposed laws on autonomy.

The **Roma minority** is still the minority the most affected by discriminatory practices and social stigma, especially when it comes to social integration, employment and access to health services. This includes the sizeable number of Roma fleeing the war against Ukraine and arriving in Moldova. The lack of access to basic services and low attendance rates in schools have led to a further marginalisation of the Roma.

There has been some progress on the inclusion of Roma, including through the adoption of the programme to support the Roma population for 2022-2025. As part of the programme, other mediators have been employed in addition to those employed through the Roma mediator programme in place since 2004. The mediators help the Roma access public services offered by the state, such as obtaining identity papers and ensuring Roma children's access to education. Further success of the mediators' programme is hampered by low institutional know-how on the programme's technical details. The number of Roma in the compulsory healthcare system remains low, leading to limited access to healthcare services. Roma families, including those with persons and/or children with disabilities, receive social assistance (benefits and services). The Roma population tends to be over-represented as beneficiaries of social assistance, especially child allowances, which are therefore a major source of income. However, only a small percentage of the Roma population is entitled to social security benefits due to the low levels of formal employment associated with long-term unemployment. The share of Roma participation in the social security system and their inclusion in social assistance programmes is unknown due to a lack of data. Roma often do not declare their minority identity because of fears of social stigmatisation and discrimination.

To reduce shortcomings in assisting the Roma population in their right to community integration, the public association coalition, Voice of the Roma, has started implementing a project on promoting human rights and equal opportunities. The initiative includes creating local initiative groups made up of Roma community representatives who can get involved in decision-making processes at local level. These local initiative groups focus on identifying problems and solutions in different areas, including access to infrastructure, education, community development and human rights.

EU citizens' rights

In September 2020, Moldova abrogated legal provisions allowing the acquisition of citizenship for special economic interests. Moldova should refrain from developing an investor citizenship scheme ('golden passports') as it would pose risks as regards security, money laundering, tax evasion, terrorist financing, corruption and infiltration by organised crime. It would also be incompatible with the EU *acquis*.

2.2.2. Chapter 24: Justice, freedom and security

The EU has common rules for border control, visas, residence and work permits, external migration and asylum. Schengen cooperation entails lifting border controls inside the EU. Member States also cooperate with Moldova in the fight against organised crime, corruption and terrorism, and on judicial, police and custom matters all with the support of the EU Justice and Home Affairs agencies.

Moldova has **some level of preparation** in implementing the EU *acquis* in the area of justice, freedom and security. Legislation is partially aligned with the EU *acquis*. During the reporting period, Moldova adopted and rolled out an integrated home affairs strategy (2022-2030) as well as six sectoral development strategies (2022-2025) to support the overall implementation of the integrated home affairs strategy. Moldova introduced some institutional changes to strengthen its capacity. To further align its legislation with the EU

acquis, Moldova should further boost its institutional capacity and improve interinstitutional cooperation and coordination.

Some progress was made by reorganising and strengthening institutional capacity in some areas, notably the General Inspectorate for Migration. Moldova also upgraded its Bureau for Asylum and Migration into a General Inspectorate with additional staff. On migration, Moldova continued its constructive engagement with EU Member States and EU law enforcement agencies.

Moldova is the European country hosting the highest number per capita of Ukrainian nationals that have fled Russia's war against Ukraine. Since 1 March 2023, Moldova has been implementing a decree granting 1-year temporary protection to these people.

There is scope for a broader use of existing tools and mechanisms for information exchange and operational cooperation.

In the coming year, Moldova should in particular:

- improve interinstitutional cooperation and coordination, strengthen institutional capacity and sharing information in the area of security to ensure effective prevention and response capabilities, including in a crisis;
- strengthen the legal framework and institutional capacity for assessing risks and fighting cybercrime.

Fight against organised crime

The country has **some level of preparation** in implementing the EU *acquis* in this area. **Some progress** was made in addressing the fight against financial crime and the recovery of assets. Assets belonging to three prominent oligarchs have been seized. The national asset recovery programme for 2023-2027 and its action plan were adopted in December 2022 and are being implemented. The good ongoing work on seizure and confiscation of assets linked to organised crime should be sustained.

Cooperation with EU Member States, Frontex, Europol and CEPOL has been expanded. Moldova has made repeated commitments to and progress in the fight against arms trafficking, drugs, trafficking in human beings and migrant smuggling. It adopted a new sectoral development strategy on the prevention and fight against organised crime for 2022-2025 to support the implementation of the integrated home affairs strategy (2022-2030) that was adopted in September 2022, and appointed a national firearms focal point. The country also revised in March 2023 its Law on the regime of arms and ammunition for civilian use, aiming to align it with the EU *acquis*.

Capacity should be strengthened to counter cybercrime and improve the general preparedness and response to cybercrime.

In the coming year, Moldova should in particular:

- continue strengthening the fight against organised crime, including through cooperation with EU Member States and EU institutions and agencies, including Frontex and Europol, CEPOL, EMDDA as well as in the context of the European Multidisciplinary Platform Against Criminal Threats (EMPACT) and the EU-Moldova Support Hub for Internal Security and Border Management⁸;

⁸ To note that the Commission recommended under its sixth report under the Visa Suspension Mechanism recommended Moldova to continue ongoing efforts in the fight against organised crime.

- increase and improve data exchange via SIENA, collection, analysis and sharing across services, supported through the proactive use of information exchange tools;
- develop and approve the new national strategy on trafficking in human beings.

Institutional set-up and legal alignment

There are different law enforcement agencies with police executive powers in Moldova, namely the police, the *carabinieri* (all three falling under the Ministry of Internal Affairs)) as well as the customs service (under the Ministry of Finance). There are 8 686 police officers (police 7 666, carabinieri, 1 020). This is equivalent (both forces combined) to 334 police officers per 100 000 inhabitants and very close to the EU average of 335.3 (Eurostat, 2019-2021). A high turnover rate and a significant number of vacancies affect the operational capacity of local law enforcement.

Key **institutions** in the fight against organised crime include specialised police units within the Ministry of Internal Affairs and other institutions, which deal with different types of organised crime and financial investigations. These include the Prosecutor's Office, the Prosecutor's Office for Combating Organized Crime and Special Cases, the Criminal Assets Recovery Agency, the services for the protection of national interests and anti-corruption under the Ministry of Interior Affairs and the National Anticorruption Center (NAC). Customs are in the lead for all investigations related to goods smuggling in the country. Coordination between services is efficient. The police should continue improving equipment and strengthening initial and vocational training across services. Forensic capacity remains fragmented; there is no operational countrywide DNA database yet, and DNA-profiling capacity is limited. The use of special investigative measures and proper equipment should be increased as well as the number of certified staff.

On **the strategic framework**, during the reporting period, Moldova adopted the Ministry of Internal Affairs' new general home affairs strategy (2022-2030) and six dedicated development sectoral strategies (equivalent to action plans covering a 33-year period for 2022-2025) on organised crime, public order, safety, civil protection, migration and education/ethics/digitalisation. The strategies set out priorities, objectives and the resources needed. As mentioned above, the sectoral strategy on organised crime has been adopted. Moldova should develop and adopt a **national serious and organised crime threat assessment** (SOCTA).

The legislation on **trafficking in human beings** has been further aligned with the EU *acquis*. The recommendations from the national strategy for preventing and fighting trafficking in human beings for 2018-2023 should serve as basis for the development of the next one to be adopted in the last quarter of 2023.

Moldova is party to the Budapest Convention on **cybercrime** and signed the First and Second Additional Protocols on enhanced cooperation and disclosure of electronic evidence in November 2022. The cybercrime unit has a central forensic laboratory, but its capacity needs to be increased.

The country made some progress in **anti-money laundering** and **counter-terrorism financing**; legislation on preventing and combating money laundering and terrorism financing was adopted (see Chapter 4). A draft law amending the Criminal Procedure Code to broaden the powers of more law enforcement agencies to investigate money laundering cases was adopted by Parliament in April 2023.

During the reporting period, the legislation on the **possession of weapons by civilians** was further aligned with the EU *acquis*. The Law on the regime of arms and ammunition for

civilian use was amended with the latest amendment entering into force in March 2023. The legislation is compliant with the EU small arms and light weapons management standards and is aligned with the provisions of the European Convention on the acquisition and possession of weapons by private individuals.

There is a national focal point on firearms in the Police General Inspectorate and a state register of weapons to manage data on firearms and other weapons owned by individuals, businesses and state agencies. Moldova should continue to increase access to relevant databases on arms across relevant departments.

On the trafficking of **small arms and light weapons**, Moldova is implementing the objectives of the EU action plan on firearm trafficking integrating the 2018 Western Balkans Roadmap. The country is also actively engaged with the South Eastern and Eastern Europe Clearinghouse for the Control of Small Arms and Light Weapons and strengthened its cooperation within EMPACT.

Moldova is a member of the WeProtect Global Alliance against child sexual abuse and exploitation. The inter-ministerial strategy on **online child sexual abuse** has still to be adopted. Capacity for investigating and prosecuting crimes against children committed through the internet has been strengthened but need to be brought in line with the best EU and international standards.

Implementation and enforcement capacity

Moldova has made significant progress in the fight against organised crime and in increasing its international cooperation, including with EU agencies and EU Member States. In 2022, 192 criminal cases against 583 individuals accused of committing crimes qualified as within an organised criminal group or criminal organisation or in their interests. The court of first instance issued 28 sentences in cases concerning organised crime against 43 people, with 18 sentenced, 8 not qualified as organised crime, 1 acquitted and 2 terminated, with 14 final convictions.

On international police cooperation, Moldova has a liaison officer posted at Europol's headquarters in The Hague, and Europol has deployed guest officers and a coordination officer to Chişinău since March 2022. A more intensive use of the tools and skills provided by Europol guest officers should be made. Moldova has also taken further steps to strengthen international police cooperation in conducting joint investigations. Since June 2022, with the support of Europol, it conducted joint investigations in 10 cases on emerging trends in transnational crimes, with 19 individuals arrested. The investigations included trafficking in human beings involving minors' case and a major identity fraud case facilitating irregular migration to the EU of potentially up to 2 000 people.

Moldova also substantially increased its participation in EMPACT. In 2023, it has been participating in 106 operational actions against 20 in 2022. In addition, Moldova participated in several EMPACT joint action days (JAD) and hosted the coordination centre of the EMPACT JAD Finestra 2. This was coordinated by Frontex and focused on cigarette and tobacco smuggling, document fraud, firearms smuggling, and other excise goods. Furthermore, five joint investigation teams were set up during the reporting period with EU Member States, and eight international operations took place.

Exchanges facilitated through the Secure Information Exchange Network Application (SIENA) have started to improve but need to be further stepped up. Moldova has created a new SIENA post (two are now available in the General Police Inspectorate and National Anticorruption Center) and is providing additional training to government staff. The roll-out

of SIENA posts across institutions and the country should be increased as should the number of training courses on using SIENA.

Moldova has a working arrangement with CEPOL since October 2012 and actively participates in its activities (trainings, workshops, study visits).

The EU-Moldova Support Hub for Internal Security and Border Management was launched in July 2022 to address the risks to internal security and transnational criminal activities in the context of the Russian aggression against Ukraine. It strongly steers the cooperation with the European specialised agencies and Member States.

The country has strengthened cooperation with INTERPOL through the exchange of information and conduct of activities in the illicit Arms Records and tracing Management System and in trafficking in human beings. On domestic operational capacity, Moldova should continue setting up robust processes to assess ongoing threats and risks, in particular hybrid threats. It should amend the legislation to ensure the availability of specialist structures, technology, resources, and skilled people to be able to adequately respond to such threats. Data collected manually should be digitised to ensure they can be consulted comprehensively as part of an integrated analytical process.

On financial investigations, between June 2022 and March 2023, the Office for Prevention and Fight against Money Laundering of Moldova carried out 91 financial investigations. An additional 52 financial investigations were conducted between March and June 2023, demonstrating the country's increased commitment and capacity.

Moldova is mainly a country of origin and transit for **trafficking in human beings**. However, many people are victims of exploitation as well. Over the reporting period, the number of adult victims identified significantly declined. There were 107 adult victims (32 women/75 men) reported in 2022 against 312 adult victims reported in 2021. The number of child victims in 2022 was 44 (43 girls/1 boy). Victims trafficked for labour exploitation are mainly men and vulnerable persons, including persons with disabilities. There are potential risks of increase of trafficking in human beings amid the mass displacement caused by Russia's war of aggression against Ukraine. Over the reporting period, 44 criminal cases were initiated: 29 for trafficking in adults and 15 for child trafficking.

The national referral mechanism for victims of trafficking is operational and has been recently upgraded in line with best international practices. Two centres for victims are managed by the national authorities and in 2022 a third one dedicated to male victims was handed over to the national authorities. Cooperation with civil society is good. A hotline is also in place. However, there are concerns about providing sustainable assistance to victims specifically providing both socio-economic opportunities and specialised medical care. There are also concerns about the workload of social protection staff at local level who are the main contact points for not only victims of trafficking and gender-based violence, but also child assistance. Overall, Moldova demonstrates continued efforts but still needs to improve its capacity to prevent all types of trafficking in human beings, identify victims at an early stage and strengthen the response of law enforcement.

On the trafficking of small arms and light weapons, 69 criminal cases were investigated with 27 final convictions. A total of 277 firearms were marked in line with the latest amendment to national legislation in January 2022, which is itself in line with EU small arms and light weapons management standards. Considering the high risk of firearms trafficking in the region, linked to the geopolitical context, Moldova showed more commitment and made some progress. Moldova adopted the concept of the National Firearms Focal Point within the structure of the General Inspectorate of the Moldovan Police by creating a separate

department and making the appointment. The IT system on weapon registry was upgraded in autumn 2022 with the support of the EU. There were more trainings on firearms detection in cooperation with Frontex and the EU Border Assistance Mission.

The exchange of information among different national stakeholders (law enforcement agencies, the prosecution service and the judiciary) needs to be strengthened. Access to INTERPOL databases should be made available to representatives from the National Firearms Focal Point and other relevant law enforcement authorities.

Moldova continued to gradually strengthen its capacity in **cybercrime**. However, it should set up a more effective law enforcement response focusing on the detection, traceability and prosecution of cybercriminals. The country should raise awareness among its population about preventive measures and reporting cases to law enforcement authorities.

In 2022, the General Police Inspectorate placed 28 individuals in **witness protection programmes** and in 2023 until 12 April 2023 placed an additional 16 individuals.

Cooperation in the field of drugs

Institutional set-up and legal alignment

The Ministry of Internal Affairs and the Ministry of Health are the lead bodies in the fight against drug trafficking and illicit drug use. The National Investigation Inspectorate has a specialised directorate in charge of the fight against drugs, while the National Agency for Public Health monitors the drug situation.

At the end of 2022, Moldova adopted a new policy document, the programme for prevention and fight against crime for 2022-2025. Its adoption marked the end of the national anti-drug strategy for 2020-2027. However, the prevention of drug use is not mentioned in the new programme (one of six sectoral programmes under the home affairs development strategy).. This highlights the difficult inter-agency coordination on this policy and the constraints, especially in the field of prevention.

Moldova's National Drug Observatory is not fully operational . The Department of Quality and Management of Healthcare at the National Agency for Public Health of the Ministry of Health carry out some of the work of the National Drug Observatory. They coordinate collecting data on drugs and draft the annual report on illicit drug use and trafficking. No national early warning system on the surveillance, prevention, detection and criminalisation of new psychoactive substances (NPS) exists. NPS are monitored through a list of narcotics, psychotropic substances and plants containing such substances as detected in illicit trafficking. The lists last updated in 2017 is not up to date to ensure effective monitoring. Inter-agency cooperation should be improved between law enforcement bodies (police and customs), local enforcement authorities and health and education bodies.

Moldova is party to the relevant international narcotic drug control conventions. It cooperates with Europol in the fight against drug trafficking and has signed a memorandum of understanding with the European Monitoring Centre for Drugs and Drug Addiction (EMCDDA) in 2012. The National Drug Observatory is the EMCDDA's contact point.

Implementation and enforcement capacity

Moldova is a transit country for drugs. In 2022, 925 drug-related offences were recorded, an increase of 13.08% compared with the previous year. Between March and June 2023, 165 criminal cases were initiated for drug-related offences. In 2022, 88 criminal cases on drug trafficking were investigated, and 146 individuals prosecuted. The court of first instance decided on the confiscation of goods with a total value of MDL 1 290 953.64 (approx.

EUR 66 000).

On the secure storage and effective destruction of drugs, the technical requirements for the facilities where narcotic, psychotropic and/or precursor substances are stored are aligned with the normative international acts to which Moldova is a party. There are rules on the effective destruction of drugs; the substances are destroyed in the presence of members of the Permanent Commission for the Harmless Destruction of Medicines. The destroyed substances are encapsulated in plastic mass or metal containers, hermetically sealed and buried in landfill.

In 2022, Moldova demonstrated a good level of cooperation on drugs with neighbouring and other countries. There were also more exchanges of information via SIENA.

There are drug addiction treatment centres in eight localities, and access to treatment is available in 13 prisons. In 2022, out of the 3 214 drug-addicted patients enrolled in the national rehabilitation programme, 211 successfully completed their course. In the same year, 153 new drug-addicted patients were registered in the national opiate pharmacotherapy programme, with a total of 2 332 people receiving support.

Fight against terrorism

Institutional set-up and legal alignment

The Security and Intelligence Service's (SIS) Anti-Terrorist Centre coordinates the fight against terrorism. The adoption of a single mechanism on anti-terrorist activity is in line with EU standards. In the police, the National Investigation Inspectorate has the power to investigate crimes of money laundering, terrorist financing and separatism, and the proliferation of weapons of mass destruction and related material.

Moldova's anti-terrorism legislation is generally aligned with the EU *acquis* and applicable international law.

The national security strategy covers the fight against terrorism and terrorist financing. The national programme for the consolidation and realisation of anti-terrorist protection measures for the critical infrastructure objectives for 2022-2026 and the action plan to implement it was adopted in October 2022.

No formal EU-Moldova counter-terrorism dialogue exists but informally, SIS officers participate in workshops, training and practical exercises organised by the EU and Member States. The SIS is part of the EU platform Focal Contact Points Foreign Terrorist Fighters Network. In addition, in 2022, SIS representatives participated in the working meetings of the EU's Committee On Preventing and Combating Terrorism. The Anti-Terrorism Centre also participates in the Committee on the Prevention and Combating of Terrorism at the Council of Europe.

Implementation and enforcement capacity

Moldova has stepped up operational cooperation with Europol, INTERPOL and neighbouring countries, notably through agreements between the SIS and Ukrainian and Romanian special services. The agreement on operational and strategic cooperation between Europol and Moldova covers terrorism. Operational cooperation with Europol could be further improved by making full use of existing mechanisms, such as the possibility for local Europol officers to carry out real-time secondary checks upon request. Moldova has a low level of terrorism alerts, but it is confronted with a wide range of hybrid threats, including bomb alerts.

In 2022, the SIS investigated eight people suspected of supporting radical groups. There were no convictions for terrorist activities.

On preventing incoming or outgoing financial transactions to finance terrorism, the SIS cooperates with the Office for Prevention and Fight against Money Laundering. During this period, the SIS and the Office carried out checks on 25 cases.

Several training measures on preventing terrorism and the radicalisation of the population were implemented during the reporting period for staff of central public authorities, airlines and judicial institutions. More work should be done to prevent and address the risk of foreign fighters' radicalisation, including by improving the exchange of data and using the EU framework for reference, such as the common risk indicators on foreign terrorist fighters.

Judicial cooperation on criminal and civil matters

Moldova's legislative framework for mutual legal assistance in civil and criminal matters is partly aligned with the EU *acquis*.

During the reporting period, Moldova received 396 requests for cooperation on civil matters and all of them were addressed. Moldova received 455 requests for legal assistance in criminal matters and all of them were addressed. The country is still not party to several core conventions, including the 1996 Child Protection Convention, the 2005 Choice of Court Convention, the 2007 Child Support Convention and the 2007 Maintenance Obligations Protocol. Moldova should become a party to these conventions.

Moldova has engaged in a constructive working relationship with Eurojust. Based on the agreement in force since 2016, it signed six joint investigation team training agreements. In 2022, it cooperated with Eurojust on 24 cases in cooperation with the Eurojust point of contact. To strengthen cooperation, the Prosecutor's Office appointed a part-time liaison prosecutor to Eurojust in June 2023. Furthermore, Moldova expressed its readiness to cooperate with the European Public Prosecutor's Office (EPPO) in line with the 1959 European Convention on Mutual Assistance in Criminal Matters and its Protocols. The General Prosecutor's Office of Moldova concluded a working arrangement with the EPPO in July 2022.

Legal and irregular migration

Institutional set-up and legal alignment

The Ministry of Internal Affairs is the main player in the field of migration. The Diaspora Relations Bureau within the State Chancellery of the Prime Minister is the key stakeholder in engaging with the diaspora. The Commission for the Coordination of Migration and Asylum Activities, established in 2018 under the lead of the Ministry of Internal Affairs, is a permanent advisory body without any legal status. It was created to monitor and coordinate activities on migration, asylum, statelessness and the integration of foreigners in Moldova and to help apply relevant government policies consistently. Since 2021, the country has observer status in the European Migration Network.

Moldova initiated in 2022 a sectoral development programme for the management of migration flows, asylum and integration of foreigners for 2022-2025. It includes an action plan to implement the agreed objectives.

A total of 13 agreements on the readmission of persons illegally staying have been concluded⁹, and 14 are currently under negotiation.

⁹ The 13 agreements are with the EU, Switzerland, Denmark, Norway, North Macedonia, Serbia, Bosnia and Herzegovina, Montenegro, Türkiye, Albania, Georgia, Kazakhstan and Ukraine. There are 24 additional protocols with Switzerland, Estonia, Hungary, Romania, Slovakia, Germany, Austria, Lithuania, Latvia,

Implementation and enforcement capacity

Since the outbreak of Russia's war of aggression against Ukraine, Moldova has faced unprecedented inflows of refugees (the highest number per capita in Europe). As of August 2023 and since the beginning of Russia's full scale aggression against Ukraine, roughly 900,000 individuals entered Moldova through the border with Ukraine. From those, 109,315 Ukrainian citizens and 7,877 third-country nationals currently remain on its territory. They were mainly female (59%), and minors (46%). Since 1 March 2023, the government has implemented decision granting temporary protection to displaced persons from Ukraine, enabling its beneficiaries to obtain an identity document issued free of charge for 1 year. Following the unprecedented influx of people fleeing Ukraine, which put Moldova's already limited capacity under pressure, the country's authorities maintained their efforts and mobilised resources to provide immediate humanitarian assistance as prescribed in the state of emergency.

On accommodation for refugees, Moldova set up 135 Refugee Accommodation Centers (RACs). 58 remained active in June 2023. The accommodation capacity of these RACs is for 3 805 people. 12% of them provide services for persons with disabilities and those suffering from mental health disorders. The government of Moldova has launched a consolidation strategy to address disorders in existing RACs, which will lead to their gradual closure in 2023-2024. Between March and June 2023, nine RAC were closed (the equivalent of 424 places). If there is an increase in the number of arriving migrants or refugees, there is the possibility to reopen the closed RACs.

Furthermore, special measures targeting unaccompanied children have been put in place, such as immediate referrals to national social workers (the guardianship authority) and providing them with the same services as Moldovan children. Further effort is needed to ensure the systematic registration of foreigners, centralise data and provide them access to all relevant services in line with EU standards, including the General Data Protection Regulation (GDPR).

In 2022, Moldovan authorities reported 1 332 cases (2 590 individuals) of illegal crossing of the state border (main nationalities: Ukrainian, Turkish and Russian). In 2022, 78 foreign citizens were placed in public custody. In the first quarter of 2023, 54 foreign citizens were placed in public custody, of those 37 were released from custody.

The Ministry of Internal Affairs oversees forced returns. Implementation of the EU-Moldova readmission agreement is generally good. During the reporting period, 623 Moldovan citizens were successfully returned under readmission agreements. Moldova has concluded 13 agreements and 24 additional protocols on readmission.

Moldova contributes to the Europol European Migrant Smuggling Centre's annual reports on migration and asylum.

Asylum

Institutional set-up and legal alignment

The Moldovan legislation governing asylum is broadly in line with the EU *acquis*, and the country is party to the relevant international conventions. The General Inspectorate for Migration (GIM) operating under the Ministry of Internal Affairs decides on applications for international protection. It strengthened its Bureau for Asylum and Migration into a General

Malta, Bulgaria, Czechia, Poland, Belgium, The Netherlands, Luxembourg, Spain, Slovenia, Greece, Italy, Serbia, Albania, Georgia, Kazakhstan and Ukraine.

Inspectorate with additional staff. Moldova conducted several reforms over the reporting period, which focused on further modernising its central structure and reorganising the border police. The Migration and Asylum Directorate, which examines asylum applications, was reorganised and is now part of the GIM. This has strengthened institutional capacity to prevent, monitor and combat the illegal stay of foreigners.

The legal status of asylum seekers and beneficiaries of international protection, temporary protection and political asylum are regulated by the Law on asylum. The Asylum and Integration Directorate of the GIM is responsible for asylum procedures. Unaccompanied minors applying for asylum are subject to child protection measures, including social placement services. Negative decisions on asylum claims may be appealed through administrative litigation without any prior procedure. The verification process includes a request from the country's Security and Intelligence Service.

Moldova maintains a regularly updated contingency plan that takes a multidimensional approach covering areas based on different types of scenarios (e.g. border management and humanitarian needs). Following Russia's war of aggression against Ukraine and the peak of the refugee emergency, a plan was initiated by international players with the support of the EU's civil protection mechanism, and this served as the basis for humanitarian aid preparedness.

Recent efforts focused on alignment with the EU Temporary Protection Directive, including a government decree adopted on 18 January 2023 and implemented from 1 March 2023. The decree allows for the registration of refugees from Ukraine on a voluntary basis.

As of August 2023, 10,747 individuals have been granted temporary protection.

The decree which is largely aligned with the EU Temporary Protection Directive, gives the rights of residence, identity documentation, education and access to the labour market and healthcare. Funding social protection/health costs related to the temporary protection is a major challenge. The current needs of beneficiaries of temporary protection have been mainly covered through continuous external support from humanitarian donors. Against the backdrop of decreasing humanitarian funding, this caseload will need to be fully absorbed by the government-led national social protection assistance. Moldova should develop a clear roadmap as to when and how this will be achieved.

Implementation and enforcement capacity

Compared to 2021, when 75 applications for international protection were lodged, and 43 people were granted protection, as of July 2023, the Migration and Asylum Office has received 14 376 asylum applications, following the arrival of people from Ukraine seeking protection after Russia's aggression against Ukraine. Out of the total number of applications examined, 7 643 decisions on asylum applications were issued: 17 people were granted refugee status, 62 granted humanitarian protection, 28 had their asylum applications rejected, 12 appealed in court, and 7 552 people terminated the asylum procedure. The remaining applications are in the process of examination. There are approximately 3 700 pending cases as many of the registered asylum seekers left the country days after registering.

With the sharp increase of asylum applications lodged, the national authorities are experiencing a significant backlog. In response, the government is carrying out an institutional reorganisation, increasing staff numbers, procuring equipment and renovating infrastructure. The funds allocated in the budget for integration programmes granting asylum were insufficient given the current number of asylum seekers reported and being supplemented by international donors.

To prevent trafficking in human beings and related crimes involving refugees at open facilities and to prevent the infiltration of smugglers, a specialised police unit carried out facility visits jointly with representatives of an NGO (the international centre Laicre Strada Moldova with which the General Police Inspectorate concluded a cooperation agreement in November 2020). Victims of trafficking in human beings in facilities have been provided with information, including telephone numbers of relevant hotlines. This information is available in English and Ukrainian.

Between May 2022 and April 2023, the European Union Agency for Asylum (EUAA) deployed a small contingent of staff to Moldova to help the country manage the arrival of people fleeing the invasion of Ukraine. This was the first-ever deployment of staff by the EUAA (and its predecessor the European Asylum Support Office) to a non-EU country. The relevant authorities in Moldova maintain close contacts with the EUAA's representatives.

Accessing and providing information on asylum procedure for asylum seekers needs to be improved. Moldova should ensure that the necessary resources are available to implement the country's contingency plan to manage human flows.

There is no electronic biometric database with fingerprints and photos, and the border crossing points are not connected. During the reporting period, the development and implementation of a biometric database was set as an objective. Active steps should be taken to plan this database's alignment with the EU's fingerprint database (Eurodacurodac).

Visa policy

The legal framework for visa policy is broadly in line with the EU *acquis*. The list of third countries with which Moldova maintains visa-free regimes is not fully aligned with the list of third countries whose nationals require a visa for short stays in the EU. Moldova maintains visa-free regimes with 12 of these countries: Armenia, Azerbaijan, Belarus, Cuba, Ecuador, Kazakhstan, Kyrgyzstan, Qatar, Russia, Tajikistan, Türkiye and Uzbekistan.

The security features of visas and travel documents are broadly aligned with EU standards. All passports issued by Moldova are biometric and comply with the International Civil Aviation Organization format.

The European Commission's sixth report under the Visa Suspension Mechanism¹⁰, published in October 2023, concluded that Moldova continues to meet the visa liberalisation benchmarks.

Schengen and external borders

Institutional set-up and legal alignment

The General Inspectorate of Border Police manages Moldovan state borders (1 906 km in length excluding the 453.4 km Transnistrian segment). It is a specialised civilian body operating under the Ministry of Internal Affairs. Following a reorganisation in the reporting period, it now has 44 border police sectors and 75 border crossing points. Border responsibilities are shared between customs and the border police.

Border control legislation is partly aligned with EU policy and best practice. A national integrated border management strategy (2018-2023), a programme for integrated border management (2022-2025) and a dedicated action plan (aligned with the 2006 EU concept on integrated border management) are in place. The National Council for Integrated State Border

¹⁰ COM(2023) 730 final

Management is the advisory body in charge of implementing the action plan. There is no Schengen action plan in place yet.

Cooperation with INTERPOL on lost and stolen passports is regular and systematic. Moldova continued its efforts to improve border management and migration systems by investing in infrastructure, software and training.

Implementation and enforcement capacity

Technical equipment and infrastructure need to be modernised. All border crossings are connected to INTERPOL's Stolen and Lost Travel Documents database. They have biometric travel document readers, and some have video surveillance systems for profiling passengers. Moldova does not have a national advanced passenger information (API) system. Inter-agency cooperation is satisfactory between border police and customs at border crossing points. Further improvements are required on information exchange through mutual access to databases and a formalised and secure information exchange system. Joint patrolling by both services should be initiated. Moldova needs additional resources, in particular technical resources, to improve the quality of border checks. Border surveillance resources are limited and require substantial improvements. Border crossing infrastructure also requires significant improvements.

Moldova demonstrated significant efforts in processing passenger flows, especially refugee flows from Ukrainian borders, and increasing border surveillance patrols. Moldova has stepped up ad hoc crisis response mechanisms since February 2022 in response to the high number of border crossings from Ukraine.

In the area of **international cooperation**, Moldova continued to implement the Status Agreement with Frontex signed in March 2022. Frontex launched a joint operation in Moldova in 2022, which was renewed in January 2023 for another year. A Frontex liaison officer with a regional mandate for the Eastern Partnership was deployed and is currently based in Moldova. The EU Border Assistance Mission (EUBAM) to Moldova and Ukraine has supported both countries since 2005, including by improving integrated border management standards.

Joint patrolling is well established and operational with its neighbouring countries – Ukraine (since 2011) and Romania (since 2018). In 2022, there were 460 joint/coordinated patrols with Ukraine and 725 with Romania. **Information exchange** takes place centrally and at joint points of contacts: 4 002 requests were initiated in Galați at the Moldova-Romania border and 3 036 requests in Palanca at the Moldova-Ukraine border. In the reporting period, Moldova and Romania signed two agreements: one on setting up the international border crossing point Leova-Bumbăta and another on coordinated controls at two border crossing points, Leușeni (Moldova) and Albița (Romania). The pilot phase of the joint border controls started on 10 April 2023.

Measures to combat corruption at the border are part of the general national integrity and anti-corruption strategy for 2017-2023 and the Ministry of Internal Affairs' sectoral development strategy on education/ethics and digitalisation (2022-2025), adopted in 2022. In 2022, disciplinary action was taken against 2 border officers for improper influence in service activity, and 8 border guards were discharged for committing acts of corruption. In customs, 115 service investigations were initiated, and 19 criminal cases were initiated.

Counterfeiting the euro

Moldova is not party to the 1929 Geneva Convention for the suppression of **counterfeiting currency**. The Criminal Code provides for criminal liability for counterfeiting and is partly

aligned with the EU *acquis*.

All aspects of customs cooperation are covered in Chapter 29 - Customs Union.

2.3. ECONOMIC CRITERIA

Key economic figures	2014-19 average	2020	2021	2022*
GDP per capita (% of EU27 in PPS)	27.1	29.2	31.7	N/A
Real GDP growth	3.6	-7.4	13.9	-5.0
Economic activity rate of the population aged 15 and above (%); total	44.2	40.3	41.1	41.8
female	40.6	36.1	36.4	37.8
male	48.2	45.1	46.5	46.3
Unemployment rate of the population aged 15 and above (%); total	4.6	3.8	3.2	3.1
female	3.2	3.2	2.5	2.6
male	4.9	4.3	3.8	3.5
Employment of the population aged 20-64 (annual growth %)	-3.9	-4.4	1.1	2.2
Nominal wages (annual growth %)	12.0	9.8	13.1	N/A
Consumer price index (annual growth %)	5.9	3.8	5.1	28.7
Exchange rate against EUR	20.3	19.7	20.9	18.9
Current account balance (% GDP)	-6.9	-7.7	-12.4	-15.7
Net foreign direct investment, FDI (% of GDP)	2.4	1.3	2.8	3.7
General government balance, % GDP	-1.5	-5.1	-1.9	-5.5
General government debt, % GDP	32.9	35.2	32.2	35.7

In line with the conclusions of the European Council in Copenhagen in June 1993, EU accession requires the existence of a functioning market economy and the capacity to cope with competitive pressure and market forces within the Union.

2.3.1. The existence of a functioning market economy

Moldova is in **between an early stage and some level of preparation** in establishing a functioning market economy. Despite the difficult economic and social environment caused by Russia's full-scale invasion of neighbouring Ukraine, the authorities have remained committed to pursuing macroeconomic stability and economic reforms. During the past ten years, Moldova has been able to sustain economic growth of about 3.1% per year on average despite the pandemic and other economic headwinds. Public finances have been stable with a low deficit (at about 1.5% of GDP on average over 2014-2019) and a comparatively low debt level. The National Bank of Moldova has been generally successful in keeping inflation within the target range set at 5% (+/- 1.5 percentage points).

After a strong rebound from the COVID-19-crisis, growth contracted sharply in 2022 due to the fall-out from Russia's war against Ukraine, the energy crisis and a severe drought that caused output in agriculture and related industries to plummet. High inflation, caused by soaring energy and food prices, depressed households' disposable incomes and consumption, while war-related uncertainty contributed to weaker investment. On the external side, the

already high current account deficit widened further, also reflecting the weak export base and low productivity. As a result of the deep recession and the increase in social spending to alleviate the energy price shock, the budget deficit widened in 2022 and is set to widen further in 2023. Public debt remains low and is largely extended on concessional terms.

Despite significant progress, Moldova's business environment is characterised by widespread corruption, a weak rule of law, weak institutional capacity and low quality public services. These factors hamper entrepreneurship and give rise to a large informal economy. The state still has considerable influence in key sectors of the economy, including telecommunications, energy and transport as well as in price setting. The authorities are carrying out a screening of state-owned enterprises, some of which are loss-making, in order to restructure and/ or privatise them. At the same time, they are working to improve corporate governance and accountability in the sector. Despite the recession, the financial sector remains stable, reflecting the impact of previous reforms and prompt regulatory action to curb the rapid increase in household lending. The labour market recovered from the pandemic and was relatively robust in 2022, despite rising unemployment towards the end of the year. However, it continues to be characterised by a very low participation rate, which is linked to the high share of people working or only willing to work abroad.

In order to improve the functioning of the market economy, and taking into account the difficult external environment, Moldova should in particular:

- further improve the management of public finances, and in particular the planning and execution of public investment;
- continue improving the business environment, reduce state interference in price setting and maintain a rapid pace of reforms to restructure and/ or privatise state-owned enterprises;
- address the main weaknesses of the labour market, in particular by increasing incentives for labour force participation, and take measures to tackle informal employment.

Economic governance

The authorities remain committed to pursuing macroeconomic stability and economic reforms despite the difficult external environment. The government continued to introduce reforms to cushion the impact of the energy crisis and supported those fleeing Russia's war of aggression against Ukraine. Structural reform measures focused, in particular, on ensuring energy security, further fighting corruption and increasing the transparency of the justice sector as well as reforms of state-owned enterprises (SOEs). The authorities also adopted a new public finance management strategy, aiming to improve revenue mobilisation and expenditure allocation as well as making budgeting more transparent. Therefore, progress on reforms continues, although weaknesses remain, for example in budget planning and execution, especially capital expenditure.

Moldova continued to progress in implementing macro-financial assistance from the EU, with disbursements in 2022 and 2023. There was also progress on the IMF Extended Fund Facility/Extended Credit Facility, adopted in December 2021 and augmented in May 2022. In April 2023, the IMF concluded its third programme review, assessing overall policy implementation as positive, ensuring a new disbursement. Among others, the programme aims to improve the transparency of and governance framework for anti-corruption institutions, strength the independence of the central bank, improve the fiscal governance framework and implement further SOE reforms. The IMF concluded that although the risks

to the programme are high, the authorities' ownership of the programme and commitment to reforms remain strong.

Macroeconomic stability

Russia's war of aggression against Ukraine further aggravated Moldova's vulnerable energy situation and, together with yet another drought depressing the agricultural sector's output, brought a sizeable economic shock and cost-of-living crisis. Following a strong rebound in 2021 of 13.9%, real GDP contracted sharply by 5.0% in 2022.

The 2022 recession was driven by a steep fall in household consumption and investment, down by 6.3% and 6.8% respectively. High inflation (averaging 28.7% in 2022), driven by high energy and food prices, eroded households' disposable incomes, while war-related uncertainty contributed to weaker investment. Weak agricultural performance due to the drought and the decline in construction and manufacturing activity (partly due to war-related supply chain disruptions) further contributed to Moldova's depressed economic performance. Net exports also negatively contributed to growth despite the better-than-expected export performance in 2022, which largely reflected re-exports to and from Ukraine due to the reallocation of regional trade routes. After remaining broadly unchanged for about a decade, the income gap with the EU has slightly narrowed in recent years as per capita GDP in purchasing power standards rose to 31.7% of the EU average in 2021, up from 29.2% in 2020 and 25% in 2013.

The current account deficit further widened in 2022 to 15.7% of GDP compared with 12.4% of GDP in 2021 due to the high trade deficit. Moldova's current account deficit was already large between 2017-2021, averaging 8.9% of GDP. Its recent widening largely reflects Moldova's protracted energy crisis and weak export base. A considerable share of Moldova's imports (about 17%) are mineral products, including oil and gas, and the country's exports are heavily reliant on agricultural products as well

as low value-added manufacturing, such as textiles and food. Moldova's high trade deficit at 29.5% of GDP on average between 2018-2022 is partly balanced by high and stable remittances of about 15% of GDP as well as financial transfers. Its recent deterioration was fuelled by high energy import prices and weaker exports in the second half of 2022, also on the back of the poor agricultural output. In 2022, net foreign direct investment flows recovered strongly at 3.7% of GDP, jumping back to their pre-pandemic levels (which averaged 2.8% between 2018-2022). In 2022, Moldova's external debt increased to 67.7% of GDP from 64.2% in 2021, largely on account of the higher financing needs caused by

Russia's war against Ukraine and the energy crisis. At the same time, external debt metrics point towards a low level of distress. Moldova's debt is largely extended by international donors on concessional terms. The country's foreign currency reserves experienced significant volatility in the first half of the year, prompting central bank interventions to support the local currency. By year end, the reserves were back to a stable and high level of USD 4.5 billion, equivalent to 5 months of imports of goods and services.

Consumer price inflation surged in 2022, peaking at 34.6% in October. This was followed by a gradual deceleration to 30.2% by year end, remaining well above the central bank's target range of 5% +/- 1.5 percentage points. The surge followed a relatively stable inflation of 4.7% on average between 2017-2021. The large increase in prices in 2022 (by 28.7% overall) was driven chiefly by the rise in energy import prices, including gas and electricity as well as food prices. The central bank tightened the monetary policy stance by a cumulative 13 percentage points between January and August 2022, bringing the benchmark interest rate to 21.5%. In December 2022, when inflation began to decelerate, falling below 10% in August 2023, the central bank started easing its monetary stance, bringing the key rate gradually down to 6% as of September 2023. Following the Moldovan leu's depreciation against the US dollar by about 7% (and a more limited depreciation against the euro by 0.8%) in the first half of 2022, the currency recovered, helped by restored confidence and considerable external support.

As result of Russia's war of aggression against Ukraine and increased social spending to alleviate the energy shock, the budget deficit widened to 5.5% of GDP in 2022 (including the recapitalisation of Energocom) up from 1.9% of GDP in 2021. Except for 2020 when the pandemic started, Moldova maintained relatively low deficit levels (below 2% of GDP) between 2016-2019. In 2022, revenues were robust on account of inflationary effects. They grew by 16%, driven by higher VAT outturns, corporate income tax and, to a lesser extent excise duties. Expenditure rose by 28% driven largely by current spending on targeted transfers to households, partial wage indexation and outlays for securing gas supplies. The government successfully introduced and implemented the Energy Vulnerability Reduction Fund, which provided targeted compensation to the most vulnerable households, and recapitalised the state-owned energy company, Energocom (amounting to about 2.2% of GDP) to secure gas reserves. Nonetheless, Moldova continues to struggle with significant budget under-execution, especially on capital investment projects. Ongoing reforms to improve capital investment planning should help improve budget execution. In 2023, the deficit is projected to remain high at 6% of GDP, according to the State Budget Law. It will be further driven by higher outlays for social assistance programmes as well as partial salary and pension indexation. In 2022, Moldova's public debt-to-GDP ratio increased to a still relatively low 35.7% of GDP (having averaged 32.3% of GDP between 2018-2021). This increase was due to the large budget deficit and the marked weakening of the local currency

in the first half of the year. Most of the country's debt has been extended by international creditors on concessional terms.

The macroeconomic policy mix has remained appropriate and sustained macroeconomic stability and the resilience of economic activity despite the multiple domestic and external shocks. Supportive fiscal policy and an appropriate monetary policy stance helped mitigate the impact of

high energy prices, while gradually curbing inflation. The authorities have also made effective use of contingency planning, especially to ensure adequate resources to strengthen the long-term security of the energy supply. Nonetheless, Moldova's economy grapples with the medium-term challenges of low productivity and competitiveness, as well as external imbalances linked to the high current account deficit.

Functioning of product markets

Business environment

Moldova continued to make progress in improving its business environment despite the fallout from Russia's war against Ukraine and a strong decline in economic activity.

Moldova's business environment and capacity to attract foreign direct investment are negatively affected by corruption, an inefficient judiciary and low-quality public services. In 2022, the authorities started implementing an ambitious agenda to strengthen the rule of law and combat corruption which remain key obstacles to investment and productivity growth. In November 2022, the government set up a working group to reduce the regulatory burden on businesses. The body proposed a legislative package to amend the Labour Code, reduce red tape and simplify inspections. The legal framework for e-commerce and digitalisation of government services was upgraded, which should strengthen institutional capacity, the quality of public services and productivity.

Moldovan firms are smaller, less productive and have fewer exporters than in the EU.

In addition to the strong presence of SOEs limiting domestic competition, the private sector has been negatively affected by the dual shock of the COVID-19 pandemic and Russia's war against Ukraine. In response, the government launched the Fund for Entrepreneurship and Economic Growth of Moldova, which offers low-interest loans to small and medium-sized enterprises (SMEs). The government also initiated a series of other programmes supporting SMEs' digital transformation, energy efficiency and technological improvements. Moldova has liberalised foreign trade policy in recent years, but gaps remain in customs procedures, logistics services and infrastructure. In 2022, Moldova approved a new Customs Code and made progress on harmonising sanitary and phytosanitary standards with the EU, which should facilitate export activity. At the same time, only a little progress was made on upgrading the transport and logistics infrastructure which hinders export-oriented businesses.

The share of the informal sector in Moldova's economy remains substantial partly as a result of a heavy regulatory burden, weak law enforcement and a general lack of trust in government institutions.¹¹ the corresponding tax evasion also negatively impacts budget revenues while distorting competition to the detriment of regular firms. Formal market entrance and entrepreneurship are further hampered by a shortage of skilled labour and a high reservation wage for Moldovans searching for work abroad, either permanently or on short-term contracts.

State influence on product markets

State influence remains significant in key sectors of the economy, including in telecommunications, energy and transport, primarily through about 900 state-owned enterprises (SOEs). Moldova's restrictive product market regulation also hampers competition. Overall, SOEs own assets worth about 26% of GDP and employ around 6% of

¹¹ According to World Economics (2022), which uses an average of the latest estimates from economists around the world, the informal economy represents about 40% of GDP in Moldova, versus an EU average of 16.9 %. Such estimations need to be taken with caution given the variety of methodological approaches.

the active labour force. They suffer from a lack of adequate corporate governance practices, inefficiency and poor oversight. This further undermines private sector investment and the economy's competitiveness and poses fiscal risks. The SOE sector still requires State-aid support, as around 40% of SOEs recorded losses in 2021, 5 percentage points more than in 2019. Moldova's product market regulation lags behind most EU countries, hampering competition. The country has some of the most restrictive product market regulations and barriers to entry in services and network industries (for example, electricity and gas, telecommunications, transport and regulated professions). Price controls in a broad number of sectors, including network industries, food, fuels and pharmaceuticals, are also more widespread in Moldova than in EU countries. This hampers competition, innovation and productivity gains.

Privatisation and restructuring

In December 2022, Moldova approved a strategy for 2023-2030 on the administration of state property to reduce the number of SOEs, improve their financial performance and increase market competition. As a next step, the authorities have started a selection process by categorising SOEs at the central government level according to which companies either remain in state ownership or will be liquidated, restructured or privatised. A privatisation strategy for small and large companies is under preparation, including identifying the optimal conditions for launching privatisation efforts. In parallel, the authorities submitted regulations to Parliament to improve selection procedures for supervisory board members, SOE audits and SOE corporate governance codes. The Ministry of Finance is also improving the methodology for SOE fiscal risk reporting. Privatisation was suspended in 2022 due to the fall-out from Russia's war against Ukraine and the adoption of the SOE strategy; however, several SOEs were reorganised or liquidated. The concession agreement for Chisinau International Airport to a private entity was terminated due to alleged breaches of contractual obligations.

Functioning of the financial market

Financial stability

The financial sector remained broadly stable despite significant challenges posed by the pandemic, economic recession and Russia's war of aggression against Ukraine. The stability is also due to the comprehensive corrective measures taken after the 2014 banking crisis. Banks are well-capitalised and have preserved adequate liquidity buffers. The average capital adequacy ratio stood at 29.5% at the end of 2022, about 350 basis points higher than a year before (vs. the 10% regulatory minimum). The liquidity coverage ratio was around 280%, well above the prescribed 100% limit. The Russian war against Ukraine led to liquidity pressures in the financial system and bank deposit withdrawals in both foreign currency and the Moldovan leu accelerated to close to 8% year-on-year by the end of March 2022. As confidence was restored, the total amount of deposits recovered to about 5% above the pre-war level at the end of 2022. Economic headwinds and slowing lending activity triggered a modest increase in the non-performing loans (NPLs) ratio to 6.4% at the end of 2022. Banks have benefited from a relatively high coverage with prudential loan loss provisions. In 2022, the return on equity and return on assets were 15.7% and 2.8%, respectively. Although this shows favourable profitability, it is expected to weaken due to elevated credit risk and falling remuneration on reserves in the 2023 monetary policy easing cycle.

Prompt regulatory action by the Moldovan authorities helped preserve financial stability. In response to a rapid increase in household lending, in May 2022 the National

Bank of Moldova (NBM) introduced responsible lending requirements, loan-to-value and debt service-to-income limits for banks, and the National Commission for Financial Markets (NCFM) issued similar regulations for non-bank lenders. The NBM also set an additional systemic risk buffer of 2% for banks' exposure to the household sector. Since 2019, the NBM has carried out the Supervisory Review and Evaluation Process to check the soundness of banks on an annual basis. In March 2023, a draft law to increase and further align deposit guarantees with EU levels was submitted to Parliament. Moreover, the authorities are strengthening the supervisory framework for insurers, savings banks and non-bank lenders by transferring regulatory and supervisory powers to the NBM. This requires more staff and better technical capacity.

Access to finance

Financial intermediation in Moldova remains underdeveloped and access to finance was further constrained by the COVID-19 pandemic and then the fallout from Russia's war against Ukraine. Banking sector assets declined from about 52% of GDP in 2020 to a modest level of around 48% of GDP at the end of 2022 (vs an average of about 280% of GDP in the EU in 2021). Credit to the private sector represented a relatively low share of 21% of GDP as of December 2022. This decelerated significantly throughout the year following NBM and NCFM measures to tighten lending standards for households, the fallout of Russia's war of aggression against Ukraine and a drop in output, which all affected corporate lending. The government's stimulus for lending to SMEs and micro-enterprises could alleviate credit constraints, while the easing of monetary policy and an improved economic outlook for 2023 may contribute to a more favourable environment. According to the World Bank, more than 80% of firms report financing their working capital from their own financial sources. The need to improve access to finance for the corporate sector, while preserving financial stability, is also underlined by the relatively modest role played by capital markets in Moldova.

Functioning of the labour market

Despite economic headwinds, the labour market recovered from the pandemic, although significant structural challenges persist. The number of employed people increased by 1.8% in the fourth quarter of 2022 from a year before. The country saw job creation in industry, services and construction, whereas employment in agriculture declined. The structurally low employment rate (among the population aged 15 years and over) rose slightly to 40.5% in 2022 from 39.8% in 2021. However, it remains well below the EU average of 54.1% in 2022. This primarily reflects the low participation in the labour force of people working or only willing to work abroad. Informal employment in agriculture, construction and trade is estimated to be more than 22% of the total. At the same time, the creation of well-paid jobs is hampered by insufficient private and foreign investment. This investment in turn is held back by, among other factors, companies' limited access to skilled labour and persistent net emigration. Some rigidity in labour market regulations, in particular regarding the ease of hiring and firing practices, still hamper a smooth allocation of the workforce. Moldova's unemployment rate has been persistently low, which partly reflects the low participation in the labour force and the substantial share of self-employed workers. Due to the economic decline and the increase in the size of the labour force in 2022 (including people fleeing Russia's war of aggression against Ukraine), the unemployment rate rose to 4.6% in the fourth quarter of 2022, up from 2.6% a year before. Depressed by high inflation, real wages contracted by over 10% year-on-year in the last quarter of 2022. However, the government has taken measures to mitigate the erosion of purchasing power of civil servants and pensioners through a partial indexation.

Moldova needs to accelerate structural reforms to increase formal job creation and the availability of skilled labour. Further reforms are needed to reduce gaps in the education system and the large share of young people who are not in education, employment or training (NEETs). This would help break the vicious circle of the shortage of skilled labour and high reservation wages (driven by very large inflows of remittances and labour emigration) and the relatively low investment in higher added-value sectors. The government adopted a national employment programme for 2022-2026. In addition, it took measures to reduce the high level of undeclared work in the labour market by strengthening checks and incentives to bring jobs into the formal economy. In 2022, the National Employment Agency provided labour market information and counselling services to more than 90% of people registered with the agency, 38% were offered job matching services and close to 24% were placed in a job. Yet, employment services and labour market programmes lack adequate funding, and progress to reduce the mismatch between skills and job requirements is slow.

2.3.2. The capacity to cope with competitive pressure and market forces within the Union

Moldova is in **between an early stage and some level of preparation** in terms of its capacity to cope with competitive pressure and market forces in the EU. Despite large investments in education, outcomes remain well below those in the EU. This contributes to the persistent mismatch between the skill level of the workforce and what employers require, which is one of the key business environment obstacles for firms. Investment in research and development remains low and has been falling despite the government's strategy to increase it. Moldova's physical infrastructure remains underdeveloped in part due to the lack of government investment. The stock of foreign direct investment is also low, reflecting weaknesses in the business environment and continuing problems with corruption and the protection of property rights. Digitalisation is lagging behind: just over two thirds of households are connected to the internet and about 40% of government services for businesses are available online. The Moldovan economy remains heavily reliant on the agricultural sector, and there is a large productivity gap compared with the EU. Moldova is a relatively open economy and is closely integrated with that of the EU. Economic links between the two have strengthened since the entry into force of the Deep and Comprehensive Free Trade Area in 2016, and the EU is the country's largest trading partner and source of foreign investment.

In order to improve its competitiveness and support long-term growth, Moldova should, in particular:

- take steps to improve the quality of education and training to ensure outcomes align with labour market needs, including ICT skills and digital literacy;
- increase investment in infrastructure, especially to improve energy security and facilitate international trade and digitalisation;
- implement measures to attract foreign direct investment, including addressing issues related to corruption and the rule of law as well as investment incentives and promotion.

Education and innovation

Moldova consistently invests a substantial amount in education, at levels equal to or higher than in many EU Member States (5.3% of GDP in 2022 compared with an EU average of 4.8% in 2021). The share of education in public spending, at around 21%, is more than double that of the EU average but has been declining in recent years.

The traditionally high level of spending has not led to corresponding educational outcomes, which continue to reflect the country's relatively low level of economic development and point to inefficiencies. Although Moldova's PISA reading scores have improved over time, the country scores below the OECD average, ranking 51st out of 77 countries, and almost all EU Member States in the most recent edition. Moldova had relatively low net enrolment rates, at 90.6% for primary education and 86.9% for secondary education in 2018. Tertiary enrolment levels were relatively low compared with other European countries (with a gross enrolment rate of 62.9%) although they have increased by nearly 10 percentage points since 2015. In 2022, 18% of the working-age population had an advanced (tertiary) level of education, compared with about 30% in the EU.

These outcomes are reflected in a mismatch between the level of skills of the labour force and those required by employers. A poorly educated workforce was cited as the biggest obstacle for businesses in Moldova in the last Enterprise Survey in 2019, with one-third of firms citing this as a major constraint, a much higher proportion than other comparable countries in Europe and Central Asia. These outcomes exacerbate existing challenges related to demographic change, namely an ageing and declining population.

Investment in research and development remains low, amounting to 0.2% of GDP in 2022 compared with an EU average of 2.3%. The country has a 4-year strategy for boosting research and innovation, which runs until the end of 2023, though over the first three years of the strategy the relative size of expenditure on R&D declined, amounting in 2022 to 0.86% of public spending. The lack of technical advisory services in fostering innovation in the agricultural sector is of particular concern.

Physical capital and quality of infrastructure

Investment (gross fixed capital formation) has accounted for an increasing share of GDP in Moldova, but the level of public investment has not been enough to maintain the public capital stock. Overall investment rose from 23% of GDP in 2017 to 27% in 2020 before declining sharply to 22% in 2021. Public investment has failed to keep up with the country's needs due to frequent budget revisions and under-execution, leading the public capital stock to fall from 75% of GDP in 2000 to 58% in 2018. Foreign direct investment has fluctuated around a relatively modest level in recent years, amounting to about 3.7% of GDP in 2022, but the total stock of FDI remains low at about 25% of GDP reflecting weaknesses in the business environment and persistent problems with corruption and property rights. Moldova's physical infrastructure, including roads and rail, is still underdeveloped with the country ranking jointly 132nd in the World Bank's 2023 Logistics Performance Indicator, an index that captures the quality of trade-related infrastructure. Moldova faces climate-related vulnerabilities which new infrastructure investment would need to account for.

Moldova has relied almost exclusively on imports from Russia for its supply of natural gas. However, it has accelerated energy sector reforms and investments to ensure security of supply and energy diversification, and its electricity grid is now synchronised with that of the EU. This underlying continued dependence gives rise to significant vulnerabilities. In May 2023, Moldova signed an agreement allowing the country to apply for EU funding under the Connecting Europe Facility to improve transport, energy and digital links with its European neighbours. As of December 2022, Moldova started importing natural gas from Romania and plans to further expand the interconnection of natural gas and electricity networks.

Moldova is also lagging behind in digitalisation. While nearly the entire population is covered by at least a 4G mobile network, just 67.5% of Moldovan households have internet

access at home compared with 92.5% of households in the EU. Among urban households, 80% have access to internet at home, against only 58% of rural households. In 2021, there were about 88 active mobile-broadband subscriptions per 100 inhabitants. According to the authorities' own estimates, in 2022 only about 21% of the population had used at least one online public service in the previous 12 months compared with 58.5% in the EU, though this represented an increase of nearly one third compared to the year before.

Sectoral and enterprise structure

The Moldovan economy remains heavily reliant on a low-productivity agricultural sector compared with the EU, with agriculture accounting for 12.1% of GDP in 2021 compared with 1.6% in the EU. While this share has been declining in recent years, agriculture still accounts for one fifth of employment. This indicates continued low productivity in this sector: half of output is produced by small farmers (fewer than 10 hectares) most of whom are strongly subsistence-oriented. The effects of Russia's war of aggression against Ukraine such as higher prices for energy and agricultural inputs like fertiliser further threaten the competitiveness of Moldovan agriculture, as does Moldova's vulnerability to climate change and droughts. The share of services in the economy has slowly gained ground over the last 5 years, reaching 63.9% of GDP in 2021, while that of industry has correspondingly declined to 14.2%. Industry is dominated by the production of relatively unsophisticated goods, namely food and beverages followed by textiles and clothing. The share of services (56.4%) and industry (14.4%) in employment has remained largely steady since sharp increases caused by statistical adjustments that took effect in 2019.

Most businesses in Moldova (about 95%) are SMEs. While SMEs account for just under 50% of output, they employ just under 60% of workers, a share which has been gradually declining over the last 5 years. In the latest Enterprise Survey in 2019, access to finance was cited as a major constraint by about 29.4% of businesses. Other indicators from the same survey show that the proportion of surveyed businesses in Moldova in need of loans is much higher compared with the average in EU. The reported loan rejection rates and value of collateral as a percentage of the loan amount are also much higher than in the EU.

The government recently expanded the definition of a 'small and medium-sized enterprise' so that more businesses to qualify for support programmes including those managed by the Organisation for the Development of Entrepreneurship, a government agency. The Digital Transformation Programme, approved in 2022, sets out measures to support SMEs to invest in digitalising their operations.

Economic integration with the EU and price competitiveness

Moldova is a relatively open economy, closely integrated with that of the EU. Economic links between the two have strengthened since the entry into force of the Deep and Comprehensive Free Trade Area in 2016. The country's trade-to-GDP ratio was 78% in 2022, an increase of 12 percentage points over the previous five years. The stronger export performance in 2022 partly reflects re-exports to and from Ukraine as a result of reallocated trade routes. The EU is Moldova's largest trading partner, accounting for about 58.8% of the country's exports and 43.9% of its imports, which is above its regional peers. The EU's share of imports has remained steady over the last 5 years, though its share of Moldova's exports has declined from 69% in 2018 primarily as a result of the surge in exports to Ukraine in 2022 following Russia's war of aggression in February that year. Trade with other countries in the Central European Free Trade Agreement (CEFTA), of which Moldova has been a member since 2007, has remained steady at about 1% of total trade. The country has been a member of the World Trade Organization since 2001.

In 2021, the EU accounted for 36% of foreign direct investment inflows into Moldova. The EU accounts for 86.7% of the stock of foreign direct investment in Moldova.

In terms of competitiveness, while unit labour costs remain below those of its neighbours and EU Member States, low and stagnant relative productivity, rising nominal wages and currency appreciation have partly eroded this advantage in recent years.

2.4. PUBLIC PROCUREMENT, STATISTICS, FINANCIAL CONTROL

Chapter 5: Public procurement

EU rules ensure that the public procurement of goods, services and works in any Member State is transparent and open to all EU companies on the basis of non-discrimination and equal treatment.

Moldova has **some level of preparation** in the area of public procurement. **Some progress** was achieved. The Law on public private partnership and the regulation on small value procurement were adopted. The country needs to further align its legislation with the EU *acquis* in the area of public procurement, especially the laws on concessions and public-private partnerships. It also needs to adopt specific legislation on the award of defence and security procurement contracts and amend secondary public procurement legislation. The efficiency and transparency of the public procurement system needs to be improved, and the e-procurement system needs to be overhauled. Professionalisation in public procurement must be ensured.

In the coming year, Moldova should in particular:

- adopt and implement the new public procurement program including initial benchmarks, annual targets, responsibility for implementation and reporting together with the required human and budgetary resources;
- take effective steps to reduce the volume of public procurement not subject to the Law on public procurement and the Regulation on small value procurement;
- align laws on concessions and public-private partnerships with the EU *acquis*.

Institutional set-up and legal alignment

The legislation on public procurement is largely aligned with the EU *acquis*. Implementing legislation requires revision. The Ministry of Finance is preparing a new public procurement programme for 2023-2026. The new programme is expected to support further alignment of the public procurement legislation and practices with those in the EU.

The government adopted the Regulation on small value procurement in December 2022, with entry into force on 1 July 2023. The share of low-value procurement is very high (close to 50% of total public procurement value), and it lacks transparency. The Regulation imposes the obligation on contracting authorities to carry out all stages of most low-value public procurement through the State Registry of Public Procurement information system.

In April 2023, Parliament approved the draft Law on public-private partnerships in first reading. The Public Procurement Agency suffers from a high turnover of staff, partially due to working conditions. It is at the limits of its capacity to carry out its mandate to monitor public procurement. The e-procurement system's shortcomings further complicate the situation.

Implementation and enforcement capacity

In 2022, the **public procurement market** amounted to 5.02% of the country's GDP, up from 3.49% in 2021. Public procurement experienced unprecedented growth in 2022: the volume of purchases increased by 62% compared with the previous year. Contracting authorities and entities awarded public contracts worth MDL 13.68 billion (approx. EUR 700 million), MDL 5.24 billion more than in 2021. Public procurement remains one of the sectors most vulnerable to fraud and corruption, as evidenced in audits and monitoring carried out by the responsible institutions, as well as investigations by the press and civil society. To curb this trend, the Regulation on small value procurement was adopted but was ultimately limited by the increase of the original thresholds at the request of the Association of the Local Authorities. Nevertheless, the Regulation on small value procurement strengthened reporting requirements for all procurements.

In 2022, 153 public procurement procedures were monitored by the Public Procurement Agency, on a sample basis with a focus on high value procedures and negotiation without prior publication of a contract notice procedure. Detected findings from 53% of the carried-out procurement procedures were completely addressed, corrected or clarified by the contracting authorities.

Centralised government procurement is not very developed, and its practical use (mainly for medical supplies and equipment) is hampered by regulatory problems and the inadequate e-procurement system. The e-procurement system is still not fully developed, and it does not cover all types of procurement procedures nor support all the procurement cycle – from planning to executing contracts.

The country should improve the transparency of the procurement system, such as by allowing wider access to procurement documentation and especially procurement plans. Several civil society organisations have an interest in documenting public procurement and are trying to monitor it but point to the limited access to data and occasional ineffective consultations. Audits are still not focused enough on outcomes and performance, and recommendations need to be better followed up.

The **capacity to manage public procurement processes** needs to be strengthened, notably by certifying public procurement officers and training contracting authorities. Currently, public procurement is not carried out by dedicated professional administrative (sub-) units but by 'working groups' set up for a specific process and made up of officials who have other tasks as part of their main job.

Efficient remedy system

The public procurement law of July 2015 (with amendments) established a National Complaint Settlement Agency that reports to Parliament. In 2022, 1135 appeals were submitted to the Agency.

Chapter 18: Statistics

EU rules require that Member States are able to produce statistics based on professional independence, impartiality, reliability, transparency, and confidentiality. Common rules are provided for the methodology, production and dissemination of statistical information.

Moldova has **some level of preparation** in this area. The country made **limited progress** over the reporting period in several statistical areas. Further alignment of sectoral statistics with EU standards is needed, including a better use of administrative sources. Adequacy of resources and relatively small employee numbers are of concern. Data transmissions to Eurostat are limited.

In the coming period, Moldova should in particular:

- conduct the population and housing census in 2024 and the pilot census in 2023;
- ensure the National Bureau of Statistics (NBS) has adequate staffing and financial resources;
- increase production and transmission of timely and high-quality data to Eurostat

The legal framework for **statistical infrastructure**, the Law on official statistics, is built on the European Statistics Code of Practice and is designed to be aligned with the EU Regulation on European Statistics. The government approved the development strategy for the national statistical system for 2023-2030 in December 2022. The strategy provides for gradually implementing the EU *acquis* on statistics, strengthening the capacity of the national statistical system's institutions and modernising the production and dissemination of official statistics.

Further efforts are needed to strengthen the institutional capacity of the National Bureau of Statistics in terms of staffing and financial resources.

The Law on official statistics was amended in December 2022 to improve access of the National Bureau of Statistics to administrative and private data sources. The law also ensures secure access to individual data, including personal data from administrative data sources and private data sources for statistical purposes. Despite these positive developments, the Bureau should make additional efforts to access data from all institutions that are official producers of statistics. The quality of administrative data also needs to be improved.

On **classification and registers**, Moldova has been implementing NACE Rev. 2 (Statistical classification of economic activities in the European Community), CPA (Classification of products by activity), the Combined Nomenclature, PRODCOM, , GEONOM (Country nomenclature of external trade statistics and statistics of trade between Member States), ISCO-08 (International standard classification of occupations) and ISCED 2011 (International standard classification of education) with different degrees of compliance with the EU *acquis*. The country has a statistical business register and a statistical register of agricultural producers. The statistical population register is under development. No regional breakdown on NUTS-equivalent "Statistical Regions" has been agreed for Moldova by Eurostat.

On **macroeconomic statistics**, quarterly GDP is calculated at current prices and at average prices of the previous year. GDP is compiled using production and expenditures approaches.

National accounts are compiled according to the UN standard of National Accounts 2008. Quarterly sector accounts are not compiled. Due to changes to NACE Rev. 2, supply/use tables have not been compiled since 2014. Regional accounts have not been transmitted to Eurostat. Fiscal notifications for the excessive deficit procedure are not produced. In February 2023, balance sheets for financial assets and liabilities (stocks of financial instruments by sectors) were produced for the first time and compiled in line with Standard for National Accounts 2008. Moldova needs to start submitting national accounts data to Eurostat. Very limited European System of National and Regional Accounts (ESA) 2010 data is transmitted to Eurostat. The institutional arrangements for producing Government Finance Statistics need to be carefully reviewed so as to assure statistical independence in the determination of the general government sector and its operations. The National Bureau of Statistics does not calculate the harmonised index of consumer prices or the house price index.

The balance of payments framework follows the International Monetary Fund's Balance of Payments and International Investment Position Manual from 2009.

On **business statistics**, the European Business Statistics Regulation is partially implemented, but no data have been transmitted to Eurostat. PRODCOM statistics are produced in line with the European Business Statistics Regulation. Structural business statistics are implemented in line with EU Regulation.

On **social statistics**, the last housing and population census was conducted in 2014. Under the Law on population and housing census adopted in July 2022, the next census is scheduled for 2024. Demographic statistical data were transmitted to Eurostat, but improvements are needed. Moldova needs to develop statistics in the area of asylum and managed migration. Moldova has developed a roadmap to adapt EU-SILC concepts (survey on income and living conditions) to the national context. The structure of earnings survey has not been implemented yet. The labour cost survey is conducted annually, but quarterly labour cost indices are not estimated. Labour statistics are not transmitted to Eurostat. For the gradual implementation of the ESSPROS (social protection statistics), a list of social protection schemes was developed. The European health interview survey has not been carried out.

In the area of **agricultural statistics**, the last agricultural census was conducted in 2011. The upcoming population and housing census methodology includes collecting data on the use of agricultural land and livestock by households working in agriculture.

Structural and short-term **energy statistics** are produced. The NBS regularly provides Eurostat monthly oil statistics.

Chapter 32: Financial control

The EU promotes the reform of national governance systems to improve managerial accountability, sound financial management of income and expenditure, and external audit of public funds. The financial control rules further protect the EU's financial interests against fraud in the management of EU funds and the euro against counterfeiting.

Moldova is at an **early stage** of preparation on financial control. **Some progress** was achieved in the reporting period, notably the adoption and the start of implementation of the new strategy for the development of public finance management for 2023-2030. This programme plans further developing the legislative and regulatory basis and creating internal audit units in public bodies. The ongoing work in developing this area is in line with international standards and EU requirements. Resources dedicated to public internal financial control should be strengthened. Attracting and retaining qualified internal auditors

remains a challenge. The supreme audit institution has improved its strategic framework based on international recommendations. The efficiency of parliamentary oversight of public funds management needs to improve.

In the coming year, Moldova should in particular:

- implement the development strategy of the Court of Accounts;
- ratify the 1929 Geneva Convention on suppression of counterfeiting of currency;
- appoint an anti-fraud coordination body and develop an anti-fraud coordination network.

Public internal financial control

The new public finance management development strategy continues to offer the **strategic framework** for public internal financial control reforms and contains specific measures for both **internal control systems and internal audits**.

The Law on internal financial control and the Law on internal audit and supplementary regulations set out the principles for organising internal financial controls and internal audits. The national internal control standards are based on the model of the Committee of Sponsoring Organizations of the Treadway Commission.

Human capacity remains the biggest challenge for **internal control and audit** units as recognised by the Public Finance Management Reform Strategy. There are internal audit units in most central government institutions, and new units have been set up in many public entities, covering around 98% of revenue and 95.1% of expenditure. Only 62% of posts are filled. Over 65% of the internal audit units in public authorities have just one internal auditor. Lower-level public bodies do not have internal audit units. Staffing issues in the internal audit units are linked to the difficulty in attracting qualified personnel and the current level of civil servants' pay. The quality of internal audits is assessed based on an annual plan. Most public bodies have developed a quality assurance and improvement programme but implementation of these programmes is hampered by a lack of supervision.

Related to **managerial accountability**, efficient implementation of managerial accountability remains a challenge for budget users at central and local level. Public bodies report to the central harmonisation unit on implementation of the internal control and audit measures. The unit prepares a consolidated annual report and presents it to the government for approval. Although staff was increased in the reporting period additional resources are required

The capacity of the central harmonisation unit for public internal financial control strengthened during the reporting period, but the unit requires further staff.

The role of Public Internal Financial Control to combat corruption needs to be strengthened, as well as its cooperation with State Audit Institutions. The mechanism for monitoring cases which are investigated because of internal audit should be strengthened. The State Financial Inspectorate, reporting to the Ministry of Finance, has a major financial inspection role. It has more resources and power than internal audit bodies as it has the power to issue penalties.

External audit

In terms of constitutional and **legal framework**, the Court of Accounts is included in the Constitution, and the applicable law is reasonably well developed. However, some provisions of the law are undermining key parts of the Court's organisational, functional, and financial independence. The President's mandate is relatively short, which could affect their independence. The duration of the mandate should be analysed, to increase the independence of the Court.

On **institutional capacity**, the Court has a broad mandate to audit all public bodies and resources. Parliament can ask the Court to carry out other tasks, which limits the Court's control of its own resources and work programme. The Court has a new development strategy, accompanied with annual action plans based on an EU financed peer review assessment, but lacks administrative capacity.

Protection of the EU's financial interests

Legislation is not aligned with EU *acquis*. Cooperation in investigations between the European Anti-Fraud Office and the relevant national authorities takes place on a case-by-case basis. The National Anticorruption Center has been nominated as main focal point and it has provided good assistance to OLAF in the context of investigative cooperation, but it is not yet officially recognised as an anti-fraud coordination service.

Protection of the euro against counterfeiting

Moldova has yet to ratify the 1929 Geneva Convention for the suppression of counterfeiting of currency. Moldova is partially aligned with EU law on the definition of counterfeiting banknotes and coins, and with the procedures for gathering, storing and withdrawing counterfeit currency from circulation. Technical analysis and classification of counterfeit currency (both national and foreign) is currently done by the Forensic and Judicial Expertise Centre of the General Police Inspectorate (GPI). The NBM includes information on detected counterfeiting in its annual report. Reportedly, the volume of detected counterfeit banknotes of national currency in relation to the total volume in circulation remained low in 2021, no cases of detected counterfeit euro banknotes were reported.

3. GOOD NEIGHBOURLY RELATIONS AND REGIONAL COOPERATION

Moldova maintains good dialogue and actively participates in various regional cooperation platforms. These include the Central European Initiative (CEI), the Black Sea Economic Cooperation Organization (BSEC), the Organization for Democracy and Economic Development (GUAM), the Southeast European Cooperation Process (SEECP) and the Regional Cooperation Council (RCC). The country also contributes to Central European Free Trade Agreement (CEFTA). Moldova chaired the GUAM in 2022 and the BSEC in the second half of 2022 and assumed the Presidency of the CEI in January 2023.

Moldova remains committed to the format of the **Eastern Partnership**.

Moldova remains overall committed to maintaining **good bilateral relations** with other enlargement countries in the region and with neighbouring EU Member States. Following Russia's war of aggression against Ukraine, Moldova stepped up cooperation with Ukraine and Romania in the areas of humanitarian support to displaced persons from Ukraine, energy security, transport and connectivity.

The first informal ministerial meeting of the three countries took place in Odesa in September 2022. The countries signed a trilateral agreement on cooperation in the field of energy. A second meeting was held in Bucharest in April 2023, adopting a joint statement by the foreign and defence ministers in support of Ukraine's peace formula, EU enlargement and improved cooperation with NATO.

Bilateral cooperation with **Romania** intensified during the reporting period. An exceptionally high number of official visits and contacts took place, including at the highest political level. Both countries maintain good sectoral cooperation that focuses on identifying mid- and long-term solutions for energy, infrastructure, trans-border cooperation and continued

implementation of the common goals. Chişinău and Bucharest engaged in various projects to strengthen the interconnection of their energy and transport infrastructure, including through the construction of a new high-voltage electricity connection between Bălţi (Moldova) and Suceava (Romania). The two countries concluded a joint action plan on cross-border traffic at common border crossing points. In February 2023, they signed an agreement on coordinated controls at state border crossing points.

Bilateral cooperation with **Ukraine** continued to improve during the reporting period. Moldova has shown solidarity with Ukraine since the start of Russia's war of aggression, voted in favour of the relevant UN General Assembly resolutions, and aligned itself with a number of political statements in international organisations that condemn the military aggression. The country hosted and supported a large number of refugees (of which about 100 000 are still in the country) and actively supported the export of Ukrainian products under the Solidarity Lanes initiative. The President of Moldova paid several official visits to Ukraine during the reporting period, including attending the anniversary of the Bucha massacre in March 2023. Moldova's Parliament adopted a declaration recognising the Holodomor of 1932-1933 as a genocide in November 2022. In the aftermath of the Kakhovka dam destruction, the Government of Moldova offered bilateral in-kind assistance to Ukraine. The two countries, however, continue facing difficulties in cooperating on the management of the Nistru River's water resources.

Moldova continues to maintain an active political dialogue with **Georgia**, an 'Associated Trio' country. A number of high-level visits have been undertaken by officials from Chisinau and Tbilisi. Relations between the two are based on mutual support for each other's sovereignty and territorial integrity with both promoting similar approaches in regional and international platforms.

Moldova maintains good relations with the **Western Balkan** partners. It is interested in further deepening these relations and using as example the pre-accession experience of the Western Balkans in order to advance on the EU path. During the reporting period, President Sandu met with the Prime Minister of **Montenegro**, Dritan Abazovic, where both agreed to speed up signing the Agreement on Education, Science and Innovation. Bilateral cooperation with **Serbia** is being actively developed. Political dialogue is ongoing between the two countries, including in bilateral and multilateral formats. Amid concerns of alleged Russian attempts of violently overthrowing the government by using third country nationals, in February 2023 Moldova barred football fans from Serbia and Montenegro from entering the country and attending a football match. This created some tensions with both countries, who requested clarifications from Chisinau.

While Moldova does not recognise **Kosovo**^{*}, ahead of the European Political Community Summit on 1 June 2023, Moldovan Parliament amended the law on visitors from third countries who are required/exempted to have a visa when crossing the state border of Moldova. The amended law allows Kosovo representatives to obtain visas for participation in international meetings held in Moldova.

During the reporting period, Moldova marked 30 years of diplomatic relations with **Türkiye**. The two countries maintain regular and friendly high-level exchanges. The Speaker of the

^{*} This designation is without prejudice to positions on status and is in line with UNSCR 1244(1999) and the ICJ Opinion on the Kosovo declaration of independence.

Grand National Assembly of Türkiye visited Moldova, while Moldova's Minister of Foreign Affairs and European Integration met his counterpart in Türkiye. At these meetings, issues of common interest were high on the agenda, including trade, energy, security, and cooperation in the Black Sea region. During the reporting period, Türkiye was the fourth largest importer of Moldovan goods, corresponding to 7.5% of all Moldovan exports.

Following the devastating earthquakes in February 2023 and on Türkiye's request, Moldova delivered in-kind assistance and a team of rescuers, emergency vehicles and search dogs. It also participated in the International Donors' Conference 'Together for the people in Türkiye and Syria' where Moldova pledged to donate MDL 8.2 million (approx. EUR 400 000) in humanitarian aid.

4. ABILITY TO ASSUME THE OBLIGATIONS OF MEMBERSHIP

CLUSTER 2: INTERNAL MARKET

This cluster covers: free movement of goods (Chapter 1); freedom of movement for workers (Chapter 2); right of establishment and freedom to provide services (Chapter 3); free movement of capital (Chapter 4); company law (Chapter 6); intellectual property law (Chapter 7); competition policy (Chapter 8); financial services (Chapter 9); and consumer and health protection (Chapter 28). This cluster is key for Moldova's preparations for the requirements of the EU's internal market.

Moldova is in the early stages of preparation for freedom of movement for workers where it achieved limited progress. For company law Moldova is in between early stage and some level of preparations and has achieved limited progress. For free movement of capital Moldova is in between some to moderate level of preparation with some progress achieved. In all remaining areas under this cluster, namely, free movement of goods, right of establishment and freedom to provide services, free movement of capital, intellectual property law, competition policy and consumer and health protection, some level of preparation has been noted. Limited to some progress has been achieved during the reporting period in these areas, apart from financial services where good progress has been made.

Chapter 1: Free movement of goods

The free movement of goods ensures that many products can be traded freely across the EU based on common rules and procedures. Where products are governed by national rules, the principle of the free movement of goods prevents these creating unjustified barriers to trade.

Moldova has **some level of preparation** in the area of the free movement of goods. **Limited progress** was made to align with EU standards through the mechanism which provides for the adoption of EU standards within 6 months of their publication in the Official Journal of the EU.

In the coming year, the country should in particular:

- screen legislation and administrative practices in the non-harmonised areas and prepare a strategy to ensure compliance with Articles 34-36 of the Treaty on the Functioning of the European Union (TFEU) and Court of Justice of the European Union case law;
- align legislation for vehicle emissions;
- strengthen administrative capacity to implement and enforce the EU *acquis*, especially in the sectors for which it seeks to sign an Agreement on Conformity Assessment and Acceptance of Industrial Products (ACAA) with the EU.

General principles

Some parts of the general principles of the legislative and institutional framework for the free movement of goods are in place due to the AA/DCFTA. This includes alignment with the EU *acquis* on general product safety, standardisation, accreditation and conformity assessments; however, legislation is still not aligned with the latest EU *acquis* on market surveillance.

In 2022, Moldova initiated the process for an ACAA with the EU in two product sectors: (i) low voltage devices; and (ii) electromagnetic compatibility. Parliament has adopted legislation designed to be aligned with the EU *acquis* in these two sectors, although the relevant national authorities, including conformity assessment authorities, need to increase their administrative capacity.

The Ministry of Economic Development and Digitalisation imposed the obligation to use portable video surveillance systems during controls conducted by the state inspectorate for non-food products surveillance and consumer protection, in order to increase the transparency and efficiency of the institution and reduce corruption.

Non-harmonised area

Moldova has not yet taken any steps to ensure that its legislation and administrative practices are in line with **Articles 34-36 TFEU** and relevant CJEU case law. It should start this work as in several areas it will need to examine the details and decide whether to repeal the relevant laws or practices, amend them, or insert mutual recognition clauses.

Harmonised area: quality infrastructure

The Institute for **Standardisation** of the Republic of Moldova fulfils 95.66% of the requirements in Guide 22 of the European Standardisation Committee/European Electrotechnical Committee for Standardisation CEN/CENELEC. On 24 November 2022, the Institute received affiliation status with CEN/CENELEC, which entered into force on 1 January 2023. 100% of CEN/CENELEC standards and 82.63% of European Telecommunications Standards Institute (ETSI) standards have been adopted as Moldovan standards. A total of 10 264 conflicting national standards were withdrawn in 2015-2022, and work in this area continues.

The National **Metrology** Institute has been an associate member of the European Cooperation in Legal Metrology (WELMEC) since 2017 and a full member of the European Association of National Metrology Institutes (EURAMET) since 2019.

The National **Accreditation** Center of the Republic of Moldova, MOLDAC, is a signatory to the European Cooperation for Accreditation Members Multilateral Agreement (EA-MLA) and is therefore periodically assessed for continued compliance with the criteria set out in the reference standard for accreditation bodies and to maintain EA-MLA signatory status. Between 20 and 24 February 2023, MOLDAC was subject to a periodic re-evaluation which confirmed that MOLDAC operates in line with the requirements laid down in the relevant reference standard and EU *acquis* and the requirements for European accreditation bodies.

In 2022, the Agency for Consumer Protection and **Market Surveillance**, was reorganised and became the State Inspectorate for Non-food Products Surveillance and Consumer Protection (ISSPNPC)

Harmonised area: sectoral legislation

In the area of ‘**new and global approach**’ **product legislation**, while national legislation designed to be aligned with the EU *acquis* is in place on machinery, lifts, cableways, personal protective equipment, electromagnetic compatibility, low voltage, radio and telecom

equipment, gas appliances, explosive atmospheres, pressure equipment, full alignment was not achieved in the reporting period. Further effort is needed to ensure alignment with the remaining ‘new and global approach’ EU *acquis*, including outdoor equipment noise emissions, energy labelling, construction products and recreational craft.

On national legislation under the ‘**old approach**’ **product legislation**, Moldova is not aligned with EU type approval *acquis* on motor vehicles, 2/3 wheeled vehicles, agricultural tractors or non-road machinery emissions. There has been no progress on aligning with and implementing the EU Regulation on Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), or the legislation on the classification, labelling and packaging of substances and mixtures, good laboratory practice, and fertilisers and detergents.

National legislation and the national list of controlled substances are designed to be fully aligned with the EU *acquis* on **drug precursors**. On **procedural measures**, national legislation is not aligned with the EU *acquis* on firearms, crystal glass, defence procurement, medicinal products pricing and **cultural objects**. It is partly aligned with the EU *acquis* on footwear and textile labelling.

Chapter 2: Freedom of movement for workers

Citizens of one Member State have the right to work in another Member State and must be given the same working and social conditions as other workers.

Moldova is at **an early stage of preparation** in the area of freedom of movement of workers. **Limited progress** was made during the reporting period, amending legislation on the regime of foreigners and bilateral agreements on social security systems were signed or entered into force. The country will need to align its legislation with the EU *acquis*, including its interpretation of the Court of Justice of the European Union case law.

In the coming period, the country should in particular:

- work on concluding additional agreements on social security coordination, notably with EU Member States;
- undertake the preparatory work for joining the European Network of Employment Services (EURES) upon accession.

In the reporting period Moldova made limited progress in aligning its national legislation with the EU *acquis*. The law on the regime of foreigners was amended to facilitate the process for EU citizens to obtain the right of temporary residence. Professional sellers, contracted service providers and independent professionals from EU Member States are permitted to carry out activities without a temporary residence permit. In July 2023, the Parliament adopted in first reading a further amendment of the law on the regime of foreigners, that would allow EU citizens (and a number of other countries) to work in Moldova without a work permit. Third-country nationals are required to obtain the right of temporary residence from the competent authority to carry out any activity. EU citizens still have no access to posts in public administration bodies.

A total of 2 918 residence permits for work were issued between 1 June 2022 and 17 March 2023; 435 of these were issued to EU citizens.

Moldova has not completed the preparatory work needed to access the European Network of Employment Services (EURES).

Moldova does not have an occupational pension scheme (voluntary private pension schemes supplement public pensions). **EU rules on supplementary pension rights** of mobile workers are not incorporated into Moldovan law.

No national health insurance card exists due to the absence of an integrated health information system. The implementation of the **European Health Insurance Card** might therefore be challenging.

New agreements for the **bilateral coordination of social security systems** were concluded in 2022. Moldova and Spain signed a social security agreement in July 2022. In January 2023, the Agreement on Social Security between Moldova and Greece, signed in September 2021, entered into force. Signature of agreements with other Member States should be stepped up.

Chapter 3: Right of establishment and freedom to provide services

EU natural and legal persons have the right to establish themselves in any Member State and to provide cross-border services. For certain regulated professions, there are rules on mutual recognition of qualifications. EU rules on postal services focus on improving the quality of universal service, gradual market opening to competition, and the establishment of an independent regulator.

Moldova has achieved **some level of preparation** in the area of the right of establishment and freedom to provide services. **Limited progress** was made in this area during the reporting period. The legal framework needs to be brought in line with the requirements of the EU Services Directive and the EU Directive on the recognition of professional qualifications. This needs to be complemented with non-legislative measures and structural reforms, such as setting up electronic platforms and procedures, and building administrative capacity. The legislation on postal services is compliant with relevant directives, and bylaws have been adopted. The regulation on cross-border parcel delivery services still needs to be adopted.

In the coming year Moldova should:

- bring its legal framework in line with the requirements of the Directive on the recognition of professional qualifications, including Directive 2005/36/EC on recognition of professional qualifications and Directive 2018/958 on a proportionality test before adoption of new regulation of professions;
- continue aligning its legislation with the Services Directive;
- update the AA/DCFTA annex on rules applicable to postal and courier services.

Regulatory reforms have helped bring Moldova's legal framework in line with the Directive 2006/123/EC on services in the internal market, however more progress is needed to ensure full compliance. Further alignment of sectoral legislation with the Services Directive is also needed. There are no barriers to the right of establishment by foreign people and companies, and there is a single contact point for companies in operation.

Moldova is currently compliant with the requirements of all three **postal services** directives and fully opened its postal market to competition in 2021. Bylaws supporting market liberalisation have been adopted and an independent national regulatory authority has been established with staff dedicated to postal services. The designated state-owned postal service operator complies with the quality requirements established by the national regulator. There are 15 other postal operators providing services related to parcels, letters and express shipments in the market. Preparations are ongoing in the framework of the EU-Moldova AA/DCFTA process to update the Annex on rules applicable to postal and courier services

with the EU Regulation on cross-border parcel delivery services, which still needs to be implemented.

Moldova has not yet harmonised its legislation with the EU Directive on the **recognition of professional qualifications** (2005/36/EC). Further assessment of the training curricula for professions falling under the automatic recognition system is required to ensure that minimum training requirements are respected.

Chapter 4: Free movement of capital

In the EU, capital and investments must be able to move without restrictions, with common rules for cross-border payments. Banks and other economic operators apply certain rules to support the fight against money laundering and terrorist financing.

Moldova is **in between some and moderate level of preparation** in this area. **Some progress** was made following the adoption of new legislation aiming to align national legislation with the 5th Anti-Money Laundering Directive. There are still outstanding Moneyval recommendations to be implemented. National legislation was also aligned with the EU Payment Services Directive 2. Moldova is also preparing to apply for the Single Euro Payments Area (SEPA).

In the coming year, Moldova should in particular:

- align its rules with the EU Regulation on Interchange Fees for card-based payment transactions, and advance preparations to apply for the Single Euro Payments Area in line with the criteria of the European Payments Council;
- strengthen the institutional capacity of the Office for Prevention and Combating of Money Laundering in the Financial Intelligence Unit;
- implement the outstanding Moneyval recommendations, including on anti-money laundering.

The movement of capital has been gradually liberalised based on the AA/DCFTA, and the country has progressively aligned its rules with the EU *acquis*. On **capital movements and payments**, Moldova is steadily liberalising capital outflows (certain restrictions remain). Some larger capital foreign exchange operations are subject to prior notification or authorisation by the National Bank of Moldova. There are also differences between the rules on payments and transfers for residents and non-residents. Non-residents and residents who live abroad can make direct investments without authorisation. Foreign investors can acquire real estate property rights (except for agricultural and forest land) to carry out entrepreneurial activities. A countrywide system for land registration is in place, and anyone with a legitimate reason can obtain information from the real estate register.

Interchange fees for card-based payments are still exceptionally high. On alignment with the EU *acquis* on **payment systems**, national legislation is expected to be harmonised with the EU Payment Services Directive 2 when the last amendments to the national law on payment services and electronic money enter into force in mid-2024. Moldova is preparing to apply for the Single Euro Payments Area (SEPA). The Central Bank together with other authorities started a dialogue with the European Payments Council on the admission criteria and next steps towards its potential accession, benefiting from technical assistance from the Dutch and Romanian central banks.

Moldova continues to align its legislation and institutional framework on **anti-money laundering** with the EU *acquis*. Moldova adopted a law to align with the 5th Anti-Money Laundering Directive. Anti-money laundering legislation partially addresses the

recommendations of the Financial Action Task Force and relevant international legislation. There are still outstanding Moneyval recommendations to be implemented. A total of 449 suspicious transaction reports and 252 suspicious activity reports were reported in the reporting period. Moldova has adopted a national anti-money laundering/countering the financing of terrorism strategy for 2020-2025, and will update its national risk assessment, develop an accompanying action plan and publish the results. The Office for Prevention and Combating Money Laundering is under the Office of the Prime Minister but is struggling with institutional capacity and resources.

Chapter 6: Company law

The EU has common rules on the formation, registration and disclosure requirements of a company, with complementary rules for accounting and financial reporting, and statutory audit.

Moldova is in **between early stage and some level of preparation** in the area of company law. **Limited progress** was made during the reporting period, by amending national legislation to align with EU legislation on corporate remuneration policy.

In the coming year Moldova should in particular:

- strengthen the administrative capacity of the Public Service Agency;
- advance alignment with the EU *acquis* on financial reporting and audit, takeovers, single-member companies' provisions, shareholder rights, including the encouragement of long-term shareholder engagement, and on disclosure of company information;
- take further steps to improve the capacity and independence of the audit oversight systems.

In the area of **company law and corporate governance**, state registration of legal bodies and individual entrepreneurs is carried out by the Public Services Agency, although it continues to struggle with its limited administrative capacity. Moldova amended its national legislation to align with *acquis* provisions on shareholder rights regarding disclosure of remuneration policy and the remuneration report. Moldova needs to align with the *acquis* on digital tools and processes, and cross-border operations (mergers, divisions, conversions). National legislation requires further harmonisation with the *acquis* on takeovers, single-member companies, provisions related to the disclosure of private limited liability companies, and the more recent *acquis* covering shareholder rights, including the encouragement of long-term shareholder engagement, and the 2022 Directive on gender equality on boards of directors.

On **company reporting**, Moldova has achieved some alignment with the EU *acquis* on annual and consolidated financial statements and related reports, and the application of international accounting standards. Further alignment is needed including the criteria to determine company size-categories and to clearly set out the fine amounts for breaches of financial reporting requirements. There is some harmonisation with the *acquis* on **transparency** requirements for listed companies, including sanctions for non-disclosure of information on the capital market. On **statutory audit**, although national legislation is partly aligned with the EU *acquis* in this area, there are still major gaps in the rules governing the institutional set-up to ensure an independent system of oversight, investigations and penalties, with the appropriate level of administrative and financial resources.

Chapter 7: Intellectual property law

The EU has harmonised rules for the legal protection of intellectual property rights (IPR), copyright and related rights. Rules for the legal protection of IPR cover, for instance, patents

and trade marks, designs, biotechnological inventions and pharmaceuticals. Rules for the legal protection of copyright and related rights cover, for instance, books, films, software and broadcasting.

Moldova has **some level of preparation** in the area of intellectual property rights. **Limited progress** was made during the reporting period. The State Agency on Intellectual Property (AGEPI) improved cooperation with the European Union Intellectual Property Office and continued to transpose the EU *acquis*.

In the coming year, Moldova should in particular:

- draft legislation to fight counterfeiting and piracy;
- improve collective rights management to safeguard appropriate royalty payments;
- increase the administrative and institutional capacity of AGEPI and take advantage of the collaboration with the European Union Intellectual Property Office to improve legislative and enforcement alignment.

On 25 April 2023 the State Agency on Intellectual Property signed an action plan with the European Union Intellectual Property Office which envisages cooperation in several sectors. The administrative capacity of the Agency needs to increase.

The law on **copyright and related rights**, broadly aligned with EU law on copyright, was amended to further align it with the EU *acquis* and entered into force on 9 October 2022. This law aligns legislation with several EU directives. The government's 2023 action plan provides for the adoption of further amendments to the law to align with the EU *acquis* on orphan works. Moldova still faces challenges in the implementation of an effective collective rights management system, notably with regards to the transparency, accountability, collection, and distribution of monies.

In terms of **industrial property rights**, the law on the protection of patents was amended, entering into force in June 2023. The Law on the protection of industrial designs is largely aligned with Directive on the legal protection of designs.

The legal framework is largely aligned with the EU Directive on the **enforcement** of intellectual property rights, but there is no policy document dedicated to the fight against counterfeiting and piracy. There are no specialised courts dealing with intellectual property law cases. The number of counterfeit products identified rose sharply from 27 803 units in 2021 to 99 758 units in 2022.

Chapter 8: Competition policy

EU rules protect free competition. They include antitrust rules against restrictive agreements between companies and abuse of dominant position, and include rules on concentrations between companies which would significantly impede effective competition. EU rules also set out a system of State aid control. Governments are only allowed to grant State aid if restrictive conditions are met, with a view to preventing distortion of competition.

Moldova has **some level of preparation** in the area of competition policy. **Limited progress** was made during the reporting period. In April 2023, the Law on competition was amended. The Competition Council is understaffed and continues to face constraints in terms of human resources and its capacity to conduct investigations and monitor implementation of legislation.

In the coming year, Moldova should in particular:

- align the legislative framework with the *acquis* on antitrust, mergers and State aid;

- increase the transparency of State aid granted by the government and further align State aid schemes in place with the EU *acquis*, including those applied in free economic zones;
- strengthen the administrative and institutional capacity of the Competition Council.

Antitrust and mergers

On the **legislative framework**, Moldova's legislation is broadly aligned with the EU *acquis* on antitrust and merger control. The new Competition law, adopted in July 2023 largely mirrors the provisions of the Treaty on the Functioning of the European Union (TFEU) on restrictive agreements and on abuse of dominant position. It also provides for *ex-ante* monitoring of the effects on competition of mergers above certain turnover thresholds, largely in line with the principles of the EU Merger Regulation. Implementing legislation provides further rules, which broadly aim to follow the EU *acquis*. However, further alignment is needed with EU competition policy, especially with regards to the dismissal of the members of the Board of the Competition Council and the level of the fines which can be imposed.

As regards the **institutional framework**, the Competition Council is an independent body with exclusive competencies in competition policy. It is accountable to the Parliament and financed by the State budget. It is a collegial body of five members, appointed for a five-year term by the Parliament.

On **enforcement capacity**, the Competition Council's institutional capacity needs to be further strengthened to ensure legislation is enforced.

On **implementation**, the Competition Council increased its activities. The number of investigations which led to a finding of a violation of the provisions of the competition law remained constant (10 investigations).

State aid

Regarding the **legislative framework**, the Law on State aid is broadly aligned with Articles 107 and 108 TFEU. EU State aid guidelines, regulations and communications are partially aligned. However, certain existing State aid schemes still need to be aligned with the EU *acquis*, including those regarding free economic zones. Moreover, aid to repair damage caused by natural disasters or exceptional occurrences is considered compatible without the need for prior notification. This is not in line with EU law, which requires such measures to be notified.

Regarding the **institutional framework**, the Competition Council also ensures consistent implementation of State aid law. The Competition Council is empowered to screen and authorise State aid measures and can order the recovery of State aid that has been unlawfully granted. It publishes reports on aid granted on its website and runs the automated State aid register information system, where measures are reported annually by grantors.

As regards **enforcement capacity**, the Competition Council is understaffed (only 9 of 25 posts are occupied due to low salaries). Its administrative capacity needs to be strengthened with additional staff and relevant training.

On **implementation**, there were two decisions adopted in the reporting period on State aid related to illegal aid given by local authorities to local companies. The AA requires Moldova to align its general State aid schemes with the EU *acquis* by 2022 and those covering free economic zones by 2024. A total of 158 of the 173 State aid schemes covered by the commitments under the Moldova-EU AA were aligned by 31 December 2022. Moldova needs to make progress with respect to the remaining schemes.

Liberalisation

The Competition law and the Law on State aid law apply to public companies and companies with special or exclusive rights. The Law on State aid law provides that companies entrusted with the performance of services of general economic interest will be considered when assessing the compatibility of the State aid granted to perform such services.

Chapter 9: Financial services

EU rules aim to ensure fair competition among, and the stability of, financial institutions, namely banking, insurance, supplementary pensions, investment services and securities markets. They include rules on authorisation, operation and supervision of these institutions.

Moldova **has some level of preparation** in the area of financial services. It made **good progress** by partially aligning legislation with the EU's Solvency II Insurance Directive and the Motor Insurance Directive. The country should make further efforts to align with the financial services acquis, focusing on the priorities identified based on the current state of play.

In the coming year, Moldova should in particular:

- implement the outstanding legislation on financial sector supervision that transfers the supervisory role over the insurance sector, non-bank financial institutions, savings and credit associations and credit history bureaux to the National Bank of Moldova;
- continue efforts in alignment with the EU acquis related to the regulation of banking and insurance sectors (including bank resolution and bank deposits guarantee schemes) and to the regulation of securities markets, investment funds and investment services.

On **banks and financial conglomerates**, the National Bank continues the development of the banking sector prudential regulatory and supervisory framework, which is based on the current EU Capital Requirements Regulation and Directive.

Although Moldova has introduced rules for investment firms governing capital adequacy, the requirements related to risk are not in place. Efforts are under way to close the gaps in the macroprudential framework, including by amending the Law of the National Bank of Moldova to give the Bank an explicit legal mandate for financial stability.

To strengthen financial stability, starting from 1 July 2023, the NBM took over some of the supervisory responsibilities for non-bank financial institutions and insurance companies from the National Committee for Financial Markets. However, the NBM needs to ensure that it is adequately staffed and prepared to carry out these additional responsibilities.

The current Deposit Guarantee Scheme protects depositors from loss on insured deposits in case of a bank failure. It covers up to MDL 50 000 (around EUR 2 500), far below the coverage of up to EUR 100 000 per depositor and bank prescribed by EU law. The Parliament has adopted in April 2023 in first reading legislation aiming to partially align with the EU Directive on deposit guarantee schemes. This will increase the maximum insured deposit value to MDL 200 000.

Moldova has a recovery and resolution framework with similar tools, resolution powers and safeguards to those under the EU's Bank Recovery and Resolution Directive. The framework is based on the 'no creditor worse off' principle. Moldova has established a resolution fund financed with annual contributions from the banks. The target level for the resolution fund has been set at 3% of guaranteed deposits, which needs to be achieved by the end of 2024.

On **insurance and occupational pensions** in the reporting period, supervisory powers over the insurance market, non-bank credit organisations and the activity of credit bureaux and savings and credit associations were transferred from the National Commission for the Financial Market to the National Bank. This transfer occurred as part of the reform of supervisory functions in the financial sector.

Pillar II and Pillar III of the EU Solvency II Directive came into force in 2023. There is a transitional period of 5 years to comply with minimum capital requirements. There are no occupational pension funds. A regulation was adopted in May 2023 on shareholdings in the share capital of insurance or reinsurance companies, requirements applicable to persons with management positions in a third country. Moldovan law is broadly aligned with the EU Directive on distance marketing of financial services, which protects consumers rights. A balance sheet review for all insurers is envisaged to evaluate their readiness for the subsequent implementation of Pillar I. Consumer protection in financial services is lacking and not properly addressed in legislation. In addition, Moldovan law is broadly aligned with the revised Directive on Institutions for Occupational Retirement Provision although a voluntary pension fund should be implemented. The reform of supervisory functions in financial sector envisages the transfer of supervisory powers in the fields of insurance market, the non-bank credit organisation, the activity of the credit bureaux, savings and credit associations to the National Bank.

As regards **financial market infrastructure**, Moldova has adopted some important parts of the *acquis*, along with relevant parts of the European Directives MiFID I and II on Securities Markets and Investment Services. It has a small, regulated capital market and one Multilateral Trading Facility, operated by the Stock Exchange, although no investment firm holds a trading license.

On **securities markets and investment services**, the national legislative framework governing collective investment management is broadly aligned with the EU *acquis*. There are no rules for some products, for example long-term investment funds, venture capital funds and social entrepreneurship funds. At the current stage, no new developments are envisaged.

On **sustainable and digital finance**, a national sustainable finance strategy has yet to be developed. The National Bank has started to raise awareness about environmental risks and sustainable finance by including it in its 2021 Financial Stability Report. Sustainable finance is considered in the strategic plan of the National Bank (NBM 2025) in order to strengthen the NBM supervisory function and promote sustainable development.

There is still no single platform or body to coordinate the digitalisation of the financial system, and the National Bank has yet to develop a digital finance strategy. Virtual assets are not a recognised form of electronic currency under the Law on payment services and electronic money, and any activity to issue or trade them is not subject to regulation and supervision by the National Bank. The national Law on anti-money laundering and countering the financing of terrorism sets out certain restrictions on crypto assets.

Chapter 28: Consumer and health protection

EU rules protect consumers' economic interests and in relation to product safety, dangerous imitations and liability for defective products. The EU also ensures high common standards for tobacco control, blood, tissues, cells and organs, and medicines for human and veterinary use. The EU also has rules for upholding patients' rights in cross-border healthcare and in preparing for and responding to cross-border health threats, including communicable diseases.

Moldova **has some level of preparation** in aligning with the EU *acquis* in this area. **Limited progress** was made during the reporting period, particularly on alignment with the *acquis* on tobacco control.

In the coming year, Moldova should in particular:

- implement the national health strategy, including e-health;
- intensify efforts on tobacco control by implementing the provisions of the Protocol to Eliminate Illicit Trade in Tobacco Products effectively;
- align the legal framework with the *acquis* on consumer protection and product safety, and improve cooperation between the public institutions dealing with consumer protection.

Consumer protection

The AA/DCFTA provides for aligning national consumer and health protection legislation and standards with those of the EU. Moldova's Law on **consumer protection** is partially aligned with the EU *acquis*. It provides the general requirements for protecting consumers and the framework for unrestricted access to products and services. It is not aligned with the *acquis* on consumer protection cooperation, with the new rules on digital content, or with the revised rules on the sale of goods and the latest changes to EU consumer legislation introduced by Directive (EU) 2019/2161.

There has been no further progress in aligning with the *acquis* on consumer protection. Moldova is not aligned with the EU *acquis* on out-of-court dispute resolution (ADR). Moldova should align with the ADR *acquis* (Directive 2013/11) in order to establish a competent authority for ADR to ensure that ADR entities comply with the given quality requirements.

On **product safety**, Moldova's legal framework is partly aligned with the EU *acquis*. In 2022, the main body responsible for market surveillance, the Agency for Consumer Protection and Market Surveillance, was reorganised and became the State Inspectorate for Non-food Products Surveillance and Consumer Protection (ISSPNPC), an administrative authority subordinate to the Ministry of Economic Development and Digitalization. It currently has 63 staff. In the reporting period the Inspectorate conducted 2 178 inspections and identified 1 862 cases of non-compliance. The highest number of cases of non-compliance were in the packaging and waste packaging sector. On 27 January 2023, the ISSPNPC and the customs service signed a cooperation action plan to ensure an interoperability mechanism between them which will allow joint inspections.

Public health

As regards **public health**, on 14 June 2023, the Government approved the health 2030 strategy, oriented towards the modernisation and long-term development of the health system. There was some progress in the implementation of its 2016-2025 strategy for the development of human resources in health. In February 2023, Moldova joined the EU4Health programme. Low levels of digitalisation in the sector are a barrier to collecting statistical data. There has been limited progress in developing an **e-health** legal framework, and there is no e-health strategy in place. In December 2022, an IT system for the surveillance of communicable diseases and public health events was introduced to improve the collection and reporting of data on registered cases. The prevalence rate of modern contraceptives among women is 38.1%, and the unmet family planning needs of women of reproductive age (15-49) is 16.9%. Women and girls, especially those in vulnerable situations, face stigma and discrimination, which hamper realising their sexual and reproductive health rights. Not all

facilities that provide sexual and reproductive health services are physically accessible to those women and often lack gynaecological examination rooms and equipment.

The national development strategy ‘Moldova 2030’, aims to ensure universal access to sexual and reproductive health services, including for family planning, information and education and to include comprehensive sexual education in the school curriculum.

On **tobacco control**, Moldova is a party to the relevant WHO framework convention on tobacco control and signed the Protocol to Eliminate Illicit Trade in Tobacco Products. In February 2023, Parliament adopted legislative amendments to ensure implementation of the protocol. National legislation has been amended to partially align it with the *acquis* on tobacco products and on the withdrawal of certain exemptions for heated tobacco products.

There are 40 community **mental health** centres in the country, offering medical assistance and psychosocial rehabilitation, support and mediation services.

In March 2023, the government approved the 2023-2027 national programme for the prevention and control of priority **non-communicable diseases**.

Moldova has a system in place to ensure **patients’ rights in cross-border healthcare** and has a legal basis that is partially aligned with the EU *acquis* on the rights of citizens receiving healthcare abroad. There are no legal provisions on healthcare for EU Member State nationals.

On **communicable diseases**, Moldova is partially aligned with the EU *acquis*. In April 2023, the government approved the 2023-2027 national immunisation programme and the 2023-2027 action plan on the implementation of the international sanitary regulations. The 2022-2025 national programme for prevention and control of HIV and sexually transmitted infections is being implemented.

On **cancer screening**, Moldova has a national cancer control programme (2016-2025) which is currently being implemented, as well as other programmes using population-based screenings. The country does not yet have a national programme on **rare diseases**.

National legislation is partially aligned with the *acquis* on **medicines for human use and medicines for veterinary use**. National procedures for the state registration of veterinary medical products are in place, and 977 items had been registered by March 2023. Moldova is partially aligned with the *acquis* on **medical devices**. Legislation is partially aligned with the *acquis* on **cosmetics**.

The legal framework regulating **blood, tissues, cells and organs** is partially aligned with the EU *acquis*, although legislation on medically assisted reproduction is being redrafted. There are only two tissue banks, and a single private centre working with haematopoietic stem cells and assisted reproduction.

Measures on **drug abuse prevention and harm reduction** are set out in the Law on the circulation of narcotic and psychotropic substances and precursors. It lays down general rules and restrictions on the circulation of drugs and is designed to be aligned with the UN conventions on drugs rather than the EU *acquis*. National legislation on preventing **alcohol abuse** is partially aligned with the EU *acquis*. In addition, legislation to protect workers from adverse health effects from **exposure to electromagnetic fields** in their work environment is designed to be aligned with the EU *acquis*.

On **health inequalities**, the law on mandatory health insurance provides for state-guaranteed insurance for certain categories of unemployed people residing in Moldova and registered with the competent institutions. The 2022-2025 national programme for the prevention and

control of HIV and sexually transmitted infections sets out provisions for universal access to rights-based and people-centred prevention, testing, diagnosis, treatment and support. There are also some health-related provisions on LGBTIQI people in the Law on equality.

In July 2022, the Ministry of Health approved an anticorruption action plan in the health sector, for the period 2022-2023, but health sector corruption remains widespread.

CLUSTER 3: COMPETITIVENESS AND INCLUSIVE GROWTH

This cluster covers: digital transformation and media (Chapter 10); taxation (Chapter 16); economic and monetary policy (Chapter 17); social policy and employment (Chapter 19); enterprise and industrial policy (Chapter 20), science and research (Chapter 25); education and culture (Chapter 26); and customs union (Chapter 29).

Moldova has achieved some level of preparation in digital transformation and media, taxation, economic and monetary policy, social policy and employment, enterprise and industrial policy as well as education and culture. It made good progress in digital transformation and media and taxation. In economic and monetary policy, social policy and employment, enterprise and industrial policy and education and culture it made some progress. The country is moderately prepared in science and research where it has achieved some progress during the reporting period. In customs union, Moldova is between some and moderate levels of preparation and has achieved some progress.

Chapter 10: Digital transformation and media

The EU supports the smooth functioning of the internal market for electronic communications, electronic commerce and audiovisual services. The rules protect consumers and support the universal availability of modern services.

Moldova has achieved **some level of preparation** in the area of digital transformation and media. **Good progress** was made during the reporting period. The comprehensive digital transformation strategy for 2023-2030 was drafted through public consultation setting out a countrywide action plan. The Law on electronic identification and trust services has entered into force and is broadly aligned with the relevant EU *acquis*. The cybersecurity framework has been strengthened through passing the Law on cybersecurity, adopted during the reporting period, but Moldova needs to start implementing the law. Moldova needs to align its legal framework with the Electronic Communications Code, and EU best practice on media need to be more widespread. Implementing legislation also including the laws on freedom of expression, personal data protection and access to information, need to be amended to align with the EU *acquis*.

In the coming year, Moldova should in particular:

- align with and implement the EU Roaming Regulation and other relevant EU *acquis* in the field of telecoms;
- adopt the Digital Transformation Strategy 2023–2030 and ensure the institutional capacity to implement it;
- adopt and implement market instruments to ensure anti-cartel measures and the de-oligarchisation of the media market.

In the field of electronic communications and information and communication technology, Moldovan law needs to be aligned with the EU Electronic Communications Code.

Connectivity gaps remain, and approximately 39% of people do not use the internet. The national development strategy, 'Moldova 2030', has the specific objective of 'Ensuring universal access to the internet and electronic services'.

On **information society services**, no authority currently has responsibility for open data policies. There is some alignment with GDPR and eID and ePrivacy legislation. There is broad alignment with the Directive on e-commerce. Moldova is not aligned with the EU *acquis* on geo-blocking, platform-to-business relations (P2B), the Digital Services Act and the Digital Markets Act.

In the area of **digital transformation**, implementation of the now expired Digital Moldova 2020 strategy has been only partially successful. Only 6 of the 12 targets set in the strategy have been achieved. There were particularly weak results in the share of public services available online (12% vs the 100% objective) and in the level of acceptance of electronic public services (49% vs the 70% objective). Several reasons have led to these results, including limited financial resources and project management and institutional implementation capacity.

Moldova's comprehensive digital transformation strategy for 2023-2030 was adopted in September 2023. The strategy aims to create a resilient, innovative, and digital economy by targeting technology start-ups with international growth ambitions and businesses in the ICT sector. To support the implementation of the new strategy, Moldova should also set up a governance body (the National Digital Transformation Council) with public and private stakeholders, civil society and experts and a working group to draw up the programme for the further development of the ICT industry and the digital economy.

Progress has been achieved in making electronic public services available through the Public Services Portal. It is a single point of access for individuals and organisations to information on the 252 online public administrative services. The e-Governance Agency is implementing a project, Unified Public Service Centres (CUPS), which offers common access points to a wide range of public services in electronic format.

Progress has been made on ensuring that trust and security services for creating and validating electronic signatures in the country are compatible with the EU's electronic identification, authentication and trust services (eIDAS). The Law on electronic identification and trust services entered into force on 10 December 2022. It sets out the legal framework for electronic signatures, electronic seals, electronic time stamps, electronic documents, registered electronic distribution services and certification services for authenticating web pages. It is partially aligned with EU Regulation on electronic identification and trust services for electronic transactions in the internal market. Moldova should join the "Third Countries' trusted list," which facilitates the validation of electronic signatures or seals created in Third Countries as advanced electronic signatures and seals in EU Member States, as a first step towards pursuing mutual recognition of qualified trust services once the new eIDAS Regulation is adopted.

On **cybersecurity**, the Information Technology and Cybersecurity Service is the government's computer security incident response team. It provides the administration, maintenance and development of public authorities' IT infrastructure and telecommunications systems.

The Law on cybersecurity, adopted on 16 March 2023, sets out a strengthened cybersecurity framework. The law gives the government nine months to set up a competent authority on cybersecurity and national computer incident response teams and will enter into force on 1 January 2025.

On **audiovisual policy**, the Audiovisual Council is the only regulatory body in the media sector and only covers TV and radio and not online media.

Parliament delayed implementing the Council of Europe's recommendations on appointing and dismissing members of the boards of the Audiovisual Council and the public broadcaster (TRM). Currently, by rejecting the annual report of the Audiovisual Council and TRM, the Parliament can dismiss the members of those boards. According to the Council of Europe, this could create a de facto political control over the regulatory council and public broadcaster. This is not in line with the EU Audiovisual Media Services Directive, which sets out that appointment and dismissal procedures must 'guarantee the requisite degree of independence'. Parliament should implement the Council of Europe's recommendations to strengthen the independence of the Audiovisual Council and TRM.

There are no rules on online media ownership. On 2 June 2022, Parliament amended the Law on audiovisual media services to include the concept of 'disinformation'. The prohibitions in the law on broadcast or retransmission of programmes with informative analytical, military and political content are not in line with the EU Audiovisual Media Services Directive.

Media literacy (or media education) is an optional subject in primary and secondary schools. It is mainly promoted by media NGOs, such as the Independent Journalism Centre and the EU's strategic communication and media support project.

Chapter 16: Taxation

EU rules on taxation cover value-added tax, excise duties and aspects of corporate taxation. They also deal with cooperation between tax administrations, including the exchange of information to prevent tax evasion.

Moldova has **some level of preparation** in the area of taxation. **Good progress** was made by harmonising policies to prevent and fight fraud and the smuggling of excisable goods and providing mutual administrative assistance. Moldova also joined the EU Fiscalis programme.

In the coming year, Moldova should in particular:

- harmonise excise duties and VAT regulations with the EU *acquis*, particularly the structure, exemptions and deductions, special schemes and scope of reduced rates;
- prepare to join the inclusive framework on base erosion and profit shifting to limit tax avoidance and increase tax revenue;
- strengthen the administrative and operational capacity of the tax administration, in particular by boosting digitalisation and automation to ensure a proper degree of preparation for interconnection and interoperability with EU systems.

On **indirect taxation**, the legislation on VAT and excise duties is partially aligned with EU *acquis*, thanks to the commitments under the AA/DCFTA. Goods and services subject to reduced VAT rates or exemptions are different from those in the EU VAT Directive. No alignment has been made with the 13th VAT Directive (refunds to non-EC taxable persons). Despite improvements made through amendments to the Tax Code in December 2022, arrears continue to accumulate in the VAT refund process. Moldova did process 3 241 claims by the set deadline, which shows some progress in this area.

On 1 January 2023, excise duty rates on tobacco products increased by 25%, but they are still below the minimum rates the EU has set to be achieved by 2025. The weighted average retail price for excise taxation is not calculated as required under Directive 2011/64/EU. Excise

duties on alcohol products are partially aligned with the EU as there has been a 15% increase in the rate. There has been no progress in harmonising excise duties on energy products, natural gas and electricity are not subject to any excise duty. Moldova has yet to implement fiscal marking of gas oils and kerosene. Some progress was made in counteracting and fighting fraud and the smuggling of excisable products. Moldova started to implement the WHO Protocol to Eliminate Illicit Trade in Tobacco Products, including aligning its tobacco control legislation with the EU Tobacco Products Directive, which included the introduction of licensing and record-keeping requirements for tobacco manufacturing. Moldova has yet to adopt the EU system of tax warehousing for excise duty suspension and the Excise Movement Control System.

On **direct taxation**, from January 2023 banks withhold a 12% tax from income in the form of interest and/or capital growth from state securities obtained by individuals and 7% from income in the form of interest from bank deposits. Moldova does not provide deferral of taxation for status changes, such as those set out in the Merger Directive, and the rules on consolidation of companies for tax purposes differ from those in the EU.

The country has also adopted rules on transfer pricing (according to the arm's length principle), which are expected to enter into force on 1 January 2024. According to the Tax Code, these rules must be applied in line with the OECD Transfer Pricing Guidelines.

On **administrative cooperation and mutual assistance**, Moldova has signed double taxation agreements with 21 EU Member States (except Belgium, Denmark, Hungary, Sweden, France and Germany). It has also ratified the Multilateral Agreement of the Competent Authorities for the Automatic Exchange of Information on Financial Accounts. The country is not yet a member of the inclusive framework on base erosion and profit shifting and has not signed OECD's October 2021 Statement on a Two-Pillar Solution to Address the Tax Challenges Arising from the Digitalisation of the Economy and no formal steps for joining this framework have taken place so far.

On **operational capacity and computerisation**, the tax administration has improved its communication and services to taxpayers (including electronic tax return declarations). However, significant efforts are needed to tackle: (i) outdated IT systems; (ii) the lack of automated risk management and data exchange systems for compliance risk management and tax audits (e.g., no automated risk-based approach in VAT refunds); and (iii) the inadequate taxpayer register, which relies too much on other authorities. There is still no technical capacity or IT strategy to prepare for interconnectivity and interoperability with **EU IT systems** (such as the Excise Movement Control System and the VAT Information Exchange System).

Efforts to combat tax evasion, particularly VAT and excise duties, have led to improved tax collection in recent years. For example, in 2022, tax collection increased by 18.6% year-on-year, also on the back of the high inflation. With the public management strategy for 2023-2030 adopted in February 2023, the country has committed to strengthen the tax administration's capacity. It will do this by simplifying processes and boosting automation and digitalisation of risk management and services for taxpayers. In the reporting period, Moldova joined the EU's 2023-2027 Fiscalis programme.

Chapter 17: Economic and monetary policy

EU rules require the independence of central banks and prohibit them from directly financing the public sector. Member States coordinate their economic policies and are subject to fiscal, economic and financial surveillance.

The country has **some level of preparation** in the area of economic and monetary policy. **Some progress** was made in the reporting period, namely: (i) the adoption of the new public finance management reform programme; (ii) a new regulation on public investment management; and (iii) a package of legislative amendments to strengthen the institutional autonomy and governance of the central bank. Moldova also strengthened the central bank's capacity as part of the financial sector supervision reform.

In the coming year, Moldova should in particular:

- strengthen the independence of the central bank and align the prohibition of monetising public debt with EU rules;
- improve budget execution, in particular of capital investments, by applying the project pipeline to identify public investment projects eligible for funding;
- improve budgetary transparency and macroeconomic decision-making by aligning with the requirements of the European System of National and Regional Accounts (ESA 2010) and take steps towards creating an independent fiscal council.

On **monetary and exchange rate policy** the National Bank of Moldova (NBM) ensures and maintains price stability in line with the EU monetary policy framework. It is equipped with regulatory powers and instruments, including the ability to implement its monetary policy objectives through direct inflation targeting. Moldova adopted a number of legislative amendments in December 2022 to further safeguard the independence of the NBM. Additional reforms should be introduced in this area, specifically to ensure that the mandates for members of the Supervisory Board are renewed in a staggered manner. The NBM may not monetise public debt by purchasing government securities or providing loans to state bodies. It is nevertheless required to roll over a relatively small amount of legacy loans previously provided to the state, which is not in line with EU rules prohibiting the direct monetisation of public debt.

In the area of **economic policy**, Moldova adopted a new 7-year public finance management development strategy. The medium-term budgetary framework covers a 3-year period, which supports fiscal discipline and accurate macroeconomic, budgetary and public debt projections. In recent years, there have been considerable challenges with budget planning and preparation. Moldova's capital expenditure has persistently shown a significant level of under-execution, which weighs on the credibility of the budget and efficient use of resources. The project pipeline approach was adopted in October 2022 but has yet to be applied.

Moldova has yet to set up an independent fiscal council to improve fiscal policy-making, although its creation was promised by the authorities as a long-term goal during the Public Finance Management Policy Dialogue in May 2023. The country is not yet fully in line with the EU's integrated surveillance framework, in particular regarding the identification and assessment of fiscal risks stemming from the large state-owned enterprises sector. Furthermore, insufficient administrative capacity and public sector transparency weighs on the effective implementation and coordination of economic policy.

Moldova does not report general government sector data in line with ESA 2010, as national accounts are still compiled according to SNA 2008, which hinders macroeconomic policymaking and budgetary transparency. The underlying statistical framework needs to be aligned with ESA 2010 requirements and definitions, and accounting rules and procedures need to be consistently applied across general government subsectors.

Moldova has requested to participate in the 2024-2025 **economic reform programme** process. This will require significant additional resources and coordination efforts.

Chapter 19: Social policy and employment

EU rules in the social field include minimum standards for labour law, equality, health and safety at work and non-discrimination. They also promote social dialogue at EU level.

The country **has some level of preparation** in the area of social policy and employment and has made **some progress** during the reporting period.

In the coming year, the country should in particular:

- further develop, adopt and implement the measures set out in the concept paper on reforming the National Employment Agency, ensuring adequate capacity and setting up a monitoring and evaluation system;
- reform social assistance, with stronger links to employment;
- take concrete steps to strengthen the mandate and administrative and institutional capacity of the State Labour Inspectorate.

Over the last year Moldova adopted several changes in the area of labour law. In July 2022, Parliament approved amendments to **the Labour Code**. Newly adopted legislation introduced flexible working arrangements offering employees the chance to adapt their work schedule. In July 2022, the government unified the minimum wage for the private and public sectors. On 1 January 2023, the minimum wage increased from MDL 3 500 to MDL 4 000 (EUR 175-200). In June 2023, Moldova also adopted a Declaration on improving social policy and on adhesion to the European Pillar of Social Rights.

To reduce the rate of undeclared work, amendments were introduced to the Law on the status of occasional workers. The amendments shifted the obligation to pay social contributions for occasional workers from the worker to the employer and extended the maximum number of days that day labourers can work in a year, from 90 to 120. They also allow day labourers to simultaneously be registered as unemployed to encourage formal work and lay down that day labourers may not earn less than the legal minimum wage for one day of work (8 hours).

On health and safety at work there have been no legislative developments.

In 2022, the State Labour Inspectorate only detected 82 cases of undeclared work (80 in 2021), the lowest numbers in the last 12 years. As of March 2023, the State Labour Inspectorate has been given additional powers including the right to conduct unannounced visits, although only limited to cases of undeclared work, under-declared work, human trafficking and labour exploitation. As of July 2023, the law also gave the Inspectorate back the right to impose penalties directly (without the need to transfer cases to court) for cases of undeclared work and under-declared work.

In July 2022, the social partners and the government signed a new national tripartite agreement on the development and promotion of **social dialogue**. In the agreement, the government committed to consult social partners on all social and economic legislation and strengthen tripartite consultation. Capacity building of social partners needs to continue.

Despite economic headwinds, the labour market recovered from the pandemic, although significant structural challenges persist. The number of employed people increased by 1.8% in the fourth quarter of 2022 from a year before. The structurally low **employment rate** (among the population aged 15 years and over) rose slightly to 40.5% in 2022 but remains well below the EU average of 54.1% in 2022. Informal employment in agriculture, construction and trade is estimated to be more than 22% of the total. Moldova's **unemployment rate** has been persistently low, which partly reflects the low participation in

the labour force and the substantial share of self-employed workers. Due to the economic decline and the increase in the size of the labour force in 2022 (including people fleeing Russia's war of aggression against Ukraine), the unemployment rate rose to 4.6% in the fourth quarter of 2022, up from 2.6% a year before.

On **employment policy**, the government adopted in November 2022 a national employment programme for 2022-2026. Among others, the programme aims to expand the number of women in employment. There is a need to set up a monitoring and evaluation system for employment services. Implementation began of some parts of the Youth Guarantee.

The National Employment Agency has limited capacity to implement the 2019 employment law and some of the new active labour measures, notably the support to self-employment and support for creation of jobs in rural areas. Comprehensive staff development programmes need to be established and applied as a regular activity of the Agency.

Moderate progress was made in the field of **social inclusion and protection**. In July 2022, the Parliament adopted the Law on the Energy Vulnerability Reduction Fund to tackle the impact of the energy crisis on the population. Around 800 000 households (out of 1.2 million) registered on a platform and received compensation. As part of the winter aid programme, approximately 273 000 people benefited from financial support from November 2022 to March 2023.

In September 2022, the government changed the process for accessing social aid (including minimum income benefit) to stimulate the employment of people available to work, encourage formal employment and target families with children. In 2022, approximately 70 000 families benefited from social aid. Although the absolute poverty rate is 24.5%, only 3.4% of the population get the social benefit and only 12.8% get the cold season benefit. The child allowance and social benefit contribute only 4.1 percentage points to the reduction of poverty among households with children. 24.4% of children are poor, and 8.9% suffer from extreme poverty.

The government approved the national programme for child protection for 2022-2026 and its action plan in June 2022. It aims to strengthen the child protection system to respond promptly and effectively to children's needs. The programme is supported by a commitment to increase the families and child protection budget from 3.3% of the national budget and 1.1% of GDP in 2020 to 6.6% and 2.2%, respectively, in 2026. This aims to reduce the rate of extreme poverty among children from 11.3% in 2019 to 8.5% in 2026.

A social assistance IT system is in place, managed by the Ministry of Labour and Social Protection. In 2022, the IT system was integrated into Moldova's interoperability platform mConnect, which automates the examination of social and winter aid applications. In June 2022, the government approved plans for an information system for the child protection sector. This aims to digitalise the child protection authority's activities and facilitate exchanges between the relevant state institutions.

In March 2023 the Ministry of Labour and Social Protection announced a reform of the social system "RESTART" for 2023-2026 in order to reduce poverty and prepare the system for accession. The reform also includes actions related to increasing the efficiency and performance of the social public institutions and combating corruption. The reform should address the administrative capacity of the social assistance system, the regional inequalities in terms of providing social services, increasing access, and improving cost-efficiency of the system. This reform should have stronger links to employment activation. On **equal treatment and non-discrimination** there are around 168,000 persons with disabilities. The national program for the deinstitutionalisation of people with disabilities continued.

Concerning equality between women and men in employment and social policy. The gender pay gap in Moldova is 14%. The number of female MPs in Parliament fell slightly from 41 in 2021 to 39 in 2023. The 2023-2027 programme for promoting and ensuring equality between women and men was approved in April 2023. It aims to reduce the gender pay gap, increase social protection for people involved in the long-term care of family members by creating new support services, promote women in management positions and in decision-making. In November 2022, the Ministry of Labour and Social Protection approved the Regulation on the procedure for prevention, examination and reporting of sexual harassment cases. In July 2022, Parliament adopted the Law on regulating flexible work arrangements and extending the benefit period of parental leave.

Chapter 20: Enterprise and industrial policy

EU enterprise and industrial policy strengthens competitiveness, facilitates structural change and encourages a business-friendly environment that stimulates small and medium-sized enterprises (SMEs).

Moldova **has some level of preparation** in the area of enterprise and industrial policy. **Some progress** was made during the reporting period. Moldova has adopted a new national development strategy until 2030 and a national development plan 2023-25 that expresses its industrial strategy. The country needs to better align its legislation with the EU Late Payment Directive and make the business environment more attractive, notably for inward foreign direct investment.

In the coming year, Moldova should in particular:

- start implementing the national programme for the promotion of entrepreneurship and increasing competitiveness for 2023-26, the national industrialisation programme for 2023-2027, and the national strategy for the development of the economy;
- reduce the administrative burden by enacting available proposals to cut red tape, simplify, and digitalise processes;
- accelerate the implementation of the strategy on the management of state property, state enterprises and entities with state capital, and delineate the role of the Ministry of Economic Development and Digitalisation in regulatory and policy-making functions and the role of the Public Property Agency in exercising corporate governance functions with respect to SOEs.

On **enterprise and industrial policy principles**, Moldova bases its development strategy on the twin green and digital transitions and the driving forces of foreign direct investment in industry and on SMEs, notably innovative start-ups in manufacturing. Efforts are now geared towards innovation, where it performs well for its level of development, digital transformation and the green economy.

Moldova has adopted a new national development strategy until 2030 and a national development plan 2023-25. Both express the country's industry strategy. The objectives of these documents include elements of the association agenda and EU industry strategy adapted to the conditions of its industry.

Investment aims mainly at infrastructure and internationalisation, support measures strongly focus on SMEs, which drive industrial development, including towards the twin transition, social entrepreneurship, smart specialisation and improving their innovation capacity. The extent to which the objective of reforming the judiciary includes its commercial part remains to be seen. Further objectives towards improving the business environment seem to be part of the 2030 strategy, notably the reduction of the informal economy. Proposals to reduce the

administrative burden, in consultations notably with enterprises and by exploiting digitalisation, are available.

On **enterprise and industrial policy instruments**, in the reporting period, the government approved several new SME support programmes such as the re-technologisation and energy efficiency, the SMEs digital transformation and the rural tourism programmes. Other programmes were redesigned to better correspond to SMEs' needs, such as the PARE 1+1 programme for bringing remittances into the economy, the START FOR YOUTH: a sustainable business at home, the SME greening and the women in business programmes. Entrepreneurship is one of the key subjects in the educational system, taking the European entrepreneurship competence framework into account. Future measures to support SMEs should focus on internationalisation, access to finance and innovation (including the transition to the green market), fair competition and entrepreneurial learning.

On 22 July 2023, the new Organisation for Entrepreneurship Development (ODA) was officially launched, replacing the previous Organisation for the Development of Small and Medium Enterprises (ODIMM). The aim is to set a modern organisation able to meet new SME support requests. Its budget for 2022 was increased but then substantially reduced for 2023 due to budget constraints. Its staff went through a reappointment procedure based on merits and skills. To further improve SMEs' access to finance, the Guarantee Fund managed by ODA has been recapitalised. Additionally, the new Fund for Entrepreneurship and Economic Growth (FACEM), also managed by ODA, was launched to provide long-term loans in Moldova's currency to SMEs in priority sectors, such as energy efficiency.

There has been progress in harmonising the definition of an SME by amending the Law on SMEs in December 2022. Considerable work remains to promote entrepreneurial learning, including meeting the specific skills requirements of SMEs and improving the data available.

There is no dedicated law on combating late payments in commercial transactions. However, the relevant provisions of the Moldovan Civil Code are fairly aligned with the Late Payment Directive (2011/7/EU) but only as far as payment terms are concerned. Other key provisions still require alignment. Monitoring systems to assess payment performance, especially by public authorities, are needed. The protection of creditors in business-to-business transactions is suboptimal, which can lead to abusive practices.

Internationalisation of SMEs is still limited and remains a long-term challenge despite efforts to support it. Cooperation based on a clustering concept has a legal basis and supports regional development, including through internationalisation. A pilot initiative led to the creation of 30 clusters in the automotive, food, textile and creative industries.

Technical negotiations for Moldova's accession to the single market programme were completed and the agreement was signed on 8 September. The two submitted strands are competitiveness of SMEs, and market surveillance.

To reduce the role of the state in the economy and strengthen the quality of corporate governance in state bodies, the strategy on the management of state property, state enterprises and entities with state capital for 2023-2030 was approved and entered into force in February 2023. The strategy sets out, as a priority action, the development of a sorting mechanism for state and commercial companies with state capital. In April 2023, two government decisions were adopted. They aim to improve the management and corporate governance in state-owned enterprises (SOEs), in line with the strategy on state assets and OECD guidelines, notably by professionalising the boards of directors and audit committees of SOEs. The law on SOE governance includes the fundamental step forward of formulating a rationale for public ownership. Moldova should clearly delineate the competence of the Ministry of

Economic Development and Digitalisation in regulatory and policy-making functions, notably to prevent regulations privileging SOEs, and the role of the Public Property Agency in exercising corporate governance functions with respect to SOEs in line with OECD guidelines and the government's own SOE strategy.

The SOE privatisation process was suspended in 2022 amid overlapping crises and the complicated geopolitical situation in the region caused by the war against Ukraine. In 2022, a number of SOEs were reorganised and liquidated. This included two in the industrial sector, despite there only being a few active SOEs in that sector.

In **sectoral policies**, current investment incentives prioritise manufacturing, whose dominating industries of food/beverages and textiles are part of the cluster initiative.

Chapter 25: Science and research

The EU provides significant support for research and innovation. All Member States can participate in the EU's research and innovation programmes and benefit from them, especially where there is scientific excellence and solid investment in research and innovation.

Moldova is **moderately prepared** in the area of science and research. **Some progress** was made in the reporting period. Moldova has been active in the European Research Area and is finalising a smart specialisation strategy. A more integrated approach to governing innovation would create economic opportunities, investment and start-ups. The absorption capacity for research and innovation is still limited, and infrastructure development is required to implement open science. The gender dimension in research needs to be further integrated, and careers in research need to be made more attractive.

In the coming year, the country should in particular:

- adopt the smart specialisation strategy and develop a multiannual action plan with measures for implementation;
- ensure sufficient financing for research and innovation (R&I) under national programmes and adopt measures to promote innovation in line with the new European innovation agenda.

In summer 2022, the Moldovan authorities adopted a reform to consolidate higher education and research, including merging most research institutes with university departments in a broader effort to improve efficiency and increase the education-research nexus. The reform also provides for better remuneration for researchers, particularly those involved in EU-funded R&I projects. The authorities are drafting the new national R&I programme for 2024-2028.

Moldova is associated to **Horizon Europe**, the EU's R&I **programme**. Its success rate in the programme was 31.68% (of proposals that receive funding) as of May 2023, which is above the EU average of 21.47%. Moldova opened a National Horizon Europe Office in May 2023.

On the **European Research Area**, Moldova committed to 9 of 18 actions of the European Research Area policy agenda for 2022-2024.

Moldovan law provides for open access to publications when research activities are publicly funded, although a comprehensive open science strategy is still in development. Gross domestic expenditure on R&D was only 0.23% of GDP in 2022.

There is no formal national strategy for promoting gender equality in R&I or reducing the brain-drain. The number of scientists is in decline, and the outflow of researchers is higher

than the inflow. There is a need for a strategy to reduce this brain-drain, attract talent to R&I, in particular from the diaspora, and give more support to researchers' careers.

Moldova has advanced in the design of a national **smart specialisation strategy**. The strategy is now in the final phase, and the formal adoption procedure is expected to be launched by the end of 2023.

Moldova should make the most of the opportunities available by the European Institute of Innovation and Technology (EIT).

Chapter 26: Education and culture

The EU supports cooperation in education and culture by funding programmes and the coordination of Member State policy through the 'open method of coordination'. The EU and the Member States must also prevent discrimination and ensure quality education for children of migrant workers, including those from disadvantaged backgrounds.

Moldova **has some level of preparation** in the area of education and culture. **Some progress** was made in the reporting period. The country's education system is broadly aligned with EU policy and practice, although students' learning outcomes lag behind the European average. The accessibility and inclusiveness of education vary across the country's urban and rural areas, as does the quality of teaching and learning. Further efforts are needed to better match the vocational education and training (VET) skills on offer with labour market needs. Cultural policies generally suffer from a lack of funding.

In the coming year, Moldova should in particular:

- promote reforms to consolidate quality and efficiency of the school network in both general education and VET;
- strengthen the continuous professional development of teachers and school leaders in line with the recently adopted national education strategy for 2030;
- implement the youth strategy and ensure efficient funding for sport and culture.

Moldova's **education and training** system has been undergoing a continuous modernisation since the adoption of the Education Code in 2014, which sets the legal basis for this area. The legislative framework is generally in line with the acquis.

In March 2023, the government adopted the national education strategy for 2030 and its implementation plan after a comprehensive consultation throughout 2021 and 2022. The 2023 allocation for education and training in the state budget has been increased by nearly 25% compared with 2022.

The school network is distributed in a suboptimal manner across the country and affected by demographic trends. More attention needs to be paid to vulnerable groups, such as Roma, where half the children are not in school.

The average pupil/teacher ratio has been consistently between 11 and 13 in the years from 2017 to 2022, with significant differences across levels and urban vs rural schools.

In 2023, the National Program on learning Romanian by national minorities, including the adult population, for 2023-2025 was approved by the Government, which will improve multilingualism and inclusiveness of education in Moldova.

Overall access to education is an issue for Ukrainian children in Moldova, which is hosting large number of Ukrainian refugees. Limited numbers of asylum applications, as well as other constraints such as insufficient number of teachers and school infrastructure, impact the

integration of Ukrainian students. There is a lack of oversight on the part of Moldovan authorities.

In **VET**, Moldova continued to develop a reform of the governance system and the quality of the education provided. Centres of excellence have gradually begun to assume responsibilities as coordinators of the school network in their sectoral domains. **The national qualification framework** services have strengthened cooperation with the European Qualification Framework Advisory Group. The Ministry of Education and Research approved the regulatory framework for dual VET in March 2023 (implementing the Law on dual education). This should facilitate matching skills provision with labour market demands by enhancing interaction between schools and industry, and between pupils and employers. In 2022-2023, the VET centres of excellence have increased their activity as providers of continuing education, and the Ministry of Labour and the Ministry of Education have recently engaged in a dialogue to improve non-formal education. **Validation of non-formal and informal learning** continues at accredited institutions, in national policies and targets.

In **higher education**, in July 2022, the government adopted a higher education reform to consolidate the national network of universities and strengthen integration between education and research. In 2023 five Moldovan universities have been accredited at European level, and Moldova benefits from the European dimension of the Erasmus+ programme.

In **digital teaching and learning**, the national authorities have held several rounds of public consultations to prepare the 2023-2027 strategy for digital transformation of Moldova. Moldova makes use of SELFIE, an EU online tool for digital self-assessment, in all general and VET schools.

In 2022, the government has created the National Agency for the Development of Programs and Activities for **Youth**. Its core mandate is to implement national grant programmes for youth organisations and implement policies targeting youth empowerment and youth dialogue. At present the Agency is understaffed and lacks operational capacity. A comprehensive youth strategy and implementation plan were approved in 2023 to set up 22 youth centres. Youth sector financing remains limited, due to the country's multiple competing priorities. Moldova benefits from youth exchanges and volunteering projects under the Erasmus+ programme and the European solidarity corps.

In what concerns **sport**, in 2022-2023, the number of students in special sports schools increased and grants for high performers were doubled and the national teams sports centre in Chişinău was refurbished in 2022. Public budgetary restrictions weaken the possibility to provide better opportunities for the inclusion of disadvantaged groups in sport activities despite regulatory provisions in place. Moldova is a signatory to the conventions against doping, match-fixing and violence. The national anti-doping law is in final stages of approval by Parliament.

Moldova's **cultural** policies and programmes reflect the general priorities of the new European agenda for culture. Moldova was an associate member of the 2014-2020 Creative Europe programme but has not yet renewed its association to the successor programme that runs until 2027. There is limited public financing for the cultural sector, which undermines the access to opportunities for artists and other cultural practitioners.

Chapter 29: Customs union

All Member States are part of the EU customs union and follow the same customs rules and procedures. This requires legislative alignment as well as adequate implementing and enforcement capacity and access to the common computerised customs systems.

Moldova is in **between some and moderate level of preparation** in the area of the customs union. The country made **some progress** in the reporting period, notably on harmonising tobacco control regulations and further aligning the new Customs Code with the EU *acquis*. Moldova joined the EU customs programme, which will lead to additional capacity and knowledge for the enlargement process. Moldova and the EU have signed a Mutual Recognition of Authorised Economic Operators programs, facilitating the trade and ensuring security for both sides.

In the coming year, Moldova should in particular:

- complete all the implementing standards, IT systems, staff training and communication activities so that the new Customs Code fully enters into force on 1 January 2024;
- prepare an IT strategy and further develop IT systems to enable a full paperless environment and interconnection and interoperability with EU IT systems;
- finalise the development of the IT system necessary to enter the Common Transit Convention and ensure smooth and secured transit of goods via its territory.

Moldova's **customs legislation** is broadly aligned with the EU customs regulations. Amendments to the new Customs Code were adopted in March 2023 to ensure further alignment with the relevant *acquis*. The government adopted the implementing regulation for the new Customs Code but postponed its entry into force until 1 January 2024.

The new Customs Code integrates certain provisions of EU regulations on intellectual property rights and customs duty reliefs and provisions to implement the New Computerised Transit System. In July 2023, the Parliament adopted the amendments to the free economic zone regime and customs duty relief (cancelling the provisions allowing customs duties circumvention) to align it with the EU *acquis*. Moldova still needs to align its Customs Code with other parts of the EU *acquis*. It should adopt all the implementing standards, IT applications, ensure staff training and communication with businesses. Alignment with the EU system of tax warehousing for excise duty suspension is still outstanding. The country still has to work to introduce the Excise Movement Control System.

Moldova obtained the mutual recognition of Authorised Economic Operators (AEO) programme with the EU in November 2022. Currently, Moldova has already issued AEO authorisations to 119 operators, 28 of them authorised for security and safety, which are recognised in EU Member States. Moldova is party to the Pan-Euro Mediterranean Convention on rules of origin and benefits from the diagonal cumulation of origin between Convention member countries. Rules on customs enforcement of cultural goods remain broadly in line with the EU *acquis*.

On **administrative and operational capacity**, the customs service was reorganised at the end of 2022. This aims to introduce an organisational structure, adjusted to EU customs requirements and ensure a higher degree of integrity. Moldova still needs to automate the customs clearance process, to shift cargo clearance from the border to inland, and to implement post-clearance controls (e.g., audits). The country has not yet fully implemented a paperless environment for customs processing or introduced an automated validation of customs declarations. It would need a new IT strategy and IT systems to enable a full paperless environment and interconnection and interoperability with EU IT systems.

Moldova joined the EU customs programme which will create new opportunities to exchange information, develop capacity and provide technical assistance.

CLUSTER 4: GREEN AGENDA AND SUSTAINABLE CONNECTIVITY

This cluster covers: transport (Chapter 14); energy (Chapter 15); trans-European networks (Chapter 21); and environment and climate change (Chapter 27).

Moldova is at the early stage of preparedness in environment and climate change and has made some progress during the reporting period by passing cross-cutting environmental legislation and implementing regulations on nature protection and industrial emissions. Some level of preparation with limited progress was achieved on transport policy and some progress in trans-European networks, while the country is in between some to moderate level of preparedness for energy. On energy, Moldova made good progress, having the highest progress performance rate among contracting parties in the Energy Community Annual Implementation Report 2022.

Chapter 14: Transport policy

The EU has common rules on technical and safety standards, security, social standards, State aid and market liberalisation in road transport, railways, inland waterways, combined transport, aviation and maritime transport.

Moldova has achieved **some level of preparation** in transport policy. **Limited progress** was made in the reporting period. Progress was severely hampered by Russia's continued war of aggression against Ukraine, which had a direct impact on Moldova's ability to progress. Moldova was granted observer status in the Transport Community Treaty that will facilitate closer integration in the EU transport market. The country needs to continue alignment with the EU *acquis* on all modes of transport and implement it effectively.

In the coming year, Moldova should in particular:

- progress to get removed from the blacklist of the Paris Memorandum of Understanding on Port State Control;
- timely implement of the Railway Transport Code;
- adopt the new national mobility strategy 2023-2030, covering all transport modes and prepare an action plan to implement it, and a new road safety strategy.

On **general transport**, Moldova is currently preparing a Mobility Strategy for 2023-2030 to be adopted by the end of 2023 and replace the 2013-2022 Strategy on transport and logistics. On public services Moldova is aligned with the EU *acquis* on rail but not road transport. Moldova has plans to increase the administrative capacity for the rail and maritime sectors while aviation authorities have implemented some measures already. Those include upgraded IT devices for inspectors, new sets of equipment for RAMP and in-flight inspections. During the reporting period, the government approved the creation, organisation and working methods of the Transport Accident and Incident Investigation Bureau and the Railway Agency.

In 2022, Moldova was granted observer status in the Transport Community Treaty as basis for further integration of the country in the EU transport market and is collaborating proactively with the treaty's structures. Closer association with the Transport Community can support Moldova on its European path and facilitate closer alignment with the relevant EU transport *acquis*.

On **road transport**, national legislation is partially aligned with the EU *acquis* on road safety. Moldova's new road safety strategy needs to be aligned with the EU Road safety Policy Framework 2021-2030 and be based on Safe System Approach and Key Performance

Indicators defined by the EU. Road safety is still a concern as the number of casualties is far above the EU average. A National Road Safety Observatory was created as a coordination centre. The use of funds for maintenance and repair of roads has become more efficient and resources allocated for road safety better absorbed.

The legislation on **dangerous goods** is partially aligned with the EU *acquis*. Although the existing regulations do not include rules for transporting hazardous substances, they do include references to applicable provisions of the European Agreement concerning the International Carriage of Dangerous Goods by Road (ADR).

Legislation on **market access**, the profession of road transport operators, digital tachographs and access to the haulage market is partially aligned. The rights of passengers are regulated by the Road Transport Code, which is partially aligned with EU legislation. The EU *acquis* on maximum weights and dimensions of heavy-duty vehicles is partially harmonised by a government decision. Access to the international market for coach and bus services is regulated by bilateral agreements or multilateral agreements to which Moldova has acceded. No timeline has been produced to align each relevant piece of legislation with the EU social and market legislation, including amendments introduced in Mobility Package 1. The current national regulatory framework does not provide for the implementation of the Intelligent Transport Systems Directive (ITS), and the country also has insufficient capacity and resources to implement it. A concept for developing an integrated system exists, which includes subsystems like e-tickets, e-GPS, and a registry of transport operators. A road transport agreement to liberalise bilateral and transit road transport between the EU and Moldova was signed in June 2022 and has been extended up to 2024.

On **rail transport**, the adopted Railway Transport Code, which will enter into force in 2024, is partially aligned with the EU *acquis*. It includes provisions on: (i) separating train operations from infrastructure management; (ii) the independence of infrastructure managers to make decisions; (iii) railway safety; (iv) the roles of those involved in the rail system; (v) the supervision of safety management systems; (vi) safety certificates and safety authorisations; (vii) train drivers; and (viii) regulation of the railway market. A railway agency reporting to the Ministry of Infrastructure and Regional Development was created as the safety authority and will become operational when the new Code enters into force. Railway safety legislation, including safety management systems, safety responsibilities of railway companies and infrastructure managers, and licensing of train drivers are partially aligned with the EU *acquis* through the Railway Transport Code. Efforts are needed to adopt legislation on railway interoperability. Legislation is also not aligned with EU rules on passengers' rights.

On **maritime transport**, a ship register, that includes merchant vessels operating internationally, has been set up. The Moldovan flag vessel is on the blacklist of the Paris Memorandum of Understanding on Port State Control. Authorities should put in place a roadmap in order to get its vessels removed from this list. Legislation on port services is not aligned with the EU *acquis*.

The country has observer status to the Black Sea Memorandum of Understanding on Port State Control. Moldova does not have a maritime coastline, but it has access to the maritime sector of the Danube River. The country is not a party to the Maritime Labour Convention. Moldova also participates in the Black and Caspian Sea (BCSEA II) technical assistance project implemented by the European Maritime Safety Agency (EMSA).

The country has two **inland waterways** of international importance, the Nistru and Prut Rivers. Moldova also has access to the Danube River and participates in the EU strategy for

the development of the Danube region. Moldova has also signed an agreement on inland waterway navigation with Romania. The inland waterways normative framework is not in line with the EU *acquis*. Currently, a draft government decision for the approval of the rules and standards regarding the technical examination of connected inland navigation vessels and the recognition of Inland navigation classification societies is in the approval process. In the approved 2023-2025 government national plan for development, an increase in the administrative capacity of the Naval Agency is envisaged.

There is no legislation on training navigation personnel and no relevant educational institutions in Moldova. The legislation on the recognition of crew qualifications is not aligned with EU legislation and Moldova should continue working on fulfilling the preconditions for recognition of navigation certificates in the EU.

On **aviation**, the country is partially aligned with the EU *acquis*, having harmonised more than half of the legal acts in the EU-Moldova Common Aviation Area Agreement with its legislation. This covers aviation *acquis* in the areas of personnel licensing, air operators' certification, airworthiness and aerodromes, aviation safety and security, and passenger rights. The *acquis* on air navigation services is at an advanced stage of implementation. The national legal framework has been harmonised with several EU regulations under the single European sky framework.

There are no legal and technical provisions on **intermodal transport** in Moldova.

Moldova needs to apply **EU passenger rights** *acquis* for all forms of transport.

Chapter 15: Energy

EU energy policy covers energy supply, infrastructure, the internal energy market, consumers, renewable energy, energy efficiency, nuclear energy and nuclear safety, radiation protection and nuclear safeguards.

Moldova is in between some and moderate level of preparation in the area of energy. Moldova has made **good progress** during the reporting period. The diversification of gas and electricity supply routes has reduced Russian energy supplies, replacing them with western supplies.

In the coming year, Moldova should in particular:

- align with and implement the 'Clean energy for all Europeans' package, including with the EU Renewable Energy Directive and the Electricity Integration Package adopted by the Energy Community Ministerial Council in December 2022, and start setting up an electricity market operator;
- adopt the Energy Strategy for 2050 finalise and adopt the National Energy and Climate Plan (NECP), in line with the Energy Community 2030 energy and climate targets;
- set up the national energy efficiency fund with a focus on interventions in the residential sector, considering the best regional practices.

On **security of supply**, Moldova follows an energy strategy (launched in 2013) with a vision to safeguard energy security by strengthening gas and electricity transmission networks and increasing their role for transit, by developing gas storage capacity, modernising the district heating systems available in the country and promoting sustainability through energy efficiency and renewables. In line with EU Regulation on the Governance of the Energy Union and Climate Action, the process of drafting the National Energy and Climate Plan (NECP) is ongoing. The final NECP will have to be aligned with the Energy Community

2030 energy and climate targets and take due account of recommendations issued by the Energy Community Secretariat. There are still delays in aligning legislation with the EU Oil Stocks Directive. Despite the available draft bill, Moldovan authorities are delaying the adoption of national legislation which would align with the EU Oil Stocks Directive. On the security of supply of gas, a state-owned trader, Energocom, purchased and stored more than 300 million m³ of gas in 2022, using a loan from the European Bank for Reconstruction and Development.

On the **internal energy market**, legislation aligning with the third energy package was adopted. Certain parts that still need to be implemented, including: (i) unbundling of the second gas transmission system operator, Moldovatrangaz, which is part of Moldovagaz (controlled by Gazprom); (ii) applying gas network codes; (iii) redesigning the public service obligation scheme, and (iv) allowing all customers to switch their suppliers without having to pay the “equity fee” currently imposed. The electricity transmission system operator Moldelectrica was certified by the National Energy Regulatory Agency (NAER) in July 2023, considering the opinion of the Energy Community Secretariat. Gas and electricity distribution and supply companies were successfully unbundled. Alignment with the ‘Clean energy for all Europeans’ legislative package is pending.

The implementing legislation needed for the gas and electricity markets was issued by the national energy regulator. Only for gas, National Agency for Energy Regulation (ANRE) aligned the REMIT Regulation in July 2022 and started the alignment with the gas balancing network code, in line with the *acquis*. Legislative changes are required to enable alignment for electricity. Market opening in electricity reached almost 10% in 2021, but due to Russia’s war against Ukraine and the energy crisis, the market was reregulated. The market opening, from legal perspective, reached 100% both in electricity and gas and procedures for supply switching are in place, even if in practice, the vast majority of gas customers are still under regulated prices. Electricity balancing mechanisms and imbalance payments were successfully introduced in 2022 but were operated under a transitional mechanism with capped prices. There are no balancing services provided by any parties in Moldova. The day-ahead market and the intra-day market are still to be set up and a nominated electricity market operator (NEMO) is still to be designated. In gas, a real market opening has yet to happen despite there being 25 licensed suppliers. New generation capacity can be built using a simple authorisation procedure in place. The connection to the grid and licensing procedures appears to be operational.

Most retail consumers are at regulated tariffs set by the national energy regulator. Cross-subsidies between customer categories and between voltage levels/pressure levels were eliminated. Moreover, the regulator approves transmission and distribution tariffs using transparent methodologies. All regulated retail prices are adjusted at least once a year.

There is no social tariff for vulnerable energy consumers. Instead, the legal aspects of energy poverty are currently covered by energy and social assistance legislation. Energy sector legislation (Energy Act, Natural Gas Act, Electricity Act) identifies vulnerable consumers as socially disadvantaged categories in line with social assistance legislation. Assistance is then addressed through specific support schemes under the social protection system. For these consumers, a dedicated Energy Vulnerability Fund was created in 2022, and direct support for gas, electricity and heating bills was provided in winter with the level of subsidies initially tailored to five vulnerability categories and extended to six categories in 2023. A new action plan, following on from the NECAP in previous years, to prepare for the winter 2023-2024 is to be developed.

Access to gas and electricity transmission systems is fully open and based on regulated tariffs. The third-party access principle is implemented. Moldovatransgaz has not been unbundled yet, hindering the correct application and implementation of the legislation. Preparatory activities for the unbundling and certification of any of the TSOs are ongoing, with the involvement of the Energy Community Secretariat.

On **hydrocarbons**, the Ministry of Environment has not aligned legislation with the Hydrocarbons Licensing Directive. Moldova does not have any offshore geographical areas.

The last **national renewable energy action plan** covered 2013-2020 and is to be substituted by the upcoming NECP. The 17% target of gross final energy consumption in 2020 to be covered by renewable sources was achieved and surpassed (23.57%). For 2030, the target for the share of renewables is 27%.

The country partially aligned itself with the Renewable Energy Directive through national legislation on the promotion of renewable energy sources. Alignment with the revised Renewable Energy Directive, part of the 'Clean energy for all Europeans package', is under way with support from the Energy Community Secretariat.

The main obstacle to the large-scale development of wind and solar electricity generation is the limited capacity of the transmission system operator to ensure balancing the system. Another obstacle is the postponed organisation of the first round of tenders for renewables, which has been on the government's agenda since 2019. Under government decision in force, the capacity to be installed until 2025, that can benefit from both support schemes – fixed prices and FiT for small-scale projects, is limited to 120 MW in wind, 200 MW in solar, and 90 MW in non-intermittent sources. This is expected to contribute to the country's recent commitment and draft NECP objective to reach a 30% target of renewable electricity by 2030.

Guarantees of origin are currently issued by the Central Electricity Supplier, a single buyer of electricity produced at feed-in tariffs and feed-in prices. Amendments to the Renewables Law, which are currently under development, should make it possible to organise the first auctions for renewable energy projects. For renewable heat, there are currently no specific support mechanisms beyond support for energy efficiency projects. The **national energy efficiency action plan** for 2019-2021 is now incorporated into the upcoming national energy and climate plan. This plan is currently being developed and will have to implement the 2030 energy and climate targets agreed at the Energy Community. The capacity of the Energy Efficiency Agency, reporting to the Ministry of Energy, that oversees promoting energy efficiency and renewable policies and managing energy efficiency projects must be strengthened. To do so, the Ministry of Energy is currently reorganising the Agency to extend its scope and expertise by amending the Agency's institutional setup and related regulation. The only existing national fund that finances energy efficiency projects is the Fund for Local and Regional Development. The Energy Efficiency Agency, once reorganised, should become responsible for financing energy efficiency projects in residential and, at a later stage, public buildings.

Moldova achieved the 2020 target and progressed with the alignment of national legislation with the Energy Efficiency Directive, which was adopted in May 2023.

Implementation of the Buildings Directive is still incomplete. The 2014 Law on the energy performance of buildings is partially aligned with the Directive. A long-term building renovation strategy has been developed and needs to be adopted. Chisinau and Balti have functional municipal heating systems. Head distribution network has been rehabilitated and the generating units are gas fired, producing both electricity and heat.

On **nuclear energy, nuclear safety and radiation protection**, Moldova does not have and does not intend to build any nuclear power plants. Moldova has developed a national strategy on radioactive waste management aligned with the Radioactive Waste Directive. The Law regarding main requirements in radiological safety has been adopted. Moldova still needs to align with and fully implement the Euratom Directives on nuclear safety, management of spent fuels and nuclear waste, basic safety standards and drinking water. Moldova is not yet a member of ECURIE system.

On **nuclear safeguards**, upon accession, the existing systems of accountancy and control of nuclear materials in Moldova would need to be adapted to accommodate for the safeguard provisions (chapter 7) of the Euratom Treaty.

Chapter 21: Trans-European networks

The EU promotes Trans-European networks (TENs) in the areas of transport, telecommunications and energy to strengthen the internal market and contribute to growth and employment.

Moldova has achieved **some level of preparation** in trans-European networks. **Some progress** was made in the reporting period. On energy, Moldova succeeded in diversifying its electricity and gas supply routes. It did so through the emergency synchronisation with the European Network of Transmission System Operators (ENTSO-E) continental grid. Moldova needs to align its legislative framework with the Trans-European Network for Transport and the Trans-European Network for Energy regulations and develop its infrastructure.

In the coming year, Moldova should in particular:

- make progress in completing the urgent priority infrastructure projects on Solidarity Lanes, in particular rehabilitating the north-south railway corridor and mobilising resources to absorb Connecting Europe Facility funds to support, in particular, the alignment to the EU gauge;
- speed-up the construction of the Vulcănești-Chișinău 400 kV power line; secure project financing for and start building a new 400 kV electricity interconnection between Suceava in Romania and Bălți in Moldova.

On **transport networks**, the current strategic framework for transport infrastructure is set out in the 2030 national strategy for development. A new national mobility strategy for 2023-2030 is being developed. The priority transport corridors are outlined in the EU-Moldova Association Agreement. In addition, the Trans-European Transport Networks (TEN-T) were extended to the Eastern Partnership, including Moldova.

In May 2023, Moldova was the first non-EU country to be associated to the Connecting Europe Facility (CEF) that will support the implementation of the extended TEN-T networks.

The road fund is the main source of funding from the national budget for the maintenance of public roads. Road works, which include TEN-T network, are advancing with some delays on sections where the contracts for works were terminated and new tenders launched.

The administrative capacity of the authorities responsible for implementing major projects needs to be improved. Moldova is a key transit route under the EU-Ukraine Solidarity Lanes initiative. The EU provided a EUR 20 million grant in 2022 for the rehabilitation of part of the north-south railway corridor. This is planned to be finished by the end of 2024, but some effort is needed to ensure the smooth implementation of the project. Following a landslide in August 2022, Moldova must ensure urgent repairs to the Cahul-Giurgiulești railway line,

which is part of the TEN-T network. For the rehabilitation of the railway segment Basarabeasca-Giurgiulesti, works are currently ongoing.

On **energy networks**, gas and electricity transmission infrastructure developments are set out in the Ten-Years Network Development Plans developed by transmission system operators and approved by the energy regulator in line with EU practice.

On **electricity**, the emergency synchronisation with the ENTSO-E continental Europe grid took place during the reporting period. Several projects are under way: the 400 kV overhead-line interconnection between Vulcănești (Moldova) and Isaccea (Romania), the extension of the 400 kV overhead line between Vulcănești and Chișinău. The Romania-Moldova gas interconnector (Iași-Ungheni) and the bidirectional flow on the Trans-Balkan corridor Moldova-Ukraine have been finalised. Backhaul legislation was adopted in January 2023, providing for financial and customs declarations of reverse gas flows.

The Regulation on guidelines for trans-European energy networks is in the final stage of alignment through a dedicated amendment to the national Law on energy.

Chapter 27: Environment and climate change

The EU promotes strong climate action, sustainable development and protection of the environment. EU rules contain provisions addressing climate change, water and air quality, waste management, nature protection, industrial pollution, chemicals, noise and civil protection.

Moldova is at an **early stage of preparation** in the area of the environment and climate change. **Some progress** was achieved in cross-cutting environmental legislation, nature protection and industrial emissions regulation. Moldova is encouraged to be more ambitious and strengthen its coordinated action on the green transition, especially by prioritising the mainstreaming of the European Green Deal in all policy areas. Climate-related commitments under the Energy Community in view of moving towards carbon pricing require urgent action.

In the coming year, the country should in particular:

- strengthen implementation and enforcement of legislation with a focus on horizontal legislation, nature protection, water management and waste management;
- allocate the necessary human and financial resources to the Ministry of Environment and to subordinated bodies;
- implement commitments under the Energy Community's Decarbonisation Roadmap.

Environment

On **horizontal legislation**, Parliament adopted amendments to the Law on environmental impact assessment to fully align it with the Environmental Impact Assessment Directive. Parliament also passed amendments to the Law on strategic environmental assessments (SEA). The aim was to improve consistency with the SEA Directive and the UN Economic Commission for Europe Protocol on SEA, particularly on public consultations, quality assurance and monitoring. Further alignment is needed in the areas of environmental liability and environmental crime. In light of the ongoing revising and replacement of Directive on Environmental Crime with a new version an adaptive response to the alignment with this changing body of *acquis* would be welcome. The country needs to strengthen implementation and enforcement in most areas. In addition, more sectoral involvement and responsibility in developing an integrated environmental and climate policy is required. It is also important for

Moldova to build capacity in the Ministry and the bodies reporting to it, mobilise enough resources, and continue to strengthen transparency, public consultations and dialogue with civil society.

On **air quality**, Moldova has aligned its legislation with several EU directives. There is a need to revise the legislation on the sulphur content of certain liquid fuels and harmonise legislation with the EU Directive on the reduction of national emissions of certain air pollutants. The current air quality monitoring system is fragmented, and the country needs to invest heavily in technical equipment, develop air quality plans and build capacity to collect, process and report data.

On **waste management** and the circular economy, Moldova put in place a number of the key parts of legislation relevant to the EU *acquis*. The country still needs to harmonise legislation with several directives, including the directives on ship recycling and managing waste from extractive industries. Moldova is making significant investments in its solid waste management infrastructure. To promote the circular economy, the government adopted a regulation on eco-labelling.

On **water quality** management, Moldova has aligned its legislation with the Water Framework Directive and entered the second cycle of river basin management planning. This included the government approving the river basin management plan of the Danube-Prut and Black Sea hydrographic basin district cycle II (2023-2028). Further alignment is needed with several other parts of the EU *acquis*. Significant parts of the population still lack access to quality water supply and sanitation services. Systemic investments are required, especially in wastewater treatment infrastructure. The sector would benefit from a clear division of responsibilities and improved coordination between the authorities concerned.

On **nature protection**, Moldova amended its Law on ecological networks in October 2022. The amended law includes a chapter on the Emerald Network. In February 2023, the national forest extension and rehabilitation programme for 2023-2032 was adopted. Efforts are needed to align legislation with other parts of EU law on nature protection and sustainable forest management. The country must also build capacity for more efficient management in this sector.

On **industrial pollution control and risk management**, Parliament approved a new legislative framework on industrial emissions in September 2022. This harmonises legislation with EU directives on industrial emissions and on the limitation of atmospheric emissions of certain pollutants from medium combustion plants. During the reporting period, several amendments to the legal framework on risk management came into force, which improve the level of harmonisation in the area. Created in 2016, the Pollutant Release and Transfer Register is not fully operational. Overall, Moldova should strengthen the coordination of interinstitutional actions and build capacity to check and validate data, check companies' reporting, and improve legal liability.

On **chemicals**, Moldova has partially aligned its legislation with EU *acquis* in this area. The country must also strengthen implementation and enforcement of the sustainable management of chemicals. It would benefit from creating a national helpdesk as a first point of contact for questions on the CLP and REACH regulations. It should also permanently strengthen cooperation with the European Chemicals Agency.

No significant progress on **noise** legislation was made during the reporting period.

On **civil protection and disaster risk management**, the country made significant progress. In October 2022, the government submitted an expression of interest and in September 2023

Moldova joined the Union Civil Protection Mechanism (UCPM). Moldova's existing sectoral development Action Plan, adopted in December 2022, sets clear priorities and provides for proactively participating in UCPM exercises and training. Moldova requested and participated in a UCPM Peer review of its civil protection system on a voluntary basis.

Moldova should continue its efforts in strengthening its civil protection and disaster risk management system, particularly on disaster prevention and preparedness. It should develop national disaster risk assessments based on a nationally approved methodology. To increase resilience to natural disasters and crises, Moldova should also boost its operational capacity, infrastructure, early warning system and step-up efforts in strengthening its hydrometeorological service. Moldova should also set up secure trans-European services for telematics between administrations (TESTA) to connect to the Common Emergency Communication and Information System (CECIS). This should be done to facilitate a coordinated communication with the Commission's Emergency Response Coordination Centre (ERCC).

Climate change

On **climate change**, Moldova is a signatory to the Paris Climate Agreement under the United Nations Framework Convention on Climate Change. The low-emission development strategy for 2030, which is currently being revised and will be complemented by the National Energy and Climate Plan, is the main decarbonisation strategy. Moldova updated its nationally determined contribution in 2020 with the unconditional target to reduce its net greenhouse gas emissions by 64-67% in 2030 compared with 1990 levels and the conditional target to reduce emissions by up to 88% if international climate finance is secured. Moldova has not submitted either a long-term low-emission strategy or a national adaptation plan under the Paris Agreement.

Moldova has a national system for monitoring, verifying and reporting greenhouse gas emissions. The national greenhouse gas emissions inventory and reporting is donor-based. Some parts of the ETS Directive are partially aligned as provisions on monitoring, reporting and verification for industrial entities are included in national legislation on industrial emissions. Provisions on monitoring, reporting and verification (MRV) for the aviation sector are not harmonised, and a national greenhouse gas permitting system has yet to be set out.

A law on fluorinated gases was adopted in March 2023. From January 2024, the import and use of fluorinated gases will gradually decrease in favour of greener, energy-efficient options, as per the EU standards. The Ozone Regulation on substances that deplete the ozone layer is incorporated into national law. The Fuel Quality Directive is partially incorporated into national law.

The main obstacles and challenges to implementation include limited administrative capacity, fragmented sectoral policies and absence of a whole-of-government oversight on implementation of climate policies and commitments, and insufficient monitoring and checks of greenhouse gas emissions, including the reliability of data across the country.

CLUSTER 5: RESOURCES, AGRICULTURE AND COHESION

This cluster covers: agriculture and rural development (Chapter 11); food safety, veterinary and phytosanitary policy (Chapter 12); fisheries and aquaculture (Chapter 13); regional policy and coordination of structural instruments (Chapter 22); and financial and budgetary provisions (Chapter 33).

Moldova is at an early stage of preparations for all chapters except for food safety, veterinary and phytosanitary policy where it has some level of preparation. Some progress was

achieved on agriculture and rural development as well as food safety, veterinary and phytosanitary policy. In fisheries and aquaculture, regional policy and coordination of structural instruments and financial and budgetary provisions limited progress was achieved. Further efforts are needed in all these areas.

Chapter 11: Agriculture and rural development

The EU's common agricultural policy supports farmers and ensures Europe's food security. It helps tackle climate change and the sustainable management of natural resources; maintains rural areas and landscapes across the EU; and keeps the rural economy alive by promoting jobs in farming, agri-food industries and associated sectors. This requires strong management and control systems. There are also common EU rules for marketing standards, quality policy, and organic farming.

Moldova is at an **early stage of preparation** in agriculture and rural development. **Some progress** was made during the reporting period, with the adoption of the national strategy for agriculture and rural development, by supporting local action groups (LAGs) in implementing local development strategies through the LEADER programme.

In the coming year, Moldova should in particular:

- draw up an action plan to set up an Integrated Administration and Control System (IACS), progress in creating the farm register;
- take concrete steps to strengthen the administrative capacity of the Ministry of Agriculture and Food Industry, and of the Agency for Interventions and Payments in Agriculture (AIPA).

On **horizontal issues**, the national strategy for agriculture and rural development for 2023-2030 was adopted in February 2023. It is aligned with the general principles of the new common agricultural policy. The authorities must develop a multi-annual financing plan as well as a monitoring and reporting system.

Further efforts are required to set up an integrated administration and control system (IACS). An interinstitutional coordination task force for e-governance in agriculture was created in 2022. A feasibility study to create a farm registry was conducted, and a roadmap for its implementation drawn up. An animal register is in place and is undergoing further developments. No system to identify agricultural parcels exists. There is no Farm Accountancy Data Network (FADN) in place. Strategies for collecting and monitoring data need to be further developed.

Regarding **common market organisation** (CMO), efforts are needed to prepare and set up the regulatory framework in line with the EU *acquis*.

The framework policy document governing **rural development** is the national strategy for agriculture and rural development 2023-2030, and the National Fund for the Development of Agriculture and the Rural Areas provides for the financial support to measures improving the standard of living and working in rural areas. The National Fund for Agriculture and Rural Development supports the implementation of the LEADER.

As regards **quality policy**, Moldova has legislation regulating the protection of geographical indications, protected designation of origin, and traditional specialties guaranteed and maintains a publicly available register of protected products.

Moldova is partially aligned with the EU *acquis* on **organic farming**. A new law further aligned with the EU *acquis* is in adoption process. The competent authority, the Ministry of

Agriculture and Food Industry, has appointed the official control body, while the accreditation and certification systems are in place and operational. The new Law on organic production and labelling, aligned with EU policy was adopted in July 2023.

Chapter 12: Food safety, veterinary and phytosanitary policy

EU hygiene rules for foodstuff production ensure a high level of food safety. Animal health and welfare and the safety of food of animal origin are safeguarded together with the quality of seeds, plant protection material, protection against harmful organisms and animal nutrition.

Moldova has **some level of preparation** on food safety, veterinary and phytosanitary policy. During the reporting period, **some progress** was made strengthening the institutional and diagnostic capacity of competent authorities (especially reference laboratories). Monitoring and enforcement of the domestic market food quality need to be strengthened.

In the coming year, Moldova should in particular:

- strengthen the diagnostic resources of competent authorities and broaden the scope of the national monitoring and surveillance programme for food safety, animal feed and veterinary drugs to increase the level of assurance for animal origin products;
- draw up a human resource development strategy for the National Food Safety Agency and a specialised training programme for inspectors from territorial subdivisions.

In the area of **general food safety, food safety rules and specific rules for feed**, Moldova's administrative capacity has been strengthened through the reorganisation of the National Food Safety Agency (NFSA).

In 2022, after taking over the laboratory system from the Ministry of Agriculture and Food Industry, the food safety laboratory based in Bălți was incorporated into NFSA thus increasing the network to seven national reference laboratories. More resources and training are needed for the agency's inspectors, particularly at the local level.

On **veterinary policy**, Moldova has further increased its surveillance system and the diagnostic resources of the competent authorities. It continued to successfully implement active surveillance of EU programmes for African swine fever and rabies prevention and control. Throughout 2022, avian bird flu detection, response times and effectiveness have improved by e.g., setting up surveillance and protection zones, laboratory testing and use of confirmatory methods. Measures for the prevention and control of rabies in animals have also been put in place.

The use of veterinary drugs with antimicrobial effects was restricted. Training for inspectors from territorial subdivisions was intensified, covering topics such as hazard analysis critical control points audits in farms and food businesses and risk analysis.

The animal state register was completed by including the registration of non-professional poultry holdings (backyards) and interconnecting it with the laboratory digital information system. The policy for the non-commercial movement of pets is harmonised with the EU *acquis*.

On **food safety rules**, the country's laboratories have sufficient capacity. It was increased during the reference period through the accreditation of new methods at the food product testing laboratories. In March 2023, Moldova was authorised to export processed poultry meat and eggs for consumption (class A), this reflects the effectiveness of official controls.

On the **placing of food, feed and animal by-products on the market**, raw milk was included in the 2022 national monitoring and surveillance programme. The country has yet to expand residue monitoring to new products and increase the number of samples of official controls obtained at farms, processors and distributors. Progress has been made to harmonise national legislation with EU regulations on the obligatory labelling of substances or ingredients that cause allergies or intolerances, country of origin of primary ingredients, and information on the presence of gluten. Regulations on maximum limits for trans-fatty acids (transfats) in food products are aligned with the relevant EU regulations.

State legislation on **phytosanitary policy** is partially aligned with the EU *acquis*. Further progress is needed to implement actions on sustainable use of pesticides. This includes activities on the online training platform launched in February 2023 to strengthen the information flow and increase the knowledge and application of good practice.

Equivalence of field inspection for crops that produce cereal, vegetables, oleaginous plants and fibres seeds, in line with EU *acquis*, was granted by the European Commission for assessments carried out by the authorities.

The Law on **genetically modified organisms**, aligned with the EU *acquis*, was adopted in June 2022 and will enter into force in 2024. Official controls, production and placing are performed according to the 2023 national monitoring and surveillance programme.

Chapter 13: Fisheries

The common fisheries policy lays down rules on fisheries management, protects living resources of the sea and limits the environmental impact of fisheries. This includes setting catch quotas, managing fleet capacity, rules on control and inspection, rules on markets and aquaculture and support for fisheries and coastal communities. Further, it promotes a sustainable aquaculture.

Moldova is at **an early stage of preparation** in the area of fisheries. During the reporting period, **limited progress** was made in strengthening the legal framework and institutional capacity, notably by strengthening inspections and controls. However, the multiannual strategy and national legislation on aquaculture have not been adopted or implemented.

In the coming year, Moldova should in particular:

- adopt a national strategy dedicated to aquaculture;
- progress on aligning quality and marking standards with those under the EU common market organisation;
- improve the traceability of fishery and aquaculture products and strengthen import inspections to prevent importation of illegal, unreported and unregulated (IUU) fishing;

Moldova needs to further strengthen the capacity to develop, implement and enforce fisheries policy. It also needs to boost overall coordination of the authorities on biodiversity protection.

The adoption of a multiannual national strategy dedicated to aquaculture and a national legislation on aquaculture aligned with EU *acquis* is pending.

On **resource and fleet management**, Moldova has no vessels engaged in sea fishing. Authorities need to improve the data available on fisheries and aquaculture. Commercial fishing is not authorised in order to protect fish species in natural water basins, and a system for recording and checking the use of fishing opportunities has not been developed.

Inspections and controls were strengthened through provisions on fish farms, the transport of live animals, and fish and fishery product processing facilities. Intensified sanitary and veterinary inspections of live fish consignments by the National Food Safety Agency strengthened compliance with sanitary and veterinary requirements including for imports. A control system to prevent importation of fishery products from illegal, unreported and unregulated (IUU) fishing is needed.

Moldova has no specific **structural actions** for small-scale fisheries. The data collection framework has not been harmonised with the EU acquis.

Concerning **market policy**, there is no legal framework on producer organisations and market requirements specific to fishery and aquaculture products (consumer information, marketing standards, market intelligence). No progress was made during the reporting period on aligning quality and marking standards with those under the EU common market organisation.

No **State aid** support measures are provided for fisheries and aquaculture sectors.

International cooperation activities should be further strengthened, including as part of the common maritime agenda for the Black Sea and the General Fisheries Commission for the Mediterranean. EU-Moldova cooperation dialogue takes place on the fight against illegal, unreported and unregulated (IUU) fishing. No further progress has been made in adopting and integrating in national law the international fisheries agreements, nor finalising legislation covering the definition of fishing vessel in line with international fisheries instruments and rules with regards to the registration and deregistration of vessels engaging in illegal, unreported, and unregulated fishing.

As regards the wider blue economy, Moldova participates in the Common Maritime Agenda, the EU sea-basin strategy for the development of a sustainable blue economy in the Black Sea. It is moderately active in the implementation of its priorities, with a strong commitment at the grassroots level. Moldova is encouraged to continue its positive regional cooperation under the Common Maritime Agenda with the other participating countries, as well as to strengthen its ownership of and commitment to the initiative.

Chapter 22: Regional policy and coordination of structural instruments

Regional policy is the EU's main tool for reducing regional disparities and investing in sustainable and inclusive socio-economic growth. It is operating through "shared management" between the Commission and EU Member States. The implementation of cohesion policy programmes requires appropriate administrative capacity on programme and project level, the establishment of systems of sound financial management and control and also the fulfilment of other EU acquis elements such as environmental or public procurement legislation.

Moldova is at an **early stage of preparation** in the area of regional policy. **Limited progress** was made in the reporting period. Moldova's legislative framework is partially aligned with the EU *acquis* in areas. Moldova's administrative capacity and experience is insufficient to meet the requirements of EU regional policy in implementing large-scale funds. Regional development and cohesion are hampered by the inefficient administrative-territorial structure.

In the coming year, Moldova should in particular:

- operationalise the IT system through which mature investment projects are submitted for approval;
- ensure sufficient administrative capacity for the whole implementation of the cross border and transnational cooperation (Interreg) programmes;
- set up audit structures specialised in auditing European funds.

On the **legislative framework**, the country still needs to align itself with the core legislative parts of the EU cohesion policy framework.

The current **institutional framework** is outlined in the Law on regional development but is to be aligned to the needs of cohesion policy. The National Coordination Council for Regional and Local Development is responsible for regional development policy at national level. The regional development councils are responsible for regional development policy at local level.

The Ministry of Finance is the national coordinating authority for external assistance with the State Chancellery being responsible for monitoring technical assistance projects. Sectoral coordination takes place at ministry level. A definition of tasks and responsibilities among the bodies involved in managing external assistance is in place. In order to ensure that the needs are most efficiently addressed through external assistance, cooperation between the Ministry of Finance and the State Chancellery should be further strengthened.

The Ministry of Finance has set up the necessary administrative structures for the implementation of the cross border and transnational cooperation (Interreg) programmes. For the effective functioning of national authority structures for Interreg programmes, the Ministry of Finance should ensure sufficient administrative capacity during the whole implementation of these multiannual programmes.

Overall, **administrative capacity** is still low. Specific expertise on planning, implementation and monitoring under shared management (beyond cross-border cooperation) is very limited. The country does not have a comprehensive plan to build and maintain administrative capacity to implement cohesion policy, including capacity-building needs assessments and training measures. The significant disparities in the provision of basic services between urban and rural areas persisted during the reporting period.

Multiannual **programming** takes place via the government-approved medium-term budget framework. This sets the financial resources for three years for the National Fund for Regional and Local Development and for contributions to projects financed by external sources.

A national regional development strategy for 2022-2028 and a separate national programme for the development of cities as growth poles exist. The National Fund for Regional and Local Development is the main source of funding for regional and local development projects.

In February 2023, the government adopted the national development plan for 2023-2025. Implementation of this plan is based on the national development strategy ‘Moldova 2030’, and considers recommendations made in the context of Moldova’s accession to the EU. Instruments to finance local and regional projects by the government are fragmented. The pipeline of mature investment projects is being made operational with the support of an EU-funded project. It will involve a first set of public investment project proposals being appraised in line with the eligibility criteria set out in a newly adopted regulation. New regulation defining the procedure for submission was adopted during the reporting period, but the IT system through which the project proposals are to be submitted is not yet operational. Moldova does not monitor and evaluate public investment programmes as laid down in the Common Provisions Regulation.

There is limited **financial management and control** system for EU funds in place with exception of Moldova’s regulation on the implementation of EU-funded Interreg programmes for which the national structures are being set up for the 2021-2027 programming period. On **audit**, Moldova does not have an audit structure specialised only in auditing European funds, a requirement for alignment with the EU *acquis*, except for the audit of the Interreg programmes. The Court of Accounts monitors the planning, management and use of public financial resources and has been part of the group of auditors performing audit of cross-border and transnational cooperation programmes but lacks sufficient resources or targeted training.

Chapter 33: Financial and budgetary provisions

This chapter covers the rules governing the funding of the EU budget (‘own resources’). These resources mainly consist of: (i) contributions based on the gross national income of each Member State; (ii) customs duties; (iii) the non-recycled plastic resource; and (iv) a resource based on value-added tax. Member States must have the appropriate administrative capacity to adequately coordinate and ensure the correct calculation, collection, payment and control of own resources.

Preparations under this chapter are at an **early stage**. **Limited progress** was achieved in the reporting period. Amendments adopted in March 2023 to the customs legislation will increase alignment with the EU *acquis*. The institutional environment required for an efficient own resources system has yet to be set up.

In the coming year Moldova should in particular:

- engage in capacity-building activities on the traditional own resources system in the EU;
- set up a coordinating body to implement the administrative processes for an own resources system.

Basic principles and institutions in the underlying policy areas affecting own resources are linked to progress under other chapters such as 16: Taxation, 18: Statistics, 29: Customs union and 32: Financial control.

Some progress was made on **traditional own resources** with amendments to the customs legislation, which is now largely aligned with the EU *acquis* and will enter into force on 1 January 2024. This will help prepare traditional own resources, namely customs duties. Moldova has electronic systems in place for levying customs duties (and VAT) at the point of import, as well as for accounting and management of debts. It operates a national VAT system. Nevertheless, the IT infrastructure should be upgraded as a basis for creating a traditional own resources system.

On the VAT-based resource, calculation of the VAT base and the weighted average rate is partial. The country does not have adequate measures in place to combat VAT and customs duties fraud, in particular those affected by the non-observed economy (non-VAT taxpayers trading goods, etc.). Legislation on structure, exemptions, deductions, special schemes and the scope of reduced rates is not fully aligned with the EU *acquis*.

On **gross national income**, Moldova compiles national accounts and calculates gross national income, including an estimation of the non-observed economy. It also makes some estimates on plastic waste generation and the quantity of plastic waste recycled at national level, which is based on reports provided by authorised waste management companies. The underlying policy is not aligned with the EU *acquis*, especially the compilation of the national accounts and gross national income currently based on the definitions and accounting rules of the UN System of National Accounts 2008 and not the European ESA 2010 standards. There has been no progress on the changeover to ESA 2010, national data collection or the calculation of non-recyclable plastic.

On **administrative infrastructure**, the Ministry of Finance has overall responsibility for financial and budgetary issues. Moldova has yet to set up the institutions for the own resources system, an own resource coordination body and implementing rules for alignment with EU requirements. No training has been organised on implementing the own resources system.

CLUSTER 6: EXTERNAL RELATIONS

There are two chapters in this cluster: External relations (Chapter 30); Foreign, security and defence policy (Chapter 31).

In this cluster, Moldova is moderately prepared in the chapter of external relations where it made some progress during the reporting period. In the chapter of common, foreign, security and defence policy, the country is in between moderate and good level of preparation and made good progress. Moldova's alignment with declarations by the High Representative on behalf of the EU and Council Decisions was 54% and has increased to 78% in 2023.

Chapter 30: External relations

The EU has a common commercial policy towards third countries, based on multilateral and bilateral agreements and autonomous measures. There are also EU rules in the field of humanitarian aid and development policy.

Moldova is **moderately prepared** in the area of external relations and made **some progress** during the reporting period. On bilateral trade, free trade agreement negotiations with the European Free Trade Association were concluded. Further action is expected on administrative capacity and alignment with the EU *acquis* on dual-use export controls and export credits.

In the coming year, Moldova should in particular:

- finalise aligning the national legislation on export controls for dual-use items with the EU *acquis*;
- set out legal framework on international cooperation, development and humanitarian aid towards non-EU countries, aligned with EU policies and principles.

On the **common commercial policy**, Moldova coordinated its positions and aligned itself to the initiatives promoted or supported by the EU in the WTO. This includes alignment with all joint statement initiatives, namely the Joint Initiative on Electronic Commerce, the Joint

Initiative on Investment Facilitation for Development, the Joint Initiative on Micro, Small and Medium-Sized Enterprises, and the Joint Initiative on Services Domestic Regulation. Additionally, Moldova aligned itself with the Trade and Environmental Sustainability Structured Discussions and the Informal Working Group on Trade and Gender. Moldova also made progress in meeting its commitments in trade facilitation and intellectual propriety rights.

Under the decision of the Commission for Extraordinary Situations, starting from 1 March 2022, sugar exports were banned to ensure food security amid the multiple crises in the region. Moldova is examining the possibility to remove the ban and resume sugar exports; export restrictions previously imposed on certain agricultural products (wheat and corn) and medical products have been lifted. Amendments to the Law on internal trade, introducing 50% local content requirements and discriminating against foreign manufacturers, were repealed in June 2022.

On export controls of dual-use items, some progress has been noted with Moldova starting to align its legislation with the EU Regulation on the control of exports, brokering, technical assistance, transit and transfer of dual-use items.

On trade defence instruments, Moldova has legislation in place on anti-dumping, countervailing and safeguard measures. During the reporting period, the country did not apply any trade defence instruments. On export credits, Moldova does not grant export subsidies or export credit, and it has no export insurance programmes.

On **bilateral trade agreements** with third countries, in March 2023, Moldova concluded free trade agreement (FTA) negotiations with the European Free Trade Association. This is expected to enter into force on 1 January 2024.

In total Moldova has 43 bilateral investment treaties in force, including with 19 of which are with EU Member States. The legislative framework for screening foreign direct investment to protect investments in areas of importance for state security is in place.

On **development policy** and **humanitarian aid**, Moldova is a recipient of aid rather than a donor. It does not have a development policy or provide structured technical assistance to any partner countries. Although Moldova has legislation on humanitarian aid, there is no dedicated structure or budget to implement it. There is also no legal framework for non-governmental organisations to provide humanitarian assistance. During the state of emergency following Russia's war of aggression against Ukraine, special conditions for providing humanitarian aid to Ukraine were adopted by the Parliament and are supported by the June 2023 adoption of temporary protection measures. Following the February earthquakes and on Türkiye's request, Moldova delivered in-kind assistance and a team of rescuers, emergency vehicles and search dogs.

Chapter 31: Foreign, security and defence policy

Member States must be able to conduct political dialogue under the EU foreign, security and defence policy, align with EU statements, take part in EU actions, and apply agreed sanctions and restrictive measures.

Moldova is in between moderate and good level of preparedness in the area of common foreign, security and defence policy. Good progress was made in the reporting period. Moldova's alignment rate with relevant declarations by the High Representative on behalf of the EU and Council decisions increased. Following Russia's war of aggression against Ukraine, Moldova aligned with EU positions in international fora, including in the UN General Assembly (UNGA). In 2023, Moldova started its gradual alignment with some of the

EU restrictive measures related to Russia/ Russian activities abroad. Moldova continued to participate in EU crisis management missions and operations under the common security and defence policy.

In the coming year, the country should in particular:

- continue to further increase the alignment rate with the EU common foreign and security policy (CFSP) and ensure the implementation of restrictive measures stemming from EU alignment;
- continue its efforts to counter hybrid threats and enhance its resilience, including by following up on the recommendations from the hybrid risk survey and implementing actions in line with a whole-of-government and whole-of-society approach.

The **political dialogue** between the EU and Moldova on foreign and security policy continued, including in the framework of the EU-Moldova Association Council. The annual consultations on security and defence took place in autumn 2022, and the second EU-Moldova high-level political and security dialogue was held in Brussels in March 2023.

On the **common foreign and security policy (CFSP)**, in 2022, Moldova's alignment rate with relevant statements of the High Representative on behalf of the EU and Council decisions on restrictive measures was 54%. As of August 2023, the alignment rate improved to 78% Moldova expelled 22 Russian diplomats and 23 Russian embassy support staff members, limiting the embassy's staff by two thirds.

Moldova's Ministry of Foreign Affairs and European Integration has the appropriate structures in place to participate in the common foreign and security policy. Within the ministry, Moldova has a state secretary for security and horizontal issues, and another state secretary for EU integration.

On **restrictive measures**, following Russia's war of aggression against Ukraine, Moldova did not align with the EU restrictive measures against Russia and Belarus and related statements by the High Representative on behalf of the EU, but the authorities have committed not to allow the EU sanctions to be circumvented. In 2023, Moldova started its gradual alignment with some of the EU restrictive measures targeting Russia/ Russian activities abroad, such as two EU Council decisions targeting the Wagner group under the EU Global Human Rights Sanctions regime, as well as the restrictive measures in response to the illegal recognition, occupation or annexation by the Russian Federation of certain non-government controlled areas of Ukraine. More work is needed to align with EU restrictive measures and enhance the robustness of their implementation including by strengthening the national authorities in charge of this action.

Moldova has aligned itself with international and EU initiatives in support of Ukraine, including on Resolutions adopted by the United Nations General Assembly, the Human Rights Council, the Council of Europe.

Moldova cooperates constructively in international fora and is a member of multiple **international organisations** Moldova ratified the Rome Statute of the **International Criminal Court**.

On **disarmament and non-proliferation**, Moldova participates in some, but not all, international export control arrangements and instruments on non-proliferation. It participates in the Proliferation Security Initiative and the Hague Code of Conduct. Moldova is party to the Arms Trade Treaty. Moldova is not a participant to Wassenaar Arrangement, neither to

other multilateral export control nor non-proliferation regimes and is yet to join the Australia Group. Moldova does not have a separate national strategy for small arms and light weapons.

On **security measures**, the EU-Moldova Agreement on security procedures for the exchange and protection of classified information was operationalised prior to the reporting period in January 2021.

Security and defence cooperation has substantially increased over the past year, including in the framework of the European Peace Facility, addressing hybrid threats and cybersecurity, countering disinformation and strengthening strategic communication.

As regards **common security and defence policy (CSDP)**, Moldova has participated in EU crisis management missions and operations under CSDP since 2014, notably in the EU Military Advisory Mission in Central African Republic, and the EU Training Mission in Mali. Moldova has expressed interest to contribute to operation ALTHEA in Bosnia and Herzegovina, and in the EU Training Mission in Somalia and was invited to do so. Moldova actively contributes to UN missions. Moldova continues to contribute to NATO-led and UN mandated KFOR mission in Kosovo.

Regarding hybrid threats, Moldova completed the relaunched the EU **hybrid risk survey** in 2023 with the objective of identifying systemic vulnerabilities and streamlining the assistance provided by the EU in this field. Moldova initiated the implementation of a range of measures to increase its resilience and improve its ability to counter hybrid threats, in line with the recommendations from the hybrid risk survey.

ANNEX I – RELATIONS BETWEEN THE EU AND MOLDOVA

On 3 March 2022, the Republic of Moldova presented its application for membership of the European Union. The European Council granted **European perspective** and candidate status to Moldova in June 2022, on the understanding that nine steps identified in the Commission's opinion on the membership application, are taken.

The EU and Moldova signed an **Association Agreement, including a Deep and Comprehensive Free Trade Area**, in 2014, which fully entered into force in July 2016. The AA/DCFTA is the bilateral legal instrument serving as the basis for political association and economic integration between the EU and Moldova. Overall, Moldova continued to broadly implement its obligations. Regular political and economic dialogue between the EU and Moldova has continued through the AA/DCFTA structures, which also include various sub-committees. The last EU-Moldova Association Committee meeting took place in June 2022 and the latest EU-Moldova Association Council in February 2023. The 9th meeting of the EU-Moldova Association Committee in Trade Configuration took place on 29 November 2022, The EU-Moldova Parliamentary Association Committee held a meeting in March 2023.

Trade relations with the EU improved after the entry into force of the DCFTA and have intensified since the start of Russia's war of aggression against Ukraine, a Moldova has re-oriented many exports towards the EU. With the application of autonomous trade measures since July 2022, the EU unilaterally granted additional tariff rate quotas for a number of all agricultural products for 12 months and in July 2023 this measure was extended to remove all outstanding tariffs under the DCFTA for another year.

In light of Moldova's candidate status, the EU and Moldova agreed on a Priority Action Plan in June 2023 with the objective of accelerating implementation of the DCFTA and improving Moldova's access to the EU internal market, paving the way towards full accession in the future.

In addition to the AA/DCFTA structures, a Human Rights Dialogue with Moldova is in place since 2010 and convenes annually. The High-Level Energy Dialogue continued its biannual meetings during the reporting period, and the High-Level Strategic and Security Dialogue was held in March 2023.

The EU remains fully committed to support a comprehensive, peaceful and sustainable settlement of the Transnistrian conflict, based on the sovereignty and territorial integrity of the Republic of Moldova in its internationally recognised borders, with a special status for the Transnistrian region. The DCFTA applies to the entire territory of Moldova.

Citizens of Moldova enjoy **visa free travel** to the Schengen area as of April 2014. As part of the visa liberalisation monitoring mechanism, the Commission has been regularly assessing the progress made by the country in implementing reforms introduced under the visa roadmap. The Commission's sixth report under the Visa Suspension Mechanism, published in October 2023, concluded that Moldova continues to take action to address the recommendations from the previous year's report. A readmission agreement entered into force in January 2018. The EU has deployed considerable resources under the **common foreign and security policy** by launching an EU Partnership Mission to Moldova (EUPM) in May 2023 and providing assistance to the Moldovan Armed Forces through the European Peace Facility. In addition, the EU has put in place a dedicated sanctions regime targeting individuals who try to destabilise Moldova.

Regarding **bilateral financial assistance**, the indicative bilateral allocation for Moldova for the period 2021-2024 amounts to EUR 260 million under the Neighbourhood, Development

and International Cooperation Instrument – Global Europe 2021-2027 (**NDICI-GE**). As part of the 2022 bilateral envelope, the Action EU4 Resilience and Governance was adopted in December 2022 with an amount of EUR 40 million and focuses on good governance, stability and peace, as well as providing opportunities for all in an inclusive manner. The bilateral annual programmes are complemented by a package of multi-country and regional programmes, supporting the energy sector, strengthening border management and assisting with migration, security more widely, as well as TAIEX and competitiveness programmes together with International Financial Institutions and International Organisations. To facilitate the development of a robust labour market, and of public procurement in the country, Moldova is participating as an observer in two pilot projects under the Technical Support Instrument.

Since its launch in 2009, Moldova has participated in the **Eastern Partnership** (EaP). This overarching framework has further boosted bilateral and regional relations with the EU. Under the Eastern Partnership **Economic and Investment Plan** (EIP), the EU aims to mobilise up to EUR 1.6 billion in public and private investments for flagship projects in Moldova. The EIP accompanies the recovery, resilience and reform priorities as agreed after the 2021 Eastern Partnership Summit. The core of these investments support the five flagships identified in cooperation with the Moldovan government. These include direct support to Moldovan SMEs, supporting the construction of an inland Freight Terminal in Chisinau, refurbishment of district heating systems in residential buildings (in Chisinau and Balti), anchoring Moldova in the Trans-European Network for Transport and modernising school infrastructure. The EU is committed to progressing under these flagships in close cooperation with Moldovan authorities. So far, EUR 600 million have been allocated in key sectors such as supporting SMEs, energy efficiency and investments in Solidarity Lanes.

These aforementioned activities are built on and added to the regional programmes under **European Neighbourhood Instrument 2014-2020**, which was replaced by the NDICI instrument.

Since 2014, Moldova has progressively extended its **participation in EU programmes**. It has joined EU Customs, Fiscalis, LIFE, EU4Health, Horizon Europe and Connecting Europe Facility (CEF). Organisations and individuals from Moldova can also benefit from certain actions of the Erasmus+ and European Solidarity Corps Programmes. Moldova participates in several Interreg programmes and is a member of the EU macro-regional Strategy for the Danube region. Moldova's participation fee for EU programmes has been waived as a result of the impact on Moldova of Russia's war of aggression against Ukraine.

Source: Eurostat and/or the statistical authorities in Moldova

b = break in series

d = definition differs

e = estimated value

f = forecast

p = provisional

s = Eurostat estimate

w= data supplied by and under the responsibility of the national statistical authority and published on an "as is" basis and without any assurance as regards their quality and adherence to EU statistical methodology

* = Europe 2020 indicator

** = Macroeconomic Imbalance Procedure (MIP) indicator

Footnotes:

- 1) As of the end of the year.
- 2) Including data from the Transnistrian region.
- 3) Including wetlands.
- 4) Based on 2008 SNA.
- 5) From 2019 LFS is carried out on a new sampling plan and according to the revised definition of employment.
- 6) Starting with 2016 the Industrial production volume index are adjusted seasonally by number of working days and seasonality, the time series was corrected
- 7) In accordance with the Law no. 206 of July 7, 2006 'Regarding support of small and medium-sized enterprises', Small and medium-sized enterprises includes enterprises with less than 250 persons employed (annual average) and annual turnover of not more than 50 million Lei and with total assets (fixed assets and current assets) of not more than 50 million lei.
- 8) Consumer price inflation
- 9) Converted from USD to EUR using annual average exchange rates, according to the National Bank of Moldova.
- 10) The definition of direct investment corresponds to the definition provided by Eurostat, but these flows shouldn't be called "inward" and "outward", because the definition actually describes assets and liabilities.
- 11) Converted from USD to EUR using end-of-year exchange rates, according to the National Bank of Moldova.
- 12) GDP according to SNA 2008
- 13) Personal transfers.
Based on 2008 SNA.
- 14) Personal transfers.
- 15) Converted from USD to EUR using end-of-year exchange rates, according to the National Bank of Moldova.
Based on 2008 SNA.
- 16) The rate is established by the National Bank of Moldova (NBM) starting from 2001. The NBM applies the interest "corridor" method: the highest rate is applied on overnight credits, the lowest one on overnight deposits. End-of year values.
- 17) January to August.
- 18) Including persons producing goods for own consumption.
- 19) From 2014 data estimated using the usually resident population
- 20) Includes economic units in the real sector with 20 or more employees and all institutions in the budgetary sector regardless of the number of employees.
- 21) Includes units with 1 and more employee.
- 22) Data was recalculated for number of population with usual residence
- 23) Based on the estimation of the indicators was used the number of population with usual residence. Starting with 2019, the data are not comparable to the previous period, as the HBS methodology was modified.

- 24) Including other sources (liquefied gas, compressed natural gas, others).
- 25) The data presented for the years 2014-2020 have been revised, especially following the adjustment of some data from administrative sources used to produce statistics.
- 26) Including the Transnistrian region.
As of the end of the year.
- 27) Including the Transnistrian region.
As of the end of the year.
Including wetlands.
- 28) Without the data from the Transnistrian region

ANNEX 1 - RELATIONS BETWEEN THE EU AND UKRAINE.....	142

1. INTRODUCTION

1.1. CONTEXT

On 28 February 2022, five days after Russia launched its unprovoked and unjustified aggression, Ukraine submitted its application for EU membership. On 17 June 2022, the Commission issued its opinion¹ and recommended to the Council that Ukraine should be given the perspective to become a member of the EU and that the country be granted candidate status on the understanding that seven steps, mainly in the rule of law area, are taken. On 23 June 2022, the European Council recognised the country's European perspective and decided to grant Ukraine the status of candidate country. The European Council invited the Commission to report to the Council on the fulfilment of the seven steps as part of its regular enlargement package. This report is the Commission's first annual enlargement report on Ukraine replacing the previous annual Association Implementation Reports. To complement its opinion on the membership application, the Commission published the analytical report² on the *acquis* alignment of Ukraine in February 2023.

Russia's war of aggression is still ongoing, causing the loss of tens of thousands of lives, livelihoods, millions of refugees and internally displaced persons, deportation and transfer of Ukrainian citizens, including children, to Russia and Belarus, massive destruction of physical infrastructure and further occupation of Ukrainian territory by Russia. Faced with this aggression, the Ukrainian government has shown a remarkable level of institutional strength, determination and ability to function. Since the beginning of the full-scale invasion and war of aggression, the EU has been supporting Ukraine diplomatically, financially, economically and militarily and through humanitarian aid on an unprecedented scale, amounting to EUR 82.6 billion. It has also issued 11 packages of sanctions against Russia. EU Member States host a large number of Ukrainians, of which close to 4 million are registered for temporary protection under the Temporary Protection Directive. The EU and its Member States have also supported efforts to ensure full accountability for war crimes and the other violations of international law committed in connection with Russia's war of aggression. To support Ukraine's repair, recovery and reconstruction process, the Commission, together with Ukraine and G7 partners, has set up the Multi-agency Donor Coordination Platform. The repair, recovery and reconstruction process is firmly embedded in Ukraine's EU accession path, ensuring investments go hand in hand with accession-related reforms. In June 2023, the European Commission proposed a dedicated medium-term financing instrument that will provide Ukraine with coherent, predictable and flexible support for the period 2024-2027. The new Ukraine Facility will support efforts to sustain macro-financial stability and promote recovery. The plan is for the Facility to be endowed with EUR 50 billion in grants and loans. The EU will continue to support Ukraine as long as it takes.

Despite the war and its impact on all levels of Ukrainian society and the martial law in place, the Ukrainian government and Parliament showed determination to carry out the necessary reforms required by the EU accession process, in particular the seven steps mentioned in the opinion. Support for future EU accession is higher than ever before. According to various recent opinion polls around 90% of Ukrainians support EU membership.

1.2. SUMMARY OF THE REPORT³

Despite Russia's full-scale invasion in February 2022 and its brutal war of aggression, Ukraine

¹ COM(2022) 407 final

² SWD(2023) 30 final

³ This report covers the period from June 2022 to June 2023. It is based on input from a variety of sources, including contributions from the government of Ukraine, the EU Member States, European Parliament reports

has continued to progress on democratic and rule of law reforms. The granting of candidate status for EU accession to Ukraine in June 2022 has further accelerated reform efforts.

During the reporting period, **no elections** took place. Overall, the legal framework remains conducive to the organisation of democratic elections. Reform of the electoral legal framework should be continued to address outstanding recommendations by the OSCE Office for Democratic Institutions and Human Rights (ODIHR).

The work of the **Parliament** (Verkhovna Rada) continues to be marked by extraordinary circumstances related to the Russian military aggression. However, legislative tasks are carried out systematically, laying the ground for an uninterrupted democratic decision-making process. Key decisions, especially on defence/security questions, were adopted by clear cross-party majorities. Considerable attention was paid to legislation related to EU integration. The Rada performed important symbolic functions, while concerns were raised about limited transparency on security grounds and weakened oversight of the executive.

Ukraine has some level of preparation in the area of **public administration reform**, with limited progress made during the reporting period. While the Ukrainian public administration has proved its resilience during the full-scale invasion, reform has slowed or stopped in a number of sectors, in particular in merit-based recruitment and selection, job classification and salary reform, as well as the roll-out of the human resources management information system. The digitalisation of service delivery has reached a high level.

On **multi-level governance**, the achievements of decentralisation reform continued, with municipalities acting as a pillar of Ukrainian resilience. Overall, following the successful finalisation of the territorial part of decentralisation, other elements of the reform still need to be completed. Local self-government in the liberated territories and those near the frontlines should be gradually restored where the security situation allows it. The newly established Ministry of Restoration should synergise infrastructure and the regional development portfolio to stimulate locally driven recovery and reconstruction based on the systematic involvement of local authorities and associations. The local fiscal base needs to be strengthened.

On the **functioning of the judiciary**, Ukraine has some level of preparation and must continue its efforts. Despite the Russian war of aggression, Ukraine continued to deliver justice services and made good progress on the implementation of the 2021 reform of the judicial governance bodies focused on integrity and professionalism. The High Council of Justice and the High Qualification Commission of Judges were re-established following a transparent process with the meaningful involvement of independent experts. It will allow the government to start filling more than 2 000 judicial vacancies again and evaluating (vetting) the qualification of some 1 900 sitting judges, which was suspended in 2019. Despite significant challenges, the Ukrainian institutions showed remarkable resilience and introduced the necessary legislative and organisational measures that allow it to continue to provide justice services to citizens and companies during the war. In 2022, most courts maintained a clearance rate (ratio of the number of resolved cases over the number of incoming cases in a given year) of 100% or even higher.

and information from various international and non-governmental organisations. It also includes the results of comparative assessments and indices produced by other stakeholders, in particular in the area of rule of law.

The report uses the following assessment scale to describe the state of play: early stage, some level of preparation, moderately prepared, good level of preparation and well advanced. To describe progress made during the reporting period, it uses the following scale: backsliding, no progress, limited progress, some progress, good progress and very good progress. Where appropriate, interim steps have also been used.

In August 2023, Ukraine enacted legislation enabling a transparent and merit-based preselection of judges of the Constitutional Court in line with the Council of Europe's Venice Commission recommendations, and started the implementation process by establishing the Advisory Group of Experts and announcing the competitions to the Constitutional Court. Legislation on the selection of judges should still be improved, and a more transparent procedure needs to be introduced for the selection of management-level prosecutors. In August and September 2023, Ukraine adopted two laws for resuming disciplinary proceedings against judges and for establishing an independent service of disciplinary inspectors on the basis of a transparent and meritocratic selection procedure with a meaningful involvement of internationally-nominated experts. A new administrative court to handle cases involving the central government bodies and staffed by properly-vetted judges needs to be established, following the abolition of the Kyiv District Administrative Court. Legislative and institutional changes are needed to ensure stronger disciplinary system for prosecutors. To increase transparency, efficiency and access to justice, Ukraine should also continue its efforts on digitalisation of the judiciary. Systemic measures still need to be taken to advance the reform of enforcement of court decisions, including the enforcement of decisions of the European Court of Human Rights. To ensure the sustainability of rule of law consolidation efforts, Ukraine should continue legal education reform.

Since the start of the full-scale invasion, Ukraine has been confronted with an unprecedented number of **atrocities** committed by the Russian military. The Ukrainian institutions made considerable efforts to address this and bring the perpetrators of international crimes to justice. Multiple law enforcement agencies, following the guidance of the Office of the Prosecutor General, started investigating these complex crimes. Specialised investigation and prosecuting departments were established for this purpose. As a result, 107 951 incidents related to various atrocity crimes have been officially registered. 267 people have been indicted and 63 people convicted for war crimes by Ukrainian courts. There has been close international cooperation, including with the International Criminal Court and its Office of the Prosecutor, Eurojust, Europol and numerous EU Member States. To improve the effectiveness of investigation of international crimes and cooperation with the International Criminal Court, Ukraine should further harmonise its legal framework with the applicable international standards.

On the **fight against corruption**, Ukraine has some level of preparation. Some progress was made during the reporting period, in particular with the establishment and consolidation of a comprehensive anti-corruption institutional framework and the gradual building of a track record in investigating, prosecuting and adjudicating high-level corruption cases. Ukraine stepped up reforms in this area after receiving EU candidate status. New legislative, strategic and institutional improvements were pursued, including the adoption of the national anti-corruption strategy, accompanied by a comprehensive state programme for its implementation. The new Heads of the Specialised Anti-Corruption Prosecutor's Office (SAPO) and the National Anti-Corruption Bureau of Ukraine (NABU) were appointed in July 2022 and March 2023 respectively, following transparent and meritocratic selection procedures with the involvement of independent experts. Since their appointment, NABU and SAPO have increased their cooperation and stepped up investigations into high-level corruption cases. The e-asset declaration system, suspended after the introduction of martial law, was restored and opened to the public, albeit with some potential weaknesses related to the verification powers of the National Agency on Corruption Prevention (NACP) and the data to be verified. The Parliament has also adopted a law that would weaken administrative liability related to e-asset declarations, but the President has not signed this law into effect. To ensure the impact and sustainability of anti-corruption efforts, Ukraine should continue building a credible track record of investigations, prosecutions and final court decisions in high-level corruption cases,

including the seizure and confiscation of criminal assets. Timely and steady implementation of the 2023-2025 state anti-corruption programme should also be pursued. Efforts are also needed to further streamline and improve substantive and procedural criminal law. To cope with increasing workloads, the number of NABU staff, SAPO prosecutors and High Anti-Corruption Court judges should be increased. Furthermore, SAPO should be further protected from possible undue interference by improving the selection procedures for the Head of SAPO and its key officials, increasing its organisational and procedural autonomy, and improving its accountability framework.

Ukraine has some level of preparation in the area of the fight against **organised crime**. Some progress was made. Ukraine has a dedicated strategic and institutional framework to fight organised crime and a good level of international cooperation. There is an increasing number of joint operations with EU Member States. Measures are being taken to tackle the illicit flow of firearms, human trafficking and cybercrime. The development of the e-case management system in the criminal justice chain was launched. The national asset recovery strategy was adopted. Russia's war of aggression had a profound impact on the institutional capacity to fight organised crime, but relevant institutions demonstrated resilience and continued their work. However, the legal framework and operational capacity to fight organised crime remain weak. Procedural gaps, jurisdictional overlaps, widespread corruption and underdeveloped IT infrastructure are also hampering the effective fight against organised crime. Inter-agency coordination needs to be strengthened further. Ukraine should also launch the national serious organised crime threat assessment in line with EU standards and build the capacity to implement it. The legal framework and institutional capacity still need to be improved as regards financial investigations, asset recovery and management. Transparent and merit-based selection of management and staff, along with a strong accountability system should be introduced in the Bureau of Economic Security, a key agency tasked to fight economic crime.

On **fundamental rights**, Ukraine complies overall with international human rights instruments and has ratified most international conventions on the protection of fundamental rights. Citizens suffered severely from the large-scale violations of fundamental rights by Russia, which Ukrainian authorities and civil society have sought to remedy since February 2022. At the start of the full-scale invasion, Ukraine introduced martial law, which led to some restrictions of rights and freedoms, but these have so far remained largely in proportion to the actual needs and have been applied with caution. The number of registered discrimination against minorities, including against LGBTIQ persons and national minorities as well as antisemitic acts, has strongly decreased. On the rights of persons belonging to national minorities, Ukraine needs to address the remaining recommendations of the Venice Commission Opinion of June 2023 and the follow-up Opinion of October 2023. Further efforts are also needed to ensure that persons with disabilities can enjoy their rights as per the UN Convention on the rights of persons with disabilities.

At the same time, important reforms have been introduced and adopted, such as the new media law. Ukraine also ratified the Istanbul Convention on preventing and combating violence against women and domestic violence in July 2022 and adopted the 2030 state strategy on ensuring equal rights between men and women, which should now be implemented. Only limited progress was made in the field of prevention of torture and ill treatment in prisons and other forms of detention, where a cultural change within state authorities needs to materialize and further measures are required to prevent and ensure accountability for such acts. A law on personal data protection, aligned with the EU *acquis*, should be adopted. The situation of children (but also of older persons) in care institutions as well as persons with disabilities remains difficult, but commitments on the deinstitutionalisation of childcare and to rebuilding

Ukraine in a barrier-free manner are promising and need to be implemented as a priority. Similarly, support for the Roma⁴ community needs to be stepped up with a concrete and targeted action plan.

Given the breadth of issues concerning fundamental rights, in particular the numerous violations by Russia, the Ukrainian Parliament Commissioner for Human Rights faces serious challenges with its existing capacity to address the entire range of its responsibilities in a meaningful manner.

Despite the context of a full-scale war, Ukraine is in between some and moderate level of preparation in the area of **freedom of expression**. Good progress was made in the reporting period with the adoption of the media law in December 2022 and despite the war-time restrictions in access for media and journalists introduced. Ukrainian citizens enjoy freedom of expression, with critical media reporting available. However, media concentration has been observed due the collapse of the media and advertising market, particularly in the television segment. This has reduced people's access to pluralistic media in Ukraine. The situation of journalists remains precarious, both economically and – since the start of the full-scale invasion – physically. Ukraine needs to envisage new ways to ensure a post-war structure for pluralistic and independent non-online media (in particular television), including the long-term outlook of the public broadcaster and independence of the national regulator.

Due to the impacts of Russia's ongoing full-scale invasion as well as the pre-existing structural economic challenges, the Ukrainian economy is between an early stage and some level of preparation towards **establishing a functioning market economy**. Since the full-scale invasion by Russia, the conduct of monetary policy, overall economic governance and the institutional and regulatory environment have faced considerable difficulties. Despite these challenges, the Ukrainian authorities have responded swiftly and with overall stability in mind, although the circumstances have also brought about some temporary setbacks on several important elements of a functioning market economy. In 2022, the economy contracted by 29.1%, showing more resilience than first expected. To contribute to financial stability and strengthen confidence in the domestic currency, the National Bank of Ukraine suspended the hitherto successfully managed inflation-targeting framework, fixed and devalued the exchange rate and raised its main refinancing rate. The banking sector remained fully operational and stable with ample liquidity, also thanks to previous reforms and supervisory forbearance measures. The state of public finances has deteriorated markedly due to the duration and cost of the war and its impact on the economic activity. This has undone the considerable fiscal consolidation and corresponding reduction in the debt stock that had been achieved in previous years before the pandemic. The significant internal and external population displacements, together with significant capital destruction, profoundly affected the labour market.

Due to the impacts of Russia's ongoing full-scale invasion as well as the pre-existing structural economic challenges, Ukraine is at an early stage of preparation in terms of its **capacity to cope with the competitive pressure and market forces within the EU**. The war has severely damaged Ukraine's capital infrastructure and triggered a massive human exodus that has deeply affected the economy. Investment in research and innovation has been low, and educational outcomes have not met the needs of the labour market, despite rather high spending and relatively high formal levels of educational achievement. The structure of the Ukrainian economy remained concentrated in sectors with low added value. While trade integration with the EU has been advancing recently, including thanks to the implementation of the Deep and

⁴ In line with the terminology of European institutions the umbrella term 'Roma' is used here to refer to a number of different groups, without denying the specificities of these groups.

Comprehensive Free Trade Area, it remains rather low. At the same time, the international response in support of Ukraine has been massive over the last year, and future reconstruction could also help support modernisation, in which Ukraine specialises in higher value-added chains, and help strengthen its competitiveness.

On **good neighbourly relations and regional cooperation**, Ukraine maintains good bilateral relations with other enlargement countries and with neighbouring EU Member States. These have been strengthened amidst Russia's war of aggression leading to further deepening cooperation with many of those countries, marked by a number of high-level visits and considerable humanitarian, military and financial support.

On Ukraine's **ability to assume the obligation of EU membership**, the country continued to work on alignment with the *acquis* in many areas.

The **internal market** cluster is key to Ukraine's preparations for the requirements of the EU internal market and is of high relevance for the implementation of the Deep and Comprehensive Free Trade Area. Some/good progress was made in the area of free movement of capital and intellectual property law. Some progress was achieved in several areas, particularly in financial services, free movement of goods, right of establishment and freedom to provide services, and company law. Progress was limited in the area of competition policy as well as consumer and health protection, with no progress in the area of freedom of movement for workers due to Russia's full-scale invasion of Ukraine.

The **competitiveness and inclusive growth** cluster and the related reforms are closely linked to the ability and capacity for recovery and reconstruction. This requires increasing competitiveness and building a sustainable and inclusive economy. Good progress was achieved in digital transformation and media and in the customs union. Some progress was made on taxation and education and culture. Limited progress was made in social policy and employment, enterprise and industrial policy, and science and research. No progress could be made – due to Russia's full scale invasion which demanded extraordinary economic policy measures – on economic and monetary policy.

The **Green Agenda and sustainable connectivity** cluster and the related reforms are also intricately linked to Ukraine's reconstruction during and after the war. Russia's war of aggression against Ukraine has been highly detrimental to the transport infrastructure, environment and climate. Progress was achieved in several areas within the cluster, with good progress on environment, some progress on energy and Trans-European networks, while progress was limited in the area of climate change and transport policy.

In the areas covered by the cluster on **resources, agriculture and cohesion**, progress was achieved in particular in three areas, namely some progress in agriculture and rural development, food safety and veterinary (SPS) and phytosanitary policy as well as in the area of fisheries and aquaculture. Progress was limited in regional policy and the coordination of structural instruments and financial and budgetary provisions.

In the **external relations** cluster, Ukraine has good level of preparation. As regards the foreign, security and defence policy, Ukraine has made good progress, as it has increased the alignment rate with relevant EU decisions and declarations of the EU's common foreign and security policy to 93% (2022). Progress was limited in alignment with the EU's trade policy.

1.3. ASSESSMENT OF THE IMPLEMENTATION OF THE SEVEN STEPS OF THE COMMISSION'S OPINION

***Step 1** - enact and implement legislation on a selection procedure for judges of the Constitutional Court of Ukraine, including a pre-selection process based on evaluation of their integrity and professional skills, in line with Venice Commission recommendations.*

In December and July, Ukraine adopted the necessary legislation that introduced a pre-selection process for the Constitutional Court judges on the basis of integrity and professionalism criteria, in line with the Venice Commission recommendations. Internationally-nominated members of the pre-selection body – the Advisory Group of Experts – obtained a temporary but decisive role in this body. Ukraine launched the implementation process. The Parliament and the Council of Judges announced competitions to fill the available vacancies in the Constitutional Court. The President and the Council of Judges appointed their members and substitutes to the Advisory Group of Experts, while the Parliament is continuing the appointment procedure. In September, the Venice Commission and the international donors, including the EU, submitted their nominations of members and substitutes of the Advisory Group of Experts. In October, the Cabinet of Ministers formally appointed them. With five appointed members and five substitutes, the Advisory Group of Experts became operational. **This step is completed.**

***Step 2** - finalise the integrity vetting of the candidates for the High Council of Justice members by the Ethics Council and the selection of candidate to establish the High Qualification Commission of Judges of Ukraine.*

The Ethics Council completed the integrity vetting of the candidates for open positions in the High Council of Justice (HCJ). The HCJ became fully operational in January 2023 when it reached its quorum of 15 members. In June 2023, the renewed HCJ appointed 16 new members of the High Qualification Commission of Judges (HQCJ) out of a shortlist of 32 candidates proposed by the HQCJ Selection Commission, following a transparent and merit-based process, including an integrity and professionalism check. **This step is completed.**

***Step 3** - further strengthen the fight against corruption, in particular at high level, through proactive and efficient investigations, and a credible track record of prosecutions and convictions; complete the appointment of a new head of the Specialised Anti-Corruption Prosecutor's Office through certifying the identified winner of the competition and launch and complete the selection process and appointment for a new Director of the National Anti-Corruption Bureau of Ukraine.*

Ukraine has further developed its track record in fighting corruption. Until the end of September 2023, 82 indictments against 203 persons were sent to court; should this trend continue, the number of indictments would double in 2023 compared to previous years. The High Anti-Corruption Court (HACC), until the end of September 2023, has significantly increased its overall performance and delivered 48 verdicts against 64 defendants in first instance, and 26 verdicts against 32 defendants in second instance. The cases investigated and adjudicated concerned prominent high-level public officials including former deputy ministers, former parliamentarians and high-level judges, e.g. the serving President of the Supreme Court. Ukraine appointed the heads of the Specialised Anti-Corruption Prosecutor's Office (SAPO) and the National Anti-Corruption Bureau of Ukraine (NABU). Ukraine adopted a comprehensive State Anti-Corruption Programme in March 2023 and launched the IT system for monitoring its implementation, as well as the Unified Portal for Whistle-blower Reports.

The e-asset declaration system, suspended after the introduction of martial law, was restored

and opened to the public, albeit with some potential weaknesses related to the verification powers of the National Agency on Corruption Prevention (NACP) and the data to be verified. The Parliament has also adopted a law that would weaken administrative liability related to e-asset declarations, but the President has not signed this law into effect.

Draft legislation was developed and registered in the Parliament that enhances the independence of SAPO and the effectiveness of the Criminal and Criminal Procedure Codes in the fight against high-level corruption. Also, a draft law increasing the staffing cap for NABU was registered in the Parliament.

Ukraine should still enact a law raising the legislative staffing cap for the NABU and remove from the law on corruption prevention the provisions restricting the NACP's powers to continued verification of assets that have already undergone the verification process and limiting NACP's powers to verify property acquired by declarants before joining the public service, without prejudice to the rules applying to national security during wartime.

Step 4 - ensure that anti-money laundering legislation is in compliance with the standards of the Financial Action Task Force (FATF); adopt an overarching strategic plan for the reform of the entire law enforcement sector as part of Ukraine's security environment.

In September 2022, the Parliament adopted a new law on ultimate beneficial ownership, while the Government subsequently adopted the necessary implementing legislation on the registration and verification of beneficial ownership information, identification of the ultimate beneficial owners and liability for violations. The Government has adopted a bylaw regulating the supervision of non-financial businesses and professions. Ukraine has also developed and registered a new draft law on targeted financial sanctions and adopted a bylaw on the evidentiary standards for listing of individuals and entities on the terrorist sanctions lists. The Office of the Prosecutor General issued instructions and methodological guidance to all regional prosecution offices on the investigation of money laundering offences and the application of financial investigations in proceeds-generating crimes, thus clarifying the regulatory framework on financial investigations. Furthermore, a new draft law on virtual assets has been prepared and is undergoing an approval procedure within the Government.

In May 2023, the President approved the comprehensive strategic plan for the reform of the law enforcement sector.

Ukraine further advanced the alignment of its anti-money laundering legislation with the FATF standards. In October 2023, the Parliament adopted a law removing a three-year time limitation and reverting to a risk-based approach for former holders of prominent public functions to be qualified as politically exposed persons to restore a FATF-compliant definition of politically exposed persons. The Commission can accept the definition of PEP's however the Commission encourages the Ukrainian supervisor (the NBU) to issue guidance making clear to obliged entities that the national list of PEPs is indicative and not exhaustive.

This step is completed. However, the Commission assessment cannot prejudice in any way the future assessment of Moneyval.

Step 5 - implement the Anti-Oligarch law to limit the excessive influence of oligarchs in economic, political, and public life; this should be done in a legally sound manner, taking into account the forthcoming opinion of the Venice Commission on the relevant legislation.

Ukraine has prioritised systemic measures against oligarchs, in line with the Venice Commission recommendations issued in June 2023. Ukraine updated and continued to implement its Action Plan to reduce the influence of oligarchs, which includes systemic

reforms in key areas affected by the vested interests. Beside the reform of the judicial governance bodies and the Constitutional Court, adoption of a new media law, implementation of the state anti-corruption programme and the finalisation of the legal framework on the ultimate beneficial ownership, Ukraine has adopted and signed into effect legislation strengthening the Anti-Monopoly Committee of Ukraine and restoring the financial reporting of political parties and the verification functions of the relevant institutions.

Ukraine is also developing a comprehensive law on lobbying in consultation with international experts; public consultations have been planned. The Government also decided to postpone the implementation of the law on oligarchs that was criticised by the Venice Commission by amending the Government's Anti-Oligarch Action Plan and to prepare amendments to it within three months after the end of the martial law, taking into account the recommendations of the Venice Commission.

Furthermore, Ukraine should still enact a law regulating lobbying in line with European standards, as part of the anti-oligarch action plan.

Step 6 - tackle the influence of vested interests by adopting a media law that aligns Ukraine's legislation with the EU audio-visual media services directive and empowers the independent media regulator.

Ukraine adopted the new media law in December 2022. In May 2023, it adopted further amendments to the advertising law to align its law with EU audio-visual media services directive and to address outstanding issues in its media law related to blacklisting and hate speech. **The step is completed.**

Step 7 - finalise the reform of the legal framework for national minorities currently under preparation as recommended by the Venice Commission, and adopt immediate and effective implementation mechanisms.

The law on national minorities (communities) was adopted in December 2022 and amended in September 2023, following the Venice Commission Opinion recommendations of June 2023 on that law. The follow-up Venice Commission Opinion adopted on 6 October 2023 acknowledges progress made, but also identifies a number of remaining issues where previous recommendations were not or only partially addressed.

Certain implementation mechanisms were adopted, among them the State Programme "Unity in Diversity", which are to be complemented by additional implementation measures, in particular a resolution on the methodology for language use in traditional settlements of persons belonging to national minorities or where they make up a significant part of the population.

In addition to that, in June 2023, Ukraine adopted a law extending the transition period for education in minority languages by one year for pupils who started their education before 1 September 2018 and, in October, registered a draft law in the Parliament to permanently exempt these pupils from the obligations of the Education Law. The Cabinet of Ministers is obliged, according to the final provisions of the revised Law on national minorities (communities), to prepare and submit to Parliament, within six months after the entry into force of the law, a draft law to revise the education law, the State language law and the media law.

Ukraine should still enact a law addressing the remaining Venice Commission recommendations from June 2023 and October 2023 linked to the Law on national minorities, also addressing the Venice Commission recommendations linked to the laws on State language, media and education.

2. CLUSTER 1: THE FUNDAMENTALS OF THE ACCESSION PROCESS

2.1. FUNCTIONING OF DEMOCRATIC INSTITUTIONS AND PUBLIC ADMINISTRATION REFORM

Due to the Russian war of aggression, Ukraine temporarily invoked **martial law** on 24 February 2022, by Presidential decree and approved by Parliament. It has been extended eight times, with the current extension in place until 15 November 2023. Martial law authorises the military command and military administrations either independently or with the Ministry of Internal Affairs of Ukraine, other executive bodies and local self-government authorities, to introduce various restrictions on rights and freedoms of individuals as well as rights and legal interests of legal entities. The application of martial law has overall been proportionate.

While martial law is in place, elections are prohibited, as is amending the Constitution of Ukraine. Regular parliamentary elections due in October 2023 had therefore to be postponed.

2.1.1. Democracy

Despite Russia's full-scale invasion in February 2022 and ongoing war of aggression, Ukraine has continued to make progress on democratic and rule of law reforms. The granting of EU candidate status to Ukraine in June 2022 has led to a further acceleration of reform efforts. Currently, a martial law is in place.

Elections

During the reporting period, no elections took place. Overall, the legal framework remains conducive to the organisation of democratic elections. The reform of the electoral legal framework should be continued to address outstanding OSCE/ODIHR recommendations.

Key recommendations in the latest OSCE/ODIHR election observation mission reports were addressed. The electoral code adopted in 2019 harmonised all electoral procedures. It introduced, among other things, an open-list proportional representation system and enfranchised internally displaced persons.

Following the 2020 local elections, work on a comprehensive revision of the electoral code has been ongoing, and the process has been transparent and inclusive.

Parliament

The work of the Parliament (Verkhovna Rada) continues to be marked by extraordinary circumstances related to the Russia's war of aggression. However, legislative tasks are carried out systematically, laying the ground for an uninterrupted democratic decision-making process. Key decisions, especially on defence/security questions, were adopted by clear cross-party majorities. Considerable attention was paid to legislation related to EU integration. The Rada performed important symbolic functions, while concerns were raised about limited transparency on security grounds and weakened oversight of the executive. Use of the urgent procedure to pass legislation is relatively limited. Comprehensive impact assessments of proposed legislation and legislative oversight of the executive, including monitoring the implementation of legislation, need to be strengthened.

On 23 February 2022, the Parliament endorsed the President's decision to introduce martial law due to the full-scale Russian military aggression. Despite the circumstances during the reporting period, the Verkhovna Rada conducts systematic legislative activity (including plenary sessions and committee meetings), taking an active part in the overall reform process.

The Parliament's rules of procedure are in place and are being amended successively in line with its roadmap for internal reform and capacity building. The code of conduct for members of parliament has not been adopted yet. The majority of rules related to integrity and prevention of corruption are regulated by anti-corruption legislation. In this regard, the obligation for members of Parliament to submit an electronic asset declaration each year has been suspended in connection with martial law.

There are currently 23 committees in the Parliament. All committees are responsible for both legislative and **oversight/control** functions. Ministerial reports, the consideration of interpellations as well as the assessment of candidates for public offices were carried out during online meetings. At the same time, overall parliamentary scrutiny, including the monitoring and implementation of legislation, should be strengthened.

The Parliament's rules of procedure do not regulate the issue of **gender balance**. At the same time, according to the government's rules of procedure, gender legal expertise is mandatory for all draft laws drafted by government. The percentage of female members of Parliament is currently at a historic high of 21%.

The Russian invasion and subsequent introduction of martial law had an impact on the **transparency** of parliamentary activities. At present, the sessions are not livestreamed on the TV channel Rada. Journalists are not authorised to attend the plenary meetings, while parliamentary requests, as well as requests for public information and by-name voting, are not available on the parliamentary website. Furthermore, due to security reasons there is no schedule of plenary meetings – they are to be called by the Chairman of the Parliament based on needs. Reinstating public consultations and scrutiny is crucial after martial law has been lifted.

As of January 2022, there were 370 registered **political parties** in Ukraine. In May 2022, the law prohibiting the activity of pro-Russian parties entered into force. Since then, 16 parties have been prohibited by court.

In 2020, an amended version of the law on political parties was prepared in a broad consultation and on the basis of a joint OSCE/ODIHR and Venice Commission Opinion. Work on the draft law was suspended after February 2022 and resumed in September 2022. OSCE/ODIHR provided legal expertise in the process.

The Law on restoration of financial reporting of political parties was adopted by the Parliament on 23 August and signed by President on 26 September. **Governance**

On **multi-level governance**, the achievements of decentralisation reform continue to be evidenced, with municipalities acting as a pillar of state resilience in mobilising bottom-up support, resetting basic social services, helping organise voluntary territorial defence and receiving large numbers of internally displaced persons.

At the same time, martial law gave rise to the creation of a large number of military administrations at local level. Ukraine should clarify, by law, the criteria for establishing them and for restoring local self-government in the liberated territories and those near the frontlines, where the security situation allows democratically elected bodies to perform their tasks.

Overall, following the successful finalisation of the territorial part of decentralisation, other elements of the reform still need to be completed. Draft constitutional amendments in particular, aimed at ensuring that decentralisation reform is sustainable and irreversible, have not yet been taken forward due to the ban on constitutional revisions during martial law. There was also limited progress in key legislative files aimed at clarifying the role of the tiers of local administration (regional, district, municipal) to delineate powers between central and local

levels and to put in place appropriate internal structures for municipal administrations. The rules of supervision of local authorities' activities, in line with the European Charter of Local Self-Government, have not yet been set up. Work should also continue on granting legal personality to municipalities under public law, based on European practice. The recently adopted Law on service in local self-government is likely to bring fairer and more transparent rules on the employment of officials at local level.

In institutional terms, the Ministry of Restoration was set up to merge previous infrastructure and regional development ministries. As a way forward, the new office should synergise both portfolios and organise resources accordingly, including via the Agency of Restoration, with a view to stimulate locally driven recovery and reconstruction. This will also require more systematic involvement of local authorities and associations in policy design and implementation, based on a formally embedded coordination mechanism. The Congress of Local and Regional Authorities, with its permanent office, is an advisory body under the President of Ukraine that has no such mandate established by law. Ukraine should refrain from enacting the law on urban planning in its current form as it creates integrity risks resulting from delegating excessive control powers in urban planning control from public to private entities, and leads to the disempowerment of local authorities in this sphere.

Fiscal decentralisation was maintained, with 64% of personal income tax (PIT), and PIT from the military staff allocated to municipalities in 2023. In parallel, certain local subsidies for delegated tasks decreased, and centrally established exemptions in local taxes were not compensated. The solid local fiscal base therefore needs to be ensured to avoid a disproportionate financial vulnerability of municipalities. This can be done through a fair distribution of PIT to municipalities where the taxpayers actually reside and a necessary extension of sources of local taxation.

Civil society

Ukraine's vibrant civil society remains engaged in reform processes and in the response to the impact of Russia's aggression. Volunteer movements and informal civil society groups often act as the backbone of humanitarian action across the country, including in the liberated and in temporarily occupied territories of Ukraine. In many respects they are key to the country's resilience.

The legal framework continues to guarantee the rights of freedoms of association, expression and peaceful assembly. An ambitious multi-year civil society development strategy is in place, providing for more meaningful engagement with civil society. However, the impact of its full implementation is yet to be assessed, while the government should consider adapting it with respect to the ongoing war and an envisaged post-war recovery. The government should further expand its public funding programmes for civil society organisations and work on improving the dialogue and consultations with them. A draft law on public consultation that has passed first reading in the Verkhovna Rada already in 2021, should be adopted. Additional efforts are also needed to address and investigate the cases of pressure and threats against civic activists. Measures were taken to support the registration of civil society organisations and simplify rules on reporting and taxation, for instance the amendments to the Law on volunteering.

An empowered civil society is a crucial component of any democratic system and is recognised and treated as such by state institutions. Civil society remains a key element of Ukrainian democracy, maintaining social bonds and fabrics, and contributing to the resilience of society at large. Volunteer movements and informal civil society groups often act as the backbone of humanitarian action across the country, including in temporarily occupied territories or newly liberated regions, while many of its members now also serve in Ukraine's armed forces.

The expertise of Ukrainian civil society organisations on key sector reforms has made them an important partner for the government as well as for Ukraine's international partners. Since the start of Russia's war of aggression, Ukraine's civil society has not only maintained its critical watchdog function but has also stepped up its efforts in terms of service provision, volunteering, humanitarian and human rights action, complementing the work of public administration and government. COVID-19 restrictions introduced since 2020 and martial law since 2022 have not significantly restricted the activities of civil society organisations, but have limited their possibilities to monitor the work of public administration.

Ukraine has several strategic documents to foster civil society engagement, including the 2021-2026 national strategy for promoting civil society development of September 2021, the national barrier-free strategy, and the national human rights strategy. These documents have continued to be implemented despite the impact of Russia's war of aggression and martial law. The action plan for the implementation of the national civil society strategy until 2024 was approved in February 2023 and contains 43 tasks across all four specific objectives of the strategy, which aim at improving the system for public participation in government policy making, creating an enabling environment for civil society development and promote participation of CSOs in the social and economic development of Ukraine and strengthen intersectoral cooperation. As part of human rights strategy implementation, work is ongoing to improve the anti-bullying legislation.

The existing legal framework guarantees the rights to the freedoms of expression, peaceful assembly and association. Measures have been put in place to ensure a three-day registration for non-governmental organisations and one-day registration for charities. The non-profit status exempts civil society organisations from the obligation to pay 18% corporate income tax. Charitable and volunteer donations are also tax-exempt.

Public funding for civil society organisations in Ukraine is mandated by a respective governmental decree. This provides a mechanism to allocate public funding at both national and local level, and a number of calls for proposals have been launched by several ministries and state funds, especially since the launch of online contest-based public funding for projects via the e-governance platform VzaemoDiia in 2021, which facilitated CSO access to public funding while increasing the transparency of the procedure. However, since the start of Russia's war of aggression, levels of public funding for CSOs have been reduced and no new CSO institutional support mechanism has been established. The allocation of public funding via VzaemoDiia was suspended on 24 February 2022 and was only partially resumed in September 2022. Since then, 8 online contests have been held. Both the Ukrainian Cultural Fund and the Ukrainian Institute reported funding cuts for their activities.

As a result of Russia's full-scale invasion, a high number of people fleeing the war beyond Ukraine's borders, act as volunteers from abroad, extending range of volunteer movements by civil society. The law on volunteering, amended in 2022, improved for instance the legal standing of volunteers in relation to their hosting organisations. Continued improvements are needed to implement Ukraine's civil society development strategy for 2021-2026, which includes points to further develop the legal framework and expand the state programme of volunteering, also to cover social needs.

CSOs have been expanding their cooperation with public institutions, including on humanitarian response, assistance to internally displaced persons as well as mental health and psychosocial support services. The recently adopted anti-corruption strategy for 2021-2025 is a good example of interactions and consultation with CSOs and proper consideration of their inputs. The legal framework for public consultations requires further standardisation and consolidation to ensure equal and fair access to public policy making for all stakeholders. The

final adoption of the draft law on public consultation, which passed first reading in Parliament in March 2021, is still pending.

While there is an open and active civic space largely respected by Ukrainian authorities, there are still examples of pressure and threats against local civic activists in particular, in some cases leading to violence. The authorities should continue to condemn such attacks, and effective investigations should ensure that there is no impunity for such crimes. and that such practices will not become widespread as in the past. Incidents of past pressure and attacks against civil society representatives, before the full-scale invasion of February 2022, still need to be fully investigated and prosecuted. In the territories temporarily occupied by Russia, only volunteers and informal civil society groups and activists are able to operate due to restricted access. In order to maintain crucial links with the Ukrainian state and people of Ukraine for mutual support, these volunteers and informal civil society groups often face high risks to their safety.

2.1.2. Public administration reform

Ukraine has **some level of preparation** in the area of public administration reform (PAR), with **limited progress** made during the reporting period. While Ukrainian public administration has proved to be resilient during Russia's war of aggression against Ukraine, reform has slowed or stopped in a number of sectors, in particular in merit-based recruitment and selection, job classification and salary reform, as well as the roll-out of the Human Resources Management Information System. The digitalisation of service delivery has reached a high level.

In the coming year, Ukraine should in particular:

- ensure timely alignment of existing legislation with the Law on administrative procedures in all sectors covered by its scope;
- restore merit-based recruitment and the selection process, as well as implement job classification as a precondition for comprehensive salary reform;
- make progress in the country-wide roll-out of the Human Resources Management Information System.

Strategic framework for public administration reform

The 2022-2025 PAR **strategy** and its action plan were amended in December 2022 to take into account Ukraine's EU candidate status and requirements under martial law. Both the strategy and the action plan continued to be monitored via a PAR Coordination Council (advisory body that includes representatives of the government, Parliament, civil society and PAR experts' network), albeit less often (one meeting in 2022). Under martial law, PAR financial sustainability has been deprioritised, and public financing largely relies on donor support.

Political support for PAR remains uneven. While it has been demonstrated in digitalisation and service delivery, in other areas, in particular the civil service and salary reform, the practical measures fall short of the declared objectives.

Policy development and coordination

The **policy-making system** is well established. The Secretariat of the Cabinet of Ministers conducts quality assurance and coordination of draft documents at the final stages of the process. However, the actual capacity of the government in terms of **evidence-based policy-making** remains insufficient. The explanatory notes that accompany legislative proposals do not often meet required standards. Line ministries rarely estimate the cost of draft policy documents and legal acts (in 2022, only two out of 28 policy documents approved by the Cabinet of Ministers included information on the implementation costs). The creation of policy

directorates in ministries and recruitment to fill reform support posts intended to address these gaps and provide technical support in implementing priority reforms - is incomplete. By the end of 2022, less than 750 reform support posts had been filled out of 3 000 planned posts, with a declining trend in 2023.

Parliament shares the right of legislative initiative with the government. In practice, over 80% of legislation originates from Parliament. The drafts submitted by parliamentarians often lack proper explanatory notes and/or impact assessments, which affects the quality of laws.

There are no formal requirements or systematic practices for **monitoring** the implementation of policies and legislation. Monitoring of the mid-term action plan and of the annual action plan by the Secretariat of the Cabinet of Ministers is mostly conducted on an *ad hoc* basis, with no outcome or impact indicators. It is necessary to ensure proper standards for both *ex ante* and *ex post* regulatory impact assessments, in particular to prepare a framework for tackling the challenges related to recovery.

Planning and coordination mechanisms for Ukraine's European integration process are in place. However, the Government Office for Coordination on European and Euro-Atlantic Integration lacks resources to manage the process effectively from within the Cabinet of Ministers, while the capacities of line ministries vary. A functional framework to ensure that the European integration framework is incorporated into an improved national decision-making process is yet to be established.

Public financial management (PFM)

The current PFM reform strategy and action plan for 2022-2025 is broadly aligned with other strategic documents, including the 2022-2025 PAR strategy, and is subject to regular monitoring.

The legal basis and institutional architecture within the Ministry of Finance to support fiscal risk monitoring and management has been established. However, capacity tools need to be developed further and practically implemented. The legislative basis for implementation of a medium-term budgetary framework is in place. The medium-term budget declaration (2022-2024) was put on hold due to the war. The government remains committed to a medium-term budgetary framework; it has made an agreement with the IMF to present the 2025 budget with a comprehensive framework for 2026-2028, which must be preceded by a risk analysis in the next year. A public investment management diagnostic assessment was finalised in late 2022. It flagged a number of issues to be addressed, including strengthening the role for the Ministry of Finance as a gatekeeper of public investments.

Budget transparency and openness in budgeting are limited in Ukraine, as reported by the Open Budget Index, and worsened under martial law. It should be gradually restored where possible. The capacity of Parliament and the Accounting Chamber to oversee the budget process should be improved as a matter of priority.

On digitalisation, efforts are being made to digitalise public internal financial control procedures as well as the budgetary planning process. Good progress has been made on the digitalisation of tax and customs administration (e.g. New Computerised Transit System Phase 4 was introduced in customs in autumn 2022; call centre, e-cash register and Single Tax Account in tax), and security of data has been improved.

Public services and human resources management

Overall, the Law on civil service provides a sound regulation framework, although martial law has affected it significantly. The **merit-based recruitment and selection procedure** was

suspended (which was also the case under COVID-19 measures from March 2020 to April 2021). Long periods with a lack of procedures to safeguard a professional and depoliticised civil service, in combination with the widespread use of non-transparent direct appointments, has undermined the civil service' competitiveness and independence.

Gender representation in the civil service continues to be unbalanced. By the end of 2022, senior management comprised 70% men and 30% women, middle management 33% men and 67% women, and at the executive level 22% men and 78% women.

Digitalisation of the human resources framework remains insufficient. Development and use of the **Human Resource Management Information System** (HRMIS) – aiming to provide a digital platform for all HR transactions across government institutions for the purpose of policymaking, transparency and accountability – has progressed very unevenly since 2017. HRMIS, including its payroll module, has been launched as the main HRM IT system by only a limited number of institutions and currently provides information on around 15% of posts.

The current **job classification** model only covers responsibility based on the civil servant's place in the administrative and institutional hierarchy. A professional job classification model piloted by the National Agency on Civil Service (NACS) had no systematic follow-up. The **remuneration system** remains non-transparent and unequal. As a result, the ability to offer a competitive position varies across institutions. Overall, senior management turnover is considerable, which results in a lack of staff stability. Systematic efforts are needed to attract, recruit and develop highly professional and non-partisan senior management.

Regarding **professional development**, civil servants are obliged to undergo training each year. NACS adjusted the training programme under martial law. The Higher School of Public Administration was established in October 2022 as a state in-service training institution reporting to NACS, based on the Ukrainian school of governance. It is tasked with training civil servants, heads of local state administrations, their first deputies and deputies, local self-government officials and deputies of local councils.

Accountability of the administration

Parliament scrutinises the Cabinet of Ministers in line with the models operating in EU Member States (approval process of the government's political programme, annual reporting, regular Q&A sessions, member of parliament requests, etc.). Public administration is also scrutinised by the Ombudsman and the Accounting Chamber. However, the Accounting Chamber has not fulfilled its oversight functions according to international standards, given the lack of a registry of recommendations and in turn the lack of a monitoring framework.

A key development in the service delivery area was the enactment of the Law on administrative procedure in May 2022, which is essential for developing the **right to good administration**. The law unifies currently fragmented administrative procedures across various sectors. The government is also preparing amendments to sectoral laws and implementing legislation, internal rules and procedures, and working processes. Certain institutions have recently asked to be exempted from the application of the law. Ukraine should refrain from introducing new exemptions from application of the law (e.g. Tax Service) as it would drastically reduce its overall impact.

The constitutional **right to fair trial** has been maintained under martial law. Administrative courts have been operating on a regular basis, with some adjustments due to security considerations. However, following the abolition of the Kyiv district administrative court, access to justice in cases involving central government bodies is undermined, since the new court is not yet established while the temporary court is overwhelmed. The Ministry of Justice

suspended the operation of state-run registers and databases. Access to **public information** has also been restricted for security reasons and granted on a case-by-case basis. A number of measures have been taken to make public registers secure, for example storing certain data on servers outside the country. The right to compensation is provided for in the legislation and applied.

Service delivery to citizens and businesses

The institutional and legal frameworks for public service delivery are in place to ensure a **user-oriented public administration**. A broad network of offline administrative service centres established locally have continued to perform well, despite war damage, thanks to their offices, remote workplaces and mobile centres.

Transforming **digital service delivery** ('State in a smartphone'), followed by the creation of the Ministry of Digital Transformation, continued to produce positive effects. The online portal for digital services (Diia portal) and the mobile application, currently provide more mature digital services. They are based on a remote qualified electronic signature and the full validity of digital documents and credentials. Both the Diia portal and Diia mobile application (17.3 million users) have played a crucial role in continuing to provide the public with access to extended number of digital services, including to internally displaced persons and Ukrainian refugees.

2.2. RULE OF LAW AND FUNDAMENTAL RIGHTS

2.2.1. Chapter 23: Judiciary and fundamental rights

The EU's founding values include the rule of law and respect for human rights. An effective (independent, high-quality and efficient) judicial system and an effective fight against corruption are of paramount importance, as is the respect for fundamental rights in law and in practice.

Ukraine has **some level of preparation** in implementing the EU *acquis* and European standards in the area of the judiciary, fight against corruption and fundamental rights. Despite Russia's war of aggression, **good progress** was made in this area and the relevant institutions continued operations, the delivery of vital services to citizens and reform efforts, demonstrating remarkable resilience. The efforts in the area of the judiciary, anti-corruption and fundamental rights need to continue and be further consolidated.

Functioning of the judiciary

Ukraine has **some level of preparation** in the functioning of the judiciary. Despite the Russian war of aggression, **good progress** was made with the implementation of the 2021 reform of the judicial governance bodies during the reporting period. The High Council of Justice (HCJ) and the High Qualification Commission of Judges (HQCJ) were re-established following a transparent and meritocratic process with the meaningful involvement of independent experts. It enables the government to start filling more than 2 000 judicial vacancies and to resume the qualification evaluation (vetting) of sitting judges. Ukraine also adopted the law on a transparent and merit-based preselection of judges of the Constitutional Court, in line with the Venice Commission recommendations, and started implementing it. Legislation was adopted to establish a strong service of disciplinary inspectors and to resume disciplinary proceedings against judges. The new administrative court to handle cases involving the central government bodies and staffed by properly-vetted judges needs to be established following the abolition of the Kyiv District Administrative Court.

In the coming year, Ukraine should in particular:

- fill the open vacancies in the Constitutional Court of Ukraine in line with the adopted legislation; relaunch the selection of ordinary judges on the basis of the improved legal framework, including clear integrity and professionalism criteria and the strong role of the Public Integrity Council; resume the evaluation of the qualification of judges (vetting), which was suspended in 2019; introduce a transparent and merit-based selection of management-level prosecutors by amending the legal framework and taking the necessary institutional measures;
- establish the service of disciplinary inspectors following a transparent and meritocratic selection process and resume the handling of disciplinary proceedings against judges prioritising high-profile cases and cases nearing the statute of limitation; take effective measures to address corruption risks in the Supreme Court; strengthen the disciplinary system for prosecutors by improving the existing legal and institutional framework;
- complete a comprehensive IT audit, including the existing IT systems, business processes and organisational structure, and based on the audit results, adopt and start implementing a roadmap to modernise IT in the judiciary, including the development of the new case management system.

Russia's military aggression against Ukraine has posed major challenges to Ukraine's judicial system. By the end of April 2023, 12 members of its judicial staff were killed, 114 court buildings (15% of the total) were either destroyed or damaged by the hostilities, and a large number of case files were lost. The material losses suffered by the courts are estimated at EUR 47 million. The Prosecution Service has also suffered severe damage. 6 staff members were killed, 64 buildings of the prosecutor's offices were either fully or partially destroyed, while 173 buildings remain in the temporarily occupied territories of Ukraine. The material damage exceeds EUR 22 million. The administration of justice has been affected by air strikes, air raid alerts and frequent power outages. Parties to court proceedings were displaced internally or abroad, which disrupted the handling of cases. More than 80 000 cases related to war crimes, crimes against humanity and other war-related offences were opened, thereby shifting the work priorities and placing an additional burden on the criminal justice system. Administering justice in areas of active hostilities and temporarily occupied territories has become impossible. Despite these significant challenges, the Ukrainian judicial, prosecution and other justice institutions showed remarkable resilience by continuing to provide justice services to citizens and companies, while also implementing reforms. The necessary legislative, organisational and technical measures were taken to allow courts to swiftly adapt their work to the new martial law realities and protect court users, while providing continuous access to justice. In particular, legislation was adopted that allowed the territorial jurisdiction of courts to be changed and court cases to be relocated to other parts of the country if it became impossible to administer justice in a certain territory, along with the secondment of judges to other courts.

The **reform of the two key judicial governance bodies** – the HCJ and the HQCJ – was completed. This reform was triggered by insufficient independence of the judiciary from the executive and legislative branches, low public trust in the judiciary, high levels of corruption and the strong influence of vested interests in the work of courts. The reform started in July 2021 with the adoption of ambitious legislation that introduced robust integrity vetting for the HCJ sitting and candidate members, as well as integrity and professionalism checks of HQCJ candidates. The legislation envisaged a temporary yet decisive role for independent experts nominated by international donors, including the EU, in the respective selection and vetting bodies. The reform was fully aligned with the relevant Venice Commission recommendations,

focusing on strengthening integrity and public trust in the judiciary. By law, the HCJ is composed of 21 members. At the start of the reform, the HCJ had 15 members and 10 of them stepped down, leaving the HCJ with only five members, including the Head of the Supreme Court as the ex officio member. The Ethics Council, composed of three national and three international experts, completed the integrity check of four appointed HCJ members in May 2022, declaring one HCJ member as non-compliant. It then proceeded with the integrity check of the HCJ candidates. By January 2023, 11 new HCJ members – duly vetted by the Ethics Council – were appointed by the relevant appointing bodies. With these appointments, the renewed HCJ reached 15 members and became operational again. By June 2023, two more duly vetted HCJ members were appointed, increasing the HCJ's composition to 17 members.

The integrity and professionalism check of 301 HQCJ candidates by the Selection Commission, composed of three national and three international experts, was completed in March 2023. The competition included a thorough background check of candidates and an interview with the 64 best candidates. Based on the results of this second stage of the competition, the Selection Commission formed a shortlist of 32 candidates for further consideration by the HCJ. In June 2023, the HCJ appointed 16 new HQCJ members proposed by the Selection Commission, following a transparent interview and individual voting procedure, making the HQCJ fully operational.

The reform of the judicial governance bodies was finalised against the backdrop of a high-level corruption case involving the Head of the Supreme Court. This case became public in mid-May, when the National Anti-Corruption Bureau claimed to have uncovered an organised crime group that allegedly received a bribe equivalent to EUR 2 500 000 to influence Supreme Court decisions favouring a particular oligarch. The Head of the Supreme Court was dismissed and put into custody while the investigation was ongoing.

This corruption case highlighted on the one hand the robustness of the specialised anti-corruption institutions established with strong EU support after the 2014 Revolution of Dignity, and on the other the need to pursue reforms in the justice, law enforcement and wider public sector to address the existing corruption challenges and irreversibly consolidate integrity, efficiency and professionalism, while striking the right balance between independence and accountability. Effective integrity tools should be used to address corruption in the Supreme Court and other courts, including through the verification of integrity and asset declarations of judges, disciplinary framework and improved selection procedures with a strong focus on integrity and professional ethics. These measures should help in building public trust in the judiciary, which remains very low. Based on opinion surveys, public trust has been growing in recent years (in 2021, 15.5% of respondents trusted the judiciary, while in 2023 it was 24.8%). Foreign business associations continue to cite problems with the judiciary and the prevalence of corruption as some of the main obstacles to doing business in Ukraine.

Good progress was achieved with the reform of the **Constitutional Court** of Ukraine (CCU). In December 2022, Ukraine adopted a law to reform the selection procedure for future CCU judges. It was not fully compliant with the Venice Commission recommendations issued in December 2022. The internationally nominated members of the CCU pre-selection body – the Advisory Group of Experts – were not provided a temporary yet decisive role in the pre-selection procedure. This was recommended by the Venice Commission to restore trust in the CCU, whose reputation was damaged by corruption allegations against its judges and several controversial CCU decisions. In July 2023, Ukraine adopted amendments to the CCU Law, which implemented the outstanding Venice Commission recommendations contained in its Opinions on CCU reform from December 2022 and June 2023. Following the adoption of these amendments, the CCU selection reform has started to be implemented. The Parliament and the

Council of Judges announced competitions to fill the available vacancies in the Constitutional Court. The President and the Council of Judges appointed their members and substitutes to the Advisory Group of Experts, while the Parliament is continuing the appointment procedure. In September, upon the formal request of the Government, the Venice Commission and the international donors, including the EU, submitted their nominations of members and substitutes of the Advisory Group of Experts. In October, the Cabinet of Ministers formally appointed them. With five appointed members and five substitutes, the Advisory Group of Experts became operational and can proceed with the pre-selection of candidates to the position of the Constitutional Court. The reform of the CCU should continue with the adoption of a law on the constitutional procedure, in line with Venice Commission recommendations, to improve transparency and accountability in the work of the CCU and make the constitutional procedure more efficient.

In December 2022, the Parliament adopted a law abolishing the Kyiv district administrative court (KDAC), which handled disputes involving the central government bodies. Some KDAC judges were subject to numerous controversies and corruption investigations. Under the adopted law, KDAC was abolished and obliged to transfer its cases to the Kyiv region administrative court until a new Kyiv city administrative court is established. Delays in the transfer of cases and in the establishment of the new court, along with limited capacities of the Kyiv region administrative court to assume new obligations, undermined access to justice. The law did not regulate the status of former KDAC judges. Under the general rules, KDAC judges may be transferred to a court of the same level without the need for a competition. Before any such transfer, KDAC judges should complete the qualification evaluation procedure, including integrity vetting. The renewed HQCJ and HCJ must launch the establishment of a new administrative court to handle cases involving the central government bodies ensuring that this court is staffed with duly vetted judges. This will enable an efficient and fair handling of administrative disputes involving central government.

Strategic documents

The 2021-2023 strategy for the development of the justice system and constitutional judiciary identified the main reform areas in the justice sector, including the reorganisation of local courts, reform of the key judicial governance bodies, consolidation of the Supreme Court key function to guarantee uniformity of jurisprudence, development of alternative dispute resolution, selection of new judges, prosecutorial reform, as well as the reform of the Constitutional Court. Part of the reform measures contained in the strategy were duly implemented, in particular the reform of judicial governance bodies and the selection of CCU judges. No formal assessment of the implementation of the strategy was carried out. A new strategy for the reform of the justice system to respond to the challenges of wartime still needs to be developed, in a transparent and inclusive manner, and adopted.

In May 2023, the President of Ukraine approved a comprehensive strategic plan for the reform of law enforcement bodies for 2023-2027. Among other measures, it provides broad reform guidance for the prosecution service, including the strengthening of its coordination role over the law enforcement agencies and raising legal certainty and uniformity of practice in criminal procedures. An action plan, that will define the expected results, tasks and performance indicators for the strategic plan, is being finalised by the inter-agency working group and with the involvement of the EU experts. Its speedy adoption and steady and consequent implementation should lead to concluding the reform process in the area.

Management bodies

Several governance and self-governance bodies with different functions are responsible for managing the judicial system and prosecution service. In the judiciary, the HCJ is the key judicial governance body that appoints and dismisses judges, handles disciplinary cases against them and oversees the work of the State Judicial Administration, a body in charge of the daily administration of court resources. The HCJ had no quorum between February 2022 and January 2023, following the resignation *en masse* of 10 out of 15 of its members ahead of their vetting by the Ethics Council. The HQCJ, another important judicial governance body, deals with the selection and qualification evaluation (vetting) of judges. The HQCJ had not been operational since autumn 2019, when a judicial reform law dismissing all its members entered into force. It resumed its functions only in June 2023 when the HCJ approved its new composition. The Congress of Judges and the Council of Judges are the self-governance bodies that are composed of judges and that represent their interests. The Council of Judges is in charge of organising the Congress of Judges sessions and implementing its decisions. They take part in the formation of the HCJ and the HQCJ, while the Congress of Judges is also an appointing authority for Constitutional Court judges (together with the President and the Parliament). Considering the institutional complexity, functional overlaps, severe shortage of funding, the large number of vacancies and the challenges stemming from the war, the judicial governance system should be improved and optimised on the basis of an independent and professional functional audit.

In the **prosecution service**, the National Conference of Prosecutors is the highest self-governance body. It appoints some of the members of the prosecutorial governance bodies – the Council of Prosecutors and the Qualification and Disciplinary Commission of Prosecutors (QDCP) and approves their regulations. The Council of Prosecutors operates on a part-time, unpaid basis and deals with the appointment of prosecutors to administrative (managerial) positions and with the protection of prosecutorial independence, whereas the QDCP is responsible for selecting, promoting and dismissing prosecutors as well as conducting disciplinary proceedings. Given the scope of its competences and in view of the European standards and good practices, the Council of Prosecutors should become a full-time body with autonomous resources. The renewed Training Centre of Prosecutors deals with initiation and in-service training of prosecutors. The HCJ reviews complaints against the disciplinary decisions of the QDCP, a competence that could in the future be transferred to the Council of Prosecutors. The activities of the National Conference of Prosecutors and the Council of Prosecutors are financed by the Office of the Prosecutor General.

Independence and impartiality

The **constitutional and legal framework** guarantees the **independence of the judiciary** from the legislative and executive branches. The Parliament and the President retain the prerogative to make limited appointments to judicial and prosecuting bodies, such as the Constitutional Court and the HCJ. Judges are appointed by the President upon submission of the HCJ according to the procedure prescribed by law. The allocation of cases to judges within a court is based on a random (automatic) system based on objective criteria established by procedural law which, in theory, cannot be influenced by a court president or other judges. However, due to the structural deficiencies of the judicial system, including limited resources, and the impact of the war of aggression, the automatic allocation of cases is not functioning properly.

The possibility that a judge, addressed by a request for their **recusal**, can still contribute to the review of such a request, remains an issue of concern. To ensure objectivity and impartiality in the decision-making process, decisions on the removal of a judge from a court proceeding should be taken without their participation and be subject to appeal.

The legislation provides **prosecutors** with a sufficient degree of independence and autonomy. However, the self-governance and governance bodies are still largely dependent on the Office

of the Prosecutor General, in particular for financing and organisational support, which should be addressed in line with the European standards. A random allocation of cases to individual prosecutors based on strict and objective criteria, including specialisation, and appropriate controls and safeguards against manipulation still needs to be introduced, along with an effective appeal mechanism for decisions on the disqualification of a prosecutor.

Despite the legal and institutional guarantees, the risks of undue internal and external interference in the work of the judiciary and the prosecution service persist, and further efforts by the competent institutions are needed to effectively reduce them.

Accountability and ethics

Codes of professional ethics and conduct exist for both judges and prosecutors. In November 2022, the Council of Prosecutors approved and published its commentary on the code of professional ethics of prosecutors. Both judges and prosecutors are obliged to submit an electronic **asset declaration** each year for the previous year and provide updates when necessary.

Following the 2014 Revolution of Dignity, Ukraine launched an extraordinary and generalised **qualification evaluation (vetting) of judges** based on professional competence, professional ethics and integrity requirements. Failure to pass the vetting represents grounds for dismissal. Some 2 500 sitting judges underwent this procedure, before it was suspended in the autumn of 2019, when the HCJ was dissolved by law. Some 2 000 judges must still complete the vetting based on a transparent procedure, clear assessment criteria and with the proper involvement of the Public Integrity Council.

The key function of the HCJ – the handling of disciplinary cases against judges – was suspended in August 2021 with the entry into force of new legislation. The function previously held by HCJ inspectors has been transferred to a new service of disciplinary inspectors. The service was not established within the legislative deadline. There is also legal uncertainty as to the statutory limitation deadlines in relation to disciplinary complaints received by the previous HCJ composition. Some 11 500 disciplinary cases are currently pending with the HCJ. In August and September 2023, Ukraine adopted two laws for resuming disciplinary proceedings against judges and for establishing an independent service of disciplinary inspectors on the basis of a transparent and meritocratic selection procedure with a meaningful involvement of internationally-nominated experts. The disciplinary offences relating to judges' conduct should still be clarified and developed. The service of disciplinary inspectors should be urgently established to enable an effective and impartial handling of disciplinary cases.

In recent years, Ukraine has implemented prosecutorial reform. It includes the **attestation of prosecutors** – where all prosecutors in office are vetted by the HR commissions on the basis of integrity and professionalism criteria. Since 2019, out of 11 278 prosecutors who expressed their intention to pass the attestation, 8 351 prosecutors passed, while more than 2 700 failed and were dismissed. By August 2023, 2 754 lawsuits were brought to courts by prosecutors challenging various aspects of the attestation reform. The courts considered 2 082 lawsuits; 1 426 lawsuits were refused (including 713 by the Supreme Court) and 523 lawsuits were satisfied (including 218 by the Supreme Court). Even if a court satisfies a lawsuit, it cannot reinstate a prosecutor to their position – based on the legislative changes adopted at the end of 2021, such a prosecutor still has to complete the attestation. The system of **disciplinary responsibility of prosecutors** should be further improved, as aimed for by the state anti-corruption programme for 2023-2025. In particular, it is necessary to clarify the disciplinary offences to extend the range of disciplinary sanctions and the statute of limitation, as well as ensure that disciplinary proceedings can be launched *ex officio* by the Council of

Prosecutors and the heads of prosecution offices. The QDCP's capacities, as well as its human and financial resources, should also be strengthened.

Professionalism and competence

Following the Revolution of Dignity, Ukraine has reformed its rules on the **selection of judges**, introducing more transparency and meritocratic elements. However, the relevant legal framework requires further refinement, in particular in view of the length and complexity of the selection process. The stages of selection and mandatory training should be optimised. At present, more than 2 000 judicial vacancies still need to be filled urgently. The renewed HQCJ should refine the judicial selection and qualification evaluation rules, including by developing and publishing clear integrity assessment criteria and a scoring methodology. Given the low level of public trust in the judiciary and recurrent judicial corruption cases, the sustained involvement of the Public Integrity Council (PIC) in both qualification evaluation and judicial selection procedures remains of critical importance. The PIC is tasked to provide reasoned opinions to the HQCJ on the integrity of sitting judges undergoing the qualification evaluation, as well as judicial candidates to higher-level courts. The new PIC, composed of 20 lawyers, journalists and civil society representatives specialised in anti-corruption and justice sector reforms, was formed in August 2023. It should help the renewed HQCJ to complete the qualification evaluation of sitting judges and to select new judges of high integrity. The new law improving the selection of judges was prepared in the Parliament's Legal Policy Committee and registered. Following the legislative changes, the HQCJ will have to adjust its own rules and procedures.

Since the introduction of new transparent and meritocratic rules on the **selection and career advancement of prosecutors** during the interim two-year prosecutorial reform period in 2019-2021, several rounds of external recruitments of junior prosecutors took place following the improved rules, which included multiple tests of legal and practical knowledge, general skills as well as integrity checks. As a result, 114 new prosecutors were appointed in the Office of the Prosecutor General, and 492 in district prosecution offices.

Moreover, during the interim reform period, a transparent selection procedure, including integrity, professionalism and leadership checks, was successfully piloted for management-level prosecutors. However, since the re-establishment of the Council of Prosecutors in autumn 2021, these positive practices have not been continued. The procedures for the selection of management-level prosecutors remain inadequate as they lack transparency and credible integrity, professionalism and leadership checks. The resources and capacities of the Council of Prosecutors to carry out its mandate in this area remain limited. These shortcomings should be addressed.

The rules governing the appointment and dismissal of the Prosecutor General make the position vulnerable to political and other undue interferences, creating risks linked to independence, integrity and ultimately public trust. In line with European standards and good practices, the selection procedure for the Prosecutor General should be made more transparent, objective and meritocratic, and the dismissal procedure should be depoliticised. In particular, the grounds for dismissal of the Prosecutor General should be exhaustive and clearly defined by law, while the dismissal procedure should be more transparent and credible.

The periodic performance evaluation of judges and prosecutors on the basis of clear rules and assessment criteria still needs to be established by the relevant judicial and prosecuting bodies. The use of performance evaluations would improve human resources management in courts and public prosecution offices.

The **National School of Judges** continued to provide training to judges of all instances. Despite war-related challenges and a drop in funding, it provided training to 10 158 people in 2022, in areas ranging from EU law to court management and IT skills. The school should strengthen its managerial and operational capacities, introduce comprehensive training needs assessment and training evaluation, modernise the training curricula and teaching methods, including trainings on judgecraft, ethics and integrity and improve international cooperation and connections with judicial training networks. The collaboration of the National School of Judges and the Prosecutorial Training Centre with the EU judicial training providers to address war-related training needs help to enhance institutional capacity and should continue.

High-quality and corruption-free **legal education** and training of justice and law enforcement professionals are key to consolidating the rule of law and fulfilling EU membership obligations. In recent years, Ukraine has taken a number of measures to improve legal education. Legal education standards were adopted and upgraded, standardised exams for entering law schools and master's degree programmes were introduced, and an institutional system for quality assurance was developed. However, progress has been uneven and further reform efforts are still needed, in particular for creating a clear institutional delineation of legal education and law enforcement training, strengthening the law school admission and licencing standards, ensuring a transparent and merit-based allocation of public funds for training future legal professionals, modernising curricula with a focus on ethics, practical training, EU law and international exchanges, implementing a unified state qualifications exam, and fighting against corruption and plagiarism.

Quality of justice

The judiciary is suffering from severe underfunding, which is further exacerbated by the war of aggression and its impact on public finances. The financial resources allocated to the judiciary met 63.4% of overall funding needs in 2022 and only 51.4% in 2023. In particular, non-judge staff in courts are heavily underfunded, which causes their outflow and disrupts the operation of courts. During the 2022 mid-year review, there were considerable revisions to the budget allocation for the judiciary. Costs for all local and appellate courts were cut by more than 10%, while cuts to other judicial institutions amounted to 15-20% compared with the initial allocations for 2022. The 2022 budgetary allocation for the judiciary, including the Supreme Court, local, appeal and specialised courts, was about EUR 491 million, compared with around EUR 656 million in 2021 (based on the exchange rate at the end of 2022). Once the public finance situation stabilises, the government should restore funding to the judiciary, while pursuing a carefully planned optimisation of the expenditures and the court network.

At the end of 2022, there were 4 643 judges in Ukraine, averaging 11 judges per 100 000 inhabitants, compared to the European average of 22.2 judges per 100 000 inhabitants that same year. In the last few years, a number of courts of first instance stopped hearing cases due to the severe shortage of judges and the absence of the HCJ. More than 100 courts in Ukraine operated at a 50% staffing level or even lower. Significant differences in workload remain between the courts across the country. In some cases, the workload of judges within the same instance and jurisdiction can differ multiple times. The government plans to address this problem by optimising the court network. However, amendments to the Law on the judiciary from December 2022 postponed optimisation to 1 year after the end of martial law. The judicial governance bodies should continue applying other measures, including the recruitment of new judges and secondments, to balance workloads.

There were some 9 500 prosecutors or 23 prosecutors per 100 000 inhabitants in Ukraine at the end of 2022, compared with the European average of 11.8 prosecutors per 100 000 inhabitants in 2020.

The Ukrainian courts use a unified judicial information telecommunications system. It includes case management, case allocation, electronic delivery and video conferencing functionality. Over the last few years, the State Judicial Administration has made efforts to interconnect the e-judiciary subsystems with the government electronic services portal Diia, the unified register of convicts, the social information system and others. An IT service for automatic notifications of court summons was also introduced, saving on postal costs. However, the system is largely outdated and underfunded. Its hardware, software and network infrastructure, along with the ICT management system, are in need of a thorough overhaul. To guide the development of a new e-judiciary system, an independent IT audit was launched in spring 2023. Based on the results of the audit, the e-judiciary system is expected to be upgraded to make the judiciary more efficient and transparent, as well as save costs and improve access to justice services for citizens and businesses.

After thorough preparation, including business process analysis, the prosecution service, with the support of the EU, has launched the development of a modern **e-case management system** named SMEREKA. Over the course of several years, it will digitalise the analysis and processing of criminal cases, starting with cases related to international crimes. This will boost efficiency, transparency and integrity in the criminal justice system.

In November 2021, the Parliament adopted a modern law on **mediation**. It lays the groundwork for mainstreaming mediation in civil, commercial and administrative disputes and in criminal procedures. Despite the war, implementation of the law continued and good progress was achieved. The government adopted legislation to ensure the provision of mediation services by free legal aid centres, while the Ministry of Justice approved an order for a register of mediators engaged in secondary legal aid and launched the first competitions for such mediators. Various mediation organisations and justice sector institutions continued to promote mediation services via training, online resources and awareness raising activities. The implementation of the law on mediation through adoption of additional sub-legislation, institutional capacity building and awareness raising among relevant target groups should continue.

An independent, professional and accountable Bar is a key prerequisite for access to justice and a functioning market economy. The Bar in Ukraine is in need of reform. The Law on the Bar should be aligned with the Constitution, applicable European standards and good practices. In particular, the self-governance system and resource management of the Bar should be improved and made more transparent and accountable. The qualification and disciplinary procedures for lawyers require significant improvements in law and in practice. The process for admission to the profession remains weak and prone to corruption risks, which undermines the credibility and independence of the profession.

In recent years, the Ukrainian judiciary has made major efforts to ensure the uniformity of court practice, which is a key element of the rule of law and legal certainty. Several procedural filters were introduced in the Supreme Court, and the Grand Chamber of the Supreme Court became operational. In addition to the existing register of judicial decisions, an electronic database of legal positions of the Supreme Court was created, to facilitate the identification of relevant guidance from the Supreme Court on the interpretation and application of specific legal norms. However, more efforts are needed in this area as divergent court practice, including within the same court, persists. Access to the Grand Chamber still requires the approval of the relevant Cassation Court, which undermines unification efforts. Further legal and institutional reform measures should be carefully calibrated and be based on a thorough assessment and inclusive consultations involving judges and subject matter experts.

Efficiency

Despite the war-related funding and staffing challenges, most courts in Ukraine maintained 100% or even higher clearance rates in 2022. At first instance, the clearance rate was 105.5% in civil cases, 97.6% in commercial cases, 111.7% in administrative cases and 99.5% in criminal cases. At the appeal level, similar clearance rates are reported: 101% in civil cases, 103% in commercial cases, 99% in administrative cases, 98.9% in criminal cases. The general clearance rate of the Supreme Court was 107.9% in 2022. The clearance rate at the Constitutional Court was 68% in 2022. As for the number of pending cases at first instance courts, there were 231 177 civil cases pending at the end of 2022, including 59 856 unresolved for over a year, 34 168 commercial cases pending, including 10 417 unresolved for over a year, 119 471 administrative cases pending, including 25 544 unresolved for over a year, and 110 637 criminal cases pending, including 47 544 unresolved for over a year. At the appeal courts, there were 23 218 civil cases pending, including 3 716 unresolved for over a year, 6 446 commercial cases pending, including 379 unresolved for over a year, 32 487 administrative cases pending, including 1 305 unresolved for over a year, and 12 377 criminal cases pending, including 3 223 unresolved for over a year. At the Supreme Court, the total backlog of cases in 2022 was 19 252.

As for the disposition time (time needed for a case to be resolved in days), according to the latest CEPEJ statistics including 2021 data, it took 165 days to resolve a civil and commercial case (129 days in 2018, 122 days in 2020) and 52 days for a criminal case (271 days in 2018, 298 days in 2020).

Given the war-related challenges, including displacement of the population and businesses, deterioration of the economic situation and travel safety concerns, Ukraine should adopt legislation that formally introduces remote hearings and regulates the procedural aspects of such hearings, in full respect of the procedural rights of the parties. This would boost the efficiency of court proceedings and facilitate access to justice, including in times of war.

Ukraine has a high number of judgments of the European Court of Human Rights (ECtHR) pending execution among the parties to the European Convention of Human Rights. In particular, execution is pending for a significant period of time and structural reform measures are still required for the ECtHR judgments related to non-enforcement of domestic court decisions against state entities, judicial independence, unreasonable length of court proceedings, poor prison conditions and inefficiency of ill treatment investigations. These cases are subject to the supervision procedure before the Committee of Ministers of the Council of Europe. Despite several war-related challenges, the Ukrainian authorities have cooperated closely with the relevant Council of Europe bodies and made efforts to enforce outstanding ECtHR judgments during the reporting period.

To deal with the systemic problem of non-enforcement of domestic court decisions, the government adopted a special strategy in September 2020 and an action plan to implement this strategy in March 2021. The action plan envisaged among other things a revision of social-oriented legislation, additional enforcement mechanisms related to state-owned enterprises protected by moratoria, the improvement of legislation on bankruptcy, the introduction of efficient judicial control over the enforcement of court decisions, the improvement of enforcement procedures and expansion of powers of private bailiffs, and the creation of a register of court decisions rendered against state entities. Most measures in the action plan still need to be carried out.

In 2022, the number of new **enforcement** cases fell by more than half due to the war – from 4.1 million to 1.7 million. In June 2022, the Parliament adopted a law that prohibited enforcement cases from being opened in the temporarily occupied territories and in the war zone. In April 2023, another law was adopted to introduce a minimal protected amount on

debtors' bank accounts. This therefore improves the protection of fundamental rights during the enforcement procedure. It also duly addressed other war-related challenges, such as the transfer of enforcement cases and replacement of bailiffs, as well as enforcement proceedings that involve Russian residents.

The draft law to streamline the enforcement of court decisions and improve the status of private bailiffs has been pending a second reading since July 2021. Russia's war of aggression and sharp deterioration in public finances have slowed down reforms in this area. The government should resume these efforts where possible under the current context, as an effective enforcement system is not only a key pillar of the market economy and the rule of law, but also an indispensable prerequisite for swift economic recovery.

Ukraine took large-scale legal, institutional and practical measures to ensure the **security of court premises** and the safety of judges and staff. The only courts where security cannot be guaranteed by the Court Security Service are those that are located in the territories of Ukraine temporarily occupied by Russia. The Court Security Service should continue building its capacities to ensure effective security of the courts and their staff, including through improved risk assessments and risk response, and the deployment of security equipment and other measures.

Domestic handling of atrocity crimes

Ukrainian authorities have been confronted with the unprecedented scope and gravity of atrocities committed by the Russian Army. This has led to an increased need to strengthen the capacities and provide expertise to investigate, prosecute and adjudicate core international crimes (also called atrocity crimes), while building on the experience that Ukraine had already gained since 2014. As a result, Ukraine started taking significant measures to advance its comprehensive framework for addressing atrocity crimes at domestic level.

Since Russia's full-scale invasion and war of aggression, a total of 107 951 incidents related to various atrocity crimes have been officially registered. 267 people have been indicted and 63 convicted for war crimes by Ukrainian courts. Due to the large number of crime scenes, several law enforcement agencies and authorities are involved in domestic investigations. The National Police of Ukraine and the Security Service of Ukraine created specialist units to investigate atrocity crimes and strengthen interinstitutional cooperation; the Interagency Working Group on Investigating War Crimes was established. The Office of the Prosecutor General also adjusted its institutional strategy and structures for prosecuting such crimes by restructuring its War Crimes Department and establishing nine regional war crime units within its service as well as the Conflict Related Sexual Violence Unit and Specialised Environmental Prosecutor's Office. Cases involving children are being investigated by the Department for the Protection of Children's Interest and Combating Domestic Violence. There are currently 2 944 criminal proceedings involving children as victims of various war crimes, including cases of forced deportation, recruitment of child soldiers, killings and sexual violence. The War Crimes Department developed and applied operational strategies and institutional synergies, aimed at improving the efficiency of investigations into crimes committed in territories of Ukraine occupied by Russia, after their liberation. The very high number of cases creates an intense workload and great amount of data recorded in criminal proceedings, thus raising risks of duplication. To address this problem, the Office of the Prosecutor General started creating a modern e-case management system (see 'Quality of justice' section above).

A dedicated war crimes prosecution strategy has been adopted and additional resources put in place with the support of international assistance providers, including the European Union Advisory Mission Ukraine, to improve investigations into such crimes. Ukraine cooperates

effectively with the Atrocity Crimes Advisory Group, a large multilateral initiative established by the EU, the US and the UK in May 2022 to provide strategic advice and operational assistance to the Office of the Prosecutor General in investigating and prosecuting international crimes in Ukraine. Relevant Ukrainian authorities advanced their coordination with the civil society organisations involved in documenting such crimes.

The Ukrainian domestic legal framework for criminal accountability for core international crimes needs to be adapted to international standards. As a matter of urgency, the Criminal Code of Ukraine should be amended to expand on the elements of core international crimes, incorporate criminal liability for committing crimes against humanity and criminal liability for commanders and other superiors for international crimes committed by the forces under their effective command and control as one of the essential means for prosecuting such crimes. Ukraine has not yet ratified the Rome Statute.

Ukraine cooperates closely with stakeholders at international level for bringing perpetrators of atrocity crimes to justice, in compliance with the principle of complementarity. Following the filing of two ad hoc declarations by the Government of Ukraine accepting the jurisdiction of the International Criminal Court (ICC), Ukraine proactively collaborates with and supports the ICC's Office of the Prosecutor (ICC OTP). This cooperation resulted in high-level investigations and arrest warrants being issued on 17 March 2023 by Pre-Trial Chamber II against the President of Russia Vladimir Putin and the Presidential Commissioner for Children's Rights Maria Lvova-Belova for the war crime of unlawful deportation of population (children) and that of unlawful transfer of population (children) from occupied territories of Ukraine to Russia. In March 2023, the ICC and Ukraine signed a memorandum of understanding to establish an ICC country office in Ukraine to further strengthen their cooperation. Ukraine also closely cooperates with the independent International Commission of Inquiry on Ukraine. It was established by the UN Human Rights Council in March 2022 to report on all alleged violations and abuses of human rights, violations of international humanitarian law and related crimes in the context of the Russian war of aggression against Ukraine.

Together with Poland and Lithuania, Ukraine is a founding member of the Joint Investigation Team (JIT) that was set up in March 2022 to enable the exchange of information and facilitate investigations into core international crimes committed in Ukraine. Estonia, Latvia, Slovakia and Romania also became JIT members, and the US Department of Justice signed a memorandum of understanding to improve coordination between the JIT partner countries and the US authorities in their respective investigations in connection with the war in Ukraine. Furthermore, the ICC OTP became a participant in the JIT. Europol received an official invitation to join the JIT in mid-August 2023 and discussions are ongoing about the UK signing a memorandum of understanding like the US.

In July 2023, the International Centre for the Prosecution of the Crime of Aggression against Ukraine (ICPA) was launched in The Hague, to support international efforts to secure evidence for the prosecution of the crime of aggression and facilitate the process of case building. The ICPA constitutes a standing structure to improve coordination on the collection, retention and analysis of evidence between JIT members investigating the crime of aggression under their respective national laws. As part of the ICPA, Ukrainian senior prosecutors work side by side with prosecutors from the EU and US, in close coordination with the ICC OTP. In mid-September 2023, a Register of Damage Caused by the Russian Federation Against Ukraine was formally established, as per a resolution of the Council of Europe (May 2023). The Register of Damage will receive and process information on claims of damage and evidence; categorise, classify and organise such claims, assess and determine the eligibility of claims for inclusion

in the Register and record the eligible claims for the purposes of their future examination and adjudication.

Ukraine co-chairs the work streams of the Ukraine Accountability Dialogue Group, an international effort aimed at promoting exchange and coherence across the range of accountability initiatives and related donor support. In November 2022, the European Network for investigation and prosecution of genocide, crimes against humanity and war crimes (Genocide Network) invited Ukraine to attend its future open sessions as well as part of the closed sessions upon specific interest of Ukraine and subject to agreement of all member states. The Genocide Network also considered to grant Ukraine observer status on an ongoing basis.

Fight against corruption

Ukraine has **some level of preparation** in the prevention of and fight against corruption. There was **some progress**, in particular with establishing and consolidating a comprehensive anti-corruption institutional framework and the gradual building of a steady track record in investigating, prosecuting and adjudicating corruption cases. This includes high-level convictions and cases moving forward in the courts against officials previously considered ‘untouchable’. Ukraine stepped up the implementation of reforms in the area of anti-corruption and continued to strengthen the anti-corruption framework after receiving EU candidate status. New legislative, strategic and institutional improvements were pursued, including the adoption of the national anti-corruption strategy in June 2022, accompanied by a comprehensive state programme for its implementation adopted in March 2023, as well as the restoration of financial reporting of the political parties. Ukraine has also restored the system of electronic asset declarations, along with the verification functions, taking into account the situation under martial law. The adopted law included some provisions which potentially weaken the verification system, but their effects still need to be monitored in practice.

The work conducted in particular by the Specialised Anti-Corruption Prosecutor’s Office (SAPO) since its new head was appointed in July 2022, led to globally increased effectiveness of the anti-corruption institutions. The new head of the National Anti-Corruption Bureau of Ukraine (NABU) was selected in early March 2023, after a transparent and merit-based procedure.

The Ukrainian authorities are committed to making continued efforts to achieve steady progress, but its sustainability needs to be monitored and further supported. The main challenge is to ensure that the outcome of the work of anti-corruption institutions is systemic and irrevocable, also in view of long-term reconstruction efforts and the need to ensure and maintain safeguards for the accountable management of foreign funding and investment. Efforts to strengthen the independence of key anti-corruption institutions and increase their capacity need to continue, and further allocation of technical, financial and human resources will be important. Sectors most vulnerable to corruption require targeted risk assessments and dedicated measures to ensure robust corruption prevention.

In the coming year, Ukraine should in particular:

- continue to further improve its track record on investigations, prosecutions and final court decisions in high-level corruption cases, including the seizure and confiscation of criminal assets, as well as ensure timely implementation of the 2023-2025 state anti-corruption programme, including appropriate monitoring and allocation of relevant resources and remove undue legal restrictions on the verification powers of the National Agency for Corruption Prevention (NACP), in order to ensure the effectiveness of the electronic asset declaration system, without prejudice to the rules applying to national security during wartime;

- revise the Criminal Procedure Code and the Criminal Code to enable higher efficiency and outcomes in high-level corruption cases, e.g. by preventing procedural delays, introducing reasonable time limits for pre-trial investigations, and improving the regulation of plea bargain agreements; increase the number of judges of the High Anti-Corruption Court by reactivating the Public Council of International Experts and enable the court to adjudicate certain cases in single judge composition;
- enact legislation to improve the selection procedures for the SAPO head and key officials, to strengthen the institutional independence of SAPO by transforming it into a separate legal entity, and to increase its level of procedural autonomy as well as establish robust mechanisms for external and internal control and discipline.

Track record

Ukraine has introduced some reform measures and stepped up efforts to build a credible track record of investigations, prosecutions and convictions of high-level corruption cases, and to some extent the seizure and confiscation of criminal assets. The country continued to pursue a rigorous reform path to facilitate the effective functioning of key anti-corruption institutions for ensuring sound operational capacities.

In 2022, NABU, responsible for the investigation of high-level corruption, initiated a total of 456 criminal proceedings (2021: 633; 2020: 792). By the end of September 2023, NABU started 501 proceedings. Based on the results of its investigations, and under the procedural guidance of SAPO, 54 indictments for corruption offences against 132 people were sent to court in 2022, which constitutes a stable number also compared with previous years (2021: 57 indictments against 127 people; 2020: 67 indictments against 106 people). By the end September 2023, 82 indictments against 203 persons were sent to court and it can be anticipated that the track-record will significantly increase, with the number of indictments likely being doubled in 2023 compared to previous years.

The High Anti-Corruption Court (HACC) was launched in September 2019 as the main court for adjudicating high-level corruption cases investigated and prosecuted by NABU and SAPO. It became operational following a transparent selection procedure of 39 judges for the court with the involvement of international experts (Public Council of International Experts). The court functions as a court of first and second instance and is independent from the ordinary judiciary in Ukraine, although the Supreme Court has the competence to hear cassation cases on verdicts delivered by the HACC. In February 2023, the judges selected a new president of the court.

The HACC has continuously increased its overall operational performance and output since its launch. In 2022, it delivered 37 verdicts against 56 defendants in first instance and 22 verdicts against 27 defendants in second instance, which constitutes an increase over previous years (2021: 34 verdicts against 41 defendants in first instance, and 25 verdicts against 29 defendants in second instance; 2020: 22 verdicts against 25 defendants in first instance, and 8 verdicts against 10 defendants in second instance). By the end of September 2023, the HACC has significantly increased its overall performance and delivered 48 verdicts against 64 defendants in first instance, and 26 verdicts against 32 defendants in second instance. To enable the court to cope with the increased caseload, which is also caused by its mandate being extended to e.g. civil confiscations, its capacity should be strengthened by selecting and appointing new judges in 2024, with the involvement of the Public Council of International Experts. Furthermore, the Criminal Procedure Code should be amended to allow certain cases to be adjudicated in single judge composition.

The cases investigated and adjudicated by the anti-corruption institutions concerned prominent high-level public officials including former deputy ministers, former parliamentarians and high-level judges, e.g. the serving President of the Supreme Court who was arrested in May 2023 for bribery. Similarly, in 2022, NABU and SAPO uncovered suspected high-level embezzlement, including in the management of PrivatBank, Ukrnafta, Ukgazbank, the State Fiscal Service of Ukraine, as well as Naftogaz in 2023.

The Asset Recovery and Management Agency processed a total of 4 401 requests in 2022 on the finding and tracing of assets that can be seized and confiscated in criminal proceedings received from relevant authorities. A total of EUR 864 364 in equivalent revenues were transferred to the State Budget of Ukraine from the management of seized assets and EUR 24 361 679 in equivalent revenues from the sale of seized assets. The HACC applied special confiscation in 10 criminal proceedings in 2022 for a total of approximately EUR 1 million.

During the first half of 2023, the NACP sent 26 cases to courts for administrative offences involving the violation of conflict of interest rules (2022: 72; 2021: 937; 2020: 239). The overall percentage of persons against whom an administrative fine was imposed was 14% during the first half in 2023 (3 people), compared to 18% in 2022 (11 people), 2% in 2021 (4 people), and 7% in 2020 (4 people). During the first half of 2023, the NACP did not conduct comprehensive verifications of asset declarations due to the suspension of this task, mandated by the application of martial law in March 2022. However, a total of 1 610 comprehensive verifications of asset declarations were completed in previous years (2022: 124; 2021: 1 043; 2020: 443), and the agency detected 220 cases of administrative offences (2022: 18; 2021: 171; 2020: 31), 253 cases of criminal offences (in 2022: 38; 2021: 119; 2020: 96), including 12 cases of unfounded assets (2022: 2; 2021: 10; 2020: 0) and 1 case of illicit enrichment that were transferred to courts and relevant law enforcement agencies. A total of 24 people (2022: 5, 2021: 17, 2020: 0) were found guilty of committing an administrative offence; 7 people (2022: 5, 2021: 2, 2020: 0) were found guilty of committing a criminal offence in the first half of 2023. The Constitutional Court issued a decision in 2020 partially rendering unconstitutional the provisions on control and full verification of declarations as well as the criminal responsibility related to false declaration. The immediate result was that a large number of criminal cases had to be terminated. Despite the subsequent restoration of the powers of the NACP and the Criminal Code article on false declaration by the Parliament in accordance with Venice Commission recommendations, the non-retroactive effect of criminal law provisions caused an accountability gap.

The NACP granted 16 whistle-blowers and their close relatives protection out of 27 applications. A total of 46 criminal proceedings for corruption and corruption-related offences were registered and carried out based on the reports of whistle-blowers, including for high-level corruption.

Findings from sociological surveys show a significant decrease in recent years in the share of citizens who have directly experienced corruption (in 2013, the share was 60%, in early 2020 not more than 40%). There has been a gradual increase in comparative corruption level indexes for Ukraine. In 2013-2022, Ukraine's performance in the Corruption Perceptions Index (CPI) increased from 25 to 33 points (maximum score is 100). The result in 2022 is the highest since the updated CPI methodology was launched and Ukraine now ranks 116 out of 180 countries in the CPI.

According to the survey 'Corruption in Ukraine: understanding, perception, prevalence' conducted each year by the NACP, in 2022, 29% (42% in 2021) believe that corruption has increased, while 16% (6% in 2021) believe it has decreased. Among business representatives,

46% believe corruption has decreased and only 16% that it has increased in 2022. There is an increase in the share of the population with a negative attitude towards corruption – in 2021, the share was 49% and in 2022 57%. More are willing to report corruption cases than in previous years. Also, the share of the population and business representatives that support the activities of whistle-blowers has increased – 65% of the population and 86% of business representatives support these activities.

Institutional framework

Prevention measures

The National Agency on Corruption Prevention (NACP) is the special agency responsible for the prevention of corruption in Ukraine. The maximum number of NACP employees is 408, but the actual number of employees in employment relationships remains significantly lower (approximately 85% of this figure). Its main mandate is anti-corruption policy, financial control (asset declarations), compliance review of political party financing, whistle-blower protection and conflict of interest resolution. The most relevant functions of the agency were suspended with the application of martial law in March 2022 due to national security concerns, including the verification of e-asset declarations and political party financing compliance review.

Three years after a full restructuring and change of governance model under the new head of the agency, selected by an international selection commission, the agency has delivered good results and there are strong signs of its growing independence from political and vested interests. The agency has also started to engage in addressing possible corruption risks linked to the large-scale reconstruction of the country. The term of the agency's head will expire in January 2024 and the credible and transparent selection of a new head by an international selection commission, as required by law, will be an important priority for Ukraine.

An independent external assessment of the effectiveness of the NACP's activity in 2020-2021 was conducted by an expert commission composed of three international experts appointed by the Cabinet of Ministers based on a proposal by international donors, as required by law. In its final assessment report published in July 2023, the commission concluded that the agency was effective and independent overall but made a set of recommendations to strengthen it further. The agency and other relevant stakeholders should implement these recommendations swiftly.

The advanced **electronic asset declaration** system has proved to be a key tool for preventing corruption. However, the obligation for public officials to submit asset declarations was fully suspended with the application of martial law in March 2022, together with other restrictions on access to a number of state registers, in order to address security concerns and protect sensitive information during wartime. In September, the Parliament adopted a law restoring the e-asset declaration system and its verification functions by the NACP. The adopted law included some provisions that limited the verification powers of the NACP and closed the e-asset declarations to the public. The President vetoed the adopted law as regards the public access to the declarations. At the end of September, the Parliament re-adopted the law addressing the President's request, while maintaining the other provisions that could create potential weaknesses. In September, the Parliament also adopted a law that weakened the administrative liability for non-submission/false information in the e-asset declaration, but the President has not signed it into effect. Deficiencies in the rules of the automated verification of the e-asset declarations continue to exist and should be addressed by the NACP in the medium term.

Effective implementation of **procurement** rules in all sectors and full use of the related electronic procurement system should help in further preventing corruption in the public services sphere.

Ukraine has made progress in strengthening its comprehensive framework for the protection of **whistle-blowers**. Some outstanding issues include further increasing its effectiveness, more awareness raising about the essential role of whistle-blowers, and launching a unified portal for their reports.

Corruption risk management in public institutions is proactively handled by the NACP. It applies a detailed model methodology and provides guidance in developing institutional anti-corruption programmes. Corruption risks in draft laws and sectors vulnerable to corruption are successfully assessed and addressed. However, further targeted streamlining and simplification of applied processes and methodologies would increase effectiveness. To strengthen the institutional ownership and effectiveness of the corruption risk management system, approval of the institutional anti-corruption programmes could be transferred from the NACP to the heads of the relevant state institutions.

Ukraine's **conflict of interest** framework is comprehensive and largely aligned with international anti-corruption standards. The NACP is well positioned to conduct monitoring and control over compliance with conflicts of interest legislation. It is also tasked with guidance, consultations, training and awareness raising. To strengthen the conflict of interest framework, the NACP should improve internal proceedings and take measures to further increase transparency and outreach of its work, including by reporting systematically to the public. More public awareness raising about the importance of the conflict of interest framework in detecting and preventing corruption is needed. Strong engagement with civil society and independent media in Ukraine is key. The legislative framework should be further improved to also cover apparent conflicts of interest.

Several legislative proposals on **lobbying** regulations were registered but not adopted yet. The NACP has launched the process of preparation of a new law on lobbying. The anti-corruption strategy and state anti-corruption programme require drafting and the approval of lobbying regulations by April 2024. To build up mutual trust of stakeholders and reach consensus on the best approach on a lobbying regulation framework for Ukraine, an open and participatory discussion should be pursued, including a wide stakeholders' engagement (in particular, civil society groups) and extensive public consultations. It will be important to ensure that lobbying regulations do not preclude or limit legitimate activities of civil society or put a disproportionate administrative burden on them.

The Council of Europe's Group of States against Corruption issued its interim compliance report in March 2023, where it assessed the measures taken by Ukrainian authorities to implement the 31 recommendations of the Fourth Round Evaluation Report on corruption prevention in respect of members of parliament, judges and prosecutors. Overall, 15 recommendations have been implemented; nine have been partially implemented satisfactorily; and seven recommendations remain unimplemented. Ukraine should swiftly act on the outstanding recommendations in order to ensure further progress.

Law enforcement

Key anti-corruption institutions responsible for investigating and prosecuting high-level corruption have remained fully operational despite the war. However, limited budget allocations have caused challenges to their operations. Structural issues with the legal framework, overall capabilities and functioning remain, with a continuous need to further strengthen their independence and operational autonomy. The deployed electronic case management system for NABU, SAPO and HACC has been put into practice but still requires full integration with the unified register of pre-trial investigations and the unified judicial information and telecommunication system. Specialised high-quality training is available to

the staff of anti-corruption institutions, including through international technical assistance providers.

In July 2022, the new head of SAPO was appointed by the Prosecutor General following the finalisation of a selection process that was largely transparent and merit-based, but which lasted more than 18 months. After the appointment, the office stepped up inter-agency cooperation with NABU and reactivated high-profile cases. Despite significant progress, SAPO still needs to further strengthen its political and administrative independence from the Office of the Prosecutor General and other institutions. Particularly outstanding issues: improve the selection procedure for SAPO head and key administrative positions of SAPO by aligning it with the procedures applicable to NABU/NACP, strengthen SAPO's institutional independence, and increase its procedural autonomy as well as establish robust mechanisms for external and internal control and discipline. In early 2023, a draft law to address these issues was registered in the Parliament, but was rejected by the responsible parliamentary committee without substantive discussions in February 2023 due to the lack of political consensus. In September, several new draft laws strengthening the SAPO's autonomy were registered in the Parliament.

The new Director of NABU was appointed in March 2023 by the Cabinet of Ministers following a merit-based and transparent selection process conducted with the participation of international members in the selection commission. NABU has been successfully leading complex high-level investigations and is among the most trusted law enforcement agencies in Ukraine. It urgently needs additional staff to work on investigations (detectives, analysts, technicians), with staffing issues being particularly acute in the three regional offices. A draft law has been registered in the Parliament to increase the number of NABU staff from 700 to 1 000. Another reform priority should focus on the reform of the forensic services, to ensure that NABU has a timely and uncompromised access to forensic expertise in its high-level corruption investigations. Similarly, NABU should be able to conduct wiretapping without the need to rely on the Security Service of Ukraine for its practical implementation.

Among other law enforcement agencies, the National Police of Ukraine and the State Bureau of Investigation (SBI) were given powers related to corruption investigation. The Bureau of Economic Security (BES) does not handle corruption cases as such, but its activities aimed at protecting the economic security of the state are closely related. SBI is responsible for investigating corruption involving public officials unless the pre-trial investigation of the crimes falls under the jurisdiction of NABU. BES was created to succeed the tax police (branch of the State Fiscal Service) in protecting the economic security of the Ukrainian state and investigating sophisticated financial crimes, including potentially touching on corruption. At the same time, the Security Service of Ukraine (SSU) has almost unlimited powers, including those related to the investigation of corruption cases. The problems of SBI, BES and SSU include limited public supervision and accountability, lack of inter-agency cooperation as well as the fact that staff is selected in processes that lack integrity control and transparency. Delineation of investigative competences is often disregarded or interfered with in practice by having criminal cases investigated by SBI and the Security Service of Ukraine that fall within the exclusive investigative powers of NABU. It will be important to introduce legal safeguards that will prevent interference in the exclusive investigative powers of NABU by other law enforcement agencies and, in this context, also progress with the SSU reform in line with EU's recommendations.

Legal framework

Ukraine has ratified the most important international treaties to prevent and combat corruption, including the UN Convention against Corruption and the Council of Europe Criminal and Civil

Law Conventions on Combating Corruption. As part of its aspirations to become a member of the OECD, in February 2023 the OECD Council agreed on the proposal of the Working Group on Bribery in International Business Transactions (WGB), to invite Ukraine to become a Participant to the WGB so as to facilitate its accession to the OECD Anti-Bribery Convention. Corresponding amendments to the Criminal Code, Criminal Procedure Code and Tax Code, and to other legislative acts are being prepared for the full implementation of the norms of the OECD Anti-Bribery Convention and the recommendations of the OECD Council.

The domestic legal framework is broadly aligned with international standards and allows Ukraine to conduct complex criminal investigations into corruption cases. However, the Criminal Procedure Code and the Criminal Code should be further improved to enable higher efficiency and better outcomes. The amendments should be aimed at preventing procedural delays, increasing time limits for pre-trial investigations and improving the grounds and procedures for concluding plea bargain agreements. The legal framework on **whistle-blower protection** should be completed and fully aligned with the EU *acquis*.

To reduce the influence of oligarchs on politics, in September 2021 the Parliament passed the Law on prevention of threats to national security associated with the excessive influence of people with significant economic and political weight in public life (**oligarchs**). The adoption of the law and the announced preparation of the register of oligarchs led some of those possibly affected giving up ownership of certain assets to avoid meeting the criteria for being identified as an oligarch under the law. Moreover, the war has disrupted economic activity, with oligarch-owned businesses being particularly affected. This has led to a decrease in profitability and resources, which has limited their ability to influence the political and media spheres. Similarly, martial law has resulted in restrictions on the media and with it, the ability of oligarchs to shape public opinion and exercise traditional influence through the media channels they control or controlled.

While being in force since May 2022, the law on oligarchs has not been implemented. In June 2023, the Venice Commission, in its Opinion on the law on oligarchs, assessed the personal approach of the law on oligarchs as difficult to reconcile with the principles of political pluralism and the rule of law and thus recommended postponing its implementation and reassessing its necessity after the end of the war. It recommended that Ukraine addresses de-oligarchisation through a systemic approach in relevant areas, such as media, competition, financing of political parties, taxation, anti-corruption and anti-money laundering.

Ukraine has duly prioritised systemic measures against oligarchs, in line with the Venice Commission recommendations from June 2023. In particular, on the basis of the Government's anti-oligarch action plan, Ukraine pursued the reforms of the judicial governance bodies and the Constitutional Court, adopted a new media law, continued to implement the state anti-corruption programme and finalised the legal framework on the ultimate beneficial ownership. In addition, in August, legislation strengthening the Anti-Monopoly Committee of Ukraine and restoring the financial reporting of political parties and the verification functions was adopted and later signed into effect. In September, the Government revised its anti-oligarch action plan to postpone the implementation of the law on oligarchs and to prepare amendments to the law within three months after the end of the martial law, taking into account the recommendations of the Venice Commission.

Strategic framework

The Parliament approved the anti-corruption strategy for 2021–2025 in June 2022, 2 years after the NACP, responsible for developing it, submitted the document. The adopted strategy outlines highly relevant anti-corruption reforms across sectors and will also play an important

role in ensuring transparent and accountable reconstruction efforts in Ukraine. Furthermore, the implementation of these reform measures is likely to increase Ukraine's track record on prosecutions and convictions of high-level corruption cases over time. The delay in the adoption of the strategy at the level of the Parliament significantly blocked an effective policy framework and the monitoring of the implementation of anti-corruption reforms. The need for having the strategy adopted as a national law should be reconsidered.

On the basis of the strategy, the NACP developed the state anti-corruption programme (SACP), adopted in March 2023 by the Cabinet of Ministers. The programme contains detailed, actionable measures across sectors and also provides a strategic framework for strengthening the key anti-corruption institutions. It includes clear key performance indicators for each government body. In drafting the strategy and action plan, the NACP carefully considered the findings of sociological surveys and other research, including recommendations and analysis by Ukrainian and international non-governmental organisations. The NACP also consulted independent experts and the public.

The NACP is the agency responsible for coordinating, monitoring and evaluating the effectiveness of the implementation of the anti-corruption strategy and the SACP. It is tasked with monitoring the implementation of measures provided in the programme each quarter. Based on the outcomes, it then provides quarterly information to relevant Ukrainian stakeholders. The current level of implementation of the programme is reasonable, in particular the development and full operationalisation of the open access information system for monitoring the implementation of the SACP is well advanced.

Fundamental rights

Ukraine generally complies with international human rights instruments and has ratified most international conventions on the protection of fundamental rights. The government has made continued efforts and progress, despite the war, on aligning its legislation with international standards and the EU *acquis*. The reporting period was marked by the Russian invasion of Ukraine, resulting in major violations of fundamental rights by Russia in Ukraine. Dealing with the consequences of these massive violations and devoting attention to mitigating measures was at the centre of the work of the Ukrainian authorities and human rights civil society organisations over the reporting period and will represent a challenge for Ukraine's prosecution, judiciary and society in the years to come.

The introduction of martial law and other measures in the interests of national security led to a limited number of restrictions of rights and freedoms. Their full re-establishment at the end of martial law in transparent and pluralistic structures (including for the media), and in accordance with European standards, should already be envisaged while military operations are still ongoing.

The new media law as well as the Law on national minorities (communities) of Ukraine were adopted in December 2022. Ukraine ratified the Istanbul Convention and adopted an updated national action plan on the implementation of United Nations Security Council Resolution 1325. It also adopted the 2030 state strategy on ensuring equal rights between men and women.

In, the coming year, Ukraine should in particular:

- adopt legislation to transpose and to implement the provisions of the Istanbul Convention;
- finalise the review of existing legislation on the rights of persons belonging to national minorities, including in education, media and on the use of state language' and in the law on national minorities in line with the recommendations of the Venice Commission Opinion of June 2023 and of its follow-up opinion of 6 October 2023;

- introduce annual public reporting to the Parliament on the work of the Prosecutor General's Office and the State Bureau of Investigation in investigating acts of torture and protecting victims, and organise a review of the performance of the National Preventive Mechanism;
- ensure application of the legislation on the rights of persons with disabilities and that restored and reconstructed infrastructure is compliant with barrier-free environment standards.

Ukraine has ratified most **international human rights instruments**. Human and fundamental rights are generally respected in Ukraine, and the government has shown commitment to protecting them. In July 2022, the country ratified the Istanbul Convention. Ukraine has yet to accede to the Rome Statute of the International Criminal Court and the International Convention on the Protection of the Rights of All Migrant Workers and Members of Their Families and to the Protocol amending the Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data of the Council of Europe (Convention 108+).

However, the Russian invasion of Ukraine has had a negative impact on the enjoyment of fundamental rights by many Ukrainian citizens, in particular those in areas of active hostilities, in territories temporarily occupied by Russian forces or in their proximity. At the same time, the government has maintained its respect of human and fundamental rights and has shown commitment to protecting them and further aligning them with the EU *acquis*.

Considering Russia's full-scale invasion, Ukraine has achieved considerable progress in implementing the 2021-2023 national human rights strategy and its action plan. The introduction of martial law in February 2022 and its ongoing extension has not led to an increased level of violations of fundamental rights, and is handled cautiously by Ukrainian authorities. At the same time, the details for a return to the full application of all fundamental rights still need to be worked out. It should take place in consultation with civil society and should aim at strengthening the freedoms of Ukrainian citizens and re-establishing the pluralism and openness of Ukrainian society – specifically after the restrictions stemming from the COVID-19 pandemic and Russia's full-scale invasion – while closing the remaining gaps with European standards and rules. The reintegration of territories currently not under government control will also require careful attention in terms of the application of fundamental rights, especially on the reintegration of those territories under Russian occupation since 2014. This should be done in the form of an update to the national human rights strategy and its action plan.

As a result of Russia's blatant violations of international humanitarian law and international human rights law, many Ukrainian citizens were exposed to deliberate targeting and indiscriminate shelling by Russia. This has resulted in killings, together with the loss of homes and basic services such as heating, light, water and sanitation. Many Ukrainians were victims of extrajudicial executions, torture and mistreatment, as well as with sexual and gender-based violence committed by the Russian military. Millions of Ukrainians were displaced. Many civilians, including children, were forcibly transferred to areas temporarily under the control of Russian armed forces or deported to the Russian Federation and Belarus. Human rights violations and abuses by Russia and its proxies in temporarily occupied territories of Ukraine continued unabated amid the lack of independent international actors on the ground. The large number of international crimes, war crimes and human rights violations committed by Russia poses an enormous challenge for Ukraine's institutions to ensure effective investigations and prosecutions across the entire country. At the same time, additional mechanisms (also non-judicial) will be needed to overcome the consequences of Russia's brutal war and restore justice in all Ukrainian territories.

Ukrainian authorities have devoted significant efforts to ensuring full accountability for war crimes and the other most serious crimes committed by Russia, including the crime of aggression. At the same time, Ukraine has yet to ratify and implement some relevant international laws and conventions, such as the Rome Statute of the International Criminal Court.

In June 2023, there were 9 656 **applications pending before the European Court for Human Rights**. The Court delivered judgments on 356 applications and found breaches of the European Convention on Human Rights in 151 out of 154 cases, relating mainly to the right to respect for private and family life, the right to a fair trial, the right to liberty and security of person and the prohibition of torture and inhumane or degrading treatment or punishment. In the reporting period, there were 1 901 new applications allocated to a decision body. There are currently 580 cases under enhanced supervision by the Committee of Ministers.

Civil society organisations highlight problems with implementing the decisions of the European Court of Human Rights adopted in favour of applicants living in Ukrainian territories temporarily occupied by Russia. Applicants are effectively unable to provide the Ministry of Justice of Ukraine with duly certified powers of attorney given their lack of access to the government-controlled territory, institutions and legal representatives.

On the **promotion and enforcement of human rights**, the Ukrainian Parliament Commissioner for Human Rights is designated as the national human rights institution and accredited by the Global Alliance of National Human Rights Institutions with ‘A’ status (largely compliant with the Paris Principles). In 2022, the Commissioner’s office received 42 485 petitions, including 562 collective petitions from 7 779 people and 41 923 individual petitions. Its staff conducted 2 031 monitoring visits and processed 3 784 draft legal and normative acts. Parliament appointed on 1 July 2022 Dmytro Lubinets, previously Chair of the Parliamentary Committee on Human Rights, to the post of the Parliament Commissioner for Human Rights. In the reporting period, the institution of the Parliamentary Commissioner has shown an active and independent approach, with efforts to adapt the institution to its existing responsibilities by organising it around 9 fundamental fields of work, including issues associated with the war of aggression (war crimes, release of prisoners of war, return of Ukrainian children) and extending its presence to Ukraine’s regions.

On the **prevention of torture and ill treatment**, in 2022 Ukraine amended relevant legislation by changing approaches to the use of forced feeding of convicts and detainees, strengthening responsibility for acts of torture and introducing a mechanism for the conditional early release for people sentenced to life imprisonment. Despite these legal improvements, torture and ill treatment remains a systemic feature of Ukraine’s prison system. In addition, the main recommendations of the European Committee for the Prevention of Torture issued in its 2020 report have not been addressed. These covered among others poor material conditions of detention and the need to transfer medical care in prison to the general health system and should be addressed.

A Human Rights Monitoring Department was established within the National Police under the Ministry of Internal Affairs. The aim among other things is to monitor observance of human rights and fundamental freedoms by the police in relation to police conduct. In addition, the pilot project Custody Records is being implemented in police units to improve standards of protection of the rights of those in police custody and ensuring detainees’ rights. At the same time, cooperation between the State Bureau of Investigation, prosecuting authorities and prison authorities remains weak, and the ill treatment investigation mechanism during the pre-trial and prison sentence stage suffers from a lack of efficiency. There are still limited operational and human resources capacities and limited operational independence of the State Bureau of

Investigation to investigate ill treatment allegations, despite the establishment of a dedicated department in 2019. The ineffective investigation into allegations of torture and cases of obstruction of justice are rooted among others in a general culture of mutual protection of law enforcement officers within the criminal justice system.

As to statistics on cases of ill treatment or torture, 30 criminal proceedings with allegations of torture and 990 with allegations of abuse of power by a law enforcement officer were registered in 2022; 11 and 94 people respectively were notified of suspicion, and 6 and 58 criminal proceedings respectively were forwarded to the court. At the same time, the Office of the Prosecutor General reports that 484 criminal proceedings with direct allegations of torture were initiated in 2018-2022, with 60 people found guilty, but only 15 receiving a prison sentence. This highlights how criminal courts do not follow through on the seriousness of the practice of torture and thereby contribute to an atmosphere of impunity enjoyed by law enforcement and prison staff. A permanent body needs to be established that involves civil society organisations and the Human Rights Commissioner to consistently monitor and follow up on alleged torture in the prison system.

To implement the Optional Protocol to the UN Convention against Torture in Ukraine, legal amendments made in 2012 assigned the Ukrainian Parliament's Human Rights Commissioner the functions of the National Preventive Mechanism. This is based on the Ombudsman+ model, with a strong focus on joint work with civil society organisations. In 2022, the Human Rights Commissioner delivered 141 mandates to the representatives of civil society to conduct visits to detention places. However, an inadequate methodology for prison visits and the delayed publication of reports raises questions over the effectiveness and performance of the National Preventive Mechanism. The mechanism continues to suffer from limited financial resources and limited capacities of the Human Rights Commissioner's office.

The **prison system** and detention centres remain an issue of concern. The prison population has fallen sharply in recent years, from 60 621 in 2017 to 42 694 in December 2022. Despite this positive trend, most of the long-standing problems identified by the European Court of Human Rights, the Council of Europe's Committee of Ministers and the European Committee for the Prevention of Torture remain. The issues are primarily linked to the material conditions of detention, very poor healthcare services, the use of detainees for prison duties and the widespread use of violence by guards. The penitentiary system was already under-resourced before Russia's war of aggression and since many facilities have been badly damaged and some completely destroyed, complicating also the provision of basic services. Despite the national strategy on human rights of 2021 and the multi-annual strategy for reforming the prison system of 2022, the key challenges facing it have not been addressed. The poor detention conditions in Ukraine have at times served as grounds for foreign courts to refuse extradition requests from Ukrainian institutions. This undermines Ukraine's fight against serious crime, including corruption and organised crime.

Medical care in places of detention is under the responsibility of the Ministry of Justice. Numerous recommendations by the European Committee for the Prevention of Torture to transfer responsibility for prison healthcare to the Ministry of Health have not been addressed.

Probation was introduced in 2015-2016. In 2022, 110 000 people were under probation. It is available through the country, with 600 offices and 3 000 probation officers. Remote monitoring was recently introduced for certain cases. There is a special probation infrastructure for juveniles, separate from adult probation. Together with conditional early release, probation is the main alternative to detention.

As a result of Russia's war of aggression against Ukraine, the Office of the High Commissioner for Human Rights and non-governmental organisations documented around 1 000 cases of arbitrary detention of civilians perpetrated by Russia and close to 100 cases of arbitrary detentions by Ukraine. So far, there is no designated body or institution responsible for addressing this issue in Ukraine.

On **personal data protection**, Ukraine continued working on alignment with the EU *acquis*. The current key legislative act that regulates data protection is the Law on personal data protection of 2010. It lacks sufficient detail and is not sufficiently enforced. Ukraine has ratified ILO Convention 108 on the Protection of Individuals with regard to Automatic Processing of Personal Data. The Ukrainian Parliament Commissioner for Human Rights is the authority in charge of checking compliance with data protection legislation, but lacks the appropriate resources to do this effectively. A draft law on personal data protection was introduced in Parliament on 7 September 2022 and should be adopted to meet the requirements of both Convention 108+ (not yet signed and ratified by Ukraine) and the General Data Protection Regulation.

The Constitution of Ukraine as well as related legislation and policies provide for the right to **freedom of religion and belief**. In general, Ukrainian public authorities enforce these norms, and incidents of hate speech and intimidation due to religion are infrequent. Religions are represented among others in the Ukrainian Council of Churches and Religious Organizations and are in dialogue with public administration mainly via the State Service for Ethnic Affairs and Freedom of Conscience. Representatives of religions are effectively collaborating with the Ukrainian administration to support Ukrainians during the war and fight disinformation campaigns that have the objectives to incite inter-ethnic and inter-religious conflict. At the same time, a number of issues are not yet fully regulated in Ukraine, such as the restitution and redistribution of church property, and the establishment of principles of relations between state and religious organisations in the spheres of education, social work and humanitarian activities.

The creation of the new Ukrainian Autocephalous Orthodox Church at the beginning in 2019 did not lead to significantly heightened tensions among Orthodox churches and communities, but to a large part of orthodox believers moving away from the Moscow Patriarchate, which is still ongoing. Since Russia's invasion, and as a consequence of its full support by the Moscow Patriarchate of the Russian Orthodox Church, Ukraine has taken legal measures since November 2022 against the Moscow-affiliated Ukrainian Orthodox Church. This includes sanctions against some members of the church hierarchy accused of supporting Russia's war of aggression and conducting searches of various church premises in application of legal standards and practices. With these measures, Ukraine aims to prevent foreign interference from Russia through a religious entity, while not targeting ordinary followers of the church.

Regarding the fight against antisemitism, in September 2021, Ukraine adopted a law on the prevention and countering of antisemitism, which defines antisemitism, prohibits anti-Jewish acts and adds civil liability. Despite stereotypes widely spread by pro-Russian disinformation, antisemitism in Ukraine is significantly less widespread and has been falling continuously in surveys for the last decade. In 2022, the lowest number of acts of antisemitic vandalism was recorded in 20 years of monitoring, with no cases of antisemitic violence. As stated by Jewish representatives in June 2023, previously existing low levels of antisemitism have been practically non-existent in Ukraine since the start of Russia's fully-scale invasion. Concrete efforts have been made regarding Holocaust education and remembrance. Activities to preserve Ukraine's Jewish cultural life and heritage are supported by the state and civil society and are increasing. Ukraine is not a member of the International Holocaust Remembrance Alliance and has not adopted its definition of antisemitism. Ukraine has not appointed a national coordinator

on combating antisemitism. Progress has been made regarding the restitutions of properties confiscated by the Soviet regime.

Freedom of expression

Ukraine is in between some and moderate level of preparation in the area of freedom of expression. Overall, it made **good progress** in strengthening its legal framework during the reporting period, in particular with the adoption of the Law on media. This is a notable achievement in the challenging context of Russia's full-scale invasion, in particular due to its vibrant public civic space and diversity of media outlets, including at regional level. According to the Reporters without Borders global ranking of freedom of media, Ukraine improved its position 27 places from 106th to 79th place.

Before the beginning of the Russia's war of aggression against Ukraine, the general context was favourable to media freedom and allowed for critical media reporting. In the current challenging context of martial law, Ukraine has taken some decisions on restricting access for media and journalists in specific areas and spheres but applied these generally with restraint. A significant drop in advertising revenue has also had an impact on the media market in the country and led to the concentration in particular of TV programmes and decrease the access to pluralistic media.

In the coming year, Ukraine should:

- develop, together with the community of journalists, simplified rules for reporting from the combat zone and adjacent areas, taking into account the security concerns;
- ensure the independence of the national regulator by providing adequate funding, including for necessary adjustments to its structure in line with the new Law on media.
- develop a roadmap to support the re-establishment of a pluralistic, transparent and independent post-war media landscape.

Intimidation of journalists

There have been a limited number of reports on instances of obstructing work and attacks on journalists by individuals. The most recent was on journalists covering victory day commemorations in Poltava and reporting from the Kyiv-Pechersky monastery, both with adequate follow-up by law enforcement. Incidents from previous years are generally being followed up as well. However, the past general practice of intimidating journalists is still to be found, in particular in local and regional contexts. Historical cases such as the murders of Georgiy Gongadze in 2000 and Pavlo Sheremet in 2016 have been followed up with renewed efforts in recent years, but still need to be concluded. A special police unit was established in 2019 to investigate attacks on journalists.

Since March 2023, officers from the Security Service of Ukraine (SSU) have repeatedly questioned journalists seeking military accreditation. The awarding of accreditation is not considered to follow fully transparent procedures, but no arbitrary arrests of journalists have been reported. In the same period, new rules on reporting from the combat zone and adjacent areas have been introduced, but rules are not sufficiently simple or are applied on an indiscriminatory basis. Independent journalism in the temporarily occupied territories of Ukraine is only possible with severe risks to life at the hands of Russian forces and will need to be re-established once the Russian occupation is ended. In addition, eight journalists have

been killed by the Russian Army while performing their professional duties and 42 have died due to shelling by the Russian Army or in detention while not working.

Ukraine has taken some steps to align with the Commission's recommendation on the protection, safety and empowerment of journalists. Media Center Ukraine was established at the start of Russia's full-scale invasion to support foreign journalists, together with a hotline for legal advice to journalists and media. In March 2023, the action plan for implementation of the information security strategy was adopted to clarify among others the rules on access and use of information as well as the protection of journalists' rights. The Parliament resolution of March 2022 on the value of freedom of speech, guarantees of activities of journalists and mass media underlined the importance of independent journalism for public authorities in Ukraine.

Legislative environment

The main achievement in the area of freedom of expression was the adoption of the Law on media in December 2022, which modernised the regulation of the entire sector and made an important step towards alignment Ukrainian legislation with the EU's Audiovisual Media Services Directive. It established the detailed rights of journalists for accreditation and obliges the public authorities to facilitate and support the work of journalists. It also empowered the independent media regulator, which will now need sufficient resources to ensure its independence and sufficient capacities.

In March 2022, in the context of martial law, the President signed a decree on a unified information policy by merging the programming of all national TV channels into a single information platform. This decision led to an expansion of government control over broadcasting and some restrictions. Some media outlets consider these restrictions disproportionate. Similarly, the exclusion of three private (opposition-affiliated) TV channels from terrestrial broadcasting (while the channels continue working and remain available through other means) has been criticised by the opposition on the same grounds. As regards defamation and blasphemy, these are not criminal offences in Ukraine. National legislation, the Law on media in particular, duly addresses the issue of hate speech. This ensures the free expression of views, while prohibiting genuine and serious incitement to violence and hatred.

Implementation of legislation/institutions

The National Council of Television and Radio Broadcasting of Ukraine acts as an independent media regulator in Ukraine. The Council is a permanent collegial body that acts on the basis of the Constitution of Ukraine, the Law on media and other Ukrainian laws and regulates, supervises and controls media. It consists of eight members – the Parliament and the President each appoint half of the members for a five-year term. They are officials and work on a permanent basis. While performing their official duties, they cannot hold any other positions, including on public grounds, in state and non-state bodies, organisations, institutions and companies, or engage in other paid or entrepreneurial activities. They also cannot hold a representative mandate and be a member of a political party.

The selection and appointment of candidates takes place on a competitive basis. The National Council is financed exclusively from the state budget, which needs to be strengthened to address all aspects of its mandate and guarantee its independence. The Law on media significantly changed and expanded the functions of the regulator, while the remuneration of National Council members remains within the limits set by the previous law. Access to information for journalists is regulated in the context of access to public information legislation. The Ukrainian Parliament Commissioner for Human Rights is empowered to draw up protocols and receive appeals on administrative violations of access to information. However, this procedure is not effective enough and should be reformed.

Public service broadcaster

Since 2017, Ukraine has had an independent public service broadcaster, Suspilne, which has three TV and three radio channels, regional networks and a digital broadcasting platform. Suspilne adheres to the standards of independent journalism, has the highest trust ratings among radio and television channels and is considered politically neutral and not subject to political influence. Its editorial standards are enshrined in the Editorial Charter, which is monitored by two bodies – the Editorial Board and the Supervisory Board of Suspilne. The broadcaster's standards are enshrined in the Charter and the Code of Ethics, which are monitored by the Supervisory Board and should ensure a clear separation between quality standards and daily editorial and managerial decisions.

A significant factor that influences Suspilne is its funding, which comes from three sources: the state budget, advertising revenues and donor funds. The main source is funding from the state budget, which has so far fallen short of the amount prescribed by the law.

Economic factors

Ukrainian legislation does not include restrictions that limit or prevent the work of the media. The Ukrainian media landscape of the past few years has been increasingly dynamic and diverse, especially online media. Previously dominant media entities with non-transparent media ownership have been gradually losing ground but still retain a strong position, in particular in television. The onset of the Russian war of aggression has profoundly impacted the media landscape and it should be a government priority to ensure the re-emergence of full media pluralism and clear media ownership transparency, taking into account security considerations. The state budget provides limited financial assistance to address specific issues in media (children, young people, persons with disabilities, science, national minorities etc.), also in form of financial assistance and economic support to media.

Internet

As regards internet freedom, since the beginning of martial law, the blocking of web resources has been conducted by an extrajudicial order on the basis of recommendations issued to providers of electronic communication networks and/or services of basic internet resources by the National Centre for Operations and Technology Management of Telecommunications Networks. In the context of Russia's full-scale invasion and its hybrid warfare including disinformation, these restrictions are legitimately rooted in national security concerns. However, the Ukrainian government should provide a clear vision for the re-establishment of previous rights and freedoms after martial law ends.

Freedom of artistic expression

The freedom of artistic expression is not restricted and is guaranteed by the Ukrainian constitution. This is repeated in the Law on culture as well as in other related legislation. Intimidation of artists is rare and is followed up in general by Ukrainian authorities. Since 2014 and following further amendments of the Law on culture in June 2022, Ukrainian authorities have implemented a ban on Russian cultural figures and their artistic work in Ukraine in response to Russia's war of aggression against Ukraine and occupation of the part of its territory. The ban includes actors, musicians, writers and artists who do not condemn the aggression against Ukraine. The ban also applies to the use of symbols that represent Russia or Russian propaganda.

Professional organisations and working conditions

Ukraine has a large number of journalism organisations that represent journalists, such as the National Union of Journalists of Ukraine and the Independent Media Trade Union of Ukraine. The latter is a member of the International Federation of Journalists and the European Federation of Journalists. Members of the National Union of Journalists and Independent Media Trade Union must adhere to standards of journalism – namely the Ethics Code of Ukrainian Journalists. Both are financed by contributions and donations. Cases of violation of the code are considered by the Commission on Journalism Ethics, a self-regulatory body of journalists and editorial offices in Ukraine. The Independent Media Council promotes high professional standards of journalism and self-regulation in the Ukrainian media sector by providing expert opinions, advice and recommendations based on international standards, national legislation and ethical standards of professional journalism. These professional organisations are involved in public councils that organise dialogue with the government and local authorities, for instance with Suspilne.

In general, the employment of journalists is precarious given the current wartime situation and is more difficult for freelance journalists. An amendment to the Law on state support of media, guarantees of professional activity and social protection of journalists adopted in 2023 provides for specific guarantees on the remuneration and social security for journalists, but does not include freelance journalists in its scope.

The right to **freedom of assembly and association** is guaranteed by the Ukrainian constitution, and the government respects these rights. Existing legislation allows for a court to restrict these rights in the interests of national security and public order. A comprehensive law in line with international standards that would regulate the process of organising and conducting events to make full use of the freedom of peaceful assembly in Ukraine is still missing. Restrictions on these rights linked to COVID-19 are no longer in force. The introduction of martial law in February 2022 allows the government to introduce temporary restrictions on the right to peaceful assembly, for instance curfews, but it applies them with restraint. The Ukrainian constitution provides for the restriction of the freedom of association by judicial procedures for reasons of national security. On this basis, the government suspended by decree the activities of 11 political parties with claimed ties to the Russian government for the duration of martial law. Major concerns remain over the freedom of assembly and association in the territories of Ukraine that Russia temporarily militarily occupies, where Ukrainian citizens are deprived of these rights. These freedoms are to be restored by Ukrainian authorities after these territories have been liberated.

Issues of **labour and trade union rights** are covered in Chapter 19 – Social policy and employment.

On **property rights**, there has been a focus on modernising and strengthening these rights since 2013. The State Register of Rights to Real Estate provides official recognition and confirmation by the state regarding the origin, transfer or termination of rights to property. However, it is estimated to be only 40% complete and does not include the majority of property rights that were acquired before its introduction and that are still stored in the State Land Cadastre (land register), with a number of mismatches. The territories not under government control since 2014 possess much more limited confirmed property rights given the wide-scale violations of property rights by Russian-supported henchmen and their criminal activities. Before the full-scale invasion by Russia, progress had been made in revamping the State Property Fund, modernising the its procedures and also in continuing to privatise small and large assets. In 2022, the European Court of Human Rights adopted seven decisions against Ukraine, which

was found to be in violation of Article 1 of Protocol No. 1 to the European Convention on Human Rights. The government is following up on this.

Since the start of Russia's full-scale invasion, property rights in government-controlled territories have not been limited, apart from the possibilities for the Ukrainian armed forces to requisition property for their needs, in particular in areas near the frontline. The government undertook a number of measures to ensure the legal continuity of property rights and take war damages into account. In February 2023, Ukraine adopted among other things a real estate law on compensation. This enables people to claim and receive compensation for property that has been damaged or destroyed as a result of Russia's full-scale invasion. To monitor property damage and destruction, local military administrations provide reporting, the state digital services platform Diia also allows for self-reporting, and the state registry of damaged and destroyed property provides a loss reporting infrastructure for property rights. In February 2022, the Criminal Code of Ukraine was amended to protect citizens from self-interested property crimes during wartime.

In the area of **non-discrimination**, Ukrainian society remains open in general and tolerant towards respecting persons in vulnerable situations. The Ukrainian constitution guarantees protection against discrimination. The law on the principles of preventing and combating discrimination in Ukraine prohibits discrimination on different grounds with race, colour, political, religious and other beliefs, sex, age, disability, ethnic or social origin, family and property status, place of residence and language receiving explicit protection.

The Law on media adopted in December 2022 prohibits dissemination in the media and on platforms of shared access to videos of statements that incite hatred towards people and groups based on their national, racial or religious characteristics, as well as statements that incite discrimination based on their ethnic and social origin, citizenship, race, religion and beliefs, age, gender, sexual orientation, gender identity, disability or any other characteristic. The National Council of Ukraine for Television and Radio Broadcasting currently formalises the criteria for identifying such violations and has the authority to take response measures against any media outlets that commit such violations.

Ukrainian criminal legislation provides for punishment of hate crimes and hate speech based on three characteristics – race, nationality and religious beliefs – but does not cover sexual orientation and gender identity, which is recommended by the European Commission against Racism and Intolerance as a matter of priority. A draft law, prepared by the Ministry of Internal Affairs to include these other protected grounds, was introduced to Parliament in 2021, still has to be adopted. The National Police of Ukraine introduced a new data collection form to investigate hate crimes and offences as part of the reporting system. In the first 2 months of 2023, it launched a pretrial investigation into 26 criminal offences based on hatred.

The Ukrainian Parliament's Commissioner for Human Rights is the main holder of powers to combat discrimination. It is an independent body, with powers equivalent to the mandate typically attributed to national equality bodies. In 2022, it received 395 reports of discrimination on various grounds and in general ensures follow-up by the authorities. The capacities of police officers, prosecutors, judges and staff of the Ombudsperson of Ukraine should be increased to tackle discrimination, hate speech and hate crime through suitable training. The legal aid system should be strengthened to implement the legislation and combat discrimination, hate speech and hate crime effectively.

As regards **gender equality**, Ukraine has several laws in place, in particular the Law on ensuring equal rights and opportunities of men and women of 2005, the Law on principles of prevention and combating discrimination in Ukraine of 2012 and the Law on prevention of

domestic violence of 2018. However, this legislation is generally declarative in nature and provides only limited guidance to the application of these laws. The Cabinet of Ministers adopted the 2030 state strategy on ensuring equal rights and opportunities for men and women in August 2022. The strategy is a comprehensive document that addresses among others gender inequality and women's participation in public institutions, economics and environmental issues.

Institutionally, since 2017 the coordination of gender policy in the government has been entrusted to the office of the Deputy Prime Minister for European and Euro-Atlantic integration, where the Commission on Gender Policy was established in order to ensure the concerted and coordinated involvement of all executive bodies, allowing for a more effective horizontal approach on gender equality.

On 18 July 2022, Ukraine ratified the Council of Europe Convention on Preventing and Combating Violence Against Women and Domestic Violence (Istanbul Convention), which entered into force on 1 November 2022. The effective implementation of the Convention is still to be initiated in a situation of increased priority, as gender-based violence prevention has suffered major setbacks in 2022 when local budget subventions were reduced due to budget constraints, and social services being degraded near the frontline and in temporarily occupied territories of Ukraine, as well as in regions experiencing massive influx of internally displaced persons (IDPs). While the number of cases of gender-based violence documented by the police has decreased by almost 50% in the first six months of 2022 (773 cases compared to 1 508 cases during the same period in 2021), the number of non-documented cases is unknown and is likely to have increased. The number of such cases linked to post traumatic stress are likely to have increased as well, including in families of military personnel.

Conflict-related and gender-based sexual violence emerged as an important war-related issue with hundreds of confirmed cases against both sexes of all ages and an estimated large number of unreported cases. In the same period, Ukraine revised the National Action Plan on UN Security Council Resolution 1325 on women, peace and security to address the changing realities in the country and include measures on conflict-related sexual violence. To fully implement the action plan, Ukraine needs to ensure the inclusion of women in the reconciliation negotiation process and in the decision-making process conduct mandatory systematic training of law enforcement agencies and the military on women's rights. It should also include the detection of forms of violence against women in their respective institutions and capacity-building for police and armed forces as first respondents in cases of conflict-based sexual violence.

Similarly, further steps are needed to ensure justice with a gender-sensitive approach, fulfil obligations to prevent, investigate and punish sexual and gender-based crimes committed during armed conflicts. This includes aligning the legal framework with international standards. Ukrainian authorities have committed to establish a comprehensive response system, including one-stop response centres in the regions to assist the victims, as well as the establishment of investigation mechanisms. In May 2022, a memorandum of cooperation was signed between the government and the UN on the prevention and counteraction of sexual violence in wartime. Gender equality has also been defined among seven cross-cutting priorities of the government's recovery plan.

Since February 2022, all positions in the Ukrainian armed forces have been opened to women, and in March 2023 more than 60 000 women were serving in the armed forces, a large part being on the frontline of combat operations. This is accompanied by increased acceptance of equal rights for women soldiers in Ukrainian society. This implies the obligation to cater more to the needs of women soldiers and veterans in terms of equipment, protection against sexual

violence and harassment and medical support during and after combat, and reintegration support to civilian life once they retire from the armed forces.

Ukraine ratified the UN Convention on the **Rights of the Child**, acceded to the three Optional Protocols to the Convention and endorsed the Paris Commitments to protect children from unlawful recruitment or use by armed groups. It also ratified the Council of Europe Convention on the Protection of Children against Sexual Exploitation and Sexual Abuse (Lanzarote Convention). Ukraine has furthermore signed the Safe Schools Declaration, which aims at protecting children and ensuring their right to education in the context of conflict and war.

The last few years have seen progress, with legislation strengthening the social protection of children and support for families with children, and introducing the notion of the best interests of the child. There is however still a need to develop procedures and criteria to provide guidance for determining the best interests of the child, including of children in need of care and protection, and giving the best interests of the child due weight as a primary consideration. Similarly, there is room to strengthen integrated social services to prevent family separation, support alternative family placements and reintegration of children from institutions into families, including investing more resources into a minimum package of social services as the first steps towards meeting the provisions of the EU Child Guarantee and secure a social service workforce trained in integrated social services and corresponding case management approaches.

Since 2021, the state guarantees a right to all medical services, with equal funding and equal access for children. Monetary benefits are provided for children, with higher rates for children with disabilities. At the same time, remaining issues include a lack of available resources, limited data collection and monitoring policies on child rights, which should be solved. Efforts have been undertaken to protect children in civil and criminal proceedings, but further capacity building to support cases involving children needs to be envisaged.

The existing difficulties in ensuring the rights of the child have been exacerbated since the beginning of Russia full-scale invasion. According to OHCHR until 30 June 2023, 535 children were killed and 1 095 injured. Research indicates that a high number of children show signs of psychological trauma. In many cities, children cannot receive proper medical care due to constant shelling by Russia and the systemic destruction of critical infrastructure. The war limits access to education for children; 3 395 educational institutions have suffered from bombings and shelling and 363 have been completely destroyed. Many children depend on online education, which is complicated by a lack of access to technology, internet connectivity and electricity availability. The government established the Coordination Headquarters for the Protection of Children's Rights under Martial Law to address these challenges in light of the difficult wartime circumstances.

Before February 2022, Ukraine had the largest number of children in institutional care in Europe. These institutions are under-resourced and include outdated and inappropriate boarding schools run by the Ministry of Education, baby homes run by the Ministry of Health, and institutions overseen by the Ministry of Social Policy for children deprived of parental care by the courts. The 2017 Law on education introduced protection with special educational needs. Since then, the number of inclusive classes and accessibility of schools have increased significantly.

Since the Russian invasion in February 2022, a number of large institutional care facilities have been evacuated to neighbouring countries under very difficult circumstances, including to a number of EU Member States. Ukraine also asked host countries to keep groups of evacuated children together. In February 2023, the President's Office committed to the goal of zero

children in institutional care and comprehensive childcare reform. UNICEF has an agreement with the Ministry of Social Policy and the President's Office to support them in the deinstitutionalisation planning process, including the short-term ambition of reunifying or placing all children who are in institutions as quickly as possible in safe, supported biological or foster families.

Since Russia's full-scale invasion in February 2022 and even before in temporarily occupied areas of the Donbas, Russia started to forcibly transfer and deport at least 19 000 children from non-government-controlled territories of Ukraine, using the pretext of 'evacuation'. Ukrainian and international non-governmental organisations (NGOs) report on the forced 'russification' of Ukrainian children in Russian institutions and 'summer camps'. In 2022, Russia introduced legislative changes to allow Ukrainian orphans and children without guardianship to obtain Russian citizenship in a simplified manner, enabling Ukrainian children to be adopted by Russians. Ukrainian NGOs as well as the Office of the United Nations High Commissioner for Human Rights note that there is currently no functioning mechanism for reunifying children with their relatives in Ukraine. The identification and monitoring of missing children and their families also remains challenging.

In 2010, Ukraine ratified the UN Convention on the **Rights of Persons with Disabilities** and its Optional Protocol. The Law on the basis of social protection of persons with disabilities in Ukraine prohibits discrimination on the basis of disability and introduces quotas for companies. However, integrating persons with disabilities into the workforce remains limited. The application of the principle of reasonable accommodation for persons with disabilities remains rare. The National Strategy for Barrier-free Environment in Ukraine, covering the period up to 2030, was adopted in spring 2021. It provides a framework for empowering persons with disabilities to fully participate in society and ensures their fundamental rights. It is being implemented by way of annual action documents. This led to a number of actions in 2022, even though they were limited by the impact of the Russia's full-scale invasion. In June 2023, Ukraine adopted the action plan for 2023-2024. It provides for monitoring the barrier-free nature of the physical environment and transport, adapting them to the needs of persons with reduced mobility, as well as introducing new and improved state construction norms and standards. The government announced that all restored infrastructure should be compliant with barrier-free environment standards by 2024. This now requires consistent implementation at all levels of government.

As of 1 January 2020, 2.7 million persons with disabilities were registered in Ukraine, among them 160 000 children. This number is expected to have risen dramatically because of Russia's war of aggression. It includes only persons who were able to register their disability. This leads to barely relevant disaggregated data as Ukraine has not yet introduced the WHO's International Classification of Functioning, Disability and Health for the registration of persons with disabilities. Furthermore, there is limited legal capacity in Ukraine to enable persons with disabilities the opportunity to claim their rights. Persons with intellectual and psychosocial disabilities remain highly vulnerable due to exceptionally high levels of institutionalisation, including of children and infants, instead of family- and community-based alternative care. Previous reform attempts have not led to a sufficient reduction in institutionalisation, also due to the lack of capacity at local and regional level. This reform needs to be prioritised.

The situation for persons with disabilities remains very challenging as regards equal participation and opportunities. There is a distinct lack of accessible transportation, healthcare, social services and public buildings. Legislation does not provide incentives for employing persons with disabilities in the open labour market. Russia's invasion led to additional strains on public services for persons with disabilities due to the growing number of war victims

among veterans and civilians, the further extension of conflict-affected areas, as well as the forced displacement of persons with disabilities, their families and carers and the destruction of care infrastructure.

Overall, during the reporting period the general trend of increasing tolerance and acceptance of **lesbian, gay, bisexual, transgender, intersex and queer (LGBTIQ)** persons in Ukrainian society over the last decade was sustained. The trend towards a decrease in the number of attacks and hate crimes against LGBTIQ persons continues (–44% since 2020). Surveys conducted in 2022 show that a majority is in favour of same-sex partnerships and equal rights for LGBTIQ persons. The government clearly communicates its support for the rights of LGBTIQ persons and against hate crimes and discrimination. In addition, Kyiv Pride was held on 25 June 2023 in Warsaw together with the city's Equality Parade, focusing on rights for LGBTIQ persons as well as on the support for Ukraine.

Existing legislation, for instance the Labour Code, already provides some level of protection against discrimination based on sexual orientation, and reforms to ensure equal rights are currently under way. The media law, adopted on 15 December 2022, bans hate speech and incitement based on sexual orientation and gender identity in media. The National Human Rights Action Plan 2021-2023 envisages progress in the status of LGBTIQ persons, for instance by amending the Criminal Code of Ukraine to apply the notion of the term 'bias' as regards sexual orientation and gender identity. The plan also suggests drafting a law that would provide for the elimination of discriminatory provisions that may violate the property and non-property rights of unmarried partners as well as the introduction of a registered civil partnership. Amendments to the provisions of the Family Code which currently discriminates same-sex couples compared with unmarried couples of the opposite sex are necessary. In March 2023, a draft bill on legalisation of same-sex marriage was introduced by MPs to Parliament and government has committed to approve the bill by the end of 2023. The judgment by the European Court of Human Rights of 1 June 2023 reinforced the requirement for the state to ensure the equal treatment of same-sex couples in Ukraine.

Procedural rights are outlined and protected among others in the Law on the judiciary and status of judges and in the Criminal Procedure Code. However, the implementation of existing rules and procedures suffers from a lack of efficiency and capacity of the judicial system. Ukraine's legal system is not yet aligned with the EU *acquis* on procedural rights for suspects and accused persons in criminal proceedings, but measures are being taken in this direction: the presumption of innocence, the right to information about the main procedural rights, the right of access to a lawyer and the right to be present at the trial are provided. The Criminal Procedure Code provides for the translation of legal documents and persons involved in the criminal proceedings have the right for an interpreter at the expense of the State.

There are safeguards for children who are suspects and accused in criminal proceedings. During the reporting period, the free legal aid system showed a high level of stability, while legal services quickly adapted to the new conditions. In 2022, the right to free secondary legal aid was extended to people without documented Ukrainian citizenship, victims of criminal offences during hostilities and armed conflict, and to those deprived of their liberty in the context of Russia's war of aggression against Ukraine. The country's legislation on victim rights should be fully aligned with the Victims' Rights Directive and Council Directive 2004/80/EC relating to compensation to victims of crime.

In 2022, the Ukrainian Parliament Commissioner for Human Rights received 5 105 reports on violations of procedural rights, 790 on administrative and civil proceedings, 3 628 on criminal proceedings and 687 on places of detention. They refer in particular to the violation of the right

of access justice, of the right to a fair trial for excessive length of the proceedings as well as violation of rights by law enforcement officials. The right to a fair trial is frequently violated, as shown by 61 decisions delivered by the European Court of Human Rights in 2022 in cases against Ukraine regarding violations of Article 6 of the European Convention on Human Rights. These issues reflect structural problems with the practices of the judiciary and law enforcement authorities. Recent law reforms have not yet led to a visible improvement in the situation, in particular as the COVID-19 pandemic and Russia's full-scale invasion have further burdened the wide application of appropriate standards and rules in law enforcement and the judiciary, in particular the rights of access to justice and the right to a fair trial within a reasonable time. A draft Law on excessive length of proceedings was registered in September 2022. It proposes reducing the terms of consideration of civil, commercial and administrative cases, introducing a protection mechanism and providing compensation for plaintiffs, but still needs to be adopted.

Regarding the **respect for and protection of persons belonging to minorities**, the wide range of national, ethnic, linguistic and religious identities in Ukraine continues to be an important element of Ukrainian society. Ukraine has been a party to the Council of Europe's Framework Convention for the Protection of National Minorities since 1998 and to the European Charter for Regional and Minority Languages since 2005. Since 2017, the legal framework for national minorities is being reformed but is not fully implemented yet. This was addressed by the Commission's opinion on Ukraine's application for EU membership, which recommends that Ukraine *'finalise the reform of the legal framework for national minorities currently under preparation as recommended by the Venice Commission and adopt immediate and effective implementation mechanisms.'*

In general, the rights of persons belonging to ethnic, linguistic, religious or national minorities are upheld in Ukraine. This is despite the efforts of the Russian regime to instrumentalise uses the topic of the Russian minority in its disinformation campaign in order to justify its illegal aggression against Ukraine. Civil society organisations and international organisations are very concerned about this high politicisation of the topic, while the issues to be addressed revolve mainly around those concerning the daily lives of persons belonging to national or linguistic minorities, such as education, language use in public life, media, civic participation and representation of national minorities.

On 13 December 2022, the Law on national minorities (communities) of Ukraine was adopted. It replaced the Law on national minorities adopted in 1992 as the main act regulating the rights of national minorities. It creates rules and structures for national minority rights in Ukraine. In the preparatory process, efforts were made to also consult representatives of national minorities. The adopted accompanying implementing measures address the structures of regional centres of national minorities, financial support to public associations of national minorities, the methodology for using minority languages and the creation of consultative bodies on national minorities, as well as a state programme 'Unity in Diversity' for national minorities, but the implementing bodies remain to be underfunded.

The Venice Commission Opinion of 10 June 2023 provided detailed guidance on the remaining issues and recommended amending the Law on national minorities (communities) as regards the use of minority languages in public life, administration, use of minority languages in media and books to ensure that the law complies with European standards. As indicated in the Venice Commission Opinion, Ukraine should also address earlier recommendations of the Venice Commission on the Law on education and the Law on State language. On 11 June 2023, Ukraine adopted a law extending the transition period for education in minority languages by 1 year for pupils starting their education before 2018. In October 2023, Ukraine registered a

draft law in Parliament to exempt these pupils from the obligations of the education law. This would allow Ukraine to reconsider the minority school system also in light of previous Venice Commission recommendations to ensure equal opportunities for persons belonging to national minorities, avoiding disproportionate interference with their rights. The amendment to the Law on national minorities was adopted on 21 September to accommodate some of the Venice Commission comments, in particular those directly relevant to the law on national minorities (communities). The Venice Commission follow-up Opinion of 6 October 2023 assessed the progress of the amending law, but also identified those recommendations that remain to be addressed. According to the final provisions of the revised law, within the six months following its entry into force the Cabinet of Ministers has to prepare and submit to Parliament a draft law to revise the education law, the State language law and the media law. These need to be in line with the recommendations of the Venice Commission.

The impact of Russia's war of aggression against Ukraine has severely affected national minorities, leading to disruptions to their social fabric by displacements of their members, challenges to guarantee education in minority languages as well as a general lack of state funding to implement adopted reforms. In the medium term, in particular after the end of the war, this will require a broad review of Ukraine's policies to enable the full application of the rights of persons belonging to national minorities.

The **Roma minority** remains one of the most marginalised communities in Ukraine and continues to face significant challenges. These include discrimination and antigypsyism, economic and social exclusion, lack of access to ID documents, lack of adequate education, continuing segregation in settlements, lack of poverty reduction and lack of adequate housing. There is a continued need for empowering women, for family planning programmes, increased protection of children's rights and the prevention of teen pregnancies, misappropriation of funds designed for child support as well as discrimination by police. These existing challenges were exacerbated by the impact of Russia's full-scale invasion, which led to the displacement of a large part of the Roma minority within the country and abroad. At its beginning, Roma faced additional obstacles in various regions, preventing an efficient evacuation. Instances of mob violence against Roma targeting both settlements and individuals were recorded in recent years. Civil society organisations point out that attention should be paid to the non-discriminatory nature of aid delivery in order to reach citizens without a full set of ID documents, as well as marginalised settlements, documentation procedures for Roma individuals should be simplified and accelerated, and the legalisation of Roma settlements should be ensured. Roma should also be included in the recovery and reconstruction efforts of Ukraine.

In July 2021, Ukraine adopted the strategy promoting the realisation of the rights and opportunities of persons belonging to the Roma national minority in Ukrainian society up to 2030. The strategy is being implemented only slowly and the related action plan, which needs to be fully aligned with the EU Roma strategic framework, developed with the full involvement of the Roma community and be given sufficient resources for its implementation, has not yet been adopted.

On 7 April 2023, the Ukrainian government adopted a state policy strategy on internal displacement until 2025, together with an operational plan for 2023-2025. The strategy aims to properly address all issues related to **internally displaced persons**, and this at all stages: from the decision to relocate these persons to the period when a person decides to return to the liberated and safe territory. Implementation of this strategy will heavily depend on the capacities and financial resources of the Ukrainian government. According to the International Organization for Migration (IOM), in June 2023, an estimated 5 088 000 were internally

displaced. According to the United Nations High Commissioner for Refugees (UNHCR), in June 2023, 6 303 500 people Ukrainians were registered as refugees. Across Ukraine, IOM estimates that 4 757 000 people have returned to their place of habitual residence in Ukraine following a period of displacement, 20% of whom returned from abroad. Income sources of internally displaced persons have been severely affected by the war. In addition, given the overall priority given to winning the war and the scale of the social emergencies created by the Russian war of aggression, increasing difficulties are reported in ensuring adequate state budget allocations for social services. Significant and continued reliance on external assistance is expected by relevant ministries in charge of social policies, with few plans at the moment in terms of self-sustainability. IOM data indicates that around one in four internally displaced persons (24%) that responded stated that monthly livelihood cash assistance was their primary source of household income. The vast majority (72%) of internally displaced persons who rely on social assistance reported a total monthly household income which – when divided by the number of people in the household – was equal to or less than UAH 2 500 (EUR 55), the subsistence minimum as of January 2023.

While **cultural rights** in Ukraine are respected and protected, also for national minorities as reiterated in the Law on national minorities (communities) of Ukraine, Russia systematically and purposefully carries out activities that violate the cultural rights of Ukrainians and specifically national minorities in the temporarily occupied territories of Ukraine. This concerns illegal archaeological excavations by Russia in Crimea, the looting of museums, archives, libraries and objects of movable cultural heritage in temporarily occupied territories, the nationalisation of Ukrainian cultural property, as well as persecution of the Orthodox Church of Ukraine in Crimea. It is very difficult for Ukrainian authorities to monitor and track looted objects as well as document cultural heritage and eventually reconstitute it after the liberation of temporarily occupied territories.

Russia continues its efforts to systematically destroy Ukrainian identity in the temporarily occupied territories of Ukraine. Under the Russian Federal Law No 19 (as of 17 February 2023), the four temporarily occupied territories of Kherson, Zaporizhzhia, Donetsk and Luhansk regions of Ukraine are to be integrated into Russia's federal education system. This includes clearing the educational space of anything Ukrainian (all school instructions are given in Russian only and there are no subjects related to Ukraine), militarising education and instilling Russian civic identity. Ukrainian authorities and citizens are currently unable to protect Ukrainian children against these illegal acts, but will need to prepare measures to reintegrate this portion of its population into its national education system.

The **citizen rights** of Ukraine are governed by the Law on citizenship of Ukraine. Anyone born to at least one Ukrainian parent automatically receives Ukrainian citizenship at birth, while foreign nationals can be naturalised after living in the country for at least five years. While only sole citizenship is permitted in Ukraine, in practice Ukrainian citizenship is not automatically lost if foreign citizenship is acquired, resulting in an estimated large number of Ukrainians possessing more than one citizenship, often with an additional EU citizenship.

2.2.2. Chapter 24: Justice, freedom and security

The EU has common rules for border control, visas, external migration and asylum. Schengen cooperation entails the lifting of border controls inside the EU. Member States also cooperate with Ukraine in the fight against organised crime and terrorism, and on judicial, police and customs cooperation, all with the support of the EU justice and home affairs agencies.

Ukraine has **some level of preparation** in implementing the EU *acquis* in the area of justice, freedom and security. Russia's full-scale invasion of Ukraine and the martial law regime

introduced in response have had a profound impact across the entire justice, freedom and security area. Law enforcement agencies are heavily involved in defending the country and protecting the population and critical infrastructure. Despite the war-related challenges, including significant losses of personnel and equipment and reduced financing, the institutions continue to demonstrate strong resilience and determination to deliver on their mandates. However, multiple shortcomings persist, many of which predate Russia's full-scale invasion. The legal and strategic framework is underdeveloped. Integrity and accountability mechanisms need further strengthening across the sector. Institutional cooperation and coordination remain weak, in particular as regards the investigation of organised crime, but also migration and border control. The smuggling of goods, including cigarette smuggling, is still not criminalised, despite being a low-risk and high-profit activity. Technical capacities for border control and surveillance need improvement, along with the anti-corruption measures. Legislation on visa policy and asylum is broadly aligned with the EU *acquis*. **Limited progress** was made in the reporting period. The overarching strategic plan for the law enforcement sector was adopted, while the preparation of a credible implementation plan is underway.

In the coming year, Ukraine should in particular:

- adopt a time-bound and measurable action plan for the implementation of the overarching strategic plan on law enforcement reform, including a strong anti-corruption component, taking the war-related context into account, and make tangible progress in implementing it;
- adopt and implement a context-adjusted migration policy strategy and revised integrated border management strategy, and ensure that corresponding action plans have indicators that allow for the proper assessment of implementation;
- adopt and start implementing legislation to criminalise the large-scale smuggling of goods, including effective prison sentences for damage to the state budget above a certain threshold.

Fight against organised crime

Ukraine has **some level of preparation** to implement the EU *acquis* in this area. The country has a dedicated strategic and institutional framework to fight organised crime, along with reasonable knowledge and technical means, and a good level of international cooperation. Russia's full-scale invasion of Ukraine and the martial law regime have had a profound impact on the institutional capacities to fight organised crime. Like other institutions in the home affairs sector, the institutions that fight organised crime are heavily involved in the country's defence and civil protection efforts, demonstrating remarkable resilience and operational capabilities. There has also been a shift in priorities towards the investigation of international crimes and offences committed by Russian entities. Overall, the legal framework and operational capacities to fight organised crime remain weak. A number of legal and procedural gaps, jurisdictional overlaps and institutional fragmentation, the prevalence of corruption, the inefficient use of resources, the uneven level of professionalism and underdeveloped IT infrastructure are observed in this area. Strengthening inter-agency coordination remains crucial. More efforts are needed in particular to combat serious forms of organised crime, money laundering (including alignment with Directive (EU) 2018/1673 on combating money laundering by criminal law) and other financial crimes. Despite the difficult context and existing challenges, the outlook is positive as the country is determined to proceed with implementing the strategic approach, including the revision of the legal framework and the putting in operational use the national serious organised crime threat assessment (SOCTA).

Some progress was made at operational level, in particular through participation in an increasing number of joint operations with EU Member States and neighbouring countries. Investigations were launched against the criminal authorities ('thieves in law'). The number of seized, confiscated and destroyed firearms and ammunition as well as convictions for trafficking of small arms increased considerably. The Office of the Prosecutor General started developing the e-case management system in the criminal justice chain.

In the coming year, Ukraine should in particular:

- develop and adopt the national SOCTA and strengthen the institutional capacities to implement it, including intelligence-led policing, open-source intelligence, information management and analysis, inter-agency cooperation; establish a permanent national coordinator to fight organised crime;
- adopt and start implementing a credible action plan for the implementation of the 2023-2025 asset recovery strategy; improve the legal framework and institutional capacities for financial investigations, asset recovery and management;
- enact legislation enabling a competitive, transparent and merit-based selection, including a credible integrity check, of the new Head of the Bureau of Economic Security and other staff and carry out the selections based on the improved legislation, introduce a strong integrity and accountability framework within the Bureau and start applying it;
- continue improving the legal framework related to firearms and other small arms and light weapons (SALWs), conduct regular threat assessments and continue cooperation between national law enforcement agencies and the military to prevent the illicit possession and trafficking of firearms and other SALWs.

Institutional set-up and legal alignment

In 2022, the National Police of Ukraine had more than 110 000 police officers, which corresponded to approximately 270 police officers per 100 000 inhabitants, against an EU average of 335 officers per 100 000 inhabitants (Eurostat, 2019-2021). An attempt to reform the National Police was undertaken in 2019, aimed at increasing public trust in the police and strengthening its ability to deal with organised crime. Specialised police units were put in place to deal with terrorism, cybercrime and drugs.

Since late 2022, the Ministry of Internal Affairs has acted as a temporary national coordinator on organised crime, in line with the strategy and action plan for combating organised crime. It is critical to establish a permanent national coordination body to tackle organised crime and upgrade the inter-agency cooperation and coordination mechanisms, including business processes and IT infrastructure.

The Bureau of Economic Security (BES) was established in November 2021 and started operating in 2022. It was expected to become the central law enforcement and analytical body to fight financial crimes and protect the economic interests of Ukraine. However, its operational capacities remain very limited. Its track record in the first few years of activity raises questions about its effectiveness and coordination with other law enforcement agencies and institutions. BES remains heavily understaffed, with less than 20% of its positions filled. The head of BES was dismissed in April 2023. In May 2023, investigative media raised allegations of corruption against the acting head of BES. Legislation should be amended to enable the selection of the new head and other staff in a competitive, transparent, merit-based manner, including a credible integrity check.

The state financial monitoring service supervised by the Ministry of Finance performs the role of a financial investigation unit, assisting the law enforcement agencies in anti-money laundering investigations. The service prepares analytical reports and ensures data exchange with other countries.

The national agency for finding, tracing and management of assets derived from corruption and other crimes (ARMA) was established in February 2016. It is tasked with formulating and implementing state policy on tracing assets that are subject to seizure and managing seized assets in criminal proceedings. ARMA has access to a number of national and international databases. It has established cooperation with foreign asset recovery and management agencies and their networks. In January 2023, ARMA launched the unified state register of assets seized in criminal proceedings. The agency had no permanent head for almost 4 years. The initial competition failed to identify a suitable candidate in August 2022. A new competition, relaunched in late 2022, selected a suitable candidate. In June 2023, the Cabinet of Ministers appointed her. However, civil society raised concerns about the selection and appointment process and the integrity of the appointee. ARMA has been criticised for inefficiency and limited capacity, and also faces corruption allegations against its previous management.

Ukraine has a dedicated legal framework to fight organised crime. The Law on organisational and legal principles of combating organised crime was adopted in 1993, but is largely outdated with numerous shortcomings. An assessment of compliance of Ukrainian law with EU law and international standards in the area of organised crime is still pending. Legislation related to asset recovery and management remains deficient and in need of thorough revision. The legislation for tackling the proliferation of illicit firearms needs further improvement, in particular by expanding criminal liability for cross-border illicit trafficking of firearms and their parts/components within the meaning of the UN Protocol on Firearms. A new law on firearms is pending adoption. Ukraine ratified the Budapest Convention on Cybercrime in 2006, and its substantive law is largely in line with the Convention. Ukraine also ratified the First Additional Protocol to the Convention on Cybercrime and signed the Second Additional Protocol on enhanced co-operation and disclosure of electronic evidence in November 2022; it still needs to be ratified. In 2006, Ukraine made a reservation not to apply paragraph 1 of Article 6 of the Budapest Convention concerning the criminalisation of misuse of IT devices, including computer programmes, which contradicts the efforts to tackle organised crime involved in cybercrime. The national cybersecurity strategy of 2021 (its action plan was adopted in 2022) has a cybercrime component. The Law on **witness protection** exists, but is largely outdated as it was adopted in 1993.

A strategy and action plan on the fight against organised and serious crime are in place. The strategy on combating organised crime was approved in September 2020, while the action plan for implementing the strategy was approved in September 2022. The key priorities of the strategy include the renewal of legislation, setting priorities and strengthening analytical capacities, operationalisation of SOCTA, a stronger focus on criminal networks, the involvement of the civil society and the establishment of a national coordinator – an interdepartmental commission for combating organised crime. The overarching strategic plan to reform the law enforcement sector for 2023-2027 was approved by the President in May 2023 as part of the pre-accession reform steps set out in the June 2022 Commission Opinion on Ukraine's membership application. The plan sets out six priorities that focus on increasing the effectiveness of the law enforcement and prosecuting bodies, consistency of the criminal policy, result-oriented management, digital transformation, as well as transparency, accountability and independence. A relevant and credible action plan with time-bound and measurable deliverables should still be adopted to facilitate the implementation of the strategic

plan. A national strategy on asset recovery for 2023-2025 was adopted in August 2023, an action plan for its implementation still needs to be developed. There is no formal government strategy on firearms trafficking, but a draft action plan on firearms trafficking is prepared. Cooperation between the Ukrainian authorities and the EU is continuing in this area. The current war context as well as the emerging trends and threats linked to organised crime need to be taken into account when developing and further updating the strategic framework.

As for the **international legal framework**, Ukraine signed and ratified the main international agreements and regional conventions that directly or indirectly target organised crime. In particular, Ukraine ratified the UN Convention against Transnational Organised Crime in 2004 and the UN Convention Against Corruption in 2009, as well as the Council of Europe (CoE) Conventions on Civil Law in 2005 and Criminal Law in 2009. It also ratified the CoE Convention on Cybercrime in 2001 and the CoE Convention on Action Against Trafficking in Human Beings in 2005. Ukraine has been a member of the CoE's Group of States against Corruption since 2006 and of the Group of Experts on Action against Trafficking in Human Beings.

Ukraine should focus heavily on strengthening **integrity and anti-corruption** in the criminal justice system, as corruption in the system undermines public trust and the fight against serious crime, including organised crime. In particular, the transparent and merit-based selection of managerial staff, including credible integrity checks, should be ensured in the institutions fighting organised crime, along with strong disciplinary and anti-corruption frameworks tailored to the local context and actual corruption risks. So far, these frameworks within the criminal justice institutions have not been effective. Internal security and disciplinary bodies are limited in their mandates, resources and independence.

Implementation and enforcement capacity

Ukraine is located at the crossroads of smuggling illegal goods to the EU, including arms, drugs and cigarettes. Illegal logging is widespread, and despite efforts made in recent years, the illegal trade in timber persists. Ukraine is a source, transit and destination country for human trafficking. It is also a production and transit country for drugs. The Russian war of aggression against Ukraine is changing the nature of organised crime, as it has affected international criminal networks and the traditional trafficking routes. At the same time, it is creating new risks that need to be addressed, in particular those linked to arms and human trafficking.

Considering the existing challenges and the evolving threat landscape related to the war, the institutional capacities to tackle organised crime remain limited. Ukrainian law enforcement agencies are currently heavily focused on investigating international crimes. They also have to operate with substantially reduced budgets and staff. Even before the war, a series of ad hoc reforms, competition between law enforcement agencies and influence by political and vested interests hampered progress in civilian security sector reforms. The unclear division and fragmentation of competences among law enforcement agencies undermines the fight against complex forms of organised crime. The existing rules and court practice on the inadmissibility of evidence gathered by a law enforcement agency that is not competent for a given case, coupled with the unclear division of competences, further complicate the fight against organised crime groups involved in diverse criminal activities, and open the door to corruption and abuse. Inter-agency cooperation among Ukraine's law enforcement, intelligence, prosecuting and judicial bodies formally exists, but is not efficient and is marred by the absence of a permanent coordinator and clear procedures. There is also fierce competition between law enforcement agencies and a high degree of distrust. The absence of a modern e-case management system in the criminal justice chain and limited access to the relevant registers, databases and intelligence information, even within a single agency, remains a problem.

The Security Service of Ukraine (SSU) still retains a technical monopoly on intercepting communications, even if the National Police of Ukraine (NPU) and the National Anti-Corruption Bureau of Ukraine have been legally empowered to conduct interceptions on their own since autumn 2019. The systemic problems within the judiciary, including a severe shortage of staff, underfunding, corruption, the absence of a modern e-case management system (see Chapter 23) as well as a lack of proper specialisation undermine the adjudication of organised crime cases.

The **number of criminal investigations** into organised crime groups and criminal organisations, although still relatively low overall, gradually increased to 499 cases in 2021 (2020: 377 cases; 2019: 293 cases) and remained at this level in 2022: 485 criminal proceedings against organised crime groups were sent by the NPU to courts, 12 of them with transnational ties. Proactive measures are being taken to combat the subjects of increased criminal influence, including the ‘thieves in law’, although tangible results in the form of convictions have yet to be seen. The NPU continues to suffer from corruption, outdated equipment and limited capacity overall, including the capacity to conduct financial investigations.

In 2022-2023, the SSU, as part of its work on organised crime, uncovered 123 organised crime groups (of which 99 organised groups and 24 criminal organisations). 517 people were notified of being suspected of committing criminal offences in organised forms of complicity. In particular, 28 organised crime groups known as professional criminals were identified. 27 people were notified of being suspected of establishing or spreading criminal influence, organising, assisting in, conducting or participating in a criminal assembly, or applying for the use of criminal influence. 12 people were convicted.

Despite the transfer of competences from the SSU to the Bureau of Economic Security in 2021 and the SSU’s increasing focus on its core activity – counterintelligence and national security – the SSU remains active as a criminal law enforcement agency. It causes institutional fragmentation, jurisdictional overlaps and competition, and opens the door to corruption and abuse. Following international practice, the SSU’s pre-trial investigation functions should be abolished. In the meantime, the prosecution service should strengthen its role as the leader of pre-trial investigations and prevent jurisdictional tension and abuse, including occasional breaches of the exclusive jurisdiction of the National Anti-Corruption Bureau of Ukraine and the Specialised Anti-Corruption Prosecutor’s Office in high-level corruption cases.

As for Ukraine’s **international police cooperation**, it is well developed and is producing positive results on the ground. Ukraine is a member of Interpol, and has a working arrangement in place with CEPOL, the European Union Agency for Law Enforcement Training, and an operational and strategic agreement with Europol, the EU’s law enforcement agency. The law enforcement agencies of Ukraine capitalised on all forms of capacity building provided by CEPOL and this co-operation should continue. The Liaison Bureau of Ukraine in Europol was opened in November 2017. A second liaison officer was deployed in 2023. Ukraine has access to SIENA, the secure information exchange network application platform for EU law enforcement. Since the start of the war, a strong international police and prosecutorial cooperation framework has played a positive role in uncovering cross-border organised crime activities.

Ukraine is an active participant in the European Multidisciplinary Platform Against Criminal Threats (EMPACT). In 2022, Ukraine planned to participate in 174 out of 293 operational actions, covering all 15 operational action plans under EMPACT. However, due to the war, Ukraine had to scale back its participation, also in terms of the number of operational actions it committed to in 2023 (122). Ukraine nevertheless acted as co-action leader in 2022 for an

operational action on high-risk criminal networks and will continue doing so in 2023. It also took part in three joint action days organised by the platform.

There has been limited progress in implementing **intelligence-led policing**. In recent years, the NPU set up a new criminal analysis department and regional departments in every region. These departments provide analytical support for criminal investigations. In 2022, they produced more than 13 000 analytical studies. However, Ukraine should still establish unified and up-to-date intelligence sharing tools and procedures for its law enforcement agencies. It should also develop a common IT platform for facilitating inter-agency cooperation and for gathering, analysing and sharing information and intelligence between the relevant institutions.

The preparation of the national **serious and organised threats assessments** (SOCTA) has been delayed since 2017. The absence of these national SOCTA undermines policymaking, priority-setting, operational work and coordination between agencies tasked with fighting organised crime. In 2022, a government resolution on the introduction of SOCTA was adopted. To relaunch preparations, an inter-agency working group was established in October 2022 under the lead of the Ministry of Internal Affairs. Regional groups to assess the threat of organised crime were created throughout the country, but their level of activity is unclear. Ukraine should develop and adopt SOCTA without further delays, and build the institutional capacities to implement it, including intelligence-led policing, open-source intelligence, information management and analysis, and inter-agency cooperation.

The state financial monitoring service (SFMS) continued its operations despite the challenging operational environment. In 2022, it registered 52 123 **suspicious financial transactions** and sent 934 referrals to the law enforcement agencies. The agencies made use of SFMS referrals in 349 criminal proceedings. In 2022, the SFMS also processed 1 242 international requests. The absence of a bank account register of physical persons makes its work and financial investigations difficult.

Financial investigations are not conducted in a consistent and sustainable manner. The Mutual 2017 Evaluation Report issued by Moneyval, the Council of Europe's Committee of Experts on the Evaluation of Anti-Money Laundering Measures and the Financing of Terrorism, and the follow-up reports point to a lack of understanding among law enforcement agencies as to what is meant by financial investigations. To address these shortcomings, the Office of the Prosecutor General issued instructions and methodological guidance to all regional prosecution offices on the investigation of money laundering offences and the application of financial investigations in proceeds-generating crimes. There is no legal obligation to apply them in all proceeds-generating offences, which undermines their consistent application when investigating offences linked to organised crime. The concept of financial investigations should be further embedded in the legal framework, in particular in secondary legislation, and systematically enforced under the supervision of prosecutors. The institutional capacities to conduct them should be further strengthened across the relevant institutions.

On **asset confiscation**, the legal and institutional framework is largely aligned with international standards. However, asset confiscation and recovery tools remain underused, and a credible track record of seizures and confiscations still needs to be established. Inter-agency cooperation between the relevant law enforcement, prosecuting and judicial bodies, as well as SFMS and ARMA and the institutional capacities of these bodies should be further strengthened. The national asset recovery strategy, which could help develop a more effective and efficient system of asset recovery, was adopted in August 2023, but not yet implemented. A comprehensive technical analysis of the operational effectiveness and independence of ARMA, including related asset recovery and management functions, was conducted. On this basis, comprehensive ARMA reform should be implemented, including a system for the

transparent selection of ARMA's head, fully fledged pre-seizure planning, prioritising the seizure of assets by criminal courts, transparent procedures for the management, sale and evaluation of assets and unblocking the possibility to manage corporate property rights.

On **trafficking in human beings (THB)**, the assessment of alignment of the Ukrainian law with the EU *acquis* remains to be conducted. In 2022 the NPU stopped activities of five organised groups involved in trafficking in human beings. 133 criminal offences of human trafficking were registered and 93 people were notified of suspicion and 63 were indicted. 66 people were recognised as victims of human trafficking, including 36 women and 12 children. In addition, the activities of 12 organised groups and criminal organisations were stopped, consisting of 40 people who smuggled people across the Ukrainian border.

In June 2023, the Cabinet of Ministers approved a targeted social programme for combating human trafficking up to 2025. Following the start of Russia's full-scale invasion and given the much higher trafficking risks, Ukraine took a number of measures to prevent and combat human trafficking. Information campaigns on the risks were conducted among citizens travelling abroad and three nationwide operations were organised to combat child trafficking. Migration police units participate in pan-European measures to combat human trafficking for the purpose of sexual exploitation and forced begging, and to neutralise organised crime groups. Close cooperation has been established with national and international civil society organisations. The Ministry of Internal Affairs established permanent communication and the exchange of information with the EU Anti-Trafficking Coordinator. In addition, the NPU cooperates closely with Europol and its counterparts in the EU Member States. Four international anti-trafficking operations were conducted in the EU Member States.

On **the trafficking of small arms and light weapons**, following the start of the full-scale invasion of Ukraine, the number of registered criminal cases involving firearms increased almost six-fold compared to 2021 (394 and 2 206 crimes, respectively). During this period, 517 offenders were notified of suspicion, 483 criminal proceedings were sent to the court with a charge. In addition, during 2022, law enforcement agencies (mainly the National Police) seized 1 939 firearms, 25 grenades and grenade launchers, 11 000 hand grenades and 202 924 rounds of ammunition. The number of firearms destroyed is not included in official reports. In Ukraine, each manufactured, imported or deactivated firearm of a certain category is marked according to the special rules approved by the Ministry of Internal Affairs. In June 2023, the ministry launched a unified register of firearms for civilians, streamlining the control, permission management and other processes. When fully implemented, this register is expected to become the central database of firearms for the authorities, allowing the control all civilian firearms during their full life-cycle from manufacture to the destruction or export. Ukraine should continue its active engagement with the international law enforcement community, including Europol and EU Member States police forces, to address these risks.

Ukraine appointed the second liaison officer to Europol on **cybercrime**. In 2022, 14 948 criminal offences were detected, and suspicion announced in 7 296 criminal proceedings. 7 502 people were sent to court with indictments. Indictments were brought against 1 293 people. Cyber police took part in six international operations to neutralise and document members of hacker groups. The fight against cybercrime should remain a priority in the present war context and in view of the fact that it forms part of Russian hybrid warfare.

Money laundering is criminalised. Prosecuting money laundering as a stand-alone crime is possible under Ukrainian law. However, the capacities of law enforcement to investigate cases and recover criminal assets are limited. In 2022, across all law enforcement agencies, 523 criminal proceedings on money laundering were registered. 117 indictments were sent to court and 19 verdicts were issued. 16 people were convicted for money laundering offences.

As for **witness protection**, the system is underdeveloped and fragmented among several institutions. The level of training and technical equipment is low. The NPU, which is the most advanced institution in this area, is not ready to ensure a witness protection programme or witness relocation due to the lack of relevant legislation and resources. On the implementation side, the NPU's Witness Protection Unit was dismantled in late 2019, with all trained members leaving. In March 2022, the NPU made the decision to re-establish it. In August 2022, seven operators started to reorganise the unit. The lack of a strong witness protection system undermines the fight against organised crime. Ukraine should speed up the adoption and implementation of the new witness protection law that complies with international standards and best practices.

Cooperation in the field of drugs

Institutional set-up and legal alignment

The legal framework for the fight against drugs in Ukraine is partly aligned with the EU *acquis*. The national drug policy strategy for the period up to 2030 and its action plan for 2023-2025 is being prepared, but has not yet been adopted. The draft action plan envisages establishing a national early warning system on new psychoactive substances. Ukraine is a party to the relevant international narcotic drug control conventions, including the United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances.

The Institute of Psychiatry, Forensic Psychiatric Examination and Drug Monitoring of the Ministry of Health is responsible for drug monitoring at national level. It produces a report each year on the drugs and alcohol situation in Ukraine and publishes it online in both Ukrainian and English. The Centre for Public Health of the Ministry of Health is responsible for harm reduction measures, social reintegration of former drug addicts and research. The State Service for Medicines and Drug Control is the central executive body that implements national policy on control over the circulation of narcotic drugs and combating their illegal circulation. There is a certain amount of inter-agency cooperation, coordinated by the Ministry of Health. There is currently no national early warning system to exchange information on new psychoactive substances.

The main body to prevent, detect and investigate drug trafficking is the NPU. The Security Service of Ukraine is also authorised to investigate drug-related crimes. The State Border Guards Service and the State Customs Service as well as other agencies provide detection and related support to investigations.

Implementation and enforcement capacity

Despite the war, the illicit production of synthetic drugs continues in Ukraine. As to its track record, in 2022 there were 34 398 registered crimes linked to illicit drug trafficking, 22 678 notices of suspicion were sent, and 19 701 indictments were issued. In 2022, 2.4 tonnes of narcotic drugs and psychotropic substances, as well as 3 187 kg and 26 828 litres of precursors for the production of narcotic drugs and psychotropic substances, were seized. Illegal drug trafficking via the internet (dark net) with the use of cryptocurrency makes it harder to identify drug dealers and beneficiaries.

A new working arrangement was signed between the European Monitoring Centre for Drugs and Drug Addiction and the Ministry of Health in 2022. It updates and replaces the previous memorandum of understanding signed in 2010. Drug monitoring efforts and the collection of data requested by the centre are difficult in the current security circumstances and are affected by the war. This makes it impossible to analyse and report on some data.

Despite the impact of the war on health infrastructure, the Ministry of Health and its institutions are partnering with a range of non-governmental organisations to ensure uninterrupted access to drug-related health services.

Fight against terrorism

Institutional set-up and legal alignment

The Anti-Terrorism Centre of the Security Service of Ukraine is the inter-agency body tasked with coordinating national efforts to fight terrorism. Its regional branches coordinate counter-terrorism activities at local level. The centre monitors terrorist threat levels, gathers intelligence, conducts drills at critical infrastructure facilities and carries out information analysis on terrorism for the national security authorities.

Ukraine has comprehensive anti-terrorism legislation and is a party to the relevant UN and Council of Europe counter-terrorism conventions and protocols. The national security strategy and the strategy of ensuring state security are in place, as well as the concept of combating terrorism in Ukraine and its action plan. In 2022, Ukraine ratified the Additional Protocol to the Council of Europe Convention on the Prevention of Terrorism and subsequently introduced amendments to the Criminal and Criminal Procedure Codes, together with other legislative acts to improve the fight against terrorism. The legal framework on the fight against terrorism has not yet been assessed for compliance with the EU *acquis* and the principles of prevent, protect, pursue and respond. The 2021 Law on critical infrastructure is a part of the national security legislation.

As to identifying and tracing financial flows that fund terrorism, the updated anti-money laundering law was adopted in 2020. In 2022, the Ministry of Finance adopted relevant secondary legislation on risk criteria that facilitates identification and prevention of terrorism financing. The financial monitoring and intelligence system complies with recommendations from the Financial Action Task Force. In 2022, Ukraine also adopted a law protecting the financial system from Russian influence and adapting legislation to specific Financial Action Task Force standards and provisions of the EU Directive on the prevention of the use of the financial system for the purposes of money laundering or terrorist financing.

Implementation and enforcement capacity

Since the beginning of Russian aggression against Ukraine in 2014 and especially after the full-scale invasion in February 2022, counterterrorism activities have shifted to countering sabotage activities by Russian intelligence and its proxies. In 2022, 287 criminal offences related to terrorism were registered, among which 95 criminal proceedings were initiated for acts of terrorism, 1 for involvement in an act of terrorism, 2 for public incitement to commit an act of terrorism, 148 for the creation of a terrorist group or terrorist organisation, 1 for facilitation to commit an act of terrorism and 40 for financing terrorism.

As regards **operational cooperation with European agencies** on fighting terrorism, cooperation takes place mainly on war crimes, where Europol supports investigations through the analysis project on core international crimes. The Security Service of Ukraine has access and capacities for information exchange on counterterrorism issues with Europol through the secure information exchange network application (SIENA). Future steps in counterterrorism should include strengthening cooperation between the Security Service and Europol by establishing a direct communication through CT SIENA and capacity building for Ukrainian counter-terrorism authorities on modern law enforcement and intelligence collection methods. Ukraine has also appointed a Eurojust contact point for terrorism-related matters to enhance judicial cooperation against terrorism.

On **external influences**, the terrorism threat in Ukraine is mostly perceived as originating from Russian intelligence agencies and Russian-controlled terrorist groups, including private military companies. Russia uses terrorism-type activities aimed at intimidating the Ukrainian population as part of its aggression against Ukraine. The full-scale involvement of organised crime groups is a specific characteristic of hybrid warfare waged by Russia against Ukraine. This includes the use of organised crime groups and criminals in occupied territories as mercenaries in warfare, organised crime groups and criminals controlled by Russian intelligence all over Ukraine, and the weaponisation of corruption at local and central levels.

On **terrorism prevention measures**, the Security Service of Ukraine constantly monitors the situation and is ready to respond to radicalisation. The threat of religious-based radicalisation is low because religious communities, including Islamic ones, are considered part of Ukrainian society, which is also helped by a sense of community in resisting Russian aggression.

Judicial cooperation in civil and criminal matters

The current legal framework on judicial cooperation in civil and criminal matters is comprehensive, appropriate and in line with EU standards. Ukraine has 87 bilateral treaties and agreements on cooperation in civil and criminal matters with 50 countries, Eurojust and the UN.

Ukraine has been a member of the Hague Conference on Private International Law since 2003 and is a contracting party to 12 conventions, including those on child abduction, child protection and child support. Ukraine ratified the 2019 Hague Judgments Convention in August 2022, which came into force on 1 September 2023. Ukraine has also ratified on 24 April 2023 the 2005 Hague Convention on Choice of Court Agreements that entered into force on 1 August 2023.

National legislation and bilateral and international agreements to which Ukraine is a party contain rules on mutual legal assistance, extradition, conflicts of law, mutual recognition and the enforcement of decisions and judgments, document service and evidence exchange, the transfer of people sentenced to imprisonment, and the fight against terrorism and other forms of organised crime, including cybercrime. The specific provisions are partly aligned with the EU *acquis*.

International prosecutorial cooperation in criminal matters is successfully managed by the Office of the Prosecutor General. Ukraine has a liaison prosecutor in Eurojust and actively participates in multiple joint investigation teams facilitated by Eurojust.

In 2022, the Ministry of Justice received and processed 2 560 requests for legal assistance in civil and commercial matters as well as for the recognition and enforcement of judgments. It processes requests within 30 days, and the average processing time by Ukrainian courts is between 3 and 6 months.

As for judicial cooperation in criminal matters, the Ministry of Justice processed 974 requests for international cooperation in 2022: 923 for international legal assistance, with the average processing length from 6 to 8 months, and 51 for extradition, with the average processing time from 5 to 6 months.

There is well-established cooperation in criminal matters with Eurojust as a result of the cooperation agreement signed in 2016 and collaboration between the Ukrainian Liaison Prosecutor and Eurojust, as well as between Ukraine and EU Member States. In 2022, Ukraine was involved in 79 new cases opened at Eurojust. Eurojust set up a joint investigation team on war crimes committed in Ukraine and hosts the International Centre for the Prosecution of the Crime of Aggression against Ukraine.

The Ukrainian Office of the Prosecutor General signed a working arrangement with the European Public Prosecutor's Office (EPPO) in March 2022 aimed at facilitating judicial cooperation in criminal matters and the exchange of information. A working arrangement between the EPPO and the National Anti-Corruption Bureau of Ukraine (NABU) followed in July 2023. Both instruments rely on the European Convention on mutual legal assistance and its Protocols for providing mutual legal assistance.

The participation of Ukrainian representatives in joint investigation teams is limited due to legal constraints that need to be urgently addressed. The reimbursement of joint investigation teams' operating costs is impossible due to certain provisions of Ukrainian secondary legislation.

Legal and irregular migration

Institutional set-up and legal alignment

Migration policy in Ukraine is developed and coordinated by the Ministry of Internal Affairs. The State Migration Service of Ukraine is responsible for implementing state migration policy as well as helping to develop it. The service shares responsibility for implementing the state migration policy on border security and visa policy with the State Border Guard Service (SBGS) and the Ministry of Foreign Affairs. The Ministry of Social Policy is responsible for developing labour migration policy and the Ministry of Economy is responsible for implementing it. The Ministry of Education and Science determines the priority sectors for the provision of educational services to foreigners and stateless persons. The government continues to improve migration coordination, however, there is ample room for improvement.

The State Migration Service territorial departments, which are situated in direct proximity to border areas or to areas with active hostilities, have been relocated, but continue to operate. The service plans to reduce the number of territorial units and introduce the concept of mobile ones. Citizens, foreigners and stateless persons can access administrative services in any of its territorial departments.

The State Migration Policy Strategy for the period until 2025 is being updated. The Integrated Border Management Strategy has been updated in July 2023 to reflect the context of Russia's war and Ukraine's EU candidate status. The action plans for both strategies have expired and the new ones have not yet been approved. The legislative framework is in place for a mass influx of migrants. However, there is no approved implementation mechanism for inter-agency coordination in the event of a migration crisis.

There is no specific legislation on long-term residence, nor a single procedure or single work or residency permits. Legislation on voluntary and forced return is in place, including the respect of the principle of *non-refoulement*. The procedure for voluntary return is rarely applied due to a lack of funding. There are no rules on passenger information or visa verification obligations of carriers that transport foreign nationals to Ukraine. Access to the labour market for foreign students, asylum seekers and stateless persons was regulated in the reporting period.

The State Migration Service is responsible for the standard readmission procedure, while the SBGS is in charge of the accelerated readmission procedure. An electronic readmission case management system for the State Migration Service and the SBGS is in place and fully operational for readmission cases with Poland.

The EU-Ukraine **readmission agreement** remains in force since 2007, though since the beginning of the war it has been used with precaution by the EU Member States. Implementing protocols between Ukraine and eight EU Member States (Austria, Czechia, Estonia, Poland

Lithuania and Benelux States) have entered into force. Ukraine approved implementing protocols with Romania, Latvia, Spain and Hungary.

Readmission dialogue is at various stages with 12 EU Member States: Bulgaria, Croatia, Cyprus, France, Germany, Greece, Italy, Malta, Portugal, Slovakia, Slovenia and Sweden. In 2022, the State Migration Service received 276 readmission requests, including 260 under the agreement between Ukraine and the EU, with 206 approved. It sent 13 readmission requests during the year; two people were readmitted from Ukraine.

Ukraine also has readmission agreements in force with other third countries, such as Switzerland, Denmark, Belarus, Georgia, Iceland, Republic of Moldova, Norway, the Russian Federation, Vietnam, Türkiye, Turkmenistan and Uzbekistan. However, the agreements with the Russian Federation, Belarus and Vietnam are not applied in practice.

Implementation and enforcement capacity

In 2022, the SBGS detained 12 068 people for violation of immigration rules in Ukraine, including 622 foreigners detained for illegal crossing or attempted illegal crossing of the state border. The majority of irregular migrants were detained at the border with EU countries. They included citizens of Moldova, Russia, Türkiye, Pakistan, Nepal, Cuba and others.

In 2022, the SBGS issued 271 expulsion decisions against foreigners and stateless persons who had illegally crossed or attempted to illegally cross the state border, with 192 forcible returns and 79 forcible expulsions. The State Migration Service reports that the number of irregular migrants decreased in 2022 (5 062) compared to 2021 (8 308).

The State Migration Service operates six special establishments that include three migrant accommodation centres with overall capacity for 566 people and three temporary accommodation centres for up to 421 foreigners and stateless persons. The staffing capacities are sufficient, and all centres are adequately equipped. The Chernihiv migrant accommodation centre was destroyed in the early phase of the war, with the migrants evacuated. The centre is currently being rebuilt and is not yet operational. The migrant accommodation centres in Volyn and Mykolaiv are operational.

An integrated migration management information system is in place with automated business process workflows and inter-agency cooperation, in particular between the State Migration Service, the SBGS and the Ministry of Foreign Affairs. However, complementary legislation on the processing of biometric data is needed to fully use the system for biometric data exchange.

The Department of Migration Police, which is part of the National Police of Ukraine, cooperates with Europol's European Migrant Smuggling Centre to identify and uncover criminal schemes that involve irregular migration and human trafficking. In 2022, it participated in several large-scale operations run by Europol to combat human trafficking, including child trafficking, human trafficking for labour and sexual exploitation.

Asylum

Institutional set-up and legal alignment

The State Migration Service and its territorial bodies are responsible for handling applications for international protection and asylum claims.

The legislation on asylum is broadly in line with the EU *acquis*, in particular on the time it takes to process applications and on asylum applicants' rights, such as the right to access employment, secondary education, family reunification and subsidiary protection.

Psychological and social aid are also covered in the legislation. However, limited support is available in practice due to the lack of capacity. Free legal assistance is available. The action plan for refugee integration has been in preparation since 2021, but work has stalled because of the war. Procedural guarantees are available for the applications of unaccompanied minors. Ukraine is a party to the relevant international conventions, including the 1951 Geneva Refugee Convention and its 1967 Protocol.

In March 2023, amendments were introduced to the Law on refugees and persons in need of additional and temporary protection. In accordance with these amendments, the restriction is imposed on the SBGS to accept applications submitted during the legal regime of martial law for recognition as refugees or persons in need of additional protection in cases where the applicant crosses the Ukrainian border directly from a country where there is no danger to life.

Implementation and enforcement capacity

In 2022, 205 applications for recognition as a refugee or a person in need of additional protection were submitted. 20 foreigners and stateless persons were recognised as refugees, and 26 as persons in need of additional protection. Interpretation is provided by the State Migration Service territorial departments during the consideration procedures of asylum applications. The national system for biometric verification and identification is operational and used during border controls.

There are three temporary accommodation centres for applicants and people granted international protection with a total reception capacity of 421 people. Staff levels seem to be sufficient for the number of applications that Ukraine has had. Material conditions are sufficient, however there is room for improvement with regards to integration and psycho-social support. The financial capacity to integrate recognised refugees is limited, as is the capacity of the relevant local authorities.

Ukraine does not have a roadmap for bilateral cooperation with the European Union Agency for Asylum.

Visa policy

Ukraine's visa policy is broadly in line with the EU *acquis* on the processing of applications, the criteria for granting protection and the processes for issuing different visa types. However, the list of third countries with which Ukraine has visa-free regimes is not fully aligned with the EU's visa policy. The following countries for which EU nationals require a visa are visa-exempt for Ukraine: Armenia, Azerbaijan, Bahrain, Belarus, Ecuador, Kazakhstan, Kuwait, Kyrgyzstan, Mongolia, Oman, Qatar, Saudi Arabia, Tajikistan, Türkiye and Uzbekistan.

The security features of visas and travel documents are broadly aligned with EU standards. Ukraine has been issuing biometric passports since 2015. The last non-biometric passports were issued in 2016, and the complete phasing out is planned for 2026 upon expiry. Ukraine has an electronic national visa registration database that includes biometric identifiers.

Ukraine does not have agreements on consular and visa-issuing cooperation, joint locations or representation agreements on the issuing of visas with other countries. Since 24 February 2022, it has suspended issuing visas at the border.

Implementation of the **visa-free regime** with the EU, established in 2017, has been smooth. The European Commission's sixth report on the Visa Suspension Mechanism⁵, published in October 2023, concluded that Ukraine continues to meet the visa liberalisation benchmarks.

⁵ COM(2023)730 final

Thanks to tighter border controls and awareness-raising campaigns, unfounded asylum applications from Ukrainian citizens in the EU and Schengen associated countries have decreased. In 2020, the number of Ukrainian applicants for international protection in EU Member States was 5 990, 37% less than in 2019. The recognition rate increased slightly from 10% in 2019 to 11% in 2020. In 2022, 26 715 Ukrainians applied for international protection in Member States (compared to 6 460 in 2021) with a recognition rate of 90% (compared to 17% in 2021).

In 2022, Russia's war of aggression led to an influx of millions of people seeking refuge in the EU and in neighbouring countries. Following a Commission proposal to activate the Temporary Protection Directive for the first time, on 4 March 2022 the Council adopted the implementing decision to grant temporary protection status to Ukrainian nationals and other categories of people displaced from Ukraine on or after 24 February 2022. Furthermore, the Commission adopted operational guidelines for external border management to facilitate border crossings at EU-Ukraine borders. There were over 21.5 million entries into the EU by Ukrainian nationals between 24 February 2022 and 20 August from Ukraine and Moldova⁶. Over 4.1 million active registrations for Temporary Protection are recorded by Member States, Norway, Iceland, and Switzerland as of mid-August 2023, of which 4.03 million in the EU Member States. Under these exceptional circumstances, the visa-free regime between the EU and Ukraine has facilitated travel to and from Ukraine, in particular for those Ukrainian nationals who decided not to take up residence in the EU and those who do not fall under the scope of the Temporary Protection Directive.

Schengen and external borders

Institutional set-up and legal alignment

The SBGS is responsible for managing Ukraine's borders. An integrated border management strategy for the period up to 2025 is in place and has been updated in light of new challenges related among others to restoring border management in the liberated area of the state border. The action plan for the implementation of the strategy for 2020-2022 has expired. The new action plan for 2023-2025 has not yet been approved. Implementation of the action plan will need better monitoring, as well as quantitative and concrete indicators to measure the progress of its implementation. There is no Schengen action plan in place yet.

The **legislative framework for border control**, in particular rules on checks and surveillance and the strategic integrated border management framework are partly aligned with EU policy and best practices. Ukraine has no legislation to request advanced passenger information (API) from airlines for flights entering or departing its territory. The API system was piloted at Kyiv Boryspil international airport.

Implementation and enforcement capacity

The Inter-Agency Working Group for Integrated Border Management, chaired by the Deputy Prime Minister for European Integration, was established in 2019 with a core task of monitoring implementation of the integrated border management strategy. In August 2023 it has convened for the first time since the beginning of the war to discuss IBM Strategy and its action plan.

The SBGS has a total staff of 60 000, including 52 000 military personnel. Due to the war, more than half of its staff has rotated from regular border-related activities to deployments –

⁶ The number of exits by Ukrainian nationals (including exits to Moldova) was nearly 18.7 million. Figures indicate the number of cross-border movements and not single individuals.

either on the frontline or at the border with Belarus. The capacities of integrated border management agencies at border crossing points are insufficient due to the lack of appropriate infrastructure and technical equipment. Technical resources require a significant upgrade to improve the quality of border checks, especially in relation to anti-smuggling. Border checks meet minimum standards. However, additional equipment is needed to detect weapons and people hiding in large vehicles and containers. The implementation of Ukraine's local border traffic agreements with neighbouring countries is satisfactory. Border surveillance is not fully effective. Risk analysis-based border surveillance mechanisms are satisfactory. In addition, as a result of the Russian war of aggression, 117 out of 234 border crossing points have been closed. Considerable infrastructure at border crossing points on the northern, eastern and southern sections of the border have been destroyed.

SBGS risk analysis aims to gradually comply with the common integrated risk analysis model. The level of situational awareness and responsiveness at Ukraine's borders could be improved by strengthening operational inter-agency cooperation and information exchange. The SBGS training curriculum is partly harmonised with the common core curricula of Frontex, the European Border and Coast Guard Agency.

There is no national **inter-agency cooperation** centre in Ukraine. Instead, relevant border management agencies operate coordination centres in their respective organisational structures to ensure intra-agency and partial inter-agency coordination and cooperation. In 2022, a virtual analytical centre was established to improve inter-agency coordination. There is no structured crisis response mechanism.

The SBGS has had a working arrangement with Frontex, the European Border and Coast Guard Agency, since 2007. Cooperation includes information exchange, joint risk analysis, participation in joint operations (as an observer or in operations without executive powers exercised by European border guards on the territory of Ukraine) and staff training. A Frontex liaison officer with a regional mandate for the Eastern Partnership has been deployed and is currently based in Moldova. The EU Border Assistance Mission to Moldova and Ukraine has been supporting both countries since 2005 and has helped them improve integrated border management.

Ukraine systematically provides data on invalid, lost and stolen travel documents to Interpol. However, only large border crossing points in Ukraine have access to Interpol's stolen and lost travel documents database and stolen vehicles database.

On border control, Ukraine uses the national system of biometric verification and citizen identification that allows for an automatic check of all types of biometric documents. All 166 international and interstate border-crossing points are connected to Interpol databases.

On operational **cooperation with neighbouring countries**, Ukraine has a number of agreements (with Poland, Slovakia, Hungary, Romania), including agreements on joint patrols, joint cooperation centres and local border traffic management. Ukraine is currently negotiating bilateral agreements on joint controls, in particular with Poland.

Some measures in place to fight border corruption consist of preventive and internal control measures implemented by the SBGS and the State Customs Service. However, more effective measures are needed to fight corruption, including preventive measures. In the reporting period, the SBGS reported 1 449 inspections, 19 servicemen were detained for abuse of office and the facilitation of illegal activities at the border. 15 border guards were found guilty of corruption offences. The stiffest sentence was a restriction from service for 3 years and a prison sentence of 6 months.

The smuggling of goods, including cigarettes, is currently decriminalised in Ukraine, constituting an administrative offence. The draft Law on the criminalisation of large-scale smuggling is pending adoption. It also includes criminal responsibility for unintended mistakes in customs declarations. Criminalisation increases the risk of abuse by law enforcement agencies if adopted. Criminalising the smuggling of all goods is a crucial element in combating cross-border crime.

2.3. ECONOMIC CRITERIA

<i>Table 2.1:</i> Ukraine - Key economic figures	2014-19 average	2020	2021	2022
GDP per capita (% of EU-27 in PPS) ¹⁾	29	30	29	
Real GDP growth	-0.8	-4.0	3.4	-29.1
Economic activity rate of the population aged 15-70 (%) , total	62.5	62.1	61.8	N.A.
<i>female</i>	56.4	56.3	56.1	
<i>male</i>	69.2	68.5	68.1	
Unemployment rate of the population aged 15-64 (%) , total	9.0	9.5	9.9	N.A.
<i>female</i>	7.7	9.1	10.2	
<i>male</i>	10.2	9.9	9.6	
Employment of the population aged 15-64 (annual growth %)	-3.3	-4.0	-1.9	N.A.

Consumer price index (annual growth %)	18.0	2.7	9.4	20.2
Exchange rate against EUR	26.6	30.8	32.3	40.2
Current account balance (% of GDP)	-1.8	3.4	-1.9	5.0
Net foreign direct investment, FDI (% of GDP)	2.6	0.2	3.8	0.3
General government balance (% of GDP)	-2.3	-5.3	-3.4	-16.3
General government debt (% of GDP)	68.7	60.9	48.9	78.5

In line with the conclusions of the European Council in Copenhagen in June 1993, EU accession requires the existence of a functioning market economy and the capacity to cope with competitive pressure and market forces within the Union.

2.3.1. The existence of a functioning market economy

Due to the impacts of Russia's ongoing full-scale invasion as well as the pre-existing structural economic challenges, the Ukrainian economy is **between an early stage and some level of preparation** towards establishing a functioning market economy. Since the full-scale invasion by Russia, the conduct of monetary policy, overall economic governance and the institutional and regulatory environment have faced exceptional difficulties. Despite the extraordinary challenges, the Ukrainian authorities have responded swiftly and appropriately, while showing remarkable resilience and adaptability to preserve macroeconomic and financial stability, although the authorities will need to continue their efforts to return economic and monetary policy settings to those conducive to the smooth long-term functioning of a market economy.

Ukraine's macroeconomic performance was somewhat muted before the full-scale invasion. Low levels of investment, a declining working age population, reliance on low value-added sectors all contributed to subdued economic growth (of around 3% per year in the four years before the pandemic) and a persistent gap with the standards of living in the EU. In 2022, as a result of the war, the economy contracted by 29.1%.

Despite the war, the Ukrainian authorities ensured predictability, transparency and stability-orientation in policy-making. In light of the wartime conditions, the National Bank of Ukraine (NBU) took decisive and appropriate actions to maintain financial stability and bolster confidence in the domestic currency, particularly by suspending the inflation-targeting framework, fixing and devaluing the exchange rate, and raising its main refinancing rate. In addition, the banking sector remained fully operational and stable with ample liquidity, also thanks to previous reforms and supervisory forbearance measures. Although the full impact of the war on the quality of assets in the financial sector remains to be seen, the ratio of non-performing loans has been high and appears to have increased more recently.

The state of public finances has deteriorated substantially due to the duration and cost of the war and its impact on economic activity, undoing the considerable fiscal consolidation and corresponding reduction in the debt stock that had been achieved in previous years before the COVID-19 pandemic. Tackling this, notably by introducing measures to increase the revenue base, will be of key importance going forward. Furthermore, the state footprint on the economy, already high before the war, has increased. The significant internal and external population displacements, together with capital destruction, affected the labour market, which was characterised by a relatively low activity rate and somewhat higher unemployment rate compared to the EU, already before the invasion. Despite progress, the functioning of product markets continues to show a number of weaknesses, particularly related to institutions, corruption, contract enforcement, and competitiveness, which are reflected in a large informal economy. At the same time, this assessment also highlights the determination and capability of the authorities to navigate through the exceptional challenges Ukraine is facing.

In order to improve the functioning of the market economy, and taking into account the ongoing war and ensuing reconstruction efforts, Ukraine should in particular:

- continue to implement prudent policies underpinning macroeconomic stability. Ensure adequate resources to maintain core state functions, while ensuring the sustainability and improving the transparency of public finances. Safeguard the stability of the financial sector, including by addressing the growing presence of non-performing loans;
- take measures to improve the business environment with a view to prepare for reconstruction efforts, in particular by reducing regulatory and administrative burden, addressing issues related to corruption and the rule of law and enhancing the anti-monopoly framework. Take steps to enhance the management of State-Owned Enterprises in line with OECD recommendations, while intensifying privatisations;
- develop and implement a strategy to attract and reintegrate displaced persons in the Ukrainian labour market and those whose participation has been disrupted by the war as well as to address structural labour market issues and, take steps to tackle informal employment, and increase labour market participation.

Economic governance

The government has shown a strong commitment to implement much-needed reforms to encourage growth and financial stability. The authorities of Ukraine have demonstrated a strong commitment to pursue stability-oriented macroeconomic policies since the Maidan

Revolution of Dignity in 2014. As part of the reform requirements outlined in successive IMF programmes, important actions were taken to reinforce the stability of the banking sector, including measures to enhance banking supervision and resolution mechanisms, as well as reforms to improve the independence of the National Bank of Ukraine. Ukraine has also taken steps to bolster the transparency of public finances and institutions, in particular by publishing budgetary information, improving the public procurement system and introducing asset reporting requirements for public officials. Additional reforms are needed to further guarantee the transparency of public finances, as well as prevent interference from vested interests, fight corruption, strengthen the rule of law, and improve the business environment.

The policy and regulatory response to the exceptional war situation was overall appropriate, although it has had an impact on the application of market principles and government involvement in the economy. Throughout Russia's full-scale invasion, the Ukrainian authorities demonstrated commendable resilience and adaptability in implementing policies to maintain macroeconomic and financial stability. Nevertheless, the current context has inevitably led to some centralisation of power and a reduction in the independence of institutions responsible for economic policy. The central bank appropriately suspended the inflation-targeting framework, moved to a fixed exchange rate regime and introduced supervisory and regulatory forbearance measures (all of which helped safeguard financial stability and bolstered confidence in the domestic currency)⁷. In addition, the NBU directly financed about one third of the government's funding needs in 2022, although this practice ceased in early 2023, reducing risks for price and external stability. The government also introduced price controls on essential goods and communal services, and many taxes were temporarily reduced. Support schemes to households and businesses have been expanded and deregulation efforts have continued, which helped improve the business environment. Overall, the government has shown a remarkable degree of continuity, including through the design of a seven-pillar national recovery and development plan, presented in May 2022 and followed-up by a government priority action plan for the current year approved in March 2023. The continuous and evolving engagement with the IMF, as well as with the Commission under the Macro-Financial Assistance Plus instrument (MFA+), have also been an important anchor for further reform efforts.

Macroeconomic stability

Before Russia's full-scale invasion, Ukraine's macroeconomic performance was rather weak, owing to low levels of foreign and domestic investment, a declining population, and a reliance on low value-added sectors. In 2021, total investment in Ukraine accounted for 13.8% of GDP (EU average of 22.1%). Foreign direct investment (FDI) has remained weak at an average of 2.8% of GDP over 2017-2021. A decline in population, fuelled by low birth rates and substantial emigration, has not only reduced Ukraine's total population but also decreased the share of the working-age population from 70% in 2011 to 67% in 2021. This has hindered economic growth and added to fiscal pressures by increasing the dependency ratio. In addition, Ukraine's economy is reliant on low value-added sectors – especially agriculture and mining – which makes the economy vulnerable to fluctuations in global commodity prices and weighs on its living standards. As a result, Ukraine has made limited gains in income convergence with the EU average over the past decade, with GDP per capita standing at 29.3% of the EU average

⁷ However, conscious of the long-term impacts of a fixed exchange regime on the economy and on the effectiveness of monetary policy, the NBU adopted in June 2023 a strategy to ease FX controls and move towards a more flexible exchange rate once conditions allow. On 3 October 2023, the NBU shifted to a managed float system for the hryvnia, marking the first step in liberalising the exchange rate.

in 2021 in terms of purchasing-power parity (PPP). Income inequality remains low compared to the EU and has been stable over the past decade, with the GINI coefficient reaching 25.6 % in 2020, compared to an average of below 30% in the EU.

Ukraine's economy has been profoundly impacted by Russia's war of aggression. After a milder-than-expected COVID-19 recession and an incomplete rebound in 2021, real GDP growth collapsed in 2022 (-29.1%, somewhat more resilient than initially expected). Population displacement, supply-chain disruptions, inflationary pressures, and territorial losses due to the war took a toll on economic activity in 2022, especially on consumption and investment, which fell by 27% and 34%, respectively. Net exports also declined considerably as supply bottlenecks

weighed on exports and the spending of Ukrainian refugees abroad boosted import growth. Despite growing by 18% in real terms due to war-related spending, the contribution of public consumption to GDP growth remained small. In 2023, the economy has started to recover somewhat despite continued Russian attacks. This is thanks to the resilience of critical energy infrastructure, some positive signs of a partial return of refugees, and the ability of businesses and households to adapt to the war economy.

The current account turned into a surplus following Russia's invasion. In the 5 years prior to the pandemic, Ukraine's registered current account deficits of 2-3% of GDP mainly due to a sizeable negative trade balance. This was offset in part by traditionally strong remittances inflows to Ukraine. The pandemic caused the current account to swing into a small surplus due to a compression of import volumes following the sharp contraction in economic activity over the course of 2020. Russia's war of aggression against Ukraine led to an unprecedented trade deficit of 16.2% of GDP in 2022, which was mainly driven by a strong contraction in the exports of goods (-35.2%) due to production disruptions as well as transport and supply-chain difficulties. Still, the current account posted a record surplus of 5% of GDP, thanks to a strong surplus of both the primary and the secondary income balance, driven by exceptionally high foreign official grants and remittances inflows, which stood at 5.4% and 15.7% of GDP, respectively.

Foreign investment has fallen markedly following the outbreak of the war. After a notable recovery in 2021, foreign investment inflows have collapsed since the outbreak of the war (-92% in 2022). Portfolio investment in Ukraine registered an outflow of 1.3% of GDP in 2022, while other investments in the country reached 8.5% of GDP, driven primarily by the additional government borrowing. The financial account registered an aggregate outflow of USD 11.1 billion (6.9% of GDP) in 2022. The gap to the current and capital account inflow of

USD 8.2 billion was financed through the draw-down of the official international reserves by USD 2.9 billion.

The National Bank of Ukraine (NBU) has ensured financial stability and strengthened confidence in the domestic currency. Prior to the war, Ukraine implemented welcome reforms to enhance the autonomy and governance principles of the NBU, which successfully helped reduce inflation from 12.6% in January 2017 to 3.2% in January 2020. Following the Russian full-scale invasion, the NBU introduced swift actions to ensure financial stability and strengthen the confidence in the domestic currency. These included suspending the inflation-targeting framework, fixing and devaluing the exchange rate, and raising its main refinancing rate. While official reserves suffered a depletion in the first months of the war, international financial support helped restore them to their highest historical level in July 2023. The positive trends in terms of improved expectations and confidence in the national currency allowed the NBU to refrain from a further increase in its policy rate beyond 25% (which was on the contrary cut by 300 basis points in July 2023 and 200 basis points to 20% in September 2023) or from further devaluing the hryvnia (beyond the 25% in July 2022). The NBU took additional confidence-enhancing measures in late 2022 and early 2023, as a result of which the spread between the market and official exchange rates narrowed down to a rather marginal 4%. The central bank is fully committed to return to an inflation-targeting framework in a flexible exchange rate regime as soon as circumstances permit it, as highlighted in the recently adopted FX strategy, as well as in the decision of the NBU on 3 October 2023 to move to a managed exchange rate regime.

Inflation declined strongly in 2023 after reaching a 6 year high in 2022. After some moderation in 2020, inflation increased steadily throughout 2021, mainly due to increasing global commodity prices – particularly for energy and food – as well as supply bottlenecks both in Ukraine and abroad. The war exacerbated inflationary pressures, causing further disruptions in supply chains, a decrease in the supply of some goods, and higher production costs. Coupled with considerable monetary financing by the central bank during the war, these factors led to a strong and steady rise in inflation over 2022, reaching 26.6% in December 2022. Inflation has nevertheless eased visibly since, reaching 8.6% in August 2023, due to increased supply of food and fuels, a rapid partial recovery of the energy system from Russia's attacks, which reduced energy prices, as well as skilful policymaking by the NBU. Indeed, conscious of the adverse effects of monetary financing, including on macro-financial stability, the NBU has discontinued this practice since the beginning of 2023 and the government has relied on taxation, foreign assistance, and financing mobilised from the domestic market. This helped

reduce inflation expectations and ease pressures on core inflation.

Public finances deteriorated markedly, reversing the gains from fiscal consolidation prior to the war. The state of public finances has deteriorated markedly due to the duration and cost of the war, making Ukraine lose access to international debt markets and rely on foreign assistance and domestic markets to finance its funding needs. Thanks largely to massive official foreign grants, the 2022 general government deficit was contained to 16.3% of GDP. Driven by spending on defence and public order, overall public expenditure increased by 65% in 2022. While tax revenues contracted by almost 8% in 2022, total public revenues increased by 32%, primarily thanks to the massive foreign grants. The war has led to a reverse in gains from the

considerable fiscal consolidation that had been achieved since 2017, during which public debt had decreased from around 81% of GDP in 2016 to 49% of GDP in 2021. Driven by the sizeable borrowing but also reflecting the decline in nominal GDP, total public debt reached 78.5% of GDP at end-2022. The substantial deterioration in public finances highlights the need to execute the budget within the available resource envelop in the short-term, complemented by important efforts to increase the revenue base over the medium term. In addition,

in the area of public financial management, building on significant improvements in the years before the war, further priority reform areas include ensuring the availability of fiscal data, restoring the medium-term budgetary framework, improving public investment management, and reinforcing the mandate and functionality of the supreme audit institution. Improving the monitoring and management of fiscal risks, including those related to state-owned enterprises, public guarantees and age-related expenditure, is also an important reform priority.

Functioning of the product markets

Business environment

Weaknesses in the business environment led to low levels of investment. Ukraine's competitiveness is weak, primarily owing to weak institutions, the prevalence of market dominance and an ineffective anti-monopoly policy. Nevertheless, some progress in deregulating its economy has been made, where the cancellation of almost one fifth of the regulatory acts under review in the period 2016-2020 was a significant step to streamline regulation. Despite a moderate regulatory burden and no significant legal barriers to market entry, corruption, ongoing geopolitical tensions and inefficient contract enforcement discourages private investment and cross-border business relations, including FDI.

To allow companies to operate during the war, the authorities have lifted certain regulatory requirements for the period of application of the martial law and continued to progress with a number of broader reforms. Against the backdrop of a highly uncertain outlook, business activity was supported by further steps towards deregulation and reducing administrative burden. As of August 2022, it is possible to set up a limited liability company in an automatic way on the basis of a model charter, without the need to go through a state registration authority. Similarly, digital tools have been deployed successfully to facilitate the functioning of the court system. The Rada also adopted a law that introduces a simplified

bankruptcy procedure that avoids summoning the parties, while simplifying the insolvency officers' work and providing for the creation of an automated information system.

The informal sector still constitutes a substantial share of Ukraine's economy, estimated at 30-40% of Ukraine's GDP. This significantly impacts tax revenues, exacerbates poor working conditions by hindering access to social protection, distorts competition and hampers the effectiveness of policy measures. Several factors contribute to the persistence of this phenomenon: despite deregulation, there is still a complex and inefficient regulatory framework; weak law enforcement; and a general lack of trust in governmental institutions. Furthermore, corruption creates a volatile business environment, providing a strong incentive for businesses to operate informally.

State influence on product markets

The war has exacerbated the state's footprint in the economy. The Ukrainian state already had a substantial economic footprint in peace times. In 2021, the public sector accounted for 18% of gross value added (down from 21% in 2020) and 32% of gross fixed capital formation (down from 35% in 2020). Ukraine's more than 3 256 state-owned enterprises (SOEs) at central level accounted for one-tenth of output and 18% of employment before the war, with an average return on equity at 0.3% in 2019 far below that of the private sector (8%). Furthermore, SOEs have held a dominant role in many markets, stifling competition and making it difficult for new firms to enter. In 2022, for which detailed national accounts are not available yet, the relative share of the sector of public administration and defence jumped up to 24% of GDP (from 7.2% in 2021), while the share of government consumption more than doubled to 38.2% of GDP. The importance of many public companies, e.g. the railways, the energy provider and the post office, strengthened as a result of their crucial role in the emergency response to the full-scale invasion.

Privatisation and restructuring

Privatisation and corporate governance of state-owned enterprises are a significant challenge for economic policy. Prior to the war, Ukraine had been quite successful in privatising small property and production assets, notably through the electronic auctions platform ProZorro. In July 2022, the Rada adopted a law to simplify the procedure for small privatisations, which have resumed since then. Investors showed interest in two ports, several distilleries and other small real estate pieces. On 30 May 2023, a law was adopted that inter alia unblocks large-scale privatisations, which have been suspended since the beginning of the war, and where progress had previously been limited. The law also amends the structure of the State Property Fund of Ukraine (SPFU). The law also makes significant changes vis-à-vis sanctioned property, which will be transferred to the SPFU for management and/or privatisation, sale or lease. As far as SOEs are concerned, while progress on the corporate governance reform was recorded before the war, it is not yet in line with OECD standards to ensure de-politicised, professional and transparent management.

Functioning of the financial market

Financial stability

Although the already high non-performing loans ratio has increased during the war, financial stability has been preserved thanks to swift policy action by the National Bank of Ukraine. Following the 2014-2016 banking crisis, the National Bank of Ukraine strengthened proper oversight of the banking sector, which was characterised by a high level of non-performing loans. Nevertheless, after two rounds of asset quality reviews, bank closures, and recapitalisations, non-performing loans started to decrease, declining from 58%

in 2017 to a still very high 30% in 2021. In response to the full-scale invasion, the National Bank of Ukraine took steps to safeguard banks' liquidity and the confidence in the system, which has remained strong as evidenced by the increase in deposits by 35% y-o-y by end-February 2023. The banking sector has remained stable and with ample liquidity, although Non-Performing Loans ratio increased to 38.1% by end-2022 in light of war-related impacts on economic activity and collateral. Despite building additional provisions for about USD 3.5 billion, banks remained profitable in 2022, owing to high liquidity ratios, which yield significant interest income in a high interest rate environment. With a market share of close to 50% over the last five years, the four state-owned banks dominate the banking sector.

Access to finance

Lending to the private sector remains low. Ukraine's financial sector is predominantly bank-based and the total stock of bank lending to the private sector stood at just 20% of GDP in 2022 (28% in 2021), much below the EU average. Banks showed strong resilience to the war situation. This was thanks to initiatives such as Power Banking (guarantee of service despite power outage) and national ATM roaming (no inter-bank withdrawal charges), although both risk appetite and loan demand have decreased against the backdrop of rising interest rates. Banks' aggregate portfolio contracted by 4% in 2022, with corporate loans almost flat while loans to households declined by 13%. To ease borrowers' situation, the government has simplified the conditions for benefitting from debt restructuring and extended access to the programme of 'Affordable Loans 5-7-9%'. Even during the war, surveys do not point out access to finance as an impediment to conducting business. Capital markets and non-bank financial intermediation are in a very early stage of development.

Functioning of the labour market

Ukraine's labour market suffers from labour and skills shortages, structurally high rates of young people not in education, employment or training (NEET), as well as informal employment. Despite witnessing a decline in labour supply, the unemployment rate has fluctuated at around 9% over the past five years. Labour force participation stood at 62% in 2021, with a low and decreasing rate of participation among women. The share of young people (aged 15-24) who were NEET stood at 15.5% in 2021. Despite high formal educational attainment, skill mismatches persist, which impacts productivity. Improvements in active labour market policies could help increase employment and reduce skill gaps by training workers with the skills that employers need. Informal employment was estimated at 20% of all employed in 2021.

The war has had a profound impact on the labour market and exacerbated pre-existing structural challenges. The massive outflow of people to other countries, an estimated 5 million internally displaced persons, and substantial job destruction in the wake of the invasion have reshaped the labour market landscape. At the macroeconomic level, the most important change was not the increase in the unemployment rate, but the dramatic fall in the labour force. Around 6.2 million people left the country, of which around 2.1 million were of working age. In addition, it has been estimated that around two thirds of refugees at working age have an advanced education. Coupled with the physical and mental impacts of the war on workers, this could exacerbate earlier trends of decreasing labour supply caused by a declining population at working age. Additionally, the surge in internally displaced persons has intensified skill mismatches and labour shortages in regions experiencing a pronounced workforce exodus and higher unemployment rates while fostering informal employment in recipient regions. Despite nominal wages remaining roughly constant, the hike in inflation has led to a collapse in real incomes for households.

2.3.2. The capacity to cope with competitive pressure and market forces within the Union

Due to the impacts of Russia's ongoing full-scale invasion as well as the pre-existing structural economic challenges,, Ukraine is at an **early stage of preparation** in terms of its capacity to cope with the competitive pressure and market forces within the EU. The war has severely damaged the country's capital infrastructure and caused a massive human exodus that has deeply affected the economy. Investment as a share of GDP was already very low before the war and infrastructure remained underdeveloped, especially trade-related infrastructure. Investment in research and innovation has been low, and educational outcomes have not met the needs of the labour market.

The structure of the Ukrainian economy changed little in the five years before the start of the Russian war of aggression and remained concentrated in sectors with low added value. Even before the war, the stock of FDI was well below the EU average, reflecting persistent weaknesses in the business environment and high perceived corruption. While trade integration with the EU has been advancing recently, including thanks to the implementation of the Deep and Comprehensive Free Trade Area, it remains low, while the openness of the Ukrainian economy overall had been decreasing before the invasion.

At the same time, the international response in support of Ukraine has been massive over the last year. Future reconstruction could also help support modernization and allow Ukraine to specialise in higher value-added chains and strengthened competitiveness.

To improve competitiveness and support long-term growth, Ukraine should in particular:

- continue and, when the situation allows for it, accelerate repairs and rehabilitation of infrastructure, in particular the restoration of energy transmission and generation capacity, including from renewable energy sources, as well as utilities, transport infrastructure, schools and health facilities;
- take measures to facilitate investment, including for reconstruction, in particular by improving public procurement processes, reducing barriers to project implementation, reforming planning processes and strengthening the administrative capacity needed for investment management;
- take steps to improve the quality of education and training, including for Ukrainians returning from abroad, to ensure outcomes align with the needs of the labour market, including the skills required for reconstruction. Ensure that the education system is also equipped to re-integrate Ukrainians returning from abroad.

Education and innovation

Ukraine invests a relatively large share of its GDP in education, which is not proportionately reflected in outcomes. The country invests a higher proportion of GDP in education than the EU. This has contributed to high levels of formal educational attainment, with 54% of the working-age population in 2020 enrolled in or having completed tertiary education, nearly double the EU average. A large part of this share is accounted for by vocational education and training rather than traditional academic degrees. Ukraine ranked 39th out of 77 countries in the latest round of PISA reading assessments in 2018, which is low compared with its investment in education.

Despite relatively high rates of investment and formal educational attainment, there is still a mismatch between the skills of the workforce and those demanded by employers. Nearly 38% of firms in Ukraine identified an inadequately educated workforce as a major

constraint, which is much higher than the EU average. This rate increases to nearly half of firms with at least 10% foreign ownership. Compared to relatively large investments in vocational training within the education system, spending on active labour market policies to mitigate the skills mismatch remains very low at just 0.03% of GDP in 2017.

The war has prolonged the pandemic-related disruptions to the continuity of education and poses a serious challenge to educational outcomes in the medium term. As of February 2023, an estimated 10% of all educational institutions in the country had been damaged or destroyed, and around 4.6 million children had been forcibly displaced by the war. According to the Ministry of Education and Science, only 32% of primary and secondary-school students are in full-time, face-to-face education as of June 2023.

Investment in research and development remains low. Total expenditure on research and development, which has been declining over the last 10 years, reached 0.29% of GDP in 2021 compared to an EU average of 2.2%. Over half of R&D spending comes from the private sector. According to the European Innovation Scoreboard 2022, Ukraine is regarded as an emerging innovator.

Physical capital and quality of infrastructure

The state of Ukraine's physical infrastructure reflects a persistent lack of investment in the years before the war and will require significant investment in order to support recovery and economic growth. The average ratio of gross fixed capital formation has fluctuated at around 17% of GDP since the Maidan Revolution, which is about half of the investment effort of similar emerging economies. FDI inflows averaged 2.2% of GDP over the five years from 2018, falling to 0.3% of GDP in 2022. The total stock of pre-war FDI remained low at around 31% of GDP. The country ranks very low on the quality of trade-related infrastructure and around a quarter of firms identified transportation as a major constraint in the 2019 World Bank Enterprise Survey. These challenges have been exacerbated by war-related disruptions to export routes including in the Black Sea. Ukraine has a highly developed gas transmission system that is also closely integrated into the European gas network, though a significant part of the country's overall energy generation and transmission infrastructure has been damaged in the war.

In terms of digitalisation, Ukraine has made remarkable progress in recent years, though war-related damage has disrupted connectivity. In 2021, 83% of Ukrainian households had internet access at home, representing an increase of over 20 percentage points in just three years. Internet connectivity was a key driver of pre-war economic growth, in particular for the IT industry. Good digital connectivity has supported the country's resilience during the war.

The destruction of physical capital caused by the war has been immense. According to the Rapid Damage and Needs Assessment, direct damage in the first year of the war is estimated at EUR 150 billion, with the housing (38%), transport (26%) and energy (8%) sectors having suffered the greatest damage. Total reconstruction and recovery needs were estimated in February 2023 at EUR 380 billion. This encompasses steps towards becoming a modern, low-carbon, disaster- and climate-resilient country in view of becoming an EU Member State and takes into account inflation, surge pricing commonly seen during mass construction, higher insurance premiums, etc. The destruction of the Kakhovka Dam in June 2023 caused severe economic and environmental loss. Russia has occupied, damaged or destroyed a large part of Ukraine's installed power capacity, thousands of kilometres of electric, gas and heating networks, transformers, compressor stations, heat-only boilers and other infrastructure facilities. Emergency repairs have continued with international support, which together with exceptional efforts by the transmission system operator Ukrenergo have kept the grid

operational. About a quarter of agricultural land could not be used for production before demining has taken place.

Sectoral and enterprise structure

The structure of the Ukrainian economy changed little in the five years before the start of the war and remained concentrated in sectors with low added value. Agriculture accounted for just over 12% of GDP (EU average: 1.6% of GDP) and over a fifth of total employment in 2021. The share of manufacturing in GDP has been declining persistently in recent years from 14.4% in 2016 to 8.6% in 2022 due in part to labour market pressures resulting from high emigration, electricity tariff reform as well as the impact of the war in Donetsk and Luhansk and the COVID-19 pandemic. The ICT sector, where Ukraine had been developing a comparative advantage, kept its relative share in output almost intact at 5.2% of GDP in 2022. Before the war, the trade, agriculture and industry sectors accounted for almost 60% of all employment, suggesting that these sectors were lagging in labour productivity relative to the other parts of the economy.

Nearly all businesses in Ukraine (99.98%) are small and medium-sized enterprises (SMEs), with access to finance remaining an obstacle for firms of all sizes. In 2020, SMEs employed 81% of workers and accounted for 62.6% of GDP and over a quarter of exports. Access to finance remains a key obstacle for businesses of all sizes and was identified by nearly half of firms as a major constraint in 2019, five times the rate in the EU. The interest rate spread for SMEs compared to large firms had been rising before the war, though SMEs account for an increasing share of outstanding loans (61% in 2020) and represent nearly one-third of new lending each year. The government strategy to boost SME development and open access to finance expired in 2020, and an updated strategic policy framework remains to be developed. The government introduced an affordable loan programme to improve access to bank lending for small firms. This has continued and expanded during the war, with an increase in the maximum loan amount and a reduction in interest rates to 0% for the duration of martial law.

Economic integration with the EU and price competitiveness

The overall openness of the economy had been shrinking even before the war, with foreign trade relative to GDP contracting from 108% in 2015 to 88% in 2022. Despite this general trend, economic integration with the EU progressed further thanks to the implementation of the Association Agreement and the Deep Comprehensive Free Trade Agreement (DCFTA). Ukrainian companies have been actively using the opportunities of the DCFTA, with 27% more businesses exporting to the EU in 2022 than in 2016. The share of exports to the EU, which consisted mostly of agricultural products, metals and minerals, increased from 28% in 2015 to 36% in 2021. The share of imports from the EU, which comprised primarily machines, chemicals and minerals, also strengthened from 36% in 2015 to 41% in 2021. The EU is the largest source of FDI in Ukraine, accounting for three-quarters of FDI inflows in 2021. Thanks to the temporary suspension of all tariffs, the agreement on road transport and the effective implementation of logistical Solidarity lanes since the start of the war, trade integration with the EU has progressed further, with 39% of Ukrainian exports going to the EU in 2022 and about half of Ukrainian imports coming from the EU.

On price competitiveness, unit labour costs remained relatively low and stable in Ukraine between 2014 and 2018, **remaining less than a third of those in neighbouring EU Member States in US dollar terms.**

2.4. PUBLIC PROCUREMENT, STATISTICS, FINANCIAL CONTROL

Chapter 5 – Public procurement

EU rules ensure that the public procurement of goods, services and works in any Member State is transparent and open to all EU companies on the basis of non-discrimination and equal treatment.

Overall, Ukraine has **some level of preparation** in the area of public procurement. **Limited progress** was made during the reporting period in the face of the Russian war of aggression against Ukraine and the application of martial law. Further legal alignment with the EU *acquis* is needed, including on concessions and public-private partnerships (PPPs), exclusion, selection, use of the most economically advantageous tender criterion, as well as defence procurement.

In the coming year, Ukraine should in particular:

- make progress in aligning the laws on public procurement with the EU *acquis*, including on concessions and PPPs;
- proceed with the appointment of public procurement commissioners in the Anti-Monopoly Committee of Ukraine;
- ensure that exceptions to the laws on public procurement are kept to the minimum required under martial law.

Institutional set-up and legal alignment

The **legal framework** on public procurement is partially aligned with the 2014 EU directives on public procurement. Further alignment is needed, including on the scope of and exemptions from public procurement legislation, mixed contracts and value estimation, exclusion, selection and award criteria. This includes the removal of fixed weights for the price criterion and mandatory use of e-auctions, as well as adjustment in the use of e-catalogues. The Law on concessions was significantly modified in 2019, but still does not comply fully with EU requirements. The defence procurement Law, adopted in 2020, is partially aligned with the EU Directive on defence procurement.

An amendment to the Law on public procurement, which entered into force in July 2022, introduced temporary domestic content requirements for a period of ten years for selected machines and equipment. However, public procurement in connection with Ukraine's international commitments is exempted from domestic content requirements.

In light of the Russian war of aggression against Ukraine, the application of martial law in Ukraine and its duration, Ukraine has introduced temporary exceptions from public procurement legislation, including the use of direct awards and simplified procedures, by way of resolutions.

An appropriate institutional framework to implement the public procurement policy is in place with adequate powers and functions. The role of the Authorised Body, responsible for defining the public procurement policy, is performed by the Ministry of Economy of Ukraine and its Public Procurement and Competition Policy Department; concessions and PPPs fall under the responsibility of the Department on Investments, Innovations and Intellectual Property of the Ministry of Economy.

Implementation and enforcement capacity

Despite the ongoing military aggression, the authorities have ensured the continuity of operations in public procurement, including the use of the e-procurement system Prozorro. Based on the annual reports from the Ministry of Economy, the **public procurement market** represented 9.3% of GDP in 2022 against 17.1% in 2021 and 17.8% in 2020. There was therefore a notable decrease in 2022 due to the war.

On the **monitoring of contract awards and implementation**, negotiated procedures were suspended under martial law and replaced by direct award. The use of framework agreements and centralised procurement, especially at regional and local level, needs to be scaled up. Concessions and PPPs have remained very low as the required IT solutions have not yet been implemented following the relevant law introduced in 2019. In 2022, the State Audit Service (SAS) detected irregularities in 67% of monitored procedures, down from 78% in 2021 (this includes all types of irregularities). Public procurement control is complex and weak due to a lack of skilled staff, overlapping responsibilities, suboptimal quality of control and enforcement. Although expanding, SAS coverage of monitoring and the *ex post* internal audit of public procurement remains modest; while the system of risk indicators needs improvement. The contracting authorities need to continue to build **capacity to manage public procurement processes**. Professional standards, a professionalisation strategy and training policy based on an assessment of training needs, need to be put in place. Training currently remains voluntary, and no statistics are available on the number of trained staff.

Efficient remedy system

Legislation on the **right to legal remedy** is partially aligned with the EU *acquis*. The Antimonopoly Committee of Ukraine (AMCU) handles complaints about public procurement violations. Complaints related to violations of PPPs and concessions legislation are looked into by the administrative and commercial courts of Ukraine.

The **implementation capacity** of the AMCU remains insufficient. Before the war, the AMCU was heavily overloaded with complaints (14,828 cases in 2021 compared to 3,865 cases in 2022). Following the 2021 amendment to the AMCU law establishing commissions for the consideration of public procurement complaints four commissioners out of a maximum of ten envisaged were recruited in 2023.

The ongoing increase of the number of commissioners and the introduction of specialised commissions for public procurement is expected to increase the AMCU's capacity to resolve cases. However, its internal administrative capacity would also need to be expanded.

Chapter 18 – Statistics

EU rules require that Member States are able to produce statistics based on professional independence, impartiality, reliability, transparency and confidentiality. Common rules are provided for the methodology, production and dissemination of statistical information.

Ukraine has **some level of preparation** in the area of statistics. **Limited progress** was made during the reporting period towards alignment with the EU *acquis*, including adoption of legislation to integrate the European Statistics Code of Practice. The administrative capacity of the institutions involved needs to be further strengthened and coordination among them improved. The publication of statistical information has been largely suspended while martial law is imposed. Data transmissions to Eurostat remained limited.

In the coming year, Ukraine should in particular:

→ strengthen the institutional independence and administrative capacity of the State Statistics Service of Ukraine (SSSU) and the coordination among relevant bodies to improve the quality of statistics;

→ adopt the national strategy for the development of Ukrainian statistics for 2024-2029;

→ increase the production and transmission of high-quality and timely data to Eurostat.

On **statistical infrastructure**, the Law on state statistics provides the legal framework for national statistics and regulates the rights and functions of national statistical bodies. The Law on official statistics, which strengthens the coordinating role of the SSSU and establishes the Statistics Council, entered into force on 1 January 2023. The SSSU is the recognised national statistical authority of Ukraine in charge of production of the official statistics. It operates under the Ministry of Digital Transformation. It coordinates the national statistical system, which also includes the Central Bank of Ukraine and the Ministry of Finance. The country is making preparations to establish a National Council of Statistics as a consultative body to the Cabinet of Ministers. Its exact tasks and role within the national statistical system should be clearly defined. Ukraine is in process of preparing a new national strategy for the development of Ukrainian statistics for 2024-2029.

Ukraine cooperates with and regularly submits limited data in several statistical domains to Eurostat on a voluntary basis. In connection with the World Bank's International Comparison Program, Ukraine carries out nearly all the surveys required under the relevant regulation, using the methodologies and classifications set out in the Eurostat-OECD Methodological manual on purchasing power parities.

On **classifications and registers**, the main classifications are in line with the EU *acquis* and are updated regularly. The State Statistics Service maintains the register of statistical units' classification of economic activities.

On **macroeconomic statistics**, annual and quarterly sector accounts are compiled using the classification of institutional sectors. Annual and quarterly indicators for GDP and its components use the production approach by income category and by end-use category. Ukraine needs to start submitting national accounts data to Eurostat. Transmission of European System of National and Regional Accounts (ESA) 2010 data to Eurostat is very limited. transmitted to Eurostat.

The Ministry of Finance compiles **government finance statistics** (GFS) based on the IMF's GFS Manual 2014, which differs substantially from the System of National Accounts 2008 and European System of Accounts 2010 in presentation. GFS or excessive deficit procedure statistics are not transmitted to Eurostat. Institutional arrangements need to be carefully reviewed to ensure statistical independence in the delineation of the general government sector and the recording of its operations.

On price statistics, the harmonised index of consumer prices is not calculated. Price statistics data is not transmitted to Eurostat.

Ukraine follows the methodology and conceptual framework for compiling the **balance of payments data** as set out in the relevant manual (BPM6, IMF, 2009). The dissemination of data on the monthly and quarterly balance of payments and international investment position corresponds to the timelines set by Regulation (EC) 184/2005.

On **business statistics**, in 2022, a new methodology for calculating indicators of demographic statistics of enterprises was developed in accordance with the requirements of European Business Statistics Regulation. Business statistics data is not transmitted to Eurostat.

On **social statistics**, the latest population census took place in December 2001. The next census is planned six months after the end of martial law. Ukraine annually provides to Eurostat the data for population statistics (POPSTAT) and demographic statistics (DEMOBAL) questionnaires. However, the data provided is only broken down by age and sex and without the necessary full metadata information. Ukraine needs to develop statistics in the area of asylum and managed migration. Social protection statistics are implemented and comply with Regulation on the European System of Integrated Social Protection Statistics. Labour market statistics on the structure of earnings, the labour cost index, and the labour cost survey have been partially implemented. During the martial law, state statistical bodies have not been conducting sample surveys of the population (households), including the survey of the labour force.

On **agricultural statistics**, a pilot agricultural census was conducted in 2012. The date of the next census will be decided after the war has ended. No data on agricultural statistics is transmitted to Eurostat.

On **transport statistics**, no transport data is provided under the regulated statistics. In 2022, work on identifying sources of administrative data, which are needed by the State Statistics Service for the implementation of European legislation in transport statistics, continued. Despite some data quality concerns, Ukraine is broadly in line with the *acquis* on **energy statistics**.

Environment statistics data is not transmitted to Eurostat. It is therefore not possible to evaluate compliance. Ukraine's self-assessment indicates the production of some statistics on waste and compilation of four environmental accounts.

Chapter 32 – Financial control

The EU promotes the reform of national governance systems to improve managerial accountability, sound financial management of income and expenditure, and external audit of public funds. The financial control rules further protect the EU's financial interests against fraud in the management of EU funds and the euro against counterfeiting.

Ukraine is at an **early stage of preparation** for implementing financial control. During the reporting period, Ukraine made **limited progress** by approving the financial audit methodology for external audits and establishing audit committees within central authorities.

In 2023, Ukraine should focus on the following recommendations:

- ensure tighter connectivity between public internal financial control (PIFC) reform and the Central Harmonisation Unit (CHU), and strengthen the CHU's role in enforcing delegated managerial accountability;
- strengthen the Accounting Chamber of Ukraine's (ACU) independence, mandate and ISSAI-based audit work through the approval of a new ACU law, and address the shortage of internal auditors;

→ increase cooperation between the ACU and Parliament to strengthen oversight of the state budget and its implementation.

Public internal financial control

The **strategic framework** for PIFC is part of the public finance management reform strategy for 2022–2025. The CHU monitors progress of both key areas in PIFC, internal control and internal audit. Around 100 key spending units are responsible for budget management, medium-term budget plans and performance management, as assigned by the budget code.

Managerial accountability is not yet fully incorporated into legislation and administrative practice. The Cabinet of Ministers has adopted basic principles of internal financial control that apply to spending units at all levels, but the principles do not go into details about lower-level management and employees. The implementation of basic managerial accountability mechanisms for central government bodies remains limited in practice.

The Budget Code of Ukraine regulates the requirement to establish **internal audit practice**. Internal audit units are mandatory in ministries, central executive bodies and other key spending units at central and regional level, but recommended in local self-government. In 2023, the legal requirement of installing audit committees at central public entities came into force. The capacity to effectively carry out internal audits is hindered by a shortage of internal auditors and high staff turnover. A certification commission has been established within the Ministry of Finance.

The **CHU** within the Ministry of Finance focuses on (i) developing internal control and internal audit functions; and (ii) coordinating activities related to internal audit and the evaluation and monitoring of internal control systems. Its tasks are described in the Budget Code and secondary legislation. The CHU aims to improve efficiency in its key tasks, for example by developing a web-based PIFC portal.

An enhanced cooperation between the Public Internal Financial Control institutions and the auditing institution with the law enforcement agencies could help in combating corruption.

External audit

The **Constitution** does not recognise **the independence** of the Accounting Chamber of Ukraine (ACU). The legal framework limits the ACU's mandate to audit public bodies and resources, including control over the national budget's revenues and use. It does not have the mandate to audit local budgets, state-owned businesses or off-budget spending. While the ACU reports on PIFC and internal audit findings to the Ministry of Finance, exemptions should be considered to maintain its autonomy. Although the ACU is instructed to apply international audit principles, this has led to flawed practices not aligned with international standards due to conflicts with Ukraine's constitution and laws.

The ACU has recently approved the methodology for financial audits, which aligns with international standards. The manual will be used in planned pilot audits in 2023. Methodologies for compliance and performance audits still require approval. In practice, the ACU focuses more on inspections than audits, as defined by international public sector auditing standards. There is also an overlap between the mandates of the ACU and the State Audit Service (SAS), with the latter having a broad mandate that includes defined public financial and IT audits.

The current **impact** of the ACU's **audit work** is minimal as its performance is measured based on the number of audits conducted rather than the actual impact of audit recommendations. There is no formal procedure for monitoring the implementation of ACU audit recommendations.

The ACU currently does not produce audit reports that are in line with recognised international standards. These are rather inspection reports that do not serve the purpose of promotion of reforms or identifying systemic issues.

Protection of the EU's financial interests

The national legislation ensures some degree of EU alignment. It addresses issues of corruption offences, money laundering and misappropriation. It is essential to establish and strengthen liability for fraud that impacts the EU budget. Ukraine should adopt a national fraud strategy for the protection of the EU's financial interest.

While an anti-fraud coordination service (AFCOS) has not yet been established to facilitate effective cooperation and exchange of information, including of an operational nature, with the European Anti-Fraud Office (OLAF), the State Audit Service (SAS) was nominated as the national contact point for cooperation with OLAF and the European Court of Auditors. Although its mandate is limited at the national level in this capacity. There is no corresponding AFCOS network of authorities involved in the protection of the EU's financial interests, but a national mechanism was designated through the setup of the Interdepartmental Coordination Council which needs to meet regularly to become effective. While Ukraine does not manage EU funds directly and thus does not report irregularities through the Irregularities Management System, the SAS has developed procedures to prevent and report violations, errors and fraud to relevant bodies, including the European Commission. Collaboration between OLAF and relevant institutions is on a case-by-case basis. The Bureau of Economic Security, which is responsible for investigating offences that impact Ukraine's financial interests, is under review, with the scope of its activities in protecting the EU's financial interests yet to be determined.

Protecting the euro against counterfeiting

Ukraine has signed and ratified the 1929 Geneva Convention for the Suppression of Counterfeiting Currency. The Centre for the Suppression of Counterfeit Banknotes and Coins, which is operated by the National Bank of Ukraine, manages, analyses and processes counterfeit euro banknotes and those from other foreign currencies withdrawn from circulation by Ukrainian banks. The responsibility for combating counterfeiting lies with the Bureau of Economic Security, the Ministry of Internal Affairs, the State Security Service and the prosecution service. However, the allocation of responsibilities among these bodies requires further clarification.

3. GOOD NEIGHBOURLY RELATIONS AND REGIONAL COOPERATION

Russia's full-scale war of aggression against Ukraine has affected the latter's relations with enlargement countries and neighbouring member states, as well as its activities in regional formats.

Ukraine participates in the **Eastern Partnership** policy, and is part of a number of regional formats, including the Central European Initiative, the Black Sea Economic Cooperation, the Organization for Democracy and Economic Development and the Regional Cooperation Council. The level of engagement of Ukraine in some formats was strengthened, or was profoundly shaped such as in the Black Sea Economic Cooperation Organization without the participation of Russia. Some formats are being reassessed.

Ukraine maintains longstanding close ties with neighbouring **Moldova**. Bilateral political dialogue on all levels has improved further, following Moldova's strong support for Ukraine in the context of Russia's war, including through hosting a high number of refugees and actively supporting the export of Ukrainian products under the Solidarity Lanes initiative. Both

countries exchange on the EU accession process, on regional and security issues, the situation in the Transnistrian region and on management of water resources of the Nistru River, which remains a challenging topic.

Ukraine and **Georgia**, fellow “Association Trio” members have a strategic partnership since 2017, but relations are currently strained. While Georgia, continues to support Ukraine’s territorial integrity and sovereignty, including through co-sponsorship of Ukrainian UN resolutions and hosts a significant number of Ukrainian refugees, Ukraine considers Georgia’s position on the Russian aggression as ambivalent. Ukraine has criticised inter alia, the non-alignment of Georgia with EU sanctions against Russia and absence of military-technical cooperation. The ill health of former Georgian President Saakashvili, a Ukrainian citizen, had led to additional diplomatic tensions.

Türkiye is a strategic partner for Ukraine, with important bilateral economic and people-to-people ties, evidenced by a bilateral visa-free regime and a free trade agreement signed in February 2022 (not yet ratified). Bilateral relations have been bolstered since the beginning of Russia’s full-scale war by Türkiye’s technical, humanitarian and military support to Ukraine, by its co-sponsoring of UN resolutions in favour of Ukraine’s territorial integrity and sovereignty, by its closure of the Bosphorus and Dardanelles straits for the passage of military ships, as well as Türkiye’s mediation efforts contributing to prisoner of war exchanges and the Black Sea Grain Initiative. Türkiye has also been a prominent participant in Ukraine’s International Crimea Platform. Nevertheless, Türkiye has not aligned with EU sanctions against Russia in the context of the latter’s full-scale aggression. Ukraine has not joined all CFSP statements on Türkiye in the past.

The Ukrainian authorities have sought to maintain and prioritise effective cooperation and close diplomatic ties with neighbouring EU Member States, both in the context of the war of aggression – determined in large part by the support of individual countries – and in the context of Ukraine’s prospective EU integration.

In the Western Balkans, Ukraine’s relations with **Albania** remain good. Albania has sponsored or co-authored all resolutions in support of Ukraine during its non-permanent membership (2022-2023) of the UN Security Council.

Bosnia and Herzegovina supports the territorial integrity and sovereignty of Ukraine, condemning Russia’s war of aggression. Bilateral relations are generally good but have been affected by certain statements on Russia’s role in Europe and significant hindrances, due to political contestation, in the implementation of restrictive measures against Russia. The two countries enjoy the visa-free regime. A number of agreements are in place, including on trade and on investment protection. Trade flows remain low.

The ties between Ukraine and **North Macedonia** are strong and deepening through political dialogue and diplomatic support as well as military assistance in the face of Russia’s full-scale war. A bilateral free trade agreement was revised and upgraded in 2022, and North Macedonia declared its support for Ukraine as a priority for its Chairmanship of the OSCE in 2023.

Ukraine-**Montenegro** relations are equally strong, bolstered by the latter’s continued support in UN fora as well as on sanctions, trade, technical and military assistance.

Ukraine-**Serbia** relations have been challenging since 2014 by Ukraine’s perception of limited Serbian support in the face of Russian aggression, in particular as regards Serbia’s absence of alignment with EU common foreign and security policy restrictive measures. Still Serbia voted in favour of UN General Assembly resolutions in support of Ukraine’s territorial integrity and sovereignty and has confirmed this support at the Presidential level. Serbia is also Ukraine’s

first trade partner in the Western Balkans, while negotiations on a free trade agreement still need to be concluded.

Ukraine has not recognised the independence of **Kosovo*** but has indicated continued support for EU-facilitated dialogue between Belgrade and Pristina. Ukraine also participated in the NATO Kosovo Force mission until 2022, when it withdrew its contingent of servicemen and military equipment. Kosovo has decided on a voluntary basis to support all Declarations by the High Representative on behalf of the EU and has aligned with EU restrictive measures, including all those related to Russia's aggression against Ukraine.

Hungary participates in initiatives such as Grain from Ukraine facilitating Ukrainian food exports and provides financial and humanitarian support to Ukraine. However, relations continue to be affected by Ukrainian legislation relating to persons belonging to national minorities, including the implementation of the recommendations of the Venice Commission on education, state language, use of minority languages in public life, administration, media and books.

Poland has become one of Ukraine's closest strategic partners in the context of Russian war of aggression and has been providing vital political, humanitarian, economic, technical and defence assistance. Poland also continues to host big number of Ukrainian refugees. The introduction of exceptional and temporary preventive measures on imports from Ukraine to the European Union - which was requested by Poland, Bulgaria, Hungary, Romania and Slovakia - has caused tensions between the two countries. The measures were lifted on 15 September.

Ukraine and **Romania** continue to cooperate closely, with recently strengthened bilateral political dialogue. Romania participates in the Grain from Ukraine scheme and helps export Ukrainian food products through EU solidarity lanes. Romania hosted the Black Sea Security Conference under the auspices of Ukraine's Crimea Platform in April 2023. Like Poland and Slovakia, Romania has hosted logistical hubs for the delivery of EU humanitarian and civil protection support to Ukraine since early 2022. Also, a new trilateral cooperation format encompassing Ukraine, Moldova and Romania was established.

Ukraine's good relations with **Slovakia** have also been enhanced during Russian war of aggression. Slovakia provided political, military, financial and humanitarian assistance, as well as its international advocacy in support of Ukraine's policy goals. Slovakia hosts a significant number of Ukrainian refugees under the temporary protection. A joint commission on economic, industrial, scientific and technical cooperation was relaunched in December 2022.

Since early 2022, Poland, Romania and Slovakia have been hosting logistical hubs for the delivery of EU humanitarian and civil protection support to Ukraine.

Relations with **Bulgaria** were bolstered by Bulgarian political, financial, military and humanitarian aid to Ukraine, as well as growing economic ties. They were also nurtured by Bulgaria's participation in EU solidarity lanes and the Grain from Ukraine initiative.

4. ABILITY TO ASSUME THE OBLIGATIONS OF MEMBERSHIP

CLUSTER 2: INTERNAL MARKET

This cluster covers: the free movement of goods (Chapter 1); freedom of movement for workers (Chapter 2); right of establishment and freedom to provide services (Chapter 3); free movement

* This designation is without prejudice to position on status, and is in line with UNSCR 1244(1999) and the ICJ Opinion on the Kosovo declaration of independence.

of capital (Chapter 4); company law (Chapter 6); intellectual property law (Chapter 7); competition policy (Chapter 8); financial services (Chapter 9); and consumer and health protection (Chapter 28).

This cluster is key for Ukraine's preparations for the requirements of the EU's internal market and is of high relevance for the implementation of DCFTA. Ukraine is moderately prepared in the area of free movement of goods and is in between some and moderate preparation in the area of free movement of capital. Ukraine has some level of preparation in most areas of the internal market, namely in the area of right of establishment and freedom to provide services, competition policy, company law, intellectual property law, financial services and consumer and health protection. In the area of free movement of workers, Ukraine is at an early stage.

In the area of free movement of goods, some progress was made on quality infrastructure. Regarding the freedom of movement of workers, no progress was made. Ukraine demonstrated some progress in the area of right of establishment and freedom to provide services, in particular by adopting a new law on postal communications. In the area of free movement of capital, some/good progress was made with prevention of money laundering. On company law, some progress was made by adopting legislative amendments aimed at further alignment on company law, financial statements and audit. Good progress was made in intellectual property law, thanks to the launch of the National Intellectual Property Authority and the adoption of the Law on copyright and related rights. On competition policy there was limited progress. On financial services some progress has been demonstrated by starting to unwind some emergency measures, implementing the *acquis* on corporate governance in banks, conducting risk-based supervision of banks and introducing legislation to promote sustainable and digital finance. Limited progress was made on consumer and health protection.

Chapter 1 – Free movement of goods

The free movement of goods ensures that many products can be traded freely across the EU based on common rules and procedures. Where products are governed by national rules, the principle of the free movement of goods prevents these creating unjustified barriers to trade.

Ukraine is **moderately prepared** in the area of free movement of goods. **Some progress** was made during the reporting period on alignment with the EU *acquis* on quality infrastructure and on several “new and global approach” EU product *acquis* on products that may be covered under a potential agreement on conformity assessment and the acceptance of industrial products (ACAA) envisaged under the Deep and Comprehensive Free Trade Area.

In the coming year, Ukraine should in particular:

- complete the alignment of its legislation with the *acquis* on quality infrastructure, in particular on market surveillance;
- further align its legislation with the *acquis* on harmonised sectoral legislation;
- re-establish the inspection and enforcement capacity of the market surveillance authorities.

General principles

The DCFTA contains obligations for Ukraine to align its legislation with the EU *acquis* in the harmonised area. It also provides for the possibility to conclude an ACAA once Ukraine has completed the alignment process in selected product sectors in terms of legislation, institutions and standards. Preparations for an ACAA are currently underway. This includes the Commission's assessment of Ukraine's alignment with specific EU *acquis* in the harmonised area, as well as alignment with and the implementation and enforcement of the *acquis* on

product conformity assessment, notification and market surveillance, the institutional framework for the **production, distribution and marketing of industrial products**. Once concluded, an ACAA would enable Ukraine to participate in the single market on the same terms as an EU Member State for the selected sectors.

Non-harmonised area

In the **non-harmonised area**, Ukraine needs to start activities for screening national technical regulations for compliance with Articles 34-36 of the Treaty on the Functioning of the European Union.

Harmonised area: quality infrastructure

Ukraine's legislation on quality infrastructure is partially aligned with the EU *acquis*. Administrative structures already exist to deal with technical regulations, standardisation, conformity assessment, metrology, accreditation, and market surveillance.

On **standardisation**, Ukraine's implementing legislation is fully aligned with the EU *acquis*. The national standardisation body, UkrNDNC has 123 staff. It has been an affiliate member of the European Committee for Standardisation (CEN) and the European Committee for Electro-technical Standardisation (CENELEC) since January 2023. UkrNDNC has also been an observer to the European Telecommunication Standards Institute (ETSI) since 2018. Ukraine is a full member of the International Electro-technical Commission and of the International Organisation for Standardisation (ISO). National standards are adopted in conformity with European standards (CEN, CENELEC and ETSI standards). During the reporting period, 26 000 European and international standards were all adopted at once in December 2022. Ukraine still has conflicting old standards that need to be withdrawn.

Ukrainian legislation on the **accreditation** of conformity assessment bodies is partly aligned with the EU *acquis*. The National Accreditation Agency of Ukraine (NAAU) has 104 employees. Ukraine has 1 095 accredited conformity assessment bodies (722 testing laboratories, 38 medical laboratories, 31 calibration laboratories, 105 certification bodies of management systems, 14 certification bodies of persons and 115 inspection bodies). NAAU is a signatory of the European Cooperation for Accreditation Multilateral Agreement (EA MLA) in the areas of accreditation of testing and calibration laboratories, medical laboratories, product certification bodies, management system certification bodies, personnel certification bodies and inspection bodies. Ukraine is a full member of both the International Laboratory Accreditation Cooperation by having signed its Mutual Recognition Agreement and of the International Accreditation Forum by signing its Multilateral Agreement.

On **metrology**, four national metrology institutes operate in Ukraine. Calibration activities are performed by 24 state-owned enterprises. During the reporting period, the National Metrology Institute in Kharkiv and state-owned enterprises located in territories directly impacted by war faced substantial damage. The national metrology institutes in Kyiv and Ivano-Frankivsk maintain their capacity and are operational. Ukraine is a full member of the International Organization of Legal Metrology, the International Measurement Confederation and the International Bureau of Weights and Measures.

In the field of **market surveillance**, the State Service of Ukraine on Food Safety and Consumer Protection is operational with 140 employees. During the reporting period, due to the ongoing war the number of inspections decreased in line with provisions of the martial law. Market surveillance inspections and controls remain suspended, with only exceptional unscheduled measures taking place. This suspension limits the effectiveness and efficiency of market surveillance and may affect the quality and safety of products.

Harmonised area: sectoral legislation

In the area of ‘**new and global approach**’ **product legislation**, Ukraine has adopted implementing legislation in the reporting period designed to be fully aligned with the *acquis* on machinery, electromagnetic compatibility, low voltage and construction products. Ukraine had previously also adopted legislation designed to align with the *acquis* on radio equipment, toys, cosmetics, recreational craft, civil explosives, pressure equipment and personal protective equipment. Ukraine is partly aligned with the *acquis* on lifts, cableways, gas appliances, equipment for explosive atmospheres, simple pressure vessels, environmental noise from using outdoor equipment and pyrotechnic articles. More work needs to be done on alignment with the *acquis* on eco-design, energy labelling (Ukraine has been party to the Energy Community Treaty since 2011), measuring instruments, non-automatic weighing instruments and medical devices.

On ‘**old approach**’ **product legislation**, Ukraine is partly aligned with the *acquis* on motor vehicles (EU-type approval) and 2/3 wheeled motor vehicles, and on fertilisers, pre-packaging and units of measurements. It is not aligned on tractors, or on non-road mobile machinery. It is also not aligned with the *acquis* on chemicals, including the registration, evaluation, authorisation and restriction of chemicals (REACH Regulation), chemicals labelling (Classification, Labelling and Packaging Regulation (CLP)), good laboratory practice (GLP), detergents, **drug precursors** or aerosol dispensers.

On **procedural measures**, Ukraine’s legislation is designed to align with the *acquis* on footwear and on textile labelling, it is partly aligned with the *acquis* on defence products, defence procurement, and the **return of cultural objects unlawfully removed from the territory of an EU Member State**. It is not aligned with regard to crystal glass or firearms, or medicinal products pricing.

Market surveillance and product safety institutions of Ukraine are vulnerable to corruption risks. Current preparations for changes to the law on Market surveillance aligning to the EU market surveillance regulation (2019/1020) foresee to centralise control of market surveillances activities with the Ministry of Economy alone, which could increase corruption risks in the market surveillance system of Ukraine. Further concerns are the lack of funding for inspection activities and the ongoing suspension of market surveillance during the martial law. Corruption risk mitigation strategy needs to be developed in line with overall anti-corruption policy framework.

Chapter 2 – Freedom of movement for workers

Citizens of one Member State have the right to work in another Member State and must be given the same working and social conditions as other workers.

Ukraine remains at an **early stage of preparation** regarding the freedom of movement of workers. Over the reporting period, during Russia’s full scale invasion, there was **no progress** on ensuring that EU workers and their family members are treated in the same way as Ukrainian nationals.

In the coming year, Ukraine should in particular:

- work on concluding additional agreements on social security coordination, notably with EU Member States;
- start work in preparation of joining the European Network of Employment Services.

Ukraine's legislation is not aligned with the *acquis* on **access to the labour market and free movement of workers**. Foreigners and stateless persons can be employed in Ukraine after obtaining an appropriate permit issued by the State Employment Service of Ukraine. There is a minimum wage threshold for obtaining the permit. Foreigners cannot be employed as civil servants. There is no specific legislation on employment of EU nationals, who therefore fall under the same conditions as nationals of non-EU countries. The right of EU workers to reside in Ukraine can be revoked on the grounds of involuntary unemployment, illness or accident (and if employment is terminated). Moreover, foreigners, including EU workers' children, only have free and equal access to higher education as nationals if they are permanently residing in Ukraine.

There is no dedicated body that deals with the promotion, monitoring and support of equal treatment and free movement of workers. There are also no plans to create one for the moment. No steps have been undertaken to prepare for joining the European Network of Employment Services (**EURES network**). Beyond the bilateral agreements mentioned above, there are no further initiatives to cooperate with other countries on freedom of movement of workers, such as exchange of information, sharing of best practices or joint inspections.

On the **coordination of social security systems**, Ukraine has several bilateral agreements with EU Member States on mutual employment and social services, including on pension rights, for Ukrainian nationals who worked abroad. These agreements also provide for equal treatment of EU workers and their family members as Ukrainian nationals.

No national health insurance card has yet been implemented in Ukraine. Implementation of the **European Health Insurance Card** might therefore be challenging.

Chapter 3 – Right of establishment and freedom to provide services

EU natural and legal persons have the right to establish themselves in any Member State and to provide cross-border services. For certain regulated professions, there are rules on mutual recognition of qualifications. EU rules on postal services focus on improving the quality of universal service, gradual market opening to competition, and the establishment of an independent regulator.

Ukraine has **some level of preparation** in the area of right of establishment and freedom to provide services. **Some progress** was made during the reporting period, in particular on postal services, but further efforts are needed to align legislation with the EU *acquis* under this Chapter.

In the coming year, Ukraine should in particular:

- take measures towards eliminating existing restrictions for the provision of services, using the possibilities provided by the Association Agreement;
- complete approximation with the EU postal *acquis*, including with the Regulation on cross-border parcel delivery services;
- continue its progress in aligning with the EU *acquis* on mutual recognition of professional qualifications.

The EU-Ukraine Association Agreement includes rules that grant the **right of establishment** to EU natural and legal persons in Ukraine. The process of removing barriers to this right of establishment, as described in the Association Agreement, has not yet been initiated.

On the **freedom to provide cross-border services**, the Association Agreement provides for the cross-border supply of services except for some sectors, for instance audiovisual services,

national maritime cabotage, and domestic and international air transport. The process of removing the remaining barriers to the provision of cross-border services by EU natural and legal persons has not yet been initiated.

As regards the right of establishment and the freedom to provide cross-border services, Ukraine will need to align its legislation also with the Services Directive (2006/123/EC). Progressive steps should be taken in this regard.

On the **mutual recognition of professional qualifications**, the legislation and approach followed by Ukraine varies depending on the sector involved. It is based on a comparative assessment of the education and professional qualifications of the applicant seeking recognition with the relevant professional qualifications defined by the professional standard approved in Ukraine. No agreement for mutual recognition of professional qualifications currently exists with the EU. Full implementation of EU law on professional recognition needs to take place. This includes the Professional Qualifications Directive, the Proportionality Test Directive and sector-specific legislation (e.g. for lawyers: the Establishment Directive and Lawyers Services Directive).

In the area of **postal services**, Ukraine has made progress on alignment with the EU postal *acquis*. On 3 November 2022, a new Law on postal communications was adopted, which entered into force on 25 May 2023. The new legal framework for postal services is partially aligned with the Postal Services Directive 97/67/EC amended by Directives 2002/39/EC and 2008/6/EC. It sets out the scope, main principles and financing of universal service provision and the role of the national regulatory authority. The designated universal service provider, which is state-owned, maintains the exclusive right to provide a universal postal service, including ordinary letters. Postal service provision is not licensed in Ukraine, but is based on notification to the national regulatory authority. There are 166 economic operators included in the unified state register of providers of postal services. The national regulatory authority, which is legally separate and operationally independent, carries out regulatory oversight, monitoring and enforcement of obligations arising from the postal law. Ukraine has also committed under the EU-Ukraine Association Agreement to align with the EU Regulation on cross-border parcel delivery services by 2024. The Annex on rules applicable to postal and courier services was updated with the Regulation in November 2021.

Chapter 4 – Free movement of capital

In the EU, capital and investments must be able to move without restrictions, with common rules for cross-border payments. Banks and other economic operators apply certain rules to support the fight against money laundering and terrorist financing.

Ukraine is **in between some and moderate level of preparation** in the area of free movement of capital. **Some/good progress** was made in the reporting period, in particular as regards the alignment of Ukrainian anti-money laundering legislation with the FATF standards. Ukraine has committed to impose no restrictions on capital movement and current payments in accordance with the rules in Article VIII of the Articles of Agreement of the IMF and Chapter 7 of the Association Agreement with Ukraine. However, the National Bank of Ukraine (NBU) has introduced foreign currency (FX) restrictions under martial law to safeguard macroeconomic stability. In the coming year, Ukraine should in particular:

- Continue preparations to apply for the Single Euro Payments Area (SEPA);
- Continue the alignment of Ukrainian legislation and institutional practices with the FATF standards;

→ Take steps to establish the Register for holders and beneficial owners of bank accounts, payment accounts and safe-deposit boxes.

On **capital movements and payments**, the NBU introduced temporary capital restrictions following the start of the Russian invasion with a view to safeguarding Ukraine's macroeconomic stability. Restrictions are subject to constant revision by the NBU in light of developments in the monetary and FX markets. The NBU has drafted a roadmap on gradually easing war-related currency restrictions introduced at the beginning of the invasion in cooperation with the IMF.

As for restrictions that were in place before the war, Ukraine had already taken some steps towards currency liberalisation based on the Law on currency and currency operations. It entered into force in 2019, and the NBU has a roadmap for its implementation. This roadmap provides for a gradual cancellation of all currency restrictions and the transition to a regime of free capital flows, taking into account the pace of improvement in macroeconomic conditions in Ukraine (but without any specific deadlines for removing the currency restrictions).

The Land Code of Ukraine adopted in March 2020 banned the acquisition of agricultural land by foreigners for an unlimited period of time. This ban will be lifted upon referendum of which the date is not yet specified. Since March 2022, there has been a Cabinet of Ministers' resolution that sets a moratorium on transactions that involve Russian assets and establishes the list of people deemed to be associated with the aggressor and exceptions.

On **payment systems**, Ukrainian laws prescribe the same terms and conditions for domestic and cross-border transfers of currency valuables and there are no special rules for such transfers with EU Member States. One of the differences between cross-border payments and payments in the domestic currency is the currency supervision of cross-border payments (covering not only payments to customers of EU Member States). On the transparency of currency conversion changes, Article 30 of the Law on payment services sets the requirements on the information provided to users before concluding the agreement on the provision of payment services. The adoption of the Law on payment services, which came into force in August 2022, was an important step towards alignment with the EU *acquis* in the area of payment services. It incorporated the EU Payment Services Directive 2 and the E-Money Directive into national law. This law is an important step on Ukraine's path to applying for the Single Euro Payments Area (SEPA).

On the **fight against money laundering and terrorism financing**, Ukraine remains in Moneyval's enhanced follow-up process since December 2017. Following the start of the war, Moneyval suspended its evaluation of Ukraine, but in June 2023 it decided to resume it, at the request of Ukraine. The next Moneyval follow-up report is expected at the end of 2024.

In September 2022, amendments were adopted on the ultimate beneficial ownership (UBO) framework that improved the UBO registration and verification system and increased legal liability for failure to provide UBO information. The Ukrainian Government also adopted a number of bylaws to align Ukrainian anti-money laundering legislation with the international Financial Action Task Force (FATF) standards, including on the ultimate beneficial ownership and supervision of non-financial businesses and professions. In November 2022, the Ukrainian Parliament changed the definition of politically exposed persons, contrary to FATF standards. In September 2023, the Parliament passed in the first reading a law aimed at restoring a FATF-compliant definition of politically exposed persons, but several of its provisions were not in line with FATF standards. In October 2023, the Parliament adopted a new legislative amendment removing the three-year time limitation and reverting to a risk-based approach for

former holders of prominent public functions to be qualified as politically exposed persons to restore a FATF-compliant definition of politically exposed persons.

As regards virtual assets, Ukraine needs to either complement its 2019 law or to proceed with the adoption of a new comprehensive law on virtual assets in order to implement the applicable FATF standards. Ukraine's alignment with the FATF standards and further reform needs to be formally assessed by Moneyval as part of its regular monitoring and evaluation framework.

Chapter 6 – Company law

The EU has common rules on the formation, registration and disclosure requirements of a company, with complementary rules for accounting and financial reporting, and statutory audit.

Ukraine has **some level of preparation** in the area of company law. **Some progress** was made during the reporting period with the adoption of legislative amendments aimed at further alignment with certain aspects of the EU *acquis* on company law, financial statements and audit.

In the coming year, Ukraine should in particular:

- further align its legislation with the EU *acquis*, including on disclosure of company and foreign branches information, on encouraging long-term engagement of shareholders, and on takeover bids;
- align national legislation with the *acquis* on cross-border operations (conversions, mergers and divisions) and on the use of digital tools and processes in company law.

In the area of **company law**, a new Law on joint stock companies entered into force in January 2023 to further align with the EU *acquis* on shareholders rights and listed companies, including electronic voting at general meetings, management structures and changes in corporate structure. The Unified State Register can be accessed electronically providing information on legal entities and private entrepreneurs that is in line with the EU *acquis*. The Law on public electronic registers provides for the electronic interaction of registers created in Ukraine. The system should be technically ready for interconnection with business registers of EU Member States once Ukraine joins the EU and a complete alignment with the EU *acquis* as regards the information to be disclosed by companies to the national business registers for transparency purposes is achieved. Further alignment is needed with the *acquis* on disclosure of company and foreign branches information, cross-border operations (mergers, divisions, conversions), long-term shareholder engagement, gender equality on boards of directors and use of digital tools and processes. In 2022, Ukraine's corporate governance code (based on OECD principles) was extended to limited liability companies and additional liability companies that are professional participants on capital and organised commodity markets.

On **company reporting**, national legislation is partially aligned with the EU *acquis* for the main legal requirements, including on annual financial statements, management reports, rules on auditors, disclosure obligations and sanctions. There is a simplified financial reporting regime for small and micro-companies. Amendments adopted in 2022 to the Law on accounting and financial reporting introduced the size categories of parent company groups and their subsidiaries (small, medium and large) for the preparation and publishing of consolidated financial statements, with exemption for certain small and medium-sized groups from their mandatory preparation (except groups that include public interest entities). Under martial law, administrative and/or criminal liability has been lifted for the non-submission or late submission of financial and audit reports. Ukraine needs to prepare to align with the 2022 EU Directive on corporate sustainability reporting.

While there are provisions in national legislation harmonised with the *acquis* on **transparency** requirements for issuers of securities, further alignment is needed regarding the publication of information on sanctions applied to market participants, as well as home/host member state issues and cooperation between member states.

On **statutory audit**, amendments to the Law on the Audit of financial statements and auditing activities were adopted in September 2022 aimed at further alignment with the EU *acquis* in this area, regarding *inter alia* auditor certification and quality control of audit services. The law has specific requirements for the statutory audit of public interest entities. The Audit Public Oversight Body, established in 2018, supervises the formation, approval and registration of statutory auditors, and is responsible for quality assurance of audit services through a system of investigations and sanctions.

Chapter 7 – Intellectual property law

The EU has harmonised rules for the legal protection of intellectual property rights (IPR, copyright and related rights. Rules for the legal protection of IPR cover, for instance, patents and trade marks, designs, biotechnological inventions and pharmaceuticals. Rules for the legal protection of copyright and related rights cover, for instance, books, films, software and broadcasting.

Ukraine has **some level of preparation** on intellectual property law. **Good progress** was made during the reporting period, in particular with the launch of the National Intellectual Property Authority and the adoption of the Law on copyright and related rights, which aims at legislative alignment with the EU copyright *acquis*, and the IPR enforcement.

In the coming year, Ukraine should in particular:

- continue alignment with the EU *acquis* on copyright and industrial property rights, as well as on trade secrets;
- continue improving the functioning of collective management organisations and the payment of royalties to right holders;
- further improve the IPR enforcement system, in particular by combating piracy and counterfeit products and establishing an intellectual property court and leverage the collaboration with the European Union Intellectual Property Office.

In the area of **copyright and related rights**, in December 2022, the new Law on copyright and related rights was adopted, which got further amended in March 2023, together with the collective management organisation law. Concerns remain in particular regarding the term of protection, for copyright and related rights, the distribution of a fair remuneration between performers and producers of phonograms, the reproduction right and the rights of the broadcasting organisations. Problems also persist with the enforcement of the current copyright law regime, for instance with the collective rights management, in particular with public broadcasting organisations that do not pay royalties to performers and phonogram producers.

On **industrial property rights**, the Law on **patents** from August 2020, which incorporated the EU standards of legal protection of inventions and utility models into national legislation, is not fully aligned with the EU *acquis*. Ukraine's trade marks legislation is partially aligned with the EU *acquis*. The subsequent implementing rules still need to be adopted. Ukraine's legislation also includes EU standards on the legal protection of designs.

Ukraine needs to further align its domestic legislation with the EU *acquis* on compulsory licensing and the respective Protocol amending the World Trade Organization's Agreement on Trade-Related Aspects of Intellectual Property Rights. Ukraine does not have a specific law on

trade secrets, though there are some provisions on trade secrets in the Civil Code of Ukraine.

Ukraine's Law on IPR **enforcement** is broadly aligned with the EU *acquis*. However, shortcomings remain in combating piracy and counterfeit products, as Ukraine remains one of the four main transit points for shipments into the EU of counterfeit products. The competent authorities dealing with IPR enforcement include the National Police, the Bureau of Economic Security, the State Customs Service and the Office of Prosecutor General.

Following the adoption of the IPR institutional reform in 2020, the Ukrainian National Office for Intellectual Property and Innovations is the new institution responsible for intellectual property and has been operational since November 2022. It functions as the National Intellectual Property Office and as the coordination platform for dialogue on intellectual property rights with all stakeholders. The agency has been promoting the strengthening of institutional capacity through training courses. It developed a closer collaboration with the World Intellectual Property Organisation and the European Union Intellectual Property Office, with which it signed in 2021 a Memorandum of Understanding to enhance technical cooperation. It is a self-financed agency, through fees, and currently has 500 employees.

Currently, the system of courts with jurisdiction over IPR cases includes common courts (civil jurisdiction) and commercial courts (commercial jurisdiction). The Law on judiciary and status of judges from 2016 provides for the establishment of an intellectual property court. However, the appointment of the 21 judges is pending, as the High Qualification Commission of Judges remained non-operational until 2022.

Chapter 8 – Competition policy

EU rules protect free competition. They include antitrust rules against restrictive agreements between companies and abuse of dominant position, and also include rules on concentrations between companies which would significantly impede effective competition. EU rules also set out a system of State aid control. Governments are only allowed to grant State aid if restrictive conditions are met, with a view to preventing distortion of competition.

Ukraine has **some level of preparation** in competition policy. During the reporting period, there was **limited progress** in the legislative alignment with the EU *acquis*. An amendment to the Law on the protection of economic competition was voted in in August 2023, which aims at further aligning that Law with the EU *acquis*. The Law on State aid remains suspended due to martial law, but this should not stand in the way of reforms in the policy area.

In the coming year, Ukraine should in particular:

- further align the legislative framework in the area of competition and State aid with the EU *acquis*, including by modifying the law on State aid to cover under its scope services of general economic interest (SGEIs).
- compile a reliable and comprehensive inventory of State aid schemes instituted before the establishment of the authority responsible for State aid control in Ukraine.

Antitrust and mergers

On the **legislative framework**, the Law on the protection of economic competition is to a large extent aligned with the EU *acquis*. However, certain gaps still remain. For example, that law does not clearly differentiate between economic and non-economic activities, lacks a clear *de minimis* rule, does not contain exemptions from the prohibition of concerted practices, and does not define the notion of 'abuse' and of 'dominant position'. An amendment to the Law on the protection of economic competition was adopted in August 2023. The law introduces a number

of changes aiming at further aligning the Ukrainian legislation with EU regime. Those changes include the introduction of a leniency and a settlement mechanism and rules on joint and several liability of undertakings for breaches of competition law.

On the **institutional framework**, the Anti-Monopoly Committee of Ukraine (AMCU) is responsible for implementing the Law on the protection of competition. It is an operationally independent authority financed by the national budget. It does not have the right to set priorities and reject complaints on the grounds of priority, while its powers to conduct effective inspections are limited. Some fundamental rights such as access to the file and hearing are also not fully in line with the EU rules. In addition, no party can bring a case for damages and stoppage of anticompetitive conduct directly before a domestic court based on a possible breach of competition rules that affects their interests. They must first apply and get a decision from the AMCU. The amendment to the Law on the protection of economic competition, introduces amendments to the hearing process before the AMCU, increases AMCU's powers of inspection and its ability to conduct unannounced inspections and increases the salaries of its employees,

State aid

On the **legislative framework**, the current Law on State aid transposes Articles 107 and 108 of the Treaty on the Functioning of the European Union and includes a notification and standstill obligation. Following the outbreak of the Russian war against Ukraine, that law was suspended under martial law. As a result, while the Law on State aid is suspended, State aid granting bodies have no obligation to notify to the AMCU new State aid and proposals to amend the terms of State aid already granted. Furthermore, State aid granted while the Law on State aid is suspended is considered compatible aid.

On secondary legislation, Ukraine approved legislation during the reporting period on the recovery of illegal State aid and guidelines on State aid for culture and support of cultural heritage.

On the **institutional framework**, even before the suspension of the Law on State aid, the enforcement of State aid rules, in particular as regards on notifications, had been challenging, as granting bodies in the government had not consistently notified State aid measures to AMCU. As a result, AMCU was not able to compile a complete inventory of State aid schemes, instituted before AMCU was established. Moreover, the *de minimis* State aid regime is not working well due to a lack of efficient control of the respective thresholds.

Ukraine also needs to do more to improve transparency in the transactions between the State and public undertakings/ State-owned enterprises, aligning its legislation more closely with the directive on the transparency of financial relations between Member States and public undertakings.

Liberalisation

Ukrainian competition and State aid legislation is fully applicable to public undertakings and undertakings with special or exclusive rights. However, according to the Law on State aid, services of general economic interest (SGEIs) are not covered by the State aid discipline. Ukraine should therefore align the Law on State aid to cover under its scope.

Chapter 9 – Financial services

EU rules aim at ensuring fair competition among, and the stability of, financial institutions, namely banking, insurance, supplementary pensions, investment services and securities markets. They include rules on authorisation, operation and supervision of these institutions.

Ukraine has **some level of preparation** in the area of financial services. Despite focusing on maintaining macro-economic stability, Ukraine has made **some progress** in the reporting period by starting to unwind some emergency measures, implementing the *acquis* on corporate governance in banks, conducting risk-based supervision of banks and introducing legislation to promote sustainable and digital finance.

In the coming year, Ukraine should in particular:

- prepare an asset quality assessment of the banking sector;
- strengthen the regulatory powers of the National Securities and Stock Market Commission, in line with the principles of the International Organisation of Securities Commissions;
- continue efforts in alignment with the EU *acquis*, related to the regulation of banking and insurance sectors (including bank resolution and bank deposits guarantee schemes) and the regulation of securities markets, investment funds and investment services.

On **banking and financial conglomerates**, significant reforms are envisaged under the current IMF programme. A first step is to unwind the emergency measures introduced under martial law. These are causing the most distortions and hampering effective financial system operations and oversight. Some steps have already been taken, such as resuming the count of loan days past due in June 2022, introducing a procedure under martial law in October 2022 to resolve insolvent systemic banks, and submitting a draft law in March 2023 to improve the procedure for withdrawing non-systemic banks from the market under martial law. An asset quality assessment of banks will be necessary to evaluate the health of the banking sector in Ukraine and develop an effective strategy to address non-performing loans.

During the reporting period, Ukraine proceeded with implementing the Law on improving corporate governance in banks and other operational issues of the banking system from 30 June 2021 to align with the EU capital requirement rules. The National Bank of Ukraine (NBU) developed draft regulations on the organisation of the internal liquidity adequacy assessment process and on the procedures for calculating the minimum amount of regulatory capital as well as the leverage ratio.

In 2022, the NBU conducted risk-based banking supervision in line with the guidelines of the European Banking Authority on common procedures and methodologies for the supervisory review and evaluation process and the recommendations of the Basel Committee on Banking Supervision.

On **insurance and occupational pensions**, the main rules of the new Law on insurance, which are aligned with the Solvency II Directive, will take effect on 1 January 2024. The NBU has begun to draft the implementing legislation for the Law on insurance.

As for the **financial market infrastructure**, in preparation for a return to normality, a new financial sector development strategy was adopted on 19 July 2023 to prepare for a safe and prompt unwinding of financial sector emergency measures, while restoring accounting and prudential norms.

On the **securities markets and investment services**, long-standing gaps remain in the powers of the National Securities and Stock Market Commission (NSSMC) relative to international standards. The authorities have committed to amend the NSSMC Law following technical assistance from multiple international finance institutions in order to strengthen the NSSMC mandate in line with the standards and principles of the International Organization of Securities

Commissions. A Credit Unions Law was adopted on 14 July 2023, which is largely in line with EU legislation.

On **sustainable and digital finance**, the National Bank developed its Sustainable Finance Development Policy 2025, to further integrate sustainability considerations into the financial sector of Ukraine, which foresees the integration of environmental and social risks management into financial institutions' activities and the mandatory disclosure by financial institutions of their activities' sustainability level. A new Law on payment services, which came into force on 1 August 2022, has expanded the list of entities with the power to issue electronic money. It comprises banks, electronic money institutions, branches of foreign payment institutions, postal operators, the NBU, public authorities and local self-governments. In addition, the NBU Resolution from 29 September 2022 approved the Regulation to set up the procedure for issuing and using e-money for transactions. The Regulation also establishes requirements for issuers of electronic money and puts in place restrictions on the use of electronic money. A law on virtual assets was adopted on 17 February 2022, but will enter into force only after relevant amendments to the Tax Code of Ukraine.

During the reporting period, it was agreed that Annex XVII to the EU-Ukraine Association Agreement, which covers the *acquis* on financial services, will be comprehensively updated. The aim is to obtain internal market treatment for this sector in future. Based on the agreed update of the financial services legislation, Ukraine will need to pursue further alignment with the EU *acquis*.

Chapter 28 – Consumer and health protection

EU rules protect consumers' economic interests and in relation to product safety, dangerous imitations and liability for defective product. The EU also ensures high common standards for tobacco control, blood, tissues, cells and organs, and medicines for human and veterinary use. The EU also has rules for upholding patients' rights in cross-border healthcare, and in preparing for and responding to cross-border health threats including communicable diseases.

Ukraine has **some level of preparation** in consumer and health protection. Over the reporting period, **limited progress** was made on alignment with the EU *acquis*.

In the coming year, Ukraine should in particular:

- further align national legislation with the EU consumer protection *acquis*;
- adopt a health information system strategy;
- adopt the national health security action plan to address threats of biological, chemical, environmental and unknown origin; approve and start implementing the 2023-2025 national action plan on antimicrobial resistance.

Consumer protection

On **horizontal aspects**, Ukraine's consumer legislation is partly aligned with the *acquis* on consumer rights, unfair contract terms, unfair commercial practices, price indications, package travel and linked travel arrangements, the sale of goods, digital content and services. It is also partly aligned with the *acquis* on product safety. It is not aligned with the *acquis* on representative actions and on timeshares, and does not address the latest changes to EU consumer legislation introduced by the EU Directive 2019/2161.

Ukraine's State Service on Food Safety and Consumer Protection is the central government body responsible for consumer safety and protection, market surveillance and advertising rules. As of 2020, the National Bank of Ukraine, the Office for Financial Services Consumer Rights

Protection and the National Securities and Stock Market Commission are responsible for protecting consumer rights in financial services in the areas of banking, and capital and commodity markets. To further align the legislation with the EU *acquis*, the law on protection of consumer rights was adopted in the reporting period, but has not yet entered into force. It introduced the concept of electronic trading platform (marketplace) and an electronic product comparison service (price aggregator), and authorised the State Consumer Service and internet service providers to restrict access to fraudulent trading websites.

Ukraine does not have an alternative dispute resolution system in place in line with the EU *acquis* to enable consumers to resolve disputes with traders out of court. As for out-of-court consumer dispute resolution for financial services, the Office for Financial Services Consumer Rights Protection currently fulfils certain responsibilities.

On **product safety**, the legal basis for market surveillance is the Law on state market surveillance and control of non-food products and the Law on general non-food product safety, which are partly aligned with the EU *acquis*. Ukraine's market surveillance risk assessment methodology was developed on the basis of the EU Rapid Information System 'RAPEX' guidelines⁸.

On **non-safety-related issues**, there was some progress on alignment with the *acquis* on the payments market. The Law on payment services was also amended in April 2023, strengthening requirements for advertising and information disclosure during the provision of services in the payment market.

Public health

Ukraine is implementing its 2023 public health strategy. The adoption of the Law on public health and its implementing legislation saw some progress, but they remain partly aligned with the EU *acquis*, for example in communicable and non-communicable diseases, and cross-border health threats.

On access to healthcare, entitlement to publicly financed health services is based on citizenship and permanent residence. Refugees are entitled to the same health services as Ukrainian nationals, but irregular migrants and asylum seekers are entitled to emergency care only and must pay the full cost after treatment. Certain professional categories have additional entitlements funded by the government. This fragments the public funds allocated to health and results in unequal access to healthcare. The main barriers that people face while seeking healthcare are the cost of medicines and treatment, waiting times and transport.

Despite launching the **e-health** system, including e-prescription, there continues to be fragmentation and overlaps in health data. Ukraine lacks a health information system strategy, and the legal framework needs to be completed. A lack or limited quality of disaggregated health-related data is one of the key systemic issues that affects the planning and policymaking processes as well as the implementation of health programmes.

Ukraine's legislation is partly aligned with the *acquis* on **tobacco control**. It has ratified the WHO Framework Convention on Tobacco Control and has achieved significant progress on its implementation. However, it has not yet ratified the WHO Protocol to Eliminate Illicit Trade in Tobacco Products.

On **communicable diseases and serious cross-border health threats**, Ukraine's legislation is partly aligned with the EU *acquis*. Implementing legislation still needs to be drawn up to

⁸ The RAPEX system is now called Safety Gate.

ensure effective prevention, preparedness (for example, there is no unified epidemic preparedness plan) and response plan.

Ukraine's epidemiological surveillance systems are based on key EU principles but need to be improved to ensure integration with the EU early warning and response system. A national health security action plan to help address threats of biological, chemical, environmental and unknown origin has yet to be adopted. Vaccination coverage remains significantly below the WHO global recommendations, also due to disruptions caused by the war.

The national 2023-2025 action plan on antimicrobial resistance is pending approval. There is a need to strengthen and ensure interoperability between health and veterinary sectors and food/safety sectors on antimicrobial resistance and improve overall preparedness and response planning.

The 2030 action plan on **non-communicable diseases** addresses risk factors, services and prevention activities. However, monitoring rules are not aligned with global non-communicable disease targets. The national cancer registry is harmonised with international registries, but there is no dedicated cancer screening programme for the early detection of cancer apart from six free cancer examinations in the national programme of medical guarantees (mammography, esophagogastroduodenoscopy, colonoscopy, bronchoscopy, cystoscopy and hysteroscopy). There is no monitoring in place for the early detection of cervical and breast cancer.

On **blood, tissues, cells and organs**, national legislation is partly aligned with the *acquis* on blood, with further alignment necessary for instance on blood safety. Responsibilities are shared between the Ministry of Health and various state bodies to ensure policy implementation, licensing and control functions. The traceability and reporting system for blood donations is not yet fully developed. Ukrainian legislation is not aligned with the *acquis* on cells for medically assisted reproduction. It also does not regulate inspections of assisted reproduction centres or standards of quality and safety of human organs intended for transplantation. Ukraine has launched a transplantation development programme.

The law on medicines that will enter into force 30 months after the end of martial law introduced important changes to previous legislation on medicines for human use. When in force, it will be partly aligned with the EU *acquis*. Ukraine does not yet fully adhere to international standards on the quality, safety and efficacy of medicines. It is not aligned with the *acquis* on **medicines for veterinary use** but is partly aligned with the *acquis* on **medical devices** and on *in vitro* medical devices.

National legislation is partly aligned with the *acquis* on **cross-border healthcare**. There is no automatic reimbursement of healthcare costs for treatment received abroad unless it is impossible to receive the required care from healthcare institutions in Ukraine and an application has been submitted for state funding. There is no separate legislation for healthcare provided to EU nationals.

On **nutrition and physical activity**, healthy lifestyle and disease prevention could play a more prominent role while monitoring could be strengthened.

Corruption in medical service provision and medical education and out-of-pocket payments in the public healthcare system remain a cause for concern. There is a need to strengthen mechanisms to monitor healthcare service delivery and patient compliance management. The complaint monitoring mechanism has the potential to become an effective tool for preventing and investigating corruption but is not widely known. Once operational, the e-stock system

should provide a further useful tool for improving transparency on the supply of medicines across the country.

CLUSTER 3: COMPETITIVENESS AND INCLUSIVE GROWTH

This cluster covers: digital transformation and media (Chapter 10); taxation (Chapter 16); economic and monetary policy (Chapter 17); social policy and employment (Chapter 19); enterprise and industrial policy (Chapter 20), science and research (Chapter 25); education and culture (Chapter 26); and the customs union (Chapter 29).

There is a good level of preparation in Ukraine in the area of customs union, where there was good progress in terms of alignment with the EU *acquis*. The chapter on digital transformation and media, where numerous regulatory acts focusing on implementation of main EU principles have been adopted is moderately prepared/has a good level of preparation. There is a moderate level of preparation in the chapters economic and monetary policy, and science and research. Ukraine has some level of preparation in education and culture, taxation as well as enterprise and industrial policy. Ukraine is at an early stage of preparation in social policy and employment. Ukraine has made some progress in the area of taxation, where a law introducing the OECD standard on the automatic exchange of information on financial accounts was adopted. There was limited progress in enterprise and industrial policy as well as social policy and employment. This cluster and the reforms concerned are closely linked to the ability and capacity for recovery and reconstruction. Reforms must be pursued to increase competitiveness and build a sustainable and inclusive economy.

Chapter 10 - Digital transformation and media

The EU supports the smooth functioning of the internal market for electronic communications, electronic commerce and audiovisual services. The rules protect consumers and support the universal availability of modern services.

Ukraine **is in between moderate and a good level of preparation** in the domain of digital transformation and media. It made **good progress** in this area during the reference period.

In the coming year, Ukraine should in particular:

- achieve full alignment with EU roaming legislation;
- ensure the necessary financing and human resources for enacting the legal rules on expansion of the Regulator's competencies (both telecommunications and media regulator) and for the performance of the central executive bodies in the area of electronic communications;
- further align with the EU Directive on security of network and information systems (NIS).

On **electronic communications and information technologies**, alignment with the EU enforcement practices in the digital sector is based on core legislation, i.e. the Law on electronic communications and the Law on the national commission for the state regulation of electronic communications, radio frequency spectrum and provision of postal services ('the Law on regulator'). These two core laws are approximated with Directive (EU) 2018/1972, which establishes the European Electronic Communications Code. In particular, Article 5 of this Directive ensures that the legal status of the regulatory body in electronic communications, with its powers and independence, is fully compliant with European approaches.

The regulator, as a newly established national regulatory authority, **is a legally distinct and functionally independent institution with appropriate decision-making powers**. These include exclusive responsibilities to carry out regulatory tasks, adopt binding decisions and

issue relevant legal and normative acts. Full implementation of the two core laws implies adoption of a series of secondary regulations. During the reporting period, numerous regulatory acts have been adopted. These focus on implementation of the main EU principles, including transparency and general authorisation together with numbering and radio spectrum.

Due to **financial constraints in general**, the 2023 budget law provides the regulator with only limited financing. This makes it difficult for it to perform its functions as defined by the Law on regulator. The authority of the central executive body in the areas of electronic communications and radio frequency spectrum, the State Service of Special Communications and Information Protection of Ukraine, faces similar challenges.

In light of current security-related constraints related to the Russian war of aggression, Ukraine has not yet **implemented the acts related to the regulatory framework for radio spectrum policy**, in particular the release of the 700 MHz band from TV broadcasting for mobile communications.

Ukraine has a well-advanced **e-government** system, where people have easy access to public services. The government launched its vision for electronic public service design and delivery known as ‘The State in a Smartphone’ in 2019. It resulted in the rapid development of electronic services and has proven its resilience and adaptability throughout the war. Digital governance has increased the efficiency and transparency of the government and facilitated government-citizen dialogue. The unified web portal for electronic services, Portal Diia, enables access to the most popular electronic **public services** (120 in total). Electronic public services are also available in the Diia mobile application (25 services) as well as on other web resources of public authorities. The mobile application is used by 17.3 million users and installed on more than 32 million devices. UA should continue seeking alignment with both the European Interoperability Framework (latest revision in 2017) and the Interoperable Europe Act (2022).

After updating Appendix XVII-3 of Annex XVII to the Association Agreement/Deep and Comprehensive Free Trade Area, Ukraine has launched a process to put in place legislation relevant to EU roaming that would align Ukraine’s legislation with the **EU telecommunications acquis**. Ukraine has the prospect of joining the EU’s ‘Roam like at home’ scheme if it implements the EU roaming regulation and other relevant legislation subject to a decision granting internal market treatment.

In the area of **electronic identification and trust services**, Ukraine has a high degree of alignment with the EU requirements (eIDAS Regulation). In January 2021, the EU and Ukraine adopted a joint work plan for cooperation on electronic trust services with a view to a possible agreement based on approximation with EU legislation and standards. While Ukraine decided to legally recognise – on an experimental basis – qualified electronic signatures originating in EU Member States on 22 November 2022, the Commission published tools (Third Countries’ trusted list) on 25 January 2023 that facilitate the validation of electronic signatures or seals created in third countries, as advanced electronic signatures and seals in EU Member States. Ukraine is the first ever third country included in this list. On 1 December 2022, the Ukrainian parliament adopted the Law amending certain legislative acts on ensuring the conclusion of an agreement between Ukraine and the European Union on mutual recognition of qualified electronic trust services and implementation of the European Union legislation in the field of electronic identification. It provides for the obligatory conformity assessment of qualified trust service providers by the independent bodies according to a certification model, similar to that of the EU.

Ukrainian **open data** policy supports the reuse of open data by both the public and private sector. Ukraine has achieved a high level of transposition of the Open Data Directive. The Ministry of Digital Transformation drafted a new open data strategy in June 2022. According to the EU Open Data Maturity Report 2022, Ukraine ranks second (after France) in the overall index, and is also the best performer among the candidate countries.

Ukraine's National Security and Defence Council is implementing a national **cybersecurity strategy**. Its computer emergency response team, CERT-UA, has received international accreditations and is taking steps within overall framework of the EU-Ukraine cyber dialogue towards closer institutional cooperation with EU counterparts, including the European Union Agency for Cybersecurity and CERT-EU. Ukraine adopted the regulations to exchange on cyber incidents as of 9 February 2023 with the objective to move towards alignment with the requirements established at the EU level by the framework for high common level of cybersecurity across the EU (NIS 2 framework). Ukraine still has no 5G mobile network and does not seem for the moment to have plans to implement the EU toolbox for 5G security.

On **audiovisual policy**, Ukrainian legislation is broadly in line with the Audiovisual Media Services Directive (AVMSD). On 13 December 2022, Ukraine adopted the Law on media and on 30 of May 2023 amendments to the Law on advertising, which broadly align the national rules with the new provisions of the revised AVMSD (Directive (EU) 2018/1808). The law entered into force on 31 March 2023 and seeks to ensure the independence of media regulator. It also includes mechanisms to ensure the transparency of media ownership and freedom of reception and retransmission for both TV and radio broadcasting if their content meets the requirements of the European Convention on Transfrontier Television and of Ukrainian law. The main regulatory authority for audiovisual media services is the National Council of Ukraine on Television and Radio Broadcasting. Restrictions are in place for the retransmission of television programmes, with control over the content carried out by residents of a country recognised as an aggressor state or an occupying power, or those that systematically violate the requirements of Ukrainian legislation.

Both laws have stricter rules on retransmission of the audiovisual content of broadcasters established in the EU than the EU Audiovisual Media Services Directive. These are aimed at preventing Russian TV channels from retransmitting audiovisual content and advertising from EU Member States to Ukraine. They are considered necessary to protect Ukraine's information space in the current security climate, but will need to be addressed by the time Ukraine joins the EU.

On **the protection of minors**, content that can be harmful to the physical, mental or moral development of children and young people is regulated both for television and radio. While there are no safety-by-design or privacy-by-design principles embedded in the policy to protect children, there are examples of industry- and NGO-driven initiatives to address the issue of harmful content, including self-generated content. Awareness-raising activities are also organised as part of formal education. Media literacy has been integrated as a key component of the education system.

Chapter 16 - Taxation

EU rules on taxation cover value-added tax and excise duties and aspects of corporate taxation. They also cover cooperation between tax administrations, including the exchange of information to prevent tax evasion.

Ukraine has **some level of preparation** in the area of taxation. It has ensured continuity of tax administration and made **some progress** in this policy area during the reporting period.

On 20 March 2023, Ukraine adopted the law introducing the OECD standard on the automatic exchange of information on financial accounts (Common Reporting Standard), which is due to start in 2024. On 3 November 2022, Ukraine joined the OECD Multilateral Competent Authority Agreement on the exchange of country-by-country reports.

In 2023, Ukraine should in particular:

- make progress in terms of aligning legislation on VAT and excise duties;
- prepare the introduction of the general anti-abuse rule as part of the Anti-Tax Avoidance Directive;
- ensure the implementation of the automatic exchange of tax information with EU Member States in line with the OECD Global Standards.

On indirect taxation, Ukraine's VAT law is generally aligned with the EU VAT Directive. The standard VAT rate is 20%, with reduced rates of 0%, 7% and 14% for specific operations. A preferential VAT regime is applied to transactions involving the import of goods. VAT and excise duties on fuel and the simplified taxation, suspended at the beginning of the war, were restored. The VAT refund, which had been suspended, has been restored and has been fully automated. No VAT refund arrears have been reported as of April 2023.

Excise taxation is partially aligned with EU law. Alcohol and alcoholic beverages are classified and taxed based on EU rules, except for beer and beer mixes. Excise duties on energy products have a narrower scope and lower rates compared to the EU Directive. Further alignment is needed on VAT and excise duty on goods imported by individuals from third countries.

Ukraine has a tax warehousing system for alcohol, tobacco and energy products, but it does not comply with the EU duty suspension system. The system includes premises within the country's customs territory and mobile excise warehouses for fuel or ethyl alcohol on the customs territory of Ukraine under duty suspension. Excise tax is immediately due once excisable goods have been produced or imported, with the excise suspension regime not applied. The country needs to bring its excise warehousing system in line with the EU *acquis*. The system of electronic administration of the sale of fuel and ethyl alcohol monitors and controls the movement of taxed products within the territory of Ukraine.

In terms of **direct taxation**, residents are taxed on worldwide income, whereas non-residents are taxed only on their Ukrainian-sourced income. The standard tax rate of 18% applies to various types of income, including earnings (salary), benefits, foreign income and passive income, with a few exceptions. However, corporate income tax is not fully in line with the Merger Directive, Parent-Subsidiary Directive and the Interest and Royalties Directive. The cross-border transfer of assets within the same company may be subject to corporate profit tax. Exit taxation rules similar to those in Council Directive EU 2016/1164 and in the general anti-abuse rule as part of the Anti-Tax Avoidance Directive have not been implemented.

On **administrative cooperation and mutual assistance**, Ukraine has double taxation avoidance agreements with all EU Member States. It has also signed the Convention on Mutual Administrative Assistance in Tax Matters (OECD/Council of Europe). Parliament adopted the Law on automatic exchange of information on financial accounts, aligned with the EU Directive on Administrative Cooperation (DAC 2), on 20 March 2023. The first automatic exchange of information is scheduled for 2024, covering the period from mid-2023. Ukraine's legislation on base erosion and profit shifting (BEPS) implements the OECD BEPS Action 13 on Multinational Enterprises Groups Country-by-Country Reporting, largely aligning with the

EU DAC 4 Directive. Ukraine intends to use the OECD Common Transmission System for automatic exchange of information based on the common reporting standards and country-by-country standards. However, there is no central communication office for information exchange with EU Member States yet.

On **operational capacity and computerisation**, 95% of State Tax Service personnel are operational despite the ongoing war, with some working remotely. As of 3 April 2023, 63 taxpayer centres had temporarily stopped their activities, with taxpayers offered extraterritorial services. Thanks to EU support, the IT centre of the State Tax Service has been able to continue operating. Before the war, State Tax Service staff were recruited under the Law on civil service. However, there is a need to assess training needs and base the annual training programme on this assessment.

IT reforms in tax are guided by the IT reform strategy for the public finance management system, adopted by the Cabinet of Ministers in November 2021. A dedicated IT reform strategy for the State Tax Service is currently being finalised. The State Tax Service currently operates electronic tax administration systems as well as VAT tax invoices (ERPN) and excise invoice (ERAN) registration systems. Ukraine needs to establish connections to EU IT systems such as the Excise Movement Control System, the VAT Information Exchange System based on the Mutual Assistance Directives and the Recovery Directive.

Chapter 17 – Economic and monetary policy

EU rules require the independence of central banks and prohibit them from directly financing the public sector. Member States coordinate their economic policies and are subject to fiscal, economic and financial surveillance.

Ukraine **is moderately prepared** in the area of economic and monetary policy. As the Russian full scale invasion demanded extraordinary economic policy measures, **no progress** could be made in the policy areas. The Ukrainian authorities have taken comprehensive measures aimed at maintaining macroeconomic and financial stability in wartime, which required to deviate from standard practices. The policy approached has delivered stability.

In the coming year, Ukraine should in particular:

- prepare to return to inflation targeting and the flexible exchange rate regime;
- limit monetary financing of the state budget;
- prepare to return to medium-term budgetary planning from 2024.

In terms of **monetary policy**, the strategic goal of the National Bank of Ukraine (NBU) against the backdrop of the war is to maintain macroeconomic and financial stability. The NBU has been pursuing policies aimed at maintaining price and financial stability, by maintaining an adequate level of foreign currency reserves. In the face of high uncertainty and less effective conventional market instruments, the NBU continued to implement a fixed exchange rate regime coupled with capital controls under martial law as the main anchor for stabilising expectations and ensuring price and financial stability.

Martial law allows the NBU to take several temporary policy measures. These include allowing monetary financing and state budget support by purchasing securities issued by the government on the primary market as well as imposing limits on deposit withdrawals and restrictions on the repatriation of non-resident funds, given the need to provide an adequate response to the war and ensure the uninterrupted funding of the budget. From 16 June 2023, the NBU eased some of the restrictions to transfer funds abroad, if guaranteed by International Financial

Institutions and foreign export credit agencies, and from 21 June 2023 to service and repay new loans to non-residents. The NBU has ceased monetary financing since the start of 2023 and committed to abstaining from monetary financing going forward. The NBU also adopted a strategy on gradual easing of foreign currency restrictions, transition to greater flexibility of the exchange rate and return to inflation targeting.

Overall, the legislative framework ensures the functional, institutional, personal and financial independence of the NBU and it prohibits direct and indirect monetary financing of the public sector. In 2021, legislation was adopted that further strengthened the Central Bank independence, notably the operational independence of its different functions (e.g. supervision). The law contains a provision that the NBU must perform its tasks, operate and use its instruments without any external and public interference. However, it still provides for some level of engagement with the authorities by allowing mutual consultations between the NBU and the government. The legislative framework also allows either the President of Ukraine or the Rada to unilaterally remove a member of the governing body without judicial review, which weakens the protective measures against arbitrary dismissals. Furthermore, there is still scope to further streamline the eligibility criteria and experience requirements for appointments at the Council and Executive Board.

On **economic policy**, medium-term budget planning has become difficult due to the war. This includes setting key priorities for financing, establishing spending ceilings and outlining possible fiscal risks. Furthermore, transparency has been negatively affected, with much less comprehensive budgetary information being published. Ukraine has continued to forecast economic and social developments, although it became very challenging in view of the many uncertainties. Forecasting capacities remain rather weak, and there is no independent fiscal institution to evaluate the forecasts, scrutinise the budgetary assumptions or evaluate how previous forecasts performed. The government announced a return to medium-term budgetary planning as of the 2024 budget, and there have been some tentative steps to reform the accounting framework.

The main strategic document on economic policy is the Economic Security Strategy of Ukraine for the period up to 2025, which was approved by Presidential decree in August 2021. As part of its implementation, a transparent system of continuous monitoring of economic stability has been implemented, based on 34 indicators on the state of economic security with their critical limits and target benchmarks. These indicators are similar to those defined in the EU legal framework and are used for determining the presence of macroeconomic imbalances.

Ukraine does not report **general government sector data** in line with ESA 2010, as they base on the IMF's GFS Manual 2014, which differ substantially. At this stage, GFS or excessive deficit procedure statistics are not transmitted to Eurostat. The underlying statistical framework is therefore not aligned with ESA 2010 requirements and definitions, and accounting rules and procedures are not consistently applied across general government subsectors. In addition, the publication of statistical information has been largely disrupted while martial law is imposed.

Chapter 19 – Social policy and employment

EU rules in the social field include minimum standards for labour law, equality, health and safety at work and non-discrimination. They also promote social inclusion and social protection, and social dialogue at EU level.

Ukraine remains at an **early stage of preparation** in social policy and employment. Over the reporting period, it made **limited progress**.

In the coming year, Ukraine should in particular:

- adopt new framework legislation in the field of labour relations and occupational health and safety to bring it in line with applicable EU directives and ensure an enabling environment for bipartite and tripartite social dialogue and strengthen the capacities of social partners;
- develop and adopt a comprehensive de-institutionalisation reform of childcare and launch its implementation, considering the situation of displaced children;
- address shortcomings and further align with EU legislation on non-discrimination in employment.

On **labour legislation**, new laws were adopted in 2022 that govern labour relations and employee rights; they contain derogations (exemptions) applicable for the duration of martial law. Pending reforms, labour relations are still guided in general by an overarching labour code from 1971 that needs to be modernised and aligned with EU legislation.

Undeclared work is widespread, with almost one in five of all employed working in informal employment in 2021.

Enforcement of legislation by the State Labour Service, Ukraine's labour inspectorate, remains constrained by legislative restrictions to the powers of labour inspectors, which are not consistent with ILO Conventions 81 and 129 on labour inspections. The State Labour Service is being reformed but remains underfunded and has a high staff turnover. Under martial law, the powers of labour inspectors are mostly limited to information and advice, as inspections have been suspended.

While alignment with EU *acquis* on **health and safety at work** remains limited, steps have been taken during the reporting period. In 2023, the Ministry of Economy approved minimum requirements for safety and health signs at work and for the health and safety of workers in explosive environments. A resolution of the Cabinet of Ministers of January 2023 established a list of hazardous chemicals prohibited for production and use at work and the Ministry of Health approved minimum requirements for health and safety of workers exposed to electromagnetic fields and the limit and working levels of industrial vibration and the procedure for assessing the level of danger of the impact of vibration on the employee. Since 2020, the State Labour Service has reviewed occupational safety at companies in all regions of Ukraine to identify the most risk-prone sectors, developed regional occupational safety profiles and set up preventive work plans. There are no reliable statistics on workplace accidents, which remain severely underreported.

On **social dialogue**, a law on collective agreements was adopted in February 2023 and will enter into force six months after the cessation or cancellation of martial law. The National Tripartite Social and Economic Council suffers from high staff turnover, understaffing and a lack of clear duties and responsibilities. Since September 2022, its rotating presidency has not been renewed, creating a period of major inactivity. The government continues to hold consultations with trade unions and employers' organisations through their joint representative bodies. Capacity of social partners remains to be strengthened.

Ukraine's **employment policy** has yet to be harmonised with the relevant EU *acquis*, in particular with the relevant guidelines issued for the EU Member States. Ukraine has no separate strategy on employment. However, the strategy on economic development of Ukraine,

which runs until 2030, includes the strategic objective of increasing employment. There is no information available to assess its implementation, considering the big severe labour market distortion caused by the war.

The State Employment Service implements the national policy on employment, labour migration and social protection against unemployment. It administers unemployment benefits and supports jobseekers and employers alike. The service is being reformed to make it more responsive to jobseekers' and employers' needs. Active labour market measures include the introduction of a state programme to provide micro-grants to individuals so they can create or develop their own business.

Employment statistics are collected in accordance with International Labour Organization (ILO) standards but not provided to Eurostat. The invasion has had a massive impact on the labour market, with vast numbers of persons being internally displaced or having fled to other countries. The employment rate (20-64) stood at 64.8% in 2021. For women the rate was 59.3%. with a low and decreasing rate of participation among women. Youth unemployment (15-24 years) was 19.1% in 2021. Informal employment was estimated at 20% of all employed in 2021. Ukraine adopted a strategy and an action plan to reduce undeclared work, but it has stopped collecting data on it since the war.

On **social protection and inclusion**, there has been some progress in administering social insurance benefits and extending their coverage, while weak targeting and the low level of support has undermined the effectiveness of Ukraine's social protection expenditure in reducing poverty and inequality. In view of the considerable number of internally displaced following the outbreak of the Russian war of aggression against Ukraine, a strategy on internal displacement covering evacuation, integration and reintegration has been put in place. There are no developments on social inclusion, access to social housing and social service provision.

In 2022, Ukraine continued to strengthen the social protection of the most vulnerable segments of the population. The continuity of several types of social payments was ensured through a special system of centralised accrual during martial law. This allowed people who live in the territory of military operations and under occupation to accrue payments that could not be made. In addition, benefits received in the past were automatically extended for the period of martial law. Assistance schemes for internally displaced persons have also been introduced.

In January 2023, Ukraine started developing a unified information system for the administration of all social payments. In a first stage, individuals will be able to apply for housing subsidies and social security benefits centrally and online.

On childcare, there has been no progress on the de-institutionalisation of the childcare system, while the impact of the Russian war of aggression against Ukraine added more urgency to a fundamental reform of the existing system, as the reform adopted in 2017 has not led to substantial progress.

The government has adopted legal changes to **non-discrimination in employment and social policy**. They oblige employers to ensure equal opportunities for employees to conclude long-term agreements and inform them about suitable vacancies. Ukrainian law now prohibits any discrimination in employment that breaches equal opportunities or restricts any employee's rights, among others on grounds of race, skin colour, sex and gender identity, sexual orientation, age, health, disability, marital status or language. In August 2022, Ukraine approved rules of procedure on penalties for non-compliance with anti-discrimination legislation. The Ukrainian Parliament Commissioner for Human Rights (ombudsperson), as the main body for combating discrimination, remains under-resourced, with limited capacity to enforce its mandate in employment and social policies.

No official statistics exist on court cases dedicated to discrimination at work. An overview of court cases demonstrates, however, that discrimination is usually not among the main reasons for disputes (which mostly focus instead on returning to work or the payment of wage arrears). Specialised civil society organisations estimate that the level of rejected appeals against discrimination is high. Ukraine is still to adopt legislation obliging employers to prove the legality of their decision, action or inaction in discrimination-related court cases, as provided for in the national human rights strategy for 2021-2023.

On equality between women and men in employment and social policy, legislation does not create any barriers or impediments for men or women to occupy any position in any profession in the labour market, neither in the public or private sector. Already in 2017, legislation that prohibited women from practising some 450 professions was abolished, with some exceptions (such as ILO Convention 45, which forbids underground work in mines). In September 2020, Ukraine acceded to the Biarritz Partnership for Gender Equality. Changes to the Law on advertising adopted in May 2023 banned also discrimination on grounds of sexual orientation in advertising as well as gender stereotyping, sexism in job listings and advertising, introducing penalties for employers. In February 2022, all jobs in the Ukrainian armed forces, including combat roles, were opened to women. However, existing legislation on female employment does not address existing imbalances and female underrepresentation in certain economic areas. Legislation obliges employers to take measures in order to prevent and protect against sexual harassment and other forms of gender-based violence, but there is a lack of direct requirements or procedures for prevention and protection.

The consistent differences in wages between men and women are largely due to occupational segregation, i.e. differences in employment preferences, with more women working in sectors with relatively high educational requirements but lower wages, primarily in the public sector. Since a substantial part of the economy is informal, official wage statistics do not accurately reflect wage differences between men and women. Ukraine has no tax-benefit system in place to create similar financial incentives to work for both parents, while unpaid care and domestic work still fall mainly on women.

In August 2022, Ukraine adopted a state strategy to ensure equal rights and opportunities for men and women for the period up to 2030. In line with the operational plan for 2022-2024, the country has committed to prepare for the ratification of ILO Convention 190 concerning the elimination of violence and harassment in the world of work. Certain parts dealing with sexual harassment and gender-based violence are included in other legislation, but are not specifically dedicated to labour relationships.

According to the Ministry of Economy of Ukraine, the gender pay gap before the fully-fledged Russian invasion in Ukraine stands at 18,6%. . In May 2022, Ukraine presented the National Strategy and Action Plan to reduce the gender pay gap, address occupational separation, gender-based discrimination and harassment at work and close legal loopholes preventing the full application of the equal pay for equal work principle.

Chapter 20 – Enterprise and industrial policy

EU industrial policy strengthens competitiveness, facilitates structural change and encourages a business-friendly environment that stimulates small and medium-sized enterprises (SMEs).

Ukraine has **some level of preparation** in the area of enterprise and industrial policy, with **limited progress** made on alignment with the EU *acquis* during the reporting period.

In the coming year, Ukraine should in particular:

- develop mid-term priorities for SME development and take measures for improving the business environment and investment climate;
- adopt necessary legislation to align with Directive 2011/7/EU on combating late payment in commercial transactions.

On **enterprise and industrial policy principles**, in 2021 Ukraine adopted an overarching National Economic Strategy until 2030. It outlined long-term priorities for the development of Ukraine's economy and strategic measures in main sectors, including industry and entrepreneurship. Following the outbreak of the Russian war of aggression against Ukraine, the 2030 strategy has been largely overtaken by the National Recovery Plan (NRP), which specifies the urgent measures and investments needed to support the country's wartime economy and society. The NRP is a strategic document that sets out the recovery/development goals of Ukraine until 2032, focusing on stimulating resilience, recovery, modernisation and growth. It stresses the need to align Ukraine's recovery and modernisation with the EU principles of green transition and digital transformation, prioritising private investment and nationwide entrepreneurship and SMEs as an important pillar of the new economic model.

The reconstruction of industry will have to be accompanied with measures directed towards improving the business environment, reducing the informal sector, and rolling back the state presence in the economy.

While Ukraine's SME Strategy and Action Plan expired in 2020, it included the strategic framework for SMEs in alignment with the Small Business Act principles. In the OECD's SME Policy Index 2020, Ukraine registered significant progress since measurements started in 2016. The next assessment is scheduled for 2024. As per the 2020 Index recommendations, Ukraine should ensure the sustainability of its institutional and regulatory framework for SME policy, step up deregulation efforts and ensure the creation of a level playing field for SMEs. In addition, streamlining support for SME greening and internationalisation and providing a range of business development services will help improve the competitiveness of the Ukrainian industry.

A number of SME digitalisation and deregulation measures have been initiated to improve the **regulatory and operational environment** for SMEs. Regulatory impact assessments are regularly conducted and include an SME test. The Unified State Electronic System of Permit Documents (eLicense) is being created to digitalise administrative services in the field of licensing, and the ePermit system is also set to be developed by the end of 2023.

Ukraine has used the same definition for SMEs as the EU since 2012. It is enshrined in the Commercial Code of Ukraine and widely applied in regulating economic activity.

On **enterprise and industry policy instruments**, the Ukrainian legislation is not aligned with EU legislation on the rules of Directive on combating late payment in commercial transactions. There is no dedicated legal basis to combat late payment in commercial transactions.

Due to the absence of a current stand-alone SME strategy, the government agencies have been operating on an *ad hoc*, reactive and short-term basis during both the COVID-19 pandemic and the war. Ukraine has implemented separate programmes to support SMEs during the war. These cover aspects such as business relocation, financing and simplification of taxation. On entrepreneurship education and business support, the national Diia.Business support activities, including the national multidimensional portal and a network of offline centres, have been increasingly important. The Diia.Business portal contains free educational courses on various aspects of starting and managing business. It also contains online services such as business

registration, choosing a taxation system, obtaining licences in the sphere of economic activity and public procurement. Digital competence is included as a key competence in the national education curricula. Female entrepreneurship is supported by several tools and women-specific programmes promoted on Diia.Business.

Ukraine signed an association agreements for participation in the EU's Horizon Europe and Creative Europe programmes and signed an affiliation agreement for the Single Market Programme on 3 February 2023, which has meanwhile been ratified. Ukraine's business matchmaking and integration into EU and global value chains are supported by eight organisation members of the Enterprise Europe Network consortium in Ukraine, five organisations that administer the Erasmus for Young Entrepreneurs programme and about 40 clusters that participate in the Ukrainian Cluster Alliance and have access to the European Cluster Collaboration Platform instruments.

As regards **sector policies**, the updated Partnership Roadmap for 2023–2024 in the area of raw materials was endorsed on 19 May 2023. Good progress of implementation of the initial Partnership Roadmap 2021-22 was reported despite the war conditions.

Chapter 25 – Science and research

The EU provides significant support for research and innovation. All Member States can participate in the EU's research and innovation programmes and benefit from them, especially where there is scientific excellence and solid investment in research and innovation.

Ukraine is **moderately prepared** in the area of science and research. It participates in the EU research and innovation (R&I) programmes and seeks greater integration into the European Research Area and the New European Innovation Agenda. Overall, **limited progress** was made towards alignment with the EU *acquis* during the reporting period.

In the coming year, Ukraine should in particular:

- intensify effort to integrate into Horizon Europe, by taking steps to establish an office in Ukraine, appointing national contact points and taking part in the relevant governance structures;
- adopt the strategy for scientific and technological development;
- develop regional smart specialisation strategies.

Ukraine has taken steps to modernise its R&I policy following the recommendations of the Horizon 2020 Policy Support Facility. The country has set up two national advisory councils (for science and technology development and for innovation) and the National Research Foundation.

Russia's war of aggression against Ukraine is aggravating the long-term trend of under-investment in R&I by destroying infrastructure and human capital. 35% of research infrastructure had been damaged or destroyed by March 2023 and 25% of the scientific workforce had left the country. In addition, public investment in science and innovation has been cut to a minimum. As of 2020, Ukraine's research spending shrunk to less than half of its 2003 level. In 2021, Ukraine's research spending as a share of GDP stood at 0.29% of GDP, which is less than half of its 2003 level.

The Ukraine Start-up Fund was set up to strengthen Ukraine's innovation capacity and business collaboration. There is currently no national technology transfer roadmap. According to the European Innovation Scoreboard 2022, Ukraine is regarded as an emerging innovator,

performing at 31% of the EU average. On innovation the performance gap with the EU is increasing.

The country has a legal basis for the design of smart specialisation strategies and their inclusion in overarching regional development strategies has been obligatory since 2021. While the actual development of strategies has been interrupted by the war, several Ukrainian regions expressed interest in restarting the process in 2023.

On cooperation with the EU, Ukraine is revising the roadmap for integration into the European Research Area and has been making progress on some of its priorities such as gender equality, open science (the National Open Science Plan was adopted in October 2022) and reforming the research assessment system. However, Ukraine's participation in European Research Area governance structures is still limited. In relation to the New European Innovation Agenda, Ukraine has developed a strategy for the development of the innovation sector and has been invited to join the European Innovation Council Forum and the Coalition of the Willing to exchange on innovation policies and initiatives.

Horizon Europe and Euratom remain the cornerstones of support for Ukraine's R&I sector. By August 2023, 79 grants had been signed totalling EUR 22.3 million. In addition, Ukraine benefits from dedicated initiatives under the Marie Skłodowska-Curie Actions programme, the European Innovation Council, the EU Cities Mission and in the areas of research infrastructure. The opening of the Horizon Europe office in Kyiv will help make the most of the available opportunities. Ukraine should also swiftly appoint the Horizon Europe national contact points (NCPs) to strengthen participation in the programme.

Ukraine has 39 intergovernmental agreements for R&I cooperation with 35 countries. In 2022, Ukraine cooperated with eight partner countries via 79 joint international research projects.

Chapter 26 – Education and culture

The EU supports cooperation in education and culture through funding programmes and the coordination of Member State policy through the 'open method of coordination'. The EU and the Member States must also prevent discrimination and ensure quality education for children of migrant workers, including those from disadvantaged backgrounds.

Ukraine has **some level of preparation** in the area of education and culture. The education system and youth policy are broadly aligned with EU objectives. Ukraine's cultural policy reflects the general priorities of the New European Agenda for Culture. Ukraine has a good level of cooperation with its European partners on sport. The country is broadly aligned with EU policy on training and qualifications. **Some progress** has been achieved in all these areas.

In the coming year, Ukraine should in particular:

- develop a plan for a relevant statistical data collection, analysis and sharing mechanism for education and training;
- start implementing a plan to optimise the network of education institutions;
- adopt legislation to modernise and regulate professional education (vocational education and training).

Education and training statistics are not widely available, and data is collected and published with a considerable time lag. According to World Bank data, public spending on education amounted to 5.4% in 2020 (the EU MS average was 5% of GDP).

The **network of education institutions**, including higher education institutions, needs to be optimised to respond to the demographic changes in Ukraine and improve the quality of education. The Russian war of aggression poses major challenges, including large-scale destruction of education facilities. This severely hampers access to education in the affected areas. Digital learning centres have allowed some students to resume their studies, but learning outcomes and the psychological state of students and teachers have suffered greatly.

Ukraine has adopted a set of laws and policies to provide education principles and standards in accordance with EU standards. The New Ukrainian School reform aims at introducing content education based on key competencies, including green and digital. The new standards in primary and basic secondary education define 11 key competencies that correspond to the EU key competencies for lifelong learning. The New Ukrainian School is being rolled out with some delays in terms of teacher training and the printing of new textbooks.

The Law on education establishes the structure of the **education system** and gives a significant role to the Ukrainian National Qualifications Framework, lifelong learning and education based on key competencies. In February 2023, the Commission published a report on the comparison between the European Qualifications Framework and the Ukrainian qualifications framework. The report demonstrates how Ukrainian qualifications compare with the European ones and support the recognition of Ukrainian qualifications and can help further studies and employment. Ukraine became a member of the Advisory Group of the European Qualifications Framework and can start preparing for the referencing to the European Qualifications Framework.

An Arrangement for Cooperation on Education between the European Commission and the Ministry of Education and Science of Ukraine was signed in June 2023. Both parties agreed to strengthen and further develop cooperation and dialogue in this field. The Commission has also opened up participation in the Eurydice Network to the Ministry of Education and Science of Ukraine to get a deeper understanding of the respective education systems and their cooperation in education.

Regarding the issue of national minorities in education, where Ukraine needs to fully implement the recommendation of the Council of Europe's Venice Commission on the education law, implement those on the State language law and address the remaining recommendations of the Venice Commission Opinion of June 2023 and the follow-up Opinion of October 2023, this will continue to be monitored as part of Chapter 23 on judiciary and fundamental rights.

The **VET system** still operates under a law from 1998 that needs modernisation to among others merge VET and pre-tertiary levels of education into one joint professional education system. Meanwhile, the development of the VET sector is guided by a dedicated strategy and concept with the aim of making VET more attractive and relevant. Work-based learning plays a significant role (70%) in dual VET programmes. However, the involvement of businesses remains low, and the quality of training, materials and technical equipment of VET institutions does not fully meet the requirements of employers and students.

Validation of non-formal and informal learning is well established and implemented. The National Agency for Qualifications accredits qualification centres that assess professional qualifications independently, including the validation of non-formal and informal learning.

On **higher education**, Ukraine is a member of the Bologna Process and has ratified the Lisbon Recognition Convention. It has made progress on the key European Higher Education Area commitments, effectively engaging in EU higher education policy and transnational cooperation. At the same time, the implementation of the Strategy for the Development of

Higher Education in Ukraine for 2021-2031 has been slow due to the disruption and lack of resources caused by the war. In May 2023, it made some progress in improving the mechanism of quality assurance of higher education. Ukraine participates in the international dimension of the Erasmus+ programme. Around 30 higher education institutions from Ukraine have joined European Universities Alliances in 2023, as associated partners.

In July 2023, Ukraine nominated its representatives to the European Education Area Working Groups 2021-2025. It is also in the process of joining the Eurydice Network.

Youth policy is governed by the law on basic principles of youth policy, the strategy on the development of youth policy in Ukraine until 2030 and the state-targeted social programme Youth of Ukraine for 2021-2025. The Ukrainian Volunteer Service has established an effective national volunteer platform. However, activities on youth employment partnerships, youth participation, skills development of disadvantaged young people and youth entrepreneurship for the digital and green economy need to be implemented in a more visible way.

Ukraine's approach to **cultural policy** broadly reflects the general priorities of the New European Agenda for Culture. At the strategic level, Ukrainian cultural policy focuses on three strands: (1) the creation of conditions for the active involvement of Ukrainian actors into pan-European cultural processes, (2) the promotion of European values, and (3) the strengthening of culture ties with the EU Member States. Its strategy for the development of culture is due for revision in 2025. The law on culture has been amended to include rules on the digitalisation of cultural heritage assets' registers. The strategic elements are further translated into three concrete policy priorities: (1) designing and implementing a new approach for a public model of cultural infrastructure, (2) safeguarding cultural heritage, and (3) fostering networking among the internationalisation of Ukrainian cultural and creative sectors, which includes the association to Creative Europe. The European Capital of Culture is an additional priority.

On **sport**, Ukraine has continued to cooperate with European partners, including in the European Week of Sport Beyond Borders and in the Council of Europe's sport partnership.

Chapter 29 – Customs union

All EU Member States are part of the EU customs union and follow the same customs rules and procedures. This requires legislative alignment as well as adequate implementation and enforcement capacity, and access to the common computerised customs systems.

Ukraine has **a good level of preparation** in the area of the customs union. Despite the ongoing military aggression, Ukraine has made **good progress** in the customs union area in the reporting period, especially in terms of alignment with the EU *acquis*. Ukraine is connected to the EU customs information system and is using the new computerised transit system (NCTS). Ukraine has been a contracting party of the Convention on a Common Transit Procedure, which is 100% based on the Union transit system, since 1 October 2022.

In the coming year, Ukraine should in particular:

- make progress in areas related to customs procedures, customs debt and the application of guarantees as well as simplification of customs formalities, and with the development of a new Customs Code;
- ensure the timely implementation of NCTS Phase 5 and expand the use of the common transit procedure as well as the authorised economic operator (AEO) framework;
- adopt legislation criminalising large-scale smuggling of all goods and build up administrative capacity to implement this.

Ukraine's Customs Code, adopted in 2012, largely aligns with the Union Customs Code, including amendments to transit, AEOs and intellectual property rights. In 2022, the Customs Code was amended twice to simplify customs formalities, decision-making procedures, and enable accession to the common transit system. The government adopted and implemented a law aligning the classification of goods with the harmonised system and combined EU nomenclature in October 2022 .

Further efforts are needed to raise the usage of the national AEO programme and finalise the related IT system for mutual recognition with the EU AEO programme.

Further alignment of the Customs Code with the Union Customs Code is needed, particularly in the areas of customs procedures, simplification of customs formalities, pre-departure information and the enforcement of intellectual property rights.

The IT system for registering traders' liabilities needs to be updated.

The pre-war simplifications for customs clearance, extended until November 2023, should be lifted to promote the use of NCTS and grant benefits to compliant AEOs, while strengthening risk-based customs controls and improving inland controls. Returning operative intelligence rights to the State Customs Service (SCS) is necessary to improve its effectiveness.

Ukraine became a contracting party of the Convention on a Common Transit Procedure and the Convention on the Simplification of Formalities in Trade in Goods on 1 October 2022, but the number of common transit movements remains modest.

Despite the ongoing war and suspension of operations at several regional customs offices and border crossing points along the eastern border, the SCS **has largely maintained its operational and administrative capacity**. However, a comprehensive reform is necessary to transform it into a modern, efficient, transparent and corruption-free institution. This includes recruiting stable and full-fledged leadership through transparent and merit-based selection. Improving human resources management with an appropriate training framework is crucial, alongside strengthening integrity and anti-corruption measures.

The SCS IT infrastructure needs a significant upgrade as existing systems for customs clearance and risk management are outdated and non-compliant with security requirements. While a strategic plan for digitalisation of the SCS was adopted in 2022 and is being implemented, the ongoing war limits financial resources and makes IT reform dependent on external funding. A long-term national strategic plan for digital development of SCS until 2026, based on the multi-annual EU customs strategic plan, should be finalised and adopted. A plan for the implementation of EU-related IT systems needs to be developed.

Criminalisation of large-scale smuggling and accession to the Protocol to Eliminate Illicit Trade in Tobacco Products, along with empowering the SCS to investigate cases of smuggling, are needed. Strengthening intellectual property rights will require the government to establish a legal framework and develop necessary IT tools. Developing risk management for post-clearance control and customs audit, as well as introducing risk-based customs valuation, needs to be addressed.

CLUSTER 4: THE GREEN AGENDA AND SUSTAINABLE CONNECTIVITY

This cluster covers: transport policy (Chapter 14); energy (Chapter 15); trans-European networks (Chapter 21); and environment and climate change (Chapter 27).

Ukraine has a good level of preparation on energy and some level of preparation in the areas of transport, trans-European networks and overall in the chapter on environment and climate change.

During the reporting period, the country has made some progress on energy. Good progress has been made on environment and climate, with more progress on the environment than on climate change. Limited progress was recorded on transport and some on Trans-European networks. Ukraine signed a road transport agreement in June 2022 with the EU to liberalise bilateral and transit road transport. However, overall legislative alignment and institutional reforms in the transport sector remain slow. In the energy sector, Ukraine adopted important legislation including its long-pending law on wholesale energy market integrity and transparency. Measures taken under martial law, which led to a decrease in transparency and independence of energy stakeholders, will need to be reversed. Regarding Trans-European networks, energy and transport institutions continue to show extraordinary resilience and capability for emergency repairs to the damaged networks. In chapter environment and climate change, Ukraine's legislative alignment with EU *acquis* and strategic planning increased, including through a framework law on waste management, flood risk management plans and a water strategy until 2050. Ukraine's weak administrative capacity in the field of environment and climate is a key bottleneck, also for the implementation and enforcement of rules on environmental impact assessments. This cluster and the related reforms are intricately linked to Ukraine's reconstruction during and after the war.

Chapter 14 – Transport

The EU has common rules on technical and safety standards, security, social standards, State aid and market liberalisation in road transport, railways, inland waterways, combined transport, aviation and maritime transport.

Ukraine has **some level of preparation** in the area of transport policy, with **limited progress** achieved during the reporting period. Progress was severely hampered by Russia's continuing military aggression against Ukraine.

In the coming year, Ukraine should in particular:

- further align and effectively implement of the EU rail and road *acquis* and set up the appropriate administrative structures for rail transport, in particular the regulatory body;
- strengthen its administrative capacity to enforce measures on road safety and establish inspection and investigation bodies for rail and inland waterways transport.

In the area of **transport**, Ukraine is implementing the EU *acquis* priority transport rules under the Association Agreement. These aim to facilitate the restructuring and modernisation of Ukraine's transport sector and gradual approximation with operating EU and international standards and policies. In this context, Ukraine's transport sector should gradually become more sustainable, safe and efficient. Despite progress in some areas, the speed of legal and institutional adjustments and reforms remains very slow, being further affected by Russia's military aggression. The implementation of the National Transport Strategy 2030, which serves as a framework for the modernisation of the transport sector, and its dedicated action plan for 2021-2024 should be resumed as soon as possible.

The level of alignment of the Ukrainian public services legislation on rail and road transport with the EU *acquis* is low and must be prioritised. In rail and waterborne transport, independent accident investigation bodies have not been established.

In 2022, Ukraine was granted observer status in the Transport Community Treaty as a robust basis for further transport market integration with the EU and is cooperating pro-actively with the treaty's structures. Closer association with the Transport Community can support Ukraine on its European path, as the Transport Community plays an important role supporting the enlargement process through the implementation of the relevant EU transport *acquis*.

In the area of **road transport**, Ukraine has partially implemented the rules on tachographs. Rules on access to the international road transport market and on passenger transport are in place. On the European Electronic Toll Service/Eurovignette, there are no tolls in Ukraine and road charges are not collected. On social aspects, national rules are aligned with EU rules on driving and rest times, but a number of other rules on rest periods have not been implemented. Ukrainian legislation on testing the roadworthiness of vehicles is partially aligned with EU rules.

No progress has been made in completing important regulatory reforms and adopting legislation during the reporting period. This includes regulation of the road transport market on wheeled transport safety and social aspects of road transport. The road safety situation in Ukraine has worsened since Russia's full scale invasion. The road safety strategy up to 2024 should be implemented as far as possible.

A road transport agreement was signed in June 2022 to liberalise bilateral and transit road transport between the EU and Ukraine for an initial period of 1 year, extended up to 2024. The agreement also provides for the recognition of Ukrainian driving licences and certificates of professional competence. Ukraine has also signed the Interbus Protocol on international regular and special regular carriage of passengers by coach and bus. However, Ukraine has yet to ratify this protocol.

The implementation of **rail transport** reform was suspended with the introduction of martial law in February 2022. The war has resulted in changes to logistics routes following the full and then partial closure of Ukrainian Black Sea ports. It has demonstrated the importance of reliable and resilient land connections with the EU and the vital role that rail transport plays in the current context. The draft railway law has not yet been adopted.

Ukrainian Railways (JSC Ukrzaliznytsia) remains the sole integrated railway undertaking that manages infrastructure and provides rail transport services, with no financial and organisational separation between infrastructure management and operations. The Law on natural monopolies aims to regulate access to infrastructure. In practice, however, tariffs and conditions for accessing the infrastructure are not regulated. The State Service of Ukraine for Transport Safety, supervised by the Ministry for Communities, Territories and Infrastructure, issues licences to wagon operators that transport passengers or dangerous goods. However, it does not issue safety certificates.

On maritime transport, no progress has been made during the reporting period in adopting legislation that aligns with the EU *acquis*. The legislative framework is not aligned with the *acquis* on a Community vessel traffic monitoring and information system. It is currently impossible to implement the technical framework as the country does not exercise full control over its coastline due to the war. Ukraine has not ratified the 2006 Maritime Labour Convention from the International Labour Organization. Its legislation is not fully aligned with the EU Directive on working time and the EU Directive on working time enforcement. A maritime administration has been created and the body is operational. However, its capacities have to be significantly strengthened in order to enforce the reforms and carry out international obligations incumbent on a port or coastal state. On digital freight transport, the scope of Ukraine's legislation partially aligns with EU legislation. Ukraine still needs to implement legislation that aligns with the EU Port Services Regulation. It should, as a flag state, make continued efforts and take necessary measures to improve the quality of its fleet. Ukraine also participates in the Black and Caspian Sea (BCSEA II) technical assistance project implemented by the European Maritime Safety Agency (EMSA).

The 2020 Law on **inland waterways transport** establishes a legal, regulatory and institutional set-up to ensure the safety of navigation. Further legislation on the functioning of the market, access to the profession, river information systems and dangerous goods still needs to be adopted and implemented. The government has taken steps to establish a dedicated executive body (‘Administration of Navigation’) for inland waterways transport matters. Ukraine is a member of the EU Strategy for the Danube Region and an active Member State of the Danube Commission. Furthermore, it has bilateral agreements with several Danube riparian states on the mutual recognition of documents. Still, Ukraine should continue to work on fulfilling the preconditions for recognition of crew navigation certificates in the EU, in accordance with Directive (EU) 2017/2397.

Ukraine airspace is closed for civil **aviation** due to the war, which makes it impossible for Ukrainian and foreign airlines to operate and has led to the suspension of air navigation services by the Ukrainian State Air Traffic Services Enterprise. However, the State Aviation Administration of Ukraine has so far maintained an appropriate level of oversight over the safety of air carriers registered in Ukraine. Ukraine has made significant progress in aligning with EU rules on aviation since 2017 and signed the EU-Ukraine Common Aviation Area Agreement in October 2021. An action plan on the implementation of the Common Aviation Area Agreement was approved in July 2022.

Ukraine has started to develop its policy, legal and regulatory framework **on intermodal transport**. However, progress has been hampered by the war. The Law on multimodal transport clarifies and simplifies the procedures and responsibilities for the use of several modes of transport. It does so by approximating Ukrainian legislation with the Directive on the establishment of common rules for certain types of combined transport of goods between Member States.

More progress is needed to fully align Ukraine’s legislation with EU rules **on passenger rights** in all modes of transport, in particular for bus and coach passengers and the rights of people with reduced mobility. EU legislation on passenger rights in rail transport has been partially implemented.

Chapter 15 – Energy

EU energy policy covers energy supply, infrastructure, the internal energy market, consumers, renewable energy, energy efficiency, nuclear energy, nuclear safety, radiation protection and nuclear safeguards.

Ukraine has a **good level of preparation** in the area of energy. Ukraine achieved **some progress** during the reporting period, despite the fact that the energy sector operated under emergency conditions due to Russian attacks on Ukraine’s energy infrastructure. Legislative alignment continued including on wholesale energy market integrity and transparency, renewables, gas transmission system operator and gas storage certification. However, measures taken under martial law led to a decrease in transparency and independence of stakeholders in the energy sector.

In the coming period, Ukraine should in particular:

→ advance green energy transition and green reconstruction: adopt an ambitious national energy and climate plan (NECP) in line with the 2030 Energy Community energy and climate targets; adopt and implement the electricity integration package; continue improving energy efficiency including in the residential sector through regulatory measures and via the Energy Efficiency Fund; implement policy measures to encourage investments

in renewable energy production; launch reform of the district heating sector, and introduce mandatory energy efficiency criteria for public procurement;

- take steps to achieve cost reflective energy pricing, in particular by gradually phasing out public service obligations and replacing them with targeted support for vulnerable energy consumers;
- improve the independent and effective functioning of the energy regulator, resulting in a track record of fair and transparent decision-making to enable the energy markets to function properly.

In April 2023, Ukraine adopted a new energy strategy until 2050. The document has not been made available as it remains classified by the Ukrainian government. Ukraine's recovery plan from July 2022 sets out the government's intentions to increase the share of renewable energy both in gas and electricity in the generation mix and develop the green hydrogen industry. Before Russia's full-scale invasion, Ukraine had developed a draft NECP. The new document will have to be drafted taking into account the impact of the war on Ukraine's energy infrastructure and overall consequences for its energy system, which needs to become more resilient, decentralised, efficient, and based on renewables. The NECP should set out concrete policy and measures and become a guiding document for post-war reconstruction in line with Energy Community 2030 targets, taking due account of recommendations from the Energy Community Secretariat.

On security of supply, Ukraine relies mostly on domestic production and limited imports from the EU as regards natural gas. As for electricity, the capacity for electricity imports has been steadily increased, reaching 1 200 MW in June 2023 for the Ukraine/Moldova control block.

Ukraine is not yet implementing the Oil Stocks Directive. The deadline under the Energy Community Treaty for alignment passed on 1 January 2023. In December 2022, Ukraine adopted a gas storage certification law, and in April 2023 the gas storage operator Ukrtransgaz was certified in a compliant manner.

Ukraine's gas and electricity transmission system operators (TSOs) have observer status in ENTSO-E and ENTSOG, the European associations for the cooperation of TSOs. Ukrenergo, Ukraine's electricity TSO, is implementing measures to achieve full ENTSO-E membership. On gas supplies, Ukraine participates in Aggregate EU, the EU's joint gas purchase platform. The country has agreements with Hungary, Poland and Slovakia on firm capacity for gas imports to Ukraine.

On the internal energy market, Ukraine's primary legislation is compliant with the third EU energy package. Ukraine has yet to align with and implement the new electricity integration package adopted in the Energy Community in December 2022. For electricity, a day-ahead and intraday market is operational under price caps. Ukraine has not yet designated a nominated electricity market operator. The electricity and gas TSOs and the gas storage operator are unbundled and certified. The electricity and gas distribution system operators are also unbundled. However, interventions by authorities and companies in the cooperate governance of TSOs and in the market continue, which constitute a challenge. The corporate governance of the gas TSO LLC Gas TSO of Ukraine proved non-functional. The governance reform of the gas TSO started with legislation adopted in August 2023.

The independence of the National Energy and Utilities Regulatory Commission, Ukraine's national energy regulator, and trust in the institution has yet to be fully established, in line with Ukraine's obligations under the Energy Community. This is critical for private investment and reconstruction in the energy sector. During the reporting period, NEURC largely focused on

maintaining low and stable energy prices for the population during the war. To this end, public service obligations were extended by Cabinet of Ministers' resolutions to ensure the social protection of household consumers of gas and electricity. As a result, the financial position of the state-owned energy companies that implement public service obligations – Naftogaz for gas, Energoatom, Guaranteed Buyer and Ukrenergo for electricity – has suffered greatly as household tariffs were far below the cost recovery level. These tailored public service obligations need to be gradually phased out and replaced by more sustainable solutions that address energy poverty and the vulnerability of end consumers. In May 2023, NEURC slightly increased household electricity tariffs.

After the Ukrainian and Moldovan electricity grids were synchronised with the Continental European Network in March 2022 as an emergency measure, Ukraine started exporting electricity to the EU market. Exports stopped after massive Russian air attacks on electricity infrastructure from October 2022 onwards. To limit the extent of scheduled blackouts caused by military attacks, Ukraine imported electricity from the EU during the winter months, resuming limited exports in April 2023. The volume of the electricity market fell significantly as many industrial consumers had to stop production because of the war.

In May 2023, parliament adopted legislation on wholesale energy market integrity and transparency (REMIT Regulation), in line with Ukraine's obligations under the Energy Community. The REMIT law also introduced amendments regarding cross-border capacity allocation. Agreements with EU neighbouring countries on cross-border capacity allocation are still pending. So far, a 50:50 split of congestion rent was agreed with Slovakia. Joint auctions for cross-border trading in electricity by Ukrenergo on the borders with Romania and Moldova and via JAO, the Joint Allocation Office, on the borders with Poland, the Slovakia and Hungary have yet to take place.

In the area of **hydrocarbons**, parliament adopted a law to simplify permitting procedures for subsoil projects in December 2022.

On **renewable energy**, much of Ukraine's installed capacity – which amounted to 9.6 GW in 2021 – has suffered from damage or is in regions with armed conflict. Implementing a functional market-based support scheme for renewable energy sources (RES) in accordance with Directive 2018/2001 remains a key priority for Ukraine, including for attracting much needed private investment. Ukraine's current target for 2030 is a 27% share of RES in gross final energy consumption. In its NECP, Ukraine should set new ambitious annual targets for RES until 2030.

In July 2023, parliament adopted legislative amendments, allowing renewable producers to sell electricity directly on the day-ahead, intraday, bilateral and balancing markets. Prosumers can install RES facilities of up to 30 kW solar and wind and up to 50 kW for combined wind/solar systems. It offers two compensation options for prosumers: a feed-in tariff and net billing based on hourly wholesale market price. In June 2023, Ukraine adopted legislation setting the framework for guarantees of origin; a functioning national electronic registry has yet to be established.

On **energy efficiency**, Ukraine's energy efficiency law is largely aligned with the EU Energy Efficiency Directive. Rules on local energy planning and the deployment of energy management systems by state and municipal authorities consider good practices from the EU. Energy audits are mandatory for large companies. However, they are not yet supplemented by penalties for breaches, which may hinder their enforcement, or by incentives. Measures in Ukraine's 2030 national energy efficiency action plan, adopted in 2021, need to be updated, and its long-term strategy for the renovation of buildings adopted. Priority investments in

energy efficiency for the transmission and distribution of electricity and gas need to be identified.

Despite Russia's war of aggression, Ukraine continues to align with EU energy efficiency legislation. During the reporting period, Ukraine adopted four out of 26 legal acts that implement its framework law on energy efficiency. In March 2023, it signed a law on high efficiency cogeneration, although still without any support mechanism for combined heat and power based on useful heat demand to incentivise investments. Additional policy and support measures are needed to promote efficient heating and cooling, including the reform and modernisation of municipal district heating systems, wider use of renewable energy sources as well as waste heat from industry.

Ukraine's law on the energy efficiency of buildings is largely aligned with the EU *acquis*. A few remaining compliance issues require further attention. These include inspections of engineering systems, differentiation between buildings certification and energy audits for buildings and introducing requirements on certifying buildings when sold or rented out. In July 2022, Ukraine adopted a new law to create conditions for the comprehensive thermal modernisation of buildings. The law on commercial metering of thermal energy and water supply is to a large extent aligned with the *acquis* on heat metering, and Ukraine has equipped 83% of buildings connected to district heating with accurate heat meters. However, individual metering and consumption-based billing is still uncommon. Ukraine has a high level of alignment with the EU regulations and Directive on Energy Labelling and the Directive on Eco-design. At the beginning of 2023, Ukraine adopted 29 technical regulations on eco-design and 16 on energy labelling. To ensure effective implementation, the organisational and technical capacity of the state market surveillance body needs be strengthened. Mandatory energy efficiency criteria for public procurement still need to be introduced.

In 2018, Ukraine set up the Energy Efficiency Fund with transparent corporate governance and monitoring/verification systems to support renovations of residential buildings. So far, it has been the only policy measure that applies compliant measuring and verification of energy savings to end-user consumption. In 2022, the fund introduced a new restoration programme to support the rehabilitation of residential buildings non-structurally damaged by war.

On **nuclear energy, nuclear safety and radiation protection**, Ukraine is party to all international conventions concluded under the auspices of the International Atomic Energy Agency, including the Convention on Early Notification of a Nuclear Accident, and the Convention on Nuclear Safety. Commitments and obligations resulting from international treaties, conventions and other agreements that fall under the responsibility of the State Nuclear Regulatory Inspectorate of Ukraine (SNRIU) are implemented and enforced to the extent possible taking into account the ongoing Russian war of aggression against Ukraine and the forceful illegal seizure by Russian forces of the Zaporizhzhia nuclear power plant.

The nuclear safety regulator's capacity for independent licensing and inspection is considered sufficient in principle. With assistance from the State Scientific and Technical Centre on Nuclear and Radiation Safety, SNRIU can fulfil its responsibilities. However, its decisions are *de facto* not applied at the illegally seized Zaporizhzhia NPP. Further capacity building at SNRIU is ongoing with international support. The regulator cooperates actively with the European Nuclear Safety Regulators Group.

In February 2023, parliament adopted a law on the reorganisation of its state enterprise for nuclear energy. It provides for turning Energoatom into a joint stock company of the public sector and includes the appointment of an independent supervisory board between December 2023 and March 2024, in line with Council Directive 204/87/Euratom. Energoatom operates

15 nuclear units at four sites with a total capacity of 13.83 MW. The Zaporizhzhia nuclear power plant, the largest one in Europe, has been illegally seized by Russia in March 2022. This is posing numerous safety threats and leaves Ukraine with 6 GW less base load electricity production. Memoranda of understanding have been signed with Westinghouse, with the construction of nine new nuclear power units envisaged in Ukraine using AP1000 technology (pressurised water reactor with two cooling loops).

Ukraine has a certain level of alignment with Euratom nuclear safety legislation. Gaps exist in the field of radiation protection of personnel, the population and the environment and on radioactive waste and spent fuel management. Ukraine's approximation process is experiencing delays, partly due to the ongoing Russian aggression and is fragmented. Alignment of Ukrainian legislation with Council Directive 2014/87/Euratom and Council Directive 2013/59/Euratom and Ukraine's institutional framework needs to be completed.

Ukraine has a regulatory framework on radioactive waste that requires further development. The country still lacks several planning documents in the areas of radioactive waste and spent nuclear fuel management as well as a law on the management of uranium legacy sites. The State Agency of Ukraine for Exclusion Zone Management is the central executive body responsible for building and managing radioactive waste management infrastructure. It manages the Radioactive Waste Management Fund. Its resources are insufficient to finance all necessary infrastructure projects in this area.

On **nuclear safeguards**, Ukraine would need to start adapting the existing systems of accountancy and control of nuclear materials in order to accommodate for the safeguards provisions (Chapter 7) of the Euratom Treaty.

Chapter 21 – Trans-European networks

The EU promotes Trans-European networks (TENs) in the areas of transport, telecommunications and energy to strengthen the internal market and contribute to growth and employment.

Ukraine has **some level of preparation** in the area of Trans-European Networks (TENs), with **some progress** achieved during the reporting period. The development of new infrastructure and networks was substantially slowed down by the Russian war of aggression against Ukraine.

In the coming year, Ukraine should in particular:

- carry out emergency repairs and plan upgrades on critical infrastructure; taking into account the need for reconstruction in areas badly affected by the war, and ensure better connections with EU Member States, in particular through more efficient TEN-T rail and road border crossing points as well as electricity interconnections;
- further align with and implement the EU TEN-T and TEN-E related regulatory framework.
- Develop administrative capacities and scale up project preparation in order to ensure that transport and energy infrastructure projects can be implemented in line with EU standards.

On the **Trans-European transport network (TEN-T)**, there are currently two TEN-T core network corridors that reach the Ukrainian border in Chop: The Mediterranean corridor and the Rhine-Danube corridor. In June 2022, the EU and Ukraine signed a High-Level Understanding on the indicative TEN-T maps, making important adaptations to the indicative TEN-T network in Ukraine, namely the inclusion of the inland waterways of the Dnipro River and Southern Buh and adjustments to the rail and road network.

Ukraine has been associated to the Connecting Europe Facility in June 2023.

The Indicative TEN-T Investment Action Plan identified 39 priority projects in Ukraine that cover all transport modes: road, rail, aviation, ports and inland waterways. When the Russian war of aggression against Ukraine started, less than 10% of the projects identified had feasibility studies and only a few of these were in a more advanced stage of preparation or implementation. The limited capacity to prioritise, prepare and implement projects and limited fiscal space remain critical bottlenecks in Ukraine.

During the reporting period, Ukrainian efforts were mostly focused on emergency repairs to the damaged transport network, restoration of lifeline connections and the implementation of quick-win solutions to improve connections with Danube ports and EU Member States as part of the ‘Solidarity Lanes’ initiative. While Ukraine’s fiscal and institutional capacities remain severely constrained by the war, transport institutions continue to show remarkable resilience and capability to undertake rapid emergency repairs to the damaged transport network.

There is an urgent need to develop administrative capacities and scale up project preparation for rebuilding and developing transport networks. Project implementation units within government services and local government bodies should be strengthened. Investments in the transport network need to be designed and implemented in line with environmental and social standards and based on cost-benefit analysis following EU best practices. Ukraine’s own domestic standards need amendments to align with the EU *acquis*, thus fostering interoperability with the transport network in the EU and contributing to the improvement of road safety.

Ukraine has yet to fully align with and implement the EU TEN-T *acquis*, in particular on technical standards needed to ensure the safety and interoperability of networks. Decarbonisation and digitalisation of the transport sector remain challenging tasks, especially in the current circumstances. Further alignment and improvement of the public procurement and environmental assessment standards and alignment with State aid rules is necessary.

Ukraine is including the **Trans-European energy network (TEN-E)** guidelines in its legislative framework, with technical assistance funded by the EU. Ukraine’s alignment with Regulation (EU) 347/2013 and designation of a national authority are still pending. A large part of Ukraine’s internal electricity transmission infrastructure had been damaged since February 2022; repairs are taking place constantly. Ukraine identified some priority projects to strengthen its electricity and gas grids and build new interconnectors, for example the rehabilitation of the 400 kV Mukacheve (Ukraine) – V.Kapusany (Slovakia) line. In spring 2023, reconstruction works started on the Bar compressor station.

Chapter 27 – Environment and climate change

The EU promotes strong climate action, sustainable development and protection of the environment. EU rules contain provisions addressing climate change, water and air quality, waste management, nature protection, industrial pollution, chemicals, noise and civil protection.

Ukraine has **some level of preparation** in the area of the environment and climate change. **Good progress** was made in this chapter, despite Russia's war of aggression. On the environment, legislation was adopted aiming at further alignment on horizontal issues, water quality, waste management, chemicals and noise. On climate, where progress was limited, Ukraine continues its work on a national climate law and a National Energy and Climate Plan.

In the coming year, Ukraine should in particular:

→ Ensure cross-sectoral mainstreaming of environment and climate action in the reconstruction plans of the country, identify green reconstruction strategy for key sectors

and prioritise relevant EU legislation and standards in its National Programme for the Adoption of the *Acquis* (NPAA);

- Adopt primary and secondary legislation to continue the reforms initiated in water and waste management *acquis*. Adopt the law on environmental control and the legislation harmonising with the industrial emissions *acquis*;
- Adopt a climate law and initiate the update of its long-term low emissions strategy consistent with the EU 2030 framework.

Environment

Ukraine has taken several notable steps to align with EU **horizontal legislation** on environment despite the difficulties posed by the ongoing Russian war of aggression. Taken in this context, the steps undertaken by Ukraine are all the more significant, especially in view of the massive environmental destruction suffered by Ukraine, and their relevance for the country's post-war recovery which will, ultimately, depend on the implementation and enforcement track record after the war. Ukraine. Ukraine ratified two amendments to the Espoo Convention in July 2022 and signed a bilateral agreement with Romania on implementation of this Convention in November 2022. During the reporting period, Ukraine adopted laws on the national pollutant release and transfer register (September 2022) and on the state environmental monitoring system.

The capacity of public administration to deliver on cross-sectoral mainstreaming of environment and climate action in relation to reconstruction of the country as well as on implementation and enforcement of already adopted EU *acquis*, needs to be strengthened. Ukraine needs to significantly strengthen administrative and inspection capacities in the environment and climate sector. The implementation and enforcement of EIA and SEA legislation deteriorated due to martial law. SEAs and EIAs must be carried out in line with the Espoo Convention and the adopted EU *acquis* including for hydropower development programmes and projects. Access by civil society to environmental information and participation in decision-making needs to be ensured. Ukrainian legislation addresses disciplinary, civil, administrative and criminal liability for environmental offences, but full alignment with and implementation of the relevant EU *acquis* is yet to be achieved.

On **air quality**, work on further alignment with two ambient air quality directives continues. In August 2022, procedures were adopted for the development of action plans to improve air quality, followed by the adoption of methodological recommendations in April 2023 on their content and procedures. Under the United Nations Economic Commission for Europe (UNECE) Air Convention, Ukraine submitted the Nomenclature for Reporting and Informative Inventory Reports in 2022 and 2023. In March 2023, legislative amendments to the state monitoring system, including on air quality, were adopted. Further work is needed on air quality information collection, processing, reporting and dissemination procedures as well as monitoring and control. Relevant investments should be planned for this purpose. On sulphur in fuels, systemic compliance monitoring of the products concerned is required. Alignment with the Directive on the control of volatile organic compound emissions resulting from the storage of petrol and petrol vapour recovery has yet to be fully achieved.

On **waste management**, a framework law was adopted in 2022, which enters into force in July 2023. On sewage sludge, general issues related to water drainage and sewage treatment were addressed with a new law in January 2023, but full compliance with the directive is yet to be achieved. A law on limiting the use of plastic bags was adopted in 2021, but additional efforts are needed on enforcement and information dissemination to the general public.

On **water quality**, river basin management plans are being developed as well as standards to assess the ecological status of rivers, lakes, transitional waters and coastal waters using four out of five biological quality parameters of the Water Framework Directive. In October 2022, the government approved flood risk management plans to implement the transposed Floods Directive. A water strategy to address water use and the protection and reproduction of water resources until 2050 was approved in December 2022. Its action plan also includes the designation of nitrate vulnerable zones by December 2023 and several indicators on wastewater discharges for the Directive on urban wastewater treatment. In January 2023 a Law on water drainage and sewage treatment addressed some of its elements. The regular national annual report on the quality of drinking water and state of drinking water supply for 2021 was published at the end of 2022. Drinking water quality is addressed in Ukrainian legislation and in its water strategy, but compliance with EU requirements needs to be further assessed. Implementation of the Directive on technical specifications for chemical analysis and monitoring of water status continues. Administrative capacity in the water sector is insufficient, also due to lack of funding.

On **nature protection**, a law on the protection of forests was adopted in June 2022. The government approved changes in forest reproduction rules, prohibiting the use of invasive alien species, in December 2022. It also approved the list of invasive tree species in May 2023. An action plan on the implementation of a strategy on biosafety and biological protection for 2022-2025, which also covers measures on invasive alien species, was adopted in July 2022. Ukraine is a party to the Nagoya Protocol on access to genetic resources since May 2022. Further action is needed to protect biodiversity, including on the *acquis* on wild birds, habitats, zoos, leg hold traps, access to genetic resources and seals. A strategy on biodiversity protection and an action plan on its implementation need to be developed also taking into account the Kunming Montreal Global Biodiversity Framework. Capacities for setting up and managing Natura 2000 sites need to be set up, and already adopted legislation needs to be implemented. Ukrainian legislation is partially aligned with the EU Regulation on timber and with the EU Regulation on forest law enforcement governance and trade. However, there is a high risk of non-compliance. The independence and capacity for monitoring and control of licences, felling and the sale of forest products need to be strengthened. The Parliament of Ukraine ratified the Nagoya-Kuala Lumpur Supplementary Protocol under the Cartagena Protocol on Biosafety to the Convention on Biological Diversity on 10 June 2023.

Ukraine has some level of preparation on **industrial pollution and risk management**. A legal framework covering these areas exists in Ukraine, but efforts are needed to further align with the EU *acquis*, including by adopting missing primary legislation. In May 2023, the Parliament adopted in first reading a draft law on integrated environmental permitting and best available techniques. The existing national limits for the emission of pollutants and discharge do not meet emission levels associated with best available techniques set out in the Industrial Emissions Directive, including for around 220 large combustion plants. Mandatory automated pollutant emission control system procedures were introduced in March 2023 for new equipment. However, they exclude the most polluting equipment from the Soviet era, and the rules will only enter into force several years after the end of martial law. Ukraine reported its emissions data for 2021 to the European Environment Agency in accordance with the Large Combustion Plants Directive. On industrial accidents, Ukraine joined the UNECE Convention on the Transboundary Effects of Industrial Accidents in 2022. Ukraine's legislation will now need to be updated to meet the Convention's requirements and the EU *acquis*. In August 2022, legal amendments were adopted to align with the Seveso III Directive dealing with onshore major accident hazards. In September 2022, the government adopted a resolution on the

identification of high-risk facilities based on the principles of the Directive. Reporting procedures on safety measures for high-risk entities were drawn up in February 2023.

Ukraine is encouraged to start administrative preparations for alignment with the new EU environmental *acquis* stemming from the European Green Deal in the areas of circular economy, biodiversity protection and zero pollution. Further work and administrative measures are needed to implement the EU Eco-Management and Audit Scheme and EU Ecolabel Regulations as well as adapt environmental standards and promote green public procurement.

In the area of **chemicals**, Ukraine adopted a law in December 2022 to address import and export issues. More efforts are needed to bring the legal framework in compliance with the EU *acquis*. Ukraine adopted the law on joining the Minamata Convention on Mercury in May 2023. In September 2022, a law on the public health system was adopted, prohibiting the production and use of asbestos. In July 2022, the government postponed the entry into force of the technical regulation to ban cosmetics testing on animals by one year. No progress has been made on biocides.

On **noise pollution**, a law on the public health system, adopted in September 2022, partially addresses the requirements of Directive 2002/49/EC. Full transposition is pending.

On **civil protection**, on 20 April 2023, Ukraine and the EU signed an agreement on the participation of Ukraine in the Union Civil Protection Mechanism (UCPM). Ukraine will become a Participating State in the UCPM retroactively from 1 January 2023, once it informs the Commission of the conclusion of its ratification procedure. As a Participating State, Ukraine will be able to not only receive but also to offer assistance via the UCPM to other countries affected by disasters. Ukraine will have access to more funding and will benefit from the full range of tools under the UCPM for structured cooperation in civil protection prevention and preparedness with the EU. Ukraine has already shown strong solidarity with other countries affected by disasters. Ukraine provided bilateral assistance to Türkiye in response to the earthquakes in February 2023 and to Slovenia in response to the floods in August 2023.

Ukraine has a well-structured civil protection system at national, regional and local level. The State Emergency Service of Ukraine coordinates response efforts. Since the beginning of the war in 2022, it has effectively coordinated, together with a wide range of stakeholders across the Ukrainian government, the delivery of unprecedented in-kind assistance to Ukraine through the UCPM. The country has a 24/7 operational duty service, which cooperates closely with the European Commission's Emergency Response Coordination Centre. To facilitate cooperation, the number of English-speaking staff could be further increased. Roles and responsibilities within the civil protection system would benefit from further clarification. The Ukrainian civil protection system has a well-documented history of disaster risk management, based on robust tactical capacities and a solid legal and institutional framework. It could be further improved by strengthening disaster prevention and preparedness measures. A national disaster risk assessment is updated periodically but is not based on a nationally approved methodology. Ukraine has not been fully mapped for specific hazards; its Early Warning System could be further strengthened. Increased synergies and cooperation should be established between the State Emergency Service of Ukraine and the authorities in charge with industrial pollution, risk management, industrial accidents, onshore major accident hazards covered under the Seveso III Directive to put forward cross-sectorial preventive measures as part of the national disaster risk management assessments.

Climate change

On climate change, Ukraine has continued work on a framework climate law to make climate commitments legally binding and to establish a climate governance architecture.

Ukraine updated its nationally determined contribution (NDC) in July 2021, including a commitment to reduce greenhouse gas emissions by 65% by 2030 compared to 1990. The commitment to reach net-zero emissions by 2060, which is included in the updated NDC, has not translated into a long-term low-emission development strategy yet. A strategy and action plan to implement its NDC is not yet in place, and an updated long-term low emission development strategy is needed. A national adaptation strategy was adopted in 2021 as well as an operational plan for its implementation covering 2022-2024.

A Contracting Party to the Energy Community, Ukraine has obligations connected to the Decarbonisation Roadmap. Connected to this, the country is currently preparing a National Energy and Climate Plan with support provided through the Energy Community; the NECP is expected to articulate Ukraine's medium-term vision for decarbonisation and resilience with needs and opportunities for rebuilding areas affected by Russia's war of aggression in a greener way.

Also related to the Energy Community's Decarbonisation Roadmap, a law on monitoring, reporting and verification of greenhouse gas emissions was adopted in 2019 and entered into force in 2020, as a first step towards emission trading, followed by a number of secondary legislation acts. As the martial law is in place, the monitoring, reporting and verification system is not fully operational. Ukraine needs to urgently step up on implementing the Energy Community's Decarbonisation Roadmap and in particular prepare for the Emissions Trading System (ETS).

Ukraine has a law on ozone-depleting substances and fluorinated gases adopted in 2019.

Administrative capacity remains weak in terms of both human and financial resources and needs to be urgently enhanced. Lack of administrative capacity hinders the alignment and implementation of EU legislation, including at local level. Ukraine needs to do more to consistently mainstream climate considerations in all dimensions of public policy in a whole-of-government approach.

It will need to align the future national climate strategy and climate law with the EU 2030 framework for climate and energy policies, notably certain pieces of legislation under the Fit for 55 package adopted during the reporting period.

CLUSTER 5: RESOURCES, AGRICULTURE AND COHESION

This cluster covers agriculture and rural development (Chapter 11); food safety, veterinary and phytosanitary policy (Chapter 12); fisheries and aquaculture (Chapter 13); regional policy and coordination of structural instruments (Chapter 22); and financial and budgetary provisions (Chapter 33).

Ukraine is moderately prepared as regards food safety and veterinary (SPS) and phytosanitary policy, has some level of preparation as regards regional policy and coordination of structural instruments and in fisheries and aquaculture and is at an early stage in the other areas - agriculture and rural development and financial and budgetary provisions. Ukraine has made some progress in four areas, namely agriculture and rural development, SPS and phytosanitary policy, fisheries and aquaculture and financial and budgetary provisions, primarily through legislative and policy alignment and through launching a national agrarian register. Progress was limited in regional policy and coordination of structural instruments.

Chapter 11 – Agriculture and rural development

The EU's common agricultural policy supports farmers and ensures Europe's food security. It helps tackle climate change and the sustainable management of national resources; maintains rural areas and landscapes across the EU; and keeps the rural economy alive by promoting jobs in farming, agri-food industries and associated sectors. This requires strong management and control systems. There are also common EU rules for marketing standards, quality policy and organic farming.

Ukraine remains at an **early stage of preparation** in the area of agriculture and rural development. **Some progress** was made, notably in the adoption of legislation aligning with the EU *acquis* and the launch of the State Agrarian Registry aimed at registering farms. The implementation of other horizontal CAP issues and the improvement of administrative capacity was limited.

In the coming year, Ukraine should in particular:

- finalise its national strategy for agriculture and rural development for 2023-2030 complementing the sector recovery action plan, and start implementing it;
- continue aligning its legislation with the EU *acquis* on agriculture and rural development focusing on the requirements stemming from the Association Agreement and strengthen the administrative capacity for evidence-based policy development;
- monitor and extend the registration of farms in the State Agrarian Registry and systematically use it for all financial support programmes, take preparatory steps for establishing an EU-compliant paying agency and farm accountancy data network.

On **horizontal issues**, the Ministry of Agrarian Policy and Food (MAPF) is in charge of agriculture and rural development. The government has yet to appoint a body responsible for the management and control of government expenditure on agriculture, separate from the managing authority for programming. The establishment of the administrative and control system required by the EU *acquis* should be accelerated. An integrated administration and control system (IACS) should be set up. In August 2022, Ukraine established a State Agrarian Registry, an automated information system for collecting, processing and providing information about producers of agricultural products and their agricultural activities. The Ukrainian State Fund for Farm Support supports farms including through interest-free loans and payments per hectare and heads of livestock. However, it is not yet an EU-compliant paying agency. Improved integration and data quality of registries, in particular the Land Parcel Identification System (LPIS) is necessary. Ukraine is encouraged to bring support measures in line with EU *acquis*. A farm accountancy data network (FADN) needs to be established. Non-state advisory services of various legal forms are allowed in Ukraine. Government support was provided before the war to registered advisers. Ukraine has started to establish an Agricultural Knowledge and Innovation System.

On **common market organisation** the Ukrainian legal framework has yet to be aligned with the EU *acquis*. Work has focused on legal acts that regulate marketing standards for certain products, and standards for further products are being developed. The law on the association of agricultural producers is pending parliamentary adoption and aligns only partially with the EU *acquis*.

In the wine sector, Ukraine started to establish a vineyard register and new viticulture zoning of wine growing areas in line with EU *acquis*. Common market organisation for wine shall be regulated through the Law on grapes and viticulture, which remains to be adopted.

On **rural development**, Ukraine's draft national strategy for agriculture and rural development for 2023-2030 remains to be finalised, including environmental standards, climate resilience and bioenergy. It aims to complement the sector recovery action plan. Rural development is implemented on the basis of assistance to support small and medium-sized businesses in rural areas. A partial credit guarantee fund for small farmers was set up as a nonbanking financial institution and its management board was established in May 2023. It remains to become operational. A scheme launched in February 2023 supports investments by small farms and their integration into functional agricultural value chains.

On **quality policy**, the 2020 law on the protection of geographical indications (GIs) makes it possible to register GIs in line with the EU system. Two laws were adopted in September and December 2022, which further regulate this sector. Protected GIs are registered in a publicly available state register. Ukraine will have to build its administrative capacity to ensure the protection and control of GIs.

In the area of **organic farming** preparations are underway for alignment with the EU *acquis*. Certification of organic production is mainly carried out by international certification bodies with Ukraine having launched the accreditation process of two Ukrainian certification bodies. Actions to enhance monitoring and control are important. Ukraine's policy objective is to reach 3% of total agricultural land certified as organic by 2030.

Chapter 12 – Food safety, veterinary and phytosanitary policy

EU hygiene rules for foodstuff production ensure a high level of food safety. Animal health and welfare and the safety of food of animal origin are safeguarded together with the quality of seeds, plant protection material, the protection against harmful organisms and animal nutrition.

Ukraine remains **moderately prepared** on this chapter. **Some progress** was made, in particular in the adoption of legislation aligned with the EU *acquis* in all sectors covered by the chapter. Implementation of the legislation should be carefully monitored and administrative capacities and disease surveillance stepped up.

In the coming year, Ukraine should in particular:

- continue to implement and update the strategy for aligning with and implementing the EU *acquis* to meet the requirements of the Association agreement, with a focus on the animal health and phytosanitary measures;
- accelerate EU market integration through a project to pilot the EU's trade control and expert system (TRACES) and subsequently extend its use to the whole country;
- enhance food safety through the reform of food safety bodies (State Service of Ukraine on Food Safety and Consumer Protection, State Agency for Animal Identification and Registration, authorised laboratories), strengthening food safety controls and implementing robust disease surveillance and vaccination.

With 242 EU legal acts to be approximated, the sanitary (food safety and animal health) and phytosanitary (plant health) sector is the single most comprehensive area in the EU-Ukraine Association Agreement. In June 2023, Ukraine informed to have concluded the alignment with 81 EU acts, while work on another 75 was ongoing. Phytosanitary primary legislation is still lacking.

On **general food safety**, the Ministry of Agrarian Policy and Food and the Ministry of Health have competence in the area of food safety, veterinary and phytosanitary policy. The Ministry of Economy is also involved in parts related to its competences. A single body, the State Service

of Ukraine on Food Safety and Consumer Protection (SSUFSCP), is responsible for national food safety control. It is also responsible for risk-based national controls through a network of sub-national bodies at regional (Oblast) and sub-regional level. As a result of an in-depth functional review, the SSUFSCP's central office revised its structure in December 2022. Its functionality should further improve by assuming all obligatory sanitary and phytosanitary duties.

The Law on the public health system adopted in October 2022 and to be implemented from October 2023 introduces a comprehensive 'One Health' approach, which also provides for information exchange on infectious diseases common to animals and humans. The government prepared a general strategy and joint action plan for cooperation between the food safety, animal and human health authorities in March 2023.

On **veterinary policy**, legislative alignment with the EU *acquis* advanced. The government adopted legislation including on animal welfare, veterinary medicinal products and disease surveillance. Regionalisation and zoning procedures for certain notifiable diseases have been considered satisfactory in audits by the European Commission. Ukraine is invited to implement zoning decisions taken within the EU. The systems for animal disease notification and management of information on outbreaks need to be upgraded to become fully functional. Preparations started to use the EU's trade control and export control system (TRACES) within one year. The animal movement control and registration system was extended to sheep, goats, pigs and equines to provide for more effective animal health measures. Official controls to enforce animal registration and identification, including controls of markets, are yet to be improved and aligned with EU legislation.

As for the **placing of food, feed and animal by-products on the market**, Ukraine's official food and feed control system saw the adoption of further legislation. Structural and institutional reforms based on EU standards took place through the creation of a risk assessment unit in the SSUFSCP and standard operational procedures were agreed. The multiannual national control plan 2022-2026 was approved. A risk analysis, assessment and management system is in place, with food production facilities participating in it. On export, as of 23 March 2023, 427 Ukrainian businesses had obtained the right to export their products to the EU. Ukraine regularly updated its food safety monitoring plan. Food safety databases are to be further integrated and administrative capacities need to be strengthened at all levels. The control of goods during the import process also follows a risk-based approach. Ukraine fully participates in the Commission's rapid alert system for food and feed (RASFF), but is not a member of the network. Official controls of imports and the handling of animal by-products not intended for human consumption remain to be fully aligned with the EU *acquis*.

On **food safety rules and specific rules for feed**, legislative changes provided for the establishment of a national institution for the registration of veterinary medicines and feed additives and for the implementation of the hazard analysis and critical control points system in feed and feed additive production facilities. Risk-oriented feed control was introduced.

Some progress was made on **phytosanitary policy**. Ukraine established a comprehensive system for the regulation and monitoring of plant protection products, pesticide use, and the quality and certification of seeds through the Law on plant protection products (January 2023) and the Law on seeds and planting material (December 2022). Relevant producers, importers, exporters and distributors are registered in a single register. Adoption of the draft framework Law on state regulation in the field of plant protection remains to be concluded. Substantial work is still needed to implement integrated pest management principles in a harmonised manner as well as increase the number of inspectors and their administrative capacity.

Authorised laboratories perform official laboratory testing for veterinary, sanitary and phytosanitary controls. Most of these are accredited to ISO/IEC 17025. Laboratory capacity, including staffing, equipment and accredited methods, is generally satisfactory, while their organisation and the structure of the laboratory network is to be adjusted to EU standards. National reference laboratories remain to be designated and provide to improve testing methods, train staff, participate in proficiency testing programmes and provide contingency capacity.

On **genetically modified organisms (GMOs)**, the relevant authority's control powers are limited. A legal framework for the regulation of genetic engineering activities, GMO registration and a system of government control of GMOs and penalties based on the nine EU legal acts that establish the legal framework is yet to be adopted.

Chapter 13 – Fisheries and aquaculture

The common fisheries policy lays down rules on fisheries management, protects living resources of the sea and limits the environmental impact of fisheries. This includes setting catch quotas, managing fleet capacity, rules on control and inspection, rules on markets and aquaculture and support for fisheries and coastal communities. Further, it promotes a sustainable aquaculture.

Ukraine has **some level of preparation** in the area of fisheries and aquaculture. **Some progress** was made, including through the adoption of legislation aligned with the EU *acquis* and by adopting a national sector strategy. Development of the legislation should be accelerated, and administrative capacities substantially strengthened, notably to enforce controls and inspection. Ukraine continues to be a reliable partner in international fora.

In the coming year, Ukraine should in particular:

- implement the national strategy for the fisheries and aquaculture sectors development until 2030 according to its action plan, including the alignment of the national legislation with the EU *acquis* and adopt EU common fisheries policy objectives and principles, including for resource management, inspections and controls, and to fight illegal, unreported and unregulated (IUU) fishing;
- develop administrative and institutional capacity for the management and control of fishing activities and launch the establishment of an independent fisheries control agency based on EU Member States' best practices;
- become a fully-fledged member of the General Fisheries Commission for the Mediterranean (GFCM).

Ukraine's new strategy for fisheries and aquaculture development until 2030 was adopted in May 2023. The Strategy outlines the development of the sectors till 2030 in line with the Common Fisheries Policy general rules and principles linked to the sustainable exploitation of fishery resources. Based on an assessment of the state of implementation of EU legal acts in April 2023, Ukraine prepared a national plan for full approximation with the EU *acquis* in the fisheries sector. The Ministry of Agrarian Policy and Food is responsible for establishing fisheries policy and drafting legislation, while the State Agency of Melioration and Fisheries is responsible for policy implementation.

On **resource management**, Ukraine amended its legislation in March 2023 for the governance of fisheries, conservation and rational use of aquatic biological resources and aquaculture, with certain parts of the fisheries management system adapted to the EU *acquis*. Ukraine will need to develop necessary administrative and scientific capacity to systematically collect data on

fisheries and adopt mechanisms to achieve a balance between fishing capacity and fishing opportunities as well as to take measures to assess and reduce the environmental impact of fishing activities.

On **fleet management**, the country has no separate fleet register for fishing vessels. Fishing is based on a permit issued to businesses through open auctions and vessels are registered either in the state shipping register of Ukraine or the ship book of Ukraine. Ukraine needs to harmonise its fleet registers with the EU fishing fleet register.

Inspection and control activities are limited, and catch from illegal, unreported and unregulated (IUU) fishing reportedly enters the fish market. The current lack of effective inspection and control hampers Ukraine's capacity to efficiently tackle IUU fishing. Work on the legislation aligned with the EU *acquis* to step up the fight against IUU fishing is however underway. A new law, adopted in March and that entered into force in July 2023 includes improved controls of fishing activities and of the origin of aquatic biological resources and for the implementation of a unified electronic management system for fishery products, similar to the rules in the EU common fisheries policy. Legislation is being developed to ensure the traceability of aquatic bioresources for the sustainable management of aquatic biological resources, to prevent IUU fishing and promote conservation of fish stocks. A dedicated public body for fisheries control will need to be created in line with best EU practices. Improvements will be needed around control data, as well as in standards, strategies and risk assessment for inspection. Electronic monitoring capacity of the fishing fleet should be improved, including on fishing in the high seas. The overall sanctioning system should be dissuasive, proportionate and effective.

Ukraine has no specific **structural measures** for fisheries and aquaculture. A planned reform aims to resolve conflicts on water use, property and tax policies. Ukraine has the largest inland water basin in Europe. This creates favourable conditions for inland fisheries and aquaculture development. The development of marine aquaculture is still at an experimental stage, while organic aquaculture has not been addressed yet. The State strategy until 2030 places high priority on developing it. Ukraine needs to improve the implementation of its legislation specific to aquaculture in line with the EU *acquis* and implement it. There are some **State aid measures** applicable to fisheries or for the development of aquaculture, including for the partial reimbursement of constructing production facilities or equipment costs.

On **market policy**, there are standards that aim to align with the EU *acquis* on veterinary requirements, hygiene and consumer information for food of animal origin. Specific market rules, similar to the ones provided in the EU common market organisation regulation for fishery and aquaculture products, are to be developed. No specialised legal acts regulate the creation of registered fisheries producer associations.

On **international agreements**, EU-Ukraine cooperation on fisheries and aquaculture is set out in the Association Agreement, including the management and conservation of fishery resources and cooperation with regional fisheries management organisations. Due to the ongoing war of aggression, the agreement between Ukraine and the Russian Federation on issues of fishing in the Sea of Azov was terminated in October 2022, and the exchange of information was suspended. As for the regional cooperation on conservation and management of fisheries resources, Ukraine is a cooperating non-contracting party to the General Fisheries Commission for the Mediterranean (GFCM), being the regional fisheries management organisation working to ensure the conservation and the sustainable use of living marine resources in the Mediterranean and in the Black Sea. Ukraine is committed to becoming a fully-fledged member of GFCM: Ukraine participates as a founding member in the Common Maritime Agenda for the Black Sea, and actively cooperates under the auspices of the Northwest Atlantic Fisheries

Organization, the Central Asian and Caucasus Regional Fisheries and Aquaculture Commission and the Commission for the Conservation of Antarctic Marine Living Resources. Ukraine is very active under the Common Maritime Agenda, the EU sea-basin strategy for the development of a sustainable blue economy in the Black Sea.

Chapter 22 – Regional policy and coordination of structural instruments

Regional policy is the EU's main tool for reducing regional disparities and investing in sustainable and inclusive socio-economic growth. It is operating through “shared management” between the Commission and EU Member States. The implementation of cohesion policy programmes requires appropriate administrative capacity on programme and project level, the establishment of systems of sound financial management and control and also the fulfilment of other EU acquis elements such as environmental or public procurement legislation.

Ukraine has **some level of preparation** in the area of regional policy and coordination of structural instruments. Overall, **limited progress** was made over the reporting period, with more notable progress in implementing territorial cooperation programmes with Member States.

In the coming year, Ukraine should in particular:

- update the State Strategy of Regional Development and modernise the State Fund for Regional Development to align them with the recovery and reconstruction process, principles of multi-level governance and a territorially based regional policy.
- adopt necessary measures to bring into practice the law on principles of regional policy, in particular given the varying impact of the war on Ukrainian regions; and strengthen the capacity of regional and local administrations to prepare related development projects;
- strengthen the coordination framework within regional policy to ensure systematic and inclusive engagement of regional and local stakeholders, a coordinating role for the Ministry for Restoration, and an adequate regional angle for the Agency of Restoration.

While a general framework for state regional policy and increased public funding for regional development were put in place alongside decentralisation reform, Russia's invasion has affected all regions, albeit with significant differences. The territorial disparities, which existed before 2022, have therefore widened considerably.

In terms of the **legislative framework**, the law on principles of state regional policy was amended to establish a framework for the recovery of war-affected regions, including a three-level strategic planning system (national, regional and local development strategies). The law defines four functional types of territory: (i) recovery territories; (ii) regional growth poles; (3) territories with special conditions for development; and (iv) territories of sustainable development. This framework should now be implemented by first developing the qualification criteria and a list of territories. Similarly, various local strategic documents that are required (such as a local development strategy, recovery and development plan, comprehensive spatial development plan) should be clarified, interconnected and linked with adequate financing lines. While the law currently focuses on Ukraine's regional development, it will need to be progressively aligned with EU regional policy, including on NUTS (Nomenclature of Territorial Units for Statistics) territorial classification.

Overall, a robust conceptual framework of organisation for the regional policy in Ukraine should be developed and aligned with the recovery and reconstruction process. Accordingly, Ukraine should update, in consultation with relevant stakeholders, the State Strategy of

Regional Development 2021-2027, taking into account the different regional development needs due to the impact of the war.

In terms of the **institutional framework** at central level, the Ministry for Restoration of Ukraine was established by merging the Ministry of Communities and Territories Development with the Ministry of Infrastructure, which resulted in high staff turnover. Ukraine should build capacity in the new Ministry, ensuring adequate staffing for regional development and strong coordination with other key ministries, in particular the Ministry of Finance.

The Secretariat of the Cabinet of Ministers of Ukraine performs the tasks of the national authority of Ukraine for Interreg programmes. It should continue its efforts to disseminate information about Interreg programmes in Ukraine, especially among local and regional authorities to support developing projects with possible new beneficiaries from Ukraine.

The State Agency for Restoration and Infrastructure Development was set up, also with regional offices, to enable implementation of the rapid recovery and post-war reconstruction projects.

At regional level, the key role in developing regional programmes lies with regional (oblast) administrations, a number of which were turned into military administrations. This risks excluding local stakeholders from decision-making. Ukraine has been gradually restoring civil administrations once the security situation in the liberated territories permits it. The delineation of competences between central, regional and local tiers of government, especially in the domains relevant for recovery, should also be clarified.

Regional development agencies aim to support the socio-economic development of regions and communities and attract investments in 22 regions. The capacity to perform their mission remains limited due to an unclear mandate, high staff rotation and poor funding.

On administrative capacity, a formal coordination framework involving authorities at central and sub-national level needs to be set up to prepare for the effective programming and management of EU funds. Regional and local stakeholders should be engaged in a more systematic way in designing, implementing and monitoring these processes.

On digitalisation, the Digital Restoration Ecosystem for Accountable Management was set up to provide a single digital pipeline for all reconstruction projects, including at local level. The system allows anyone to monitor project performance and use this information to create reports.

Regional development is funded by the State Fund for Regional Development (UAH 4.5 billion, down 50% in 2023 compared with the pre-war amount in 2021). The Fund for the Liquidation of the Consequences of Armed Aggression (UAH 35.5 billion) may also be used for regional and local projects. **Programming** based on these funds should be based on priorities, adequate quality of project proposals, cost-benefit analysis and close alignment between the strategic planning of public investment and the budget. To this end, capacities of sub-state administrations should be increased, and the availability of statistics at local level improved to enable evidence-based decisions to be taken.

Ukraine entered into five **Interreg programmes** with EU neighbours and held the Presidency of the EU Strategy for the Danube Region in 2022. This helped it gain experience in European territorial cooperation and shared management, including programming, sound financial management, project selection and contracting for instance.

On financial management and control systems, the country needs to establish medium-term budget planning. The link between policy and budget at national and local level should be

strengthened. The legal basis for the system of **monitoring and evaluation** of regional development is complex and fragmented.

The internal and external **audit functions** are in place thanks to the Accounting Chamber of Ukraine and the State Audit Service and it is important to strengthen their capacities. However, the Chamber has no mandate to audit local budgets, other than resources transferred from the national budget. This poses also a risk to the audit of Ukrainian beneficiaries receiving support from Interreg programmes which are implemented under shared management in a similar way to the EU cohesion policy. Internal audits of local authorities and *ex ante* procurement verification are missing.

The participation of Ukrainian regions in peer-to-peer recovery initiatives with EU counterparts may facilitate further integration of Ukrainian sub-national authorities into EU networks.

Chapter 33 – Financial and budgetary provisions

This chapter covers the rules governing the funding of the EU budget ('own resources'). These resources mainly consist of: (i) contributions based on the gross national income of each Member State; (ii) customs duties; (iii) the non-recycled plastic resource and (iv) a resource based on value added tax. Member States must have the appropriate administrative capacity to adequately coordinate and ensure the correct calculation, collection, payment and control of own resources.

Preparations under this chapter are at an **early stage**. There was **limited progress** in the areas covered by the chapter.

In the coming year, Ukraine should:

→ further strengthen the administrative capacity and coordination mechanism among key stakeholders in the own resource system.

On **traditional own resources**, Ukraine has implemented most of the fundamental principles in the policy areas that affect the own resources system. The 2019 Customs Code aligns with the Union Customs Code in most of its rules, in particular on transit, authorised economic operators and intellectual property rights. However, customs legislation is not fully aligned with the EU *acquis*, while administrative capacity in the IT sector is under strength.

Ukraine applies a single **VAT** system that is largely, but not fully aligned with the European system. VAT is levied on imports and enforced, where necessary, as outlined in the Tax Code.

Ukraine currently lacks a mid-term revenue strategy, which is to be developed under the IMF programme by the end of 2023.

Mechanisms to **prevent and combat tax and customs fraud** are generally in place. The Bureau of Economic Security is responsible for investigating and prosecuting financial crime, including tax and customs fraud. However, its performance has been unsatisfactory so far. The State Audit Service functions and the anti-fraud focal point for the European Anti-Fraud Office, and reports on cases of fraud.

National accounts and **gross national income** (GNI) data in Ukraine partially comply with European System of Accounts 2010 standards, and include an estimation of the non-observed economy (17.7% of GNI for 2020). However, Ukraine does not submit the data to Eurostat.

On **administrative infrastructure**, the current level of human and administrative resources is insufficient to ensure the full and accurate application of EU rules on payments into the EU budget upon membership.

CLUSTER 6: EXTERNAL RELATIONS

This cluster covers: external relations (Chapter 30); and foreign, security and defence policy (Chapter 31).

Regarding external relations, Ukraine has a good level of preparation. It made limited progress on trade policy in the reporting period. It stepped up its engagement with global partners and African Union partners in 2022 and extended humanitarian assistance to Türkiye following 2023 earthquake. Ukraine is invited to remain compliant with the WTO and Association Agreement rules and assess the need for new bilateral agreements in the context of its candidate status and forthcoming accession.

As regards chapter 31, Ukraine has made good progress, ensuring a high level of alignment with relevant EU decisions and declarations of the EU's common foreign and security policy (93% in 2022, 89 % alignment between January and August 2023). Ukraine enhanced the cooperation with EU on the security and defence policy issues and jointly worked on combating hybrid threats. Ukraine has not yet ratified the Rome Statute of the International Criminal Court.

Chapter 30 – External relations

The EU has a common commercial policy towards third countries, based on multilateral and bilateral agreements and autonomous measures. There are also EU rules on humanitarian aid and development policy.

Ukraine has a **good level of preparation** in the area of external relations showing a significant convergence with the EU. Ukraine has matured in its capacity of WTO Member since 2008. **Limited progress** was made during the reporting period.

In the coming year, Ukraine should in particular:

- ensure that its trade policy is in compliance with World Trade Organization (WTO) and Association Agreement rules;
- before any new bilateral trade agreement, assess its impact, in light of candidate status and forthcoming accession.

On **common commercial policy**, Ukraine has been a member of the WTO since 2008. Since 2016, trade relations with the EU have been regulated by the EU-Ukraine Association Agreement, which established the Deep and Comprehensive Free Trade Area.

Ukraine has notified to the WTO preferential **bilateral trade agreements** with 17 countries, eight of which do not have a preferential trade agreement with the EU. It signed a preferential trade agreement with Türkiye in 2022, with ratification pending, and is negotiating and discussing preferential trade agreements with several partners (in particular the United Arab Emirates). In relation to this, Ukraine should continue to coordinate closely with the EU on international trade negotiations, in particular to ensure that, when it joins the EU, its commitments are compatible with those of the EU.

Ukraine has 66 bilateral investment treaties in force, 21 of which are with EU Member States. It has also signed seven treaties that have not yet entered into force. Ukraine continued benefiting from a generalised system of preferences (tariff system) granted by several countries, including the United States.

Ukraine has had a solid legal framework in place on export controls of goods and technologies, including on dual use, since 2003. It adopted and maintained a consolidated list of **dual-use goods** and technologies based on Council Regulation (EC) No 428/2009. Applications for

obtaining export permits for dual-use goods and technologies are subject to expert reviews, with the modalities set up by the law.

Ukraine has a legal framework in place to provide **humanitarian aid** to other countries and relies on the state budget reserve fund to provide this aid. It provided considerable humanitarian and civil protection support (through the State Emergency Service) to Türkiye following the Türkiye-Syria earthquake in February 2023.

On **development policy**, Ukraine stepped up engagement with global partners and African Union partners in 2022. This followed the appointment of a Special Representative for the Middle East and Africa in 2021. In November 2022, in connection with the UN and Türkiye-brokered Black Sea Grain Initiative, which allows for commercial food and fertiliser exports from key Ukrainian ports in the Black Sea, President Zelenskyy launched the Grain from Ukraine programme at an international summit on food security in Kyiv. The initiative seeks to address global food insecurity through (donated or internationally funded) deliveries of Ukrainian grain and foodstuffs to developing countries. Under the initiative, 625 000 tonnes of wheat have been delivered to African countries since December 2022.

Chapter 31 – Foreign, security & defence policy

Member States must be able to conduct political dialogue under EU foreign, security and defence policy, align with EU statements, take part in EU actions, and apply agreed sanctions and restrictive measures.

Ukraine has **a good level of preparation** in the area of foreign, security and defence policy. **Good progress** is demonstrated by continued unprecedented political dialogue with the EU at all levels and significantly enhanced security and military cooperation with the EU and its Member States. Ukraine has also demonstrated progress in the overall alignment with Statements by the High Representative on behalf of the EU and Council Decisions. In the coming year, Ukraine should in particular:

- work towards the ratification of the Rome Statute of the International Criminal Court (ICC) and its related instruments,
- further maximise alignment with Statements by the High Representative on behalf of the EU and EU sanctions (Official EU Council positions and actions in the area of CFSP);
- pursue and further enhance political dialogue on foreign and security policy with the EU.

Against the backdrop of Russia's unprovoked and unjustified war of aggression against Ukraine, the country continued to take steps to further integrate into the EU in the area of foreign and security policy. Ukraine continued **political dialogue** at an unprecedented level and frequency with the EU and the EU Member States.

The institutional framework enables Ukraine's participation in the **common foreign and security policy (CFSP)** and **common security and defence policy (CSDP)**. The CFSP-related issues fall under the competences of the Ministry of Foreign Affairs, which has good capacity to handle EU affairs. Ukraine's Ministry of Foreign Affairs established a position of 'political director'.

Ukraine has a good record of **alignment with CFSP** (statements by the High Representative on behalf of the EU and Council Decisions). For the calendar year 2022 Ukraine reached 93% alignment and 89 % alignment between January and August 2023. This represents a clear political intention to align with CFSP.

On restrictive measures, Ukraine aligns with EU restrictive measures against Russia. Regarding EU restrictive measures not related to Russia's war of aggression, Ukraine has not aligned with a number of measures, e.g., related to the political and security situation in the Eastern Mediterranean, Africa, Middle East and Asia. Ukraine has mechanisms in place to ensure effective implementation of EU sanctions. Authorities should strengthen the related national legislation and continue to improve their capacity to implement and enforce the sanctions.

Ukraine intensified its diplomatic engagement with global partners through food security-oriented agreements as well as high level political engagement and dialogue. This approach is in line with the EU's own outreach to global partners aimed at addressing global consequences of Russia's aggression, countering Russian disinformation narratives, and supporting President Zelenskyy's Peace Formula.

Ukraine's cooperation with **international organisations** is strong and constructive, including with the UN, the Council of Europe, the OSCE and the Organisation for Black Sea Economic Cooperation. Accession to NATO is reflected in the Ukrainian Constitution as a central goal and the main foreign policy objective. Ukraine formally applied for NATO membership on 30 September 2022. Ukraine stepped-up collaboration and coordination at all levels with both the EU and NATO in the framework of EU-NATO cooperation in the field of capacity building for partners.

Ukraine has not yet ratified the **Rome Statute of the International Criminal Court** and its related instruments, although it has already accepted the jurisdiction of the Court twice, including through legislative acts adopted in 2022 in the context of evident war crimes committed as part of Russia's war of aggression.

On non-proliferation, Ukraine is party to and has ratified the main non-proliferation agreements. Ukraine complied with its international obligations under international **export control regimes** throughout the reporting period. Ukraine participates in the Wassenaar, Missile Technology Control Regime, Nuclear Suppliers Group and Australia Group) and Zangger Committee. Ukraine continued to submit reports on international transfers of certain categories of military goods to the UN Register of Conventional Arms, the OSCE as well as the Wassenaar Arrangement.

Ukraine signed the Arms Trade Treaty in 2014 and continues procedural preparations for its ratification. Ukraine has put in place additional preventive measures in this regard, and it is setting up a unified firearms registry. Ukraine's legislation provides for multiple measures to counter illegal arms trafficking and ensure arms control.

In July 2022 the Parliament established the Temporary Special Commission to monitor the receipt and use of international equipment and technical assistance (in particular, weapons) during martial law. EU and Ukraine established the **internal security dialogue**.

As regards **security measures** (classified information), the EU and Ukraine have an arrangement to exchange classified information.

On common security and defence policy, Ukraine has continued to seek its involvement in EU defence initiatives and civil and military crisis management, including Permanent Structured Cooperation (PESCO) and the European Defence Fund (EDF). Given the context, military and security cooperation between Ukraine and the EU and its Member States was significantly enhanced in particular within the framework of the European Peace Facility (EPF) and through the EU Military Assistance Mission in support of Ukraine (EUMAM Ukraine)

The EU and Ukraine continue to cooperate in the area of countering **disinformation and cyber threats**. The establishment of a dedicated cybersecurity dialogue in 2021 and its second iteration in 2022 were key to enhance the EU-Ukraine cyber cooperation with the aim to bolster cyber resilience and advance responsible state behaviour in cyberspace. Both sides also built up a unique cooperation aimed at tackling disinformation. Ukraine has been a contributing country to the NATO Cooperative Cyber Defence Centre of Excellence since March 2022.

ANNEX 1 - RELATIONS BETWEEN THE EU AND UKRAINE

After the start of Russia's war of aggression against Ukraine, Ukraine applied for EU membership on 28 February 2022 and was granted European perspective and **candidate country status** in June 2022. The European Council granted **European perspective** and candidate status to Ukraine in June 2022, on the understanding that seven steps identified in the Commission's opinion on the membership application, are taken.

The EU and Ukraine signed an **Association Agreement (AA)**, including a **Deep and Comprehensive Free Trade Area (DCFTA)** in 2014, which fully entered into force in 2017. The AA / DCFTA is the key legal instrument serving as the basis of EU-Ukraine bilateral relations and provides the foundations for political association and economic integration between the European Union and Ukraine. Overall, Ukraine continued to broadly implement its obligations under the Association Agreement. Under the DCFTA Ukraine has committed to align its legislation to EU single market rules. While important progress has been achieved, Ukraine is behind schedule in some of these commitments. In some areas, effective enforcement by independent and transparent institutions remains challenging. The DCFTA comes with a commitment to comply with its provisions, as well as those under WTO such as ruling of a bilateral arbitration panel of December 2020, in respect of which Ukraine has still to comply with Article 35 of the Agreement and eliminate the wood export ban introduced in 2015.

Regular political and economic **dialogue** between the EU and Ukraine has continued through the AA/DCFTA structures. Regular subcommittee meetings were held throughout the period. The Association Committee did, however, not meet during the reporting period whereas the 7th EU-Ukraine Association Committee in Trade Configuration took place on 25-26 October 2022; the Association Council was held on 5 September 2022 in Brussels and the 24th EU-Ukraine Summit took place on 3 February 2023, in Kyiv.

Trade relations with the EU intensified after the entry into force of the DCFTA. With the application of autonomous trade measures since June 2022, the EU has unilaterally removed all outstanding tariffs under the DCFTA. Such measure was renewed for another year in May 2023.

In light of Ukraine's candidate country status, the EU and Ukraine agreed a Priority Action Plan in February 2023. Once fully implemented, Ukraine will see increased its access to the EU internal market, paving the way towards full accession in the future.

The EU has been living up to its commitment to support the implementation of the **Solidarity Lanes** initiative with new logistics corridors between Ukraine and the EU now firmly established through rail, road and inland waterways covering trade both directions. Solidarity lanes have become the lifeline for Ukraine.

Citizens of Ukraine enjoy **visa-free travel** to the Schengen area as of 11 June 2017. An agreement on readmission between the European Union and Ukraine is in force since 2007.

Regarding **bilateral financial assistance**, since the Russian invasion, the EU, Member States and the European Financial Institutions, stepped up their support in a Team Europe approach, mobilising EUR 59 billion for Ukraine's overall economic, social and financial resilience in the form of emergency macro-financial assistance, budget support, emergency assistance, crisis response and humanitarian aid. This includes EUR 2.3 billion in grants from the NDICI Global Europe instrument (2022 and 2023), EUR 25.2 billion of macro-financial assistance (concessional loans) as well as military assistance of EUR 25.2 billion, including EUR 5.6 billion under the European Peace Facility and bilateral EU Member States contributions.

Together with the resources made available to help Member States cater for needs of Ukrainians fleeing the war in the EU (EUR 17 billion), the overall support to Ukraine and Ukrainians amounts to EUR 82.6 billion. This includes, amongst other, around 100 000 tons of in-kind assistance under the Union Civil Protection Mechanism (UCPM), turning this into the largest and most complex UCPM operation to date. The EU has provided support for medical evacuations of, to date, more than 2770 severely ill Ukrainian patients as well as mental health and psychosocial support to Ukrainians via the International Federation of the Red Cross, funded by the EU4Health Programme.

Ukraine has been participating in the **Eastern Partnership** (EaP) since its launch in 2009. This overarching framework has further boosted regional relations with the EU. Ukraine benefits from regional programmes financed from NDICI-Global Europe. Ukraine also benefits from investments through the **Neighbourhood Investment Platform** (NIP). Before and during Russia's war of aggression, the EU has worked hand in hand with financial institutions to support Ukraine. The **Economic Investment Plan**, which was set up already before the war, will serve as an important vehicle of the reconstruction of Ukraine. The plan will continue to mobilise investments in grants, loans and guarantees and leverage additional public and private investments for Ukraine in sectors covered by the flagship initiatives such as support to SMEs, economic transition for rural areas, improving connectivity by upgrading border crossing points, digital transition and sustainable energy.

Ukraine participates in several **Union programmes**: Horizon Europe, EURATOM Research and Training Programme, Digital Europe, Fiscalis, Customs, Creative Europe, EU4Health, LIFE, Single Market Programme, Union Civil Protection Mechanism, and Connecting Europe Facility. Organisations and individuals from Ukraine can also benefit from certain actions of the Erasmus+ and European Solidarity Corps programmes. Ukraine is participating in several Interreg programmes and is a member of the EU macro-regional Strategy for the Danube region.

In 2014, the European Union Advisory Mission for Civilian Security Sector Reform Ukraine (EUAM Ukraine) was created. Following the Russian aggression, the EU established the EU Military Assistance Mission (EUMAM Ukraine) on EU soil in support of Ukraine in October 2022.

STATISTICAL DATA (as of 31/08/2023)
Ukraine

ANNEX I – RELATIONS BETWEEN THE EU AND ALBANIA	135

1. INTRODUCTION

1.1. CONTEXT

The first Inter-Governmental Conference on accession negotiations with Albania took place on 19 July 2022. The first step in the accession negotiations process, the analytical examination of the EU *acquis* or the ‘screening’, was launched on the same date and has progressed smoothly. Albania has continued to implement the Stabilisation and Association Agreement and the meetings of the joint bodies under the agreement have taken place at regular intervals.

The EU accession negotiation process with Albania is conducted in line with the revised enlargement methodology, and the requirements set out in the Negotiating Framework, which put an even stronger focus on the fundamentals of the accession process.

The Albanian authorities’ political commitment to the strategic goal of EU integration and their ambition to move forward in the accession negotiations based on continuing progress on reforms have been consistently stated as the country’s key priority. This commitment has been maintained despite the challenge of addressing the economic and social consequences of the triple shock of the 2019 earthquake, the COVID-19 pandemic and Russia’s war of aggression against Ukraine. The ongoing accession negotiation process now needs to translate into an acceleration of EU-related reforms.

Albania has maintained its record of full alignment with the EU’s common foreign and security policy during the reporting period. As a non-permanent member since January 2022, Albania has been actively engaged in the UN Security Council as a co-penholder of resolutions condemning Russia’s war of aggression against Ukraine, aligning with the EU position when co-sponsoring and voting on UN resolutions on Russia’s invasion of Ukraine and its humanitarian impact, and also when voting on the suspension of Russia from the Human Rights Council. Albania’s stance is a strong signal of its strategic choice of EU accession and of its role as a reliable partner.

1.2. SUMMARY OF THE REPORT¹

As regards **political criteria**, regular local elections on 14 May 2023 were conducted in a generally calm manner. Observers assessed them as well-administered, competitive and with the participation of key political actors. Concerns relate to the misuse of state resources, claims of pressure on public sector workers and voters, and allegations of vote buying. A low turnout of only 38.2% was registered. The political scene continued to be marked by political polarisation, against the background of persistent deep divisions within the largest opposition party. Parliamentary oversight of the executive remained limited. In March 2023, amendments were adopted with a large majority that strengthen the consultative role of Parliament in the accession negotiations process. Delays and politicisation of the appointments of the Ombudsperson and of the new Anti-Discrimination Commissioner weaken these independent institutions. Under the coordination of the chief negotiator and the newly reformed EU negotiation structures, Albanian institutions have mobilised significant

¹ This report covers the period from June 2022 to June 2023. It is based on input from a variety of sources, including contributions from the government of Albania, the EU Member States, European Parliament reports and information from various international and non-governmental organisations. It also includes the results of comparative assessments and indices produced by other stakeholders, in particular in the area of rule of law.

The report uses the following assessment scale to describe the state of play: early stage, some level of preparation, moderately prepared, good level of preparation and well advanced. To describe progress made during the reporting period, it uses the following scale: backsliding, no progress, limited progress, some progress, good progress and very good progress. Where appropriate, interim steps have also been used.

resources to engage actively in the screening process and to prepare for the next steps of the accession negotiations. While putting EU-related reforms at the centre of its legislative and policy planning, the government needs to refrain from measures that are not in line with EU standards. The government also needs to engage in stronger public communication on the EU accession process. While civil society is generally free, shortcomings negatively impact the ability of civil society organisations to contribute to policy processes. The role of civil society, including in the EU accession negotiation process, needs to be strengthened.

Albania remains moderately prepared in the area of **public administration**. The new strategies on public administration reform and public financial management reform have yet to be prepared and adopted. The reorganisation of roles and responsibilities within the Office of the Prime Minister is still ongoing. Provisions on merit-based recruitment in the Civil Service Law are not consistently applied, especially at senior management level. Significant efforts were made on the digitisation of public services, but it remains crucial to ensure equitable access to services for citizens with limited digital skills or limited access to IT equipment. Increased attention is also required on digital security and protection of personal data, especially following the cyberattacks in 2022 and a number of data leaks.

Albania has a moderate level of preparation on the **functioning of the judiciary**. The implementation of the justice reform continued, resulting in good progress overall. The appointments to the Constitutional Court have been completed with all nine judges now in office, of whom eight with full nine-year mandate. The Specialised Structure against Corruption and Organised Crime (SPAK) achieved further results, and a new Chief Special Prosecutor was elected in December 2022 after a sound process. The efficiency of the judicial system and access to justice continued to be affected by the long timescale of proceedings, increased workload and high backlog of cases, which remains particularly high in appeal and first instance courts. Progress was made in addressing judicial vacancies through the swearing-in of 40 new magistrates in October 2023. The temporary evaluation of all judges and prosecutors (**the vetting process**) has continued to advance at a satisfactory pace. By 6 October, 57% of the vetting dossiers processed had resulted in dismissals, resignations or termination of mandate. In June 2023, the Special Court of First Instance against Corruption and Organised Crime sentenced the former Head of the Constitutional Court to 6 months in prison for false declaration and concealment during the vetting process. Albania must ensure that criminal procedures are systematically initiated against judges and prosecutors whose vetting process revealed criminal elements. The case management system and the judicial training system need improvement to further increase efficiency and professionalism across the sector. Positive actions have been taken towards increasing the relevance of the continuous training programme in the reporting period. Some progress was made on the case management system, particularly with the establishment of the interoperability working group and the adoption of the interoperability framework setting the basis for the roll-out of the system.

Albania has some level of preparation in the **fight against corruption**. Despite some progress and continued efforts in fighting corruption, it remains an area of serious concern. SPAK bodies have conducted investigations in a number of high-level cases, ordering several arrests and convictions in a number of high level cases. Overall, corruption is prevalent in many areas of public and business life and preventive measures continue to have a limited impact, particularly in vulnerable sectors. Increasing the number of final convictions at a high-level remains an important priority to further tackle the culture of impunity. Further efforts are needed to ensure due judicial follow-up in vetting cases where there are indications of criminal offences. The institutional capacity of the Anti-Corruption

Directorate-General in the Ministry of Justice needs to be further strengthened and the composition of the Ethics Commission needs to be revised. The sectors most vulnerable to corruption require targeted risk assessments and dedicated actions.

Albania has some level of preparation in the **fight against organised crime**, with a continued good level of cooperation with EU Members States and EU agencies. More efforts need to be made in the fight against illicit drugs, including through an increase in the capacities of the law enforcement authorities. Following the adoption of a law on cannabis production for medical and industrial purposes, Albania needs to ensure that mechanisms are in place to effectively prevent cannabis from being diverted to unintended use. Progress that has been achieved with the seizure and confiscation of assets linked to organised crime must continue. Efforts also need to continue to ensure an increase in the number of prosecutions and final convictions, especially in high-level cases, and to establish the asset recovery office. Countering cybercrime, money laundering and preventing and combatting trafficking in human beings remain areas in which additional results are needed. All forms of child sexual abuse online should be criminalised and prosecuted. Progress was made on the implementation of the Moneyval recommendations, and of the Financial Action Task Force (FATF) Action Plan. Albania remained on the FATF list of jurisdictions under increased monitoring due to its draft Voluntary Tax Compliance (VTC) law (including a criminal amnesty). Following the draft law's withdrawal, in June 2023 FATF decided to propose an on-site visit, which took place in August and led to Albania's delisting in October 2023. Nevertheless, Albania should ensure that any future VTC law (including potential criminal amnesties) complies with the EU *acquis* and international standards. The track record on money-laundering and high-level corruption cases remains insufficient, and financial investigations need to be further developed.

On **fundamental rights**, efforts at implementation of the legal and policy framework need to be intensified. Progress was made on the use of alternatives to detention. There was some progress on the rights of persons with disabilities, as concerns biopsychosocial assessment. The process of first registration of property and other transitional processes need to advance in full transparency, including by tackling corruption. On the protection of national minorities, the adoption of the remaining implementing legislation did not advance. Furthermore, Albania needs to put in place strong legal and institutional safeguards to prevent further breaches of personal data.

Albania is in between some and moderate level of preparation in the area of **freedom of expression**. Limited progress was made. The intersection of business and political interests, the lack of transparency of sources of finance, the concentration of media ownership, intimidation and precarious working conditions continued to hamper media independence, pluralism and the quality of journalism. The atmosphere of verbal and physical attacks, smear campaigns and intimidation lawsuits against journalists has not improved.

The application of gender-responsive budgeting continued to improve. Since January 2022, the Albanian government has implemented a range of measures aimed at supporting families, women and girls, and vulnerable groups, as a response to the crisis caused by the COVID-19 pandemic and Russia's war of aggression against Ukraine. The economic assistance to victims of domestic violence has been increased significantly. The implementation of the law on gender equality and of the national strategy for gender needs to be further intensified.

The legal framework on **migration** is largely aligned with the EU *acquis* but needs updating in line with developments on the EU side. Albania has contributed to the management of the mixed migration flows towards the EU by cooperating to implement the EU Action Plan on the Western Balkans. It concluded a revised Frontex Status Agreement in September. In

2022, there was a 34% reduction in the number of irregular migrants entering Albania compared with 2021. No progress was made in referrals and access to asylum procedures and shortcomings in the return procedures remain. Albania should take concrete steps to address the needs of unaccompanied minors and align its visa policy with that of the EU. Although the number of asylum applications lodged by Albanian nationals in EU Member States and Schengen-associated countries remains lower than the pre-pandemic level, it increased again in 2022. Continuous and sustained efforts are still needed to address this phenomenon.

On the economic criteria, Albania has between a moderately and good level of preparation on **developing a functioning market economy** and made some progress in addressing last year's recommendations. The economy showed resilience and GDP growth remained strong in 2022, despite the economic fallout from Russia's war of aggression against Ukraine. Albania is at level of preparation **to cope with competitive pressure and market forces within the EU** and made some progress on structural reforms in the energy market, transport infrastructure, the digitalisation of the economy and education outcomes, though significant gaps with regional and European levels remain.

On **public procurement**, Albania is moderately prepared and has made some progress, in particular through an increased use of the most economically advantageous tender award criteria. On **statistics**, Albania is moderately prepared, and made some progress in further aligning with standards of the European System of National and Regional Accounts (ESA 2010) and in steps to strengthen the role of the Institute of Statistics. Albania is moderately prepared in the area of **financial control** where some progress was made, in particular with the updates to the legal framework on internal control and internal audit and the implementation of the policy document on the strengthening of public internal financial control, and continued to target internal audits on arrears.

Albania is moderately prepared in most areas of the **internal market**, namely free movement of goods, services and capital, financial services, and competition policy. The same applies to company law and intellectual property law. Some progress was made on intellectual property rights and on free movement of family members of EU citizens as well as on financial services. However, no progress was made on competition policy, where the State aid Commission still lacks operational independence. Preparations are at an early stage on consumer and health protection, where the country made limited progress. Some progress was also made on free movement of capital, which led to the country's removal from the FATF list of jurisdictions under increased monitoring.

Albania has achieved a moderate level of preparation in many areas linked to **competitiveness and inclusive growth**, namely taxation, enterprise and industrial policy, social policy and employment, education and culture and the customs union. The same holds true for the digital transformation and media, where the country made good progress, including by joining the Digital Europe programme in June 2023. Albania has some level of preparation in the fields of science and research. The country reached a moderate to good level of preparation in economic and monetary policy, as the governance and monetary policy of the Bank of Albania were appropriate and effective in dealing with the crisis caused by Russia's war of aggression against Ukraine; more efforts are required regarding its independence. With limited progress made on the customs union, more efforts are also required in pursuing the fight against smuggling, corruption and imports of counterfeit products.

As regards the **green agenda and sustainable connectivity**, Albania has some level of preparation in the areas of transport, trans-European networks, environment and climate change, and it has a moderate to good level on energy. Progress is noted on the reform of the

day-ahead and intra-day electricity markets, on renewable energy auctions and in developing transport and regional energy networks. Further efforts are needed on renewable energy and on energy efficiency. Albania ratified its participation in the Union Civil Protection Mechanism and is active in it. On the environment and climate, further efforts are needed on water and waste management, environmental law enforcement and nature protection. This cluster and the reforms concerned have significant links to Albania's economic reform programme, the Commission's economic and investment plan and the green agenda for the Western Balkans. Albania needs to address strategic investment planning, and the implementation and monitoring capacity of infrastructure projects.

Albania has some level of preparation in most areas linked to **resources, agriculture and regional policy and cohesion**, namely agriculture and rural development, veterinary and phytosanitary policy, and financial and budgetary provisions. There is a moderate level of preparation in fisheries and aquaculture as well as on regional policy. Some progress was observed in most areas covered, notably with adoption of the Law on wine and regarding administrative capacities for the instrument for pre-accession assistance for rural development programme (IPARD III). Further efforts are needed in regional policy particularly on administrative capacity and coordination between central, local and municipal levels and on financial and budgetary provisions.

Albania has a good level of preparation as regards **external relations, foreign security and defence**. On external relations, Albania made some progress, further aligning its legislation with the EU *acquis* on preventing trade in certain goods that could be used for capital punishment and torture. As regards the EU common foreign and security policy, Albania maintained full alignment with all relevant EU decisions and declarations during the reporting period. As a non-permanent member of the UN Security Council since January 2022, Albania continues to be actively engaged in promoting and defending the rules-based international order as well as Women, Peace and Security.

1.3. STATE OF PLAY OF THE ACCESSION NEGOTIATIONS

Following the Inter-Governmental Conference on accession negotiations with Albania that took place on 19 July 2022, the Commission immediately launched the **screening** process, which is progressing smoothly. All sessions on Cluster 1 (Fundamentals), Cluster 2 (Internal Market), Cluster 3 (Competitiveness and Inclusive Growth) and Cluster 4 (Green Agenda and Sustainable Connectivity) have taken place. Explanatory sessions on Cluster 5 (Resources, Agriculture and Cohesion) and Cluster 6 (External Relations) have been completed and bilateral sessions on these are ongoing. The remaining screening meetings are scheduled until November 2023.

2. CLUSTER 1: THE FUNDAMENTALS OF THE ACCESSION PROCESS

2.1. FUNCTIONING OF DEMOCRATIC INSTITUTIONS AND PUBLIC ADMINISTRATION REFORM

2.1.1 Democracy

The reporting period was marked by the start of the EU accession negotiations process, including the beginning of the screening. The political scene continued to be marked by political polarisation, against the background of persistent deep divisions within the largest opposition party. This has continued to negatively affect the Parliament's key functions of holding the executive accountable through effective scrutiny and of serving as a forum for constructive political debate, as well as its responsibility to elect in a timely manner the heads of key independent institutions such as the Ombudsperson.

The Parliament nonetheless succeeded in adopting, with a large cross-party majority, legislative amendments to strengthen its role in the EU integration process. This was a welcome development. On 14 May 2023, Albania held local elections with the participation of the country's key political actors, in contrast to the largely boycotted 2019 elections.

Elections

Local elections were conducted in a generally calm manner, including on the day of the vote. According to the findings and conclusions of the election observation mission of the OSCE's Office for Democratic Institutions and Human Rights (OSCE/ODIHR), the local elections were well-administered, competitive and held with the participation of the country's key political forces. There are concerns about the misuse of public resources at both national and local levels, claims of pressure on voters and public sector workers, and allegations of vote buying. All of these need to be duly investigated. Despite the establishment of the ad hoc committee on electoral reform in February 2022, no progress was made neither on the adoption of any text nor in addressing the outstanding recommendations of the OSCE/ODIHR and the Venice Commission. This requires constructive and inclusive political dialogue from all sides.

Albania held regular local elections on 14 May 2023 in all of its municipalities. Elections were assessed by observers as well-administered, competitive and with the participation of key political forces, as also noted by the OSCE/ODIHR. The election day was generally peaceful. Vote counting was assessed to be mostly positive, though inconsistencies were noted. The Central Election Commission created a digital platform for the disclosure of the political parties' campaign financing.

Some 40 electoral subjects registered, fielding a total of 144 mayoral candidates, of which only 15 were women, and 23 763 municipal councillor candidates. Legal provisions require that half of the candidates for municipal councils should be women, however this was fully respected in only 10% of municipalities. Electronic voting and counting was implemented in three municipalities, representing 401 out of 5 212 polling stations. As in the previous elections, voters were identified by biometric signature in all polling stations, with technical glitches reported in some 10% of these. These elections registered a low turnout of 38.2%. The participation of young people was particularly low: among 122 545 first-time voters, only 16 628 (13%) cast a vote. A large proportion of the electorate resides outside Albania and are unable to vote from their place of residence, given that the electoral code does not provide for voting from outside the country in local elections.

During the election campaign contestants could campaign freely, but issues of importance for local communities barely featured in the campaigns. The election observation mission deployed by the OSCE/ODIHR pointed out concerns about the misuse of state resources, claims of pressure on public sector workers and voters, and allegations of vote buying. According to the findings of the election observation mission, a level playing field between candidates was not guaranteed due to a narrow and formalistic interpretation of the electoral code's provisions.

Although diverse, the media environment is characterised by systemic problems, including concentration of media ownership and the control exerted by intertwined business and political interests, which impacts on media freedom. This environment, combined with rules on media coverage of elections, favours the main parties. On misuse of state resources, the OSCE/ODIHR referred to the government's decisions, adopted in the weeks before the elections, to provide a bonus to pensioners and to increase the salaries of various categories of public sector employees, and to the fact that on several occasions the leadership of the

central government said that future support to municipalities would depend on the election results.

On 15 June, the Electoral College ruled that the election of the mayor in the municipality of Rrogozhine should take place again, following irregularities in one polling station set up in the town's prison. By-elections were held in Kukes on 24 September, following the dismissal of the mayor.

Parliament's ad hoc committee on electoral reform, set up in February 2022, has not produced any results. The term of the committee was extended in September 2023. Despite the efforts of the Central Election Commission to advance the implementation of out-of-country voting, the required legislative changes are still pending. In December 2022, the Constitutional Court ordered Parliament to close the legal gap within one year. Electoral reform, addressing OSCE/ODIHR and Venice Commission recommendations, should not be further delayed.

Parliament

Parliamentary activity continued to be affected by political polarisation, against the background of persistent deep divisions within the largest opposition party. Parliament nonetheless succeeded in adopting with a large cross-party majority legislative amendments to strengthen its role in the EU integration process, which was a welcome development.

Parliamentary debates and proceedings continued to be negatively affected by harsh political rhetoric, personal attacks and disruptive behaviour in the plenary hall. Disputes between the majority and the opposition, in particular over the Prime Minister's refusal to attend most interpellations requested by the opposition, caused a temporary disruption in the normal functioning of Parliament. The Ethics Secretariat imposed several disciplinary measures, resulting in the unprecedented expulsion of 23 opposition MPs within a month. Higher ethical standards in Assembly proceedings are needed to foster a more constructive political dialogue between the opposition and the majority.

During the reporting period, seven MPs were replaced, five from the Democratic Party and two from the ruling Socialists, due to them running as mayoral candidates in the local elections. Reorganisation of Parliament's standing committees and other bodies was not carried out, because of the conflict within the opposition and attempts to control its caucus.

Parliamentary activity was suspended during the electoral campaign for the 2023 local elections. This suspension was not warranted by the law.

Parliament's **oversight** of the executive remained limited. MPs filed three requests for interpellations and one motion with debate with the Prime Minister. The Prime Minister attended one in person. Other interpellations were held with members of the Council of Ministers. Parliamentary oversight of the work of independent institutions remains limited to considering their annual reports and to a digital tool to monitor the follow-up of the recommendations of these institutions.

During the reporting period, the opposition asked for two committees of inquiry to be set up, but the majority rejected both requests, in spite of the fact that the opposition's right to initiate such committees is guaranteed by the Constitution. The majority's argument in both cases was that a revision of the law on committees of inquiry is under consideration. The current law, however, remains in force.

In March 2023, amendments were adopted with a large majority to the 2015 Law on Parliament's role in EU integration, strengthening the consultative role of Parliament in the

accession negotiations process. During the reporting period, the National Council of European Integration met on a regular basis to take stock of Albania's EU integration process.

Parliamentary proceedings continued to be live-streamed on social media. In an effort to increase transparency, the Parliament created a new website, which is still incomplete and only partly accessible. A working group on transparency standards was set up in 2021 and consultations have taken place with civil society and the media. However, these standards under the principle of open government still need to be consulted upon, agreed, and adopted. Parliamentary documentation, such as legal acts and minutes of plenary sessions and committee meetings, should be published in a more timely and user-friendly manner, clearly indicating the amendments made during each step of the legislative procedure. Public consultation with civil society and interest groups remained formal.

The Assembly faced considerable difficulties in fulfilling its duty to elect the Ombudsperson. A year after the post became vacant, Parliament made another call for candidates in March 2023 and interview candidate in July. Parliament is still to elect a new Anti-Discrimination Commissioner. Delays and the politicisation of these appointment processes weaken these independent institutions.

Governance

Following the first Inter-Governmental Conference that opened the EU accession negotiations with Albania in July 2022, the government has renewed its overall political commitment to the country's EU path. Under the coordination of the chief negotiator and the newly reformed EU negotiation structures, Albanian institutions have mobilised significant resources to engage actively in the screening process, which is proceeding smoothly, and to prepare for the next steps in the accession negotiations.

The opening of accession negotiations needs to translate into an acceleration of specific EU-related reforms. While putting EU-related reforms at the centre of its legislative and policy planning, the government needs to refrain from measures that are not in line with EU standards. The government also needs to engage in stronger public communication on the EU accession process. Following the first Inter-Governmental Conference on accession negotiations in July 2022, the government appointed a new Chief Negotiator, at Minister of State level, and with increased resources. The resulting administrative reorganisation took place during the reporting period. Under the new set up, the Chief Negotiator is responsible for the overall steer, strategic planning and coordination of EU-related matters, together with the State Agency for Strategic Programming and Assistance Coordination, whose Director-General coordinates the National Instrument for Pre-Accession Assistance, and the Ministry for Europe and Foreign Affairs.

Significant progress was made in ensuring coordination on EU integration and EU assistance between State Agency for Strategic Programming and Assistance Coordination (SASPC,) line ministries, and the Central Finance and Contracts Unit and local government units. This now needs to be further consolidated. Improved cooperation, as well as recruitment and training of technical stakeholders in the responsible national bodies, would help ensure the successful implementation of the Instrument for Pre-Accession Assistance programmes, including the Western Balkans Investment Framework, Cross Border Cooperation and IPARD.

Under the coordination of the Chief Negotiator, Albanian institutions have participated in the screening process organised by the Commission, which is proceeding smoothly.

Building on the experience of the screening process, Albania will need to continue to strengthen its EU negotiating structures and coordination between subordinated bodies and line ministries, while further developing expertise on the EU *acquis* across the public administration.

In early 2023, the government adopted the new national plan for European integration for 2023-2025, and the 2022-2030 national strategy for development and European integration, which defines the vision, priorities and sectoral strategic objectives for the upcoming period (*see section 2.1.2. Public Administration Reform*).

In September 2023, a government reshuffle took place leading to the replacement of seven ministers.

The **territorial administrative reform** remains to be further consolidated as part of the wider decentralisation agenda. The annual monitoring report for 2022 on the implementation of the decentralisation and local governance strategy was published in June 2023. A systematic and timely monitoring of this process, and of the mechanisms to carry it out, needs to be ensured.

The new 2023-2030 cross-cutting strategy on decentralisation and local governance, which aims to consolidate the decentralisation process, was adopted in April 2023. The drafting process was based on a series of consultations that included 61 municipalities, central institutions, local government associations, civil society, the private sector, academia, researchers and development partners, which helped to capture and address the priority needs.

Parliament's ad hoc committee on the country's territorial and administrative divisions, which met between February and October 2022, did not lead to legislative or policy decisions, due to a lack of political agreement between the ruling majority and the opposition.

Despite some efforts to address legal and institutional gaps, conflicting and overlapping legal provisions and policies - which regulate the various sectors involving the exercise of functions by the local government units (LGUs) - and the division of responsibilities between local, regional and central government remain areas of concern. There is still a need to streamline the legal framework on the functions of LGUs and further consolidate the implementation of new functions.

Local government units still lack sufficient financial resources and administrative capacity to perform all their devolved responsibilities in a fully satisfactory manner and to exercise their greater policymaking powers effectively. The LGUs' fiscal autonomy remains at risk, as most of their budget depends on national transfers. The delivery of quality public services at local level remains limited.

Progress has been made to reduce the she salary gap between the central and local government levels. However, in order this effort must continue for small LGUs, in order to attract and retain qualified staff, ensuring equalisation based on the principle of equal pay for equal positions.

On gender equality, 18 municipalities signed the European Charter for Equality of Women and Men in Local Life , and 5 municipalities have developed and approved local gender action plans. Despite these positive developments, efforts are required to systematically reflect women's needs, rights and entitlements in the legal and policy frameworks at local level. Women representation in local governments continues facing challenges that hinder their meaningful participation.

On transparency, some improvement has been noted: for example, the Consultative Council

has adopted an integrity index methodology and 21 LGUs have developed and approved local integrity plans. Further efforts are needed to expand integrity plans to all LGUs and to ensure that the existing integrity plans are fully implemented and adequately monitored.

The Consultative Council continues to operate as the main forum for institutional dialogue and coordination between central and local governments. Further efforts are needed to engage LGUs and the associations of local government in the early phases of legislative initiatives, and to intensify cooperation and coordination between local and central government. Appropriate levels of representation needs to be ensured.

The network of EU integration local coordinators has strengthened the LGUs' involvement in the EU accession process. The engagement of elected bodies of local governments and municipal administration in the EU integration process needs to be strengthened, especially in the context of the EU accession negotiations.

Civil society

The role of civil society, including in the EU accession negotiation process, should be further strengthened. The structures in place for consulting civil society need to be reinforced and become fully operational. There has been no progress in implementing the roadmap on an enabling environment for civil society. The amendments made to the 2014 VAT Law that allow for tax exemptions instead of tax refunds have not been implemented yet.

An empowered civil society is a key component of any democratic system and Albania's legal and regulatory framework on the right to freedom of assembly and association is in line with international standards. Preparations began in 2022 to set up the national electronic register of non-profit organisations, in line with the 2021 law. It is envisaged that the electronic register will be operational at the end of 2023 (*see also Chapter 24 on FATF recommendations*). In the meantime, civil society organisations (CSOs) continue to register at Tirana District Court as per the old law of 2001 and its lengthy registration process.

There has been no progress in the implementation of the roadmap on an enabling environment for civil society, which remains very dependent on donor support. Additional efforts and resources are required to advance its implementation and to improve the roadmap's reporting and monitoring mechanisms. The revision of the Law on voluntarism is still pending.

The legal framework on public consultation is generally in line with European standards. The Parliament's platform still needs to achieve full operability and consultations on draft legislation should be carried out regularly. In addition, the scope of the Law on public consultation still needs to be extended to cover implementing legislation (*see also the Section on public administration reform*).

The role of civil society in the EU accession negotiation process needs to be strengthened to ensure the meaningful participation and consultation of CSOs in policy-making processes. The structures in place to consult civil society at governmental level need to be strengthened and become fully operational. The Partnership Platform on European Integration, set up in 2019, is partly operational.

The ability of the National Council for Civil Society to voice the priorities of CSOs in policy-making processes remains weak. An update of the Law on the National Council is still pending. The public funding of the Agency for the Support of Civil Society remains insufficient to sustain CSOs' activities, in particular in social services.

Limited progress continued in the field of VAT refund, with implementation of the

instructions on VAT reimbursement for CSO beneficiaries of EU funding and other donor grants. However, the process remains lengthy and cumbersome. In 2022, amendments were made to the 2014 VAT Law to allow tax exemptions for CSOs, however implementation has not started yet. Albania still does not have tax incentives in place for individual donations and only marginal tax incentives for corporate donations.

Better coordination and meaningful representation of interest groups should be ensured at all levels as the landscape remains fragmented, dependent on donors and concentrated in the main cities, although grassroots initiatives are active on some community-based issues.

2.1.2. Public administration reform

Albania remains **moderately prepared** in the area of public administration reform. It made **limited progress** in delivering on last year's recommendations.

A new national strategy for development and European integration for 2023-2030 was adopted in February 2023. Preparations for the new strategies on public administration reform (PAR) and public financial management (PFM) have started but they still have to be adopted. The new 2022-2026 digital agenda was adopted in June 2022. The new 2023-2030 decentralisation strategy was adopted in April 2023. Implementation of the ongoing 2015-2022 PAR and 2014-2022 PFM strategies continued. The centre of government entities under the Prime Minister's Office have evolved, but the new structure still needs to settle in. A more consistent legislative framework with clear criteria for the creation of subordinated entities still needs to be created. Provisions on merit-based recruitment in the civil service law are not consistently implemented, especially for senior level positions. A salary reform was initiated in 2023 but the reform does not yet fully address the complexity of the salary structure or the limited role of performance. Progress on the implementation of the automated payroll system stalled. Significant efforts were made on digitisation of service delivery through the e-Albania platform. This was accompanied by a closure of front office contact centres in 2022, which raised concerns over access to services to vulnerable and digitally less-apt citizens. A restitution of some contact centres is under consideration, together with other ongoing efforts to improve the user experience of the portal online. Further efforts are needed to ensure equitable access to services for people with limited digital skills or limited access to IT equipment. Increased attention is required to digital security and protection of personal data. The Commission's 2022 recommendations remain mostly valid. In the coming year, Albania should, in particular:

- put in place a legislative framework that properly regulates the typology and criteria for establishing subordinated bodies and clarifies lines of accountability;
- adopt and start implementing the new public administration and public financial management strategies, and review the effectiveness of the current monitoring structures;
- consistently and effectively implement the provisions on merit-based recruitment, promotion and dismissal in the civil service law at all levels, especially at senior level; continue the reform of the salary system for civil servants and re-initiate the automation of the payroll system.

Strategic framework for public administration reform

Good governance is addressed in the newly adopted national strategy for development and European integration for 2023-2030. The government maintained regular monitoring of the implementation of the 2015-2022 **PAR strategy** and the 2014-2022 **PFM strategy**. Preparations of new PAR and PFM strategies for 2023-2030 have started. The new 2022-

2026 digital agenda was adopted in June 2022. The new 2023-2030 strategy on decentralisation and local governance was adopted in April 2023.

The Minister of State for Services and Standards was appointed as the overall coordinator for good governance in June 2022, ensuring a clear political mandate for the coordination of reforms. This post was abolished in the September 2023 during the government reshuffle. There is not yet clarity on the new structure to be put in place. An Integrated Policy Management Group (IPMG) for PAR is in place, but not very active. A new government decree from July 2023 should streamline the IPMG structure. Some of the technical groups under it are more actively used for coordination of PAR initiatives. The **financial sustainability** of reforms needs to be improved through better reviewing of overall financial resources as, currently, the implementation of reforms depends heavily on funding from external donors.

Policy development and coordination

The legal basis and the institutional set-up for consistent **policy making** are partially in place. An extensive **policy coordination structure** exists through the Strategic Planning Committee (SPC), chaired by the Prime Minister, and the Integrated Policy Management Group. The SPC has met regularly and steered the policymaking process. The IPMG's activity has varied between sectors and should be improved. The SPC and IPMG structures are now operating in cooperation and under the facilitation work of the Agency for Strategic Programming and Aid Coordination – SASPAC set up in mid-2021.

A new national strategy for development and European integration was adopted in February 2023, with some delay, and will now cover the period up to 2030. It serves as an overarching reference document for the integrated planning system. In addition, the new 2023-2025 national plan on European integration was adopted in March 2023.

An integrated planning system - including links to budgeting - is in place, but its application has been uneven. The use of the developed support systems on planning and external fund management has been very limited. The support system for budget planning has been more actively used, including for the preparation of the mid-term budget planning. Consistency between policy planning and budgeting needs to be further improved by making full use of the systems that have been developed, including after a review of their functionality.

SASPAC is now staffed and assumed its mandate to manage policy and project coordination between the Government of Albania and donors, including independent fiscal institutions. Further efforts are needed to strengthen the administrative capacity of line ministries and the Prime Minister's Office and to increase the accountability of management (*see Chapter 32 – Financial Control*). The rulebook of the Prime Minister's Office still needs to be adopted.

Administrative capacity for **inclusive and evidence-based policymaking and legislative development** needs to be further strengthened. Progress was reported on increasing the use of regulatory impact assessments, with practical training for the entities involved but further efforts are necessary to improve their quality. On **public consultation**, a regulatory framework is in place. The electronic web portal is operational and has been updated. However, the proportion of legal acts that undergo online public consultations remains very low. Implementing legislation is yet to be subjected to public consultations. In 2022, 48 acts were subject to consultation, out of a total of 866 adopted acts. The quality control of consultations needs to be strengthened and proper follow-up ensured, and further efforts are needed to encourage stakeholders, in particular civil society, to participate.

Public scrutiny of government work needs to be further improved. Parliamentary oversight of the government's performance, including subordinated agencies, needs to be strengthened. Regulatory and institutional monitoring, and the reporting framework for government performance, are still fragmented. The harmonisation of reporting practices would be facilitated by using the Integrated Planning System Information System. Communication to citizens about ongoing reform efforts needs to be improved.

Public financial management

The 2014-2022 PFM strategy expired in December 2022 and a new strategy is in preparation, with adoption expected still in 2023. The new strategy should be developed through an inclusive process. The Ministry of Finance and Economy (MoFE) which is the leading institution for the PFM reforms regularly reports on the implementation of the PFM strategy.

The **Law on organic budget** has been systematically implemented in line with the budget calendar for 2022. In recent years, including in 2022, budget revisions have been made primarily through normative acts, often lacking transparency, and confirmed *ex post* by Parliament. Uncertain economic conditions have justified this to some extent, but a return to more regular budget revision procedures seems appropriate. An independent oversight body with a mandate to assess the fiscal risks and monitor the compliance with the existing fiscal rules remains to be established. The quality of the medium-term budget programme has improved, but efforts should continue to consistently improve revenue estimates and strengthen sector ceilings to support policy implementation by the line ministries. Initial efforts on gender-responsive budgeting should be maintained and expanded.

Budget transparency remains satisfactory overall with the publication of all key budget documents. However, further improvement in the quality and format of the documents is still needed including publishing of audit reports online in a timely manner.

Public service and human resources management

Progress on **merit-based recruitment, promotion and dismissal** needs to be consolidated by applying consistent standards across the public administration and across all levels.

Greater legal compliance is needed in recruitment procedures. Recruitment from a pool of talent is the standard approach, and has well-established procedures, but it is not fully applied yet. The merit principle needs to be complied with for both senior and entry-level positions. The administration manages to fill most vacant posts, with 830 out of 855 vacant positions open for external recruitment filled in 2022. From January to September 2023, 303 positions were filled out of the 585 vacant posts announced. Across the public administration, job descriptions are not yet fully in line with the categories set out in the civil service law. Of the 830 recruited staff in 2022, 66% were women and 34% - men. Of the 303 recruited staff from January to September 2023, 66% were women and 34% - men.

In 2022, there were 19 **dismissals** from the civil service, a significantly lower number than in previous years (346 in 2021, 619 in 2020) and the authorities have declared that these dismissals were in compliance with the civil service law. The government reports that the rate of execution of final court decisions on dismissals and reinstatements improved from 79.5% in 2021 to 81.5% in 2022. The long time it takes to enforce reinstatement decisions has a significant cost for the government, so the focus should remain on improving reactivity.

The **human resources management** information system continues to be filled with the necessary data, although at a slow pace. It does not yet cover the entire public sector, it is not completely up-to-date and it still needs to be extended to the local level.

On **salary reform**, two new laws and the package of implementing legislation were adopted in May 2023. These increased salaries for holders of political mandates, influencing also salaries in constitutional bodies. It also introduces a number of changes to the salary structure of the civil service, including a higher weighing of seniority and a broader range of salary classes. The resulting salary increases will be introduced in two phases in 2023 and 2024. Earlier in 2022 and 2023, a number of other decisions had been taken which impacted salaries, including increase of public sector salaries in key sectors and increase of the minimum salary. The comprehensive **salary reform** has not been finalised yet and the new measures do not address all outstanding issues. The salary system remains complex and not fully transparent. The most recent reform provides some new limited incentives for career progression but performance incentives are not yet applied. Reform of the remuneration system should be linked to the process of harmonising job descriptions. Automation of the payroll calculation stalled in 2022, ascribed to the inability of the IT system in place to perform this function and the complexity of the current remuneration system. Greater efforts are required to make it possible to calculate the payroll automatically and to link it to the treasury.

The Albanian School of Public Administration (ASPA) continued to adapt its training programmes for **professional development**, with a stronger focus on EU integration. Training was provided to 5 397 people in 2022. Efforts to improve the physical and digital infrastructure of ASPA are still needed.

Accountability of the administration

The legal framework for the organisation of the central administration does not provide a comprehensive and consistent foundation for the establishment and accountability of subordinated institutions and autonomous agencies. This has resulted in the ad hoc setting up of some new agencies. The law should set out a clear typology and criteria for creating subordinated bodies and, as well as clarify responsibilities and reporting lines. Workflow and decision-making processes in the public administration should be more transparent. The legal framework for ensuring managerial accountability needs to be improved.

The citizens' right to good administration needs to be further strengthened. The rate of implementation of the Ombudsperson's recommendations continues to hover in the 50-60% range. Of the 249 recommendation in 2022, 17% were fully and 36%, partially implemented, leading to a combined score of 53%, (50% in 2021). Of the 30 recommendations issues between January and April 2023, 17% were fully and 17% partially implemented, leading to a combined score of 34%. Parliament should strengthen its cooperation with the Ombudsperson and address the problem of the lack of responsiveness of public administration bodies.

On **transparency and access to information**, the Commissioner for the right to information reports that a high number of institutions (391) have published transparency programmes and an increasing number of government entities have established an electronic register of information requests. The Commissioner received an increased number of complaints (992) about the administration's failure to provide information, often resolved after his intervention. The revision of the Law on access to information should be completed to ensure managerial responsibility for non-compliance with its provisions. Albania ratified the Council of Europe Convention on Access to Official Documents in 2022. The Law on open data and interoperability, aiming at aligning national legislation with EU Directive 2019/1024 on open data and the reuse of public sector information, entered into force in April 2023.

A legislative framework is in place for the **right to administrative justice**. The capacity of the administrative court system and, in particular the appeal courts, to deal with cases is limited, which led to an increased backlog in 2022. Legislation is in place to protect the **right of citizens to seek compensation** and is applied in practice in judicial cases. However, there is no mechanism for the regular monitoring and analysis of administrative and judicial practice in such matters, and the government does not gather data on payments made in public liability cases and the reasons for them. Nevertheless, the enforcement of administrative court decisions by the executive remains problematic, with a low level of voluntary compliance, which results in the need to use bailiffs.

In November 2021, Parliament adopted the Law on co-governance, giving substantial powers on mediation and dealing with grievances to the Agency for Dialogue and Co-governance. The structure of the organisation was accordingly adjusted by a government decision in 2022. The agency reports directly to the Prime Minister. It can conduct inspections on public institutions, based on citizens' complaints, and apply administrative sanctions or propose disciplinary measures or mediation. Complaints are received via the 'Albania we want' platform. A separate platform exists to denounce corruption. A significant number of complaints are received and treated, but some concerns remain on whether the agency's role may discourage the use of more formal and independent appeal and complaint channels.

Service delivery to people and businesses

The institutional and legal frameworks to ensure a user-oriented administration are in place. The new 2022-2026 digital agenda was adopted in June 2022. Alignment with the revised European Interoperability Framework is still pending. Alignment with new legislation, such as the Interoperable Europe Act, should be ensured.

During the reporting period, the government continued its push to expand online service delivery, primarily through the e-Albania platform. The number of online services increased to 1 227, estimated to be around 95% of all public services. The government is planning to reorganise the portal to improve its user-friendliness. The number of registered users has increased to 2.8 million though only about 1.5 million of those are active users. On 1 May 2022, the government decided at short notice to close the 'front desks' (ADISA centres), delivering central government services, with a view to moving towards 100% online service delivery. The aim of this measure is to improve the quality of services and reduce corruption. The rapid shift has raised questions about the quality and accessibility of services for people with limited digital skills, limited digital access, or persons with a disability and this issue still needs to be addressed. The government has recently announced its intention to reinstate some form of contact centres. A good number of municipalities have one-stop-shop centres to provide municipal services, which in the past were often combined with an ADISA centre. On accessibility for persons with disabilities, Albania needs to align with Directive 2016/2102 on the accessibility of the websites and mobile applications of public sector bodies.

In 2022, the provision of digital services was temporarily suspended after a number of cyber-attacks on government systems, albeit not on the e-Albania platform itself. A number of data leaks from some public systems have also occurred. Therefore, digital security, as well as data protection provisions, need to be strengthened. The National Agency for Information Society is improving its risk assessment capacity and business continuity infrastructure. On data protection, Albania should upgrade its regulatory framework to align with EU standards.

The Code of administrative procedures provides the legislative framework to **simplify administrative procedures** in line with international standards. The process of legal

harmonisation with the code needs to be completed. In April 2023, the government adopted a new Policy Document on Standards of Public Services, which aims to improve service standards.

2.2. RULE OF LAW AND FUNDAMENTAL RIGHTS

2.2.1. Chapter 23: Judiciary and fundamental rights

The EU's founding values include the rule of law and respect for human rights. An effective (independent, high quality and efficient) judicial system and an effective fight against corruption are of paramount importance, as is the respect for fundamental rights in law and in practice.

Albania is **in between some and moderate level of preparation** in aligning with the EU *acquis* and European standards in the area of the judiciary and fundamental rights. **Some progress** was made in the reporting period.

Functioning of the judiciary

Albania is **moderately prepared** on the functioning of the judiciary. **Good progress** was made during the reporting period, with the continued implementation of the justice reform. The vetting process for judges and prosecutors has advanced with overall good results, although the pace of proceedings in appeal needs to be stepped up in light of the revised constitutional deadline, with due regard to the quality of the process. By 6 October, 57% of the vetting dossiers processed resulted in dismissals, resignations or termination of mandate. Albanian institutions need to ensure systematic judicial follow-up on vetting cases where criminal offences have been indicated. The efficiency of the judicial system and access to justice continued to be affected by the length of proceedings, the increased workload and the large backlog of cases, which remains significant. Progress was made in addressing judicial vacancies through the appointment of a significant number – 40 – of new magistrates, sworn in office at the High Judicial Council in October 2023. Implementation of the new judicial map has started; however, this process needs to be consistent with the legal framework and principles of access to justice. The Specialised Structure for Anti-Corruption and Organised Crime (SPAK) achieved further results, and conducted investigations in several high-level cases, which include the involvement of two former ministers. A new Chief Special Prosecutor was elected in December 2022 after a sound process. Some positive actions have been taken towards increasing the relevance of the continuous training programme in the reporting period, however further significant progress is needed on last year's recommendation regarding the judicial training system. Progress was made on the case management system, particularly with the establishment of the inter-operability working group and the adoption of the interoperability framework setting the basis for the roll-out of the system.

Recommendations for the coming year:

- further advance the process of re-evaluating judges and prosecutors (vetting) and speed up procedures, in particular on appeal, with due regard to the quality of the process;
- consolidate efforts to improve the efficiency of all courts and prosecution services and reduce the backlog of cases, including by filling open vacancies, improving the functioning of the courts and streamlining/simplification of judicial proceedings, further decisive action to set up a modern integrated case management system and to create a robust implementation and communication plan for the new judicial map that ensures

respect of the right to access justice and of the applicable legal framework, in particular on transfers and promotions;

→ continue to strengthen the capacity and independence of the judicial system and its self-governing institutions, while making quality and efficiency improvements at the School of Magistrates, including by revising the admission examination in line with European standards.

The comprehensive transitional re-evaluation (vetting) of all judges and prosecutors continued to advance at a steady pace. The International Monitoring Operation, deployed under the *aegis* of the European Commission, continued to exercise independent oversight of the process.

By 6 October 2023, the vetting institutions had completed 689 vetting cases at first instance amounting to 84% of the total. Of these, 537 decisions are final. In total, around 805 professionals were due to undergo scrutiny. Overall, 57% of the vetting dossiers processed so far have resulted in dismissal or termination due to the assessee resigning or reaching retirement age. The outcome of decisions of the first instance vetting body, the Independent Qualifications Commission and, where applicable, of the Appeal Chamber, resulted in 257 dismissals (mostly for issues relating to unjustified assets); 278 confirmations in office; 152 decisions to terminate the vetting proceedings; and 2 suspension decisions, with the obligation to undergo training. The International Monitoring Operation has continued to oversee the vetting process and has issued opinions on first-instance assessments, including 33 recommendations for appeal, and 8 dissenting or concurring opinions after the final decisions. The vetting institution of public commissioners has followed all recommendations for appeal. In the same period, the Appeal Chamber processed 208 cases.

In June 2023, the Special Court of First Instance against Corruption and Organized Crime sentenced the former Head of the Constitutional Court to 6 months in prison, commuted to one year of probation, for false declaration and concealment during the vetting process. Trial is ongoing against three former High Court judges, and the Special Court of First Instance against Corruption and Organized Crime has confirmed the request of the Special Prosecutor's Office regarding the confiscation of assets in one of the three cases. The vetting institutions are expected to systematically refer cases to prosecution services where there are indications of criminal offences. So far, 34 cases have been referred to prosecution in cases of termination of the vetting process due to resignation, which represents about 10% of the number of resignations and dismissals. Prosecution services are encouraged to proactively initiate criminal proceedings against judges and prosecutors whose vetting process revealed criminal elements.

It is important that all state institutions and judicial authorities, including the self-governing bodies of the judiciary, respect the independence and exclusive jurisdiction of the vetting bodies, and refrain from acts that could contradict the final vetting decisions.

Strategic documents

The Ministry of Justice reports regularly on the implementation of the 2021-2025 cross-sector justice strategy and its action plan. All judicial institutions, including the Constitutional Court, have developed plans to align their activities with the cross-sector strategy.

A specific set of indicators is included in the justice strategy and its action plan to make it easier to track its implementation. There is a need to improve the reporting capacities of the relevant units in all institutions, standardise reporting methods, provide more frequent specialised training of staff on analytical skills, and ensure the accuracy of statistical data at

all levels. Albania needs to ensure effective cooperation between justice institutions, the allocation of sufficient resources and the efficient and systemic functioning of the justice sector in the context of implementing the justice strategy and its action plan.

Specialised bodies

SPAK, comprising the Special Prosecution Office (SPO) and the National Bureau of Investigation (NBI), continued to be fully operational. The High Prosecutorial Council (HPC) elected a new Chief Special Prosecutor in December 2022 after a sound process. The capacity of the recruitment bodies (SPO, NBI and the Courts for High-Level Corruption and Organised Crime) needs to be further strengthened to ensure efficiency and the sustainability of their workload. The SPO has filled 17 out of its 20 prosecutor posts. One prosecutor was temporarily transferred to SPO from the Prosecutor General Office in March 2023 for the period of one year. The SPO has filled 12 out of its 16 financial investigator posts. Following a second round of recruitment in June 2022, the NBI has 60 investigators. As provided by law, an international commission consisting of two criminal justice experts nominated by the EU and two by the US government, continued to monitor the functioning of the NBI. *See also under Chapter 24 – Justice, Freedom and Security*

Despite some progress, the remaining judge vacancies in the SPAK specialised courts need to be filled up. In the SPAK appeal court, 10 out of 11 judges have been appointed. There were nine judges out of 16 in the first instance court, of which three delegated and not formally appointed.

Management bodies

The self-governing institutions of the judiciary have continued to fully exercise their functions. All vacancies for non-magistrate members of the High Prosecutorial Council (HPC) have now been filled. The High Judicial Council (HJC) and HPC are due to renew at least half of their membership, including both magistrates and lay members, by December 2023. This renewal will result in new chairpersons for both Councils. It is essential that the process to select the members of the HJC and HPC guarantees fair and effective competition and independence, in particular by taking measures to ensure a competitive number of applicants notably in appointments by bodies that appoint lay members and by Parliament.

The HJC advanced with the appointments of judges to vacant positions but it needs to finalise the promotion of judges to the High Court and ensure that all 19 judges are in place. The HJC continued to approve a significant amount of implementing legislation regulating the activities of the judicial system and courts. Evaluations remained below the projected targets. However, they remain key to ensuring the effective functioning of the judiciary and efficiency of the judicial system. The HJC needs to increase the pace of evaluations and the HPC needs to urgently start carrying them out. The HJC and HPC need to put in place clear rules of procedure for the evaluation, promotion and transfer of judges and prosecutors. The HPC needs to urgently start carrying out evaluations of prosecutors, in line with its annual plan, and adopt the necessary implementing legislation to do this. So far, no evaluations have been completed by the HPC, which is a matter of concern. The HPC and the General Prosecution Office (GPO) should further improve cooperation to ensure effective management of district prosecution services and in reporting on how the system is functioning. The budgets and human resources of the HJC and HPC have gradually increased. There are recurrent complaints from the media and civil society about transparency and outreach. It is necessary to improve the regulatory framework and the well-established practice for media communications and access to information, based on the principle of transparency.

The Justice Appointment Council continued to operate throughout 2022 and a new Council was selected in December 2022.

The capacity, independence and efficiency of the self-governing bodies of the judiciary needs to be further strengthened, including by ensuring the quality of their decisions, transparency of their work and effective public communication.

Independence and impartiality

The 2016 justice reform set out a satisfactory legal and institutional framework to guarantee the independence and impartiality of magistrates. However, concerns continued to be raised about alleged attempts to interfere with and exert pressure on the judicial system. The training of magistrates should further focus on integrity and judgecraft. Targeted action to reduce undue influence and increase public trust in the judiciary should be further considered.

Legal provisions are in place to guarantee independent procedures to appoint, promote, evaluate and dismiss judges and prosecutors, and to ensure the possibility to appeal all related decisions. The remuneration of judges and prosecutors reaches the highest levels for public sector salaries in the country. In December 2022, the Constitutional Court delivered a decision on the regulatory framework for the salaries of magistrates. This decision has been implemented in full respect of the principle of the financial independence of magistrates. The transparency and correct implementation of the legal provisions on promoting and transferring prosecutors and judges should be ensured by the Councils, including through implementing legislation.

The roll-out of a modern integrated case management system has been long pending, and it remains necessary to improve the efficiency and transparency of the justice system. The limited number of judges at several courts coupled, with the lack of an integrated case management system, leads to a worrying result in that the random allocation of cases is not widely applied. The random allocation of cases in the prosecution services is not applied and is an area of serious concern. The IT centre for the justice system has only one member of staff on duty, which is insufficient to ensure strong leadership and high standards. Progress was made on the case management system, particularly with the establishment of the interoperability working group in June 2023 and the adoption of the interoperability framework setting the basis for the roll-out of the system .

It is a criminal offence to exert undue influence over a judge or a prosecutor. There have been no official reports from judges or prosecutors of such attempts. Concerns remain about internal and external attempts to exert undue interference over the judicial system, political pressure and intimidation. No sanction has been taken against public officials or politicians waging accusations against magistrates. However, the self-governing institutions have publicly reacted to such accusations, classifying them as undue influence and pressure.

Accountability

The High Justice Inspector (HJI) continued to be operational, initiating and conducting disciplinary investigations against magistrates. Nearly half of the planned inspectors (12 out of 26) are in office. The recruitment of additional inspectors and improvement of HJI's capacity remain necessary. The HJI adopted a revised methodology to reduce the backlog of 1 606 cases that it inherited, of which 1 072 have yet to be processed. The HJI has not accumulated a backlog of new cases since it was set up. It is still necessary to During the reporting period, the HJI received 789 complaints. It processed 534 complaints and started 28 disciplinary investigations, of which for six magistrates it has requested disciplinary measures by the Councils. In most cases where the HJI requested dismissals, the councils decided on a

more lenient measure.

The HJI has proposed three disciplinary measures for judges to the HJC, of which two are still ongoing and one has been followed, but with a change to the proposed measure. The HJI has proposed three disciplinary measures for prosecutors to the HPC, of which one is ongoing and two are suspended.

The HPC should quickly begin the evaluation of all prosecutors, given the lack of progress in the reporting period.

Cooperation between the institutions governing the justice system should be further strengthened. The regular general meeting between the HPC and the HJC took place only once during the reporting period. Coordination on a regular basis is needed.

Strategic communication by the institutions of the judiciary on key policies is still weak. Greater transparency is needed on the concrete steps to implement the judicial map. Frequent communication is also needed on key policies adopted by both councils, including reader-friendly information on the procedure to promote judges and prosecutors, regular thematic evaluations and other analytical reports.

Professionalism and competence

The system for recruiting, selecting, appointing, transferring and dismissing judges and prosecutors is managed exclusively by the self-governing institutions of the judiciary. The continued implementation of judicial reform reduced political influence throughout the appointment process, thus contributing to ensure a more merit-based career system. The last vacancy in the Constitutional Court was filled in December 2022. The evaluation process, including the ranking of candidates, needs to be more transparent and allow for more competition, in line with the Venice Commission recommendations.

The High Court continued to reduce its backlog of cases, however this remains very high, and more efforts, including additional judges and legal advisers, are necessary to help reduce it further.

Quality of justice

Some positive actions have been taken towards increasing the relevance of the continuous training programme in the reporting period. The overall quality of the initial and continuous training at the School of Magistrates (SoM) requires further improvement. Further to the efforts made in previous years, an increase in the number and quality of cohorts of students and graduates is still necessary as a matter of priority, to address judicial vacancies and the efficiency challenges of the judicial system. However, for the 2022-2023 academic year, the intake of new students slightly decreased compared with the previous term. Of the 96 places available in the SoM, only 66 students were admitted for 2023-2024. In addition, the SoM needs to continue improving the quality of new recruits and graduates, including through a comprehensive revision of the entry examination in line with European standards. A comprehensive analytical projection of the short and long-term needs of the judicial system, including a number of magistrates is still missing. This should take into account the backlog in cases, implementation of the judicial map and the results of vetting. The SoM needs to intensify its efforts to improve the quality of academic staff and to ensure a competitive and transparent recruitment process. The methodology of continuous training needs to be improved and should be based on a regular needs assessment. The SoM should publish an analysis of the satisfaction surveys on continuous training and adopt a methodology to conduct regular needs assessments. Initial training should be substantially revised to be more consistent with the objective of specialisation and to put a greater focus on practical training,

especially on legal writing and reasoning. Training should also include a specific curriculum on EU law. The total budget allocated to training initiatives at the SoM in 2022 amounted to EUR 2.7 million, compared with EUR 2.9 million in the previous year. As an observer of the European Judicial Training Network (EJTN), the SoM should be more proactive in profiting from the network's activities and expertise.

The quality of final court decisions need to be further improved. The HJC and the High Court have taken some steps towards the dissemination and unification of judicial practice, which however requires further consolidation. Access to full reasoned decisions and their timely publication remains very limited.

Albania had 11.4 judges per 100 000 inhabitants (318 judges) and less than 8 prosecutors per 100 000 inhabitants (202 full time prosecutors) in 2022 according to the European Commission for the Efficiency of Justice (CEPEJ). The EU average in 2021 was 24.1 judges and 10.8 prosecutors per 100 000 inhabitants. The number of judges in Albania increased in 2022 compared with the previous year's ratio, following several new appointments; and there was a slight drop in the number of prosecutors compared with the previous reporting period. The 2021 budgetary allocation for the judicial system was about EUR 70 million. This amounts to over EUR 14.5 per inhabitant. The budget for the courts saw a significant increase, however the courts' infrastructure remains poor overall and future budget allocations need to address with greater determination the pressing needs of the judicial institutions.

Efficiency

The unfilled open vacancies, the length of proceedings, the low clearance rate and the high number of unresolved cases continue to affect the efficiency of the judicial system.

The majority of courts in Albania function with reduced personnel, due to judicial vacancies, on average at less than half of their normal capacity. Progress was made in addressing judicial vacancies, through the appointment of 40 new magistrates who were sworn in office at the High Judicial Council in October 2023 and will immediately take up their duties at first instance courts throughout the country. Albania began to implement the judicial map, which aims to help optimise human and financial resources, increase specialisation, increase the courts' efficiency and mitigate the impact of the vetting process. The implementation of the judicial map should ensure the respect of the right to access to justice and of the applicable legal framework, in particular on transfers and promotions. A robust implementation plan for the judicial map is still missing and needs to be urgently put in place. Periodic assessments, effective communication and an adequate budget need to be ensured.

The average number of cases per judge remains high, which is of concern, especially at appeal level. Attempts to stabilise the backlog have not yet produced results. There has been a 31% increase in cases awaiting adjudication countrywide. The average length of a case at appeal level was 893 days in 2022. At the Tirana Appeal Court, the average length of a criminal case was 5 820 days.

The courts with the largest backlog are the High Court, the Appeal Court and the Administrative Court of Appeal. In 2022, the backlog in the Administrative Court of Appeal increased by 15%, with 21 166 cases pending, compared with 2021, although the clearance rate improved. The backlog in the appeal courts of general jurisdiction is 28 140 cases, i.e. up 24% from the previous reporting period. All the other efficiency indicators for cases at appeal level have worsened compared with the previous reporting period, which is a worrying trend. The High Court has the biggest backlog, of over 31 827 cases but has managed to reduce it by 12% compared with the previous year. The highest number of pending cases at the High

Court are civil cases, while of the number of new cases registered in the Court fell by 27% compared with last year.

The accumulated backlog has a significant impact on the clearance rate and capacity of judges to process cases in due time. The HJC and HPC should decide on an appropriate methodology and take the necessary steps to reduce the backlog at all levels and to ensure a reasonable time for the hearing, reasoning and publication of final court decisions. The absence of defence lawyers is the most frequent reason for the adjournment of hearings. Together with filling up of vacancies as well as other administrative and procedural matters, this issue should be addressed to improve judicial efficiency.

Further efforts are needed to improve the collection and reporting of judicial statistical data. It is urgent to set up a new integrated case management system through determined policy, planning and budgetary efforts, and ensure its interoperability across the entire justice system, in line with CEPEJ methodology. Progress was made with the establishment of the interoperability working group and the adoption of the interoperability framework setting the basis for the rollout of the system .

Alternative dispute resolution is not used, and the courts did not refer any cases in 2022. It is necessary to improve citizens' awareness of alternative dispute resolution, the services of the mediation chamber and the legal provisions on court referral to the mediation chamber needed as a matter of priority to reduce the case backlog and increase access to justice.

There are 18 cases pending before the Council of Europe Committee of Ministers for supervision of the execution of final judgments of the European Court of Human Rights.

Fight against corruption

Albania has **some level of preparation** in the fight against corruption. Despite **some progress** and continued efforts in fighting corruption, including a number of high level convictions and financial investigations at high level, it remains an area of serious concern. Overall, corruption is prevalent in many areas of public and business life and measures to prevent it continue to have a limited impact, particularly in vulnerable sectors. The Specialised Structure for Anti-Corruption and Organised Crime (SPAK) conducted criminal proceedings and financial investigations in several high-level cases. Criminal convictions were pronounced by the SPAK Courts in high-profile cases, notably in case of a former Minister of Environment and of a member of Parliament as part of an investigation into the concession contracts on urban waste treatment (the incinerators' affair). Increasing the number of final convictions in high-level cases remains an important priority to further tackle the culture of impunity. The vetting of judges and prosecutors continues to bring results in the fight against corruption within the judiciary, however further efforts are needed to ensure due judicial follow-up in vetting cases where there are indications of criminal offences. The institutional capacity of the Anti-corruption Directorate-General in the Ministry of Justice needs to be further strengthened. The composition of the Ethics Commission needs to be revised, as the presence of a member of the government is ground for serious concern. The sectors that are most vulnerable to corruption require targeted risk assessments and dedicated actions. The 2022 recommendations were only partially implemented, thus they remain valid.

In the coming year, Albania should in particular:

- strengthen the investigation, prosecution, adjudication and final conviction of corruption cases, in particular at high level, and increase the seizure and confiscation or recovery of criminal assets resulting from corruption-related offences;
- further strengthen the capacity of the SPAK, to fully reflect its operational needs,

including by increasing human resources, providing specialised equipment and adopting a strategy that prioritises cases as a way to tackle the continuously increasing backlog of cases;

→ adopt a new anti-corruption strategy to effectively curb corruption, including dedicated action plans and indicators for the sectors most vulnerable to corruption, and address effectively the recommendations of the Council of Europe's Group of States against Corruption (GRECO).

Track record

Efforts continued to extend the track record of **investigations, prosecutions and convictions** in the fight against corruption.

The specialised law enforcement bodies in charge of investigating, prosecuting and adjudicating complex corruption cases – the SPAK and the Anti-Corruption and Organised Crime Courts – remained operational during the reporting period.

However, greater political will and more structured and consistent efforts, including adequate resources, tools and skills, are still needed to systematically address cases of corruption.

In 2022, 186 people were convicted of public sector corruption and 7 of high-level corruption, while 298 new cases were sent to court for public sector and none for high-level corruption, 18 people were convicted of corruption in the judicial system.

The anti-corruption sector in the state police recorded a total of 1 193 criminal offences and investigated 1 537 suspects in 2022, up from 1 018 criminal offenses and 1 491 prosecuted offenders in 2021.

Seizures of assets from corruption-related crimes totalled EUR 38 million in value in 2022, compared with EUR 21 million in 2021. The reported value of confiscations remain much lower and needs to significantly increase.

On **high-profile cases**, criminal convictions were pronounced by the SPAK Courts, notably the conviction of a former Minister of Environment to 10 years in prison and of a Member of Parliament to four years in prison as part of an investigation into the concession contracts on urban waste treatment (the incinerators' affair), reduced to 6.8 and 2.8 years respectively due to shortened trial. A former deputy prime minister was indicted by SPAK for criminal offences, including passive corruption, as part of the investigations on the 'incinerators' case. A former deputy minister of health was arrested in connection to a procurement case. Investigations launched previously on high level officials have continued.

In 2022, the **administrative investigations** conducted by the Anti-corruption Directorate-General led to 20 criminal reports (compared with 12 in 2021), and 43 administrative reports comprising 259 disciplinary measures. A systematic preventive policy should be adopted by the relevant agencies based on the analysis of the record of disciplinary measures and other wrongdoings.

The vetting of members of the judiciary continued to have a positive impact on the fight against corruption. During the reporting period, 12 cases were referred to the prosecution services when the vetting process had been terminated due to resignation, increasing the number of referred cases to 34, which represents about 10% of the total number of resignations and dismissals. Additional efforts are needed to systematically initiate criminal procedures against judges and prosecutors suspected of criminal conduct during vetting by prosecution services, in particular in cases of dismissal.

On **asset declarations by high-level state officials**, in 2022 the High Inspectorate for the Declaration and Audit of Assets and Conflicts of Interest (HIDAACI) applied 128 administrative measures, such as fines. It referred 37 cases to law enforcement agencies for further investigation (compared with 15 cases in 2021 and 72 in 2020). The electronic system for the declaration of assets and private interests continued to operate.

In 2022, HIDAACI reviewed 13 **whistleblowing** cases and two requests for protection against retaliation. Additional campaigns are needed to increase citizens' engagement in the fight against corruption.

As regards internal control mechanisms, the state Supreme Audit Institution (SAI) reported estimated direct economic damages to public finances in 2022 of almost EUR 14 million, roughly half on revenue and half on expenditure. The SAI also estimated the negative effect due to irregularities at around EUR 825 million which includes economic, efficiency and effectiveness losses. In 2022, the institution referred four cases involving 16 persons for prosecution, including a former Minister for Health and a former director of the Port Authority in Durres. Two of these cases, and 12 of the persons, were related to abuse of duty in cadastre agencies of Vlore and Sarande. (*see also Chapter 32 – Financial Control*).

On **access to information**, the Commissioner for the Right of Information and Protection of Personal Data approved the new models of the transparency programme and the register of requests and responses and has monitored all central and dependent public authorities, as well as all local self-government units. The electronic register of requests and responses was installed in another 100 public authorities, bringing the total number to 195. A total of 331 public authorities have published the transparency programme on their official websites.

Anti-corruption measures continue to have a limited impact in particularly vulnerable areas. Corruption remains prevalent in the health and property sectors and within the police. Targeted action is urgently needed. Internal checks and inspection mechanisms in the public administration remain weak and ineffective.

Institutional framework

Prevention of corruption

The **Anti-Corruption Directorate-General** in the Ministry of Justice is the main body responsible for systematically preventing corruption and raising awareness. It also conducts administrative investigations in institutions. It cooperates with a **network of anti-corruption coordinators** posted to 44 state institutions. The independence, capacities and public visibility of the directorate-general and the network, as well as alignment of its investigative functions with EU practices should be further increased, and their efficiency assessed against public perception and bribery indexes.

The central ministries, all agencies of the Ministry of Justice, and 22 additional municipalities adopted integrity risk assessment and **integrity plans**. Their effective implementation is yet to be ensured.

Within the overall anti-corruption framework, the role of the state Supreme Audit Institution is to provide recommendations to the government to address systematic weaknesses. The e-procurement, e-appeals and e-complaints systems helped to increased transparency in public procurement.

In 2022, the powers of the Agency for Dialogue and Co-governance were extended to include following up citizens' complaints of corruption, including inspections at the relevant authorities. The Agency should further improve its efficiency, in coordination with the Anti-

Corruption Directorate-General and the network of coordinators.

The High Inspectorate for the Declaration and Audit of Assets and Conflicts of Interest (HIIDACI) has become a well-established institution. It introduced the online system for assets, while providing training, assigning contact points and establishing cooperation with banks, cadastre and other institutions. Close to 100% of around 4 000 persons concerned entered their declarations in the online system. However, the module for publication of assets was put on hold until it fulfils cyber security requirements. Relevant institutions should cooperate closely to ensure a proper verification of the data declared. Measures continue to have a limited impact, notably in the most affected areas such as infrastructure, property rights, customs, tax, education, health, public procurement and government contracts. These areas require targeted risk assessments, dedicated actions and effective implementation of the measures.

Further efforts are needed to improve compliance with procedures and prevent corruption in the procurement cycle (*see also Chapter 5 – Public Procurement*).

Law enforcement

The specialised bodies in charge of investigating, prosecuting and adjudicating complex corruption cases – the Anti-Corruption and Organised Crime Courts and the SPAK, comprising the Special Prosecution Office (SPO) and the National Bureau of Investigation (NBI) – remained fully operational during the reporting period.

Legal framework

Albania is party to all international **anti-corruption conventions**, including the United Nations Convention against Corruption.

In March 2023, **GRECO** concluded that Albania implemented or dealt satisfactorily with only 5 of the 24 recommendations made in the report of the 2020 evaluation round concerning integrity of central government and law enforcement (Fifth Round evaluation), while 13 were partly implemented and 6 were not implemented. More efforts are needed to make improvements in the following areas: (i) the adoption of robust integrity plans in all ministries; (ii) the consistency of the legal and institutional framework on the fight against corruption and the integrity of public officials; (iii) effective implementation of the Ministerial Code of Ethics; (iv) independence of the Ethics Commission; and (v) integrity measures for the members of the Council of Ministers and political advisors. Improvements are also needed in the framework and conduct of public consultations, the monitoring and transparency of contacts with lobbyists and other third parties, and in post-employment restrictions to avoid conflict of interests. There is also a need to strengthen the legal guarantees on the financing of political parties and electoral campaigns.

On the OSCE/ODIHR 2021 recommendations on the investigation and prosecution of cases of vote-buying, by 12 May 2023, 13 election-related reports had been received by SPAK, and 6 pre-trial criminal investigations had been initiated, including on vote-buying. As electoral campaigns are increasingly moving online, special attention should be paid to online and third-party campaigning.

Albania's legislation is partially in line with the OECD Convention on Combating Bribery of Foreign Public Officials in International Business Transactions.

Strategic framework

The implementation of the inter-sectoral strategy against corruption is overall on track, although important weaknesses remain. A new strategy for 2023-2030 is in preparation, in

which more attention should be paid to the sectors most vulnerable to corruption which require targeted risk assessments and dedicated actions, sound monitoring mechanisms and sufficient budget for implementation. The new strategy should also aim to encourage ownership and strengthen institutional capacities. The strategy aims to include monitoring indicators. Overall, the impact of corruption prevention structures in the public sector remains limited. Some progress was made in awareness-raising and efforts in this area need to be sustained.

Fundamental rights

Albania's legal framework sets out an overall good basis for the protection of fundamental rights. However, overall efforts at implementation of the legal and policy frameworks need to intensify. In particular, implementing legislation still needs to be adopted. On personal data protection, Albania should take urgent measures to prevent the recurrence of massive breaches of personal data and improve their handling. Progress was made on the use of alternatives to detention and, in particular, the probation service. The application of gender-responsive budgeting continued to improve. Since January 2022, the Albanian government has implemented a range of measures aimed at supporting families, women and girls, and vulnerable groups, as a response to the global crisis caused by the COVID-19 pandemic and Russia's war of aggression against Ukraine. Economic assistance to victims of domestic violence has been increased significantly. The implementation of the law on gender equality and of the national strategy for gender continued and needs to be further intensified. There was some progress on the rights of persons with disabilities, as concerns biopsychosocial assessment. The process of first registration of properties and other transitional processes need to advance in full transparency, including by tackling corruption. The registration and digitisation of cadastral data continued, but at a slow pace. Progress was made with the adoption of implementing legislation for the Law on the cadastre and the Law on the finalisation of transitional ownership processes, however the overall implementation and results need to be significantly advanced. The remaining implementing legislation related to the 2017 framework Law on the protection of persons belonging to national minorities is still to be adopted. On the protection of personal data, Albania needs to put in place strong legal and institutional safeguards to prevent further massive breaches of privacy by private companies and the public administration and adopt the necessary legislation to align with the EU *acquis* on personal data. Since the 2022 recommendations were only partially implemented, in the coming year Albania should, in particular:

- adopt the pending implementing legislation on the rights of persons belonging to minorities pertaining to self-identification and the use of minority languages, and increase the capacities of the state Committee on National Minorities;
- safeguard the right to property, notably by making decisive progress on first registration and compensation, improving the transparency of the state cadastre and the quality of the property register, and ensuring that the right to a fair trial and the right to effective remedy are respected in cases of expropriation and removal of properties;
- improve data protection, in particular by adopting the revised Law on personal data protection in full alignment with the EU *acquis*, by strengthening the independence and capacity of the Information and Data Protection Commissioner, and by awareness raising measures.

Overall, Albania continues to be party to most international **human rights instruments**. Albania has not signed the Optional Protocol to the Convention on the Rights of Persons with Disabilities and the Optional Protocol to the International Convention on Economic, Social

and Cultural Rights. For Albania to fully benefit from its observer status in the European Union Agency for Fundamental Rights (FRA), it needs to develop a comprehensive monitoring and data collection system to assess the level of implementation of human rights legislation, policies and strategies.

Albania continues to ensure good cooperation with the **European Court of Human Rights (ECtHR)**. In June 2023, 389 cases were pending against Albania before the ECHR. The ECHR delivered judgments on ten applications and found breaches of the European Convention on Human Rights in nine out of ten cases (against three in 2022), relating mainly to the right to respect for private and family life, the right to a fair trial, and the right to liberty and security. In the reporting period, there were 101 new applications allocated to a decision body. Currently, there are seven cases under enhanced supervision by the Committee of Ministers.

On the **promotion and enforcement of human rights**, the Ombudsperson (People's Advocate) continued to exercise their mandate satisfactorily. Despite a 10% increase in the institution's budget from 2021 to 2022, the human and administrative capacities of the institution still need to be further strengthened. Of the 249 recommendations issued in 2022, only 17% have been fully implemented and 36% partially implemented, while 41% remain unimplemented, rejected, or without response. It is necessary to significantly improve the implementation of the Ombudsperson's recommendations to ensure the effective enforcement of human rights. Parliament's election of a new Ombudsperson, following the end of the five-year term of the incumbent Ombudsperson in June 2022, is significantly delayed. The incumbent remains in an acting capacity until the new Ombudsperson is elected. Blockages and delays in the parliamentary appointment procedure need to be urgently addressed to ensure that appointment procedures fully guarantee the legitimacy of the institution. The Ombudsperson should complete and publish their annual report before presenting it to Parliament and end the practice of presenting the annual report to Parliament before it is published.

The Commissioner for Protection from Discrimination (CPD) continued to carry out their mandate with 73 recommendations issued in 2022, up from 49 in 2021. Only 23.2% of the overall number of recommendations were fully implemented, while 53.5% of recommendations concerned cases subject to court proceedings. Legislative changes are necessary to empower the Commissioner to issue executive orders instead of recommendations. In 2022, 297 cases were handled by the CPD (213 new complains from 2022 and 84 carried over from 2021) of which 143 were in the field of employment, 140 in the field of goods and services and 14 in the field of education.

On the **right to life**, limited progress was made in investigating cases and strengthening the institutional and legislative framework on persons missing since the communist era. Sufficient resources should be allocated to improve capacities to make identifications and to formalise the arrangements for institutional coordination in the area. A single comprehensive and publicly accessible database of missing persons should be created. Continued political will is important to increase the number of cases solved and to raise public awareness of this issue.

On the **prevention of torture and ill-treatment**, the medical and custodial staff in prison hospitals are generally satisfactory. However, poor material conditions still prevail, as well as structural deficiencies, including the lack of communal spaces for group activities and of outdoor yards. A memorandum of understanding with a joint action plan was signed by the Minister for Justice and the Minister for Health and Social Protection to implement the 2021 recommendations of the European Committee for the Prevention of Torture and Inhuman or

Degrading Treatment or Punishment and the judgments of the ECHR on forensic psychiatric patients and prisoners with a mental disorder. Patients with medical conditions from the Kruje and Zaharia detention facilities were transferred to the Lezha prison. The renovation of the Lezha prison continued, however, it is still over-populated and conditions in its forensic psychiatric facility need to be brought up to a satisfactory standard. Efforts are also needed to increase the number of staff and improve their working conditions and skills. No systemic ill-treatment in prisons or by the police has been reported, but the People's Advocate underlines the need to improve the minimum standards for sanitary conditions in prisons and police premises.

The National Preventive Mechanism (NPM) carried out 73 periodic inspections in 2022, which were followed by 90 recommendations (in response to inspections and individual complains). The NPM handled 45 cases (31 complaints and 14 own-initiative cases), of which 25 complaints were related to prisons and treatment of prisoners and were 6 against the state police for alleged use of violence and unfair association. The NPM's 90 recommendations were accompanied by 779 sub-recommendations, of which only 41% have been implemented, 9% partially implemented, 45% not implemented and 5% are still without a response.

The **prison system** and detention centres remain a serious issue of concern. Long-standing issues include political influence, corruption and poor management, as well as a shortage of staff, poor infrastructure, and a lack of healthcare and security. The lack of inspections and employment and reintegration programmes for prisoners are other issues of concern. Continued efforts are needed to increase the number of prison staff, including medical and specialist personnel, and to improve their skills and working conditions.

Across the country, the number of inmates is now below the capacity of the prison system, with 89% of the capacity used. However, 13% (3 out of 22) of the prisons are overcrowded.

The Director-General for Prisons has initiated a review of prison security and the rehabilitation of prisoners in Peqin, Fier and Ali Demi prisons. Special attention should be paid to de-radicalisation in prison and after release. The closure of prisons that do not meet the necessary standards has been announced in the framework of the territorial reform of prisons (the 2023-2028 master plan of the Directorate-General of Prisons), and is expected in the next 2 years.

According to the Directorate-General of Prisons, the electronic entry and exit management system in prisons and detention institutions is ready to be put in operation. It aims to increase security, improve controls and data storage, make the facilities easier to manage. Between January 2022 and February 2023 a total of 2 009 staff were trained on human rights, including on the European Prison Rules.

In 2022, 6 688 people were placed in alternatives to custody by a court decision, which is down 1% from 2021, but an 18% increase compared with 2020. The probation service remains fully operational across the entire country and provides alternatives to imprisonment, including for juvenile offenders. However, the use of electronic monitoring is still suspended (since 2017) because of an unsettled legal dispute.

Legislation on the **protection of personal data** needs to be urgently aligned with the EU General Data Protection Regulation (GDPR) and the EU law enforcement Directive. Public consultations on the draft legislation took place in the summer of 2022. The law needs to ensure the independence of the Office of the Information and Data Protection Commissioner (IDP) and empower it to adopt binding decisions. Moreover, to ensure effective alignment with the EU *acquis* on data protection, the capacities of the IDP will need to be strengthened.

In 2022, the IDP handled 370 complaints and carried out 48 administrative inspections, issuing 48 recommendations and 63 administrative sanctions. In response to massive personal data leaks in 2021, the IDP Commissioner issued a decision in November 2022 that imposed fines on the Directorate-General for Taxes and Directorate-General for Road Transport Services for their respective liability for the breaches. One cross-cutting finding of the IDP from its administrative inspections has been the lack of awareness about data protection in the public administration. Concerns about the handling of personal data by private companies and the public administration continued in 2022. Overall, robust legal and institutional safeguards are needed to prevent breaches of personal data, increase public awareness of the relevant risks and increase the public institutions' awareness of their obligations set out in the law.

Overall, **freedom of thought, conscience and religion** was generally upheld. The state continued to provide the same level of financial support to religious communities. In May 2023, the state allocated approximately EUR 1.05 million to the Catholic, Sunni Muslim, Orthodox, and Bektashi communities for the administrative functioning of the communities and religious education, a similar amount as the previous year. The dependence of some religious groups on financial support from third parties creates vulnerabilities. The restitution of properties belonging to religious groups that were expropriated during the communist era remains an unresolved issue.

The Commissioner for Protection from Discrimination reported three cases of complaints of discrimination based on religious grounds, but ruled that there was no discrimination in any of the cases.

Regarding the fight against antisemitism, Albania is an observer member to the International Holocaust Remembrance Alliance (IHRA) and has adopted the IHRA definition of antisemitism. Concrete efforts have been made regarding Holocaust education.

Freedom of expression

The country is **in between some and moderate level of preparation** in the area of freedom of expression. **Limited progress** was made, in particular through the amendment of the Law on audiovisual media, to align with the 2018 EU Directive on audiovisual media services, with a view to participation in the Creative Europe Programme. However, the intersection of business and political interests, lack of transparency of financing sources, concentration of media ownership, intimidation and precarious working conditions continued to hamper media independence, pluralism and the quality of journalism. The atmosphere of verbal and physical attacks, smear campaigns and intimidation lawsuits against journalists has not improved.

Last year's recommendations remain valid. In the coming year, Albania should in particular:

- ensure zero tolerance for intimidation and effective judicial follow up in cases of attacks against journalists, including through full decriminalisation of defamation;
- address the high concentration in media ownership and significantly increase the transparency of media financing, including by revising legal requirements for public advertising, in line with European standards;
- improve the working conditions for journalists, in particular by strengthening the protection of Albanian journalists' employment and social rights and ensuring a consistent application of the labour code.

Intimidation of journalists

High-level officials and political actors continued to voice anti-media sentiments and use denigrating language against journalists on several occasions. In July 2022, a second journalist was banned for three months from government press conferences for alleged ethical violations.

In November 2022, an investigative journalist was physically attacked in Tirana by unidentified persons. The journalist claimed that the attack was directly related to his reporting on allegations of former public officials' connections to corruption cases. In January 2023, a local journalist and his wife were physically attacked, while the journalist was on duty covering a court case. In March 2023, the building of a private national broadcaster was attacked by heavily armed individuals and, as a result, a security guard lost his life. All high-level state authorities and politicians across the political parties condemned the event; effective judicial follow-up should be ensured. In July 2023, international media watchdog organisations called on a high-level local official to refrain from threatening and harassing a journalist following her reports on a corruption case. A solid track record of prosecution and judicial follow-up has yet to be established to safeguard the safety of journalists.

There was a slight increase in the number of strategic lawsuits against public participation (SLAPPs). Media organisations reported that 19 new criminal court cases were filed against journalists or media workers in 2022, while 11 cases remain unresolved and have been carried over from previous years. Furthermore, 12 civil cases were filed, of which 11 are for allegedly publishing fraudulent or inaccurate information. No custodial penalties have been imposed on journalists during the reporting period. Data is not available on any financial penalties imposed. The systematic monitoring and transparent reporting of the judicial cases involving journalists and media professionals needs to be strengthened. The use of force by law enforcement authorities, in particular on the margins of demonstrations, continues to be a source of concern.

Legislative environment

The constitutional right to freedom of expression continued to be generally upheld. However, defamation remains a crime punishable by particularly high criminal fines. The provisions of the Criminal Code on insult and defamation need to be repealed or fully aligned with European standards. The civil law provisions on publishing fraudulent or inaccurate information need to be aligned with European standards on freedom of expression and media freedom.

During the reporting period, the Audiovisual Media Authority adopted a revised Audiovisual Broadcasting Code, which defines the principles, rules, requirements and practices of audio and audiovisual broadcasting, following consultation with civil society and media organisations. The Code aims to improve the application of the right to gender equality, to tackle hate speech, and to address disinformation.

In April 2023, following a public consultation with media actors, Parliament adopted limited amendments to the 2013 Audiovisual Media Law intended to transpose key aspects of the 2018 Audiovisual Media Services Directive (*see also Chapter 10 – Digital transformation and media*).

The anti-defamation legal package was removed from Parliament's agenda in November 2022.

There is a need for a comprehensive assessment of the legal and regulatory framework to address major challenges hampering media independence, in particular concentration of

media ownership and transparency of financing sources and economic interests, including public funding. It is essential that any change to the legal framework be in line with European standards, including the Venice Commission opinions, and is subject to extensive consultations with media organisations and civil society.

Implementation of legislation/institutions

It remains important to ensure direct and transparent media access to government institutions and their activities and to factual non-partisan public information. The practice of institutions, public officials and political parties of distributing pre-packaged audio, video and text materials to the media, especially in the context of elections, remains an area of concern that needs to be addressed.

International media freedom organisations condemned the decision by a prosecution office to impose blanket bans on information in the media about cyberattacks on Albania's e-governance system, denouncing a potential violation of the media's liberty to publish public interest materials. Albania adopted changes to the law on the right to information, including stronger accountability for breaches of the law. Implementation of the right of access to public information needs to be further strengthened.

In December 2022, the demolition by a government agency of a hotel belonging to a businessman and prominent media owner, claiming violations of construction laws, and without waiting for the outcome of a legal review, caused controversy.

Public service broadcaster

In March 2022, Parliament formally launched the process to fill two vacancies on the steering board of the public broadcaster, which is composed of 11 members. One vacancy still has to be filled. Parliament needs to avoid blockages and delays in the procedure to appoint members of the board of the public broadcaster. Appointments need to be carried out in line with procedures that ensure the greatest level of independence, impartiality and legitimacy of the institution.

In June, the Steering Council of the public broadcaster elected by unanimity a new Director-General. The fact that the appointee held the position of Secretary for relations with media and civil society of the ruling Socialist Party until September 2021 has raised some concerns about the future independence of the public broadcaster. By July 2023, tens of media workers had been dismissed by the newly appointed management.

Economic factors

High-profile business groups further increased their economic penetration in the media market during the reporting period. Media organisations and activists have continued to raise concerns about the use of media channels to promote owners' economic interests and political agendas and to provide coverage favourable to their political and business sponsors. Concerns have been raised that individuals accused of corruption and money laundering are financing the media as part of their strategies to escape justice. Market and audience concentration and lack of transparency of media funding continue to remain issues of concern as regards media freedom in the country. Media owners' practices to evade taxes have been denounced by media freedom organisations.

In the context of intertwined economic and media interests, there are also reports of media outlets exerting pressure in exchange for positive coverage.

Internet

It is estimated that there are around 800 online media outlets operating across Albania, most

of them registered outside the country and a more limited number registered with the Electronic and Postal Communications Authority under the domain .al.

The state generally refrains from filtering and blocking online content. However, media freedom organisations claim that there are no specific legal provisions to enforce and protect net neutrality. Albania is a signatory to the Declaration for the Future of the Internet of April 2022.

Digital media continue to be strongly influenced by political actors, businesses and by third parties in terms of funding and content.

Large information technology platforms remain unregulated and unregistered in Albania, although they account for a big proportion of the online advertising market and are the main distribution platforms for news and video content. Advertising in online and social media during elections is still unregulated. Media freedom organisations have highlighted the lack of regulation to ensure transparency in online advertising during electoral campaigns.

The national strategy for cybersecurity and its 2020-2025 action plan have been adopted. The strategy includes a chapter on the protection of children online as a priority for the country. Five key pillars in this chapter look at tackling specific areas of their protection online, including capacities for the investigation and prosecution of crimes against children committed over the internet, which remain a major problem.

Freedom of artistic expression

Freedom of artistic expression is broadly guaranteed.

Professional organisations and working conditions

Professional associations of journalists face serious hardships in terms of limited financial and human resources, and of the limited possibility to set up an effective cooperation with the government to promote the interests of independent media.

Limited job security and poor working conditions pose serious risks of self-censorship and a reduced resistance to disinformation.

The limited enjoyment of employment rights remains an issue of concern, especially in local and online media. Many media employees do not have employment contracts, while many journalists do not receive their salaries on time or are dismissed in breach of the provisions of the Labour Code. Some media outlets that have been fined by the tax authorities for underreporting the employees' wages have claimed to be targets of political intimidation. It is important that labour, tax and other legal obligations are respected systematically and without discrimination.

Self-regulation needs to be further strengthened and supported. The Alliance for Ethical Journalism, a group that brings together stakeholders (including online ones) who pledge to comply with the Code of Ethics, has started to develop some activities in this area.

Freedom of assembly and association is guaranteed by the constitution and continued to be generally respected.

Labour and trade union rights are covered in *Chapter 19 – Social policy and employment*.

On **property rights**, progress was made with the adoption of implementing legislation on the Law on cadastre and the Law on the finalisation of transitional ownership processes, but significant challenges remain. The state cadastre needs to put effective measures in place to

prevent corruption and, accordingly, to establish high standards of transparency and efficiency in the procedures, develop an efficient integrated land management system and proceed vigorously with the systematic digitalisation and diligent reconciliation of legal titles and cadastral maps. Albania has endorsed the Terezin Declaration in 2009 but does not have any restitution or compensation laws relating specifically to Holocaust era confiscations of private property. More efforts are needed to finalise the transitional ownership processes, the first registrations of properties and rightful compensation for properties illegally expropriated during the communist era. The legalisation, expropriation and demolition of constructions must strictly adhere to the legal framework in place, including the principle of transparency and due judicial process.

In 270 cadastral zones, first registrations were not yet completed and progress was slow, with only 20 zones registered in 2022-2023. Meanwhile, in the registered cadastral zones, 80% of data is believed to be inaccurate. Ownerships are unclear and property boundaries overlap due to repeated and inconsistent interventions and faulty measurements over recent decades.

Many title deeds and cadastral maps are still in paper format and many property transactions continue to be processed based on deeds and maps on worn-out paper with unclear data. In 2022, the state cadastre began to systematically digitise title deeds and has digitised approximately 40% of them by April 2023. The systematic digitisation of maps is set to follow in 2023. However, systematic correction of data and measurements might only start in 2024 or later, a process that will require significant investment and several years to be completed.

Internal procedures for property registrations and transactions continued to fall short of the standards set by clarity and anti-bribery measures. In the work of the Anti-corruption Directorate-General, 85% of all public allegations of corruption received, 60% (160) of all administrative measures and 70% (50) of all employees who were the subject of criminal reports, were related to the state cadastre agency. In this respect, the state cadastre needs to urgently adopt a sound integrity plan and an institutional development strategy, and effectively integrate high standards of transparency and accountability in its internal procedures and IT systems.

Compensation for properties confiscated by the communist regime continued to stall during 2022. So far, only around 800 requests have been satisfied, while the agency for the treatment of properties (ATP) still has to process around 26 000 requests for compensation. In 2023, the government adopted decrees to extend the mandate of the ATP and clarify the calculation of compensation for properties whose type of use had changed, in particular those that changed from agricultural to construction land. The ATP should process all remaining requests without further delay.

Numerous complaints continued to be raised about the actions of the government agencies responsible for expropriating properties in the public interest and demolishing illegal constructions, which is a cause for concern. Civil society organisations and other stakeholders highlighted that the government is applying the law selectively. The authorities should ensure that the principles of legality and transparency, the prohibition of the arbitrary use of executive power, and the right to a fair trial and the right to an effective remedy are duly respected in cases of the expropriation and removal of properties.

Legislative amendments from 2018 established the joint registration of marital property. However, men still formally own most of the private land in the country. To strengthen women's legal rights and interests, the legal notion of 'agricultural family' may need to be reviewed.

On **non-discrimination**, the implementation of the legal and policy framework needs to be further strengthened, including by providing specialised training to judges and prosecutors. In 2022, the Commissioner for Protection from Discrimination (CPD) continued to handle a stable number of cases, mostly in the areas of employment and services. Laws on hate speech are in line with international standards. National policies are needed to guide the fight against the different forms of hatred and discrimination. Better enforcement and greater awareness-raising are needed to eliminate hate speech, particularly in rural and remote areas. In 2022, the CPD handled six cases of hate speech, including on the grounds of race, gender or sexual orientation, and found that hate speech had been used in two cases. In 2023, the CPD handled 3 new cases, of which two are under review. On hate crime, some progress was made in increasing the capacities of law enforcement agencies to respond to this phenomenon. However, further awareness-raising and capacity-building among criminal justice officials about hate crimes is still needed. Moreover, the ODIHR's recommendations on the collection of data and statistics on hate crimes have yet to be fully implemented. Six cases of hate crime were reported to the police.

The 2021-2030 national strategy on **gender equality** and its action plan are more affirmative in addressing the rights of all women and men. It focuses on people who face intersecting forms of discrimination and vulnerability, young people and social reforms, and includes a section on humanitarian emergencies. However, implementation needs to be stepped up. The Gender Equality Mechanism lacks adequate financial and human resources, thereby hampering the implementation of the strategy. Further effort is needed to complete the collection of data envisaged by the strategy to allow adequate monitoring.

The application of gender-responsive budgeting has continued to improve. In 2022, all standard budget instructions contained gender-responsive budgeting as part of the criteria for expenditure and for the first time a gender budget statement was officially attached to the draft budget. Overall, 9% of the 2023-2025 medium-term budget programme specifically supports gender equality outcomes. A total of 47 budget programmes of 11 ministries and two state institutions were gender-responsive. At local level, 12% of public finances are gender-responsive. Parliament has increased its engagement in promoting gender-responsive budgeting and in promoting gender equality more broadly. However, it does not have a functioning sub-committee on gender equality, and the regulatory impact assessment is not carried out regularly, nor does it have a specific provision on gender equality. The standard EU *ex ante* gender impact assessment tool has been adapted to the Albanian context, with a specific focus on mainstreaming gender equality goals into policies related to the EU internal market.

Eighteen municipalities signed the European charter for equality of women and men in local life, and five municipalities (Elbasan, Tirana, Durres, Gjirokastra and Gramsh) have developed and approved local gender action plans. The plans are instrumental for the implementation of the European charter, as well as the national strategy for gender equality.

Since January 2022, the Albanian government has implemented a range of measures aimed at supporting families, women and girls, and vulnerable groups, as a response to the global crisis caused by the COVID-19 pandemic and Russia's war of aggression against Ukraine.

In January-June 2022, 916 victims of domestic violence provided with a protection order have benefited from economic assistance, which has tripled from ALL 3 000 to ALL 9 000.

Provisions on referral mechanisms between different levels of care, training for healthcare providers, youth friendly services, and outreach to vulnerable groups have not been addressed in the Law on reproductive health. The Ministry of Health and Social Protection has made

efforts to monitor and provide training to health personnel on identifying and addressing the issue of gender-biased sex-selective abortion, but efforts should continue to ensure monitoring of the practice. Women living in rural and remote areas, Roma and Egyptian women and LGBTIQ individuals face limited access to primary health care, and to sexual and reproductive healthcare services.

On gender-based violence, the national legal framework needs to be further harmonised with the provisions of the International Labour Organization Convention on Violence and Harassment in the World of Work (Convention No. 190), ratified in February 2022. The current legal framework is not fully aligned with international standards, including the Istanbul Convention, and lacks focus on the reintegration of, and access to services for, victims and survivors of violence.

In 2022, the police identified and treated 5 210 cases of violence and other crimes committed within domestic relationships, a 1.9% decrease from 2021. In total, 72% (3 767) of all victims were women and girls. 2 940 cases of domestic violence were handled with a request for a protection order. According to Article 130/a *Domestic violence*, criminal proceedings were initiated for 1 887 cases and 682 perpetrators were arrested. In 2022, 36 cases of women victims of sexual violence were treated in the Lilium centre, which is fully funded from the state budget. Currently, there are local referral mechanisms for reporting gender-based violence in all 61 municipalities of the country. However, these mechanisms and the rehabilitation and reintegration programmes for vulnerable women need to be reinforced. Social services continue to be donor-driven and often delivered by civil society organisations active in the field. A dedicated state budget and other resources are still needed.

The legal and policy framework on **the rights of the child** increasingly reflects international standards and EU requirements. Coordination mechanisms need to be significantly improved to ensure full implementation of the legal framework in the areas of child trafficking, cybercrime, child marriage, child sexual abuse and the right to healthcare and education. The ratification of the Optional Protocol to the Convention on the Rights of Persons with Disabilities should be beneficial to this end. The 2021-2026 national agenda on the rights of the child (NARC) set out the strategic framework, in line with the national and international commitments in this area. Elimination of all forms of violence and child protection, including online is one of the four strategic goals of the national agenda. The systematic collection of reliable and comparable data disaggregated by age and sex is essential for evidence-based policy-making and for effective protection of children.

The persistence of child marriage, driven by gender inequality, poverty and social exclusion, remains a matter of concern. The lack of official data means it is not possible to provide an accurate picture of the phenomenon, while the laws to protect minors from child marriage are generally ineffective or applied inconsistently. However, since 2021 the government has prioritised addressing child marriage in its budgeted national policy framework, and the 2021-2026 national agenda on the rights of the child contains objectives and measures to combat this practice.

The 2021-2023 national de-institutionalisation plan included an economic reform programme with a financial package to develop alternative childcare services and to close social care institutions. However, family and alternative care laws are often inadequately implemented and are not fully enforced. Additional efforts are needed to further implement and tackle all violations of children's rights.

Violence and sexual violence, including online, remains an area of concern. In 2022, Child Protection Units managed 2 496 cases of children in need of protection (mainly cases of

children at risk or victims of violence, abuse, neglect or exploitation). The number of child protection workers (241 in all 61 municipalities) remains far below the total number needed. Two centres with emergency services for child victims of sexual abuse and other forms of violence have been set up and are operational in Fier and Shkodra. A comprehensive legal framework on the status and responsibilities of social workers needs to be adopted. Further efforts are needed to ensure an adequate and systematic response to all types of violence against children. Albania lacks legislation criminalising travel companies that facilitate opportunities to engage in the sexual exploitation of children. As a member of the Lanzarote Committee, Albania needs to provide cross sector training to professionals for the provision of integrated services for children victims of sexual abuse and other serious forms of violence. The full inclusion of unaccompanied or separated foreign minors in the national child protection system is needed. Child labour prohibition needs to be effectively implementing, and working conditions of young people need continuous monitoring.

Since December 2022, a new support programme is being implemented for unemployed women with three or more children. Through this programme, the state budget covers social and health insurance payments based on the minimum wage. Around 7 500 women benefit from this programme.

The 2022-2026 justice for children strategy enlarges the from criminal justice to equitable access to justice for all children and in all areas of law, seeking to consolidate child-friendly justice. Its full implementation would require more resources, investment, coordination and accountability. The coordination and implementation of the strategy requires a dedicated service within the Ministry of Justice.

For children in conflict with the law, pre-trial detention remains the main reason for deprivation of liberty (74% of cases). With the reduced number of magistrates, pre-trial detention is unduly prolonged, negatively impacting the detained children and their prospects for rehabilitation and reintegration into the community. Albania should consider developing community-based programmes for children in conflict with the law instead of the planned large facility.

The Albanian state police has created units in 16 police departments or stations where trained police personnel conduct child-friendly interviews. The proper maintenance and uninterrupted functioning of these facilities require an adequate budget from the state police.

Some progress was made on the **rights of persons with disabilities**. The reform of the biopsychosocial assessment is now implemented country-wide, with respective referral mechanisms yet to be put in place. Albania's framework legislation on the rights of persons with disabilities remains only partially in compliance with the UN Convention on the Rights of Persons with Disabilities and gaps must be addressed. Albania needs to ratify the Optional Protocol to the Convention. More robust efforts are needed to address discrimination against persons with disabilities, to improve overall accessibility, promote employment and collect statistical data. De-institutionalisation actions are taking place, but need to be further taken forward at a sufficient pace. The quality of education for children with disabilities, especially children with a hearing impairment, continued to cause concern. Numbers of assistant teachers in the pre-university education system continued to increase in 2022. However there is need to be further increased to ensure sufficient support in all schools, especially in rural and remote areas. Additional efforts are needed to provide training on inclusive education approaches for all teachers and on the early detection of disability.

Discrimination against **lesbian, gay, bisexual, transgender, intersex and queer (LGBTIQ) persons** is still very prevalent in Albanian society, especially as regards access to healthcare,

education, justice, employment and housing. Members of the LGBTIQ community continue to experience physical aggression and hate speech, particularly on social media. Albania does not have legislation recognising civil cohabitation or same-sex marriage. In 2022, police officers received training on investigating hate crimes against LGBTIQ persons. The shelter for homeless LGBTIQ persons continued to provide care, support and advocacy, but state funding remains insufficient, which creates uncertainty for the continued provision of services. The 12th Tirana Pride took place peacefully on 20 May 2023. However, public awareness and acceptance of LGBTIQ persons remain low, particularly in rural areas. Hate speech and discriminatory language in the media, especially online, criminal offences and discrimination against members of the trans community persist and need to be addressed. In 2022, the CPD handled one case of hate speech against the LGBTIQ community. In 2023, two new cases of hate speech were registered and are being processed. According to civil society organisations' data based on a survey, around 40% of people in the LGBTIQ community reported incidents of discrimination, of which only 20% were reported to the police. Of the total number of referred cases, only 15% were resolved.

On **procedural rights**, the legal framework for free legal aid is complete and primary and secondary legal aid are delivered at central and local level. The number of people that have benefited from free legal aid has increased considerably since the approval of the 2017 law. Despite the legal framework on free legal aid and institutional set up, few children benefit from legal aid compared with the number of children involved in criminal law, family and civil law and administrative law cases. The budget allocated for legal aid in 2022 amounted to around EUR 800 000, markedly higher than in 2021. The budget spent in 2022 is estimated at EUR 400 000 (up from EUR 245 739 in 2021). However, the dedicated state budget should be further increased to make the legal clinics fully operational. The staffing of the free legal aid directorate is complete, and ten centres are in operation across the country. It remains important to improve the collection, analysis and reporting of statistical data on free legal aid. Limited progress was made on other procedural rights. There was no progress on addressing remaining issues concerning the procedural rights of suspects and accused persons. On the right to information in criminal proceedings, the refusal or failure to grant access to a case file should be subject to judicial review, with effective remedies. On access to a lawyer, adequate facilities for confidential client-lawyer consultations need to be provided by courts, prosecutors' offices and the police. On the presumption of innocence, there should be a clear legal prohibition and available redress, against public authorities making public references to guilt in public statements and in judicial decisions, other than those on guilt. Moreover, redress should be ensured in the event of a breach of such prohibition.

No progress was made during the reporting period on the adoption of the three remaining pieces of implementing legislation related to the 2017 framework Law on the protection of national **minorities**. The implementing legislation on the crucial issues of free self-identification of national minorities and the use of languages has yet to be adopted in line with European standards and should be open to wide public consultation. Overall, Albania needs to ensure effective implementation of the legal framework on the rights of persons belonging to minorities. The capacities of the State Committee on National Minorities needs to be strengthened. The national population and housing census began on 18 September 2023. It is important for Albania to carry out the national census in a smooth and transparent manner and in line with international standards.

Limited progress was made on the social inclusion of the **Roma and Egyptian** minorities. Monitoring data and reporting on the implementation of the national action plan for equality, inclusion and participation of Roma and Egyptians in Albania (2021-2025) are not yet

available. The institutional capacity of the Ministry for Health and Social Protection, which coordinates Roma-related policies, remains weak. The staffing of the social inclusion department needs to be strengthened. Participation of Roma and Egyptians in the local administration needs to be improved, and inter-ministerial, national and local coordination on Roma inclusion should be further strengthened. Roma and Egyptian children continue to benefit from scholarships and part-time education programmes, as well as free textbooks and transportation to remote schools. However, segregation in schools remains an issue that should be systematically addressed. The overall employment rate of Roma and Egyptians remains very low. Roma and Egyptians continue to benefit from a 5% quota through implementation of the law on social housing. The housing situation remains a significant challenge due to often poor living conditions and a lack of property title deeds. Access to personal documents has improved for both communities. However, other barriers such as the lack of digital skills and access to technology continue to prevent Roma and Egyptian people from fully enjoying their rights and accessing public services, which are increasingly digital. Additional efforts and resources are required to accelerate the inclusion of Roma and Egyptians, tackle anti-gypsyism, discrimination and educational and physical segregation, to promote participation of Roma, and to reduce the gaps with the rest of the population.

On **citizenship rights**, there were no new developments in the reporting period. The two programmes adopted in 2022 by the Council of Ministers for acquiring Albanian citizenship on the basis of special merit in the fields of arts, culture, education, science and sports, without requiring applicants to have a prior residency in Albania to be eligible, remain in force. The 2020 Law on citizenship provides a legal basis for the creation of an investors' citizenship scheme ('golden passports'). In July 2022, the Council of Ministers adopted a decision allowing the Ministry of the Interior to launch a tender for a public-private partnership that would serve to roll out an investors' citizenship scheme. In March 2023, the government announced the suspension of initiatives related to the establishment of the investors' citizenship scheme. As a candidate country, and in line with the Commission's recommendation on this matter in its sixth report under the visa suspension mechanism², Albania should refrain from developing such a scheme which would pose risks as regards security, money laundering, tax evasion, terrorist financing, corruption and infiltration by organised crime, and would be incompatible with the EU *acquis*.

2.2.2. Chapter 24: Justice, freedom and security

The EU has common rules for border control, visas, residence and work permits, external migration and asylum. Schengen cooperation entails lifting border controls inside the EU. Member States also cooperate with Albania in the fight against organised crime, corruption and terrorism, and on judicial, police and custom matters all with the support of the EU Justice and Home Affairs agencies.

Albania is **in between some and moderate level of preparation** to align with the EU *acquis* in the area of Justice, freedom and security. **Some progress** was made overall. The Specialised Structures against Organised Crime and Corruption (SPAK) are building an initial track-record of law enforcement cases, however efforts need to be intensified. SPAK continued to achieve a good level of cooperation with EU and member state law enforcement agencies.

The track record on money-laundering and high-level corruption cases remains insufficient, and financial investigations need to be further developed. However, there was progress in the implementation of the recommendations of Moneyval and of the Financial Action Task

² COM(2023) 730 final.

Force (FATF), as in June 2023 FATF decided to do an on-site visit, which took place in August and led to Albania's delisting in October. Nevertheless, Albania should ensure that any future VTC law (including potential criminal amnesties) complies with the EU *acquis* and international standards. Albania continued to show commitment to counter the illicit production and trafficking of cannabis. In view of the law adopted on controlling the cultivation and processing of cannabis and the manufacturing of its by products for medical and industrial purposes, Albania should ensure that mechanisms are in place to effectively prevent cannabis from being diverted to unintended purposes.

Albania has continued its positive engagement with the EU justice and home affairs agencies. Albania has contributed to the management of the mixed migration flows towards the EU by cooperating to implement the EU Action Plan on the Western Balkans. It concluded a revised Frontex Status Agreement in September. Referrals and access to asylum procedures remain to be addressed and there are still shortcomings in the return procedures. The number of asylum applications lodged by Albanian nationals in EU Member States and Schengen-associated countries remains below the pre-pandemic level, but further increased in 2022. Addressing this phenomenon still requires continuous efforts. As to immigration from third countries, Albania should take concrete steps to address the needs of unaccompanied minors. Albania's visa policy should be further aligned with that of the EU.

The recommendations for 2022 have only been partially addressed. In the coming year, Albania should in particular:

- continue developing the systematic use of parallel financial investigations when dealing with organised crime, illicit trafficking, terrorism and money laundering;
- ensure that any voluntary tax and compliance legislation (including amnesties) is in alignment with the relevant EU *acquis* and international standards set by Moneyval and the Financial Action Task Force (FATF);
- implement the asylum law effectively and improve referrals and access to the asylum procedure; address shortcomings in the return procedures; resume the regular and timely provision of data on migration flows and asylum; continue to address the issue of unfounded asylum applications; and further align its visa policy with that of the EU.

Fight against organised crime

The country has **some level of preparation** in aligning with the EU *acquis* in this area. **Some progress** was made in meeting last year's recommendations. Albania continues to have a good level of cooperation with EU Member States, Europol and Eurojust, and participated in a number of international law enforcement operations. Some progress was made on the seizure and confiscation of assets linked to organised crime, which must continue in the future. Continued efforts are also needed to ensure more prosecutions and final convictions, especially at a high-level, and to set up the asset recovery office. More results are still needed in countering cybercrime, money laundering, and preventing and combating trafficking in human beings. All forms of child sexual abuse online should be criminalised and prosecuted.

Last year's recommendations remain valid, therefore in the coming year Albania should in particular:

- strengthen the fight against organised crime, including through continued cooperation with EU Member States and EU agencies (including Europol and Eurojust), expanding access to Europol's Secure Information Exchange Network Application (SIENA) to all relevant law enforcement agencies;

- set up without delay an asset recovery office, in alignment with the EU *acquis*, that will be responsible for identifying and tracing criminal assets, as foreseen by national legislation;
- ensure that the Special Prosecution Office and National Bureau of Investigation make efficient use of the databases to which they now have access and improve their criminal analysis and intelligence capability.

Institutional set-up and legal alignment

The Albanian State Police (ASP) has a total of 11 932 officers, equivalent to 260 officers per 100 000 inhabitants, compared with an EU average of 335.3 per 100 000 inhabitants (Eurostat, 2019-2021). The Ministry of the Interior approved the organisational and structural reform of the Albanian State Police at central and local levels in April 2023 and its implementation began in May 2023. In the context of the reform, ASP committed to addressing the high turnover of its staff. After the transfer of responsibility for money laundering, terrorism financing, financial crimes and property investigations from the former Serious Crime Prosecution Offices to the District Prosecution Offices, prosecutors and judicial police officers need more training. Albania should provide the relevant institutions with adequate human resources, including external expertise, and with access to relevant databases and criminal intelligence systems to ensure efficiency in the fight against organised crime.

The Specialised Anti-corruption and Organised Crime Structures (SPAK) employs 17 prosecutors, out of the 20 approved by the High Prosecutorial Council. One prosecutor was temporarily transferred to SPAK from the General Prosecutor's Office in March 2023 for the period of one year. A total of 74 administrative positions have been filled and 17 are vacant. The work of the financial investigation unit in the SPO started after the recruitment of 12 investigators in April and May 2023, while the recruitment of another 4 investigators is ongoing. The 60 investigators of the National Bureau of Investigation (NBI) and several special prosecutors attended trainings on different topics with assistance from international actors (mainly the EU and USA). The number of databases to which the SPO and NBI have direct access has increased and now include the Civil Status System, the ASHK (database of the State Cadastre Agency), the database of the Prisons Directorate, the Banking Accounts Register, the SEMD (the Ministry of Justice's electronic system to check the legal status of citizens), the database of the Directorate-General for Road Transport (DPSHTRR), the Albanian notary register, the beneficiary property register, and the state police systems ADAM, E-Fine, Reports-Statistics and the total Information Management System (TIMS). However, a solution is still needed to enable simultaneous access to all databases. The recruitment of officers of the Judicial Police Services to the NBI should be preceded by the clarification of their functional roles and selection criteria, in line with the SPAK Law.

The **strategic framework** consists of the 2021-2025 strategy against organised and serious crimes for. In February 2023, the action plan for 2023-2025 was adopted. Iterative annual action plans of the Albanian State Police on preventing and suppressing the criminal activity of cultivating narcotic plants have been adopted, the last of which in 2023. There is also a cross-cutting anti-corruption strategy for 2015-2023 and its action plan for 2020-2023. A 2021-2023 action plan on the fight against trafficking in human beings was adopted in November 2021. A strategy for controlling small arms, light weapons, ammunition and explosives and a 2022-2024 action plan to implement it are in place.

The **legal framework** was further aligned with the EU *acquis*, especially in the field of anti-money laundering. In its 4th enhanced report on Albania, released in June 2023, Moneyval

concluded that Albania has improved its measures to tackle money laundering and terrorist financing, strengthened the transparency of its legal arrangements and improved the regulation and supervision of non-financial institutions. However, Albania remained on the FATF list of jurisdictions under increased monitoring despite the FATF's assessment that the country has substantially completed its 2020-2023 action plan. This was due to FATF concerns linked to Albania's plans for the adoption and implementation of a voluntary tax compliance law, including a criminal amnesty. In June 2023 FATF decided to propose an on-site visit, which took place in August and led to Albania's delisting in October. Nevertheless, Albania should ensure that any future VTC law (including potential criminal amnesties) complies with the EU *acquis* and international standards'. (see also Chapter 4 – *Free Movement of Capital* and Chapter 16 – *Taxation*).

On the beneficial ownership (BO) register, which entered into force in 2021, sanctions are in place since July 2022 for subjects who fail to comply with BO registration obligations. The further application of administrative sanctions against relevant entities for violations of the transparency obligations needs to be monitored. The central register of bank accounts, which became operational at the end of July 2021, has allowed for faster investigations.

Albania made limited progress in aligning its firearms and explosives legislation with the EU *acquis*. It adopted several pieces of legislation to implement the previously amended law on weapons and transformed the firearms focal point from a virtual unit into a section within the criminal police department. Albania should further align its legislative framework, including as regards explosives precursors. Increased efforts are needed on awareness raising, outreach and education on the dangers and risks related to the misuse, illicit possession, and trafficking of firearms/SALW as well as on reduction of illicit firearms through legalisation, voluntary surrender and deactivation. Progress is necessary in establishing the required infrastructure for the latter purpose.

While Albania has a comprehensive legal framework for confiscating criminal proceeds, an asset recovery office has not yet been created, as required by the Law on the administration of seized and confiscated assets from 2019, and is now long overdue.

In the fight against organised crime and money laundering, Albania needs to step up the implementation of the anti-mafia law on the preventive seizure and confiscation of assets – including non-conviction based confiscation and third-party confiscation – to freeze assets related to criminal activities and promote their social reuse. Albania should also allow 'suspicious transactions reports' to be presented as evidence in court.

Albania is party to the Budapest Convention on Cybercrime and in February 2023 signed the Second Additional Protocol to the Convention on enhanced co-operation and disclosure of electronic evidence. Based on the 2020-2025 national cybersecurity strategy, new legal and sub-legal acts on cybercrime have yet to be adopted. In July 2022, Albania was victim to a large-scale cyberattack, which led to the temporary disruption of most online public services (see also Chapter 31 – *Foreign Security and Defence Policy* and Chapter 10 – *Information Society and Media*).

Legislative amendments to criminalise all forms of online child sexual abuse have yet to be adopted.

Implementation and enforcement capacity

Albania pursued its efforts to improve its **track record** on fighting organised crime. In 2022, 54 new cases were referred to the prosecution service (up from 41 in 2021). Of these, 18 indictments for a structured criminal group were closed in 2022. A total of 98 people received

final convictions at appeal level (compared with 75 people in 2021).

In 2022, the SPO increased the number of *ex officio* investigations to 28 (from 18 in 2021), out of 257 new criminal proceedings – with 79 of these for organised crime. SPAK participated in 142 criminal cases involving 626 accused persons, compared with 128 criminal cases and 418 accused persons in 2021. In 2022, there were 55 final court judgments were passed down and 207 defendants convicted. Of these, 18 became final at the first-instance Special Court and 37 at the Special Court of Appeal. At appeal level, 15 criminal cases involved 47 defendants accused of organised crime, and 22 criminal cases involved 80 defendants accused of corruption and other criminal offences.

There was a fall in serious crime in 2022 with 3 816 new cases referred to both SPAK and the general prosecutors (compared with 3 913 new cases in 2021), with an increase in referrals for money laundering (503 referrals in 2022 against 423 in 2021), organised crime offences (13 referrals more than in 2021) and cybercrime cases (65% increase in 2022). New referrals for trafficking of arms and terrorism remained at similar levels in 2022, while referrals for drug trafficking dropped to 2 876, compared with 3 078 in 2021. For serious crimes, 820 cases resulted in indictments in 2022, compared to 791 in 2021. In 2022, there were 560 people with final convictions for serious crimes compared with 375 in 2021. The use of special investigative techniques and proactive investigations should be stepped up.

On international police cooperation, Albania deployed a second liaison officer to Europol in February 2023. In 2022, there was an increased number of police operations carried out in cooperation with international partners: 90 of them were in the field of narcotics (up from 78 in 2021) and 19 in the field of illicit trafficking (up from 14).

In 2022, 16 joint investigation teams (JITs) were operating. Eight JITs started in 2021 and eight in 2022. Most of the JITs (11) are in the field of narcotics.

There was a 16.9% increase in messages shared by the Albanian State Police with international partners on the Secure Information Exchange Network Application (SIENA), from 5 686 in 2021 to 6 645 messages in 2022. Between January and August 2023, the number of SIENA messages exchanged increased by 39.1% compared with the same period in 2022. An agreement was signed in January 2021 between the Albanian State Police and the customs authorities to allow access to SIENA. However, these connections have still not been made operational. This should be tackled as matter of urgency by the stakeholders involved. The Directorate-General for Taxation and the Financial Intelligence Unit have not taken the necessary steps to obtain access to SIENA. Access to SIENA is essential to allow the timely sharing of sensitive information with counterparts in EU countries.

Albania continued to cooperate with EU police services through the European Network of Fugitive Active Search Teams (ENFAST), in which it has observer status.

Albania is one of the most active third countries participating in the European Multidisciplinary Platform against Criminal Threats (EMPACT). In 2022, Albania participated in 119 operational actions and was action leader in two of them, the Operational Action Plans (OAPs) on Organised Property Crime and Cyberattacks. Albania was co-leader of another two actions in the OAP on criminal finances: money laundering and asset recovery. In 2023, Albania further stepped up its participation in EMPACT and is participating in 128 operational actions, while remaining the leader of two operational actions (in the OAP on Organised Property Crime and in the OAP on Cyberattacks) and a co-leader of two Operational Actions (in the OAP on Migrant Smuggling and in the OAP on Criminal finances, money laundering and asset recovery).

Albania continued to actively participate in EMPACT Joint Action Days promoting cooperation against firearms trafficking, the smuggling of migrants and drug trafficking, motor vehicle crime, and trafficking in human beings and document fraud.

The cooperation with Interpol has continued to yield positive results, even though the number of messages received through Interpol's I-24/7 global police communication channel fell by 9.3% in 2022. Cooperation between the Albanian Security Academy and the EU Agency for Law Enforcement Training (CEPOL) is well established and based on a working arrangement. However, the revision of the Working Arrangement has been pending for more than two years and no new National Contact Point has been appointed. Albania continues to benefit from full access to the CEPOL Exchange Programme and to participate in the CEPOL-led Partnership against Crime and Terrorism project in the Western Balkans. Authorities should, with the assistance of CEPOL design, prepare and organise targeted training on counter terrorism and environmental crime.

On **domestic operational capacity**, legal and institutional reforms have strengthened the capacities of the ASP's Operational Directorate. During 2022, special investigative measures were used in 496 cases involving drug trafficking investigations. Albania should continue to use and develop special investigative techniques and proactive investigations.

With EU assistance, in January 2023 the Security Academy was accredited for the very first time as an institution of higher education, for a period of 5 years. A few recommendations will need to be addressed before the accreditation is renewed.

Law enforcement authorities need to be more proactive and systematic in addressing organised crime, especially when investigating large criminal networks. Special units within the police and the prosecution service have access to 40 national registers, but they still lack direct access to the electronic register of mobile phone subscribers and to IP addresses from internet service providers.

Financial investigations do not systematically accompany criminal proceedings from the beginning, and their effectiveness remains limited. The financial investigation techniques of the police and prosecutors still need improvement. Seizures of assets declined in 2022. Albania reported about EUR 46 million worth of seized assets (compared with EUR 50 million in 2021). The confiscation of assets increased in 2022 to EUR 5.8 million in value, compared with EUR 150 000 in 2021.

There is no strategic or systematic approach to identifying and confiscating criminal assets that are located abroad or that are not reachable. Albania should implement rules on the extended confiscation and precautionary freezing of assets, to effectively handle them and to prevent any loss of their economic value.

Albania remains a country of origin, transit and destination of **trafficking in human beings**. Albanian women and children are subject to trafficking mostly for sexual exploitation to neighbouring countries and EU Member States, while the second and third purposes for trafficking are forced labour and criminal exploitation. The number of perpetrators of Albanian nationality registered in the EU remained high in 2021, with Albanian nationals being in the top-10 non-EU countries of origin of suspects (4th) prosecuted (9th) and convicted (7th) persons. Children placed in institutions and children from the Roma and Egyptian communities are particularly vulnerable to trafficking. The Prosecution Office registered 11 new criminal proceedings for trafficking in human beings in 2022, compared with 10 in 2021. The number of final convictions remained very low with seven final convictions from two cases. The national referral mechanism for (potential) victims of trafficking remained functional. Assistance was provided in all cases. In 2022, 112 victims or potential victims

were identified and assisted, compared with 159 in 2021. The identification of potential victims remains inadequate within Albanian territory and among vulnerable migrants entering the country and those accommodated in reception centres. Implementation of the 2021-2023 national action plan on the fight against human trafficking should be supported by adequate funding and better coordination. NGO-run shelters remain underfunded. Investigations and prosecutions are not conducted consistently with a focus on the victim. A gender-responsive approach to access to justice for victims should be promoted. Anti-trafficking efforts should increase, in particular by strengthening the capacity of border police to identify and refer to the prosecution service cases of trafficking and by strengthening the child protection system. Successful reintegration remains difficult because the state's core protection, care and social services are insufficient.

Prevention efforts, especially on strategic communication, should be stepped up. Dedicated awareness-raising campaigns should be developed to target communities at risk of trafficking in human beings and high-risk sectors and environments. The 116 006 hotline for victims of crime, including trafficking, should be made functional. The improved legislative framework for victims, including amendments to the Criminal Procedural Code, is yet to be implemented. Police, prosecutors and judges should receive dedicated training, especially on the rights of victims.

On **trafficking in firearms**, large numbers of firearms are available in Albania. These are used by Albanian criminal groups and trafficked, primarily to neighbouring countries. Albania is both a destination and a transit country for light firearms. There were 27 new criminal cases registered at the Prosecutor's Office in 2022, a similar level to 2020, and 26 people received final convictions in 2022, compared with 20 in 2021. The exchange of information between different national stakeholders (law enforcement agencies, the prosecution service and judicial system) is still poor, which clearly jeopardizes the reception of complete data from the police and the prosecution service.

Cases of **cybercrime and internet fraud** increased in 2022, with 121 cases referred to the Prosecutor's Office (compared with 79 in 2021) and with 3 people receiving final convictions. Albania should provide a more effective law enforcement response that focuses on the detection, traceability and prosecution of cybercriminals. Albania should raise encourage prosecutors to make greater use of the 24/7 network of contact points set up by the Council of Europe Convention on Cybercrime. The ASP's cybercrime unit has a central forensic laboratory but should increase its capacity to deal with such cases. The capacities for investigating and prosecuting crimes against children committed through the internet need to be strengthened.

Albania's economy has a large informal sector and transactions are primarily cash-based although the number of electronic transactions has increased substantially in recent years. Crimes that generate large amounts of money include drug trafficking, tax evasion, smuggling and trafficking in human beings. On **money laundering**, both the centralised bank account register and the beneficial ownership (BO) register are in place. The beneficial ownership register is now almost fully populated, comprising 99% of businesses and 94% of NGOs by April 2023 (*see also Chapter 4*). Since July 2022, sanctions are in place for subjects who fail to comply with BO registration obligations, and 317 fines were issued during the reporting period. Albania should monitor the further application of administrative sanctions for violations of the transparency obligations by entities that must register. A dedicated electronic register (PRESTO), which the General Prosecution Office introduced in July 2021 to ensure that all money laundering cases are tracked, is in full use. Albania also needs to align its legislation with the *acquis* on combatting money laundering by criminal

law.

In 2022, 503 cases of money laundering were referred to prosecutors, against 423 in 2021. The number of people with final convictions for money laundering rose from only one in 2021 to nine in 2022.

The ASP's **witness protection** programme has worked satisfactorily. In 2022, 23 witness protection operations were performed, one less than in 2021.

Cooperation in the field of drugs

Institutional set-up and legal alignment

The Ministry of the Interior and the Ministry of Health and Social Protection/Institute of Public Health are the lead bodies in the fight against drug trafficking and drug abuse, respectively. Albania still does not have a dedicated national drugs strategy. Several security aspects are covered by the 2021-2025 national strategy against organised crime and serious crime and its successive action plans. Under the strategy against organised crime, the ASP adopts annual action plans on preventing and cracking down on criminal activity in the cultivation of narcotic plants, the most recent of which was adopted in February 2023. More efforts need to be made in the area of drugs policy, notably by adopting a national drug strategy covering the supply and demand and harm reduction aspects and by fully aligning legislation with the EU *acquis* and international practices.

The activity of the working group established in May 2022 to review the legislation on narcotic drugs and psychotropic substances should be stepped up, in reaction to the changes made to the psychotropic substances lists by the International Narcotics Control Board.

The establishment of a National Drugs Observatory (NDO) is still pending. Albania should set up an operational observatory with the necessary human and financial resources, which is crucial for implementing a comprehensive data collection system on drugs, coordinating a drug information system, and for associating Albania to the EU's Reitox network.

Although there is a national early warning system (NEWS) coordinator, who has been appointed by the Ministry of the Interior, and Albanian experts have undergone training courses, there is still no operational NEWS on the detection of new psychoactive substances. The NEWS should be made operational without delay.

Albania adopted a law on controlling the cultivation and processing of the cannabis plant and the production of its by-products for medical and industrial purposes in August 2023. Albania should continue to consult the EU on the envisaged implementing legislation and ensure that mechanisms are in place to effectively prevent cannabis from being diverted to unintended use.

Implementation and enforcement capacity

Albanian criminal groups continue to play a prominent role in the global traffic of drugs, in particular the trafficking of cocaine from Latin and South America to Europe. During the reporting period, international police operations, often with the active involvement of the Albanian State Police, have led to the dismantling of some of these groups.

In a joint operation in January 2023 between Eurojust, Europol, Italian and Albanian authorities, targeting a large-scale drug trafficking network responsible for trafficking cocaine, cannabis and heroine from Albania to Italy, 30 suspects were arrested across 31 locations. In April 2023, Spanish authorities dismantled an Albanian criminal group that trafficked cocaine from Latin America across Europe. 17 people belonging to that organisation were arrested in raids across Spain. Since the start of the operation in September

2021, nearly ten tonnes of cocaine seized in Italy, Belgium, Greece, Portugal, the Netherlands and Spain have been connected to that group.

Albania's law enforcement authorities have maintained a good level of cooperation with their counterparts in EU Member States in tackling the trafficking of narcotics. During 2022, 271 police operations in the field of narcotics took place, out of which 90 were conducted in cooperation with Albania's international partners. Albania continues to implement the working arrangement with the European Monitoring Centre for Drugs and Drug Addiction (EMCDDA), but stronger efforts are needed, including through better inter-institutional coordination, in increasing its reporting capacity on drug-related issues in line with EMCDDA guidelines/protocols and in allocating sufficient resources for this task.

Drug trafficking is the most common form of serious criminal offence in Albania, even if the number of identified cases has slightly decreased. In 2022, the police identified 2 956 offences related to the cultivation, production, sale and trafficking of narcotics compared with 3 168 in 2021, involving 3 690 alleged offenders (3 927 in 2021). Production and sale are by far the most common offences related to drugs (77% of all cases). Between January and August 2023, the number of detections of criminal offences related to drugs increased by 10.9% over the same period in 2022.

Albania should drastically increase its capacity to collect, store and report data for all drug-related indicators and in line with EU standards, and should increase the capacities of the law enforcement authorities with regards to drugs.

Albania remains the only country in the region that allows monitoring by another country: since 2013, Italy's Ministry of Economy and Finance Enforcement Agency (*Guardia di Finanza*) has carried out aerial surveys to detect cannabis plantations in Albania. In 2022, 63 flight missions were operated by the agency, surveying 1 106 744.8 hectares, allowing 41 000 plants to be found and destroyed. This represents a decrease of around 55% compared with 2021, but is still higher than in 2017-2019. In addition, the ASP continued monitoring by drones. The quantity of cannabis seized in Albania increased slightly from 3.6 tonnes in 2021 to 3.76 tonnes in 2022.

The amount of cocaine seized declined from 725 kg in 2021 to 578 kg in 2022, which remains a very significant amount. Hashish and heroin seized have declined drastically from 208 kg in 2021 to only 37 g in 2022 for hashish and from 81 kg in 2021 to 7 kg in 2022 for heroin. At the same time, there was a large increase in the amount of MDMA seized, from 7 g in 2021 to 480 g in 2022.

The lack of safe and secure storage for seized drugs and drug precursors prior to destruction remains a concern. Albania needs to establish the legal base for an appropriate process for the destruction of precursors and the practice of keeping only a small sample as material evidence for court proceedings (instead of the entire quantity seized).

Fight against terrorism

Institutional set-up and legal alignment

Albania has a comprehensive legal framework for preventing and combatting the financing of terrorism and is fairly advanced in aligning with the EU *acquis* in this area. It is a party to all of the Council of Europe counterterrorism conventions, including those covering the seizure and confiscation of the proceeds of crime and the financing of terrorism. The authorities should ensure effective implementation of targeted financial sanctions mandated by the UN Security Council, including by increasing the involvement of financial institutions and other relevant actors and through effective inspections, in line with the FATF action plan. Work

needs to continue on preventing the risk of radicalised groups using non-profit organisations to finance terrorism.

In March 2022, the government adopted a new cross-sectoral strategy for 2023-2025 and two action plans to prevent violent extremism and fight terrorism. These replace the 2020 national cross-sectoral counterterrorism strategy and the 2015 national strategy on countering violent extremism and their respective action plans. The funds necessary to implement the action plans need to be budgeted.

Albania has continued to make good progress in implementing the 2019 bilateral arrangement with the EU on putting the Joint Action Plan on Counterterrorism for the Western Balkans into practice. A revised bilateral arrangement was signed in December 2022 and is being implemented. Albania should submit the first report on the implementation of the revised arrangement. Work has advanced on creating a body or mechanism for joint national threat assessments as well as on advancing the work on Critical Infrastructure Protection. According to the revision, the Albanian authorities should draft a report on critical infrastructures to assess the current situation and needs both from a legislative and an operational point of view, to align with the upcoming EU legislation and standards and ensure the resilience of critical entities.

The Counterterrorism Directorate of the ASP is the lead body on counterterrorism, under the jurisdiction of the Special Prosecution Office and the special courts. Its resources were increased as part of the ASP restructuring in 2023. The State Intelligence Service and the Defence Intelligence and Security Agency are also active in the field. The ASP's community policing personnel are involved in preventive and early-warning efforts. The Coordination Centre for Countering Violent Extremism is in charge of capacity-building and coordinating countering violent extremism (CVE) activities across government institutions and oversees the implementation of the relevant parts of the national CVE and counterterrorism strategy. Changes in the centre's leadership and staff have repeatedly led to the loss of institutional memory and have negatively impacted the centre's effectiveness. The centre should therefore create the necessary internal administrative procedures to address this and to improve knowledge and information management. Last year's efforts to improve the centre's capacity to prevent violent extremism at local level should be continued. The capacities of local communities and local security councils to prevent terrorism should be further improved. Measures and capacity to address terrorist content online should be improved, including by aligning with the EU *acquis* and by adopting best practices.

Implementation and enforcement capacity

The police referred seven cases of terrorist offences and financing of terrorism to the Special Prosecution Office. One individual, an Iranian national, was convicted of terrorist offences in 2022. The authorities repatriated 10 adult women and 27 minors from the camps in Syria in October 2020, August 2021 and May 2022. The CVE Coordination Centre and the ASP's Counterterrorism Directorate have led the inter-institutional work on reintegrating and rehabilitating them in an effective and professional manner, with the Counterterrorism Directorate also carrying out criminal investigations and ensuring monitoring. No criminal charges have been brought against any of the returnees so far. In total, 81 Albanian nationals returned to Albania from Syria and Iraq. Around 35 to 45 Albanian nationals are estimated to remain in Syria, of whom 9 seem to be in prisons of the Syrian Democratic Forces. At least 45 Albanian nationals are believed to have died in the conflict zone. The authorities continue to seek to return the remaining women and children from the camps in Syria. The CVE Coordination Centre has engaged in capacity building at local and national level on preventing and countering violent extremism, including in cooperation with civil society.

Regional cooperation and the exchange of sensitive information with international partners remains satisfactory. Albania should make more proactive use of the capabilities of the Europol European Counter Terrorism Centre and should continue its collaboration with the Europol Internet Referral Unit. The country actively participated in the implementation of the Western Balkan counter-terrorism initiative, under the Integrative Internal Security Governance.

Albania should continue to focus on the disengagement, reintegration and rehabilitation of returnees and their families from Syria, and on the investigation and prosecution of those suspected of criminal offences. It should strengthen the case management and referral mechanisms for returnees and individuals at risk of radicalisation. Prison radicalisation and online terrorist content continue to require attention. Albania should also continue to investigate links between organised crime and terrorism. Furthermore, it needs to align its legislative framework with the EU legislation on explosive precursors.

Judicial cooperation in criminal and civil matters

In 2022, the Albanian Liaison Office to Eurojust registered 38 cases at the request of the Albanian authorities, which represents an 81% increase compared with 2021. 48 new cases were opened with the Albanian Liaison Office at the request of the competent authorities of EU Member States, only slightly fewer than in 2021 (51). Among non-EU countries, Albania had the fourth highest number of Eurojust cases in 2022.

With EU assistance, in 2022 Albania doubled its participation in joint investigative teams (JITs). Out of 16 JITs, the majority (11) were pursued in the field of narcotics, 3 were in the field of computer crime, and the remaining dealt with illicit trafficking and economic and financial crime.

Albania actively participates with two representatives in the Eurojust regional project 'Increasing cross-border cooperation in criminal justice in the Western Balkans' (WB CRIM JUST). This has led to greater interaction between prosecutors in the Western Balkans with the aim of coordinating their investigations.

The Albanian liaison prosecutor was appointed to Eurojust in January 2021 and helped to facilitate judicial cooperation between EU and Albanian prosecutors in the fight against transnational organised crime. The continuity of this engagement was ensured in June 2023 when the mandate of the liaison prosecutor posted to Eurojust was extended for another two and a half years, beyond the expiry of the EU funding for their posting at the end of 2023.

The setting-up of joint investigation teams has been facilitated by EU financial support and the Law on judicial cooperation in criminal matters with foreign jurisdictions. Albania should also ensure that it provides its own financial resources to proactively set up more JITs.

A cooperation agreement between the European Public Prosecution Office (EPPO) and the General Prosecution Office was signed in July 2022 to facilitate cooperation in criminal matters and the exchange of information. A similar agreement between EPPO and SPAK was signed in June 2023.

On judicial cooperation in civil matters, between June 2022 and March 2023, Albania received 102 requests for mutual legal assistance and sent out 72 requests. On judicial cooperation in criminal matters, in the same period, Albania received 144 requests and sent out 263 requests. Albania should finalise the internal procedures for acceding to the 2005 Hague Convention on Choice of Court Agreements and the 2007 Protocol on the Law Applicable to Maintenance Obligations. It should continue to improve international cooperation, the timely implementation of multilateral instruments, and its institutional

capacity.

Legal and irregular migration

Institutional set-up and legal alignment

The Ministry of the Interior is the main actor in the field of migration. The main bodies under its supervision responsible for implementing migration policies are the Department of Border and Migration in the ASP Directorate-General, the Directorate for Anti-Trafficking and Migration Policies in the Ministry of the Interior and the Directorate of Asylum, Foreigners and Citizenship. The Ombudsperson and the child protection unit in the Ministry for Health and Social Protection play an important role in monitoring and providing services to migrants. The National Agency for Employment and Skills is responsible for services, employment programmes and vocational training programmes for foreigners, stateless persons and refugees.

The **legal framework** on migration is partially aligned with the EU *acquis* and needs updating in line with developments on the EU side. Following the entry into force of the Law on Foreigners in November 2021, 23 out of a total of 29 pieces of implementing legislation have been adopted so far: two in 2021, 15 in 2022 and six in 2023.

Albania has a readmission agreement with the EU and implementing protocols are in place with 12 Member States. Albania and Greece have still not concluded an implementing protocol. Draft readmission agreements have been sent by the Albanian authorities to several countries of origin³, so far to no avail. New draft readmission agreements with Georgia and Armenia have been drawn up and are to be followed up.

The implementation of the national migration **strategy** and action plan for 2019-2022 came to an end in December 2022. Out of 129 measures in the action plan, 72 measures are reported as implemented, 36 as partially implemented and 21 measures as not implemented. The final report has not yet been completed. In March 2023, an inter-institutional working group began preparations to draft the new migration strategy for 2024-2030. Several preparatory workshops with national stakeholders were organised in May 2023 to identify priority objectives.

Implementation and enforcement capacity

Albania cooperated with the EU, EU Member States and its neighbours to implement the EU Action Plan on the Western Balkans presented by the Commission in December 2022 and therefore contributed to the management of the mixed migration flows towards the EU.

In 2022, there was a 34% decrease in the number of irregular migrants entering Albania, i.e. 12 216 compared with 18 496 in 2021. This reduction could be attributed to the strengthening of border surveillance and control, especially in the Kakavije/Kapshtice operational area where the Frontex joint teams were deployed. As many as 32% of all migrants apprehended in 2022 were apprehended repeatedly. Of all arrivals, 235 were identified as unaccompanied or separated children. Unaccompanied minors travelling from Albania to EU Member States remain a source of concern.

The three nationalities most represented remained Syrians, Afghans and Bangladeshis.

In the first 8 months of 2023, 4 877 irregular immigrants were apprehended, down by 30.6% from the same period in 2022. Regular reporting on irregular migration flows and asylum should be ensured. Since the summer of 2022, the information provided to the EU by the

³ Afghanistan, Iraq, Morocco, Algeria, India, Pakistan, Egypt, Bangladesh and Tunisia.

Ministry of the Interior has been sporadic.

Reception capacities already increased in 2021 with the refurbishment of the Babrru National Reception Centre to provide up to 250 beds and a dedicated family-friendly space. In July 2023 a new Temporary Reception Centre was inaugurated in Qafë-Botë. The total capacity of all reception facilities is approximately 570 beds. Albania does not have separate facilities for unaccompanied minors. The updated national contingency plan for the possible arrival of a substantial number of migrants and asylum seekers still needs to include an appropriate budget allocation. The case management of unaccompanied children is not handled as an integrated process, as required by the law on asylum. Unaccompanied minors need to be included in the national child protection system.

By June 2023, the overall **staffing** of the ASP's Department for Border and Migration had increased by almost 19% in comparison with 2021. As a result of the organisational and structural reform, there are now 1 977 employees at central and local levels, of whom 1 882 are police officers and 95 are civilian staff. Comprehensive training and joint exercises have been organised for key border officials and frontline officers. However, permanent training structures should be established in compliance with basic training standards for EU border guards. Border and Migration Police officers should increase their ability to identify vulnerable refugees and migrants with specific needs. Coordination with child protection and anti-trafficking departments should also improve. Reports of migrants being returned to Greece without adequate pre-screening have continued during the reporting period. Albania should address the shortcomings identified in its return mechanism for irregular migrants, in line with applicable legislation and with international obligations.

The **readmission agreement** with the EU is functioning well, with Albania swiftly honouring requests from Member States for the readmission of both its own and third-country nationals. In 2022, 23 860 Albanian nationals were ordered to leave and 9 655 were effectively returned. Cooperation between Albania and Frontex on return operations is very good. On 25 January 2022, Frontex organised in Albania its first fully-fledged Frontex-led return operations, returning approximately 50 Albanian irregular migrants from several EU Member States with the support of the Albanian authorities.

The number of third country nationals voluntarily returned from Albania to their countries of origin remains low: six in 2022. Albania should pursue its efforts to increase returns to their countries of origins of migrants with no right to stay.

In August 2021, Albania started temporarily hosting Afghan evacuees. By the end of September 2023, 4 033 have been hosted in open facilities near the coastline in Albania, with the support of international NGOs. All Afghan evacuees applied for temporary protection in the country, granted to them by a Council of Ministers decision adopted on 25 August 2021. Around 90% of them have been resettled to other countries, mostly to the United States (1 963), Canada (1 439), UK (106) and EU Member States (77). Since March 2022, the Albanian authorities have granted to refugees from Ukraine the right of residence in Albania for a period of up to one year without needing to obtain a residence permit. They can also apply for a temporary protection status. By the end of August 2023, 70 909 Ukrainian citizens had entered Albania, while 62 631 had left. Most of them are staying in private accommodation. Only 33 have applied for and benefit from temporary protection status.

Asylum

Institutional set-up and legal alignment

The 2021 Law on asylum is largely aligned with the EU *acquis* and all 15 pieces of

implementing legislation have been adopted. Appropriate consultations should continue with the European Union Asylum Agency (EUAA) on the practical guidelines for their implementation through the EUAA-Albania cooperation roadmap and through practical cooperation under the EU regional support to protect sensitive migration systems. Although the law grants asylum seekers the right to access public services at the same level as Albanian nationals, the lack of alignment with other legal acts and lack of implementation capacity prevents asylum seekers from accessing services effectively. An efficient implementation of the law to a high standard remains to be achieved and would require additional investment in administrative capacities and the overall development of a well-functioning asylum system. A revised pre-screening instruction was adopted in 2022, but its implementation in practice needs to be improved.

Albania has the necessary institutions in place to handle asylum claims. Administrative appeals may be lodged with the National Commission for Refugees and Asylum.

Implementation and enforcement capacity

Albania continues to be primarily a transit country, considered as such both among the refugee and migrant community and by the Albanian authorities. In 2022, 125 people made a claim for asylum with the Border and Migration Police, compared with 85 in 2021. The fact that only 1% of all arriving migrants in 2022, a large majority of whom came from countries with high protection rates in the EU, were referred to asylum procedures, underlines the need to improve referrals and access to asylum procedures.

In 2022 no applicant was granted refugee status, while 24 were granted subsidiary protection. Between January and June 2023, nine people were granted subsidiary protection, and none was granted refugee status.

On **asylum procedures**, the capacities of the Border and Migration Police to identify and refer people with specific needs are still insufficient. The Directorate for Asylum, Foreigners and Citizenship has been reorganised with three experts charged with developing asylum procedures, one head of sector and one director. The staff needs training to develop their skills on assessing individual claims, particularly regarding information on the country of origin and for cases involving vulnerable people. The lack of qualified interpreters at the temporary reception centres during and after pre-screening should be addressed and the hiring of female interpreters encouraged, to increase reporting on violence and on potential trafficking cases. Coordination between the actors involved should be improved.

There are still shortcomings to be addressed in the implementation of return procedures at the border with Greece, in particular as regards adequate screening, safeguards including access to information, interpretation, a pre-return period of stay, and the right to appeal, including for unaccompanied minors.

The status of about 2 700 Iranians (from the People's Mujahedeen of Iran) relocated to Albania in 2015 and 2016 has yet to be decided. They currently hold temporary residence permits on humanitarian grounds.

The Commission's sixth report under the visa suspension mechanism, published in October 2023, concluded that Albania has taken action to address most of the Commission's previous recommendations. Albania's visa policy is still not fully aligned with the EU's as regards the list of countries whose nationals require an entry visa. Albania has year-round visa-free arrangements with Armenia, Azerbaijan, Belarus, China, Guyana, Kazakhstan, Kuwait and Türkiye, which are not on the EU's visa-free list. Moreover, a reciprocal visa liberalisation agreement with China was signed in February 2023, which consolidates the earlier unilateral

decision of Albania granting visa free access to Chinese nationals. Albania also grants visa-free access to third country nationals who have a resident permit in the United Arab Emirates for at least 10 years. As in 2022, nationals of Bahrain, Oman, Qatar, Saudi Arabia and Thailand, who need a visa to travel into the EU, also benefited from the seasonal lifting of visa requirements between April and December 2023. Following strong requests from the EU side, Albania has not extended seasonal visa-free access to the nationals of Egypt, India, and Russia in 2023, which is significant progress. Overall, the practice of temporarily lifting the visa requirement is not aligned with the EU *acquis*. Continuing to progressively align Albania's visa policy to the EU's is essential, in particular with regard to countries presenting migration or security risks.

According to Eurostat data, the number of Albanian citizens lodging asylum requests in EU Member States increased by 16% in 2022 compared with 2021 (from 11 300 to 13 100 applications), but still remains below the pre-pandemic level (20 415 in 2019). The asylum recognition rate increased slightly from 5.7% in 2021 to 6.3% in 2022 (9% in 2021 and 10.6% in 2022, including people with humanitarian status).

In 2022, 6 991 Albanian nationals were refused permission to exit Albanian territory at border crossings, which is a 33% increase on 2021. The number of minors refused permission to exit rose by 19%, from 343 in 2021 to 423 in 2022. In the first 8 months of 2023, the number of minors refused exit remained stable compared with the same period in 2022. This increase can be attributed to the strengthening of border crossing controls, the implementation of the relevant legislation. Awareness-raising activities should continue as well as addressing the underlying reasons, and dialogue and structured cooperation with the EU Member States most affected by unfounded asylum applications by Albanian nationals. The Commission is monitoring the trend very closely in the framework of the visa suspension mechanism and issued a recommendation to Albania on this matter in its sixth report under the visa suspension mechanism.

Greater attention should be paid to the reintegration of returnees, especially the most vulnerable people. Migration counters that have been set up in municipalities should be formalised and improved to facilitate the reintegration of returnees and more police officers should continue to be trained to escort returnees to Albania.

Schengen and external borders

Institutional set-up and legal alignment

The **legislative framework** for the management of Albania's external borders is not yet fully aligned with EU standards, however its 2021-2027 integrated border management strategy and 2021-2023 action plan are broadly aligned. The Law on border control that introduced rules on advance passenger information and passenger name records (PNR) into Albanian legislation is not aligned with the EU *acquis*. A passenger information unit was created in February 2022 within the Albanian State Police. The Albanian authorities are aware that the transfer of PNR data from the EU to Albania is not possible under the current legal framework.

Implementation and enforcement capacity

Albania has committed to modernise its border infrastructure and improve border surveillance. With EU assistance, Albania has improved radar coverage for the surveillance of the blue border. Efforts need to continue to complete the coverage and to create a command-and-control room to collect situational information from the regional level and allow coordinated intervention from the central level. Albania should establish a risk-analysis

system based on the common integrated risk analysis model developed by Frontex.

In 2022, 418 criminal offences were recorded for assisting illegal border crossings (29 more than in 2021) and 631 offenders were prosecuted, of whom 321 were arrested or detained.

As part of the organisational and structural reform of the Albanian State Police, an investigative sector has been created in the border and migration police with the aim of preventing, detecting and countering cross-border illegal activity, including people-smuggling and trafficking in human beings. This is a very positive development.

Albania continues to participate actively in the Western Balkan Risk Analysis Network.

Operational cooperation with neighbouring countries continued to be good. In 2022, in accordance with the relevant protocols, a total of 976 joint patrols were carried out with border police officers from Montenegro, Kosovo*, North Macedonia and Italy's *Guardia di Finanza*; up from 920 in 2021. At the green border, 592 joint patrols were carried out, while 384 joint patrols were carried out at the maritime border with Italy. A joint police and customs cooperation centre with Greece was inaugurated in the Kakavije border area in April 2023. Furthermore, an agreement with Montenegro was signed in February 2023 on the opening of a joint border crossing point at Shen Nikolla-Pulaj and an implementing protocol with North Macedonia for the common border crossing point at Qafe Thane/Kjafasan was signed in November 2022.

The successful implementation of Frontex Joint Operation Land and Albania Sea continued in 2022 under the current EU-Albania Status Agreement. The updated EU-Albania Status Agreement was signed in September 2023 and allows teams from the European Border and Coast Guard standing corps with executive powers to also be deployed at non-EU borders. In June 2023, the Albanian Ministry of Interior and Frontex signed a memorandum of understanding on a complaints mechanism on the protection of fundamental rights.

Albania needs to ensure that the personal identification secure comparison and evaluation system (PISCES) is operated in alignment with the EU *acquis* on personal data protection. In 2022, the Department for Border and Migration undertook 14 serious disciplinary measures against border police officers for corruption and abuse of office, slightly fewer than in 2021 (16).

The production and delivery of Albanian biometric documents was transferred from a foreign private company to a newly established state agency in August 2023. Albania will need to ensure that it continues to respect the international standards and procedures for producing and issuing secure identification documents.

* This designation is without prejudice to positions on status, and is in line with UNSCR 1244(1999) and the ICJ Opinion on the Kosovo declaration of independence.

2.3. ECONOMIC CRITERIA

<i>Table 1.1:</i>	2014-19	2020	2021	2022
Albania - Key economic figures	average			
GDP per capita (% of EU-27 in PPS) ¹⁾	30	31	32	34
Real GDP growth	2.9	-3.3	8.9	4.8
Economic activity rate of the population aged 15-64 (%) , total	66.1	69.1	69.3	73.2

Source: national sources

In line with the conclusions of the European Council in Copenhagen in June 1993, EU accession requires the existence of a functioning market economy and the capacity to cope with competitive pressure and market forces within the Union.

2.3.1. The existence of a functioning market economy

Albania is **between a moderate and a good level of preparation** in developing a functioning market economy and made **some progress** in this area. Despite the economic fallout from Russia's war of aggression against Ukraine, the Albanian economy showed resilience and GDP growth remained strong in 2022. Inflation increased to above the target in 2022 but remained single-digit and then decreased in early 2023. The strong recovery supported labour market performance, giving Albania the highest participation rate and one of the lowest unemployment rates in the region. Supported by strong revenue growth and a large increase in nominal GDP, the public debt ratio fell much more than expected, to below its pre-2019 crisis level, but remains among the highest in the region. Long-awaited reforms were launched to improve investment expenditure, planning and execution, and the monitoring of fiscal risks continued to improve, but weaknesses persist in both areas. There was some progress on revenue-related reforms but plans to adopt a medium-term revenue strategy have been abandoned, while a low revenue ratio continues to impede much needed investments. The financial sector remained stable and continued to expand but financial intermediation remains low. The business environment benefitted from a higher level of digitalisation of public services. However, challenges related to a large informal economy and a shortage of labour with relevant skills persist. Consultations of the public by the government did not improve significantly. Last year's recommendations to improve the functioning of the market economy were partly implemented, and remain partly valid. In the

coming year, Albania should in particular:

- achieve a non-negative primary balance and continue to reduce the public debt ratio while providing targeted support to vulnerable households and firms if needed, and continue to reduce arrears and use the regular revision process for budget amendments;
- complete procedures to fully establish the National Single Project Pipeline and advance the necessary legal amendments to fully integrate public-private partnerships (PPPs) into it, and use a systematic risk assessment when deciding on new state guarantees and onlending;
- adopt measures to increase tax revenue as a share of GDP in a growth-friendly way, while taking into account the results of a broad public consultation on tax policies.

Economic governance

Albania continued to pursue stability-oriented economic policies. The authorities supported households and businesses and state-owned electricity utilities to cushion the impact of high energy and food prices, while complying with the fiscal rules. After a large decrease in 2022, the public debt ratio fell below its pre-pandemic level. The government continued to use specific legal ('normative') acts instead of the regular legislative procedure to amend the 2022 budget, but on fewer occasions than in 2021, and none in the first half of 2023. Albania submitted its 2023-2025 economic reform programme (ERP) to the European Commission at the end of January 2023, in which it underlined its plan to achieve a positive primary balance already in 2023. Parliament approved the 2023 budget on 24 November 2022 and the ERP on 5 February 2023.

Albania partially implemented the policy guidance jointly agreed at the Economic and Financial Dialogue between the EU and the Western Balkans and Türkiye in June 2022. Fiscal consolidation progressed, and control of arrears and fiscal risks improved, but there was limited progress on revenue-related reforms. Business support services were broadened and measures against informal employment were better coordinated, but information about the actions against informality and their effects remained limited. Labour market analysis and the preparations for implementing the Youth Guarantee progressed and reimbursements for medical costs increased, as did ad-hoc expenditure on social protection. Albania still has not ensured the necessary sustained and systematic increase of expenditure on social services, human development and innovation.

Macroeconomic stability

Albania's economy continued to show resilience, despite three consecutive shocks. Albania's real GDP growth averaged 2.7 % in 2013-2018. Though the economy was hit by the 2019 earthquake and the COVID-19 crisis, GDP contraction was less than expected in 2020 (3.3 %), followed by a strong economic recovery in 2021 (8.9 %), which extended into 2022 (4.9% GDP growth) despite the shock due to Russia's war of aggression against

Ukraine. Solid increases in private investment and very strong private consumption growth led to higher-than-expected economic growth in 2022, outweighing shrinking public investment and consumption and a negative contribution of net exports to growth. A robust

rise in private consumption was supported by continued strong employment and wage growth. Construction, manufacturing and services were the main drivers of growth on the production side, partly due to buoyant tourism. These macroeconomic trends largely continued in the first quarter of 2023, albeit at a slower pace, except for growing public consumption and investment.

Convergence with EU income levels stagnated in 2014-2019 with GDP per capita (at purchasing power parity) remaining at 30% of the EU average, but rising to 32% in 2021 and 34% in 2022.

Despite surging import prices, the current account deficit decreased in 2022. Sharply increased 2022 import prices widened the goods trade deficit, despite currency appreciation and strong growth in goods exports. However, a 30% surge in the services trade surplus, to 13% of GDP, contributed to a 1.7 pps decrease in the current account deficit to 6% of GDP in 2022. The share of remittances in GDP continued to fall, from 4.9% in 2021 to 4.5% in 2022, resulting in a decrease in the secondary income surplus to just above 6% of GDP in 2022. In the first half of 2023, the current account deficit continued to fall by about 27% compared with the first half of 2022, driven by a continuing surge of the trade surplus in services and by the growth of remittances.

Foreign direct investment (FDI) inflows grew strongly and financed the current account deficit in 2022. The completion of large energy projects led to a declining trend in FDI inflows after peaking above 8 % of GDP in 2015-2019, but they grew by 19% in 2022, which pushed the ratio up to 6.7% of GDP in 2022 from 6.4% in 2021. FDI inflows again fully financed the current account deficit in 2022, after falling short of it in 2020 and 2021. Public external debt fell by 3.3% nominally (in terms of GDP from 32% to 26.1%) and overall

external debt dropped by 10 pps to 54.6% of GDP in 2022. Using buffers of the late 2021 Eurobond and in view of the less favourable conditions on the capital markets, the Albanian government only issued its 6th Eurobond in June 2023⁴, which increased public external debt by 5.2% in the second quarter of 2023 compared with the second quarter of 2022. Foreign exchange reserves have consistently increased over recent years and remained at about EUR 5 billion throughout 2022 and until May 2023, before rising to 5.6 billion in July 2023, following two interventions in the foreign currency market to address a currency appreciation hike-. The reserves continued solidly covering 7 months of imports of goods and services and over five times the short-term external debt.

Inflation rose significantly, though less than in Albania's peers, and the Bank of Albania began to tighten its monetary policy stance. Annual inflation averaged 2% in 2021 but rose sharply from late 2021 due to rising international food and energy prices to an average of 6.7% in 2022. Nevertheless, it remained the lowest in the region, helped by subsidised retail electricity prices and the appreciation of the lek against the euro, mostly due to significant external inflows from tourism and FDI. In response to the inflation rate exceeding the 3% target, and the broadening of domestic demand-driven price pressures, the Bank of Albania (BoA) raised the policy rate by 2.75 pps in several steps to reach 3% in March 2023. Inflation

⁴ EUR 600 million, 5-year maturity, with a coupon of 5.9%.

has been slowing since November 2022, to 4% in August 2023 as price increases for food, energy and transport decelerated, appreciation of the Albanian lek against the euro accelerated (from 2.8% in 2022 to 7.8% year-on-year in the January to August average 2023) and financial market conditions tightened.

In 2022, high GDP and revenue growth helped to lower the public debt ratio below its pre-pandemic level. The fiscal deficit was below 2 % of GDP in 2015-19, but increased sharply to 6.8 % of GDP in 2020, due to the impact of the pandemic. A strong economic rebound and rising inflation fostered high revenue growth, contributing to the fiscal deficit falling to 3.7% of GDP in 2022, despite significant energy-related spending. Exceptional support to the state-owned electricity provider and vulnerable groups was partly offset by savings on interest and personnel expenditure, and under-execution of foreign financed investments. As a result, the overall annual expenditure increase was moderate at 2.1%. The high GDP denominator and a small nominal decrease in public debt led to a 10 pps public debt ratio decrease from its peak of 74.5 % in 2021 to 64.6 % in 2022. For 2023, a fiscal deficit of 2.5% of GDP and a positive primary balance are foreseen. The exceptional provision for budget support to state owned energy companies in the budget was not needed, and the funds are planned to be reallocated.

The overall annual expenditure increase was moderate at 2.1%. The high GDP denominator and a small nominal decrease in public debt led to a 10 pps public debt ratio decrease from its peak of 74.5 % in 2021 to 64.6 % in 2022. For 2023, a fiscal deficit of 2.5% of GDP and a positive primary balance are foreseen. The exceptional provision for budget support to state owned energy companies in the budget was not needed, and the funds are planned to be reallocated.

The tax revenue ratio remains low, despite improvements in the tax administration. Increasing social contributions and local taxes pushed the overall tax revenue ratio upwards to 25.7% of GDP in 2017, but since then it decreased to 25.4% of GDP in 2022, which is low compared to peers. It is also low given the need for significant investment in physical and human capital. Improvements in the tax administration, and substantial reforms such as the introduction of automated electronic VAT invoicing ('fiscalisation'), excise harmonisation and indexation and digitalisation were successfully implemented in the last three years, but have not yielded an increase of the revenue ratio. The tax revenue structure has remained unchanged over the last decade, characterised by a heavy reliance on revenue from consumption and low revenue from capital taxation and social contributions (the average social contributions revenue of 5.8% of GDP are the second lowest in the region). The 2023 amended income tax law, which takes effect in 2024, will broaden the tax base bringing self-employed professionals into the personal income taxation. Following a suspension of public consultations on the long-planned medium-term revenue strategy (MTRS) in 2022 the authorities have undertaken a review and update of the 2020 draft, which should aim for a broader tax base and a higher revenue mobilisation in a comprehensive and systematic way with public buy-in.

Weaknesses in the management of public investment persist, but new initiatives have been launched to address them. Though public investment spending has increased strongly since 2017, partly driven by post-earthquake reconstruction, it remains backloaded and generates increasing arrears in the last quarter of the financial year. In 2021 and 2022 these were partly settled with year-end budget amendments, using unexpected excess revenue. However, structural weaknesses in investment planning and execution persist, partly because the selection and monitoring of public investment projects remains fragmented across types of investment and government agencies that use different procedures. In addition, national legislation still separates investment planning for public-private partnerships (PPPs) from that

of conventional projects. Post-earthquake reconstruction spending lacked transparency as it was not integrated into the regular public finance procedures. Reforms launched at the end of 2022 aim to harmonise and improve the evaluation procedures for various types of public investment projects and resulted so far in setting up a national single project pipeline, which also strengthens project prioritisation in line with fiscal space and can contribute to reducing arrears. An amendment to the PPP-legislation is still necessary for integrating PPPs into those new procedures.

Fiscal space improved, and the overall macroeconomic policy mix was appropriate in the face of high inflation. Good fiscal performance and a reduction in the debt-to-GDP ratio has improved the fiscal space, but vulnerabilities remain significant given the exposure to external shocks and continued high debt ratio (in comparison to regional peers). The fiscal response to the energy shock mainly consisted of continuing to subsidise the regulated electricity price for all households and SMEs, though it could have been better targeted to reduce fiscal costs and to include incentives for investments in energy-saving. Nevertheless, the overall spending restraint supported the 2022 monetary policy stance and contributed to dampening inflationary pressures. The macro-fiscal policy mix was generally appropriate to address the high inflation rate and to support economic stability and recovery.

Functioning of product markets

Business environment

Business satisfaction with public services is improving, but there are increasing concerns about labour shortages. The 2022 Balkan Business Barometer, an annual independent survey of businesses in the region, shows that businesses' satisfaction with public services improved in 2021 and 2022, supported by a higher level of digitalisation. More public services are now available online, including 31 tax services which allow taxpayers to pay taxes online to a certain extent. In addition, applications for all business licences can be made online. Efforts to set up a complete and digitalised cadastre within the next two years are progressing, but there are still delays and discrepancies as regards the information on property deeds. Improved digital public services help to reduce corruption, but irregularities in public procurement procedures are still perceived as an obstacle for businesses, although implementation of these procedures is improving, and the number of unsolicited proposals and new PPPs have decreased. The introduction of cash limits for business-to-business transactions is one measure taken to address the significant level of informal economic activities that add to unfair competition. There is a growing perception that difficulties in recruiting skilled labour is becoming an obstacle to business and entrepreneurs are increasingly demanding government measures to help retain workers and to provide incentives for the return of the diaspora.

Mixed progress on improving legal certainty for businesses and making public consultations more effective. The adoption of the new 'Unified Law on Investment', originally planned to be adopted in 2020, is reportedly postponed to end-2023, delaying the expected improvement in legal security for investors. The mandatory publication of the government's draft documents on the government's online platform increased transparency although its use for public consultation has remained very limited and actual consultations must still rely on ad hoc outreach by government institutions. In this context, Albania made progress by mapping the stakeholders of the line ministries at the end of 2022 to notify them about public consultations in their area of interest. A new "council of enterprises", composed of public and private sector representatives, has been set up to improve consultation of SMEs. In February 2023, the Financial Action Task Force (FATF) reported that Albania largely completed the implementation of the agreed action plan on anti-money laundering and

reforms to counter the financing of terrorism. In June 2023 FATF decided to propose an on-site visit, which took place in August and led to Albania's delisting in October. Nevertheless, Albania should ensure that any future VTC law (including potential criminal amnesties) complies with the EU *acquis* and international standards'.

State influence on product markets

High food and energy prices triggered increased government support but intervention in the price-setting mechanism was deemed unconstitutional. Rising food and energy price led Albania to adopt a financial support package (the 'social resilience package') in March 2022 to support the transport sector, farmers and vulnerable households and to increase the budget for subsidised electricity prices⁵. A sovereign guarantee scheme for businesses exposed to rising food prices was also adopted. In April 2022, the government created two temporary boards ('Transparency Boards') with government and private sector representatives, which set regularly adjusted ceilings for the wholesale and retail prices of selected food commodities and fuels. However, in 2023 the Constitutional Court decided that these boards were not in line with the constitution and so had to be abolished. In 2023, a one-time windfall tax was introduced on the extraordinary profits in 2022 of the energy providers in the liberalised market. The government announced relief measures for exporting businesses that are affected by the strengthening of the lek, a temporary financial compensation for businesses in agriculture and fishery, which are struggling with the 25% increase of the minimum wage that took effect in April, and plans for a sovereign guarantee to support the liquidity needs of larger companies faced with high inflation, wage increases and currency appreciation.

Privatisation and restructuring

The state's presence in the economy slightly increased but remained limited overall. In 2022, Albania reported State aid of 0.3% of GDP mostly in form of tax exemptions and grants, excluding support to agriculture. According to recently established sector accounts, the public sector's share of gross value added of the economy averaged about 10.6% in 2015-2019 and slightly increased to 11.1% in 2020. The proportion of public sector employment⁶ to total employment decreased from 16.3% in 2014 to 14.3% in 2017, before picking up to 15.3 % in December 2021. According to a list of public sector institutions, the central government of Albania is the majority or full owner of 76 central state-owned enterprises, mostly in transport infrastructure and energy, in addition to enterprises in water supply and sewerage in local government or municipal ownership. Restructuring and liquidation of state-owned enterprises continued, and in 2022 a new nomination framework for the boards of State-owned enterprises was adopted by the Council of Ministers. In 2021, the state-owned Albanian Investment Corporation, which develops dormant state assets by mobilising private capital, started to review state assets and formalise partnerships with governmental institutions, and it has now prepared 7 proposals.

Efforts continued to improve the monitoring of state-owned enterprises (SOEs) and the associated fiscal risks. State-owned energy utilities' dependence on regular public guarantees and loans remains a source of fiscal risks. This is aggravated by the hydropower sector's vulnerability to rainfall fluctuations and to climate change risks, for which mitigation measures are still underdeveloped. Fiscal risk statements regularly accompany the budget and have been expanded since 2021 to include disaster risks and the financial assessments of an

⁵ The increasing international prices for electricity imports are so far not reflected in the prices for households and SMEs. The state budget balances the differences for the state-owned electricity distributor.

⁶ As a share of total employment of 15 to 64-year-olds, according to LFS (INSTAT).

increasing range of state-owned enterprises and utilities. These proved useful for forecasting financing needs for the public electricity sector in 2022⁷, when adverse weather caused a decline in domestic electricity production, and rising international prices led to surging electricity import costs. An instruction issued in December 2022 introduced additional reporting requirements for all public bodies on potential fiscal risks, including those related to PPPs, but the capacities and the mandate of the fiscal risk unit has yet to be upgraded to make full use of this information.

Functioning of the financial market

The financial sector remained stable, but risks from the high share of foreign currency and variable interest loans persist. Bank profitability (the return on equity) continued its recovery from 12.9% in 2021 to an average of 15.5% in the first half of 2023, following a drop to an average of 8.5% in 2022. Overall banking sector capital, in relation to risk-weighted assets, remained unchanged between 18-19%, which is above the regulatory minimum, but a few small banks do not fulfil the macroprudential requirements adequately. Liquidity declined in 2022, but was still above the regulatory limit set by the Bank of Albania and recovered slightly in 2023. The ratio of non-performing loans to total loans fell 3 pps from mid 2020 to mid 2022, and have remained around 5.2% since then. However, there are concerns that the interest rate risk could transform into a credit risk as bank loans, about 75% of which carry variable rates, are being repriced. Several updates of banking legislation and regulation were adopted in 2022 which strengthen macroprudential requirements (liquidity buffers, net funding ratio, capital adequacy) and risk management. The recent resolution of the dispute over the fees for private bailiff services, which facilitate the execution of collateral, is therefore timely. Banks have a sizeable exposure to sovereign risk, given the 25% share of government securities among their assets. Euroisation was already high and increased slightly. The share of foreign currency deposits is above 50% and foreign currency loans are about 49% of the total, although the share of loans that are not hedged against exchange rate risks decreased. The consolidation of the banking sector continued, with the merger of the small Alpha bank into OTP. This reduces the number of banks in Albania to 11. The small but growing non-bank financial sector expanded to 38 institutions⁸ but its share of GDP was unchanged at 12%. This includes the insurance market, which is estimated at about 2.3% of GDP, dominated by non-life insurance. New legislation provides sets a framework for growing use of new instruments like factoring and leasing in addition to strengthening risk management requirements in the non-bank financing sector.

Access to finance

The modernisation of payment systems improved access to finance but capital market development is just beginning. Total credit growth accelerated from an average of 6.9% in 2021 to 11.2% in 2022. Lending to the private sector⁹ also accelerated, from 6.9% in 2021 to an average of 12.3% in 2022, but slowed to 7.3% by July 2023 as interest rates continued to increase. The financial intermediation level remained low, with loans to the non-financial private sector standing at 32.7% of GDP, about 15 pps below regional peers. In 2022, the regulatory framework for the modernised payment system was completed. This has led to more adults holding a bank account and to an increase in electronic payment facilities across

⁷ The government provided direct on-lending of 0.4% of GDP and budget support of 1% of GDP to the sector to cover the increased costs.

⁸ Including 12 insurance companies, 8 investment funds, and a number of institutions providing microcredit, financial leasing, factoring, money transfer and electronic payment services.

⁹ Annual average growth adjusted for written-off loans and exchange rate impacts.

the country. Card payments increased by 18%. Bank financing is still the dominant means of external business financing. In April 2023, the Government set out to promote active participation in the capital market, including by state owned enterprises, municipalities and foreign investors. The policy aims to promote bonds placements in view of increasing demand e.g. from private pension funds and to deepen the secondary market for government securities. In addition, institutions of the Albanian banking and financial sector have begun to implement the 2022-2027 national strategy for financial education, which aims to address the comparatively low level of financial literacy in the Albanian population.

Functioning of the labour market

The labour market continued to improve. Solid employment growth, averaging 3.7% a year in 2015-2019, helped lower the unemployment rate (in the 15-64 age group) from 17.5% to 12%. The labour market recovered most of its pandemic-related losses in 2021 and strengthened significantly in 2022, when employment growth averaged 5%. The unemployment rate dropped to 11% in the last quarter of 2022 and the inactive population decreased by 14.3%. The labour-force participation rate climbed to 74.8% by the end of 2022 and 75.8% mid 2023, approaching the EU average, as did the closing gap between male and female labour force participation which dropped by 3 pps to 11.5 pps (mid 2023). However, the recent employment increase is not matched by an equivalent increase in social insurance contributors, which might indicate a growth in informal employment. The unemployment rate for 15-29 year-olds remained persistently above 20%, masking on one hand an increase in their participation rate by 3pps, but on the other hand an increase in the number of unemployed people aged 25-29. Although employment growth continued in the first half of 2023 with an average 3.5% it did not lower the overall unemployment rate, mainly because of an increasing number of unemployed young people (15-29). Despite the improving labour market situation, emigration increased by 10.5% compared with 2021, leading to a population decrease of 1.1 % in 2022. This also contributes to the ageing of the population and hits the financing of the pension system, on which Albania already has a low ratio of contributors to beneficiaries.

Real private sector wage growth was not matched by public sector wage growth and triggered plans for a comprehensive reform of public sector salaries and wage increases. Public and private sector wage growth was balanced (both 6.6%) in 2021, but in 2022 nominal private sector wages grew by 12.3% (5.5% in real terms) on average, while public sector wages only increased by 2.3% in nominal terms, resulting in a drop in real wages. In April 2023, the government launched a public sector salary review, aimed at restructuring and updating salary scales and bringing public wages closer to regional levels. A revised regulatory framework was announced to consolidate the principles and mandates for the setting of the public salary schedule for about 130 000 public sector employees. The objective is to raise the average monthly public wage in several steps to the equivalent of about EUR 900 by 2025 and to retain and attract staff in positions of critical importance for the public, including health workers, teachers and police. The first stage increased public sector wages in the second quarter of 2023 by 20.5% year on year, pushing overall average wage growth to 14.9% in the first half of 2023 compared to the same period in 2022. The

estimated total cost of ALL 39 billion would mean a 50% increase in the current public sector wage bill and potentially a deviation from the planned fiscal trajectory, in addition to likely spill-over effects to private sector wage developments. In January 2023, the minimum wage in Albania was the lowest in both nominal terms and in purchasing power standard among countries in the region with available data. The government lifted the minimum wage by 25% year-on-year in April 2023 to ALL 40 000 and announced a further increase to ALL 45 000 (about EUR 400). Since early 2022, the minimum wage has exceeded 50% of the average monthly wage and generated high wage growth in the lowest income sectors like agriculture.

2.3.2. The capacity to cope with competitive pressure and market forces within the Union

Albania has **some level of preparation** to cope with competitive pressure and market forces within the Union and made **some progress** in bolstering competitiveness. Structural reforms in the energy market progressed, and transport infrastructure, the digitalisation of the economy and education outcomes continued to improve, but significant gaps with regional and European levels remain. Albania's competitiveness is hindered by relatively low levels of entrepreneurial and technological know-how, unmet investment needs in human and physical capital, persistently low spending on R&D and, increasingly, by shortages of skilled labour. Trade openness increased through surging exports of services (tourism), but remains low overall, as the exports of goods remain well below potential.

As some of the Commission's 2022 recommendations were not fully implemented, last year's recommendation remain partially valid and in the coming year Albania should in particular:

- improve the labour market relevance and quality of vocational education and training (VET) to increase enrolments, and invest in the digital skills of young people and adults;
- increase spending on education, social protection and health as a percentage of total expenditure and issue instructions to collect data on public expenditure on R&D;
- accelerate the diversification of renewable energy sources, develop business support services for SMEs' green transition, digitalisation and e-commerce, and support cooperation between business and academia on innovation.

Education and innovation

Education reforms are progressing, but it remains difficult for young people to transition into the labour market. Albania recorded improving results in the last PISA tests (15-year-olds in 2015 and 2018) and relatively good results in the latest international assessments of fourth-grade students' mathematical and scientific understanding (TIMSS 2019) and their reading comprehension (PIRLS 2021)¹⁰. This might indicate that recent reforms of the education system are having some effect, despite the relatively low spending on the education system of about 3% of GDP on average in 2017-2022. However, the gap in the education level to the EU average remains wide and higher public expenditure on education is necessary to speed up convergence. In addition, regional surveys¹¹ show that about a quarter of young respondents consider that skills learned in the education system do

¹⁰ TIMSS = Trends in International Mathematics and Science Study, conducted every four years at the fourth and eighth grades. Albania participated for the first time in TIMSS in 2019, only with 4th graders. PIRLS = Progress in International Reading Literacy Study, assessing students' reading achievement in their fourth year of schooling every 5 years. Albania participated in 2021 for the first time. It scored in both studies above most regional peers but limited testing scope and issues with data quality limit comparability. [TIMSS & PIRLS International Study Center](#).

¹¹ Balkan Public Opinion and Business Barometers 2022

not match the needs of their job, and 45% of companies surveyed identify applicants' lack of skills as a reason for unfilled vacancies (2022). Participation in vocational and educational training (VET) remains particularly low (17.7% of upper secondary students, compared to the regional average of 58%) and attendance numbers actually fell in 2022. This contributes to the continued high rate (26.1%) of young people (aged 15-29) not in education, employment or training (NEET) at the end of 2022, and the high emigration of people with a lower level of education¹². The private sector's involvement in VET improved, but schools have yet to develop and follow curricula with sufficient and attractive work-based learning that is relevant to the labour market. Though ongoing reforms of the VET system address these issues, their funding and the pace of implementation are not yet adequate. In addition, implementation of the 2023-2030 national employment and skills strategy, which envisages the employment policies that are necessary including upskilling and adult training, needs sufficient funding to raise the skill levels of the relatively large group of Albanian adults with a low level of education, and thus alleviate the shortage of skilled labour.

Albania has better access to EU research funds, but domestic funding remains negligible. Public funding for research and development is foreseen to increase from the estimated 0.1% of GDP in 2022, but it is unlikely to reach the level of 1% of GDP envisaged in draft 2023-2030 national strategy on technology and innovation (STI), and reliable data on actual research funding is not yet available. There are no cost-based tax incentives currently being offered to private companies for training and research. Though some efforts have been made to stimulate public/private cooperation in this area, the very limited level of investment in innovation remains an obstacle to the much-needed increase in productivity. Albania's association agreement with Horizon Europe entered into force in 2022, giving its research institutions access to EU funding for research and innovation that is comparable to EU Member States.

Physical capital and quality of infrastructure

Investment recovered in 2021 and 2022 and infrastructure projects made some progress. Total investment (gross fixed capital formation) averaged 24.4% of GDP in 2014-2018 before dropping by almost 2 pps in 2019-2020. In 2021 and 2022, investment rebounded to 24.4% and 24.0 % of GDP respectively, fuelled by rising private and foreign direct investment as well as public-financed post-earthquake reconstruction. This pushed public investment to 6.8% of GDP in 2021, before it fell to 5.4% of GDP in 2022. The share of gross fixed capital formation in GDP is the second highest in the region, and about 1.2 pps above the EU average. Net FDI inflows rose by 22% year-on-year in 2022, mostly flowing into real estate, energy, finance and manufacturing. Albania has made progress with the preparation and construction of road, rail and port infrastructure projects, which are improving interregional connectivity (the Adriatic-Ionian Corridor) and trade-related infrastructure (rehabilitation of the rail line from the port of Durrës to Tirana, construction of a new rail line to the international airport). In addition, a new 2023 – 2030 transport sector strategy and action plan was prepared, with an estimated budget of EUR 1 billion. The logistics performance index of the World Bank on Albania's trade and transport-related infrastructure records an increase from 2.29 in 2018 to 2.7 in 2022 (1 = low to 5 = high, EU = 3.6).

Digital infrastructure improved but needs further investment. Though the percentage of businesses with access to fast network connections (>10MB/s) increased from 79.8% in 2020

¹² OECD "Labour Migration in the Western Balkans: Mapping Patterns, Addressing Challenges and Reaping Benefits". <https://www.oecd.org/south-east-europe/programme/Labour-Migration-report.pdf>

to 90.5% in 2021 there has only been a small rise in internet use and business websites. Fixed broadband penetration increased from 17 to 20 per 100 inhabitants in 2021 and remains an issue, particularly in rural areas. These have 40% of the population but only a quarter of the fixed broadband subscribers. Investment in digital infrastructure is also needed in schools. Many schools lack computers - there are about 0.2 computers per pupil - and have poor internet connections, which remains an obstacle to using digital technologies in schools. Households with access to the internet increased from 88.3% in 2021 to 96.5% in 2022, with an increasing share also accessing the internet via a fixed broadband connection.

Hydropower remains the main source of electricity, but Albania made some progress in the development of its electricity sector. Although this is a renewable source, hydropower creates a dependency on unpredictable rainfall, exacerbated by climate change. This means that the country's electricity import needs fluctuate, leading to calls for more efforts to diversify electricity sources. Albania aims to increase solar energy production capacity to 1 GW and has awarded two contracts for solar photovoltaic farms with 240 MW capacity through solar power auctioning. In addition, the first auctions for wind power resulted in contract awards for 222.5 MW installations in July 2023. These are important steps towards reducing Albania's 98% dependence on hydroelectric production. The power sector law¹³ was amended to improve its alignment with the EU *acquis* on energy, as required by the Energy Community secretariat. This enabled the effective separation of the electricity distribution system operator from the production operator. The Albanian Power Exchange (ALPEX) also went live and held its first electricity auction in April 2023. ALPEX is a joint venture company, owned by the transmission system operators of Albania (OST) and Kosovo (KOSTT), entrusted with operating both day-ahead and intraday markets. Transparent price signals can be provided for investments in renewable energy through ALPEX, though retail electricity prices are not yet fully liberalised for all customers. The recently adopted Law on renewable energy sources and new incentives for households to install solar panels and water heaters are expected to help to reach the increased renewable energy share targets in the 2020–2030 national energy and climate plan for energy efficiency (NECP).

Sectoral and enterprise structure

The economic structure continued to shift gradually away from agriculture and towards construction, manufacturing and services. The share in gross value added of the agricultural sector fell from 22.9% to 21% in 2014 -2019. It increased slightly to 21.3% in 2022 but remained higher than other sectors, exceeding the share of manufacturing by a wide margin despite this sector's gradual increase (to 7.5% in 2022). The increase in the combined share of services by 2.7 pps in 2015-2019 to 55.4% of gross value added reversed in 2020, and was down to 54.1% in 2022. Within the services aggregate, the category 'wholesale and retail trade, transport, accommodation and food service activities' recorded a strong 1.9 pps increase in 2022 compared with 2021, while the category 'public administration and defence; compulsory social security; education; human health and social work activities' fell. Reflecting stronger investment activity, the construction sector's share in gross value added increased to 11.2% in 2022, about 1 pp higher than its average in 2015-2019. Agriculture provided 33.7% of employment in 2021, down from 36% in 2019 and 2020 but still accounted for over 50% of employment in more than half of Albania's prefectures.

¹³ The decision to close Case ECS-4/17 in April 2022 was based on the complete transposition into national law of the Electricity Directive's provisions related to DSO unbundling, the completion of legal unbundling and substantial progress in functional unbundling.

Manufacturing's share of total employment increased slightly to 11.2% in 2021, whereas services' share increased to 44.4%.

Tax registrations of businesses and farmers continued to increase. Tax registrations of farmers increased by 34.1% in 2022, most likely related to the support scheme for farmers' fuel costs, whereas the number of active registered non-agricultural enterprises increased by 5.6%. A total of 92.6% of active enterprises employed fewer than 10 people (85.6% employed 1 to 4 people), 5.7% had 10-49 employees, whereas 1.6% of enterprises had 50 or more employees and comprised 50.6% of total employment. The percentage of registered enterprises that provide services (85.6%), was unchanged from 2021. There is a high concentration (64.8%) of active enterprises in the prefectures of Tirana, Durrës and Vlorë, which account for about 50% of the population. In total, 5.3% of active enterprises are jointly or wholly owned by foreigners, contributing to 12.5% of employment, the majority (62.7%) of which have owners from Europe, in particular from Italy and Greece.

Economic integration with the EU and price competitiveness

The EU remains Albania's main trading and investment partner. Trade openness (the sum of exports and imports as a share of GDP) averaged 75.7% of GDP in 2015-2019. After a drop in 2020, it jumped from 74.7% of GDP in 2021 to 88.5% of GDP in 2022, driven by strong growth both of exports and imports, which rose to 37.5% and 49.6% of GDP respectively. Despite the increase in exports' share of GDP (up by 10 pps since 2015), it remains the lowest in the region, largely due to the very low share of goods exports. Exports remain dominated by services, mostly tourism-related. The EU remained the main destination for the export of both goods and services (2020 data). The EU's share of Albania's goods exports increased in 2022, halting the downward trend of the previous 5 years, but the EU's share of Albania's imports continued to decline. The trade in goods with countries in the Central European Free Trade Agreement (CEFTA) decreased, in particular due to a 2 pps drop in its proportion of Albania's exports. FDI inflows from the EU jumped from 30% of the total in 2015-2018 to 51% in 2019-2022. Between these periods, the shares of Switzerland and Türkiye, once the source of the second and third largest inflows, decreased from 33.7% of the total to 11.4% and from 8% to 7.6% respectively. The EU's share of FDI stocks remained high at 54.4%. In January 2022 an inter-ministerial working group was established to draft a 2022-2027 export promotion programme, expected to be finalised in 2023. The real effective exchange rate increased by an average of 0.5 % in 2022, but by 2.6% in the first quarter of 2023 (compared with the 2022 average).

2.4 PUBLIC PROCUREMENT, STATISTICS AND FINANCIAL CONTROL

Chapter 5: Public procurement

EU rules ensure that public procurement of goods, services and works in any Member State is transparent and open to all EU companies on the basis of non-discrimination and equal treatment.

Albania is **moderately prepared** in public procurement. **Some progress** was made , in particular, through an increased use of the most economically advantageous tender award criteria.

The 2022 report's recommendations were only partially implemented and remain valid.

In the coming year, Albania should, in particular:

- continue efforts to ensure competitive procurement procedures, with further encouragement of the use of the most economically advantageous tender award criterion and the use of framework contracts;
- step up efforts to align the legislative framework with the EU *acquis* in the area of concessions and public-private partnerships;
- ensure that the conditions of intergovernmental agreements concluded with third countries comply with the requirements of the EU *acquis* and in the Stabilisation and Association Agreement (SAA) in the area of procurement.

Institutional set-up and legal alignment

The **legal framework** on public procurement is largely aligned with the 2014 Directive on public procurement and procurement of utilities. The Law on concessions and public-private partnerships (PPPs) is partly aligned with the EU *acquis*. The government plans to adopt a revised PPP law in 2023. Albania is also partially aligned with the EU *acquis* on defence and security procurement.

A working group has been set up and a negotiation team has been nominated to prepare for Albania's accession to the Agreement on Government Procurement of the World Trade Organization.

The Public Procurement Agency (PPA) is the body mandated to propose regulatory measures, monitor compliance with procurement rules and monitor the implementation of contracts. A new organisational structure was created in March 2023. It has 48 posts, of which eight are vacant. In 2022, a regulation was adopted to strengthen the status of the Agency for Centralised Procurement. The MoFE, together with the Concessions Treatment Agency (ATRAKO), are the main organisations responsible for PPP and concessions.

Implementation and enforcement capacity

Albania's public procurement market represented about 9.4% of GDP in 2022, compared with 10.7% in 2021. In 2022, the average number of bids per tender was 2.5 (compared with 2.5 in 2021 and 2.57 in 2020). Public procurement forecasts are published regularly.

The PPA has a monitoring system to assess procurement performance and compliance, as well as the implementation of contracts. Since 2021, contracting authorities submit plans for implementing signed contracts to the PPA. The PPA provides regular monitoring reports and, since 2021, has also provided real-time information on procurement through the open data platform.

All legal and financial instruments used in the area of public procurement and concessions, including intergovernmental agreements concluded with third countries for the

implementation of joint projects, should comply with the principles of transparency, competition, equal treatment and non-discrimination.

On the monitoring of contracts award and implementation, the number of negotiated procedures without prior publication increased to 157 in 2022 (143 in 2021). This represented 3.3% of all procedures but had fallen to 0.9% in terms of the value of all procurements in that period (from 3.4% in 2021). The use of framework agreements fell slightly in terms of numbers (763 compared with 873 in 2021), but these represented a higher total value of contracts procured through framework agreements (approximately EUR 419 million in 2022 compared with approximately EUR 354 million in 2021). The application of the most economically advantageous tender criteria for the award of public procurement contracts increased to 7.3% of procedures, amounting to 33.9% of the total value of contracts.

There is a central procurement portal for the publication of tender and contract notices, and its use is mandatory, including for low-value procurements. The PPA extended its role in contract monitoring and contracting authorities began reporting on contract implementation in 2022, so far on 3 659 contracts.

On PPP/concessions, there was a significant reduction in the number of new PPPs. The use of unsolicited PPPs was also curtailed. By the end of 2022, the PPPs/concessions registry contained information on 228 contracts. In 2022, 3 concession procedures were published, of which one was awarded. . The technical capacity to design and assess PPPs requires further development. The December 2022 government decision on improvements to the single investment project pipeline aims to gradually integrate decisions on PPPs into the broader assessment procedures for investment projects.

The contracting authorities need to continue to build **capacity to manage public procurement processes**. Ongoing training continued, with 1 396 people trained in 2022. The technical skills and capacity to design and assess concessions and PPPs also require further development. Further efforts are needed to improve compliance with procedures and prevent corruption in the procurement cycle.

On integrity and conflicts of interest, the PPA issued instructions on the declaration of conflicts of interest by procurement officials and adopted a regulation on preventing conflicts of interest in the exercise of public functions in the PPA. The State Audit Institution continues to report irregularities in public procurement at central and local level.

In terms of developing an effective system for the **prevention of corruption** in public procurement, Albania should focus on further strengthening the functioning of the overall system to increase competition, compliance and professionalisation. Albania has laid a good foundation by significantly improving transparency through its comprehensive electronic procurement and e-appeals system, and in terms of giving participants access to redress by developing its review system.

Efficient remedy system

The Constitution and the PPL contain provisions on the **right to legal remedy** that are mostly in line with the remedies Directive.

The Public Procurement Committee (PPC) is the independent review body dealing with complaints about public procurement and concessions/PPP. Its decisions can be challenged before the Administrative Court of Appeals (and Supreme Court for subsequent appeals). A regulation was adopted in 2022 that further clarified the rules on the invalidity of procurement contracts and the role of the PPC in this respect.

The remedy system is easily accessible to economic operators, though subject to a fee. An electronic portal for submitting and managing appeals and complaints is in place and provides real-time statistics. The PPC has completed the overhaul of its internal procedures to incorporate the new online procedures.

In 2022, the PPC received 782 complaints about procurement, in line with the previous year (768 in 2021). 89.9% of complaints were addressed within the legal time limit (compared with 89.2% in 2021 and 78% in 2020), while the average time it took to reach a decision fell to 12 days. In 2022, 5.45% of PPC decisions were appealed before the administrative courts (a slight reduction compared with 2021).

The **capacity** of the PPC to deal with appeals, needs to be further improved. In March 2023, the Parliament agreed to increase the number of posts at PPC from 36 to 42, eight of which remain vacant. Extensive training of PPC staff is based on a cooperation agreement with the University of Tirana.

Chapter 18: Statistics

EU rules require that EU Member States are able to produce statistics based on professional independence, impartiality, reliability, transparency and confidentiality. Common rules are provided for the methodology, production and dissemination of statistical information.

Albania is **moderately prepared** on statistics. **Some progress** was made in addressing the 2022 report's recommendations. Further alignment was made with ESA 2010 standards, statistics publication was made faster of, and there was increased transmission to Eurostat. Parliament approved the 2023 statistical plan, including a date for the population and housing census, which is ongoing. The role of the Institute of Statistics (INSTAT) was further strengthened, and its resources improved but capacity challenges remain. Despite the progress made in the modernisation of, data collection methods, further efforts are needed to improve the statistical production processes.

The recommendations issued in 2022 largely remain valid. In the coming year, Albania should:

- disseminate in a timely manner the results of the population and housing census 2023 and prepare an updated plan, secure the resources and be ready to implement the census of agriculture holdings in line with the relevant EU *acquis* and international standards;
- take measures to reduce the staff turnover of the Institute for Statistics (INSTAT) should, in order to ensure that statistical production needs are met;
- increase the production and transmission of timely and high-quality data for dissemination by Eurostat, and in particular make government finance statistics (GFS) data publicly available.

On the **statistical infrastructure**, Albania's Law on official statistics is in line with the European Statistics Code of Practice, and most classifications are in line with EU standards. The 2022-2026 official statistics programme is being implemented. The 2023 annual statistics plan was approved by parliament in January 2023. This included the date for the population and housing census, which needs to be conducted in 2023, having already been postponed twice. While INSTAT has made some efforts to fill vacancies and aims to increase staffing levels from 236 to 266 by 2026, further efforts are needed to reduce staff turnover, to ensure that production needs are met, and to train new staff in the latest statistical developments.

On **macroeconomic statistics**, annual and quarterly GDP data are produced in line with the production and expenditure approach, using current prices and with chain-linked volume and seasonally adjusted. On national accounts, Albania is partially in line with ESA 2010 on the quarterly and annual national accounts (main aggregates), on supply and use tables and derived input-output tables, as well as on regional accounts; data transmission to Eurostat has gradually improved in terms of timeliness for annual national accounts. However, significant improvement is still needed to achieve full compliance (mainly in the approach to quarterly GDP by income and population and employment data). Substantial further work is necessary to improve the timeliness, coverage and quality of annual non-financial sector accounts and annual financial sector accounts and to start compiling also quarterly non-financial sector accounts. Efforts are needed to start the work for the compilation of pension entitlements table. Despite progress on alignment with ESA 2010 standards, Albania still needs to improve compliance with the methodological requirements, and implement the improvements it has already achieved in the next benchmark revision in 2024. The Gross National Income (GNI) inventory, which describes the sources and methods used to compile national accounts, should be updated. Efforts are also needed to ensure the completeness of the notification tables on the excessive deficit procedure, which are sent regularly to Eurostat on a best-efforts basis. Improvements are also needed in government finance statistics to meet the requirements of the EU *acquis* and the data should be made publically available. INSTAT produces and publishes the harmonised index of consumer prices and is responsible for generating income accounts.

Data collection and production of **business statistics** have improved. Albania carries out an industrial production survey, although data is currently not collected or transmitted to Eurostat. Albania is partly compliant for all short-term statistics (STS) domains (industry, construction, retail trade and other services). However, some STS indicators are still not transmitted to Eurostat, in particular those on industrial turnover, hours worked, and indicators on business registrations and bankruptcies. Further efforts are needed to transmit the business demography statistics, starting with enterprise births, deaths, and survivals. INSTAT continues to achieve high response rates in both business and household surveys.

On **social statistics**, INSTAT continues to conduct the labour force survey regularly, and microdata are provided to Eurostat, but it still does not produce statistics on job vacancies. Statistics on labour costs are calculated based on a labour cost survey. INSTAT continues to conduct the annual survey of income and living conditions (SILC) wave and the data has been validated and published by Eurostat. Data on income and living conditions at household and personal level has been released using EU-SILC. Statistics on external migration and asylum are partly aligned with the EU *acquis*. Crime statistics are published every year and are fully based on administrative sources. Crime statistics in Albania are classified on the basis of the national criminal code and laws, but INSTAT is working on a mapping that uses the International Classification of Crime for Statistical Purposes.

The collection of gender-disaggregated data has improved: the new official statistics programme includes provisions on collecting and analysing gender statistics. Further efforts are needed to produce disaggregated data for certain groups, especially on the prevalence of violence and harassment at work, on data disaggregated by both gender and geographical location, age, ethnicity, disabilities and migratory status. After being postponed twice the population and housing census is being implemented in 2023, after a second pilot census led to further adjustments in the approach. Recruitment of staff for the census started in May. Video messaging to raise awareness about the census have already started, and widespread communication on it will start in September 2023. Albania needs to ensure that the census

goes ahead, that adequate funding for its full implementation is ensured, that administrative data is reused where possible, and to ensure that sufficient attention is paid to the rebasing of data.

Agricultural statistics are partly aligned with the EU *acquis*. Some progress was made on the administrative registers, such as in the farmers' register, the individual register of animals and the animal holding registers, but the quality of the data still needs to be improved. INSTAT also needs to finalise the documents needed for the census of agricultural holdings planned for 2024, including an action plan and an updated budget, and secure necessary funds to carry it out successfully. Adoption of the necessary legal act to ensure compliance with the EU regulations on integrated farm statistics needs to be assured.

Environmental statistics are partly aligned with the EU *acquis*. Material flow accounts are well aligned to the EU *acquis*. Air emission accounts, physical energy flow accounts and environmental taxes by economic activity remain partially in compliance with the EU requirements. Waste statistics have improved but they are not yet fully aligned. Data on packaging waste are increasingly substantial as they are the basis for a new EU own resource on non-recycled plastic packaging waste. Albania already collects data on municipal waste, but it needs to collect and transmit the statistics on industrial waste and ensure a comprehensive estimate of all plastic packaging waste generated and recycled.

Energy statistics are moderately aligned with the EU *acquis*. INSTAT and the national Agency of Natural Resources produce monthly and annual energy statistics for commodity balances for all energy products (fuels) used in Albania (natural gas and oil) as well as prices of electricity for households and industry. Substantial further work is required to reach full alignment with the EU *acquis* on energy statistics.

Chapter 32: Financial control

The EU promotes the reform of national governance systems to improve managerial accountability, sound financial management of income and expenditure, and external audit of public funds. The financial control rules further protect the EU's financial interests against fraud in the management of EU funds and the euro against counterfeiting.

Albania is **moderately prepared** in the area of financial control. **Some progress** was made during the reporting period when it comes to updates to the legal framework of internal control and internal audit. Implementation of the policy document for the strengthening of public internal financial control (PIFC) and targeted internal audits on arrears continued. Albania further aligned its national legislation with the EU *acquis* on counterfeit banknotes and coins. Internal control is not yet ensured across budget entities. Working relations between the Supreme State Audit Institution, the Parliament and the Ministry of Finance and Economy (MoFE) need to be further strengthened.

Since the 2022 Commission recommendations were only partially addressed, they remain valid. In the coming year, Albania should in particular:

- implement the instructions on financial delegation of responsibilities and issue instructions on delegation of management responsibilities with a view to improving managerial accountability;
- monitor and follow-up the implementation of recommendations made in the annual PIFC report across budget institutions; increase parliamentary scrutiny of audited bodies in the implementation of external audit recommendations, through more frequent parliamentary hearings and the establishment of a parliamentary monitoring framework to regularly assess government's follow-up action;

→ strengthen controls and consolidate capacities to protect EU financial interest, ensuring correctness and transparency of expenditure in line with the principles of sound financial management.

Public internal financial control (PIFC)

A **strategic framework** for PIFC is in place. PIFC measures are included in the public financial management and the public administration reform strategies, and were also set out in the 2021-2022 PIFC policy document. As of 2023, the specific PIFC policy document will be integrated into the new 2023-2030 PFM strategy, which is under preparation. Annual PIFC reports are prepared and bring together reporting on activities, and findings from assessments and self-assessment on internal control and internal audit. They are presented to the Council of Ministers and Parliament as part of the process to approve the budget.

The **internal control** system is only partially effective. The legislation on internal control is largely in line with international standards. Amendments to the law were adopted in February 2023 to strengthen enforcement options and clarify roles and responsibilities. The Ministry of Finance and Economy is responsible for monitoring implementation. Albania has implemented several measures to improve the internal control system, in particular to improve the execution of procedures and to strengthen the capacity of civil servants. However, further efforts are needed to advance the implementation of PIFC reforms. Risk management is still at an early stage at all levels and needs to be better incorporated into the management of financial and operational processes.

Managerial accountability is not yet fully embodied in the legislation and administrative practice. The instructions that have been adopted on the delegation of financial responsibilities need to be implemented and accompanied by delegation of operational and administrative responsibilities to improve overall managerial accountability. In practice, a very small number of administrative decisions are delegated to lower levels due to the centralised system of decision-making.

The legislative framework on **internal audit practice** is in line with international standards. The law was amended in February 2023 to strengthen the independence of internal audit, update the requirements of the organisational set-up and clarify how to deal with suspected corruption and fraud.

At the end of 2022, 83% of internal audit units were considered to be set up in line with the legal requirement. A total of 31 public units (mainly smaller municipalities and independent institutions) have not yet set up an internal audit unit or established an alternative arrangement, and some are understaffed. In 2022, there were 434 internal auditors, of whom 353 had basic certification (up from 342 in 2021 and 318 in 2020). A new system for the advanced certification of auditors has been set up and a first cohort of 25 participants has been selected.

The fact that the internal audit system does not yet issue audit opinions on the effectiveness of the internal control systems across different budget entities remains an issue.

In 2022, the **Central Harmonisation Unit** assessed compliance with manuals and instructions of the internal audit activities of 25 internal audit units. It found only 36% of them to be partially or fully compliant.

Well-functioning internal control, internal audit and inspection systems are essential for the strengthening of systems to prevent corruption. The recent revision of the internal audit law has clarified procedures for internal auditors when faced with potential criminal acts (report to financial inspection and suspend audit). In 2021, 6 cases were reported by internal audit

units to the financial inspection. Financial inspection has reported relatively few cases to Prosecution (1 in 2021).

External audit

In line with the standards of the International Organization of Supreme Audit Institutions, Albania's **constitutional and legal framework** guarantees the independence of the State Audit Institution. The State Audit Institution has adopted a new strategic development plan for 2023-2027.

Albania should increase the implementation of external audit recommendations and develop the parliamentary scrutiny of audited bodies. The State Audit Institution has continued to take action to improve its **institutional capacity**. It carries out annual professional development activities for audit staff. The number of staff has increased to 212, partly in response to the obligation imposed by the High Court to audit all 61 municipalities on a regular basis.

The **quality of audit work** needs to be further improved to fully comply with the standards of the International Organisation of Supreme Audit Institutions. In 2022, the financial, compliance and performance audit manuals were updated. The objectives of the State Audit Institution have shifted from compliance and regularity audits to performance audits and financial audits. It follows a risk-based external audit approach.

The **impact of audit work** has shown some progress. The Albania's Supreme Audit Organisation continues to compile annual reports on its performance, publishes them on its website and reports accordingly to Parliament. Audit of the state budget is conducted in a timely manner. In 2022, 177 audit reports were submitted to Parliament. The State Audit Institution also regularly reports on the implementation of its recommendations. The level of implementation of external audit recommendations is still insufficient (50% of 2021 recommendations are fully or partially implemented), despite a high proportion of recommendations (97%) being accepted by institutions. The parliamentary scrutiny of audited bodies on the implementation of recommendations is still limited and should be increased, through more frequent parliamentary hearings and the creation of a parliamentary monitoring framework to regularly assess government's follow-up action.

ALSAI has the right to refer to the criminal prosecution bodies when the findings of audits are of their competence. ALSAI reported four criminal charges to Prosecution Office in 2022 involving 16 officials, compared to 14 cases involving 62 employees in 2021. In addition, it monitors implementation of recommended disciplinary measures. ALSAI has signed MoU's with the General Prosecutor's office, SPAK and HIDAACI.

Protection of the EU's financial interests

Albania has ensured some level of **alignment with the EU *acquis*** in the area. However, it still needs to fully harmonise its legislation with the EU Directive on the fight against fraud to the EU's financial interests by means of criminal law.

The national **anti-fraud coordination service** has established a network involving other relevant authorities, which meets regularly. Still, the roles of the authorities part of the AFCOS network should be further clarified in relation to protecting the EU's financial interests. A national anti-fraud strategy still needs to be adopted.

The manual of procedures for irregularities continue being updated.

Albania needs to improve its **cooperation with the European Commission** on investigations. In 2022, it reported 71 cases of irregularities and suspected fraud in IPA and IPARD programmes. Although cooperation on investigations has improved, Albania needs

to step up its efforts in developing a solid track record on cooperation on investigations by providing, among others, effective operational assistance to investigators from the European Anti-Fraud Office (OLAF) so they can fully discharge their duty in carrying out an on-the-spot check in accordance with Regulation (EU, Euratom) No 883/2013 and Regulation (EC, Euratom) No 2185/1996. Albania should also continue its efforts in developing a track record on reporting of irregularities.

Protection of the euro against counterfeiting

Albania further **aligned with the EU *acquis*** on the definition of counterfeit banknotes and coins, as well as the procedures for gathering, storing and withdrawing them from circulation.

Technical analysis is provided by the national analysis centre of the Bank of Albania and the Forensic Police Institute. In January 2023, a cooperation agreement on the protection of currency against counterfeiting was signed by the Bank of Albania, the General Prosecution office and the Ministry of the Interior.

In 2022, Albania seized 834 counterfeit euro coins and 134 euro banknotes, representing 68% of all seized counterfeit currencies in the country, compared with 38% in 2020.

3. GOOD NEIGHBOURLY RELATIONS AND REGIONAL COOPERATION

Good neighbourly relations and regional cooperation form an essential part of Albania's European integration process. They contribute to stability, reconciliation and a climate conducive to addressing open bilateral issues and the legacies of the past.

Albania maintained its engagement in a number of regional cooperation initiatives, such as the Central European Free Trade Agreement (CEFTA), the Energy Community, the Transport Community, the South East European Cooperation Process (SEECP) and the Regional Cooperation Council (RCC).

The EU-Western Balkans Summit in December 2022 took place for the first time in the region, in Tirana. The summit focused on support to the region in the fields of energy and migration, and on youth cooperation, roaming, green lanes and overall progress on implementing the Economic and Investment Plan.

As of January 2023, Albania has assumed the Chairmanship in Office for the Western Balkans Fund. Albania has also assumed the Chairmanship in Office of the Berlin.

On the **Common Regional Market (CRM)**, a political breakthrough was achieved at the Berlin Process Summit in Berlin in November 2022, where leaders adopted the three mobility agreements on higher education qualifications, on professional qualifications and on free movement with identity cards. Albania has ratified all three mobility agreements and has deposited the related notification instruments. A number of important decisions agreed at the technical level within CEFTA remain blocked.

Albania generally maintains good **bilateral relations** with other enlargement countries and neighbouring EU Member States.

Relations with ***Bosnia and Herzegovina*** remained friendly and without pending issues, with occasional high-level bilateral visits. The two countries are still to establish resident bilateral embassies, as agreed in 2020. Trade flows remain low.

Relations with ***Georgia*** are good. Albania supports the territorial integrity and sovereignty of Georgia. Albania expressed appreciation for Georgia's aspirations to integrate into the EU and NATO.

Albania's relations with **Kosovo** remained good overall. Albania's authorities have demonstrated consistence and strong support to the EU-facilitated Belgrade-Pristina dialogue. The Prime Minister of Kosovo visited Tirana in March 2023. In September 2023, the President of Kosovo visited Albania.

Relations with the **Republic of Moldova** are good, with the first bilateral diplomatic consultations taking place in 2022, and a joint commitment to develop the nascent bilateral economic relations. Albania has welcomed the EU's decision to grant EU candidate country status to Moldova.

Relations with **Montenegro** remained good overall. After 3 years, the second joint governmental meeting between Albania and Montenegro took place in Podgorica in February 2023. Albania signed a series of bilateral agreements with Montenegro's caretaker government, intended to improve cooperation between the neighbours in several areas of common interest related to energy, fishing, plant protection, social protection, sports, culture, media, defence and health. The parties signed a bilateral agreement for the construction of a bridge on the Buna River to connect the coastal areas of Ulcinj (Montenegro) and Velipoja (Albania) and announced the opening of the border crossing at Saint Nicholas – Pulaj.

Relations with **North Macedonia** remained good. In November 2022, the second government-to-government meeting between Albania and North Macedonia took place in Skopje. The governments signed 21 agreements, memoranda of understanding and protocols and pledged to cooperate on their EU integration process and on addressing the energy crisis triggered by Russia's unprovoked invasion of Ukraine. Both governments agreed on three initiatives related to the infrastructure of Corridor VIII, the construction of a dry port in Struga and the opening of the new Struga-Pogradec border crossing. Albania and North Macedonia will also create joint investigation teams in the fight against organised crime. Further avenues of cooperation are related to defence, security, digitalisation, border control, improving child protection and implementing Albanian sign language in both countries.

Relations with **Serbia** remained good overall, with regular high level political contacts. Albania's authorities have shown unwavering support for the EU-facilitated Belgrade-Pristina dialogue.

Relations with **Türkiye** have continued to strengthen, as reflected in the exchange of high-level visits. In November 2022, Albania's Minister for Europe and Foreign Affairs visited Ankara and led jointly with her counterpart the first meeting of the Political Dialogue Group. The Prime Minister of Albania visited the country and met the President of Türkiye in December 2022. Albania provided immediate support to Türkiye with the deployment of a team of 56 people in relief efforts following the earthquake that hit the country in February. Türkiye continues to exert pressure on Albania to deliver on dismantling the 'Gülen' movement in the country.

Ukraine-Albania relations have intensified since the beginning of Russia's war of aggression against Ukraine. Albania has sponsored or co-authored all resolutions in support of Ukraine during its non-permanent membership of the UN Security Council. The Prime Minister visited Kyiv in June 2022, together with the Prime Minister of Montenegro. Albania has welcomed the EU's decision to grant EU candidate country status to Ukraine.

Relations with **Greece** remained good overall, with continued political contacts. Greek Minority rights, in particular the property rights of the Greek minority, remain a subject of disagreement in the bilateral relations. The pre-trial detention of an ethnic Greek mayor-elect, who was arrested on the eve of the local elections, and whose trial started on 14 September on charges of vote-buying has been a source of bilateral tensions and raises serious concerns.

His requests to be granted special leave to be able to swear the oath have been dismissed and the High Court is expected to deliberate on the assignment of the related appeal to a court. The Constitutional Court accepted in October to pronounce itself on the constitutionality of the criminal judicial procedure following his arrest. On the issue of the delimitation of the maritime border, both sides agreed to jointly refer the case to the International Court of Justice. In December 2022, the Ministers of Foreign Affairs made visits to each other's capitals. In September 2022, the first joint technical meeting in the context of a future agreement on social insurance schemes took place in Athens.

Relations with **Italy** remained very good. Political dialogue intensified with high-level visits on both sides. In September 2022, the President of Italy visited Albania. In December 2022, Albania's Prime Minister met the Italian Prime Minister. The Albanian Minister for Europe and Foreign Affairs met the Deputy Prime Minister and Minister for Foreign Affairs of Italy in Rome in November 2022. Cooperation in the field of defence, justice and home affairs was further strengthened, including in the areas of the fight against cybercrime, trafficking in human beings, irregular migration and asylum.

4. ABILITY TO ASSUME THE OBLIGATIONS OF MEMBERSHIP

CLUSTER 2: INTERNAL MARKET

This cluster covers: free movement of goods (Chapter 1); freedom of movement for workers (Chapter 2); right of establishment and freedom to provide services (Chapter 3); free movement of capital (Chapter 4); company law (Chapter 6); intellectual property law (Chapter 7); competition policy (Chapter 8); financial services (Chapter 9) and consumer and health protection (Chapter 28). This cluster is key to Albania's preparations for the requirements of the EU's internal market and is very relevant for the development of the Common Regional Market.

Albania is moderately prepared in the areas of right of establishment and freedom to provide services, free movement of capital, company law, intellectual property law and financial services. Some progress was made on intellectual property law as well as free movement of capital, which may lead to the country's removal from the list of jurisdictions under increased monitoring. Nevertheless, Albania should ensure that any future VTC law (including potential criminal amnesties) complies with the EU *acquis* and international standards. The country is in between some and moderate level of preparation in the area of the free movement of goods, on which there was limited progress, and competition policy. Some level of preparation is registered on freedom of movement of workers, with some progress notably on free movement of family members of EU citizens. Limited progress can also be reported on freedom to provide services and company law. Preparations are at an early stage on consumer and health protection, where the country has made limited progress; significant efforts are still needed notably on ensuring quality healthcare for all. No progress can be reported on competition policy, where the State Aid Commission (SAC) still lacks operational independence.

Chapter 1: Free movement of goods

The free movement of goods ensures that many products can be traded freely across the EU based on common rules and procedures. Where products are governed by national rules, the principle of the free movement of goods prevents these creating unjustified barriers to trade.

Albania is **in between some and moderate level of preparation** in the area of free movement of goods. There was **limited progress** overall and on last year's recommendations, notably on alignment with the EU *acquis* on simple pressure vessels. Despite an initial compliance check with Articles 34-36 TFEU this is so far only limited to the harmonised area). On the quality infrastructure, some legal bases are still not aligned and, though it has started the process, Albania is yet to fully join all the EU standards bodies. Last year's recommendations therefore remain valid, as efforts are still needed to ensure legislative alignment and to strengthen enforcement.

In the coming year, the country should in particular:

- complete the alignment of its legislation with the EU *acquis* relevant to the quality infrastructure i.e. on accreditation, conformity assessment and market surveillance;
- significantly strengthen the enforcement capacity of the market surveillance inspectorate;
- adopt an action plan for screening all domestic legislation, procedures, and administrative practices for compliance with Articles 34-36 of the Treaty on the Functioning of the European Union (TFEU) which fully covers the non-harmonised area, with a timeframe for screening all such legislation and practices and for introducing mutual recognition clauses or repeal and/or amend legislation and practices as necessary.

General principles

Albania's legislation is not aligned with Articles 34-36 TFEU. Plans for further alignment with the EU *acquis* are set out in the 2023-2025 national plan for European integration adopted in February 2023, and in the current consumer protection and market surveillance strategy.

Non-harmonised area

Albania needs to widen the scope of its work on drafting an action plan for screening national technical regulations to comply with **Articles 34-36 of the TFEU**, as thus far they have only focused on harmonised product sectors. The main purpose of such an action plan is to ensure that there are no issues in regard to the non-harmonised areas, i.e. to ensure that any non-harmonised legislation, processes, procedures or rules fully comply with Articles 34-36 TFEU, or are covered by mutual recognition clauses. Albania therefore needs to ensure that its action plan to comply with Articles 34-36 TFEU also fully covers all the non-harmonised areas.

Harmonised area: quality infrastructure

Albania's legislation on **accreditation** is designed to be aligned with the EU *acquis*, while that on market surveillance is partially aligned. Administrative structures already exist to deal with technical regulations, standardisation, conformity assessment, metrology, accreditation and market surveillance, but the recruitment of qualified staff to ensure market surveillance of all harmonised sectors needs to be completed. Albania has mutual cooperation agreements on accreditation, standardisation, and conformity assessment with some EU Member States, other countries in the region and other non-EU countries.

On **standardisation**, the Albanian legal framework is designed to align with the EU *acquis*. Albania's General Directorate of Standardisation is a full member of the European Telecommunication Standards Institute (ETSI), an affiliate member of the European Committee for Standardisation (CEN) and the European Committee for Electrotechnical Standardisation (CENELEC), and an associate member of the International Electrotechnical Commission (IEC). It applied to become a full member of CEN/CENELEC in July 2021, and

is currently addressing the issues identified by the subsequent peer review by CEN/CENELEC in order to achieve this goal, including staffing. National standards are adopted in conformity with EU standards (set by CEN, CENELEC and ETSI). In 2022, 1 828 European and international standards were adopted (including 953 CEN-CENELEC, 384 ETSI and 491 International Organization for Standardization (IOS) and International Electrotechnical Commission (IEC) standards). During January-September 2023 GDS adopted 737 European and International standards as Albanian standards (including 430 CEN-CENELEC, 151 ETSI, and 156 IOS and IEC standards). All the harmonised European standards were adopted as harmonised Albanian standards, all by the “cover page” method, and 318 standards were withdrawn.

Albanian legislation on the accreditation of **conformity assessment** bodies is partially aligned with the EU *acquis*. The Directorate of Accreditation (DPA) has full operational capacities and has continued efforts to increase the administrative capacities through training of DPA staff, technical assessors and decision makers for different standards. Albania has 109 accredited conformity assessment bodies (49 testing laboratories, 5 medical laboratories, 1 calibration laboratory, 8 certification bodies of management systems, 15 certification bodies of persons and 31 inspection bodies). In September 2022, Albania joined the International Accreditation Forum Multilateral Recognition Arrangement. It is also a signatory of the European co-operation for Accreditation Multilateral Agreement, a full member of the International Laboratory Accreditation Organisation (ILAC), and has a mutual recognition agreement with ILAC (ILAC MRA). The General Directorate of **Metrology** is fully staffed and operational. It is a full member of the International Organization of Legal Metrology, the European Association of National Metrology Institutes (EURAMET) and the International Measurement Confederation, and an associate member of the European Cooperation in Legal Metrology (WELMEC) and the International Bureau of Weights and Measures. Albania has not yet aligned its legislation with the EU requirements on **notification procedures**.

The State Inspectorate for Market Surveillance (SIMS) remains understaffed. It should continue to increase the number of staff, including inspectors. In 2022, over 11 000 market surveillance inspections were carried out in Albania, resulting in 179 fines, 38 urgent measures, and 58 products being taken off the market, and in January-September 2023 there were 423 inspections leading to 56 products being in nonconformity resulting in 19 administrative measures (8 warnings, 8 fines and 3 urgent measures).

Harmonised area: sectoral legislation

In the area of ‘**new and global approach**’ **product legislation**, Albania adopted implementing legislation designed to be fully aligned with the EU *acquis* on simple pressure vessels. However, alignment has not yet started on equipment and protective systems intended for use in potentially explosive atmospheres (ATEX), gas appliances, pressure equipment, recreational craft, and eco-design.

On the ‘**old approach**’ **product legislation**, Albania is partly aligned with the EU *acquis* on textile labelling, footwear, crystal glass and aerosol dispensers. Its legislation is partly aligned with the EU *acquis* on registration, evaluation, authorisation and restriction of chemicals (REACH); on chemical classification, labelling and packaging ; on aerosol dispensers, and on detergents. Albania is not aligned with the EU *acquis* on motor vehicles, two- or three-wheeled vehicles, tractors (agricultural, forestry), non-road mobile machinery emissions, or on good laboratory practice.

Albanian legislation is not aligned on **drug precursors**, though the list of controlled substances complies with the relevant lists in the EU *acquis*. On **procedural measures**, Albania is partly aligned on firearms, on crystal glass, on textile labelling, on the pricing of medicinal products, and on footwear. Albania remains partially aligned with the EU *acquis* on defence products (transfer of defence-related products), and on the return of **cultural objects unlawfully removed from the territory of an EU Member State**.

Albania has anti-corruption measures in place on transparency on accreditation, conformity assessment, tariffs, legal acts and the activities of public bodies. Some agencies and the customs administration that ensure market surveillance have rules on transparency, ethics and conflicts of interest, and are subject to audits. However, further efforts are needed in terms of enforcement and strengthening the capacities of market surveillance inspectorate.

Chapter 2: Freedom of movement of workers

Citizens of one Member State have the right to work in another Member State and must be given the same working and social conditions as other workers.

Albania has **some level of preparation** in freedom of movement for workers. **Some progress** was made on the implementation of the 2022 report's recommendations on free movement of family members of EU citizens, strengthening of social security bilateral agreements and further development of the IT system for mapping job seeker vacancies (e.g the development of the National Agency for Employment and Skills (NAES) application, providing real-time updated information about jobs) that is preparing the implementation of the European network of employment services (EURES) upon accession. The development and adoption of 17 pieces of implementing legislation of the Law on foreigners was in line with the 2022 report's recommendations. In the coming year, Albania should:

- continue the development of the IT system to enable connection to EURES;
- strengthen the enforcement of the Law on foreigners;
- continue negotiating and implementing new bilateral agreements on social security, notably with EU Member States.

Regarding **access to the labour market**, Albania has in place a Law on foreigners, enabling simplified procedures for EU citizens settling in Albania, in line with the EU *acquis* in this area. 17 pieces of implementing legislation of the Law on foreigners were adopted during the reporting period, making the law fully operational. As of January 2023, the application procedure is further simplified as employees can now register their employment contract online. In 2022, 1 281 EU citizens received a declaration of exemption for employment.

A cooperation agreement between the State Labour Inspectorate and Social Services, the National Agency for Employment and Skills (NAES), the Commissioner for Protection from Discrimination and the Public Procurement Agency, is needed to strengthen the control of law enforcement. The Ministry of Finance and Economy (MoFE) needs to intensify efforts to review the existing bilateral employment agreements and introduce the new bilateral cooperation agreements in the field of labour migration during 2023. An interinstitutional working group was set up in March 2023 for the preparation of the new migration strategy.

In preparation for joining the **European network of employment services (EURES)**, Albania has put in place an integrated database for its employment services that, upon its connection to EURES, can facilitate exchanges of information between IT departments on civil status, the tax system, the compulsory healthcare system and the economic assistance system. The IT system to enable connection with EURES needs to be further improved.

On the **coordination of social security systems**, Albania has bilateral agreements with Austria, Belgium, Czechia, Germany, Hungary, Kosovo, Luxembourg, North Macedonia and Türkiye. Bilateral agreements with Bulgaria, Switzerland and Romania have been signed and are yet to be ratified. Negotiations with Croatia, Montenegro and Italy have been concluded and agreements are yet to be signed. Discussions on coordinating social security schemes have taken place with Greece, and Serbia. Negotiations and implementation of new bilateral agreements on social security between Albania and other EU Member States have yet to take place.

In March 2023, NAES signed a cooperation agreement with the Public Employment Service of Lithuania intending to create a cooperation framework to exchange information on employment and labour migration.

Regarding the fight against corruption, Albania has put in place a cross-cutting strategy and action plan against corruption for 2020-2023. The Ministry of Interior has adopted its 2022-2024 integrity plan. Authorities have increased the transparency and availability of digital services as all relevant information on access to the labour market and the entry or exit of foreign workers and self-employed people are available online. A co-governance platform is in place and enables people to denounce corruption in public services online.

Chapter 3: Right of establishment and freedom to provide services

EU natural and legal persons have the right to establish themselves in any Member State and to provide cross-border services. For certain regulated professions, there are rules on mutual recognition of qualifications. EU rules on postal services focus on improving the quality of universal service, gradual market opening to competition, and the establishment of an independent regulator.

Albania is **moderately prepared** in the right of establishment and freedom to provide services. **Limited progress** was achieved in the reporting period, in particular in the field of freedom of establishment and free movement of services through the completion of the self-screening of the legislation that needs to be aligned with the Services Directive.

In the coming year, Albania should in particular:

- start amending the legislation to address the barriers to the freedom of establishment and free movement of services, which were identified in the self-screening exercise;
- continue efforts to align its legislation with the EU *acquis* and ensure appropriate institutional capacity in the area of mutual recognition of professional qualifications.

On the **freedom of establishment and the free movement of services**, Albania completed the self-screening of the existing legislation for the remaining 18 sectors to identify provisions that need to be aligned with the Services Directive. The entire legislative self-screening process covered 38 sectors and resulted in the identification of 112 pieces of legislation where amendments are needed to ensure their compliance with the Services Directive. The National Business Centre functions as a one-stop-shop for registering businesses and issuing licences, authorisations and permits. The e-Albania portal serves as a single contact point for electronic public services and as of May 2022, almost 95% of services are offered online.

The national legislation on **postal services** is aligned with the EU postal *acquis*, where Albania has made good progress. Albania is aligned with the Postal Services Directive since 2017, following the abolishment of the reserved area and postal market opening to full competition, and has aligned with the Regulation on cross-border parcel delivery services in

June 2021. There is currently one universal service provider (Albanian Post SA) designated for a period of 5 years, starting from July 2020, and 33 other postal service providers on the market. The Electronic and Postal Communications Authority (AKEP) is the independent national regulatory authority responsible for the regulation and supervision of postal services in Albania.

As regards aligning the professional qualifications framework with the *acquis* on the **mutual recognition of professional qualifications**, a roadmap on professional qualifications was finalised and remains pending adoption. Institutional capacity in this area still needs to be strengthened. The Albanian legislation currently regulates 331 professions/professional qualifications. In January 2023, Albania signed the Agreement on Recognition of Higher Education Qualifications and the Agreement on Recognition of Professional Qualifications for Doctors of Medicine, Dentists and Architects, along with the other Western Balkan countries, at the Berlin Summit.

Chapter 4: Free movement of capital

In the EU, capital and investments must be able to move without restriction, with common rules for cross-border payments. Banks and other economic operators apply certain rules to support the fight against money laundering and terrorist financing.

Albania is **moderately prepared** in the area of free movement of capital. **Some progress** was made on the implementation of Moneyval's recommended actions and the Financial Action Task Force (FATF) Action Plan. In June 2023 FATF decided to propose an on-site visit, which took place in August and led to Albania's delisting in October. Nevertheless, Albania should ensure that any future VTC law (including potential criminal amnesties) complies with the EU *acquis* and international standards. The issue of enabling EU citizens to acquire land remains unresolved. There was progress on further alignment of the national payment system legislation with the EU *acquis*, particularly in the area of the E-Money Directive, the Payment Account Directive and on increasing financial literacy.

In the coming year, Albania should in particular:

- ensure that any voluntary tax compliance legislation (including amnesties) is in alignment with the relevant EU *acquis* and international standards set by Moneyval and the Financial Action Task Force (FATF);
- step up efforts to adopt the relevant legislation that would provide EU citizens with the right to acquire land, which is outstanding since 2016;
- ensure fulfillment of the 2018-2023 national payment strategy; initiate the assessment for the mid-term strategic objectives.

On **capital movements and payments**, Albania is lagging behind its commitment under the 2006 Stabilisation and Association Agreement (SAA) to enable EU nationals and entities to acquire agricultural real estate, a step that has been due since 2016. Provisions that would regulate the acquisition of agricultural land by EU citizens, together with more clarity on ownership rights, would encourage more foreign investment in Albania.

On **payment systems**, foreign banks can open branches and agencies in Albania and offer cross-border payments. Albanian legislation is partly aligned with the EU *acquis* on direct debits and credit transfers. The measures introduced by the Bank of Albania in the context of COVID-19 restrictions in March 2020 to reduce the costs of payment system services and to promote home banking remain in place as part of the national strategy on low-value payments.

Albania's payment system committee, which is open to representatives of non-bank financial institutions and payment system operators, is implementing the 2018-2023 national retail payments strategy. The Law on payment services, designed to align national legislation with the EU Payment Service Directive II (PSD II) provisions on transparency conditions and information requirements for payment services, came into effect fully in July 2022. Implementing legislation has been adopted to further align with the *acquis* on e-money and on access to payment accounts, and to increase transparency and competition in the payment system market. In March 2023, implementing legislation came into force on the supervision of e-money institutions, which sets among others the rules on management of risks related to this activity, supervision and requirements on e-money issuers. There are nine licensed electronic money institutions operating in Albania. The financial literacy of Albania's adult population continued to improve in 2022 (69% of adults now have a payment account), as did the use of electronic payments (17.9 electronic transactions per adult, compared with 12 in the previous year). Further efforts are needed to increase e-payment transactions through credit cards, a service that is particularly in demand from the tourism sector, but which still remains expensive for businesses. Albania does not apply the rules of the Interchange Fee Regulation, as the government considers the penetration of electronic payments to be very limited and concentrated in the capital.

On the **fight against money laundering**, Albania continued its efforts to address the deficiencies in technical compliance identified by the 2018 Moneyval mutual evaluation report. In its 4th enhanced report on Albania, released in June, Moneyval concluded that Albania has improved its measures on tackling money laundering and terrorist financing, strengthened transparency. The Law on money laundering is designed to be aligned with the EU *acquis* and the register of beneficiary owners is operational, though amendments extended the registration deadline to June 2022. Although the Financial Action Task Force assessed that Albania has substantially completed its 2020 action plan, the country remained on the FATF's list of jurisdictions under increased monitoring as the draft VTC law (including a criminal amnesty) that Albania sent to them in early 2022 did not comply with FATF principles or best practices. In June 2023 FATF decided to propose an on-site visit, which took place in August and led to Albania's delisting in October. Nevertheless, Albania should ensure that any future VTC law (including potential criminal amnesties) complies with the EU *acquis* and international standards. (See also chapters 24, *Justice freedom and security* and 16, *Taxation*).

Albania has legislation in place on risk management standards and licensing requirements for financial institutions, including non-banks and foreign exchange bureaux, in line with Moneyval recommendations. Staffing levels at the Albanian Financial Intelligence Unit (the new name of the General Directorate for the Prevention of Money Laundering after its renaming via amendments to the law on money laundering in July 2023) have increased. It has trained its employees on financial investigation techniques, asset tracing, seizure and confiscation, on risk-based implementation techniques, and on cybercrime prevention indicators.

During 2022, the Bank of Albania continued its inspections to 70 foreign exchange offices (FEO) with the focus on observing the fulfillment of the requirements under the anti-money laundering (AML) legislation. Substantial discrepancies were identified in 23 foreign exchange offices, related to inadequate knowledge about the AML legislation requirements; inappropriate procedures for client identification, and deficiencies in maintaining supporting documentation of foreign exchange operations. The inspections concluded with 15 cases of fines and 8 cases of warning notices to the FEOs. There is a need to reinforce internal

operational procedures and improve evidence-recording of suspected cases, and an overall need for training of staff of the FEOs about the anti-money laundering legal requirements.

Chapter 6: Company law

The EU has common rules on the formation, registration and disclosure requirements of a company, with complementary rules for accounting and financial reporting, and statutory audit.

Albania is **moderately prepared** in the field of company law. **Limited progress** was made mainly on further legislative alignment on transparency requirements for listed companies. As such, last year's recommendations remain valid.

In the coming year, Albania should in particular:

- finalise the review of the existing legislation in the area of company law to identify amendments needed to complete alignment with the EU *acquis*, and make progress to introduce such amendments;
- further align the legal framework on accounting, transparency and audit with the latest EU *acquis* in these areas.

Although there is some alignment with the EU *acquis* in a range of **company law and corporate governance** areas, there was no legislative progress during the reporting period. Further alignment is needed with the 2019 Directive on the use of digital tools and 2019 Directive on cross-border operations (mergers, divisions, conversions), as well as with rules on encouraging long-term shareholder engagement (2017 Directive), and gender equality on boards of directors (2022 Directive). A corporate governance code for listed companies still needs to be developed. The National Business Centre is responsible for company registration, allowing free online registration and online access to data. Many services are only offered online through the e-Albania electronic service window. The national business register should be ready to interconnect with the EU Business Registers Interconnection System upon EU accession.

In the area of **company reporting**, the Law on accounting and financial statements is partially aligned with the EU Accounting Directive. The National Accounting Council monitors the enforcement of financial reporting and accounting standards. There are guidelines in place to comply with the EU Directive on disclosure of non-financial and diversity information by certain large undertakings and groups. Moving forward, Albania will need to align with the 2022 EU Directive on corporate sustainability reporting. The 2020 Law on capital markets provides specific **transparency** rules for listed companies regarding financial reporting, including fines in case of non-compliance. In January 2023, a regulation was adopted to further align with the *acquis* on transparency requirements for listed companies. Currently, there are no listed companies that are subject to these reporting requirements. On **statutory audit**, Albania should strengthen the capacity of the Public Audit Oversight Board in terms of staffing and funding and further align its framework with EU statutory audit rules.

Chapter 7: Intellectual property law

The EU has harmonised rules for the legal protection of intellectual property rights (IPR), copyright and related rights. Rules for the legal protection of IPR cover, for instance, patents and trade marks, designs, biotechnological inventions and pharmaceuticals. Rules for the legal protection of copyright and related rights cover, for instance, books, films, software and broadcasting.

Albania is **moderately prepared** on intellectual property rights. **Some progress** was made with improvements in the transparency of the functioning of collective management organisations (CMOs).

In the coming year, Albania should in particular:

- adopt the implementing legislation for the amendments to the Law on copyright and other related rights;
- continue to improve the functioning of CMOs and the payment of royalties to right holders;
- further align legislation on industrial property rights and the IPR enforcement system.

In the area of **copyright and related rights**, the General Directorate of Industrial Property is responsible, which is in charge of registering, administering and promoting intellectual property objects, and the Copyright Directorate of the Ministry of Culture. The National Copyright Council, comprising five members appointed by the Minister for Culture, is responsible for certifying the tariff methodology.

The April 2022 amendments to the Law on copyright and other related rights further aligned the legal framework with the EU *acquis* in the areas of orphan works, certain permitted uses of certain works and other subject matter protected by copyright and related rights, for the benefit of persons who are blind, visually impaired or otherwise print-disabled, and term of protection of copyright and certain related rights. The amendments also regulated the functioning of CMOs, including the distribution manner and percentage of the fee, as well as the remuneration collected by the CMOs. To apply the new amendments, Albania still needs to adopt the implementing legislation concerning the procedure and fair compensation for the use of orphan works as well as the database of copyright works.

In March 2023, Albania adopted an act to make the functioning of CMOs more transparent and in June 2023, guidelines were adopted on the criteria and procedures of licensing and renewal of licensing of CMOs and the criteria and procedures for suspension and revocation of collective management license. In July 2023, the government adopted a decision on the list of equipment, fees and the right to remuneration for the reproduction of copyright works for private or other personal use. Albania is not yet aligned with the Directives on online transmissions of broadcasting organisations and retransmissions of television and radio programmes (SatCab II Directive), on copyright and related rights in the Digital Single Market (DSM Directive), and on the collective management of copyright and related rights and multi-territorial licensing.

On **industrial property rights**, the 2022-2025 national intellectual property strategy is being implemented. Albania needs to further align its legislation with the *acquis* on patents, trade marks.

In 2022, 1 165 national and 2 072 international applications to register trade marks were filed with the General Directorate of Industrial Property (compared with 1 404 and 2 107, respectively, in 2021). In 2022, 19 applications to register industrial designs were submitted to the General Directorate of Industrial Property (compared with 49 in 2021). There were 21 applications for national patents in 2022, compared with 23 in 2021.

The State Inspectorate for Market Surveillance (SIMS) is responsible for monitoring the **enforcement** of intellectual property rights. In 2022, the copyright division of SIMS carried out 350 inspections, resulting in 44 administrative sanctions. The SIMS industrial property division carried out 107 inspections in 2022, resulting in 28 administrative sanctions. The

SIMS division on industrial property rights adopted in April 2023 a manual on intellectual property inspection. In 2022, the customs administration suspended the release of 2 140 products suspected of infringing IPR (compared with approximately 3 000 products in 2021).

Chapter 8: Competition policy

EU rules protect free competition. They include antitrust rules against restrictive agreements between companies and abuse of a dominant position, and also include rules on concentrations between companies which would significantly impede effective competition. EU rules also set out a system of State aid control. Governments are only allowed to grant State aid if restrictive conditions are met, with a view to preventing distortion of competition.

Albania is **in between some and moderate level of preparation** in competition policy. There was **no progress** during the reporting period, including on legislative alignment with the EU *acquis* in the area of State aid. Despite recommendations in previous years, the operational independence of the State Aid Commission (SAC) has not yet been ensured. Its enforcement record needs to be significantly improved. Last year's recommendations remain valid.

In the coming year, Albania should in particular:

- ensure the operational independence of the SAC and significantly increase the administrative capacity of the SAC's secretariat;
- further align the legislative framework in the area of State aid with the EU *acquis*;
- step up efforts to raise awareness of the SAC with respect to line ministries and regional and local authorities to ensure prior notification of aid measures and strengthen the enforcement of State aid rules.

Antitrust and mergers

Albania's **legislative framework** is broadly in line with the EU *acquis* and the SAA. The Law on the protection of competition is largely aligned with Article 101 TFEU (restrictive agreements) and Article 102 TFEU (abuses of dominant position). It also provides for prior control of mergers, in line with the Merger Regulation. Implementing legislation is broadly in line with the relevant EU regulations and Commission guidelines. In June 2023, the Albanian Competition Authority adopted a decision on an informal guidance aiming at alignment with the relevant Commission Notice on novel or unresolved questions concerning Articles 101 and 102 of the TFEU that arise in individual cases.

Regarding the **institutional framework**, the Albanian Competition Authority (ACA) is responsible for implementing the Law on the protection of competition. It is an operationally independent authority reporting to parliament. It can adopt implementing legislation, impose fines and remedies, prohibit mergers or authorise them, with or without conditions. Parties may appeal against the ACA's decisions before the courts. On **enforcement capacity**, the ACA has maintained the total number of staff at 46, and staff have benefited from relevant workshops and training. On **implementation**, in 2022 the ACA took 99 decisions, including five on prohibited agreements, eight on abuse of a dominant position and 50 authorising concentrations. In the first half of 2023, ACA took 35 decisions, including two on a prohibited agreement and 23 authorising concentrations. In 2022, ACA assessed 30 draft legal assessments, mostly concerning legislation in the energy and gas market. During the reporting period, the ACA has carried out the preliminary and in-depth investigation procedures, in several sectors of the economy where dawn raids were conducted, including higher education, non-banking financial entities, digital production, transport-taxi services,

market of concrete production and importing and trade of vegetable oil. The ACA should continue to strengthen its enforcement of competition rules.

State aid

On the **legislative framework**, the Law on State aid largely reflects Articles 107 and 108 TFEU. The implementing legislation is partially aligned with the EU *acquis* only in some areas e.g. the General Block Exemption Regulation. Further alignment with EU implementing legislation on State aid control is needed.

Regarding the **institutional framework**, the SAC is responsible for implementing the Law on State aid. Its operational independence, which is required by the SAA, has yet to be guaranteed, given that it is an arm of the Ministry of Finance and Economy. The SAC can order the recovery of illegal and incompatible aid but has not done so to date. Its decisions can be appealed in the courts.

The SAC's **enforcement capacity** remains insufficient as the staffing of its secretariat needs to be significantly increased. On **implementation**, in the second half of 2022, the SAC approved four decisions on the authorisation of State aid. In June 2023, the SAC approved a decision on authorising State aid in the field of photovoltaics. No negative or recovery decision was taken. The enforcement track record on State aid control needs to be significantly improved. Advocacy activities among grantors need to be stepped up to ensure prior notification of aid measures.

Liberalisation

The Law on State aid applies to all legal and natural persons performing an economic activity. There has been no investigation of State aid for public undertakings or undertakings with special or exclusive rights.

Chapter 9: Financial services

EU rules aim to ensure fair competition among, and the stability of, financial institutions, namely banking, insurance, supplementary pensions, investment services and securities markets. They include rules on authorisation, operation and supervision of these institutions.

Albania is **in between moderate and a good level of preparation** in the area of financial services. **Some progress** was made on last year's recommendation on improving collateral execution by bailiffs, as the pending legal issue on service fees was addressed, and there was also progress on the alignment of national capital market legislation with the relevant EU *acquis*, and on incorporating sustainable financing principles both in banking and non-banking strategic policies and objectives. The country should make further efforts to align with the financial services *acquis*, focusing on the priorities identified based on the current state of play. Some of last years' recommendations remain valid.

In the coming year, Albania should:

- continue the work towards full alignment of the banking regulation with the revised versions of the EU *acquis* on CRR/CRD and BRRD;
- step up efforts to further align the legislation in the fields of private pensions and on capital markets with the relevant EU *acquis*;
- continue to work towards alignment with the Solvency II Directive;

On **banks and financial conglomerates**, the Bank of Albania (BoA) continued to align its banking regulation with Basel III, especially on the capital adequacy ratio. It adopted

legislation designed to be aligned with the *acquis* on the internal liquidity adequacy assessment process, providing a regulatory framework to ensure adequate levels of liquidity reserves. National legislation on the capital adequacy ratio and on the net stable funding ratio of banks was further aligned with the *acquis* on new credit risk requirements.

Albania's legislation is partially aligned with the EU *acquis* on the recovery and resolution framework for banks. Albania should continue working towards full alignment with BRRD II. Regarding the implementation of the framework, as all banks now have resolution plans, the BoA carried out on-site bank inspections to strengthen their resolvability, and issued recommendations to the banks concerned. A 2023-2025 strategy on administration and supervision of financial risks related to the climate of financial sector was adopted in May 2023.

Albania's legislation is partially aligned with the EU *acquis* on deposit guarantee schemes. Non-aligned areas include the maximum level of coverage, depositors excluded from coverage and pay-out period.

In 2023, the Bank of Albania was invited by the Single Resolution Board to participate in resolution college meetings, for two banking groups with subsidiaries operating in Albania. As it was on the FATF list of jurisdictions under increased monitoring (*see also chapter 4: Free movement of capitals for more details*), Albania has not been assessed for banking equivalence under the Capital Requirements Regulation.

The non-performing loan ratio continued to decrease (5% in December 2022 compared with 5.6% in December 2021). The full implementation of the bankruptcy law enables further execution of the non-performing loan resolution strategy. The legal decision on bailiff fees also made it possible to adopt the collateral execution procedure.

Eleven banks are currently operating in Albania (including two systemic banks which are subsidiaries of foreign groups), which has a system to identify systemically important banks in place that is similar to EU practice. The BoA has an investment policy on the financial assets of the resolution fund. The supervision and regulation system of the financial sector is ensured by the BoA and by the national financial supervisory authority (AFSA), which are independent institutions that are accountable to parliament. In 2022, BoA ensured 13 on-site supervision inspections (compared with 16 in 2021). Three more full-scope inspections on banks were conducted during the first half of 2023 and one partial inspection focusing on the implementation of the national standards on financial reporting. Four more partial inspections took place in the third quarter of 2023. There have been 81 on-site inspections between 2018 and 2023, leading to recommendations to the respective entities. Albania needs to step up efforts to align its legislation on capital markets with the relevant EU *acquis*. In April Albania adopted a policy document on capital market development 2023-2027, and in August 2023 AFSA adopted a 2023-2027 strategy for the financial supervisory authority for financial literacy and financial inclusion.

In the area of **insurance and occupational pensions**, national legislation on compulsory insurance in the transport sector is designed to align with the relevant EU *acquis*. National law provides for voluntary implementation of the *bonus-malus* (no claims bonus) system by insurance agencies. There is only a limited possibility to insure agricultural production against natural disasters (floods, droughts and fires). In September 2023, Albania adopted a Law on private pension funds, designed to be aligned with the EU *acquis* on the activities and supervision of institutions for occupational retirement provision (IORP II).

The insurance market continues to be dominated by the non-life insurance companies (eight out of 12 insurance companies are non-life insurers, one of which carries out reinsurance

activities). Insurance market results were positive in 2022, mainly due to the good performance of the non-life insurance sector. Since March 2022, AFSA is a member of the International Association of Insurance Supervisors via an international supervisory cooperation and information exchange agreement. In June 2023 Albania completed a self-review of the level of compliance with the IAIS core principles. This concluded that Albania is fully compliant with 10 out of 24 principles and in other 12 as largely observed them. In May 2023 AFSA adopted a risk-based supervision manual for the insurance market. During the reporting period, AFSA signed two bilateral memorandums of understanding (MoUs) on the exchange of information and cooperation with their equivalents in Malta, Luxembourg and Austria. There are five pension funds in Albania that offer a voluntary private pension scheme. They had 36 518 registered members in 2022, an increase compared with 2021. Albania needs to step up efforts to align its legislation on private pensions with the relevant EU *acquis*.

On the **financial market infrastructure**, the Albanian Stock Exchange, which is a private entity, only deals with government bonds. After its suspension in April 2022, the stock exchange is no longer registered as a licensed financial operator and is not operational. A central securities depository (AFISAR) remains in place, operated by the BoA. The Albanian securities registry (ALREG), a private company, ensures the settlement of non-government securities. ALREG is an indirect participant in the BoA's Albanian interbank payment system. The agreement between the BoA and AFSA stipulates that the BoA is responsible for minimising systemic risk, and AFSA is responsible for investor protection. AFSA adopted the guarantee fund's regulation, making the post-trade infrastructure fully operational.

Albania's legal framework on capital markets is partially aligned with MiFID II and with the *acquis* on transparency, market abuse, prospectuses, settlement and central securities depositories. During the reporting period, Albania adopted four pieces of implementing legislation designed to further align its capital market legislation with the EU *acquis* on transparency, on prospectuses and on investment firms.

Albania's capital market has two segments: i) government securities and ii) bonds issued through private placement. Thirteen entities currently operate in the Albanian capital market, all are banks apart from one central securities depository and the non-operational securities exchange.

On the **securities markets and investment services**, AFSA continues to supervise securities markets in accordance with Albania's Law on capital markets. Security markets in Albania consist mainly of government securities and bonds issued through private placements. The amount of bonds with private placements registered at ALREG reached EUR 90.5 million in December 2022. The launch of a digital platform in August 2022 makes it possible to provide investment services (the offering of treasury bills).

In the area of **sustainable and digital finance**, while the 2023-2027 AFSA strategy includes priority actions with green/sustainable financing aspects, Albania should take further steps to accommodate sustainable finance aspects in its regulatory and legal financial framework. In addition, Albania should incorporate sustainable considerations in its disclosure regime for both non-financial and financial companies, in order to improve the availability of reliable data on banks' credit risk exposures and, therefore, fully implement the Bank of Albania's Medium-Term Strategy on the management and supervision of climate-related financial risks in the banking sector. The Bank of Albania is also cooperating with international institutions, such as the World Bank and the International Monetary Fund, to further integrate green/sustainable finance aspects in its regulatory framework. Albania should incorporate

sustainable and digital financing principles both in banking and non-banking strategic policies and objectives.

Chapter 28: Consumer and health protection

EU rules protect consumers' economic interests and in relation to product safety, dangerous imitations and liability for defective products. The EU also ensures high common standards for tobacco control, blood, tissues, cells and organs, and medicines for human and veterinary use. The EU also has rules for upholding patients' rights in cross-border healthcare and in preparing for and responding to cross-border health threats, including communicable diseases.

Preparations are at an **early stage** in the area of consumer and health protection. There was only **limited progress** on last year's recommendations, which remain relevant, via alignment to the EU *acquis* on serious cross-border health threats (though the implementing legislation remains to be adopted) and its integration in the EU COVID-19 surveillance system,. Significant progress still needs to be made to implement the One Health approach and all-hazard health preparedness, to strengthen the policy framework and ensure that everyone in Albania has quality healthcare coverage. Alternative dispute resolution bodies in regulated sectors are also now being ensured.

In the coming year, Albania should in particular:

- further align its legislation with the EU health *acquis* on substances of human origin, on medicines for human and veterinary use, and on tobacco control, and accede to the WHO's Framework Convention Protocol to Eliminate Illicit Trade in Tobacco Products;
- increase the financial and human resources in the health sector, specifically in primary healthcare and all-hazard health emergency preparedness, based on the lessons learnt from the COVID-19 pandemic to strengthen responses, both at central and local level;
- guarantee equal access to quality health services for vulnerable populations, including Roma and Egyptian minorities, older people, people with pre-existing mental health problems, people with disabilities, rural or remote populations, in particular for women and girls who belong to these groups, who are often subjected to multiple forms of discrimination.

Consumer protection

On **horizontal aspects**, Albania needs to adopt its 2023-2030 cross-cutting strategy on consumer protection and market surveillance setting out its current consumer policy. The national legal framework in this area are Albania's Laws on consumer protection and on general safety of non-food products, and relevant national implementing legislation. However, national legislation is not yet aligned with the EU *acquis* on package travel and linked travel arrangements or with the recent EU *acquis* on digital content. It is also not yet aligned with the revised EU *acquis* on the sale of goods or with the changes in the EU *acquis* brought by the Directive on better enforcement and modernisation of Union consumer protection rules. Consumer policy and legislation are implemented by the Consumer Protection Commission (CPC), the State Inspectorate of Market Surveillance (SIMS), the financial supervisory authority, alternative dispute resolution bodies in regulated sectors, local government, the civil aviation authority and the legal authorities. CPC held three meetings in 2022 and addressed 22 cases, and 10 more cases were addressed during its meeting on April 2023. The CPC respective decisions were published in its website. Albania needs to increase human resources and capacity in many of these bodies, and improve

coordination between them. Albania is currently negotiating to join the EU consumer protection programme, under the EU single market programme.

On **enforcement and redress**, Albania has not yet updated its legal measures to further extend the investigative and enforcement powers of competent authorities to align with Regulation 2017/2394 on cooperation between national authorities responsible for the enforcement of consumer protection laws. It is also not yet aligned with Directive 2013/11 on consumer alternative dispute resolution.

On **product safety**, Albania's Law on the general safety of non-food products is designed to be aligned with the EU *acquis*, apart from aspects only relevant to EU Member States, notably concerning obligations linked to Safety Gate, which is the EU rapid alert system for dangerous non-food products previously called 'RAPEX'. Albanian legislation has a limited level of alignment with the *acquis* on product liability. The State Inspectorate for Market Surveillance was restructured in June 2020 and, although the number of posts increased from 69 to 80 (69 staff are currently employed) it is still understaffed. It should continue to increase the number of staff, including inspectors. In 2022, over 11 000 market surveillance inspections were carried out in Albania, resulting in 179 fines, 38 urgent measures, and 58 products being taken off the market.

Public health

On **public health**, Albania is implementing its 2021-2030 health policy and 2020-2025 action document on primary healthcare; the latter aims to tackle health inequalities. The level of public spending on health remains low, at 3.04% of GDP and 9.47% of total government spending (according to 2022 government data), and is lower than in most countries in south-eastern Europe and the EU. Health funding prioritises curative care over preventive care and hospital-based treatment over primary healthcare. In Albania, average life expectancy at birth is higher for women than men (80.5 years versus 77.4 years), but women have shorter healthy lives than men (51.9 years versus 54.6 years), even though women are less exposed to some of the key health risk factors, such as smoking or alcohol abuse. Neonatal mortality in 2021 was 7 per 1 000 live births, an improvement on 2020 (8 per 1 000) but still high compared with other countries in the region.

The Ministry of Health and Social Protection and the National Agency of Information Society (NAIS) are responsible for **e-health**. The Ministry of Health and Social Protection operates an electronic system for collecting and reporting health information from medical records, based on the European Core Health Indicators. Albania's e-prescription covers the description, registration, execution and reimbursement of prescriptions, and there is an e-warehouse system for pharmaceutical products. Albania also has an e-visit system to record patients' visits to primary healthcare centres, an e-referral system to digitalise referrals, and an e-report system to automate electronic medical reports, which makes it possible to send electronic reports to employers and employees, and which includes e-signatures by doctors. Health statistics, health infrastructure, equipment and human resources remain inadequate, especially in rural areas.

Albania's legislation on **blood, tissues, cells and organs** is not fully aligned with the relevant EU *acquis*, and there is no system in place to report alerts, serious adverse reactions or events or to provide feedback. Albania has a national blood transfusion centre, regional blood centres and blood banks for collection and distribution, comprising 31 entities in total. Albania has a kidney transplant programme in place, as well as a national protocol on the issue. Albania does not yet have the capacity for transplants from deceased donors or for corneal donations.

On **tobacco control**, national legislation on tobacco products is designed to be aligned with the EU *acquis*, but Albania still needs to accede to the World Health Organization's Framework Convention Protocol to Eliminate Illicit Trade in Tobacco Products, and to further align its other tobacco legislation with the EU *acquis*.

In the field of **serious cross-border health threats including communicable diseases**, the legal base is designed to be in line with the EU *acquis*, but relevant implementing legislation still remains to be adopted. While Albania has an antimicrobial resistance action plan, the **COVID-19 pandemic** demonstrated significant shortcomings. It stretched the system's capacity to provide immediate access to medical supplies, protective equipment, and stretched the digital infrastructure required to maintain essential services and protect healthcare personnel and patients, demonstrating a lack of resources. Albania is a signatory to the EU Joint Procurement Agreement on medical countermeasures. It is part of the European COVID-19 Surveillance Network, reporting COVID-19 data to the European Surveillance System (TESSy) managed by the European Centre for Disease Prevention and Control (ECDC). It is also part of the European Centre's viral respiratory disease surveillance networks, in which it reports on several communicable diseases. Albania should, however, improve the timeliness and completeness of the reported data it provides. In late 2022, Albania introduced HPV vaccination for 13 year-old girls.

Albania's legislation on **patients' rights in cross-border healthcare** is not yet aligned with the EU *acquis*, while its legislation on **medicines for human and veterinary use** is partly aligned. There was no significant progress on standards in the pharmaceutical sector. There is still no specific legislation to address the risk of counterfeit medicines in the legal supply, although some provisions are in place to address this risk. Additional efforts are needed to protect the public from counterfeit medical products and to improve cross-border cooperation on sustainable access to medicines and their correct use. There were no developments or expertise available on paediatric medical products, medical products for diagnosis, orphan medical products, medical products based on genes (gene therapy), cells (cell therapy) or tissues (tissue engineering). Albania needs to increase investment and capacity building in this sector.

On **preventive measures**, a national **cancer** control plan is in place. Appropriate structures for cancer screening are in place, but a cancer registry has still not been created. There is a breast cancer screening programme, which includes systematic examinations for women between 50 and 60 years of age, along with free, on demand, clinical breast examinations. Screening for colorectal cancer is conducted as part of a free check-up programme offered annually to all Albanian citizens aged between 35 and 70 years of age. In September 2023 Albania adopted the 2023 – 2026 **mental health** action plan, which aims to promote care mental health and well-being for all citizens.

On **nutrition and physical activity**, malnutrition remains a critical issue, especially for children and pregnant women. Albania needs to develop a nutrition plan and raise awareness in schools and community centres of the risks of malnutrition. On **drug abuse prevention and harm reduction**, prevention activities are only sporadic, and should be conducted in a more systematic way. The National Drug Observatory, established in 2011, should be given adequate resources to function fully.

On **health inequalities**, implementation of the 2020-2025 primary healthcare strategy should provide better access to healthcare services for vulnerable communities, as well as increased community primary healthcare coverage, giving priority to vulnerable groups. Health inequalities have a particular impact on women, especially women from rural areas and disadvantaged communities, women with disabilities, Roma and Egyptian women (who face

problems of access to abortion), LGBTIQ people and migrant women. Further efforts are needed to provide healthcare to people with disabilities and to populations in rural and remote areas, and to improve mental health services for children. The national plan for equality, inclusion and participation for Roma and Egyptians 2021-2025, designed to improve their access to healthcare, is ongoing. There has been a slight increase in the number of Roma and Egyptians in informal settlements benefiting from health services. However, the recently established post of Roma and Egyptian health mediator is not yet operational and they continue to face barriers in accessing health services. Health insurance coverage for Roma and Egyptians remains low.

On anti-corruption regarding consumer protection, agencies and the customs administration that ensure market surveillance have rules on transparency, ethics and conflicts of interest, and are subject to audits. As regards public health there are specific anti-corruption measures in place for cosmetics, and there are systems in place to control pharmaceutical manufacturers and to track veterinary medicine stocks. The national medicines agency has a range of anti-corruption and whistle blower provisions in place.

CLUSTER 3: COMPETITIVENESS AND INCLUSIVE GROWTH

This cluster covers: digital transformation and media (Chapter 10); taxation (Chapter 16); economic and monetary policy (Chapter 17); social policy and employment (Chapter 19); industrial policy (Chapter 20); science and research (Chapter 25); education and culture (Chapter 26); and customs union (Chapter 29).

There is a moderate level of preparation in Albania in many areas linked to competitiveness and inclusive growth, namely digital transformation and media, taxation, social policy and employment, enterprise and industrial policy, education and culture and customs union. Albania has some level of preparation science and research. The country has made good progress in digital transformation and media, by joining the digital Europe programme in 2023, and on enterprise and industrial policy as well as limited progress in the area of taxation. The country is in between a moderate and a good level of preparation on economic and monetary policy, as the governance and monetary policy of the Bank of Albania were appropriate and effective to deal with the crisis caused by Russia's war of aggression against Ukraine; more efforts are required regarding its independence. With only limited progress made on the customs union, more efforts are required as well in pursuing the fight against smuggling, corruption and imports of counterfeit products.

This cluster and the reforms concerned have significant links to Albania's economic reform programme. Socio-economic reforms must be pursued to help address the existing structural weaknesses, low levels of competitiveness, high unemployment, and the economic impacts of the Russian war of aggression against Ukraine.

Chapter 10: Digital transformation and media

The EU supports the smooth functioning of the internal market for electronic communications, electronic commerce and audiovisual services. The rules protect consumers and support the universal availability of modern services.

Albania is **moderately prepared** in the field of digital transformation and media. **Good progress** was made on following up the recommendations of last year's report, with the implementation of the 2022-2026 digital agenda and e-government services offering 95% of public services online. A Law on electronic communication is yet to be adopted to align with the new European Electronic Communications Code. The Law on audiovisual media was amended in May 2023, to align with the 2018 EU Directive on audiovisual media services

ensuring country's continuous participation in Creative Europe Programme. The Law on electronic identification and trust services is yet to be adopted. In 2023, Albania signed the association agreement joining the Digital Europe programme and introduced coding as a subject for students in the first grade.

In the coming year, Albania should in particular:

- complete the extension of the 112 emergency number to the whole country;
- adopt relevant legislation to implement the new European Electronic Communications Code and enact the law on cybersecurity to ensure closer alignment with the EU Directive on measures for a high common level of cybersecurity across the Union (NIS II);
- improve the collection of statistical data on digital performance and digital competitiveness.

On **electronic communications and information and communications technologies (ICT)**, limited progress was made in implementing the 112 single European emergency number. An interinstitutional working group was set up to prepare a draft Decision for the Council of Ministers on rolling out 112 across the country.

In 2022, fixed internet broadband reached 585 285 entities (535,049 household subscribers and 50,236 businesses), up 5% from 2021. The penetration rate was about 21% of the population, with 80% of households covered by fixed broadband connections. There is still a gap in fixed internet broadband penetration between urban and rural areas. Only 20% of total number of fixed broadband connection is in rural area, while the rural area population is about 40%. The mobile penetration rate at the end of 2022 was 77% compared with 73% at the end of 2021. By the end of 2022, there were 2.14 million active users of mobile broadband, slightly up from 2021 (2 million).

In the area of **information society services**, the strategic documents of the 2022-2026 digital agenda of Albania are in line with the EU Digital Decade programme. Authorities need to adopt the new Law on Electronic Communications to align with the 2018 European Electronic Communications Code Directive.

Albania concluded an agreement for its association to the Digital Europe Programme in June 2023. On digital skills, coding has been introduced in 100 schools from the first grade for the 2022-2023 academic year, by setting up 100 smart labs in schools across the country.

As regards **online public services**, during the reporting period 95% of applications for 1 217 public services were done online, with 7 833 332 e-sealed documents downloaded in 2022 by more than 2.8 million registered users on the e-Albania portal. Of these, only about 1.5 million are active users. This adds up to 14 276 256 individual uses of e-services in 2022. Authorities need to ensure and facilitate equal access to online services for all citizens and to enhance efforts to align with the Digital Services Act and Digital Markets Act.

Albania concluded discussions on the allotment of bandwidth with neighbouring countries in September 2022, while the migration strategy was also developed in 2022. The Ministry of Infrastructure and Energy (MIE), along with the Electronic and Postal Communications Authority, made an assessment on the building permit for electronic communication networks. Amendments to the Decision of the Council of Ministers on building permits for electronic communications networks were adopted, aiming to simplify the process to grant permits for the deployment of the 5G network. In July 2022 an interinstitutional working group on the release of Digital Dividend 2 was set up, which is responsible for coordinating activities and for proposing to the competent bodies all the pieces of implementing legislation

that will be necessary to carry out this initiative including the release of the 700 MHz band. In December 2022, Albanian operators signed the cooperation agreement to reduce data roaming charges between the Western Balkans and the EU. The Law on electronic identification and trust services, needs to be adopted.

In response to the large-scale cyber-attacks that were detected in July and September 2022, the government has begun to considerably strengthen its cybersecurity architecture, including by appointing a National Coordinator for Cybersecurity, setting up a government Cybersecurity Operations Centre, developing a new, yet to be adopted, Law on cybersecurity aiming to further align with the NIS2 directive. The list of critical information infrastructures and important information infrastructures, as approved by the Decision of the Council of Ministers, has increased from 140 to 289, and now covers sectors such as government, energy, health, finance, transport, digital and water supply. The 2020-2025 national strategy for cybersecurity and its action plan are in place. The National Authority on Electronic Certification and Cybersecurity is preparing to set up a national operations centre for cyber defence, including by appointing a National Coordinator for Cybersecurity and allocating additional resources. A government cybersecurity operations centre was created within the National Agency for Information Society and is responsible for cybersecurity incidents and crises within governmental systems. Albania concluded agreements on cybersecurity with Israel, Saudi Arabia and the United Arab Emirates. Authorities need to further strengthen cyber security capacities including through awareness raising activities and trainings. Stronger cooperation with the private sector and civil society is needed.

Albania still needs to improve the collection of statistical data on digital performance and digital competitiveness.

On **audiovisual policy**, in May 2023 authorities adopted amendments to the Law on audiovisual media, aligning with the EU's 2018 Audiovisual Media Services Directive, thus ensuring the country's continued participation in the Media and Cross-sectoral strands of the Creative Europe programme. In July 2023, the Audiovisual Media Authority approved the new Broadcasting Code defining principles, rules, requirements and practices of audio and audiovisual broadcasting in Albania.

In March, the MIE approved the action plan on integrity risk management for 2022-2025, while the National Authority on Electronic Certification and Cybersecurity, the Electronic and Postal Communications Authority and the MIE have in place their respective transparency programmes.

Chapter 16: Taxation

EU rules on taxation cover value-added tax, excise duties as well as aspects of corporate taxation. They also cover cooperation between tax administrations, including the exchange of information to prevent tax evasion.

Albania is **moderately prepared** in the area of taxation. **Limited progress** was made, through some streamlining of excise rates, consolidation of the scope of the fiscalisation process and in the effective implementation of financial account information with EU Member States in line with the OECD Global Standard. The adoption of the new income tax law aims at partial alignment with the anti-tax avoidance and merger directives. The country remained on the FATF's list of jurisdictions under increased monitoring as the draft tax and criminal amnesty law that Albania sent to them in early 2022 did not comply with FATF principles or best practices. In June 2023 FATF decided to propose an on-site visit, which took place in August and led to Albania's delisting in October. Nevertheless, Albania should ensure that any future VTC law (including potential criminal amnesties) complies with the

EU *acquis* and international standards. Albania committed to amend or abolish the industrial incentive regime by 31 December 2023, since it has been identified as a potentially harmful tax regime within the scope of the Forum on Harmful Tax Practices.

In the coming year, Albania should in particular:

- reduce tax expenditures, in particular due to exemptions;
- simplify the taxation system to further encourage more tax compliance;
- amend or abolish by 31 December 2023 the industrial incentives regime, considered as a potentially harmful tax regime within the scope of the Forum on Harmful Tax Practices.

On **indirect taxation**, the standard VAT rate is 20% and the reduced rates are 6% and 10%. There remains a substantial number of exemptions not foreseen in the EU *acquis*. In 2022, in response to the energy price crisis, Albania exempted from VAT the import and sale of electricity through the Albanian power exchange. In addition, the import and supply of firewood were also exempted from VAT until the end 2023. The quarterly total of VAT refund arrears is published regularly. The total of outstanding VAT reimbursement arrears was almost entirely cleared by the end 2021, and this has remained so in 2022, thanks in part to the use of an automated risk-based procedure.

Excise taxation is partially aligned with the EU *acquis*. As of July 2022, the excise level for liquefied gas is unified, irrespective of purpose of use. In 2023, the reduced rates for small producers of beer and spirits were abolished. The excise duty for accumulators was removed in 2022.

The new calendar for cigarette excise rates, approved in November 2021, continued to be applied. It envisages a 15% increase over 4 years to approximately EUR 65 per 1 000 cigarettes by 2026, thus gradually aligning with the EU minima, which currently stands at EUR 90 per 1000.

On **direct taxation**, financial institutions are legally required to calculate, withhold and declare income tax on income from savings. On corporate income tax, a number of provisions are partially aligned with the Anti-Tax Avoidance Directive. In March 2023, Albania adopted the Law on Income Tax in March 2023, which is partially aligned with provisions of EU Directives on anti-tax avoidance and mergers.

Albania has committed to amend or abolish by 31 December 2023 the industrial incentives regime.

Although the Financial Action Task Force assessed that Albania has substantially completed its 2020 action plan, the country remained on the FATF's list of jurisdictions under increased monitoring as the draft tax and criminal amnesty law that Albania sent to them in early 2022 did not comply with FATF principles or best practices. In June 2023 FATF decided to propose an on-site visit, which took place in August and led to Albania's delisting in October. Nevertheless, Albania should ensure that any future VTC law (including potential criminal amnesties) complies with the EU *acquis* and international standards'. On **administrative cooperation and mutual assistance**, Albania ratified a Double Taxation Agreement with Finland in 2023 and signed a double taxation agreement with Slovakia in May 2023. Albania is yet to conclude double taxation agreements with Denmark, Cyprus, Lithuania, Portugal.

The Law on automatic exchange of information on financial accounts is partially aligned with the relevant 2014 EU Directive. Albania has automatically exchanged financial account information with 77 jurisdictions (including 24 EU Member States) in 2022 and has received

information from 68 jurisdiction (of which 21 EU member States) within the framework of the OECD common reporting standard.

Regarding **operational capacity**, the number of vacancies in the tax administration remains high, up from 155 vacancies in 2022 to 181 in March 2023. The annual training programme is needs-based and 1 040 employees of the General Directorate of Tax (GDT) received training in 2022. **Computerisation** of the fiscalisation process is considered fully complete. All B2G, B2B and B2C transactions are carried out only through the fiscalisation system and the information is reported in real time to the tax administration. Efforts need to be kept up to ensure and increase compliance and to increasingly use the available data in tax monitoring and risk assessments.

Chapter 17: Economic and monetary policy

EU rules require the independence of central banks and prohibit them from directly financing the public sector. Member States coordinate their economic policies and are subject to fiscal, economic and financial surveillance.

Albania is **in between moderate and a good level of preparation** in the area of economic and monetary policy. It made **some progress** as the governance and monetary policy of the Bank of Albania were appropriate and effective to deal with the crisis caused by Russia's war of aggression against Ukraine. It made progress on last year's recommendations to improve government's policy coordination and consultation mechanism with non-governmental stakeholders, though it still needs to improve the effectiveness of its stakeholder consultations. The lower number of budget amendments improved the credibility of the budget process. However, alignment of the Law of the Bank of Albania with the EU *acquis* was postponed. Alignment of government and national accounts to ESA2010 increased, and Excessive Deficit Procedures notifications improved (Albania regularly submits this on a best-effort basis). However, significant improvements are still needed to achieve full compliance with ESA 2010.

In the coming year Albania should, in particular:

- align the legislation on the personal independence of the Bank of Albania's governor as well as on monetary financing of the public sector with the EU *acquis*;
- improve intra-governmental coordination mechanisms and the effectiveness of its non-governmental stakeholders consultations;
- begin reporting on long-term fiscal sustainability of its social security system.

On **monetary policy**, the Law on the Bank of Albania (BoA) sets out BoA's primary objective as achieving and maintaining price stability. The inflation target is 3%. The BoA is financially independent, with sufficient instruments, competence and administrative capacity to conduct an effective monetary policy. It has a fully operational supervisory council, appointed by and accountable to the parliament which act independently. However the personal independence of the central bank governor is only partly aligned with the EU *acquis*. Monetary policy is conducted within a free-floating exchange rate regime using a standard set of instruments: i) open market operations; ii) standing facilities; and iii) required minimum reserves. Albanian legislation allows the BoA to provide limited financing to the government under certain conditions, which is not in line with the EU *acquis*, though this option was not used since 2010. The planned alignment with the EU *acquis* was postponed in view of the recent external shocks, the shallow secondary market for government securities and persisting high short-term government debt roll-over needs.

The BoA continued to normalise its monetary policy in response to inflation overshooting its target since March 2022 by gradually increasing the main policy rate up to 3% in March 2023, and raising the rates for overnight deposit and lending facilities by 1.9pps and 3.1pps respectively. It continued to provide liquidity to the economy (the unlimited provision of liquidity to the economy was stopped early 2022), and continued to publish the calendar as well as quarterly statements of its interventions in the foreign exchange and money markets. Increasing interest rates for commercial bank loans and deposits indicate the effective transmission of the monetary policy normalisation.

In November 2022, the supervisory council of the BoA approved the bank's updated 2023-2025 Medium-Term Development Strategy, as well as its 2023-2025 budget. This includes the objective to strengthen BoA's independence, governance, transparency and accountability in accordance with the gradual alignment with of the EU *acquis*. In particular, it aims at further aligning its governance standards on its internal audit by including the use of updated International Financial Reporting Standards (IFRS), operational risk management, business continuity management. It also foresees promoting the further development of the secondary market for government securities, to improve the general conditions for domestic government financing. Given the changed external and financial situation, BoA stated that it will continue its intermediary activity of buying and managing of Government securities accounts from households, revising its plan of the 2022 strategy to phase out this activity. On 1 March 2023, BoA approved its 2022 annual report, which includes its externally audited financial statements, and subsequently presented to the national parliament's economic and financial committee.

In the area of **economic policy**, Albania has complied with its set of fiscal rules since 2016. It added a new numerical rule to achieve a neutral or positive primary balance from 2024, which considerably strengthens the fiscal rules framework. The 2023-2025 medium-term fiscal framework foresees compliance with all fiscal rules. Albania has no independent fiscal institution to monitor compliance with its fiscal rules and the quality of its forecast, instead it is obliged by law to use the IMF's forecast for nominal GDP as basis for calculating the public debt-to-GDP ratio and other fiscal indicators. This is not in line with the EU *acquis*. Budget implementation is regularly audited by the Supreme State Audit Institution. In 2022 Albania used secondary legislation four times, instead of the regular legislative process, to amend its budget, but did not introduce any budget amendment in the first half of 2023.

The presentation and publication of the annual budget includes a medium-term fiscal framework with a 3+ year horizon on a rolling basis, a forecast of government debt and of the macroeconomic development, as well as a fiscal risk statement. The accompanying "citizens budget" includes a list of public investment projects and PPPs. The budgetary framework's macro-fiscal analysis could be improved and the addition of long-term fiscal sustainability indicators. Budget preparation involves all governmental units, but the expenditure plans of local governments are not detailed in the framework. Budget planning improved in 2023, being based on the previous year's actual fiscal outcome, instead of using the previous year's budget plan.

Albania submitted its Economic Reform Programme (ERP) 2023-2025 on time and adopted it on 1 March 2023. The publication of the draft ERP for consultation was two weeks late and the lack of comments to the report underlines the need to upscale outreach to civil society and improve stakeholders' awareness of the ERP process. The mandatory publication of the government's draft documents, including notifications, regulatory impact assessment reports, explanatory notes and public consultation reports on the online platform increased governmental transparency. However, the lack of public comments on the platform shows

that the government also needs to organise direct exchanges with stakeholders and to demonstrate that they are taken into account. In this context Albania made progress by mapping the stakeholders of the line ministries by end 2022 in order to notify them about public consultations in their area of interest. In addition, oversight and quality control of the public consultation process are being reorganised within the government. Albania still needs to improve the overall effectiveness of its stakeholder consultation and its inter-institutional coordination mechanism.

National account statistics are partially in line with European System of National and Regional Accounts (ESA 2010), but substantial further work is necessary to improve alignment and compliance of both the annual sector accounts and financial accounts. Albania provides 12 of 14 indicators for the macroeconomic imbalances procedure (MIP scoreboard) of a medium compliance level. In cooperation with the Ministry of Finance and the Bank of Albania, the Albanian statistical office INSTAT is compiling the excessive deficit procedure statistics (EDP) and the government finance statistics (GFS). Work on both compilations is continuously progressing, but substantial further work is necessary to reach the full compliance with the ESA2010 requirements. Albania regularly submits most of the excessive deficit procedure notification tables to Eurostat on a best-effort basis but not for publication and without completed questionnaires. The Albanian statistical authorities should lift the embargo on publishing the GFS data submitted to Eurostat. From October 2022, Albania has transmitted EDP tables through the new “Albanian Integrated GFS Compilation System” (AIGCS), which aims to improve data consolidation across the government units and data consistency.

Chapter 19: Social policy and employment

EU rules in the social field include minimum standards for labour law, equality, health and safety at work and non-discrimination. They also promote social inclusion and social protection, and social dialogue at EU level.

Albania is **moderately prepared** on social policy and employment and made **good progress** during the reporting period, increasing the quality and effectiveness of labour market institutions and improving access to jobs. In line with last report’s recommendations, the new 2023-2030 national employment and skills strategy was adopted. It focuses on the quality of jobs, skills development and better matching of demand with supply in the labour market. The national implementation plan for the Youth Guarantee scheme was approved, as an annex to the 2023-2030 national strategy. Efforts should continue on strengthening the social protection system, alongside the labour market measures.

In the coming year, Albania should:

- adopt the new 2023-2030 strategy for occupational health and safety, with a focus on strengthening institutional capacity to effectively enforce compliance with the legislation, and adopt the 2024-2030 national social protection strategy;
- begin piloting the Youth Guarantee targeting youth unemployment, especially young people who are not in education, employment or training (NEETs), and start to roll it out into full implementation;
- increase the budget allocation, implementation and monitoring of the social fund, strengthen the capacity of local government, and revise the procurement procedures for social care services.

On **labour law**, implementation of the law as amended by the 2015 Labour Code is ongoing. On **labour inspection activities**, 22% of the planned inspections during the previous year were first time inspections while the total number increased significantly in 2022 to 10 154 (up from 7 039 in 2021), detecting 1 799 undeclared workers (1 092 in 2021). Progress was made on promoting the e-inspection platform, which increased the quality of labour inspections, however more efforts are needed to reduce informality. In 2022, 13.4% of inspection cases found no violation. Although the State Labour and Social Services Inspectorate stepped up efforts to build human resource capacity through training and monitoring, the capacity of the social services inspectorate remains very limited. In 2022, 135 inspections of social care services were carried out.

On **child labour**, the system for monitoring child labour and other forms of exploitation, and the coordination of law enforcement between the Agency for the Protection of Children's Rights and the Labour Inspectorate, is weak.

On **health and safety at work**, efforts need to be stepped up to ensure the further alignment of the national legislation with the EU acquis. Authorities need to strengthen their institutional capacities and inspections processes. Albania needs to develop a new 2023-2030 strategy for occupational health and safety in line with the EU strategic framework on health and safety at work 2021-2027 and its priorities.

On **social dialogue**, in May 2022 the Council of Ministers approved the Decision 'On the determination of employers' organisations and trade union organisations in the National Labour Council', and in July 2022 the Ministry of Finance and Economics issued an order 'On the appointment of members and candidates of the National Labour Council, and representatives of employers' and employees' organisations. Progress was made on strengthening the capacity of the newly assigned staff of the National Labour Council's secretariat. However, the specialised commissions of the National Labour Council are yet to become operational. Efforts were made to enhance the tripartite collaboration between the State Labour and Social Services Inspectorate, trade unions and business organisations.

On **employment policy**, Albania is implementing the new 2023-2030 national employment and skills strategy, adopted in March 2023.

Labour market indicators improved in 2022. Employment increased by 3.9% on average in 2022, up from a 0.5% increase in 2021. All sectors have experienced higher employment rates. During the fourth quarter of 2022, the employment rate of people aged 15-64 was 65.5%, up from 62.1% in the fourth quarter of 2021. Despite the improvement in the employment rate in recent years, Albania lags EU averages. The employment rate has especially improved among women (61.4% in Q4-2022), but the unemployment rates of women and young people remain high. Gender inequality in employment remains problematic, with the employment rate for men exceeding the rate for women by 10.4%. In the fourth quarter of 2022, the employment rate for young people aged 15-29 was 44.6% (47.5% for men and 41.8% for women). Despite an increase of 1.8% compared with the previous year, youth employment lags the rest of the adult population.

The **unemployment** rate in the fourth quarter of 2022 was 11.0% (11.0% for men and 11.1% for women) decreased by 0.4% compared to the fourth quarter of 2021. The structure of the Ministry of Finance and Economy (MoFE) was revised in 2023 to add resources to the General Department for Employment and Skills. MoFE still needs to fill all vacant positions.

The National Agency for Employment and Skills (NAES) filled 70% of its vacancies by the end of 2022. In 2022, 15 658 adult participants attended vocational training out of which 7 191 were females. In 2022, 26 808 registered unemployed jobseekers found a job through

labour offices compared with 24 158 in 2021. As of May 2023, 17 935 young people not in employment, education or training (NEETs) were registered in the NAES database. In 2022, Albania continued to implement the reformed employment promotion programmes packages in all regions, with a focus on the most vulnerable people. A new programme to subsidise the development of digital skills was adopted and began operating. Progress has continued with the Social Employment Fund, which aims to help persons with disabilities to find work.

According to the Albanian National Institute of Statistics (INSTAT), in 2022 23.4% of **young people** registered as **neither in employment, education or training (NEET)** were looking for work, up from 22.9% in 2021. The relevant authorities adopted the action plan to implement the Youth Guarantee, which focuses on NEETs. The official unemployment rate in 2022 for young people aged 15-29 was 20.7%, compared with 20.9% in 2021. It rose by 0.9% in the fourth quarter of 2022 compared with 2021.

On the **employment of persons with disabilities**, the 2023-2030 national employment and skills strategy states that the levy on employers who do not fill their quota of employees with disabilities will be collected through the tax system.

On **social protection and inclusion**, the MoHSP continued its efforts to consolidate the economic aid scheme (a scheme for social assistance payments to households experiencing poverty), implementing a new biopsychosocial evaluation system for persons with disabilities, and to reform the system social care service. MoHSP needs to finalise the evaluation of the current social protection strategy and progress with the design of the new 2024-2030 national strategy on social protection, in consultation with stakeholders. Progress was made on the implementation of the exit strategy for recipients of economic assistance (Ndihma Ekonomike). A protocol for making referrals is in place and the regional actors are profiling beneficiaries of working age.

There is some progress in implementing the strategy on **social protection**, in terms of rolling out the reform of the biopsychosocial assessment of persons with disabilities and reaching more beneficiaries through social care services. The total budget in 2023 of the social protection programme has increased by 5% compared with 2022. The effectiveness of the targeting of the economic aid scheme needs to be assessed through field research and by using microdata from Eurostat on income and living conditions and from household budget surveys, to identify groups in need that do not yet benefit from the scheme. Authorities need to finalise the impact assessment of the adequacy of exit strategy benefits, increase their amounts, establish a mechanism for their annual indexation and implement the roadmap on the revision of benefits that will be based on this assessment. With the amendments to the Law on social assistance, adopted in 2022, additional social protection measures were introduced to mitigate the effects of Russia's war of aggression against Ukraine. The social resistance package approved in March 2022 included EUR 48 million as an additional contingency fund for vulnerable groups. The percentage of population receiving basic package of social care services has been increased from 0.2% in 2019 in 1.5% in 2023.

The MoHSP needs to strengthen its efforts on monitoring the 2021-2025 national action plan on **persons with disabilities**. Since 2023, reform of the biopsychosocial evaluation is being implemented throughout the country, with 36 multidisciplinary commissions in 12 regions.

On the inclusion of **Roma and Egyptians**, following the approval of the new 2021-2025 national action plan for equality, inclusion and participation of Roma and Egyptians in Albania, in 2023 employees in line ministries, regional directorates, municipalities and other local institutions were trained on how to report progress indicators in the ROMALB electronic system (242 officials are active users). However, the institutional capacity of

MoHSP, in charge of the coordination of Roma-related policies, remains weak in terms of human resources. Roma and Egyptians continue to face skills-related challenges in the labour market. A significant proportion of unemployed people registered for economic assistance have not completed primary education. The inclusion of Roma in jobs in the public administration needs to improve.

The MoHSP prioritised the reform of the digitalisation of social care services through the National Electronic Register of Social Care Services, which has not been fully operational since July 2022 due to the cyberattack on all government data systems.

All 61 municipalities have approved local social care plans. Authorities need to ensure that social services are established and functioning across all municipalities. . During 2022, 27 community-based social care services at municipality level have been set up and 13 specialised services at county level. For 2023, 13 community-based social care services at municipality level and 13 specialised services at county level have benefited the continuation of financial support. For 2023, the Social Fund's budget increased to EUR 2.8 million, 50% increase compared to 2022. Nevertheless, local governments, frequently lack the funding and resources to effectively set up manage and implement social services.

On **non-discrimination in employment and social policy**, Albania and the ILO signed the 2023-2026 decent work country programme, which aims to address key problems around working conditions and social protection such as the work accidents, effective protection at work by setting up effective mechanisms to tackle violence and harassment, low levels of wages, and insufficient coverage of the social security system.

On **equality between women and men in employment and social policy**, according to INSTAT's labour force statistics for the fourth quarter of 2022 there is a gender employment gap of 11.6% for the group aged 15-64 years old. 69.1% of women participate in the labour force, compared to 80.7% of men. In 2022, the labour force participation rate for women increased by 5.9% for women and 3.0% for men compared with the same (fourth) quarter of 2021. The National Council for Gender Equality approved in June 2023 the Action Plan for the implementation of 'Women, Peace, Security' 2023 – 2027 resolution.

On **fighting corruption**, in April 2022 the MoHSP adopted its integrity strategy. The Institute of Social Security has a code of ethics in place. Authorities use online services in order to increase transparency such as the Economic Aid System platform which manages the state database for economic assistance and the process to apply for and grant economic assistance.

Chapter 20: Enterprise and industrial policy

EU industrial policy strengthens competitiveness, facilitates structural change and encourages a business-friendly environment that stimulates small and medium-sized enterprises (SMEs).

Albania is **moderately prepared** in the area of enterprise and industrial policy. **Some progress** was made on the implementation of the recent legislation on micro, small and medium enterprises, on start-ups, and on the continuation of the business support programmes in line with the business and investment development strategy. Despite these improvements, and the government's ongoing efforts to tackle the informal economy and corruption, the recommendations in the 2022 report were only partly addressed.

In the coming year, Albania should, in particular:

- further address the main challenges to the business environment by reducing the regulatory burden, increasing the participation of businesses in the funding programmes, reducing the informal economy and corruption, and increasing business support services;
- accelerate the full alignment of national legislation with the EU *acquis* on late payments;
- adopt the unified investment Law and address the challenges to competitiveness and growth that were highlighted in the joint recommendations of the economic reform programmes of 2023-2025.

Albania continues to implement its 2021-2027 business and investment development strategy, which focuses on SME development and innovation; investment, attractiveness and internationalisation; and human capital development. It is also implementing its 2020-2024 inclusive and sustainable industrial development programme. Together, the business and investment development strategy and the inclusive and sustainable industrial development programme create the strategic framework for Albania's **enterprise and industrial policy**. Albania follows the implementation of the EU Small Business Act (SBA) and takes SBA recommendations into account when drafting SME policy. A 3-year action plan (2022-2024) to implement the mining strategy was also adopted in June 2022. Albania is implementing its 2017 national strategy on innovation and technology and is currently drafting a smart specialisation strategy. The Law on start-ups in innovation was amended to set up the state start-up agency, and to cover digital nomads.

The business community asserts that the key persistent challenges that harm the business climate are corruption; the informal economy and unfair competition; the lack of transparency in public procurement procedures (especially for public-private partnerships); the lack of predictability of legislation; bureaucracy, and an inefficient public-private consultation mechanism. Lengthy court procedures also remain a concern, despite progress on justice reform. Issues with property titles remain a persistent obstacle to foreign investors. Other areas that need to be addressed include the weak diversification of exports and a high dependency on imports. Businesses also face obstacles due to a lack of skilled workers and access to finance. They in turn need to adjust to modernisation and green process, digitalisation, innovation, and to e-commerce.

Despite the increased business costs, companies have responded positively to the government's decision to increase the minimum wage, as a way to keep workers, particularly in labour-intensive companies. The tax administration continued its efforts to tackle the informal economy by expanding the taxpayer base, enforcing compliance and working to create a level-playing field for economic operators, including in the tourism and construction sectors. According to Labour Inspectorate data for 2022, the tourism (hotel, bar and restaurant sector had the highest exposure to informal employment accounting for 44% of total cases identified, followed by manufacturing with 25% and construction with 21%. Due to intensified efforts to tackling informal employment, the number of identified informal workers increased by over 64% in 2022 compared 2021. More efforts are also required to increase productivity in the economy and to improve the business climate.

Albania continues to privatise state assets, partly through privatisation vouchers which are currently valid until December 2023. The Law on the establishment and operation of economic zones and the Albanian Investment Corporation enable the environment to develop projects to revitalise old state-owned sites by attracting investment, though no progress has been made on the adoption of the unified investment Law. In November 2022, a government decision established the Tirana Economic Development Area (TEDA), which is expected to attract investors in the automotive, information and communication technology, and

electronic equipment industries. In June 2023 the wining company to develop TEDA was chosen after a competitive procedure. During the reporting period the national strategic investment committee, chaired by the Prime Minister, continued to adopt decisions on cases of investors benefiting from the status of strategic investor, mainly in the area of tourism.

In the area of **enterprise and industry policy instruments**, the Albanian Investment Development Agency operates an online platform to help businesses access information on financing opportunities. The agency also provides training on e-commerce and has published a digital self-assessment tool and guidance to help SMEs start e-businesses and e-commerce. Regarding entrepreneurs skills, intensive trainings for startupperes are offered by the Albanian Information Society Agency through ‘TechSpace’, and entrepreneurship has been added into the pre-university curriculum. Albania is implementing a 2021-2024 action plan on the facilitation and development of e-commerce, through establishment of an inter-ministerial working group, in line with the commitments among CEFTA parties.

Further amendments to the Law on late payments entered into force in May 2023 in order to regulate late payments on transactions between farmers and the agro-companies that collect, process and export agricultural products. This is expected to also help to formalise transactions in this sector. Further alignment with the EU *acquis* needs be ensured as soon as possible, especially to address issues related to proof of property ownership property (titles), and recovery procedures for unchallenged claims. Albania’s definition of SMEs is partly aligned with the EU one, on the number of employees, however national capacity to support SMEs remains limited. On policy instruments, negotiations on Albania’s participation in the EU “Single Market Programme” are underway.

On **sectoral policies**, Albania continues to implement the 2019-2023 national strategy and action plan for sustainable development and tourism, and in June 2023 it launched the mobile application for tourism events in Albania (TEA). Some progress was made in identifying niche markets in the export area. Issues related to transport costs, simpler export procedures, market research and advice on improving product diversification, are all areas that need to be further addressed. Albania continued to provide incentives for the agro-processing industry which faces challenges including labour shortages and low levels of mechanisation, digitalisation and innovation. In June 2023, the government introduced fiscal relief measures for export-oriented businesses who faced high costs due to local currency (ALL)’s appreciation against Euro by almost 7 % between January-May 2023, allowing for postponement of profit tax payment in 2024. Albania also adopted a 2022-2026 cross-sectoral strategy and action plan on the digital agenda. Investors are increasingly interested in renewable energies, particularly since the adoption of the Law on renewables and the establishment of the Albania Power Exchange. Further clarity on the categorisation of land used for agricultural purposes and land that can be rented or used to produce renewables were introduced in the amended Law on protection of agriculture that was adopted in July 2023.

Chapter 25: Science and research

The EU provides significant support for research and innovation. All EU Member States can participate in the EU’s research and innovation programmes and benefit from them, especially where there is scientific excellence and solid investment in research and innovation.

Albania has some level of preparation in the area of science and research. Some progress was made over the reporting period, by setting up a national team to develop the smart specialisation strategy and by strengthening innovation support measures such as ensuring sufficient funding to the start-up fund and further progressing the entrepreneurial discovery

process of the smart specialisation strategy. Last year's recommendations have not been fully addressed and therefore remain valid.

In the coming year, Albania should in particular:

- increase investment in research, in line with its own commitments and the new European Research Area priorities;
- complete the smart specialisation strategy, adopt the 2023-2030 national strategy on scientific research and innovation and adopt the new law on scientific research;
- produce statistics and reliable data on science and technology.

On **research and innovation policy**, the interinstitutional working group monitoring the implementation of the 2017-2022 national strategy for scientific research, technology and innovation recommended open online access for all scientific publications financed by public funds. The working group also recommended revising the implementing legislation to create legal and fiscal incentives to encourage businesses to finance scientific research. The new 2023-2030 national strategy on scientific research and innovation, which aiming at addressing these recommendations (which are in line with the new European Research Area), needs to be adopted. Albania needs to adopt the new law on scientific research.

Albania increased funding for scientific research to 0.08% of GDP in 2023, up from 0.05% in 2022 and 0.04% in 2021, however this is still far below the target 1% of GDP by 2030. Research funding as a percentage of public expenditure amounted to 0.17 % of GDP in 2022. INSTAT needs to produce a complete data set on scientific research and innovation.

The methodology to increase funding for research and science needs to be further developed and aligned with the EU *acquis*. Information on the budget allocated for R&D has not yet been published due to the poor quality of data. In April 2023, for the first time, the National Agency for Science Research and Innovation launched a call for proposals to implement the university-business cooperation programme. Albania needs to further strengthen its research and innovation capacity at national level, by promoting links between academia, industry and government, and in the fields of open access and open data. A new Law on the creation, organisation and operation of technology and science parks was also adopted in July 2022. Since 2022, the start-up fund has been managed by the Minister of State for the Protection of Entrepreneurship. The fund granted EUR 2.5 million to 58 beneficiaries in 2022.

The qualitative and quantitative phase was completed for the development of a **smart specialisation strategy**. However, the second phase of the entrepreneurial discovery process remains to be finalised. The Deputy Prime Minister's Office is now responsible for coordinating the development of the smart specialisation strategy.

On the **EU framework programmes**, Albania is fully associated to Horizon Europe. Its participation in the programme in 2022 has improved since Albania has been participating in the EU's Framework Programmes for Research and Innovation (9 projects with a total funding of EUR 1.7 million). The authorities need to make efforts to further increase participation of the private sector in Horizon Europe. National innovation efforts should be aligned with the new European innovation agenda. Albania needs to strengthen its efforts in participating in the activities of the European Institute of Innovation and Technology (EIT).

Regarding transparency, the Ministry of Education and Science has created an electronic register for inquiries recording 45 exchanges in the first quarter of 2023. Authorities have established a contact point to denounce corruption and abuse of EU funds.

Albania needs to make further efforts to produce reliable data on research and innovation. Albania was included for a second consecutive year in the European Innovation Scoreboard as an emerging innovator facing however a decrease in its score from 41.7% in 2022 to 41.1% of the EU average in 2023.

Chapter 26: Education and culture

The EU supports cooperation in education and culture through funding programmes and the coordination of Member State policies through the 'open method of coordination'. The EU and the Member States must also prevent discrimination and ensure quality education for children of migrant workers, including those from disadvantaged backgrounds.

Albania is **moderately prepared** in the field of education and culture. **Some progress** was made, with further strengthening the new National Agency for Employment and Skills, and the continued restructuring of the National Agency for Education, Vocational Training and Qualifications. The new 2023-2030 national strategy on employment and skills and the new 2022-2029 national youth strategy place an emphasis on improving the quality of Vocational Education and Training (VET) and increasing the skills of young people. Further efforts are required to strengthen the quality and inclusiveness of education, while appropriate resources should be allocated to ensure that the new policy reforms are implemented. The implementing legislation of the Law on cultural heritage and museums is still to be finalised.

Some of last year's recommendations were not fully addressed and remain valid. In the coming year, Albania should in particular:

- ensure sufficient resources for the optimisation of the VET system in line with the needs of the labour market;
- improve the professional development and training of teachers and trainers, with a focus on pedagogical skills related to the implementation of the competence-based inclusive approach and digitalisation from pre-primary to university level, including VET education;
- adopt the implementing legislation for the Law on cultural heritage and museums.

On **education and training**, the reconstruction of the educational facilities damaged by the 2019 earthquake remained a priority. During the reporting period, 17 education facilities were repaired. Currently, 79 educational institutions have been either reconstructed or repaired, while work is ongoing on 105 institutions. The Ministry of Education and Sports (MoES) has based its **anti-corruption policy** on transparency through digitalisation, by implementing its transparency programme, by monitoring and auditing through internal and external audit mechanisms, and by strengthening integrity with the adoption of integrity plans for the MoES and the Ministry of Culture in April 2022. Greater efforts are needed to efficiently manage the resources offered by donors and funding from the state budget.

The MoES planned the progressive design and implementation of information and communication technology (ICT) programmes for the first time, starting from the first grade in 2022. 100 schools in Albania were equipped with smart labs, and 1 200 ICT teachers were trained. The authorities need to make further efforts to reduce the digital divide across all communities and among vulnerable people. Authorities need to strengthen efforts towards effective, coherent and inclusive digital transformation of the education and training systems in Albania, including the capacity of the systems to develop digital skills.

The MoES reported that **public spending** on education represented 3.2% of GDP in 2022, while the forecast for 2023 and 2024 is 2.9% and 2.8% respectively (considerably lower than

the EU average 5%). The MoES developed guidelines on career education in the pre-university education system, which includes activities and job descriptions for career guidance in schools. The Agency for Quality Assurance in Pre-University Education carried out the evaluation of 34 pre-university education institutions.

The net **enrolment rate** (NER) in primary education in 2021-2022 was 88.3%, slightly down on the year before (90.5%). The NER for lower secondary education was 87.4% in 2021-2022 compared with 87.1% in the previous year. There has also been a decline in the NER of students in upper secondary education, at 77.6% in 2021-2022 compared with 78% in the year before. The NER of children in pre-primary education in 2021-2022 was 78.8%, up from 72.9% the year before.

On inclusive education, the number of children with disabilities in public and private educational institutions (starting from preschool education) has increased to 4 748 students. In 2022-2023, the number of assistant teachers for students with disabilities in the public pre-university education system went up by about 17% compared with the previous year (1 300 assistant teachers in total). The need remains for more assistant teachers and a better quality of education, especially in remote non-urban areas. In 2023, Albania amended the Law on pre-university education including provisions on students with disabilities and on transforming schools into resource centres. In 2022, the MoES offered 141 scholarships in pre-university education to children at risk of dropping out. Since the school year 2022-2023, ICT oriented secondary education is offered in Albanian sign language.

Gender gaps still exist in education as, according to INSTAT, the enrolment rate in compulsory education is 98.7% for boys and 92.7% for girls. Participation in upper secondary education is higher for boys than girls, at 98.7% and 89.9% respectively. whereas for higher education the participation rate is higher for girls (73.2%) than for boys (49.6%). In **vocational education**, approximately 82% of graduates are males. VET providers must follow the code of ethics in accordance with the national legislation, while ethics committees have been set up in all education providers.

The participation of **Roma and Egyptian children** increased in pre-university (13 499 in 2022-2023 against 13 086 in 2021-2022) and decreased in early childhood education (2 150 in 2022-2023 in both public and private sectors against 2 514 2021-2022). The measures planned to facilitate access to universities (such as the quota system and waiving university fees) are in general not being implemented. Greater efforts are needed to improve coordination between the local and central levels on preschool education.

The 2022-2029 national strategy for **youth** was adopted in October 2022. It integrates the empowerment through self-defence approach as part of the extra-curricular programs of public schools. This approach aims to promote behavioural changes in communities, in relation to issues such as gender-based violence, by fostering skills that promote the emotional, psychological and physical safety of young women and men. The selection of Tirana as European Youth of Capital 2022 enhanced the local and national ecosystem for the development of youth policies.

The 2023-2030 national strategy on **employment and skills**, adopted in 2023, prioritises the systematic engagement of the private sector in vocational education and training, and the development of green and digital skills through a lifelong learning system that allows for effective upskilling and reskilling activities.

On vocational education and training (VET), the authorities consolidated the relevant institutional framework, by further reinforcing the National Agency for Employment and Skills, and by further restructuring the National Agency for VET and Qualifications and

increasing its resources. Further efforts are needed to ensure adequate staffing in both agencies; to improve the quality assurance framework and to strengthen planning and monitoring at central level. In 2023, several VET providers were restructured. The optimisation plan for VET providers, endorsed in 2020, lacked the necessary resources to be implemented. Despite promotional activities and support to help students from rural areas participate in VET, attendance fell in the 2022-2023 school year, with 16 811 students enrolled in vocational schools (2 634 female and 14 177 male) compared with 18 279 students (2 714 female and 15 656 male) in 2021-2022. The authorities need to take action to address the skills mismatch and to intensify efforts to make VET more relevant to the needs of the labour market. In January 2023, the MoES approved a career orientation guide for students in the ninth grade to improve information, education and career counselling in schools. Enrolment of vulnerable groups in VET also decreased to 6 022 (1 743 female) from 9 392 (1 330 female) in 2021-2022.

Albania continued to participate in Erasmus+ and the European Solidarity Corps. Albania benefits from the international dimension of the 2021-2027 Erasmus+ programme. In 2022, approximately 900 higher education staff members and 1 280 students from Albania were selected to undertake a mobility period in EU Member States or associated third countries to the programme. The number of higher education capacity-building projects selected for funding increased from 12 in 2020 to 17 in 2022. For the first time, higher education institutions were eligible to participate in the call for proposals for the European universities initiative. Albania is participating in the European Education Area working groups 2021-2025.

Regarding the **culture sector**, the 2019-2025 national strategy is being implemented. During the reporting period the national register of Albanian intangible cultural heritage was published. This was created pursuant to the Convention for the Safeguarding of the Intangible Cultural Heritage, and published for the first time in an online format. The relevant authorities adopted implementing legislation on the creation and administration of the database of stolen cultural assets, and rules on monitoring and evaluating entities that have cultural assets under administration. The authorities need to adopt the remaining implementing legislation of the Law on cultural heritage and museums to make the law fully operational.

Albania continued to participate in the EU 2021-2027 Creative Europe programme. Albania needs to accelerate the adoption of implementing legislation and to ensure the effective implementation of the Law on cultural heritage and museums, in line with the principles of the framework for actions for cultural heritage.

Chapter 29: Customs union

All Member States are part of the EU customs union and follow the same customs rules and procedures. This requires legislative alignment as well as adequate implementing and enforcement capacity and access to the common computerised customs systems.

Albania is **moderately prepared** in the area of the customs union. **Limited progress** was made on the authorised economic operator programme and preparatory work for the development of the New Computerised Transit System. Last year's recommendations remain valid.

In the coming year, Albania should in particular:

→ approve legal provisions and develop the New Computerised Transit System;

- continue efforts in pursuing the fight against smuggling, corruption and imports of counterfeit products, including by strengthening administrative capacity and improving cooperation between the bodies involved;
- accede to the WHO Framework Convention on Tobacco Control Protocol to Eliminate Illicit Trade in Tobacco Products.

On **customs legislation**, Albania's customs code is broadly aligned with the EU *acquis*. However, the levying of scanning fees for each customs declaration continues to contravene the Stabilisation and Association Agreement, which prohibits customs duties or charges with an equivalent effect on trade between the EU and Albania.

Preparatory work for the development of a National Single Window and a New Computerised Transit System continued through cooperation with international experts in this area. A legal analysis has been carried out and procurement procedures have begun.

Albania is implementing its authorised economic operator programme, with 11 AEOs in June 2023 (and 9 applications under examination). Awareness raising activities on the benefits of the programme continued. Protocols for mutual recognition of authorised economic operators were signed with Serbia and North Macedonia in 2022. A memorandum of understanding was signed between the Albanian Customs Administration and the Italian Customs and Monopolies Agency in September 2022, improving customs cooperation with respect to goods transported by sea. A protocol was signed with Kosovo Customs allowing it to conduct the clearance of goods destined for Kosovo at offices in Durrës and Porto.

Since September 2021 Albania has been applying the new transitional rules of preferential origin of the Pan-Euro-Mediterranean Convention on bilateral trade with the EU.

The Customs Code's provisions on valuation are aligned with EU rules. The risk management system is automated and compares import, export and transit data against active risk profiles. The underlying automated system for customs data is being upgraded to improve risk analysis. The legislation on customs enforcement of intellectual property rights is harmonised with the EU *acquis*.

As part of the anti-fraud effort, it is recommended that Albania accedes to the WHO Framework Convention on Tobacco Control Protocol to Eliminate Illicit Trade in Tobacco Products.

The national rules on cash and goods transported in travellers' baggage still differ from the EU *acquis* as regards the amounts to be declared and the declaration form. The Albanian customs administration can impose sanctions for non-declarations or mis-declarations of cash at the border.

On **administrative and operational capacity**, so far five officials of the customs authority have been certified by the EU Agency for Law Enforcement Cooperation, as users of and trainers for the secure information exchange network application. The INES+ (intelligent adaptive traffic control) system has been operational for managing cases of infringement of intellectual property rights, with a view to stepping up the fight against imports of counterfeit products. By the end of 2022, 38 out of 41 customs services were accessible online through the e-Albania portal.

In terms of **prevention of corruption**, the customs authority's new structure entered into force in May 2022 to address challenges that had been observed, such as the lines of reporting to the anti-corruption coordinator. In May 2023 the customs authority published a 'green book reporting on progress in 2022 and highlighting priorities for the following year.

CLUSTER 4: THE GREEN AGENDA AND SUSTAINABLE CONNECTIVITY

This cluster covers: transport (Chapter 14); energy (Chapter 15); trans-European networks (Chapter 21); and environment and climate change (Chapter 27). Albania is in between moderate and a good level of preparation on energy. It has some level of preparation in the areas of transport, trans-European networks and environment and climate change. The country has made some progress in the areas of energy and trans-European networks, notably on the reform of the electricity market and in developing transport and energy networks. Limited progress was made in the areas of transport and environment and climate change.

Addressing the issues of climate change by strengthening green transition policies, pursuing efforts in sustainable hydropower generation and ensuring sustainable connectivity, constitute fundamental priorities for economic integration within the region and with the European Union. This cluster and the reforms concerned have significant links to Albania's economic reform programme, the Commission's economic and investment plan for the Western Balkans and the green agenda for the Western Balkans.

Chapter 14: Transport

The EU has common rules on technical and safety standards, security, social standards, State aid and market liberalisation in road transport, railways, inland waterways, combined transport, aviation and maritime transport.

Albania has **some level of preparation** in the area of transport policy, with **limited progress** achieved in the reporting period. The recommendations from last year have been partly addressed, with some progress in adopting implementing legislation in the rail sector and with further measures to improve the quality and performance of the vessels under the Albanian flag. Albania has completed around 80% of the measures of the Roadmap for improving the performance of the Albanian fleet.

Continued efforts are needed to further align the legislation and to move the Albanian flagged fleet out of the black list under the Paris Memorandum of Understanding on port state control. The recommendations from last year remain valid.

In the coming year, Albania should in particular:

- adopt the new 2021-2025 national transport strategy and its action plan and adopt the new road safety strategy in compliance with the transport community road safety action plan;
- implement legislation on the railway sector reform, in compliance with the transport community rail action plan;
- accelerate concrete measures to improve the performance of maritime transport vessels under the Albanian flag.

Regarding the **general transport acquis**, the new national transport strategy and its action plan for 2021-2025 still needs to be adopted. On alignment of the transport policy with public service obligations and the *acquis* on public service contracts, guidelines remain to be adopted for further alignment with the *acquis* on public passenger transport services. More efforts are required to fully implement the intelligent transport systems (ITS) Directive, boost multimodality and implement relevant national laws in compliance with the Transport Community action plans. Albania continued the preparation of a national ITS strategy for rail and maritime modes. ITS equipment for roads has been procured and is to be installed in new premises, which are under construction. For larger transport agglomerations, sustainable urban mobility plans which respect environmental and social standards should be developed following EU practice.

Albania continued to actively participate in the work of the Transport Community Treaty (TCT). However, it has shown a slow implementation rate of the five TCT action plans and dedicated smart and sustainable mobility strategy for the Western Balkans.

Administrative capacity needs strengthening throughout the transport sector, particularly in the rail sector. Since January 2023, the Albanian Civil Aviation Authority has set-up a new organisational structure, aiming to better fulfil its duties and functions. Legislative updates are required to complement the reform of the Albanian Road Authority. In December 2022, the government approved the structure and the organisation chart of the National Investigation Authority for Rail and Maritime Accidents and Incidents. Available funds for road and railway infrastructure maintenance remain insufficient, resulting in continued deterioration of infrastructure conditions. Continued efforts are required to support the 2018-2022 rail maintenance plans.

When revitalising the ports in Albania, attention shall be paid to prevent corruption as an enabler to infiltrate transportation and logistics chain with criminal networks.

On road transport, further efforts are needed to align with the *acquis* on electronic road toll systems and road fee enforcement. Road safety remains a serious concern with casualties above the EU average, work is still needed to tackle the discrepancy between the national statistics and the significantly higher WHO estimate. Albania needs to allocate sufficient financial resources to establish a road crash data system in line with the Care Database. Further efforts are needed to improve the inter-institutional coordination mechanism including the establishment of a road traffic safety agency. Albania should also make further efforts to align with the EU *acquis* on social transport legislation, notably the Directive for posting of drivers in the road transport sector.

Albania completed the alignment of its legislation on periodic roadworthiness tests, but still has to further strengthen its inspection capacity. The rules of traffic on electric scooters and of bicycles have been unified, aiming to strengthen road safety of such new category of vehicles in road. Some efforts were made regarding road safety education. Action on road safety has been taken, including road signs and marking, to improve safety on road sections and intersections. Tendering has been completed for construction of the traffic monitoring centre and installation of ITS for 200 km of main road network, and is expected to be operational in 2024. Albania is partially aligned with the Directive 2008/96/EC on road infrastructure safety management.

On railway transport, the Railway Safety Authority began its operations in September 2023 by abolishing the Railway Inspection Directorate but it is not yet completely functioning since the staffing process is ongoing. The Railway Regulatory Authority is not yet functional, and the certificates and safety authorisations cannot be issued according to the EU *acquis*. Albania still needs to ensure full operability of the rail network and complete the institutional framework for the four new rail companies: infrastructure manager, passenger transport operations, freight transport operations and maintenance, based on the law adopted in July 2021.

Albania also needs to finalise and adopt the strategic framework for implementing ITS on the core rail network. Albania published its Network Statement in 2022 and this should also cover the part of the network located in port areas. Albania needs to complete the establishment of the electronic register of vehicles and the rail infrastructure asset management system (RIAMS). On train drivers, Albania adopted the Guideline on the professional training in the professional training centres of railway personnel who exercise

safety functions, conditions and procedures for testing, licensing and certification of drivers, which is partially aligned with the EU *acquis*.

On **maritime transport**, continued efforts are required to substantially improve the quality of the Albanian flagged fleet and to thereby reduce the detention rate of Albanian-flagged vessels, in order to remove Albania from its current position on the black list of poor flag performance. During last year Albania improved its position in the Paris Memorandum of Understanding on Port State Control, moving up from very high – risk to moderate, but still in black list.

While Albania has completed around 80% of the measures of the roadmap for improving the performance of the Albanian fleet, it has yet to fully align with the *acquis* on the EU vessel-traffic monitoring and information system (VTMIS), based on the strategic framework for implementing ITS on the core maritime network. Albania has made significant progress with respect to the implementation of the EU Port Services Regulation and efforts are underway to achieve the full compliance of its legal framework by 2025. There were still no new developments regarding **inland waterway transport**, which is limited to two lakes shared with neighbouring countries, and regulated by bilateral agreements. On **aviation**, to comply with the requirements for the first transitional phase under the European Common Aviation Area Agreement (ECAA), Albania still needs to address the findings raised by the EU Aviation Safety Agency (EASA) during its standardisation inspection in 2022 on air traffic management (ATM) and air navigation services (ANS).

The Albanian Civil Aviation Authority has a new structure since January 2023, aiming to improve its operability. Currently, oversight duties are covered by outsourced staff. New Ministerial Orders have been adopted on the approval of the national civil aviation security quality control programme and on the national civil aviation security training programme. Alignment with the EU ATM/ANS *acquis* is still not complete and, where the relevant rules are formally aligned, implementation is incomplete. Legislation on passenger rights is largely aligned with EU legislation.

On **combined transport**, Albania has not aligned with the related EU directive and has yet to provide references to national legislation that have been aligned with the EU *acquis*. The 2021-2025 national transport strategy, which includes the priority measures for intermodal and combined transport, is yet to be adopted.

Albania should increase efforts to align with and implement the EU **passenger rights** legislation.

Chapter 15: Energy

EU energy policy covers energy supply, infrastructure, the internal energy market, consumers, renewable energy, energy efficiency, nuclear energy and nuclear safety, radiation protection and nuclear safeguards.

Albania is **in between a moderate and a good level of preparation** in the area of energy. In the reporting period, there was **some progress** on reforming the day-ahead and intra-day electricity markets and progress in holding auctions for renewables projects.

Limited progress was achieved in the gas sectors and regional interconnection lines. In the context of the global energy crisis, these efforts, as well as energy-efficiency measures, should be accelerated, taking into account Albania's commitments under the Paris Agreement and the need to engage in the clean energy transition, in line with the Green Agenda for the Western Balkans.

Albania still needs to adopt all the missing implementing legislation on energy efficiency. No new energy-efficiency funding mechanisms have been put in place. The energy-efficiency agency's role, capacities and operations need to be further strengthened. Albania has adopted new energy and climate targets for 2030.

Last year's recommendations have not been addressed and remain valid. In the coming year Albania should in particular:

- ensure full access to the liberalised market for all customers connected to 20 kV in 2022, progressively extend this access to all customers and sell and buy electricity to cover distribution losses on the ALPEX power exchange;
- update and implement the 2020-2030 national energy and climate Plan (NECP), as part of the 2030 decarbonisation roadmap, and ensure that the Albanian renewable energy operator is operational by the end of 2023; strengthen the capacity of the Energy Efficiency Agency and continue drafting and adopting implementing legislation, including establishing the energy-efficiency obligation scheme, and adopting the labelling regulations. Proceed with the comprehensive assessment of the potential of high-efficiency cogeneration and district heating, in line with its obligations under the Energy Efficiency Directive;
- Transpose and implement the Electricity Integration Package adopted by the Energy Community Ministerial Council in December 2022.

On **security of supply**, Albania is still moderately prepared but its oil stock legislation is not in line with the EU *acquis*. Two regulations to align the existing industry-related model with the EU oil *acquis*, prepared in cooperation with the Energy Community, need to be adopted. Progress is needed to create a central stockholding body for oil. Albania should align with the *acquis* on the minimum stocks of crude oil and petroleum products required for security of supply. Furthermore, Albania's emergency oil stock model has not yet been amended.

In December 2022, the government adopted the national action plan for response to the energy crisis. This plan follows a series of measures undertaken by the government under the state of emergency for the supply of electricity, in force until 31 December 2023. The plan focused on vulnerable households and SMEs throughout the 2022-2023 winter, while continuing reforms towards energy sustainability and building resilience through diversified sources of energy.

Albania's electricity system has been connected to systems in Greece and Montenegro since 2014. The Albanian Power Exchange was established in October 2020, and it held its first day-ahead auction for the delivery of electricity on 12 April 2023. It aims to encourage more renewable energy investment, guarantee power selling and fill production gaps. In 2022, Albania's electricity distribution losses in the power grid remained at 19.7%, with a slight reduction (0.3%) compared with 2021. The Electricity Integration Package remains to be adopted.

Albania intends to connect the Vlora thermal power plant with the Trans-Adriatic Pipeline (TAP) through a natural gas pipeline, as well as through an LNG terminal, to improve energy security for the country and the region. Preliminary agreements for gas supply have been signed but no progress in terms of developing its own gas infrastructure took place in the reporting period. Such plans have raised concerns from civil society, in particular regarding protection for Vlora bay. Albgaz has been licensed and certified by the Energy Regulatory Authority (ERE) as the combined gas transmission and distribution operator. However, some

certification conditions are not yet fulfilled. Albgaz is an observer at the European Network of Transmission System Operators for Gas (ENTSO-G).

On the **internal energy market**, the transposition and implementation of the newly adopted electricity integration package is pending. The transmission system operator is unbundled and certified. Legal unbundling of the distribution system operator from the supply branch was completed by restructuring the former integrated utility OSHEE into a holding company with three subsidiaries, licensed respectively as a universal service provider (FSHU), electricity supplier (FTL) and distribution system operator (OSSH).

In December 2022, ERE approved the contract for providing compliance officer services for the distribution system operator, which was the last measure needed to ensure the functional unbundling of the distribution system operator. The Energy Community closed the infringement case ECS-4/17 on the lack of distribution system unbundling in 2023. With the go-live of the Albanian Energy Exchange in April 2023, unbundling brings Albania into a better position to develop its power market further. The establishment of the intra day market is pending. Further efforts are needed to strengthen the administrative capacity of the National Regulatory Authority (ERE).

Electricity prices are not fully liberalised. All customers connected to 35kV benefit from an unregulated market. The next step (de-regulating supply at all voltage levels, except the 0.4 kV level) has yet to be completed. Given the energy crisis, a transitional mechanism has been put in place to allow the Albanian Power Corporation (KESH) to purchase electricity abroad and introduce a price cap on electricity for domestic customers in 2021, which was extended until December 2023.

The ERE legal framework is in line with the EU *acquis*, except for the regulator's right to impose measures promoting competition, requiring transmission and distribution system operators to change their terms and conditions and raising the level of the penalties that ERE can impose. ERE still needs to develop its capacity to address shortcomings in the energy markets.

Albania's legislation is partly aligned with the **hydrocarbons** licensing directive. It has not been aligned with the Directive on the safety of offshore oil and gas installations.

Albania needs to update and implement the national energy and climate plan (NECP) adopted in 2021, in line with the 2030 energy and climate targets.

On **renewable energy**, the feed-in tariff (FIT) support scheme has been transformed into a contract for difference (CfD) for large producers to which the existing power purchase agreements (PPA) will be converted. A renewable energy operator (REO) should be established. A pricing methodology for consumers with installed capacity up to 500 kW was adopted in 2021 and is to be implemented by the end of 2023. The agency responsible for renewable energy has not yet been set up. This role is shared among the Ministry of Industry and Energy (MIE) and the National Agency for Natural Resources.

Albania reached its target of a 39% share of renewables in total final energy consumption for 2022, based on the national consolidated renewable energy action plan (NCREAP). Implementation for the two solar photovoltaic (PV) farms with a total installed capacity of 240 MW is ongoing (Karavasta 140 MW and Spitalla 100 MW).

An auction on wind farms, with an installed capacity of 10 MW to 75 MW, was launched in 2021. The first phase contracts were awarded in June 2023 while in July 2023 three bidders were awarded a total of 222.5 MW in capacity. To accelerate renewable electricity

production and facilitate the transition from hydropower to other renewables, more auctions should be conducted.

The Renewable Energy Sources Law (RES) aligned with the Renewable Energy Directive (EU) 2018/2001, was adopted in March 2023. The new Law brings a series of innovations to the electricity sector, including that a renewable energy community has the right to produce, consume and sell renewable energy, and offer aggregation, including power purchase agreements. It abolishes the feed in tariffs support schemes, so that all support measures will be granted via competitive procedures. The Law on bioenergy is still pending adoption.

Albania depends almost exclusively on hydropower for electricity generation, making it vulnerable to climate change. It is a net importer of electricity at a rate of 30% per year, as hydroelectricity is not sufficient to cover its needs. Progress is needed in power interconnection with neighbouring countries and setting up an integrated regional energy market, to strengthen security of supply and create opportunities for green energy development and trading. The deployment of its vast solar and wind resources would significantly improve Albania's energy security and reduce its vulnerability to climate change impacts. Albania plans to use more photovoltaic and renewable energy from wind, and this trend should be pushed forward, based on the NECP 2030 energy and climate targets.

The concession contracts for hydroelectric power plants (HPP) are not sustainable for Albania. The small plants have a significant impact on biodiversity and local communities, notably in protected areas, where around 100 concessions/private investments are located. Plans for hydroelectric power plants have been challenged by civil society during public consultations, questioning the regularity of concession processes and the validity of environmental impact assessments (EIAs).

Moreover, no strategic environmental assessments (SEAs) have been conducted. A large hydroelectric plant planned in Skavica on the Drin River raised concerns from local communities and environmentalists. Civil society organisations claim that there were no proper consultations on this plant in the decision-making process and no information on the resettlement plan. Such investment needs to be fully compliant with the national legislation and the environmental and Energy Community *acquis*, in particular regarding public consultations and the quality of environmental impact assessments and strategic environmental assessments. Further efforts are needed to give guidance on the development of hydroelectric plants and enforce environmental legislation.

The national **energy efficiency** action plan (NEEAP), is an integral part of the National Energy and Climate Plan. The NECP was revised based on recommendations from the Energy Community, aiming to reduce the final energy consumption by 9.4% and to start implementation in 2024. The Energy Efficiency Agency (EEA), created in 2018, needs further administrative capacity. An EU twinning project (i.e. technical assistance provided on the spot by EU-level experts) with this agency started in September 2023. The goal is to support further development of the legislative and institutional framework for implementing the EU *acquis* on energy efficiency, to support implementation of the 2015 Law on energy efficiency and to strengthen the capabilities of the Agency.

Energy-efficiency incentives are in place, including a household subsidy scheme for installing solar water heaters and improving energy efficiency for educational and public buildings. In October 2022, the Government introduced mandatory 15% energy saving targets for the public sector while Tirana Municipality is also supporting local residents with grants up to 50% of the insulation costs for their homes. Several implementing measures have been adopted in accordance with the Energy Efficiency First principle.

However, implementing legislation related to (i) the energy-efficiency obligation scheme, (ii) energy labelling, (iii) increasing the number of electric vehicles in the national car fleet and (iv) minimum energy performance of buildings, (v) energy efficiency measures related to purchasing by public authorities, remain to be adopted. Some progress was made in training experts for energy audits and issuing building energy performance certificates. Given the targets and the ongoing energy crisis, other financing incentives and mechanisms for energy efficiency should be put in place, and energy efficiency projects should also be accelerated.

Albania needs to ensure that implementable energy efficiency and renewable energy action plans are adopted within the scope of the NECP 2030, including the agreed 2030 targets on energy and climate.

Albania has made no further progress on **nuclear energy, nuclear safety and radiation protection**. The country is considering to join the European Community Urgent Radiological Information Exchange system (ECURIE) system.

On **nuclear safeguards**, upon accession, the existing systems of accountancy and control of nuclear materials in Albania would need to be adapted to accommodate for the safeguard provisions (chapter 7) of the Euratom Treaty.

Chapter 21: Trans-European networks

The EU promotes trans-European networks (TENs) in the areas of transport, telecommunications and energy to strengthen the internal market and contribute to growth and employment.

Albania has **some level of preparation** in trans-European networks. **Some progress** was made in developing transport and energy networks since work to prepare projects is ongoing. Albania needs to make further efforts to address the recommendations from last year that are still valid.

In the coming year, Albania should, in particular:

- continue developing the core transport and energy networks in line with the national strategies for transport and energy and infrastructure investment prioritisation, under the single project pipeline;
- continue to align its legal framework with EU *acquis* and the regulations on TEN-T (trans-European transport networks) and TEN-E (trans-European energy networks), including fully aligning guidelines for trans-European energy infrastructure and strengthening the institutional framework and administrative capacity for developing and monitoring TENs;
- strengthen capacity for and ensure progress in implementing the Economic Investment Plan for the Western Balkans projects on transport and energy, in line with the agreed timetable within the Western Balkans Investment Fund platform, while contributing to the Green Agenda.

Albania has made some progress on its strategic framework for **transport networks**. The draft national transport strategy for 2021-2025 and its action plan are yet to be adopted. This national transport strategy include the regional and EU priorities, the Green Agenda, the EU Economic Investment Plan for the Western Balkans, the strategy for smart and sustainable transport for the Western Balkans, as well as all action plans that are part of the Transport Community Treaty cooperation. (See Chapter 14 - Transport).

Albania proposed that rail Corridor VIII be part of the extension of the TEN-T corridors to the Western Balkans region. A relevant high-level agreement on indicative maps for TEN-T in the Western Balkans was signed in June 2023. The amended maps for the new European Western Balkans corridor will be part of the revised TEN-T Regulation, which is currently being discussed by co-legislators. Corridor VIII will be part of the new European Transport corridor, linking South-East Europe with the centre of Europe through the Western Balkans region.

Investment needs to be made in accordance with the cost/benefit analyses carried out in line with EU best practice. The Design of the Adriatic Ionian Road connection – section from border with Montenegro till Lezha is progressing. The Albanian government has been launched different Public Private Partnership (PPP) schemes and works are ongoing on different sections from Thumana till Fieri. Tirana bypass is under final preparation and planned to start in 2024. Projects are channelled through a single project pipeline, confirming the country's strategic orientation towards TENs. Robust measures to improve the road infrastructure from a road safety point of view, particularly to eliminate identified road accident blackspots, which cause fatalities and injuries, should continue implementation following the road safety inspections and road safety audits.. The road core network is now covered by 5-year maintenance programmes. Adoption of the multiannual maintenance plans for the rail core network still remains a challenge, given the state of rail infrastructure.

Work to prepare road, rail and port infrastructure projects, especially along the Adriatic-Ionian road connection and Corridor VIII (Varna–Durrës) has shown progress as well.

Concerning rail, work to rehabilitate the Durrës-Tirana line and to build a new line to the international airport is progressing in line with contractual obligations (48% of the civil works are completed). Further efforts and strengthening of project programming and management capacity are needed to avoid bottlenecks and make the investment grants awarded under the Western Balkans Investment Fund platform operational, and in particular to start working on the construction of the Tirana Bypass and the Vore-Hani Hotit rail line, connecting Albania with Montenegro. Both projects are expected to start in 2024.

In December 2022, the government presented its plans for creating the Porto Romano port, 12 kilometres north of Durrës. All the cargo activities currently at the ports of Durrës and Vlora would be relocated to this new port. A new eight kilometres railway line is to be constructed, to link the Porto Romano port with the existing rail network. This investment will take place in phases, and according to the authorities, phase 1 will be completed in 2027, including the container terminal, dredging and filling, the northern breakwater and the supporting infrastructure.

Kukës airport in the north of Albania started normal operations in July 2021, focusing on low-cost airlines. Construction work on a commercial airport in the Vjosa-Narta protected landscape is ongoing. This causes significant concern about threats to the environment, the habitat, migratory birds and other living species.

On **energy networks**, efforts are still necessary to adopt the strategic environmental assessment (SEA) and project identification plan under the gas master plan, since it is strongly interlinked with the development of TEN-E projects. The planned development, and interconnections between the LNG terminal in Vlora and regional gas pipelines (the existing Trans-Adriatic Pipeline and the envisaged Ionian Adriatic Pipeline) would increase regional energy security. More work is needed for the implementation of the above pipelines, as well as for the development of a gas market in Albania. Such initiatives should be implemented following environmental impact assessments and strategic environmental assessments, as

well as transparent public consultations that cover all stakeholders, including the local population, environmental groups and civil society organisations.

Progress was made on improving the infrastructure for electrical power transmission. Companies from Kosovo have joined the Kosovo-Albania control block and are participating in the Albanian Energy Exchange, which became operational in April 2023, following the successful implementation of the platform operator.

Concerning the construction of a 400kV interconnection line between Fier in Albania and the North Macedonia border, work is expected to start during 2023.

Albania's participation in the EU strategy for the Adriatic-Ionian region remains a priority for both transport and energy networks and it is important that the country continues its active involvement.

Chapter 27: Environment and climate change

The EU promotes strong climate action, sustainable development and protection of the environment. EU rules contain provisions addressing climate change, water and air quality, waste management, nature protection, industrial pollution, chemicals, noise and civil protection.

Albania shows **some level of preparation** in this area. **Limited progress** was made in further aligning policies and legislation with the EU *acquis* in areas such as water management, chemicals, environmental crime and climate policy.

Albania made progress in the area of civil protection since it joined the EU Civil Protection Mechanism in 2022 and it has prepared a national disaster risk reduction strategy and action plan for 2023-2030. Albania needs to continue working to further improve its civil protection system. Significant efforts are needed on implementation and enforcement for waste management, water and air quality and climate change, to strengthen its administrative and inspection capacities and implement structural, cross-sectoral reforms.

Most of 2022 recommendations remain valid and in the coming year, in addition to addressing the shortcomings set out below, Albania should, in particular:

- adopt the new law on water services; substantially increase the budget resources and implementation capacity of its key national water agencies; adopt the River Basin Management Plans (RBMPs) for the Ishem, Erzen and Mati rivers and complete these RBMPs for the Shkumbini and Vjosa rivers;
- take immediate measures to review and improve the quality of environmental and strategic impact assessments of projects, plans and programmes, especially in the hydropower, construction, tourism, transport and mining sectors (and ensure public participation and consultation in this process); take immediate measures to fight environmental crime and achieve full alignment with the Environmental Crime Directive and with the Environmental Liability Directive and increase policy and law enforcement for nature and biodiversity protection, especially in the protected areas;
- set up flood vigilance mechanisms and risk management plans in all river basins; implement the national strategy on climate change and the related action plans on mitigation and adaptation, adopt the relevant legislation and implement its integrated national energy and climate plan in line with Energy Community obligations.

Environment

In terms of **horizontal legislation**, Albania still needs to step up efforts to achieve full alignment and implementation in most areas. The implementation of the Directives on Environmental Impact Assessment (EIA) and strategic Environmental Assessment (SEA) needs to be significantly improved

The EIA quality and the relevant processes need to be improved, Recommendations from EIAs are rarely implemented; they should be enforced and then monitored. Public participation and consultation in decision-making need to be improved, particularly at local level.

The EIA for Vlora Airport was broadly criticised by civil society and other stakeholders. One of the issues was the lack of consideration for the ‘protected area’ status of the selected site.

Implementation of the EU Directive on protecting the environment through criminal law needs to be improved, although convictions for environmental crime increased to 79 in 2022 (from 65 in 2021).

The implementation of the polluter-pays principle in implementing legislation is weak. Further progress is needed to achieve full alignment with the Directive on environmental liability. Inspections and enforcement capacity should be rapidly strengthened, especially to address environmental crimes more effectively. The state budget for environment and climate change remains very limited in 2023, and not sufficient to implement the EU *acquis*. Frequent staff turnover and hiring of staff without relevant expertise, has further eroded the capacity of the central administration and related agencies in this area. The recent replacement of some directors in the regional administration of protected areas across the country has attracted particular attention and raised concerns about the management of these areas. Corruption cases, identified by the Specialised Anti-Corruption Structure (SPAK) during the award procedures for the construction concession for the incinerator in Elbasan (in 2021) and the Fier waste incinerator (in 2022), are being investigated, and the former Minister of Environment and former Secretary General of the Ministry of Environment have been indicted.

More efforts are needed to align with the EU **air quality** *acquis*, including extending and improving the air monitoring system. The implementation of the 2014 national air quality strategy is still pending and the 2019 national plan on air quality management does not provide a functional monitoring system. There are only seven automatic air monitoring stations in the whole country (located in the main cities) but data is not reported in real time and monitoring is not carried out during the whole year. The plan focuses mostly on transport measures, while air quality monitoring still not in line with EU standards. Implementation of the action plan for air quality and of the Directive on sulphur content in certain liquid fuels is ongoing, while implementation has not yet started for the Directives on controls on volatile organic compound (VOC) emissions and stage II petrol vapour.

The legal framework for **waste management** is only partially aligned and substantial efforts to achieve full alignment are needed. Closing non-compliant landfills and dumpsites, as well as littering, remain significant challenges. Separate collection of waste streams and economic instruments to promote recycling and reuse and prevent waste generation are still insufficient. The construction of a new incinerator in Tirana poses growing concerns in terms of compliance with the EU waste *acquis*, including with the waste hierarchy and recycling targets. Moreover, Albania’s waste management policies do not aim to reach EU 2030 recycling targets.

Albania should do more to promote the circular economy and incentivise the prevention, reduction and recycling of waste. In particular, it should invest further in composting, to cut down landfills. The first three local composting facilities in the country have been built with donor funding, and started operation in 2022-2023, in the municipalities of Cerrik, Roskovec and Belsh.

The implementation of the waste streams legislation should be speeded up. The enforcement and compliance-checking role of the institutions should be clarified and strengthened, and they should be given appropriate staffing and budget. In January 2023, a unit on circular economy was set up within the Ministry of Tourism and Environment, and is awaiting proper staffing. In March 2022, Albania adopted legislation that bans the use of certain categories of plastic bags, and has partially aligned with the Directive on single-use plastics. However, the implementation of this ban is inconsistent. Further alignment with this Directive is needed, namely banning the other single-use plastic items. The entire legislation on waste needs to be reviewed and upgraded.

On **water quality**, the level of alignment remains incomplete and two laws on water resources and marine waters should still be adopted as early as possible. Directive-specific implementation plans for the Drinking Water Directive and Urban Waste Water Treatment Directive – where major investment is required for compliance – were prepared in 2022. Following the 2020 adoption of the Drini-Buna and Semani River Basin management plans, Albania should complete and adopt the remaining five RBMPs for the Ishem, Erzen, Mati, Shkumbini and Vjosa rivers.

In line with the Green Agenda for the Western Balkans, Albania should increase efforts to strengthen transboundary basin management with neighbouring countries. This concerns the Drini-Buna and Vjosa river basins. A transboundary approach with Greece is encouraged during the future development of the Vjosa management plan, acknowledging the high ecological value and eco-tourism potential of the river and its national park status in Albania.

To ensure progress on the EU water *acquis*, Albania needs to substantially increase the budget resources and implementation capacity of the key national water agencies and adopt a capacity development plan. In addition, water quality and quantity monitoring is insufficient. The Water Resources Management Agency, together with the National Environment Agency and other water monitoring agencies, should urgently plan and implement a national water monitoring programme with sufficient resources.

The performance of the water supply and sewerage services sub-sector remains overall low.

Albania should amplify and accelerate further its water reform measures. The National Strategy of the Water Supply and Sewage Sector for the period 2023-2030 was approved by the Albanian Government on July 2023. The new law on water supply and sewerage and the revised water code should be adopted and implemented as soon as possible. There is also a need to ensure full alignment with the urban waste water treatment Directive, extend sewerage networks, license and apply adequate tariffs for all waste water treatment plants and build new ones, in particular in urban and coastal areas with high tourism development. The strategic institutional development plan of the National Agency **for Water Supply Waste Water and Waste Infrastructure (AKUM)** needs to be adopted and enforced, to drive and support the implementation of the water reform and the new 2030 strategy.

Alignment with the EU *acquis* on **nature protection**, in particular the Habitats and Birds Directives, is advanced. The legislation on strategic investment raises concerns for the protection of biodiversity, as it may lead to extensive tourism and industrial investment in protected areas. Construction work for the new Vlora Airport within the Pishe Poro-Narta

Protected Area (former Vjosa-Narta Protected Area), which started in December 2021, is ongoing. In September 2023, the Standing Committee of the Bern Convention recommended to Albania to suspend the construction of Vlora Airport until a new and sufficient Environmental Impact Assessment (EIA) procedure is conducted. In September 2023, the Ministry of Tourism and Environment started implementing a monitoring plan in order to minimise the environmental footprint of the Vlora Airport in the protected area, including through on-site verifications, though without a prior updated EIA. Progress was made in March 2023 with the upgrade of the status of the Vjosa River - from a Nature Park (Category IV) into a National Park (Category II). The upgrade of the status of the Vjosa River took the form of also including the tributaries of this river, which is among the last of Europe's wild rivers. Faster implementation of the rules for managing revenues generated by fees paid in Protected Areas should be considered.

In 2022-2023, the government of Albania increased the total areas under protection by creating two new protected areas, the Porto-Palermo Bay Nature Park and the Albanian Tulip Nature Monument. However, the capacity and funding for proper management of all protected areas are very limited. Albania still does not adequately enforce the forest and logging laws: despite a moratorium on logging, this practice continues unchecked. Prosecutions of arsonists or other people causing forest fires are rare, considering the high number of intentional and unintentional fires in 2022. No convictions have been reported in these cases. The moratorium on hunting was extended by an additional five years but, for conservation purposes, a law and a plan to enforce the moratorium should also be adopted. Similarly, hunting continues to take place, despite a moratorium being in place. There has still been no decision by the Elbasan court on the case of the poaching of a lynx in Elbasan in 2020. Albania should ensure that its administration has adequate capacity to prevent and inspect wildlife crimes.

The Skavica hydropower plant project that is under preparation is expected to have a significant environmental and socio-economic impact on the area, and impact the Balkan lynx populations that use this corridor to migrate between Albania and North Macedonia. The preliminary environmental impact assessment for this project has been completed, but the representatives of the affected communities claim that no locals were invited to attend the consultations. Investment in the road sector rarely includes in practice the obligatory planting and restoration of roadside slopes, and no wildlife crossing has so far been planned and implemented in Albania.

In February 2022 Albania joined the High Ambition Coalition for Nature and People, pledging to protect at least 30% of its land and seas and promote nature-based solutions within the UN framework convention on climate change.

Alignment with EU legislation on **industrial pollution and risk management** is still at an early stage. Capacity and financial constraints are hampering progress in implementing legislation on the prevention of major accidents involving dangerous chemicals.

On **chemicals**, Albania has a legislative basis for alignment with the EU regulation on the registration, evaluation, authorisation and restriction of chemicals (REACH), but the implementing legislation has yet to be adopted and adequate administrative structures have not yet been established. In October 2022, Albania further aligned its legislation with the new EU Regulation on persistent organic pollutants.

Albania performed urban **noise** monitoring in several cities and municipalities, in line with the national monitoring programme and according to WHO and national standards. Albania

should strengthen its administrative capacity for preparing strategic noise maps and action plans.

On **civil protection**, Albania made progress in building its civil protection capabilities and has undergone a comprehensive reorganisation of its national civil protection system. In 2022, it joined the EU Civil Protection Mechanism (UCPM), demonstrating its commitment to contribute to the Mechanism and make further progress on civil protection. Albania also prepared a national disaster risk reduction strategy and action plan for 2023-2030.

Nevertheless, the country should work on further improving its civil protection system. Considering the increased frequency of national disasters in the last decade and the intensified impacts of climate change, Albania should review its emergency plans and substantially increase its operational capacities, infrastructure and systems for early warning, prevention, preparedness and response.

Albania needs to build efficient civil protection and disaster risk reduction (DRR) systems, to increase the country's resilience to natural disasters and crisis. The country should improve its management of flood risks in accordance with the EU floods Directive, and formulate new measures for to reduce the damage caused by flooding.

This includes boosting implementation by developing and adopting flood risk management plans in all basins. And further improving flood forecasting and the sustainability of the network of national monitoring stations, as well as urgently regulating its early warning and hydrometric-meteorological services.

Albania is also encouraged to develop river basin drought management plans, and forest fire risk assessments and management plans. And it should establish secure trans-European services for telematics between administrations (TESTA).

Climate change

Albania has some level of preparation for tackling climate change, but alignment with the EU *acquis* still remains limited. Albania pledged climate neutrality by 2050 at COP26, in line with the EU ambition. It also joined the Global Methane Pledge. The country presented its Fourth National Communication to the UN Framework Convention on Climate Change (UNFCCC) on November 2022. Albania is committed to taking measures to reduce greenhouse gas emissions from different economic sectors such as transport, agriculture, land use and forestry, industrial processes and waste, according to its updated National Determined Contribution (NDC). Albania's revised contribution to mitigation aims to decrease emissions by 20.9% by 2030 compared to the Business as Usual scenario. In February 2023 a ministerial decision approved the national strategy for development and European integration (NSDI) 2022-2030, which sets out a series of priority measures like adoption of climate secondary legislation, climate budgeting, and nature-based solutions. In addition, by December 2022 the country had partially aligned with the Regulation on the governance of the energy union and climate action. The level of emission reductions planned for 2021-2030 in the NECP is 18.7%.. The plan relies significantly on sequestration of CO₂ by forests, but there are very limited financial means and capacity allocated to protecting and managing forests, including measures to promote reforestation and manage forest fire risks. This should be urgently tackled.

The national strategy on climate change will need to be updated to take into account the new climate targets set out in the revised NDC and, closer to accession, the new climate targets set by the EU. The implementation of the 2020 climate Law requires further implementing measures to be initiated under the Minister for the environment. Capacity in the public

administration for interpreting the climate change impacts on Albania and incorporating climate change into sectoral strategies and plans remains very limited; capacity building is very much needed in this regard. No emissions register is in place.

Substantial investment and efforts are needed for climate adaptation, as Albania is highly exposed to the consequences of climate change. Sea level rise as well as floods/droughts are expected to substantially affect the society, public infrastructure and economic activities. Climate risk management plans need therefore to be adopted at all levels, and major vital infrastructures need to be climate-proofed, to increase the country's resilience to climate change impacts.

CLUSTER 5: RESOURCES, AGRICULTURE AND COHESION

This cluster covers: agriculture and rural development (Chapter 11); food safety, veterinary and phytosanitary policy (Chapter 12); fisheries and aquaculture (Chapter 13); regional policy and coordination of structural instruments (Chapter 22); and financial and budgetary provisions (Chapter 33).

The cluster comprises policies linked to sustainable and inclusive regional development and the EU's funding system; particular preparation is needed in this respect to develop the capacity required of a future Member State. Albania has some level of preparation in most areas linked to resources, agriculture and cohesion, namely agriculture and rural development, veterinary and phytosanitary policy, and financial and budgetary provisions. The country is moderately prepared regarding fisheries and aquaculture as well as regional policy and coordination of structural instruments.

Albania has made some progress in agriculture and rural development, notably in developing administrative capacity for the instrument for pre-accession assistance for rural development programme (IPARD III). Some progress was also observed on fisheries and aquaculture. Albania made limited progress on financial and budgetary provisions.

Chapter 11: Agriculture and rural development

The EU's common agricultural policy supports farmers and ensures Europe's food security. It helps tackle climate change and the sustainable management of national resources; maintains rural areas and landscapes across the EU; and keeps the rural economy alive by promoting jobs in farming, agri-food industries and associated sectors. This requires strong management and control systems. There are also common EU rules for marketing standards, quality policy and organic farming.

Albania has **some level of preparation** in agriculture and rural development. **Some progress** was achieved with regard to (i) developing administrative capacity to prepare the instrument for pre-accession assistance for rural development (IPARD III) programme and (ii) the adoption of the law on wine and (iii) adopting an implementation plan for the setting up of the farm accountancy data network (FADN).

Some of the Commission's recommendations from 2022 were not fully implemented and remain valid.

In the coming year, Albania should in particular:

→ ensure the necessary administrative capacity is available for the setting up of the farm accountancy data network (FADN);

- Ensure that the administrative capacity required for the entrustment of budget implementation tasks under the IPARD III programme is in place, in line with the principles of sound financial management;
- complete the legal frameworks on quality policy and organic food production; ensure that the institutional and administrative capacity for their implementation is in place.

On **horizontal issues**, a farm register was put in place and should be improved to fully align with EU *acquis*. Registration of farms is required and performed by the advisory services, both under national schemes and under relevant IPARD measures. The farm register is an important first part of the future integrated administration and control system (IACS) and it will support the implementation of IPARD III programme. There was no progress in establishing a land parcel identification system (LPIS). An implementation plan, with specific details of the timeline and resource allocation to set up the FADN was adopted in April, and the necessary administrative capacity now needs to be deployed.

Direct payments to farmers are coupled to production and not subject to cross-compliance rules. All support measures need to be brought in line with the EU *acquis*. In spite of a slight increase, as compared with the previous year, the national agriculture budget remains low. Implementation of the strategic action plan for the reform of the advisory system has started, but implementation capacity remains low.

There was limited progress on setting up a **common market organisation (CMO)**. Legislation on vineyards and wines aligning with the EU *acquis* was adopted, including implementing legislation setting rules for registration in the vineyards register and for declarations and information collection by operators. Further efforts in this area are needed. Institutional capacity for implementation is still low.

On **rural development**, implementation of the IPARD II programme continued but increased capacity building and oversight is needed to ensure completion of the IPARD II programme and the efficient implementation of the IPARD III in full compliance with the principles of sound financial management.

Legislation on **quality policy** is partly aligned with the EU *acquis*.

On **organic farming**, additional effort is needed to adopt the legislation on organic production, which has been drafted in line with the recent reform of EU *acquis*. Albania continued to provide national support for organic farming.

Chapter 12: Food safety, veterinary and phytosanitary policy

EU hygiene rules for foodstuff production ensure a high level of food safety. Animal health and welfare and the safety of food of animal origin are safeguarded together with the quality of seeds, plant protection material, the protection against harmful organisms and animal nutrition.

Albania has **some level of preparation** in the area of food safety, veterinary and phytosanitary policy. **Limited progress** was achieved over the reporting period, particularly on alignment with the *acquis* on official controls, animal and plant health. The work has started but significant further efforts are needed. Albania made progress on designing and adopting the food safety national sectoral policy.

The Commission's recommendations from last year were not fully implemented and remain valid. In the coming year, Albania should in particular:

- work on alignment of national legislation with the *acquis* under the framework of their national sector policies, specifically for relevant laws on official controls, animal health and plant health;
- finalise the staffing of the veterinary service in order to ensure it is fully operational;
- strengthen the capacity to implement effective surveillance and vaccination programmes on the main infectious animal diseases, including rabies; continue to efficiently implement the rabies vaccination programme in 2024.

There was limited progress in implementing the *acquis* on **general food safety**. Some progress took place at the National Food Authority by revitalising the AKU-net system on inspection statistics, data management and transparency. Significant work is still needed to reduce the administrative burden for planning and reporting on risk-based official controls and to ensure the national data are transparent. Despite setting up of the Scientific Panel in June 2022 and February 2023, the results of its work are not yet public.

Albania has made limited progress on **veterinary policy**. Following the reorganisation of the Ministry of Agriculture and Rural Development in May 22, further structural reforms are still necessary to have a clear chain of command and line of communication/reporting, in line with the EU *acquis*. Adequate human resources should be ensured by filling vacancies in the general directorate dealing with food safety, veterinary and plant protection.

Moreover, while the National Veterinary and Plant Protection Authority increased its veterinary staff, the reform of the veterinary sector remains uncomplete. Significant work is still needed to establish the necessary capacity on passive and active surveillance, including reliable assessments of the prevalence of diseases. Substantial work is also required on data analysis and on the design, planning, and implementation of effective systems for disease prevention and/or eradication.

Albania continued its work on animal diseases through two vaccination campaigns against rabies and the implementation of control and eradication programmes for monitoring brucellosis and tuberculosis in cattle herds, brucellosis in small ruminants and anthrax. While countrywide verification and registration of the number of animals in Albania continued, substantial work is required to upgrade the animal register with additional information on other animals, such as swine, equine animals and poultry, as referred to in the EU *acquis*, to ensure that solid traceability systems are established for food of animal origin.

Regarding the **placing on the market of food, feed and animal by-products**, while Albania has made some progress in aligning its legislation with the EU *acquis*, implementation of its national residue monitoring plan remains an issue. In particular as regards veterinary medical products, pesticide residues, heavy metals and mycotoxins in live animals and products of animal origin. No validated screening methods are yet in place to guarantee the reliability of results for the relevant species and commodities. Limited progress was made in developing capacity and accreditation and validation methods for Albania's laboratory network. No progress was made on the legal basis of animal by-products. Preliminary work started on categorising food establishments but further work is required to align with the *acquis*.

Concerning **food safety rules**, Albania continued to align with the *acquis* on food additives and identification of maximum levels for certain contaminants in food. Raw milk testing was included in the 2023 official control plan but more progress is needed on developing a roadmap to improve milk quality.

Progress on **phytosanitary policy** remains limited. Albania approved an action plan for the sustainable use of plant protection products but the plant health law remains to be adopted.

Albania continued to update the list of active substances in plant protection products, in line with the *acquis*.

No progress was made on **feed or genetically modified organisms** and the legislation is yet to be adopted.

Chapter 13: Fisheries and aquaculture

The common fisheries policy lays down rules on fisheries management, protects living resources of the sea and limits the environmental impact of fisheries. This includes setting catch quotas, managing fleet capacity, rules on control and inspection, rules on markets and aquaculture and support for fisheries and coastal communities. Further, it promotes a sustainable aquaculture.

Albania is **moderately prepared** in fisheries and aquaculture. It made **some progress**, specifically on keeping the vessel monitoring system (VMS) operational and allocating human resources to monitor and report on activity by fishing vessels. There was limited progress on filling vacancies in the fishery directorate. The administrative capacity of the inspectorate and central administration need to be further improved. As a contracting party of the General Fisheries Commission for the Mediterranean (GFCM), Albania is fully implementing the recommendations to control its fishing effort.

The Commission's recommendations from 2022 remain largely valid. In the coming year Albania should in particular:

- build up the necessary administrative capacity in the fishery sector, notably by completing staffing, strengthening data collection and scientific advice and implementing national policies in line with EU's common fisheries policy (CFP) and international agreements;
- take concrete steps to implement the regional plan of action for small-scale fisheries;
- continue its active participation in the GFCM inspection scheme in the Adriatic Sea.

Regarding **resource and fleet management and structural measures**, the vessel register has improved and fishery production data are regularly maintained and updated. Albania continues to implement the legal acts related to managing commercial fishing capacity. Ministerial orders have been issued in line with the recommendations of the GFCM for the sustainable exploitation of fish stocks. Regarding small-scale fisheries, no significant step was taken. The government continued to implement financial support measures for the fishery and aquaculture sector as part of its 2022-2023 national funding programme for agriculture and rural development.

Inspection and control capacity has improved. The vessel monitoring system (VMS) is functional and operational. Two patrol boats for fishery inspectors were purchased and delivered. The legal basis for the electronic reporting system (ERS) was prepared and approved by the Council of Ministers and financial resources earmarked in the budget for setting it up. The Ministry of Agriculture has six system operators at the central level of the Directorate of Fisheries and Aquaculture Service; these monitor and report on the activity of fishing vessels, in addition to the fisheries monitoring centre (IMOC). Sufficient inspection and control capacity is in place to monitor marine fishing activity for all vessels over 12 metres long 24/7, to control fishing activities, to prevent, reduce and eliminate illegal, unreported and unregulated fishing (IUU). The inspection and control capacity to fight against IUU was strengthened through cooperation with the European Fisheries Control Agency (EFCA).

The capacity to interpret and implement the national legislation in this field or the EU common fisheries policy remains weak and data collection needs to be improved, in particular on scientific capacity and data management. The structure and human resources of the Fishery Directorate central administration remain to be improved.

The adoption procedure of the plans on the allocated zones for aquaculture (Shengjin, Durrës and Vlora) is ongoing, plans are currently under public consultation. Efforts to prepare such zones for inland waters have started.

On **market policy**, the wholesale market for fishery products and aquaculture in Shengjin fishing port and in Vlora are not yet fully operational. On **State aid**, support was made available in 2022 for replacing fishing vessels and equipment (50% co-funding). A fuel compensation scheme for fishing vessels operators was implemented. In 2023 State aid is provided under the national supporting scheme, as a separate financing measure for the fisheries sector.

Regarding **international agreements** on fisheries and aquaculture management, two cooperation agreements are in force: with North Macedonia for joint fisheries management in Lakes Ohrid and Prespa and with Montenegro on joint fisheries management of Shkodra/Skadar Lake and the Buna/Bujana river. Albania is a contracting party to the GFCM and has fully implemented the recommendations of this body on controlling its fishing effort. Albania should continue to actively participate and implement GFCM measures and recommendations, notably (i) implementing the multiannual management plans for the conservation and sustainable exploitation of small pelagic and demersal fisheries in the Adriatic Sea, and (ii) increasing activities to implement the regional action plan of action for small-scale fisheries in the Mediterranean and the Black Sea (RPOA-SSF).

As regards the **wider blue economy**, to ensure the optimal development of all sea-related activities in a sustainable manner, Albania is encouraged to promote regional maritime cooperation with partner countries in the Adriatic-Ionian sea.

Chapter 22: Regional policy and coordination of structural instruments

Regional policy is the EU's main tool for reducing regional disparities and investing in sustainable and inclusive socio-economic growth. It is operating through "shared management" between the Commission and EU Member States. The implementation of cohesion policy programmes requires appropriate administrative capacity on programme and project level, the establishment of systems of sound financial management and control and also the fulfilment of other EU acquis elements such as environmental or public procurement legislation.

Albania is **moderately prepared** as regards regional policy and coordination of structural instruments. **Limited progress** was made over the reporting period. However, the adoption in July 2022 of implementing legislation based on the Albanian Law on regional development and cohesion with the setting up of the National Committee for Regional Development and Cohesion are worth noting.

The recommendations for 2022 remain partly valid. In the coming year, the country should, in particular:

- prepare for effective implementation of the EU *acquis* under Chapter 22 and factor in the requirements of the future structural and cohesion funds in the institutional set-up and the financial management and control systems, ensuring that all its instruments and funds are gradually made compliant with EU requirements in terms of programming and partnership principles;

- implement the national strategy for regional development and cohesion (2021-2027) and complete the regional development plans (2021-2024). These two measures should foster development potential through decentralised intervention based on local and/or regional integrated plans and strategies;
- clarify responsibilities between central and local authorities, and further strengthen administrative capacity in central, regional and local bodies, by ensuring adequate staffing, revising the local government salary structure and keeping fiscal decentralisation high on the agenda.

Regarding the **legislative framework** for regional policy, implementing legislation was adopted in July 2022 regarding the creation, organisation and operating rules of the National Committee for Regional Development and Cohesion under the Prime Minister's office.

The Law on regional development and cohesion divides the territory of Albania into four development regions, each of them covering three counties. Efforts should be pursued to draft the national and regional plans (2021-2024) as part of the national strategy for regional development (2021-2027).

The Albanian Development Fund (ADF) is responsible for implementing the Law on regional development. It also has a mandate to prepare the national plan for regional development, as well as regional plans for the four development regions, to be implemented through a national operational programme for regional development with ADF as managing authority.

On the **institutional framework**, relevant by-laws on establishing a comprehensive regional development system need to reflect the role and responsibilities of each of the bodies involved and ensure coordination between them. An inter-institutional working group for Chapter 22 negotiations was established, chaired by the Ministry of Interior. The authorities should strengthen regional policy dialogue by making it more inclusive and improving coordination among ministries and with autonomous local governments. Capacity to manage public funds locally has to be strengthened. (*See above under Political Criteria - Governance*).

Albania also needs to address issues with strategic planning, implementation and monitoring capacity for infrastructure projects financed by the Western Balkans investment fund (WBIF) under the economic and investment plan (EIP).

On **administrative capacity**, the staff of the bodies involved in indirect management should continue to receive training, especially those that are new to managing EU funds. Strengthening human resources should remain a focus, along with an adequate staff retention policy. The administrative capacity for coordinating and monitoring sectoral reform through integrated policy management groups and sectoral steering committees has slightly improved. The involvement of development partners, local governments and civil society organisations in sectoral dialogue still needs some improvement.

On **programming**, efforts should continue to develop autonomous programming capacity for the period ahead. In December 2022, a decision was adopted to align strategic priorities and the medium-term budget. The national single project pipeline of investment, including for regional development, remains to be adopted. A key element for regional development will be to ensure ownership by public and private bodies at national and sub-national levels.

Albania continues to gain experience in programming and implementing regional policy cooperation through participation in cross border cooperation, transnational and interregional cooperation programmes. Albania participates in the EU strategy for the Adriatic Ionian

region (EUSAIR), which promotes cooperation and synergies among participating EU and non-EU countries.

On **monitoring and evaluation**, the sectoral monitoring committee issue operational recommendations for all IPA sectors and strategic issues are being discussed at the IPA monitoring committee. The work to ensure adequate monitoring of all programme activities by the State Agency for Strategic Programming and Aid coordination (SASPAC) should continue. The support offices of the National Authorising Officer and the National IPA Coordinator have yet to establish a list of key performance indicators for evaluating performance.

On **financial management, control and audit**, an evaluation of indirect management by the beneficiary country under IPAlI found that the Albanian Law on the audit authority needs to be amended, to ensure that management powers remain with the General Director and are not subordinated to the Supervisory Council. The National Authorising Officer (NAO) needs to ensure that its management declaration adequately reflects the results of its supervision and monitoring of management and control systems. The NAO support office will also have to strengthen its work with a view to Monitoring the implementation of sectoral operational programmes in indirect management by newly appointed bodies. The Officer's support office has yet to establish procedures to ensure immediate dissemination and implementation throughout the institutions, regarding internal control by the Commission. Irregularities still need to be registered completely and without delay in the irregularity management system, and internal control weaknesses and non-compliance events should be systematically reported in a dedicated registry.

Chapter 33: Financial and budgetary provisions

This chapter covers the rules governing the funding of the EU budget ('own resources'). These resources mainly consist of: (i) contributions based on the gross national income of each Member State; (ii) customs duties; (iii) the non-recycled plastic resource and (iv) a resource based on value-added tax. Member States must have the appropriate administrative capacity to adequately coordinate and ensure the correct calculation, collection, payment and control of own resources.

Albania has **some level of preparation** on financial and budgetary provisions. **Limited progress** was made in aligning with the EU *acquis* in the underlying policy fields that affect the functioning of the EU funding system.

Methodological improvements continued concerning alignment with ESA 2010 standards (European System of Accounts), and improving data transmission of the excessive deficit procedure (EDP) tables through the Albanian Integrated Government Financial Statistics compilation system (AIGC).

Last year's recommendations remain valid, as more progress is needed. In the coming year, the country should in particular:

- continue aligning data on National Accounts to ESA 2010 and improving the comprehensiveness of data transmission to Eurostat, including on the excessive deficit procedure;
- align its legislation with the EU provisions on VAT and customs duties and strengthen efforts to tackle fiscal evasion and informality;
- enhance administrative capacity and coordination mechanisms among key stakeholders in the own-resources system.

There was some progress in the underlying policy areas that indirectly affect the own-resources system (*for progress in these areas, see Chapters 16 – Taxation, 18 – Statistics, 29 – Customs union, and 32 – Financial control*).

On **traditional own resources**, a new Law on income taxes was adopted in March 2023, which will enter into force in 2024. Albania does not yet have in place a medium-term revenue strategy. Current legislation remains partly aligned with the relevant EU directives. Amendments were made to the VAT and excise legislation, aiming to align it with the respective EU directives, reduce some tax exemptions and upgrade excise fees.

Regarding the **Gross National Income** (GNI) resource, the Institute of Statistics (INSTAT) continued the regular transmission of GNI and GDP data to Eurostat, in the framework of the ESA 2010 transmission programme. However, significant improvement is still needed to achieve full compliance, mainly in the approach to quarterly GDP by income and population and employment data, and the GNI inventory should be updated. Work continued to improve the full set of non-financial accounts data, the estimation components for the non-observed economy, and the regional accounts, as well as to fully integrate the supply and use tables into national accounts.

Albania continued to align its legislation with ESA 2010 standards and publish the inventory of resources and methods used in the national accounts. The country remains partly in line with ESA 2010. INSTAT provided a draft inventory of the methods, procedures and sources used to compile deficit and debt data and the underlying government sector accounts, according to ESA.

However, further efforts are needed to improve compliance with ESA 2010 and to set up the GNI Inventory in full alignment with Eurostat recommendations. The benchmark revision of national accounts is postponed to 2024 and the new GNI Inventory is going to be provided after its implementation. INSTAT continued its work to improve the EDP data and the submission of questionnaires and pilot estimations to Eurostat, following the ESA 2010 and the manual on government deficit and debt (MGDD), but substantial efforts are needed to reach the full compliance with ESA 2010 requirements.

Albania continued its preparations for improving the estimation of its non-observed economy. A pilot project to improve the exhaustiveness adjustments of GDP/GNI estimates, designed in particular to develop new experimental estimates of illegal activities and fiscal audits, was implemented. Efforts continued to improve the exhaustiveness of estimates of national accounts. Based on the ESA 2010 methodology (European System of Accounts) and the data sources available, a direct estimation of the non-observed economy was achieved, but it doesn't include all types of exhaustiveness adjustments. A GDP revision is planned in 2024, as a result of ongoing methodological improvements implemented in recent years.

On **administrative infrastructure**, Albania needs to continue the work on creating the relevant institutions involved in the own-resources system and an own-resource coordination body, and on implementing rules. These are needed to ensure that, when it joins the EU, Albania will be able to calculate, forecast, account for, collect, pay, control, and report to the EU on own resources, in line with the EU *acquis*.

As part of the 2008 Law on management of budgetary system, Albania has in place legal provisions which define the criteria for initiating public financial inspection, in cases of any irregularities, and serious financial mismanagement situations. Furthermore, the general tax directorate and the general customs directorate continued their work on identification of tax evasion and fraud. (*See also chapter 16, 29 and 32 on actions against corruption*). Continued

efforts are needed to formalise the informal economy, improve the exhaustiveness of the national accounts and GDP/GNI calculations and combat tax evasion and customs duty fraud.

CLUSTER 6: EXTERNAL RELATIONS

There are two chapters in this cluster: external relations (Chapter 30) and foreign, security and defence policy (Chapter 31). Albania has a good level of preparation in both.

As regards Chapter 31, during the reporting period Albania made good progress, maintaining full alignment with all relevant EU decisions and declarations of the EU's Common Foreign and Security Policy, including with the EU's restrictive measures following Russia's invasion of Ukraine.

As a non-permanent member of the UN Security Council since January 2022, Albania continues to be actively engaged in promoting and defending the rules-based international order.

Albania made some progress on external relations, in particular in further aligning with the EU *acquis* its legislation on preventing trade in certain goods that could be used for capital punishment and torture.

Chapter 30: External relations

The EU has a common commercial policy towards non-EU countries, based on multilateral and bilateral agreements and autonomous measures. There are also EU rules in the field of humanitarian aid and development policy.

Albania has a **good level of preparation** in external relations. **Some progress** was made during the reporting period, particularly regarding alignment of the legislation with the relevant EU *acquis* on preventing trade in certain goods that could be used for capital punishment and torture.

Last year's recommendations were partly implemented; therefore, in the coming year Albania should focus on:

- continuing to implement CEFTA additional protocol 5 on trade facilitation and additional protocol 6 on trade in services, and make progress with preparations to adopt additional protocol 7 on dispute settlement;
- establishing a legal framework covering international cooperation and development policy as well as humanitarian aid, in line with EU policies and principles.

On **common commercial policy**, Albania continued to coordinate its positions and align its policies closely with those of the EU, including within the World Trade Organization (WTO) and its Dispute Settlement Body. In December 2022, Albania adopted its Law on accession to the WTO Joint Initiative on Services Domestic Regulation. Albania also adopted in March 2023 the Agreement on Fisheries Subsidies in its Council of Ministers, which was ratified by Parliament in June 2023.

Albania continued to implement Central European Free Trade Agreement (CEFTA) commitments related to additional protocol 5 on trade facilitation and additional protocol 6 on services. A memorandum of understanding was signed in September 2022 between the governments of Albania and Italy to enable the extension of the green lanes between the Western Balkan countries and the bordering EU Member States.

Albania continued its awareness campaign with private sector representatives regarding the procedures and benefits involved in applying for authorised economic operator status, and

has so far registered 18 applications from local businesses. The first eight authorised economic operators were certified by the General Directorate of Customs and were positively assessed by the CEFTA validation committee. Albania continued to participate in the negotiations on CEFTA additional protocol 7 on dispute settlement.

Albania has yet to align its national control list of dual-use goods with the Commission delegated Regulation of 21 October 2022 on the list of dual-use items. In April 2023, Albania adopted its Law on goods that could be used for capital punishment or torture, which provides for partial alignment with the *acquis* on trade in certain of goods that could be used for capital punishment, torture or other cruel, inhuman or degrading treatment or punishment.

There has been no progress on export credit guarantees, although Albanian second-tier banks do provide guarantees such as payment guarantee, performance/contract guarantee and bid guarantee. There is no state-supported export credit insurance provider.

Albania has 40 **bilateral investment treaties** in force, 22 of which are with EU Member States. Albania is negotiating with China a memorandum of understanding concerning investment cooperation in the digital economy, with Azerbaijan in the field of economic, industrial and technological cooperation and with India an agreement on establishing an intergovernmental commission on economic cooperation.

Albania has no **development policy** framework for cooperation/aid or agency for development cooperation. It is encouraged to establish a legal framework covering international cooperation and development policy as well as humanitarian aid for non-EU countries, in accordance with EU policies and principles. In March 2023, Albania became a member of the OECD Development Centre.

The 2001 Law on non-profit organisations recognises the potential activities of such organisations in the field of **humanitarian aid**, and allows them to carry out development and humanitarian aid activities in Albania and elsewhere. Two decisions by the Council of Ministers were adopted in March and June 2022 to address humanitarian aid issues for Ukrainians coming to Albania, following Russia's invasion of Ukraine, and on the financial aid to be provided to the Ukrainian government for that country's reconstruction.

Chapter 31: Foreign, security and defence policy

Member States must be able to conduct political dialogue under the EU foreign, security and defence policy, align with EU statements, take part in EU actions, and apply agreed sanctions and restrictive measures.

Albania has a **good level of preparation** in the field of foreign, security and defence policy. **Good progress** was made as the country continued, in the reporting period, its track-record of full alignment with relevant High Representative statements on behalf of the EU and relevant Council Decisions, including with the EU restrictive measures following Russia's war of aggression against Ukraine.

Furthermore, as a non-permanent member of the UN Security Council since 2022, Albania has continued to be actively engaged in promoting and defending the rules-based international order, in particular in the context of Russia's war against Ukraine.

Some progress was made in implementing the national strategy on small arms and light weapons and in aligning with the EU *acquis* in this field, but Albania remains both a destination and a transit country for light firearms. Albania continued to participate in EU crisis management missions and operations under the Common Security and Defence Policy

In the coming year, Albania should in particular:

- maintain its alignment with EU foreign, security and defence policy and strengthen its implementation in all international fora and its enforcement capacity regarding restrictive measures;
- consider stepping up its participation in EU crisis management missions and operations ;
- continue to implement its national strategy on small arms and light weapons as well as the corresponding action plan and step up the investigation and prosecution of firearms trafficking.

The **political dialogue** between the EU and Albania on foreign and security policy issues continued, including through Albania's active engagement in the EU-Western Balkans Common Foreign and Security Policy dialogue, at political directors' level. Albania supports the Global Strategy for the EU's Foreign and Security Policy of June 2016 and the Strategic Compass for Security and Defence.

Albania's Ministry for Europe and Foreign Affairs has appropriate structures to participate in the **common foreign and security policy**, while the Ministry of Defence deals more specifically with the common security and defence policy. When invited during the reporting period, Albania aligned with all (100%) of relevant Council Decisions and High Representative declarations on behalf of the EU, including all EU restrictive measures against Russia and Belarus following Russia's war of aggression against Ukraine. This is a strong signal of the country's strategic commitment to its EU path.

Albania made efforts to implement EU **restrictive measures**. However, the technical implementation and enforcement of the increasingly complex EU sanctions regimes pose a challenge. The authorities should continue to strengthen their capacity in this regard. In March 2023, Albania, North Macedonia, Kosovo and Montenegro launched the informal "Western Balkan QUAD – 100% alignment with EU CFSP", a platform aimed at facilitating their full alignment with the EU's CFSP.

Albania's priorities as a non-permanent member of the UN Security Council in 2022-2023 are in line with important EU priorities, including strengthening the agenda for women, peace and security, human rights and international law, countering violent extremism, and climate and security. The new national action plan on Women, Peace and Security was finalised. Albania has closely cooperated and coordinated with the EU and with the EU Member States in the UN Security Council, including on the international response to Russia's war of aggression against Ukraine. In March 2023, Albania became a member of the OECD Development Centre. While Albania generally aligns with the EU's positions in international organisations, implementation of a fully common approach is yet to be achieved.

Albania maintains a bilateral immunity agreement with the United States, granting US citizens exemptions from the jurisdiction of the **International Criminal Court**. In doing so, it does not comply with the EU common positions on the integrity of the Rome Statute or with the related EU guiding principles on bilateral immunity agreements. Alignment with the EU position is therefore needed.

On **conflict prevention**, during its current mandate as elected member of the UN Security Council, Albania has vocally addressed the importance of promoting peace and security through resolution of current crises, peaceful conflict settlement and mediation. Albania continued supporting EU measures and documents on conflict prevention.

Regarding **non-proliferation**, Albania continued to implement its national strategy on small arms and light weapons (SALW), adopted in February 2019, and the related action plan for 2022-2024. Albania also remained actively engaged in implementing the 2018 regional

roadmap and other regional forms of cooperation such as the European multidisciplinary platform against criminal threats (EMPACT) on firearms.

Albania continued to participate in some, but not all, international export control arrangements and non-proliferation instruments. It started procedures to join the Wassenaar Arrangement in September 2020 and should conclude the process rapidly. Albania continued to implement the national strategy against proliferation of weapons of mass destruction and its action plan, adopted in January 2020. Since May 2022, Albania has been serving as a member of the Executive Council of the Organisation for the Prohibition of Chemical Weapons (OPCW) for the 2022-2024 period, actively contributing to the effective implementation of the Chemical Weapons Convention.

Albania continued active **cooperation with international organisations**. In October 2023, Albania was elected to the UN Human Rights Council for the 2024-2026 term.

In terms of **security measures**, Albania has progressed on the path to full implementation of its security of information agreement with the EU.

Regarding civil and military crisis management, Albania continued to participate in EU crisis management missions and operations under the **common security and defence policy**, notably EUFOR Althea in Bosnia and Herzegovina.

Albania takes part in the European Peace Facility Balkan Medical Task Force assistance measure.

Regarding **hybrid threats**, Albania completed the EU's hybrid risk survey with the objective of identifying systemic vulnerabilities and continues to address the recommendations. A follow-up exercise to establish the state of implementation of the recommendations, which date back to 2020, was held in Tirana in September 2022 by the EEAS and the Commission.

In response to the large-scale cyber-attacks that were detected in July and September 2022, the government has begun to significantly strengthen its cybersecurity architecture – *see under Chapter 10 – Digital transformation and media*.

Albania needs to continue efforts on closing space for foreign interference and information manipulation, including disinformation and take actions towards building societal resilience against it and other forms of hybrid threats.

ANNEX I – RELATIONS BETWEEN THE EU AND ALBANIA

Albania is a candidate country since 2014. The first Intergovernmental Conference on **accession negotiations** took place on 19 July 2022, following the approval of the negotiating framework by the Council. On the same day the Commission launched the analytical examination of the acquis - the “**screening**” process, which progresses smoothly. All sessions on Cluster 1 (Fundamentals), Cluster 2 (Internal market), Cluster 3 (Competitiveness and inclusive growth) and Cluster 4 (Green Agenda and sustainable connectivity) have taken place. Explanatory sessions on Cluster 5 (Resources, agriculture and cohesion) and Cluster 6 (External relations) have been completed and bilateral sessions on these are ongoing. The remaining screening meetings are scheduled until November 2023.

Albania has been participating in the **Stabilisation and Association process** since 1999. The **Stabilisation and Association Agreement** (SAA) between Albania and the EU came into force in April 2009. The transitional period of the SAA ended on 31 March 2019 and since 1 April 2019, Albania is fully associated with the EU. In the reporting period, Albania continued to implement, overall, its commitments under the SAA. Regular political and economic dialogue has continued through the relevant joint bodies under the SAA. The Stabilisation and Association Council took place on 16 March 2023, for the first time in Tirana. Discussions focused on progress in SAA implementation as well as of the most important reforms developments. The Stabilisation and Association Committee did not meet during the reporting period. The Stabilisation and Association Parliamentary Committee met on 1 December 2022 and 19-20 July 2023.

The SAA and its Interim Agreement, applied since 2006, have allowed progressive trade liberalisation and mutual duty-free access for most goods. Since 2000 Albania has also been benefiting from the ‘autonomous trade measures’. The EU is the main trading partner of Albania, followed by CEFTA countries. Trade integration with the EU is high. In 2022 the EU remained the main trading partner of Albania, accounting for 59% of Albania’s total trade in goods (73% of total exports and 52% of total imports). EU-Albania trade rose by 19% in 2022, demonstrating continued recovery from the impacts of the COVID-19 pandemic. Albania’s total trade in 2022 was worth EUR 12.1 billion. The country’s trade deficit with the EU amounted to EUR 1.1 billion in 2022. In comparison, Albania’s trade with CEFTA represented around 10.7% of total trade as compared to 10.1% in 2021, which demonstrates ongoing regional integration.

Visa liberalisation for citizens of Albania travelling to the Schengen area has been in force since December 2010. A readmission agreement between the EU and Albania has been in force since 2006. The Commission’s December 2022 fifth report under the visa suspension mechanism¹⁴ concluded that Albania continues to meet the visa liberalisation requirements.

Albania has continued to fully align with all EU **common foreign and security policy** positions and declarations during the reporting period. Albania continued to actively participate in EU crisis management missions and operations under the common security and defence policy, notably EUFOR Althea in Bosnia and Herzegovina.

Under the **Instrument for Pre-accession Assistance 2021 – 2027 (IPA III)**¹⁵, a second financing Decision of EUR 80.6 million for the Annual Action Plan 2022 supports the process of re-evaluation of judges, democracy, law enforcement, EU integration, water and youth. At the EU-WB Summit in Tirana in December 2022, the Commission put forward an

¹⁴ COM(2022) 715 final

¹⁵ Official Journal L 330, 20.9.2021

Energy Support Package of EUR 1 billion for the Western Balkans to address immediate, short-term, and medium-term needs in the region in the context of the energy crisis and of Russian war of aggression against Ukraine. Following this announcement, a EUR 80 million budget support programme for Albania was adopted at the end of 2022 (annual action plan 2023) to cushion the energy price increase to SMEs and vulnerable households and to accelerate energy diversification. These programmes are complemented by a significant package of multi-country programmes and the rural development programme IPARD III with EUR 112 million, which provide a significant contribution to kick-start the implementation of the Economic and Investment Plan for the Western Balkans and the Green Agenda. Albania participates also in cross-border cooperation programmes, transnational cooperation programmes and Union programmes.

On-going programmes under IPA II (2014-2020) are still providing significant support for the social and economic development of the country and contribute to key reforms. On the fundamentals, progress was made with the implementation of the justice reform for instance in the process of reevaluation of judges and prosecutors (“vetting”), in supporting the specialised structures against corruption and organised crime, as well as in fighting money laundering. EU programmes have supported public administration reform, public finance, decentralisation and service provision to the citizens. In addition, civil society has been a strong partner in advancing the priority areas of the fundamentals agenda. Significant EU financial assistance has been allocated to Albania for protecting the environment and boosting the connectivity with the EU transport systems.

Albania is the only country from the region that has signed cooperation agreements with all justice and home affairs agencies of the EU. Albania participates in five **cross-border cooperation programmes**, as well as in transnational cooperation programmes. Albania participates with IPA support in the EU programmes Erasmus+, Creative Europe (Culture and Media strands), Employment and Social Innovation, Horizon 2020, Customs 2020, Fiscalis 2020, Competitiveness of Enterprises and Small and Medium-Sized Enterprises Programme (COSME), Justice, Europe for Citizens and EU Fundamental Rights Agency (FRA) (observer). To improve the accountability of public administration in the country, Albania is participating as an observer in a pilot project under the Technical Support Instrument.

The **Western Balkans Investment Framework** (WBIF) has supported Albania in the amount of EUR 217.8 million provided as IPA III grants for flagship projects in the area of clean energy, environment and climate, digital future, and sustainable transport.

The EU provides support via IPA and the Foreign Policy Instrument to strengthen Western Balkans partners’ resilience to face hybrid threats including cyber and foreign information manipulation and interference.

STATISTICAL DATA (as of 31/08/2023)

ANNEX I – RELATIONS BETWEEN THE EU AND BOSNIA AND HERZEGOVINA	133

1. INTRODUCTION

1.1. CONTEXT

Following its application for EU membership in February 2016, Bosnia and Herzegovina must fulfil **14 key priorities** as set out in the **Commission's Opinion**¹ of May 2019 covering democracy/functionality, the rule of law, fundamental rights, and public administration reform. Once the Commission assesses that Bosnia and Herzegovina has achieved the necessary degree of compliance with the membership criteria and in particular has met the key priorities, the Commission will recommend opening EU accession negotiations. On the basis of the December 2019 conclusions of the Council of the European Union², the Commission focuses its annual reports on Bosnia and Herzegovina's implementation of the 14 key priorities.

On the basis of a recommendation by the Commission³, in December 2022 the European Council granted Bosnia and Herzegovina the status of **candidate country**⁴. The positive momentum that followed the granting of candidate status resulted in limited progress on the Opinion's key priorities. Positive developments at state level were in stark contrast to negative developments at the level of the *Republika Srpska* entity, impacting the country as a whole.

Following the October 2022 elections, state and entity-level legislative and executive bodies were set up by May 2023. The Commissioner and the Chairwoman of the Council of Ministers co-chaired a **High-Level Political Forum** in Sarajevo on 17 May to monitor the implementation of the steps in the recommendation, report on further progress on the ground and discuss reform efforts along the EU path. At the Political Forum the authorities reconfirmed their commitment to the strategic goal of EU accession.

Following the granting of candidate status, the **public commitment** of political parties to the strategic goal of **European integration** brought positive results. Important steps and commitments were made towards the fulfilment of the key priorities, despite negative legislative developments at entity level. The formation of a state-level coalition government at record speed is an important proof of a new political dynamism and will.

To address the **steps** specified in the Commission recommendation for candidate status, in the reporting period Bosnia and Herzegovina took the following actions. The Council of Ministers adopted strategies to counter organised crime, made an updated risk assessment and an accompanying action plan on anti-money laundering and combating the financing of terrorism, adopted strategies and action plans on migration and on terrorism, and appointed a supervisory body for the implementation of the national war crimes processing strategy. The contact point with Europol finally started operations in June 2023. The Council of Ministers endorsed a set of draft laws, notably on: integrity in the judiciary; torture prevention (designating the Ombudsman as national preventive mechanism); foreigners; and freedom of access to information. These were adopted by Parliament in August and September 2023.

The Council of Ministers also endorsed the legal basis for conducting negotiations on the southern and eastern gas interconnections, and the cooperation agreement with Eurojust. The Council of Ministers also endorsed the organisation of the Digital Summit of the Western

³ COM(2022) 528 final, p. 38-39.

⁴ <https://www.consilium.europa.eu/media/60872/2022-12-15-euco-conclusions-en.pdf>

Balkans, held in Sarajevo in October 2023, the establishment of the Computer Emergency Response Team (CERT), and the procurement of helicopters for the Ministry of Defence and the Armed Forces. A state budget for 2023 was adopted in March. Bosnia and Herzegovina has launched ratification of two regional mobility agreements and needs to do the same for the agreement on free travel with identity card.

Recent developments, mainly in the *Republika Srpska* entity, are going against the positive momentum. Notably, the entity called for constitutional judges to resign and adopted a law decreeing that Constitutional Court decisions would not be implemented, calling into question the authority, integrity and the unimpeded functioning of the Constitutional Court and breaching the constitutional and legal order of the country. The entity also reintroduced criminal penalties for defamation, which severely impact the environment for civil society and restrict freedom of expression and media freedom, representing a major step backwards in the protection of fundamental rights. A draft law targeting civil society groups as ‘foreign agents’ was adopted in the first reading by the entity assembly. If finally adopted, this law would further undermine the effective functioning of democracy and would mark another regrettable and undeniable major step backwards.

Bosnia and Herzegovina continues to implement the **Stabilisation and Association Agreement** (SAA) which, together with its Interim Agreement applied since 2008, has enabled progressive trade liberalisation with the EU and mutual duty-free access for most goods. Continued protectionist measures are, however, a cause of increasing and serious concern regarding implementation of the SAA.

Policy dialogue under the SAA was restored after political blockage in 2021 and early 2022. The cycle of sectoral subcommittees opened in 2020 was completed in June 2023. A Stabilisation and Association Council took place in July 2023.

Bosnia and Herzegovina received the first 90% of the EUR 70 million energy support package in May 2023. The Council of Ministers needs to urgently appoint a National IPA Coordinator (NIPAC) for IPA III.

1.2. SUMMARY OF THE REPORT⁵

As regards **political criteria**, elections took place in October 2022. The High Representative intervened multiple times in electoral matters, including on the evening of the election day, which according to OSCE/ODIHR challenged legal certainty.

All state and entity-level legislative and executive bodies were set up by May 2023. A new state-level Council of Ministers took office in late January, supported by a ruling coalition including SNSD, HDZ BiH, and the ‘trojka’ (SDP, NiP, *Naša Stranka*). A state budget for 2023 was adopted in March. The new Council of Ministers took significant steps to adopt EU reforms following the granting of candidate status: it adopted the strategy on organised crime, an updated risk assessment and accompanying action plan on anti-money laundering and combating terrorism financing, as well as the strategies and action plans on migration and on terrorism. It also appointed a supervisory body for implementation of the national war crimes

⁵ This report covers the period from June 2022 to June 2023. It is based on input from a variety of sources, including contributions from Bosnia and Herzegovina, the EU Member States, European Parliament reports and information from various international and non-governmental organisations. It also includes the results of comparative assessments and indices produced by other stakeholders, in particular in the area of rule of law. The report uses the following assessment scale to describe the state of play: early stage, some level of preparation, moderately prepared, good level of preparation and well advanced. To describe progress made during the reporting period, it uses the following scale: backsliding, no progress, limited progress, some progress, good progress and very good progress. Where appropriate, interim steps have also been used.

processing strategy. The contact point with Europol finally started operations in June 2023. The Council of Ministers also endorsed a set of draft laws, notably on: integrity in the judiciary; torture prevention (designating the Ombudsman as national preventive mechanism); foreigners; and freedom of access to information. These were adopted by Parliament in August and September 2023.

A number of Constitutional Court decisions have yet to be fully enforced, including on state property. The Constitutional Court suspended or quashed several legal and political acts by the *Republika Srpska* entity. The entity leadership determined to enforce such laws nevertheless, endangering legal certainty. The entity assembly called on state-level constitutional judges to resign, and in June 2023 it legalised the non-publication of decisions of the High Representative and the non-implementation of the rulings of the Constitutional Court, calling into question the authority and integrity of the Constitutional Court and breaching the constitutional and legal order of the country. Both entities' assemblies should appoint judges swiftly to the vacant judges' seats and ensure the full composition of the Constitutional Court.

Constitutional and electoral reforms are still needed to bring the Constitution into line with the European Convention on Human Rights, complying with the *Sejdić-Finci* case law.

No steps were taken to develop socio-economic reforms in line with Commission recommendations and with the joint conclusions of the economic and financial dialogue. The continued protectionist measures are a matter of concern in the implementation of the SAA. Policy dialogue under the SAA was restored after its political blockage in 2021-2022. Bosnia and Herzegovina has not yet developed a national plan for the adoption of the EU *acquis* (NPAA), as required by the SAA.

Some progress was made on the alignment with the common foreign and security policy (CFSP). Bosnia and Herzegovina significantly improved its alignment with EU foreign policy. *Republika Srpska* entity authorities and parties advocated for a neutral stance on Russia's aggression against Ukraine, contesting the country's alignment with EU statements and obstructing the full implementation of restrictive measures against Russia. Bosnia and Herzegovina has launched ratification of two regional mobility agreements and needs to do the same for the agreement on free travel with identity cards. Bosnia and Herzegovina is at an early stage of preparation and made some progress on **public administration reform** (PAR). Some positive steps were taken by (i) adopting the PAR coordination arrangement ('common platform'), including a political decision-making body; (ii) implementing comprehensive and countrywide public finance management, (iii) improving capacity for public consultation at state level and on regulatory impact assessment in the *Republika Srpska* entity, (iv) adopting a strategy on human resource management in the Federation entity, (v) improving the professional development and performance appraisal in the Federation entity and at state level, and (vi) adopting a Law on freedom of access to information, aimed at fostering proactive disclosure and transparency. Some five years after adoption, the PAR action plan has been implemented only to a limited extent. Civil service laws are still not harmonised with each other and merit principles are not enshrined in recruitment procedures. The monitoring of human resources is not effective in detecting irregularities. A political decision-making body, included in the 'common platform', still needs to become operational to steer reforms effectively. The capacity of entity-level PAR coordinators remains weak. Bosnia and Herzegovina needs to complete essential steps to improve the overall functioning of the public administration by ensuring a professional and depoliticised civil service and a coordinated, countrywide approach to policymaking.

Bosnia and Herzegovina is at an early stage of preparation as regards its **judiciary**. Some progress was made in this area. In September 2023, Bosnia and Herzegovina amended the Law on the High Judicial and Prosecutorial Council (HJPC) with the aim of establishing a system to verify the asset declarations of judges, prosecutors and HJPC members, albeit with changes compared to the version on which the Venice Commission was consulted. Such changes hamper the effectiveness of the asset-declaration system and therefore need to be amended. The Council of Ministers also appointed a new supervisory body overseeing the implementation of the national war crimes strategy. The independence and impartiality of the judiciary did not improve. Executive and legislative authorities failed to adopt additional safeguards. Inconsistency and overly broad discretion persist in applying the rules on appointment, disciplinary responsibility, career advancement and conflict of interest of judges and prosecutors. Persistent and evident signs of deterioration continue to require urgent measures to strengthen integrity and regain the public's trust in the judiciary. The poor functioning of the judicial system continued to undermine citizens' enjoyment of rights and the fight against corruption and organised crime. The *Republika Srpska* entity assembly called on state-level constitutional judges to resign and legalised the non-implementation of the rulings of the Constitutional Court, calling into question the authority and integrity of the Constitutional Court and breaching the constitutional and legal order of the country.

Bosnia and Herzegovina is between an early stage and some level of preparation in the prevention of and **fight against corruption and organised crime**. No progress was made in the fight against corruption. Some progress was made in the fight against organised crime. The Council of Ministers adopted a strategy on organised crime, a strategy and action plan on terrorism, an updated risk assessment and an accompanying action plan on anti-money laundering and combating the financing of terrorism. The contact point for cooperation with Europol started operating in June 2023. The Ministry of Justice is yet to submit a draft state-level law on the prevention of conflict of interest in line with European standards to the Council of Ministers for adoption. Although there were some indictments pertaining to high-level corruption, the overall track record on preventing and repressing corruption (including at high level) remains insignificant due to operational inefficiency and political interference. There are systemic shortcomings in the operational cooperation between law enforcement agencies fighting organised crime, due to non-harmonised criminal legislation, weak institutional coordination, and a very limited exchange of intelligence. Criminal organisations take advantage of legal and administrative loopholes. The police is vulnerable to political interference. Financial investigations and asset seizures are also largely ineffective. A proactive approach remains fundamental to countering criminal infiltration in the political, legal and economic systems. Cooperation with Eurojust and the European Public Prosecutor's Office (EPPO) still needs to be stepped up. Building upon some operational successes in 2023, Bosnia and Herzegovina needs to continue its efforts in the fight against terrorism and drug trafficking and must increase its capacity to do so. A new law on anti-money laundering and terrorism financing in line with the EU *acquis* urgently needs to be adopted.

The legislative and institutional framework on **fundamental rights** is largely in place. In August 2023 the Parliament adopted a Law on freedom of access to information and amended the Law on the human rights Ombudsman to designate it as the national preventive mechanism against torture and ill-treatment. Significant reforms are still needed to ensure that all citizens can exercise their voting rights and to ensure non-discriminatory, inclusive and quality education for all, including by overcoming the practice of 'two schools under one roof'. Pride marches have been held regularly since 2020, and an action plan on the rights of lesbian, gay, bisexual, transgender, intersex and queer (LGBTIQ) persons was adopted in July 2022. The gender action plan was adopted in October 2023. Gender-based violence, ill-

treatment of detainees and inadequate protection of minorities, including the Roma⁶, continue to cause concern.

There was backsliding in guaranteeing freedom of expression and freedom of the media by protecting journalists from threats and violence and ensuring the financial sustainability of the public broadcasting system. Criminal penalties for defamation, reintroduced in the *Republika Srpska* entity in July 2023, severely impact the environment for civil society and restrict freedom of expression and of the media. In September 2023, a draft law targeting civil society groups as ‘foreign agents’ was also adopted in first reading in the *Republika Srpska* entity assembly; if fully adopted, it would mark another regrettable and undeniable major step backwards.

Bosnia and Herzegovina continued to take steps to improve **migration** management. Bosnia and Herzegovina adopted a new strategy and action plan on migration and asylum and now needs to implement them. A Law on foreigners was adopted in September 2023. Major weaknesses still undermine the provision of necessary assistance. Bosnia and Herzegovina needs to urgently step up efforts to ensure access to asylum and strengthen border management. Bosnia and Herzegovina is satisfactorily implementing the integrated border management strategy and should adopt in good time the strategy and action plan for 2024-2029.

As regards **economic criteria**, Bosnia and Herzegovina is at an early stage of establishing a functioning market economy. Cooperation and coordination of economic policymaking at state level and among the entities have further deteriorated. As a result, the country’s internal market remains fragmented, adversely affecting the business environment. Unemployment remains very high and labour out-migration persists. The country’s economic reform programme (ERP) continues to be of poor quality and implementation of reforms is limited. The ERP does not contain sufficient credible countrywide measures to address the major structural economic challenges in relation to the business environment, the informal economy, public enterprises, the green and digital transitions and unemployment. Overall, Bosnia and Herzegovina’s economic performance remains below its potential, as policymaking is hindered by political stalemate, an overly short-term approach, and lack of focus on policy measures to build growth.

Bosnia and Herzegovina is between an early stage and some level of preparation in terms of **capacity to cope with competitive pressure and market forces in the EU**, and made limited progress in this area. The quality of education has remained low and the country continues to lag behind in the energy and digital transition. In response to changes in global demand, some structural adjustment took place, with the focus of value-added moving towards services, such as trade, IT and tourism. Economic integration with the EU remains high, but overall trade is below potential.

Bosnia and Herzegovina is in between an early stage and some level of preparation in its ability to take on the **obligations of EU membership**. It needs to significantly step up alignment with the EU *acquis* and implement and enforce the necessary legislation. Limited to no progress was made on most EU *acquis* chapters during the reporting period.

Bosnia and Herzegovina has some level of preparation and made limited progress in the area of **public procurement** with the adoption of certain bylaws. The legislation needs to be further aligned with the EU *acquis*, including in the area of concessions. There was limited progress on **statistics**; preparations for the next census have hardly progressed and the

⁶ In line with the terminology of European institutions the umbrella term ‘Roma’ is used here to refer to a number of different groups, without denying the specificities of these groups.

production of macroeconomic statistics continues to deviate from the EU *acquis*. Some progress was made on public internal **financial control (PIFC)** in terms of implementing PIFC strategies in the entities and at state level.

Major steps are needed to align the legal framework across the country with the EU *acquis* on the **internal market** (free movement of goods, workers, services and capital, company law, intellectual property, competition policy, financial services, consumer and health protection) as well as to establish an internal market within the country. Bosnia and Herzegovina made no progress in this cluster. Procedures and legislation that differ between the entities create obstacles to competitiveness and growth and hinder enforcement. Bosnia and Herzegovina should improve coordination among the relevant authorities in all areas to achieve a countrywide approach and improve their enforcement record. It should abolish ethnic-based voting procedures in the Competition Council and State Aid Council and set up a financial stability fund as part of the bank resolution framework. This cluster is key for Bosnia and Herzegovina's preparations to meet the EU single market requirements and is very important for early integration with and the development of the Common Regional Market, as well as for the country to benefit from the Economic and Investment Plan and the New Growth Plan for the Western Balkans.

Bosnia and Herzegovina made limited or no progress in the areas of **competitiveness and inclusive growth** (taxation, digital transformation and media, social policy and employment, enterprise and industrial policy, science and research, education and culture and customs). It showed no progress in other areas (economic and monetary policy) where it is at an early stage or has some level of preparation. These areas have significant links to the economic reform programme. The country needs to introduce socio-economic reforms to address structural weaknesses, including low competitiveness and high unemployment. Bosnia and Herzegovina made some or limited progress in the **green agenda and sustainable connectivity** cluster, where it is at an early stage on energy, environment and climate change. It has some level of preparation in the areas of transport and trans-European networks. Further steps are needed on connectivity reform measures and in aligning with the Trans-European Transport Network (TEN-T) and Trans-European Networks for Energy (TEN-E) Regulations. The green transition and sustainable connectivity are key to economic integration within the region and with the EU. The implementation of the Economic and Investment Plan⁷ and the Green Agenda for the Western Balkans⁸ needs to be accelerated.

Bosnia and Herzegovina made no progress in the areas of **resources, agriculture and cohesion** (agriculture and rural development, food safety, veterinary and phytosanitary policy, fisheries and aquaculture, and financial and budgetary provisions), where preparation is mostly at an early stage. It must step up its efforts to prepare and adopt a post-2021 countrywide strategy for rural development, align its legislation on food safety, veterinary and phytosanitary policy and strengthen its administrative capacity. The administrative capacity of laboratories and central databases has yet to be strengthened. More efforts are also needed to prepare and adopt a countrywide strategy on fisheries and aquaculture and harmonise data collection. Bosnia and Herzegovina should start preparing a countrywide regional development strategy.

Bosnia and Herzegovina has some level of preparation in the cluster on **external relations**. Its alignment with the EU Common Foreign and Security Policy (CFSP) significantly improved, notably on High Representative statements on behalf of the EU and Council

⁷ COM(2020) 641 final.

⁸ SWD(2020) 223 final.

decisions on restrictive measures following Russia's war of aggression against Ukraine, although the implementation of sanctions remains a challenge. Bosnia and Herzegovina again unilaterally introduced and continued export restrictions breaching the terms of the SAA, a matter of concern for trade and commercial policy. The country needs to implement the additional protocols to the Central European Free Trade Agreement (CEFTA) on trade facilitation and trade and services, and swiftly adopt the additional protocol on dispute settlement. Bosnia and Herzegovina continued to actively participate in **regional cooperation** and to maintain good neighbourly relations. It needs to swiftly ratify the three regional mobility agreements.

In 2022, Bosnia and Herzegovina benefited from EUR 45.5 million under the **Instrument for Pre-accession Assistance 2021-2027 (IPA III)**⁹, providing support for programmes in justice, public administration reform, public finance management, EU integration, environment and climate change, employment and social protection. This set of programmes, complemented by a package of multi-country programmes, significantly contributes to the implementation of the **Economic and Investment Plan** for the Western Balkans and the **Green Agenda**.

The 2023 annual action plan consists of the **energy support package** for the Western Balkans and provides EUR 70 million to reduce the socio-economic impact of rising energy prices, in particular on small and medium-sized enterprises and households, and to support the transition to renewable energy sources, in line with the priorities of the EU's Economic and Investment Plan for the Western Balkans.¹⁰

Adopting countrywide sector strategies remains a key requirement for Bosnia and Herzegovina to benefit fully from IPA funding in the future. The Council of Ministers urgently needs to appoint the National IPA Coordinator (NIPAC) for IPA III.

1.3 ASSESSMENT OF THE IMPLEMENTATION OF THE 14 KEY PRIORITIES FOR OPENING EU ACCESSION NEGOTIATIONS AND OF THE STEPS SPECIFIED IN THE COMMISSION RECOMMENDATION FOR CANDIDATE STATUS

Key priority 1: *Ensure that elections are conducted in line with European standards by implementing OSCE/ODIHR and relevant Venice Commission recommendations, ensuring transparency of political party financing, and holding municipal elections in Mostar.*

The electoral frameworks remains to be aligned with European standards and recommendations. The High Representative imposed several changes to the electoral framework, including on the evening of the election day (2 October 2022), which according to OSCE/ODIHR challenged legal certainty. Municipal elections were held in Mostar in December 2020.

Key priority 2: *Ensure a track record in the functioning at all levels of the coordination mechanism on EU matters including by developing and adopting a national programme for the adoption of the EU acquis.*

Step: *ensure a track record in the functioning at all levels of the coordination mechanism on EU matters including by developing and adopting a national programme for the adoption of the EU acquis.*

⁹ C(2022) 9167 final.

¹⁰ C(2022) 9158 final.

There was no action on this key priority and step. The Council of Ministers should improve the functioning and make effective use of the coordination mechanism (collegium and ministerial conferences), and develop a national programme for the adoption of the EU *acquis* (NPAA). The programme for EU integration, prepared by DEI is still pending approval by the Council of Ministers. The Council of Ministers needs to urgently appoint the national IPA coordinator (NIPAC) for IPA III.

Key priority 3: *Ensure the proper functioning of the Stabilisation and Association Parliamentary Committee.*

The Stabilisation and Association Parliamentary Committee (SAPC) adopted its rules of procedure in 2021. Following the October 2022 elections, delegates to the SAPC were appointed in May 2023. Bosnia and Herzegovina's Parliament and the European Parliament held a full session of the SAPC in late October 2023. **The key priority is completed.**

Key priority 4: *Fundamentally improve the institutional framework, including at constitutional level, in order to:*

- a) *Ensure legal certainty on the distribution of competences across levels of government;*
- b) *Introduce a substitution clause to allow the State upon accession to temporarily exercise competences of other levels of government to prevent and remedy breaches of EU law;*
- c) *Guarantee the independence of the judiciary, including its self-governance institution (HJPC);*
- d) *Reform the Constitutional Court, including addressing the issue of international judges, and ensure enforcement of its decisions;*
- e) *Guarantee legal certainty, including by establishing a judicial body entrusted with ensuring the consistent interpretation of the law throughout Bosnia and Herzegovina;*
- f) *Ensure equality and non-discrimination of citizens, notably by addressing the Sejdić-Finci ECtHR case law;*
- g) *Ensure that all administrative bodies entrusted with implementing the *acquis* are based only upon professionalism and eliminate veto rights in their decision-making, in compliance with the *acquis*.*

NB: *The June 2022 European Council called on the leaders of Bosnia and Herzegovina to urgently finalise the pending constitutional and electoral reforms. These reforms should be advanced as an utmost priority.*

This key priority requires fundamental reforms, including at constitutional level to improve the institutional framework of Bosnia and Herzegovina. In June 2023 the *Republika Srpska* entity adopted a law on the non-application of decisions of the Constitutional Court, in breach of the constitutional and legal order, further hindering legal certainty.

Key priority 5: *Take concrete steps to promote an environment conducive to reconciliation in order to overcome the legacies of the war.*

The Council of Ministers appointed a supervisory body for the implementation of the national war crimes processing strategy. Some positive action was taken at local level (Mostar, Brčko). Occasionally political leaders continue spreading historical revisionism and glorifying war criminals, including by denying and trivialising genocide, war crimes, and crimes against humanity. Bosnia and Herzegovina should address outstanding issues concerning war crime trials, missing persons, redress of wartime victims of torture and sexual violence, and transitional justice.

Key priority 6: *Improve the functioning of the judiciary by adopting new legislation on the*

High Judicial and Prosecutorial Council and of the Courts of Bosnia and Herzegovina in line with European standards.

Step: *adopt, as a matter of priority, integrity amendments in the existing law of High Judicial and Prosecutorial Council.*

The Parliament adopted integrity amendments to the HJPC Law in September 2023, albeit with changes compared to the version on which the Venice Commission was consulted. These changes hamper the effectiveness of the asset declaration system and therefore need to be amended. Bosnia and Herzegovina should finalise and adopt the two comprehensive judicial reform laws – the new Law on the HJPC and the new law on the Courts of Bosnia and Herzegovina – in line with the opinions of the Venice Commission.

Key priority 7: *Strengthen the prevention and fight against corruption and organised crime, including money laundering and terrorism, notably by:*

- a) adopting and implementing legislation on conflict of interest and whistle-blowers' protection;*
- b) ensuring the effective functioning and coordination of anti-corruption bodies;*
- c) align the legislation and strengthen capacities on public procurement;*
- d) ensuring effective cooperation among law enforcement bodies and with prosecutors' offices;*
- e) demonstrating progress towards establishing a track record of proactive investigations, confirmed indictments, prosecutions and final convictions against organised crime and corruption, including at high-level;*
- f) de-politicising and restructuring public enterprises and ensuring transparency of privatisation processes.*

Step: *adopt the Law on prevention of conflict of interest.*

Step: *take decisive steps to strengthen the prevention and fight against corruption and organised crime.*

The Parliament amended the Law on public procurement in August 2022, and bylaws have been put in place. The Europol contact point started operating in June 2023, and Bosnia and Herzegovina deployed a liaison officer to The Hague. All police bodies in Bosnia and Herzegovina can now exchange messages through the Secure Information Exchange Network Application (SIENA) system. The Council of Ministers adopted strategies on terrorism and on organised crime, and an updated risk assessment and accompanying action plan on anti-money laundering and combating the financing of terrorism. These strategies and action plans need to be implemented at operational level.

Key priority 8: *Ensuring effective coordination, at all levels, of border management and migration management capacity, as well as ensuring the functioning of the asylum system.*

Step: *decisively advance work to ensure effective coordination, at all levels, of border management and migration management capacity, as well as ensuring the functioning of the asylum system.*

Migration management has improved. The Council of Ministers adopted a migration strategy and action plan. The Parliament adopted a Law on foreigners in August 2023. Reception capacities are sufficient. Readmission agreements and implementing protocols are implemented overall satisfactorily. Bosnia and Herzegovina needs to assign an appropriate budget for migration management, improve the procedures for the return of persons not in

need of international protection and take further steps to ensure a functioning asylum system. Obstacles persist to ensuring effective access to asylum.

Key priority 9: *Strengthen the protection of the rights of all citizens, notably by ensuring the implementation of the legislation on non-discrimination and on gender equality*

Legislation on gender equality and on anti-discrimination is not harmonised across the country or effectively enforced. The Council of Ministers adopted a new gender action plan in October 2023; a new action plan on women, peace and security remains to be adopted. Cases of femicide sparked public protests and exposed systemic shortcomings of response to gender-based and domestic violence, including in the legislative alignment with the Istanbul convention.

Key priority 10: *Ensure the right to life and prohibition of torture, notably by (a) abolishing the reference to death penalty in the Constitution of the Republika Srpska entity and (b) designate a national preventive mechanism against torture and ill-treatment.*

Step: *ensure prohibition of torture, notably by establishing a national preventive mechanism against torture and ill-treatment.*

In October 2019 the Constitutional Court repealed the reference to death penalty in the Constitution of the Republika Srpska entity. In August 2023 the Parliament amended the Law on the human rights Ombudsman to designate it as national preventive mechanism against torture and ill-treatment – an international obligation of the country. **The key priority is completed.**

Key priority 11: *Ensure an enabling environment for civil society, notably by upholding European standards on freedom of association and freedom of assembly.*

While the overall legal and regulatory framework is broadly in line with the EU *acquis*, recently the Republika Srpska entity adopted in the first reading a draft law targeting civil society actors as ‘foreign agents’ which, if fully adopted, would mark another regrettable and undeniable major step backwards.

Key priority 12: *Guarantee freedom of expression and of the media and the protection of journalists, notably by: (a) ensuring the appropriate judicial follow-up to cases of threats and violence against journalists and media workers, and (b) ensuring the financial sustainability of the public broadcasting system.*

Step: *guarantee freedom of expression and of the media and the protection of journalists, notably by ensuring the appropriate judicial follow-up to cases of threats and violence against journalists and media workers.*

There continue to be concerns about political pressure, intimidation and threats against journalists. In July 2023 the Republika Srpska entity re-introduced criminal penalties for defamation, with disproportionate restrictions that severely impact freedom of expression and of the media and representing a major step backwards. No action was taken to ensure the financial sustainability of the public broadcasting system.

Key priority 13: *Improve the protection and inclusion of vulnerable groups, in particular persons with disabilities, children, LGBTIQ persons, members of the Roma community, detainees, migrants and asylum seekers, as well as displaced persons and refugees in line with the objective of closure of Annex VII of the Dayton Peace Agreement.*

Pride marches have been held regularly since 2020. An action plan on the rights of LGBTIQ persons was adopted in July 2022 and remains to be implemented. The protection and inclusion of persons in vulnerable situation should be further addressed.

Key priority 14: *Complete essential steps in public administration reform towards improving the overall functioning of the public administration by ensuring a professional and de-politicised civil service and a coordinated countrywide approach to policy making.*

All levels of government have been implementing the action plan on public administration reform (PAR), the comprehensive and countrywide public finance management strategy, and their own individual strategies on public financial management. In August 2023 the Parliament adopted a Law on freedom of access to information, intended to improve the proactive disclosure of information and the transparency of state-level institutions. A professional and de-politicised civil service remains to be achieved, notably by amending civil service laws. A coordinated countrywide approach to policy making remains to be ensured.

2. CLUSTER 1: THE FUNDAMENTALS OF THE ACCESSION PROCESS

2.1. FUNCTIONING OF DEMOCRATIC INSTITUTIONS AND PUBLIC ADMINISTRATION REFORM

2.1.1. Democracy

General elections took place in October 2022. Ahead of the vote and even directly after the closure of the polls, the High Representative intervened multiple times in electoral matters, including on budget and rules. State and entity-level legislative assemblies were swiftly formed by March, and executive bodies by May. The ruling coalition includes SNSD, HDZ BiH, and the ‘trojka’ (SDP, NiP, *Naša Stranka*) while excluding SDA from these levels of government. The Presidency took office in November, and for the first time since 1995 includes a woman, Željka Cvijanović (SNSD), also as first female chair. A new state-level Council of Ministers was swiftly set up after the vote and took office in late January, chaired for the first time by a woman, Borjana Krišto (HDZ BiH). A new government of the Federation entity was appointed in late April, headed by SDP leader Nermin Nikšić, after the High Representative suspended the Federation entity constitution to enable this.

Following the granting of candidate status, the public commitment of political parties to the strategic goal of European integration has brought positive results. Important steps and commitments towards the fulfilment of the key priorities were taken, despite negative legislative developments at entity level. The formation of a state-level coalition government at record speed is an important proof of a new political dynamism and will. The positive momentum which followed the granting of candidate status resulted in limited progress on the key priorities during the reporting period.

Recent developments, mainly in the *Republika Srpska* entity, are going against the positive momentum. Notably, the entity adopted a law not to implement Constitutional Court decisions and criminalised defamation, severely restricting media freedom and representing a major step backwards in the protection of fundamental rights. A draft law targeting civil society as ‘foreign agents’ is also pending adoption in the entity. If adopted, this law would further undermine the effective functioning of democracy and would mark another regrettable and undeniable major step backwards. These developments have a severe negative impact on

progress on key priority 4 on the improvement of the institutional framework, including at the constitutional level; key priority 12 on the guarantees of freedom of expression and the media; and key priority 11 on ensuring an enabling environment for civil society.

The Constitutional Court suspended and then quashed several legal and political acts adopted by the *Republika Srpska* entity that were in breach of the constitutional and legal order, including twice on state property matters, which the High Representative had previously also suspended. In June 2023, the *Republika Srpska* entity legalised the non-publication of a decisions of the High Representative and decreed that the rulings of the Constitutional Court would not be implemented, in breach of the constitutional and legal order. The High Representative annulled these laws in July. Entity authorities determined to enforce them anyway, thereby calling into question the authority and integrity of the Constitutional Court and to breach the constitutional and legal order of the country.

In April 2023, the *Republika Srpska* entity assembly called on state-level constitutional judges to resign. This is of concern. Entity parliaments should instead swiftly appoint judges to the vacant seats to ensure the unimpeded functioning of the Constitutional Court of Bosnia and Herzegovina.

To swiftly respond to unconstitutional initiatives by the *Republika Srpska* entity, the Constitutional Court needs to reform its own rules of procedures, including to be able to suspend unconstitutional legislation before its entry into force.

Elections

Neither before nor after the October 2022 elections did the Parliament amend the election law to address outstanding recommendations by OSCE/ODIHR and GRECO on electoral standards, including as regards transparency of political party financing (Opinion key priority 1). The High Representative imposed several changes to the electoral framework, including on the evening of the election day, which according to OSCE/ODIHR challenged legal certainty. Overall, elections were competitive and well organised, but marked by mistrust in public institutions and ethnically divisive rhetoric. The Parliament needs to address OSCE/ODIHR and GRECO recommendations to improve the integrity of and public trust in the electoral process, ahead of the 2024 local elections.

No steps were taken by the Parliament to harmonise the legislation on the registration of political parties across the country, nor to remove from the Constitution any ethnic and residence-based discrimination in voting rights, in line with European Court of Human Rights (ECtHR) rulings. The country needs urgently finalise the pending constitutional and electoral reforms. These reforms should be advanced as an utmost priority.

General elections took place on 2 October 2022 following interventions by the High Representative in June and July to ensure the appropriate budget and with the stated aim of improving the integrity and transparency of the electoral process and strengthening the role of the Central Election Commission. According to OSCE/ODIHR, elections were competitive and well organised overall, but were marked by mistrust in public institutions and ethnically divisive rhetoric.

On the evening of election day, following the closure of the polls, the High Representative imposed significant amendments to the election law and to the constitution of the Federation entity, including for the appointment of cantonal delegates to the entity House of Peoples. According to OSCE/ODIHR this challenged legal certainty, as the full impact of the cantonal assembly vote was not foreseeable by electoral contestants and voters. The Constitutional

Court in March 2023 established that the electoral changes imposed did not breach the Constitution. An application on the matter is pending at the ECtHR.

Appeals against alleged irregularities in the vote caused delays in the publication of results. The Central Election Commission (CEC) ordered a control count of all votes for the President of the *Republika Srpska* entity, finally confirming the political results. The CEC confirmed all electoral results 30 days after the vote. The judicial prosecution of reported cases of electoral frauds has been weak. The CEC needs to strengthen its audit capacity to monitor compliance on political party financing. Political parties should respect its independence and refrain from threatening to dismiss CEC members.

Despite the appointment of two women, as Chairs of the Council of Ministers and of the Presidency, the October 2022 elections led to a decrease in the participation of women in politics. The country needs to further harmonise its legislation with the gender equality law, implement measures to reduce verbal violence against women in politics, increase visibility of women candidates and improve party cultures to secure equal participation of women.

As regards internal party democracy, political parties lack democratic internal policies and structures. There are no women among party leaders, and few in other leadership positions.

Early mayoral elections took place in six municipalities in February 2023, with very low turnouts and multiple reports of incidents, including voter fraud and family voting.

Parliament

Following the October 2022 elections, new legislative assemblies were formed by March 2023. Parliamentary oversight over the executives remains weak. No improvement was made on the registration and financing of political parties. The Stabilisation and Association Parliamentary Committee held a full session in October 2023 (Opinion key priority 3).

The Parliamentary Assembly went into pre-electoral recess from August until December 2022, which resulted in a very poor legislative output, despite the outstanding backlog, as in the previous period. The outgoing Parliament adopted only a law on trial within reasonable time and the 2022 budget and four sets of amendments (including on public procurement in August 2022), of which two in urgent procedure (28%). The new Parliament adopted three laws (2023 budget; wine market; freedom of access to information) and six sets of amendments (on basics road safety; foreigners, integrity in the judiciary, torture prevention). The 2023 budget and the laws on VAT and foreigners were adopted in urgent procedure (33%). The 2023 budget was adopted in late March, after a first quarter under temporary financing.

Parliamentary oversight of the executive was very weak. No follow-up was given to the findings and recommendations of the interim investigative committee of the House of Representatives on the state of the judiciary, published in June 2022. The House of Representatives established a standing committee for the fight against corruption and the kleptocracy. There is no parliamentary monitoring of compliance with the recommendations of independent institutions or of their annual reports.

Despite legislation laying down a 40% gender quota for candidates, after the 2022 elections women account only for 24% of the members of the House of Representatives (10 out of 42, down from 11) and 13% of the members of the House of Peoples (2 out of 15, down from 3). Rules of procedure requiring gender balance are largely ignored, and there are no measures to promote the political representation of disadvantaged women. At entity level, the *Republika Srpska* assembly includes only 12 women among 83 MPs (14.5%, down from 18 MPs), and

the Federation House of Representatives has 27 women out of 98 MPs (27%, down from 30 MPs).

The delegates to the Stabilisation and Association Parliamentary Committee (SAPC) were appointed in May 2023, and the Parliamentary Committee held a full session in October 2023. Bosnia and Herzegovina should continue ensuring the proper functioning of the SAPC, notably with the adoption of recommendations, in line with Opinion key priority 3.

Entity parliaments met regularly, making considerable use of urgent procedures. In 2022, the Parliament of the Federation entity adopted 6 laws by urgent and 19 by shortened procedure, out of 38 (66%). In 2022, the assembly of the *Republika Srpska* entity adopted 65 laws, of which 25 (38.5%, down from 62%) by fast-track procedures, including the 2023 budget. The Brčko District Assembly adopted 46 laws, of which only one (2%, down from 16%) by urgent procedure.

There are 9 party groups in the state-level House of Representatives, 10 in the Federation entity House of Representatives, and 11 in the *Republika Srpska* National Assembly.

There are no specific standing committees on oversight and control of the government in either entity and the assemblies do not follow up on the work of administrative bodies. Such a committee is in place in the Brčko District.

By the end of 2022, the terms of office of two judges of the state-level Constitutional Court expired due to age limits. The entity assemblies have not yet replaced them, thus impairing the Court's decision-making. Both entity assemblies should complete appointment procedures and ensure the full composition of the Constitutional Court.

In October and November 2022, the Federation House of Peoples finally appointed four entity-level constitutional judges to the vacant judgeships. Since 2019, the Federation entity's constitutional court had operated with only five judges out of nine, which seriously impaired its decision-making. The appointment restored the functioning of the court's panel on 'vital national interest'. The House of Representatives of the Federation entity has failed to replace a constitutional judge whose term expired in August 2022; he will continue to serve until replaced.

The Federation Parliament has not filled the vacancies on the steering board of the public broadcaster FTV, nor has it appointed a director of FTV since 2013.

Governance

New executive bodies took office in early 2023 after the October elections. The Council of Ministers took swift action to bring forward the reforms required to address the Opinion key priorities, notably by adopting several strategies and draft laws, which now need to be approved in Parliament. The Presidency was marred by continued lack of consensus on key issues, including foreign policy and regional cooperation. The executives have little capacity for coordination and policy planning. Coordination of EU matters needs to be strengthened, including the role of the Directorate for European Integration (DEI). The Council of Ministers still needs to improve the functioning of the coordination mechanism and to develop and adopt a national programme for the adoption of the EU *acquis* (Opinion key priority 2). The Council of Ministers needs to urgently appoint the National IPA Coordinator (NIPAC) under IPA III.
